The region W. of the Mississippi was first explored by Europeans in 1512; but no effective settlement was made in it till about the end of the 17th century, when it was, in part, colonised by the French. The latter ceded it to Spain in 1763; but again recovered its possession in 1800. At that period, the whole territory, from the Gulf of Mexico to about the 50th deg. of N. lat., and from the Mississippi on the E. to the Rocky Mountains on the W., was comprised under the term Louisiana: and the whole of this immense territory, the possession of which was of such vast consequence to the United States, was purchased by them, in 1803, from France for 15,000,000 dollars. In 1804, the present state of Louisiana was constituted a territory under its existing limits; and, in 1812, it was admitted into the Union as an independent state. It sends 4 representatives to congress. (*Flinn's Geog. of the U. States*; *Darby's View of the U. States*; *Murray's Encyc.*, American ed.; *American Almanack*, 1849, 1850.)

LOUISVILLE, a flourishing commercial town or city of the U. States, being the largest and most populous in Kentucky, cap. co. Jefferson; on the Ohio, above, but contiguous to, the rapids, 50 m. W. Frankfort, and 85 m. S.W. Cincinnati. The pop., which in 1800 amounted to only 600, had in 1830 increased to 10,336, and in 1840 to 21,210. The town, which is in a picturesque situation, is regularly laid out. Three broad and well paved streets, running parallel to the river, are intersected by others at right angles. The houses are compactly built of brick and stone, and, though generally of an ordinary description, many are in very good taste. In 1835, the chief public buildings were the court-house, gaol, 8 or 9 churches, a theatre, a free school, the U. States branch bank, the union-hall, an asylum for disabled boatmen, and some workhouses. The free-school, built in 1829, has accommodation for 700 or 800 pupils. A medical school has been recently instituted. There are also some excellent hotels, one of which, according to Hoffmann, is equal to any in New York. (*Winter in the Far West*.)

Louisville has manufactures of cotton-yarn and stuffs, woollen goods, cotton bagging, iron, cordage, hats, &c., in which steam-power is largely employed, and several type and brass foundries, tanneries, flour-mills, &c. The falls of the Ohio are no serious obstruction to navigation, at least when the river is full, the whole descent being only 22 ft. in 2 m. To avoid them, however, the Louisville and Portland canal has been excavated, in part through a solid ridge of limestone, to the depth of 12 ft. This canal is 2 m. in length, in some places 40 ft. deep, and of sufficient width to admit the largest class of steamers. There belonged to Louisville, on the 30th June, 1849, 13,955 tons shipping, being all, or mostly all, steamers. The commercial transactions of the town are very large; and it has, in fact, with the exception of New Orleans and St. Louis, a more extensive trade than any town in the western part of the Union. It was founded in 1780, and incorporated as a city in 1828. (*Stuart's Three Years in America*, i. 290-292; *Hoffmann*; *Murray*, &c.)

LOUTH, a marit. co. of Ireland, on its E. coast, being the most northerly in the prov. of Leinster, having E. the Irish Sea; N. Carlingford Bay, which separates it from Down and Armagh; and W. and S. Monaghan and Meath. Area, 206,261 acres, of which 14,916 are unimproved mountain and bog. Surface rugged in the N., but in other parts generally flat or undulating. Soil generally fertile. Estates of a medium size. Farms of all sizes, but the great majority small. Its crops, agriculture, &c., are similar to those of Meath, which see. Average rent of land, 27s. an acre. Minerals unimportant. The linen manufacture is carried on to a considerable extent, especially at Drogheda, but the business has materially declined. Principal rivers Boyne and Dee. Principal towns Drogheda, Dundalk, and Ardee. Louth is divided into 4 baronies, and 61 parishes; and sends 4 mems. to the H. of C., viz. 2 for the co., and 1

and the Doughnuts and Donuts. Registered donors for me in 1992-93, 94, 95, 96 and 97 are: (names changed) and 100,000 units, of which 60,000 were organs and 40,000 dentures.

[illegible]

"Length occupies little or no consideration, those being only one establishment of any importance, a cargo and stevedore community. The stevedores would constitute a considerable portion of the crew. It is not particularly good food, a little beginning of the U. S. economy of Lough, and maintaining only the Monitor. It is in a very prosperous state, the principal traffic outside of that of coal for London and the W. ending of York, where the vessel freight being steady and some of which comes down the Monitor from York. There is a paper mill and flour mill on the river in addition to wood mills, and two other mills, one worked by steam are employed in grinding wheat. There is a ship. The river has also a ship-building establishment, and is known for its extensive air. Length was incorporated in the list of District #1, where Carter was confirmed by other citizens, merchants and finally by law. (4) rather the Municipality between the law is divided into 3 wards, and is governed by a mayor and 3 other persons, with 10 councillors. It has a population of the poor under a separate Corporation known as the Poor Law, an estimate of 1891 according to the rate of property. Length is also one of the polling places for the U. S. Landings of the river and the quarter sessions for the 10 or 12 years here to the day. July and last, the April sessions being in October. Markets on food and the quarter sessions have been April 15, 16, Monday after Easter, May 1 and a large cattle fair May 15. (Wm. Cory and Sons Reports.)

LEUVEN, a town of Belgium, and formerly one of the most populous and important in that country prior to French conquest and now on the Rhine, a tributary of the Scheldt and on the railway between Brussels and Liège, is on the R. M. S. the former at 50° 30' N. long 5° 31' E. Pop. in 1835 35,000. It is partly surrounded by dells and partly by a marshy swamp from 40 to 100 ft. high with a deep flow outside the total amount of water being about 1 m. a great part of the upland area remains however of fields and gardens but the fortifications are now cut through by different roads, and are mostly converted into landscapes. The castle now in ruins, on a hill near the Dyle is of considerable but somewhat antiquated importance being the residence of the prince of Orange. The town, which though regularly and well is not generally well built, has several interesting public edifices. The town hall begun in 1466 and completed about 150 years afterwards, one of the finest specimens of the North Gothic in Europe has been recently repaired, or rather restored, and given still of the noble aspect of the town and government. It is lofty, has its light and elegant exterior, and is most admirably ornamented. The collegiate church of St Peter a curious and noble specimen of the 15th century with some good paintings, has a finely carved pulpit, and had formerly a superb stained glass in the choir is said to have been of the extraordinary height of 115 ft. with two magnificent large towers. The university of Louvain was founded by John IV Duke of Brabant in 1265, but it was not till 1613 that it obtained the privilege of teaching divinity.

for which it was afterwards so celebrated. It had, in the days of its prosperity more than 60 colleges, some of which were established in halls that had previously belonged to the monastery. This famous university, after having been suppressed by the French in 1793 was re-established in 1817. It has at present 16 colleges, some of which are handsome buildings. Its library originally the library of the abbey is richly furnished with antique modern writings. Volume III of Bayle's dictionary for a year and the Bayle's dictionary was brought up to the castle of Lorraine. The town has 3 churches, 3 convents, 3 hospitals and charitable societies, a royal college, and a college for novices, and to the east of Lorraine of primary instruction and education, a chamber of commerce and manufactures, a house of farm inspection, &c.

In the 14th century Lorraine was one of the great mines of the world and those contributions, which important it is said to have then 100,000 individuals within the city of Strasbourg though then more probably to a great exaggeration. But the misadventure we have just recalled to you against the Duke of Orleans many of them emigrated on the revolt being suppressed by foreign conquerors, and taking refuge in England where, being temporarily rescued by Edward III they continued to lay the foundations of the world manufacturing. Lorraine seems never to have recovered from this disaster. It has still some remarkable ancient edifices but it is now principally maintained by the taxes paid to the land to England. The different branches produce about 50,000 horses a year, a large proportion of which is sent to Germany and into France. Lorraine has also manufacturing of iron and cotton yarn, and various dyeing and some primary manufactures, with numerous distilleries, and glass works and manufactures all and more more. It is connected with the Rhine near Bâle by the canal of Loup, the navigation by means of 10 locks, and has a considerable trade in corn, clover and the hemp. In the province of the surrounding country I take the Vosges to be bounded in the top, of the Dyke. (See the *Dictionnaire de Maximilien* for an extensive article on this city and the *Strasbourg*. In that *Strasbourg* - Strasbourg

Last V. 8. 8. is a manufacturing town of France. It
 lies up river on the Rhine and on the road from
 Bonn to Bremen. It is 10 the river and of c.
 8. 8. is the former city. Pop. is about 100,000.
 It consists of an old and new town; the former con-
 sisting of three or four principal streets by many smaller
 streets to both sides of the river; the latter which is the
 residence of the principal manufacturers has a broad
 and elegant main street and many well built streets and
 other houses. The town, which is separated from the
 Rhine as far as 1000 yds. is here crossed by several good
 bridges. A large church appeared to have been con-
 structed during the early crusades, a bell tower by the
 temple towards the end of the 13th century a hospital
 and a public library are the chief public buildings.
 Lanter was formerly a fortress of some strength and
 portions of its wall still exist. It is now however dis-
 tinguished chiefly by its industry and ranks as one of
 the first cities of the western manufacture of France.
 Fine broad streets and gardens are its chief orna-
 ments but of late years other two western goods have
 been introduced. Cotton yarn from abroad now, for
 example and there are many spinning manufactories
 and weaving grounds, thousands of looms and
 factories for textile and other machinery. The western
 manufactures in the principal 1000 yards and, accord-
 ing to Berghaus produced in that goods of the value of
 between 1,000,000 and 1,500,000 £. The work people
 according to Berghaus are in pretty much the same condi-
 tion as at Elberfeld. Perhaps their wages are a little better
 than at any time they are the contrary to superabundance and
 of pretty common ground habits. In 1844 exports amount
 from 100 to 1,500,000 £ a day. It opens no windows
 from 10 to 11, to 12 to 1, and closes at 10 o'clock
 (dinner). From 10 to 11, to 12, a party of three
 persons, one of each of the three classes, may gain to-
 gether 1,000 £ a year, or 60,000, certainly sufficient to main-
 tain them to a state of comfort.

THE UNIVERSITY OF CHICAGO

LUBECK.

however, unfavourable to the silk-worm. Hemp and flax succeed well; but the culture of madder and saffron has been abandoned. The mountain pastures are excellent, and feed many sheep: coarse woollens and serges are made in almost every peasant's family. In 1835, of 43,847 properties subject to the *contribution foncière*, very nearly a half were assessed at less than 5 fr., and 6,635 at from 5 to 10 fr., only 7 properties being assessed at more than 1,000 fr., and 53 at from 500 to 1,000 fr. The dep. is said to be rich in mineral products, but the mines are but little attended to. Lozère is divided into 3 arronds.; chief towns, Mende, the cap., Florac, and Marvejols. It sends 3 mems. to the Ch. of Dep. Number of electors in 1838-39, 712. Total public revenue in 1831, 2,256,376 fr.; expenditure in the same year, 1,777,870 fr. (*Hugo, art. Lozère; Official Tables, &c.*)

LUBECK, a city and republic of N. Germany: the city, which is the cap. of the Hanseatic towns, and the seat of their high court of appeal, is sit. on the Trave, about 10 m. (direct distance) from Travemünde, at its mouth in the gulph of Lubeck. In the Baltic, 36 m. N.E. Hamburg, and 38 m. S.E. Kiel; lat. 53° 52' 8" N., long. 10° 41' E. Pop. in 1845 of town, 25,339, of town and territory, 47,197. The town is built on a gentle ridge, on one side of which runs the Trave, and on the other the Wackenik. The environs are well wooded, and enlivened with cheerful villas, particularly those along the banks of the Trave. The streets, which are steep, are wider than those of Hamburg. The houses generally appear to be old, and mostly built of stone; like those of Hamburg and Antwerp, their gable ends face the street. They are in general very lofty, 6 or 7 stories not being uncommon. Round the ramparts of the city, in which there are 2 handsome gateways, is a promenade shaded with fine trees. The principal buildings are the cathedral, 4 churches, and the town hall. The cathedral is a curious old building, the spires of which being much out of the perpendicular, momentarily threaten to fall, which also is the case with the towers of St. Mary's and St. Peter's. The church of St. Mary is handsome in the interior, and well worthy a visit, were it only for the sake of the paintings, many of which are curious and of ancient date. Among them is the celebrated picture of the Dance of Death (usually attributed to Holbein, but which belonged to the town for at least 35 years before Holbein's birth). In the same edifice may be seen some fine specimens of sculpture, particularly a representation of the Lord's Supper, carved in white marble, finely designed and beautifully executed." (*Barrow's Excursions in the N. of Europe*, p. 22-24.) Behind the high altar is an old astronomical clock, constructed in 1405, which is the grand curiosity of the place. According to one of the guide-books, it exhibits at a certain hour figures representing the emperor and the seven German electors; but, according to Mr. Barrow, the figures are meant for the Twelve Apostles, who "at mid-day sally forth and march in regular succession, passing a figure of our Saviour, to whom they each face round, and having made a quick and familiar nod of the head, they then march onwards to a door on the opposite side, which closes upon them the moment the twelfth apostle has entered." (P. 24.)

The cathedral, begun in 1170, and finished in 1341, has many monuments of the senatorial families of Lubeck, some of which are well executed, and, among others, a remarkably curious old picture, by Hans Hemling, dated in 1471, the subject of which is the Passion of Christ, treated in 23 distinct groups. The town-hall, a turreted Gothic building, faces the market-place. It was the place of assembly for the deputies from the cities formerly comprised in the Hanseatic League; but the hall in which they held their meetings was unfortunately destroyed in 1817. Lubeck has a Calvinist and a R. Cath. church, an exchange, arsenal, and mint, several hospitals and benevolent institutions, a gymnasium, a city-school, which in 1832 had 263 pupils, ecclesiastical and teachers' seminaries, schools of surgery, midwifery, navigation, drawing, swimming, and numerous other schools, a public library of 35,000 vols., a society of useful sciences and arts, a bible society, a house of correction and prison, a theatre for operas, &c.

Lubeck, though by no means so prosperous and important as formerly, is still a thriving commercial town. Many of its modern-built houses are on a grand scale. Their basement-stories are used as magazines or warehouses, and they have commonly large court-yards into which the carriages of the proprietors are driven. (*Barrow*, p. 25.) In Lubeck and its territory are numerous breweries, distilleries, iron forges, and linen yarn factories; besides manufactures of hats, vinegar, starch, tobacco and snuff, wax lights, paper and cards, musical instruments, with numerous oil and other mills, several printing establishments, and a few woollen, cotton, and golden and silver lace factories. Its trade is principally confined to the N. and W. of Europe. Berghaus states that upwards of 1,600 vessels a year enter and leave its port; they are principally Danish,

LUCCA (DUCHY OF).

227

the rest being Russian, Swedish, Lubeck, Dutch, English, and Prussian. Lubeck communicates by means of the Trave and a canal with Hamburg (which see), with which it has an extensive intercourse. The principal article of export is corn: the principal articles of import are wines and silks, from France; cottons, hardware, and other manufactured goods, from England; colonial products, dye stuffs, &c. It has an extensive commission and transit trade, and considerable markets for wool, cattle, horses, &c. Vessels of considerable burden load and unload by means of lighters at Travemünde, at the mouth of the river, which is properly the port of Lubeck. Two steam-boats, of small draught of water, ply on the river between the city and its port. Steam-packets sail at fixed periods from the latter for Petersburg, Stockholm, and Copenhagen.

Lubeck has several fire and life insurance companies. Accounts are kept in marks of the value of 1s. 2'67d. each, divided into 16 schellings of 12 pfennigs. The Lubeck rix-dollar, equivalent to 3 marks, is worth 4s. 6'72d. The lb. = about 18 oz. avoird.; 112 lbs. = 1 centner.

The territory subject to Lubeck consists of a district of about 80 sq. m., immediately adjacent to the city, surrounded by the territories of Mecklenburg, Holstein, and Oldenburg, and the Baltic; of numerous small detached portions of surface enclosed by Holstein; and of the *Vierländer*, and town of Bergedorf, the sovereignty over which it shares with Hamburg. United area, about 127 sq. m. Pop., in 1845, 47,197, all Lutherans, except about 300 Calvinists, 400 Rom. Caths., and as many Jews. The land is very productive, yielding good crops of corn, fruit, and kitchen vegetables; but the rearing of live stock is the chief occupation of the rural pop. The government is vested in the senate and house of burghesses (*bürgerschaft*); the former consists of 4 burgo-masters, holding office for life, 2 syndics, and 16 councillors; and the latter of 12 colleges or companies, only 7 of which have, however, the privilege of voting. The house of burghesses has the initiative in all deliberations relative to the public expenditure, foreign treaties, &c.; the senate is entrusted chiefly with the executive duties, but its sanction is necessary to the passing of new laws. Public revenue, in 1850, 831,891 marks; expenditure about equal. In 1849 the public debt amounted to 5,606,575 marks; but it is, and has been, in process of reduction. Lubeck has one vote in the full council of the German Confederation, and along with the other Hanse Towns, a vote in the committee. It furnishes a contingent of 407 men to the army of the Confederation.

It is uncertain when or by whom this city was founded; but no doubt it existed *anno* 1140. Early in the 13th century, the Emperor Frederick II. made it one of the free towns of the empire; and from 1260 to 1669, Lubeck was the repository of the archives of the powerful association of cities included in the Hanseatic League, and the station of the confederated fleet. The dissolution of the League marked the epoch of the decline of Lubeck. After the battle of Jena, Blücher threw himself into Lubeck, which, after a severe engagement, was taken by the French, and sacked. In 1810, it was made the cap. of an arrond. in the dép. Bouches de l'Elbe; but was restored to its rank, as a free city, by the Congress of Vienna in 1815. Sir Godfrey Kneller, the painter, Mosheim, the historian of the Christian religion, Meibomius, and H. Müller, were natives of Lubeck. (*Martinière, Dictionnaire Géographique; Berghaus; Allg. Länder, &c.*, iv. 486-489.; *Barrow's Excursions in the N. of Europe*.)

LUBLIN, a city of Russian Poland, cap. of the palatinate of Lublin, in a marshy situation, on the Bistrzya; a tributary of the Wieprz, 97 m. S.E. Warsaw. Pop. estimated at 16,500, half of whom are Jews. It is subdivided into the old and new town, the former situated on an eminence, and the latter on the bank of the river. Lublin was fortified by a wall and ditch, till these works were destroyed in the civil wars towards the end of the 18th century. It has still, however, a citadel standing on a high rock, and, according to Stein, the ruins of a castle built by Casimir the Great. Its streets are irregular and filthy, and its houses mostly of wood. The principal edifices are a handsome town-hall, the Sobieski palace, the cathedral, the churches of the Dominicans and Carmelites, and that formerly belonging to the Jesuits. There are in all 18 churches and 12 convents, 6 nunneries, a spacious synagogue, an episcopal seminary, a Piarist college, several civil and military hospitals, an orphan asylum, and a theatre. Lublin is a bishop's see, and the seat of the second court of appeal in Poland. It has manufactures of coarse woollens; considerable trade in woollen cloth, corn, and Hungarian wines; and three large yearly fairs, each lasting a month, and attended by German, Greek, Armenian, Arabian, Russian, Turkish, and other traders. (*Dict. Géog.; Stein, &c.*)

LUCCA (DUCHY OF), a state of Central Italy, being, excepting San Marino, the smallest of the Italian states; between lat. 43° 46' and 44° 14' N., and long. 10° 9' and

10° 47' N.; having (except a few small detached portions) N.W. and N. the territories of Modena and the Tuscan Lunigiana, E. and S. Tuscany, and W. the Modenese. Length (N to S) 25 m. greatest breadth, 31 m. Area (incl. Montignone, &c.), 450 sq. m. Pop. (1859), 118,196. The Apennines skirt the N. part of the duchy, 2-3 m. of which they cover with their ramifications; but none of them rise to the height of 4,000 ft. The rest of the surface is a low but fertile plain, which becomes marshy towards the coast. The general slope of the country is from N. to S., in which direction it is traversed by the Serchio near its mouth. This river is not navigable, but is of great use for irrigation; most of the other streams in the duchy are its tributaries. Near the shore are some small lakes. The mean annual temperature is about 50° F.; in the summer it rises to 60°; in winter it rarely freezes in the plain of Lucca. The soil, which is calcareous and stony in the N., is sandy in the S., and rich in the intermediate region. The soil is chiefly agricultural but the crops produced are not sufficient for home consumption; the deficiency being principally supplied by beans, which are largely cultivated, and partly, also, in the mountainous districts, by chestnut flour. The latter is sometimes exported to the neighbouring states, the price varying from 4s. 6d. to 10s. a cask. The culture is extending of all the articles for the production of which the soil and climate afford facilities. The number of mulberry trees has rapidly increased since the peace, and the manufacture of olive oil has been materially improved. The latter is esteemed the best in Italy and fetches the highest price, especially that grown on high grounds. It is exported to the value of about £2,000 a year, the market price being from 4s. to 4s. 6d. the Lucca pound of 15 oz. Wine is said to give a fair return to the cultivator, hemp and flax are raised, and the produce of silk is very considerable. Lucca, in fact, was early distinguished by her productivity in the silk manufacture, and in 1319 the culture of the mulberry became an object of public attention. Silkworms are grown near the coast, in which neighbourhood also most of the cattle in the duchy are reared. There are nearly 30,000 landed proprietors, of whom a large part have necessarily very small properties, and belong to the class of agricultural or manufacturing labourers. The principal causes which have led to this subdivision of the land, as well as to the rapid increase and great density of the pop., appear to be the habit of dividing household property equally among the males of a family, the suppression of monasteries, and the abolition of entails.

The *metayer* system of agriculture is not so prevalent here as in Tuscany and elsewhere, but *Stimand* represents the peasantry of Lucca as being, notwithstanding, in a very depressed condition. "Every day the husbandman is reduced to buy the day's provision. Very rarely has he a reserve of corn; still more rarely of oil or wine. The former has been sold to the press, and the latter to the tub. He has rarely any provision of salt meat, butter, cheese, or vegetables. All the kitchen utensils are of earthenware, and the whole furniture consists of a table and some wooden chairs, one or two stools, and an indifferent bedstead, on which the father and mother sleep, with their feet in one direction, and the children with their feet against the head board. When the division under General Vetrain ravaged the districts of the Val di Nievola, in 1799, the peasantry derived this advantage from their indigence that when they had consumed their clothes, and the gold trinkets of their women, they had scarcely any thing left to lose" (*Stimand*, *Tabelle de l'Agrie Toscane*, &c., pp. 212, 214). But, according to Dr. Bowering this statement must be either too highly coloured, or the condition of the peasantry must have improved in the interval; for he affirms that the labourers, in addition to articles of prime necessity, consume salt provisions, and sometimes fresh meat and colonial products. The ordinary wages of country labourers vary from 4d. to 6d. a day, with food. *Urban* labourers, who dwell with their masters, get from 4s. to 6s. ft. a year. The mountaineers, who depend almost entirely upon the culture of the chestnut, are said to be in a better condition than the peasantry of the hills and plains. The inhabitants of the districts of *Parute* and *Scilappa* are in particular distinguished by their robust and healthy appearance, and by the beautiful complexion and regular features of the women. This last circumstance is the more remarkable, as, during a great part of the year these women have to bear the whole burden of domestic labour, while their husbands, fathers, and brothers emigrate to the Tuscan marionnes, and the States of the Church, in search of harvest and other work. During winter, about 1,000 labourers set out for those territories, Corsica, &c.; and return in summer bringing with them their small savings, the aggregate of which may amount to 10,000*l.* Most of the Italian tape and plaster cut-makers, in other countries of Europe, are emigrants from Lucca. Mining is little or not at all pursued, though

copper, iron, and lead ores are met with. *Mineral* marble, and other fine marbles, are found in great quantities. From 4,000 to 6,000 hands are employed in the manufacture of silk, wool, and cotton, and there are in the duchy about 30 paper factories, and others of linen cloth, straw and banner hats, leather, glass, and iron goods. The capital is the chief seat of manufacturing industry.

The value of the exports amounts to about 4 millions *fr.* a year, more than 1-4th part of which is derived from silk and silk. These articles go chiefly to other parts of Italy, and to France, England, and the Levant. Grain, seeds, wine, liquors, live stock, lard, skins, and fresh fish, are sent to Tuscany, and woollen goods to the rest of Italy and the Levant. The imports, which mostly come from Tuscany through Leghorn, consist principally of grain, seeds, rice, fine wines, hemp, flax, cotton, colonial products, salted provisions, pig-iron, &c. British cotton woollen and linen fabrics pay an import duty of 10 per cent. ad valorem, cotton (raw) 5 lire, pig and bar iron, 6 lire 13 soldi, and glass wares, 8 lire per 100 lbs. The importation of tobacco and salt is prohibited, except on account of government, which has a monopoly of these articles. The *li* (lira) of Lucca is somewhat less than the *li* Troy, the peso grosso = 11 *li*; the cupo of oil = 36 pail grout, the stajo of corn = about 54 gallons. Accounts are kept in lire of 20 soldi and 100 denari. The lire = 7*sd.*; the *scudo* = 6*sd.*; the gold *ducatoon* or *placato* = 1*li* 4*sd.* English. Lucca has only one import, *Vinaccia*.

The government is a limited monarchy, under a duke, who exercises the executive power, nominates the ministers, and all other public officers, &c. But an estimate of the amount of the public expenditure is annually laid before the senate, and must be sanctioned by it. This body consists of 25 members, elected from among the four classes of merchants, artisans, scholars, and landed proprietors, called together by the duke for at least a month every year, and without his consent no tax or other public burden can be imposed. The council of state consists of the 2 state ministers and 5 additional councillors. Justice is administered by a local *consulato* in each commune, and a tribunal of original jurisdiction, a civil and criminal court of appeal, and a court of cassation in the cap. A permanent council of war and a court of revision, all to decide in military causes. The military force comprises about 700 men, costing about 14,000*l.* a year. The naval force consists of only a *golette* of 15 guns, and 3 gun-boats. The regular and secular clergy amount together to about 1,000 persons, under the

in 1847, of the Archbishop *Maria Louisa*, the greater part of Lucca has been added to Tuscany, and the rest to Modena.

LUCCA (anc. *Lucca*), a city of Italy, cap. of the above duchy, in a plain near the left bank of the Serchio, 11 m. N. E. Pisa, and 30 m. W. Florence, lat. 43° 50' 40" N., long. 10° 30' 40" E. Pop., in 1858, 34,000. The city is surrounded with walls, which would form, however but a very feeble defence against an enemy. The towers of the churches, rising above the ramparts, have a fine effect in the rich and beautiful landscape, the view being bounded by vine-clad hills spotted with villas, over which tower the craggy Apennines. On a nearer inspection, the public buildings are less pleasing in their architecture than in their distant effect, yet many of them are very curious structures. According to Mr. Woods, "The churches are all, more or less imitations of the cathedral at Pisa, smaller, indeed, in size, but some of them are decidedly superior in the proportions and disposition of the parts" (*Louvre of an Architect*, N. 416.) Most of the churches are built of Carrara marble. The cathedral, mostly constructed in the 11th century, has much carved, inlaid, and mosaic work; a rich display of

colossal glass; a skeleton, by P. de Balthazard, and some pictures of the Venetian school. The church of San Michele, and San Francesco are both ancient. The latter belonged to a monastery restored and enriched towards the close of the 17th century. Frequent notices, both of the monastery and the church, occur in the surrounding country, but nothing is to be seen, indicating that the latter has been ever rebuilt, or materially altered. The curious architecture is described by W. de B. 11. The do-

meets regularly three times a year, but may be convened oftener, at the pleasure of the senate. Two *scopere*, or presidents, are chosen annually from among the senate, by the council, one to preside at the council and the other in the court of appeal. The latter tribunal is composed of 12 *reurs*, chosen from the senate, and has authority in all legal causes, except in cases of capital punishment, when the senate is assembled to pronounce judgment. The council of state for the Swiss Confederation is chosen from among the senate, when Lucerne has the directorial power, which occurs once every three years. In ecclesiastical matters, Lucerne is subordinate to the bishop of Basle; but being at the head of the Rom. Cath. cantons of Switzerland, it was the permanent residence of the papal nuncio till 1836, when, in consequence of a dispute with the government, the nuncio removed into the canton of Schwytz. Public instruction is under the direction of a commission of senators. It has been till lately indifferently conducted, but is improving. The public revenue amounted in 1833 to 266,128 Swiss fr., the public expenditure to 260,363 fr. A contingent of 1,734 troops is furnished to the army of the Confederacy, and 20,000 Swiss fr. money.

LUCERNE, a town of Switzerland, cap. of the above canton, and one of the three seats of the Swiss diet, on both sides the Rhone, where it issues from the W. extremity of the lake of Lucerne, 26 m. S. S. W. Zurich, and 43 m. E. N. E. Berne. Lat. $47^{\circ} 3' 17''$, long. $8^{\circ} 18' 36''$ E. Pop. 7,800. Its situation is highly picturesque, and its environs abound with pleasant promenades. The town is surrounded by a circle of watchtowers, and on the land side is inclosed by a continuous wall. It is pretty well built, and has several fine public edifices. The cathedral, founded in 696 (*Euseb*), has a painting of Christ on the Mount of Olives, by Lanfranc, and an organ with nearly 2,000 pipes. The churches of St. Peter and the Jesuits are handsome buildings; and there are several convents; that of the Jesuits has, however, been happily converted into a lyceum. The most remarkable objects in Lucerne are the 4 bridges over the Rhone, connecting the great and little towns. Some of these are of considerable length; all of them are covered and ornamented with pictures illustrative of Swiss and Scripture history, or copied from the "Dances of Death." The town-hall,

three primitive cantons of the Swiss Confederacy. In less than 20 years they conquered the territory which now forms the canton. The town was taken by the French May 1., 1798, and was for eight months the cap. of the Helvetic government.

LUCERNE (LAKE OF) (*Gern. Waldstätter See*, or the Lake of the Four Forest Cantons), a lake of Switzerland, in nearly the centre of that country, between the cantons of Lucerne on the W., Schwytz N., Uri E., and Unterwalden S. It is the largest and decidedly the finest lake in the interior of Switzerland, and one of the most picturesque in Europe. It is of a singular cruciform shape, with an addition to its E. end, termed the Lake of Uri. Its greatest length is about 36 m.; but the breadth of any of its arms is seldom more than 2 or 3 m. Area estimated at 45 sq. m.; height of its surface above the level of the sea, 1,260 ft.; depth varying from 200 ft. near Lucerne to 900 ft. near its E. end. The Rhone traverses this lake in its entire length, emerging from it near its W. extremity. Its banks exhibit every gradation of scenery, from a gently rising and fertile country at its W. end, to rugged and savage sublimity on the Lake of Uri. Its E. and S. parts are surrounded by mountains rising to many thousand feet above the sea, the chief of which are Mounts Pilate and Righi. Its shores abound in localities memorable in early Swiss history. At the N. extremity of what is called the Lake of Uri is the little town of Brunnen, where, in 1315, a treaty was entered into by Uri, Schwytz, and Unterwalden, which gave birth to the Helvetic Confederacy. Like all mountain lakes, it is subject to violent tempests; and in consequence of the different positions of its different arms, and the influence of the surrounding mountains, different winds seem to prevail in different parts of its extent at the same time. A steam-boat plies 3 times a week in summer, and 5 times at other seasons, between Lucerne at its W. end and Flüelen at its E. extremity, calling at the intermediate ports. (*Euseb. Voyageur en Suisse*, 266—261.; *Picot's Statist. de la Suisse*, 213—223.; *Cass's Switzerland*, *Ingis's Switzerland*, &c.)

LUCIA (ST.), one of the British W. India islands, belonging to the Windward group; in lat. 14° N., and long. 61° W., about 20 m. N. N. E. St. Vincent, and 25 m. S. Martinique. It is of an oblong shape, being nearly 23 m. in length by about 13 m. in its greatest breadth. Its area has been differently estimated, but may amount to about 300 sq. m. Pop., by the last census, 23,044, of whom only 1,100 were whites. The central and E. parts of the island are occupied by the table-land, called Capisterre, the W. part, which has a much less elevation, is called Basseterre. These two districts differ widely in physical aspect, but each, in an eminent degree, is subject to the operation of those agencies which are supposed to exert a beneficial influence on the health of Europeans in tropical climates. St. Lucia has, in fact, always been noted for its unhealthiness. At an average of the 20 years, ending with 1836, the annual deaths amounted to upwards of 123 per thousand of the white, and 42 per thousand of the black troops.

"Basseterre, the best cultivated portion of the island, abounds in swamps and marshes. Capisterre consists of a succession of abrupt mountains of the most picturesque and fantastic shapes, covered to the summit with forest trees and dense underwood, and intersected by numerous ravines, which, being too narrow to admit of free ventilation, are at all times replete with moisture, and choked up with decayed vegetation in every stage of decomposition. The climate is principally characterised by extreme moisture and variability. During several months, but particularly in Oct. and Nov., rain is incessant and showers are frequent for at least 9 months of the year. Cool dry weather generally sets in about Christmas, and continues 3 or 4 months, at which time the climate is exceedingly pleasant, though not more healthy, since it is at that period of the year that the greatest mortality prevails. During the rest of the year the weather is sometimes dry and sultry, at others cold and damp, exhibiting a difference of 10 or 15 degs. of temperature in a few hours." (*Tulloch's Report on Morbidity*, &c. in the *W. Indies*.) The range of the thermometer is much the same as at Dominica. Nearly 9,000 acres are under crops, and 4,700 in pasture. The mountains are feathered to the top with tall forest trees, and the valleys at their feet abound with excellent timber.

St. Lucia has several good harbours, the chief being the Carriage on the W. coast, within which 20 ships of the line may lie in perfect security, without even, as is stated, being moored. The wish to command this admirable harbour was, in truth, the motive which made the island be formerly so much coveted by the European powers.

The quantities of the principal articles imported into the United Kingdom from St. Lucia in 1846 and 1847, were:—

The city of Lucerne was given by Pope in 798 to the abbots of Murbach in Alsace; to whom it belonged till towards the end of the 12th century, when it was sold to the House of Hapsburg. But in 1332, the citizens, impatient of the Austrian yoke, rebelled, and joined the

1849	67,395	2,473	10,037	-	7,928

The total value of native exports from St. Lucia, in 1848, was only 45,212*l.*; but their value in that year being unusually reduced, it may, at a medium, be estimated at 90,000*l.* or 100,000*l.* The exports from the U. K. to St. Lucia, in 1849, amounted to 16,672*l.*

The island is divided into 9 parishes. Castries, the cap., lies in a low and marshy situation, at the extremity of a long and winding bay of the same name. The fort, where most of the troops in the island are stationed, is built on the summit of a steep hill, called *Morne Fortuné*, about $\frac{1}{4}$ m. from Castries, and 860 ft. above the level of the sea. Near it is the principal hospital. Another hospital, and some barracks, are erected on Pigeon Island, a small, conical, and extremely unhealthy islet, near the N. extremity of the island. St. Lucia is governed by a governor and council, acting under orders from England. The mutual jealousies of England and France prevented, for a lengthened period, a permanent settlement being made on the island, which was then regarded as a sort of neutral territory. At length it was ceded to the French in 1763. But being taken by the English in 1803, it was definitively assigned to us by the Treaty of Paris. (*Parl. Reports, &c.*)

LUCIA (STA.), a town of Sicily, intend. and distr. of Messina, cap. canton, in a healthy situation on the declivity of Mt. Dinamare, 7 m. S. by E. Milazzo. Pop., in 1831, 6,270.

LUCKIPOOR, a town of Hindostan, prov. Bengal, distr. Tipperah, a few miles from the mouth of the Brahmaputra, with which it communicates by a small river, 156 m. E.N.E. Calcutta; lat. $22^{\circ} 56'$ N., long. $90^{\circ} 43'$ E. Coarse cotton cloths of a substantial kind are made here; and the neighbourhood is so fertile and productive, that Luckipoor is one of the cheapest towns in British India.

LUCKNOW (Hind. *Lakshmanawala*), a large city of Hindostan, prov. and kingdom of Oude, of which it is the cap., on the Goomty, a tributary of the Ganges, about 150 m. N.W. Benares, and 265 m. S.E. by E. Delhi; lat. $26^{\circ} 51'$ N., long. $80^{\circ} 50'$ E. Pop. formerly estimated at 200,000; but now probably under 200,000. This city is interesting from its being the cap. of one of the most powerful native states in Hindostan, with which the British power in its rise and progress in India, has been more intimately connected than any other; and it is also one into which European habits have been very extensively introduced by the late reforming sovereign of Oude, Saadet Ali. "When viewed from the summit of a lofty edifice, Lucknow presents a confusion of gilded cupolas and pinnacles, turrets, minarets, and arches, bounded by the winding Goomty, and so thickly interspersed with the richest tropical foliage, as apparently to realise the most fantastic visions of oriental splendour. A nearer inspection, however, does not fulfil the anticipations which a bird's-eye survey is calculated to excite. This capital may be divided into 3 quarters. The first is the city, properly so called, containing the shops and private dwellings of the inhabs. connected with the court and residency. The streets here are sunk 10 or 12 ft. below the surface, and are so narrow that two carts cannot pass; besides being filthy in the extreme. The chowk, and one or two bazars in its vicinity, are good streets; but on the whole, this extensive quarter is more meanly built than, perhaps, any city of the same rank in Hindostan.

"The second quarter of Lucknow was built mostly by the late nabob, Saadet Ali. It stands near the Goomty, towards the S.E., and consists of one very handsome street, after the European fashion, above a mile in length, with bazars striking out at right angles, and a well-oult new *chowk* or market-place in the centre, with a lofty gateway at each extremity, which presents a Grecian front on one side, and a Moorish one on the other. The houses that compose the remainder of this street belong to the king, and are occupied by members of his family, or officers of his household. These are, for the most part, in the English style; but with a strange occasional mixture of Eastern architecture. The same remark applies to the palaces, &c. that occupy the space between this street and the river. All these palaces are filled with European furniture and pictures, and may rank with comfortable English houses; but none is on a scale of royal magnificence. The king's peculiar residence only excels the others in being approached through 6 spacious courts, with reservoirs, fountains, and innumerable pieces of cast statuary, China figures, and other toys that decorate its area. The adjacent buildings of the British residency terminate the great street to the N. At its opposite extremity is the entrance of the *Delkusha* park, an artificial wilderness

of high grass, with which Saadet Ali clothed the arid tract between Lucknow and Constantia, and well stocked with deer, antelopes, and peacocks.

"The third quarter of the city adjoins the Goomty to the N.W. being only separated by a wretched bazaar from the second. It consists chiefly of palaces and religious buildings; and being in a style more purely oriental than the modern portion of the city, is by far the most interesting quarter to a stranger. The magnificent pile of *Imam-bârah*, with its noble gateway, called the *Roumi-derwasah*; the new palace built, but never finished, by Saadet Ali, the *Dowlet-khanah*, &c. are the chief ornaments of this division of Lucknow." (*Hamilton's E. I. Gaz.*, li. 130, 131.)

There are many stately *khanas*, and some handsome mosques and pagodas scattered in different parts of the wretched alleys, of which the city chiefly consists; but the most striking buildings, as in other Mohammedan capitals, are the royal tombs and mosques. Of these the *Imam-bârah*, or tomb and mosque of Asophud Dowlah, is the chief. It is said by Lord Valentia to be the most beautiful building he had seen in India. "The approach to the building is through a very large quadrangle to a garden, elevated a small height; on one side of which is a very beautiful mosque, and on the other the *Balee* palace. The *Imam-bârah* itself is built on an elevated terrace, and consists of 3 long and finely-proportioned apartments, running parallel to each other; in the middle one is the tomb, level with the ground." (*Valentia's Trav.*, i. 157.) The central room is, according to Hamilton, 167 ft. in length, by 62 ft. in breadth, with an octagon room at each end; and in the rear of the centre, a raised set of rooms, or open arches, with fountains and basins of water under each arch. Lord Valentia says, that a range of silver temples or cenotaphs also extends from one end to the other of the room, raised on platforms about 3 ft. from the ground, and each valued at from 50,000 to 100,000 rupees. The *Roumi-Derwasah*, so called from being supposed a copy of one of the gates at Constantinople, is in a light and elegant, though fantastic style, and a mixture of Gothic and Moorish architecture. A good engraving of it and a part of the city, is given in Lord Valentia's Travels, (i. 172.) Near it is the Fivefold palace, a large fortified building, appropriated to the wives, &c. of deceased sovereigns.

Two bridges have been erected over the Goomty at Lucknow; one a heavy bridge of masonry, the other a bridge of boats. The erection of an iron bridge was projected by Saadet Ali, but the materials arrived from England too late for the accomplishment of the work during his lifetime; and his heir, conformably to a prejudice universal among the Mohammedans of Hindostan, declined the unlucky task of completing the unfinished undertaking of a deceased predecessor. About 3 m. from Lucknow is Baroun, a country seat of the last-named chief, built by himself. It is in a Grecian style of architecture, and has, as might be expected, many faults; but it is ornamented by a very fine portico, rising the whole height of the house in front. Near the city is also Constantia, the former residence of a general in the E. I. Company's service, and erected at an expense of 7 lacs of rupees; but this building is in wretched taste, and only imposing at a distance. It has, however, or had, some fine gardens attached to it.

Lucknow is traditionally said to have been founded by *Lakshman*, the brother of *Rama*; who had his residence here, to extinguish the recollection of which Aurungzebe erected a mosque with 2 minarets on its site. After the battle of Buxar, Shuja ud Dowlah removed his court from Lucknow to Fyzabad; but on his death, in 1775, his successor made this city again the cap. of Oude. (*Lord Valentia's Travels*, i. 135—175.; *Mod. Trav.*; *Hamilton's Hindostan and E. I. Gaz.* &c.)

LUCKPUT-BUNDER, a town of Hindostan, prov. Cutch, of which it is the chief port after Mandavee, on the Khoree, or most easterly branch of the Indus, on the high road from Mandavee to Hyderabad and Tatta, 82 m. S.E. by S. the last-named city, and 67 m. W.N.W. Bhooj. It is defended by a good fort. Early in the present century, it had but 2,000 inhabs., and owing to the shallowness of the river, could only be approached by very small craft; but, by an earthquake in 1819, the Indus was deepened at Luckput to more than 18 ft. at low water, and there is now 20 ft. water in its channel from the ocean to Busta, 8 m. below this town. (*Geog. Journal*, iii. 119.) This must, no doubt, have contributed to the commercial prosperity of Luckput-Bunder, though we have not learned the particulars.

LUDLOW, a mun. and parl. bor., market town, and par. of England, co. Salop, hund. Munslow, on the Teme, 24 m. S. Shrewsbury, 32 m. W. by S. Birmingham, and 126 m. W.S.W. London. Pop. of parl. bor., in 1841, 5,171. The town is neat and well built, and the streets are generally wide, well paved, and lighted. On a bold rock, overhanging the river, at the N.W. angle of the town, stands the castle, supposed to have been built in 1130. The walls and towers which still remain present a mass

of extensive and magnificent ruins; and round the castle are public walks shaded with trees, from which there is a fine prospect of the surrounding country. Near the centre of the town is "the Cross," a handsome stone building, with rooms over it used as a school; and in Castle Street is the market-house, the lower part of which is open, and serves as a corn-market, the upper part comprising several large rooms, used for corporation meetings, assemblies, public balls, &c. The guildhall, where the quarter sessions and court of record are held, is a neat and commodious modern structure; and there is a prison called Gaolford's Tower. Performances are given in a small theatre during the races, which are held in the neighbourhood. The church, which stands at the upper end of the town, is a large cruciform building of perpendicular architecture, surmounted by a square embattled tower, rising from the intersection. The interior is very beautiful: lofty pointed arches divide the nave from the aisles; and at the E. end of a very spacious choir is a noble window, entirely filled with painted glass: the whole church is ceiled with fine oak, and embellished with carving. The S. entrance is peculiar, consisting of a hexagonal porch richly ornamented. The living (valued at 160*l.* a year) is a rectory, in the gift of the lord chancellor. There are three places of worship for dissenters, and to both the church and chapels Sunday schools are attached, furnishing religious instruction to upwards of 500 children. The grammar-school, founded in the reign of Edward VI., is intended to give free instruction, in English and classical learning, to the sons of all residents within the bor. The pupils comprise about 30 free boys, and nearly the same number of pay scholars boarding with the master, who receives a yearly salary of 100*l.*, and is assisted by an usher. The master holds, also, the office of preacher, with a salary of 48*l.* a year. A national school, under the superintendence of the rector and a committee, is well attended by boys and girls; and is liberally supported, partly by contributions, and partly, also, by the funds of a blue-coat charity recently merged into it.

Ludlow, as a place of trade, is of little importance. The glove trade formerly employed several hundred hands; but of late years it has greatly diminished. A small flannel-mill employs about 20 hands, and there is a considerable paper-mill. Malting and tanning are also carried on to some extent; but the chief business is confined to the retailing of goods consumed in the town and neighbourhood. The corporation charter was granted by Edward IV., and has been subsequently confirmed by 9 different monarchs. Under the Municipal Reform Act, the government is vested in a recorder, 4 aldermen, and 12 councillors. Corporation revenues in 1847-48, 1,286*l.* The bor. has returned 2 mems. to the H. of C. since 12 Edward IV.; the right of election, previously to the Reform Act, being nominally vested in the resident burgesses (made so by birth, marriage, or gift), but substantially in the lord of the manor, Earl Powis. The electoral limits were enlarged by the Boundary Act, so as to include, with the old bor., the township of Ludford, and a part of the par. of Stanton Lacey. Registered electors in 1849-50, 446. Market (well attended) on Monday; fairs, chiefly for horses, cattle, and pigs, Mon. before Feb. 12., Tues. before Easter, Wed. in Whitsun week, Aug. 21., Sept. 28., and Dec. 6.; on the two last of which large quantities of hops are exposed for sale.

The history of Ludlow is closely connected with that of its castle, which, being erected by the barons of Montgomery in the 12th century, continued in a habitable state till the suppression of the council of the Marches of Wales by William III. To all lovers of English poetry this castle is interesting, as having been the scene where Milton's "Comus" was performed in 1631, by the family of the Earl of Bridgewater.

LUDWIGSBURG, a town of Wirtemberg, circ. Neckar, of which it is the cap., on rising ground, about 1 m. W. of the Neckar, and 6 m. N. Stuttgart. Pop. in 1837, 6,900. It is one of the best laid out and handsomest towns of the kingdom; but is dull. Charles Street, by which it is traversed from end to end, is 1 m. in length, and, like most of the other streets, is lined with rows of trees. From 1727 to 1733, Ludwigsburg was the chief residence of the court; its palace, though now deserted, is one of the largest and finest in Germany; and it has a gallery of old German, Dutch, and Flemish pictures; and a theatre. The palace-gardens, formerly celebrated for their beauty, are now falling into disorder from neglect. Ludwigsburg has a Lutheran parish church, three other churches, an arsenal, a military school for 20 officers' sons, a lyceum, an orphan asylum, and workhouse, house of correction for females, school for poor children (*Kinderrrettungsanstalt*), a cannon-foundry, and manufactures of woollen cloth, earthenware, and buttons. In the neighbourhood are the royal summer palaces of Favourite and Monrepos, and the fine statue of Count Zeppelin, erected by King Frederick of Wirtemberg. About 6 m. distant is Marbach, the

birthplace of Schiller, and the mathematician Mayer. (*Memminger; Beschreibung von Wirtemberg*, 523-24.; *Berghaus; Stein*.)

LUGANO (TOWN AND LAKE OF). The town of Lugano, being with Bettinzoro and Locorno, a cap. of the Swiss canton of Tessin, stands on a bay on the W. bank of the lake of same name, 15 m. N.N.W. Como. Pop. 4,800. It is a well built, handsome town, finely situated round the curve of a beautiful bay, surrounded by an amphitheatre of hills, having their slopes studded with villas, vineyards, gardens, and forests; while in the distance are seen the snowy pinnacles and craggy masses of the Alps. Among the principal public buildings are the church or cathedral of San Lorenzo, on an eminence above the town, commanding a fine view, with a finely sculptured portal and a façade, said to be by Bramante: the church of the Franciscan friars, remarkable for two paintings of first rate excellence by Bernardo Luini. It has also some pretty extensive silk manufactures, a large theatre, and an hospital; several establishments for the printing and sale of books newly published or prohibited in Italy; and no fewer than 3 newspapers, which occasionally advocate doctrines that are but little to the taste of the Austrian and Sardinian governments. Perhaps, however, the town may derive its principal support from its being on the route, and one of the entrepôts, of a considerable portion of the trade carried on between Italy and Switzerland, and Germany, by the pass of St. Gothard. Though nominally and politically Swiss, the Luganese are Italians in dress, language, manners, and appearance; in every thing, in short, but their greater activity and enterprise; and for this distinction they are mainly indebted to their comparatively free institutions and free press. Monte Caprino, near Lugano, has a great number of natural caverns or grottoes, which, on account of their coolness, are used by the inhabs. in summer as cellars in which to keep their wine, meat, and other provisions.

The Lake of Lugano (formerly the *Lacus Ceresius*), is principally within the canton of Tessin, in Switzerland, but partly also in Lombardy, between the Lago Maggiore and the Lago di Como. It is of an extremely irregular figure: its greatest length from Porlezza at its N.E. to Porto at its S. extremity, is about 16 m.; but in addition to its main body, it has two great arms, one stretching S.S.E. to Lago, and the other N. to Agno. It is nowhere above 2 m. in width, and is mostly surrounded by high mountains, overhanging woods, and bold, abrupt precipices. One of the mountains, San Salvador, on a promontory, washed on two of its sides by the lake, rising to the height of nearly 2,000 ft. above its level, is a sublime object from the lake, and commands from its summit a most magnificent and varied prospect. In some parts, however, the banks of the lake slope gently down to the water's edge, and are covered with villages, vineyards, gardens, &c. The bay of Lugano on its W. side, with its surrounding amphitheatre of hills, is particularly fine. Its waters are quite transparent, and so very deep, that in some places no soundings are said to have been attained. It is about 190 ft. above the level of the lakes of Como and Maggiore, into the latter of which the Tresa conveys its surplus waters. (*Conder's Italy*, i. 314.; *Estace*, iv. 60.; *Coze's Switzerland*, iii. 268.; *Murray's Handbook*, &c.)

LUGGERSHALL, or LUDGERSHALL, a decayed bor., market town, and par. of England, co. Wilts, hund. Amesbury, 25 m. N.E. Salisbury, and 68 m. W. by S. London. Area of par. and bor., 1,660 acres. Pop. in 1841, 554. The town, now in a wretched and decaying state, contains nothing worth mention, except an old ruinous church, and a place of worship for Baptists; the inhabs. are chiefly supported by agricultural labour. Formerly, however, it must have been a place of more importance; for a large castle existed here soon after the Conquest: it was also one of the most ancient parl. hors. and notwithstanding its insignificance in modern times, sent 2 mems. to the H. of C. down to the passing of the Reform Act, by which it was disfranchised.

LUGO, a town of Spain, prov. Galicia, and a bishop's see, on the Minho, 47 m. E.S.E. Coruña, and 142 m. N.N.E. Oporto. Pop., according to Miñano, 7,209. It occupies an eminence on the E. bank of the river, and is surrounded by an ancient wall of great thickness, with circular projecting towers. The streets are mean and irregularly built: the chief buildings are a Gothic cathedral, 4 convents, 2 hospitals, a singular-looking prison, a foundling asylum, and public seminary. The climate is alleged to be colder than that in other parts of Galicia: snow is frequent, and N. winds are common during the winter months. The place appears to be in a languishing condition; the only fabrics are those of thread stockings and Morocco leather. In the neighbourhood are bred great numbers of cattle, horses, mules, sheep, and hogs, which meet with a ready sale at the monthly fairs, and the great fair in October.

Lugo is a place of great antiquity, having been the cap. of a *conventus*, or district, under the Romans, who called it *Lucus Augusti*. Many monuments of Roman art were

existing in the time of Pons; but they have nearly all been since destroyed. The Roman medicinal baths are still, however, used, and the works formed to protect them from the floods of the Minho may yet be traced. Alonso the Catholic wrested Lugo from the Moors, and re-established its bishopric. (*Mémoires, Mod. Trav.*)

LUND, a city of Sweden, near its S. extremity, prov. Malmö, 20 m. N.E. Malmö. Pop. 4,120. It is open, and irregularly built, but clean. It is an archbishopric, and has a cathedral, an ancient irregular building, raised at different periods. But it is chiefly remarkable for its university, founded in 1666. This institution has 22 regular and 7 assistant professors, and is attended by about 600 pupils. In 1834 it had 596 pupils, whereof 108 were students of divinity, 120 of law, 50 of medicine, and 160 of philosophy, the sciences, &c. It has a library of 20,000 printed vols. and 1,000 MSS., with museums of natural history and mineralogy, antiquities and medals, &c.; an observatory, a chemical laboratory, and a botanical garden. Puffendorf, who, next to Grotius, is the grand authority in matters of public law, was appointed Professor of the Law of Nature and Nations in this university in 1670; and here, in 1672, he published his great work *De Jure Naturæ et Gentium*. "Without," to use the words of a distinguished authority, "the genius of Grotius, and with very inferior learning, he has yet treated this subject with sound sense, with clear method, with extensive and accurate knowledge, and with a copiousness of detail sometimes indeed tedious, but always instructive and satisfactory." (*Macintosh on the Law of Nature and Nations*, p. 31.) Linnæus was for some time a pupil in the University of Lund. The town has manufactures of woollen cloths and tobacco, tanneries and sugar refineries, a discount bank, and some foreign trade. The ancient kings of Scanla were chosen on the hill of Lybers, near the town. (*Stén; Cass's Travels*, iv. 298.; *Dict. Géog.*, &c.)

LUNEBURG, a town of the kingd. of Hanover, cap. of the distr. and principality of Lunenburg, on the Ilmenau, 67 m. N.N.E. Hanover, and 27 m. S.E. Hamburg. Pop., in 1848, estimated at 11,800. It is surrounded by walls of no great strength, and entered by 6 gates. It has dark and narrow streets, and old-fashioned houses. The castle, or palace of the prince, the town-hall, council-house, military academy for young nobles, gymnasium, exchange, and cavalry barracks, are the principal public buildings. The military academy has a library of 14,000 vols., and in the town-hall is another library. Lunenburg has 4 churches, in one of which are the tombs and monuments of many of the ancient dukes of Lunenburg, several superior schools, an orphan asylum, and a *mont-de-piété*.

Lunenburg was formerly a Hanse Town, was governed by magistrates of its own selection, and had an extensive trade. It took part in the Baltic herring-fishery, and had numerous breweries and manufactures of woollen stuffs, &c., now much fallen off. Lime-burning and the making of salt are at present the chief branches of industry. A large and singular rock of gypsum, rising nearly 170 ft. above the Ilmenau, in the immediate vicinity of the town, furnishes abundant materials for the former business. About 20,000 tons of lime a year are sent to Hamburg, Altona, and Holland. About 160,000 centners a year of salt are procured from some adjacent salt-springs: the evaporation is effected by means of turf, and is conducted under a special commission, the government having a monopoly of the article. The price of the undried salt is 40 dollars, and of the dried, 46 doll. the last of 400 lbs. (*Berghaus*.) Lunenburg has some fabrics of woollen and cotton and linen goods, tobacco, paper, cards, and soap; with distilleries, breweries, &c. It also trades in horses; and is the seat of a transit trade between Hamburg and the Elbe, and the interior provs. of Hanover. About 200,000 centners of merchandise are said to have passed *in transitu* through Lunenburg in 1838. (*Von Reden's Hanover*, ii. 87., &c.; *Berghaus*; *Stén*; *Hodgskin's N. Germany*.)

LUNEL, a town of France, dép. Hérault, cap. cant., on the canal of Lunel, 14 m. E.N.E. Montpellier. Pop. in 1846, ex. com., 5,797. It has a fine promenade, infantry and cavalry barracks, numerous liqueur and brandy distilleries, and a brisk trade in corn, wines, and raisins. The muscadine wine, produced from vineyards situated on gently rising grounds to the N. of the town, and bearing its name, is reckoned by some connoisseurs as the best of its class, and is rivalled only by the Frontignan. "It is a very delicate wine, of a bright yellow colour, with a less distinct flavour of the grape, and less cloying than the Frontignan. The vineyard called the Clos-Maset, which has been long known to afford the first-rate growth, makes about 100 hds. a year, being one third of the total quantity supplied from the territory of Lunel. Several of the more ordinary muscadine wines, however, come into the market as Frontignan and Lunel; but they may be easily detected by their deeper colour, and the want of the characteristic flavour and perfume,"

(*Henderson on Wines*, p. 177.) According to Jullien, the wines of Lunel, "*Sont plus précoces et plus fins que ceux de Frontignan; mais ils ont moins de corps, un goût de fruit moins prononcé, et ne conservent pas aussi longtemps.*" (*Topographie de Vignobles*, p. 260.)

LUNEVILLE, a town of France, dép. Meurthe, cap. arrond., on the Vezouse, and on the road from Paris to Strasbourg, 16 m. S.E. Nancy. Pop. in 1846, ex. com., 12,164. It is generally well built, and has a good square, a *château* erected by Leopold, duke of Lorraine, early in the last century, and long the residence of Stanislaus, king of Poland, a handsome par. church, very extensive cavalry barracks, a parade ground of 200 hectares, a large covered riding arena, two hospitals, a synagogue, theatre, and manufactures of woollen cloth, woollen and cotton yarn, gloves, &c. Luneville is one of the principal cavalry stations in France. The origin of the town is uncertain, but its name seems to indicate that Diana was anciently worshipped here; and several Roman medals, with the impress of that divinity, have been found near a fountain in the neighbourhood. The peace between France and the German Confederation, in 1801, by which the former acquired the territory on the left bank of the Rhine, was concluded in this town. (*Hugo*, art. *Meurthe*; *Berghaus*; *Guide du Voyageur*, &c.)

LURGAN, an inland town of Ireland, co. Armagh, prov. Ulster, about 3 m. from the S. border of Lough Neagh, and 18 m. W.S.W. Belfast. Pop., in 1841, 4,677. It is a neat, clean, and well-built town, consisting principally of one wide street. It has a par. church, a R. Cath. chapel, meeting-houses for Presbyterians and Quakers, a court-house, and a bridewell. A manor-court is held every three weeks, and general sessions and petty sessions every Friday. It is a constabulary station; and has 2 schools on the foundation of Erasmus Smith, and a subscription school. The linen manufacture, particularly that of diapers and damasks, is extensively carried on, as is that of tobacco: there are 2 breweries and an extensive distillery. Markets on Fridays; fairs, August 8. and November 22. The nearness of the town to the point where the Lagan and Newry navigation joins Lough Neagh, affords great facilities for inland traffic. Post-office revenue, in 1830, 409*l.*; in 1836, 592*l.* Branches of the Belfast, Northern, and Provincial Banks were opened in 1834, and of the Ulster Bank, in 1837.

The town is on the estate and in the immediate vicinity of the residence of the Brownlow family, to the head of which it gives the title of baron.

LUTON, a market town and par. of England, co. Bedford, hund. Flitt, 16 m. W. N.W. Hertford, and 28 m. N.W. London. Area of par., 15,500 acres. Pop. in 1841, 7,748; do. of township, 5,827. The town, pleasantly situated between two hills in the Chiltern chalk range, is irregularly built with three long streets, running from a market place (in which is an old town-hall), in the form of the letter Y. The church is an interesting specimen of Gothic architecture, with a square embattled tower surmounted at the angles by hexagonal pinnacles, and a handsomely decorated W. door: the interior contains, besides some painted windows, a curiously carved font, and some fine old monuments. There are also places of worship for Wesleyan Methodists, Baptists, and the Society of Friends. Three well-attended Sunday schools, a national and Lancastrian school, furnish instruction to the children of the poor; and there is a well endowed hospital for lodging and clothing 24 aged widows. The inhab. are principally engaged in the manufacture of straw hats, and especially of the variety called the Tuscan grass-plait. Lace-making used also to be carried on to a considerable extent; but this business has been all but extinguished by the rise of the Nottingham frame-lace trade. Two miles E. of the town is Luton Hoo Park, formerly a seat of the Bute family, erected by Lord Bute, the favourite of George III. Markets on Monday; large cattle fairs, April 18. and Oct. 18.

LUTTERWORTH, a market-town and par. of England, co. Leicester, hund. Guthlaxton, 12 m. S. Leicester, and 79 m. N. N.W. London. Area of par., 1,890 acres. Pop., in 1841, 2,531. The town, situated on the Swift, a tributary of the Avon, comprises one main and well built street, with others of inferior size; there are some good houses, but a large proportion of the tenements are mere mud-walled thatched cottages. The church is a large and very handsome structure, in the pointed style, with a high square tower having turrets at the angles: the interior is elegantly fitted up. But it is principally remarkable from having been the scene of the pastoral labours of John Wycliffe, and from its containing his pulpit and portrait. This early and illustrious reformer and eminent divine was appointed rector of Lutterworth in 1374, where he expired 10 years afterwards, on the 31st of December, 1384. Luckily, however, his doctrines did not die with him. In 1415, the Council of Constance vainly endeavoured to gratify their impatient rage against his memory, by ordering his remains to

be disinterred and cast upon a dunghill. This disgraceful sentence was carried into effect: for, the bones of Wycliffe being taken up were burned, and the ashes thrown into the Swift. "Thus," as Fuller has ingeniously expressed it, "this brook (the Swift) has conveyed his ashes into Avon, Avon into Severn, Severn into the narrow seas, they into the main ocean: and thus the ashes of Wycliffe are the emblem of his doctrine, which now is dispersed all the world over."

Lutterworth has 3 places of worship for dissenters, 4 Sunday-schools, an endowed free-school, attended by 100 boys, and 3 smaller subscription schools. Its chief manufacture is that of coarse hosiery, but it is not extensive. It has a considerable trade in farm and dairy produce, chiefly carried on at its 7 annual fairs. Markets on Thursday: fairs Thursday after Feb. 19., March 10., April 15., July 23., and Oct. 10.; also on Holy Thursday.

LUTZEN, a town of the Prussian states, prov. Saxony, circ. Merseburg, 12 m. S.W. Leipzig. This town, the pop. of which is under 1,500, would be unworthy notice were it not that its environs have been the scene of two of the most memorable conflicts of modern times. The first, which occurred on the 16th of November, 1632, took place between the Imperialists, under Wallenstein, and the Swedes, under their heroic monarch, Gustavus Adolphus. The latter were victorious; but the victory was dearly purchased by the death of their king, who fell (it has been alleged by treachery) in the action. Besides their king, the Swedes lost about 3,000 men; but the loss of the Imperialists amounted to double that number, and their artillery fell into the hands of the conquerors.

The other great conflict took place nearly on the same ground on the 2d of May, 1813, between the French, under Napoleon, and the allied army, encouraged by the presence of the emperor Alexander and the king of Prussia. The struggle was most obstinate and bloody; but in the end victory declared in favour of the French. The allies lost 20,000 men, killed and wounded, and that of the French was also very severe.

LUXEMBURG (GRAND DUCHY and PROVINCE OF), a territory of W. Europe, between lat. 49° 25' and 50° 28' N., and long. 5° and 6° 30' E.; having N. the Belgian prov. of Liege, W. that of Namur, E. Rhenish Prussia, and S. France. Greatest length and breadth about 65 m. each. Area, 2,700 sq. m. Pop., in 1849, 372,879. By the treaty of the 19th of April, 1839, this territory was definitively partitioned between Holland and Belgium; the E. portion, with an area of about 1,000 sq. m., and a pop. of 186,500, being assigned to the former, and the W. portion, with an area of 1,700 sq. m., and a pop., also, of about 186,500 to the latter. The title of the Grand Duke of Luxembourg, with the suffrage in the councils of the German Confederation, are enjoyed by the king of the Netherlands.

A chain of hills, branching from the Ardennes, traverses the country from S.W. to N.E. It nowhere rises to more than 2,000 ft. above the sea; but it forms the dividing line between the basins of the Meuse and the Moselle. The last-named river and the Sur form the E. boundary of the grand duchy; the other principal streams are the Ourte, Our, Alzette, Semois, &c., tributaries of either the Meuse or the Moselle. The valleys are fertile, but the rest of the country has mostly a stony and barren soil; and in some parts, especially about the centre of Belgian Luxembourg, a good deal of the surface is occupied with marshes, heaths, and poor waste land. The entire surface is estimated at 690,000 *bonniers* (a measure nearly answering to hectares), of which about 240,000 are supposed to be in tillage, 211,000 in woods, 127,000 in heaths, wastes, &c., and 112,000 altogether unproductive, or occupied by roads, rivers, &c. It is mostly divided into small properties. Rye, barley, oats, and wheat are the principal corn crops; and potatoes, with flax, hemp, and beet-root, are raised. The agricultural course almost invariably occupies 3 years; the first year, wheat, maslin, or rye is sown; in the second, oats, barley, or potatoes; and in the third, the land is left fallow. The vine is grown on the banks of the Moselle; and the annual produce of wine was estimated, in 1837, at 75,503 hectol. The chief branch of rural industry is, however, the rearing of cattle for exportation. The sheep yield indifferent wool, but their flesh is excellent. Horses are good. A great many hogs are reared, and in the first half of 1836, 36,700 were exported to France. The meadow-lands, especially in the valleys of the Alzette, Chiers, and Semois, are carefully irrigated and manured. The woods are an important source of wealth, the annual produce of timber and fire-wood being estimated, according to Vandermaelen, at nearly 1,100,000 *steres*. Nearly 93,000 hectares of woods belong to communes, there being scarcely a commune without a certain portion of forest land. There are few countries in which iron is more abundant; and about 9,200,000 kilog. of metal are produced annually: from the want of coal, it has to be smelted with timber.

Since 1837, however, coal has been admitted into Bel-

gian Luxembourg (where this branch of industry is principally conducted), from Rhenish Prussia at the reduced duty of 1 fr. per 1,000 kilog., and the production of iron is probably on the increase. The slate of Luxembourg is of a superior quality. Viel-Salm, in the N. of Belgian Luxembourg, furnishes about 4 millions of slates a year; and in the S., the quarries of Herbenmont and Geripont produce about 10 millions a year, mostly exported to the neighbouring countries. Slate-pencils, marble, and a little lead, zinc, copper, and manganese are the other chief mineral products. Next to forges and potteries, woollen cloth, lace, leather, and glue factories, distilleries, and breweries, are the most numerous manufacturing establishments. The commerce of Luxembourg, however, except in iron, slate, and cattle, is insignificant. The inhabs., partly of Saxon extraction, and partly Walloons, are all R. Catholics. The whole territory is subdivided into 3 districts; those of Luxembourg, Diekirch, and Grevenmacher: each has in it a tribunal of original jurisdiction; and the first, which is identical with the Dutch prov., is placed under a Prussian military governor, and a Dutch civil commissary. Belgian Luxembourg is governed in the same way as the other Belgian provs. Dutch Luxembourg has the 11th place in the German Confederation, with 3 votes in the full council, and one in the committee. It has, since 1839, furnished a contingent of 1,850 men to the army of the confederation; the contingent previously to the division of the duchy having been 2,556 men.

LUXEMBURG (Germ. *Luxemburg*), a town belonging to the kingdom of the Netherlands, the cap. and only place of any importance in the above Grand Duchy, and one of the strongest fortresses of Europe; on the Alzette, a tributary of the Sur, 22 m. S.W. Treves, and 77 m. S.S.E. Liege; lat. 49° 37' N., long. 6° 7' 5" E. Pop., in 1848, 12,200. It is built partly on a steep rocky height, and partly in the valley beneath; being, consequently, divided into the upper and lower towns, which communicate by flights of steps, and streets running zigzag, so as to be passable for carriages. Both towns are fortified; and the works, which are partly excavated in the solid rock, have been greatly strengthened by the successive possessors of the town—Spaniards, Austrians, French, and Dutch. Great improvements have recently been made in them; and since 1837, a new fort has been constructed outside the Treves gate. The casemates of that part of the fortifications called *Le Bouc*, resemble those of Gibraltar, and are capable of accommodating 4,000 men. Luxembourg is tolerably well built, but has no remarkable public buildings. It has some iron forges, and manufactures of linen fabrics, leather, and tobacco. It is at present garrisoned by 2,000 Prussian troops.

The territory of Luxembourg was governed by its own counts from the time of the Carolingian Frankish kings to 1354, when the Emperor Charles IV. erected it into a duchy. It was taken by the French in 1794, and subdivided among the depts. of Forets, Ardennes, Sambre-et-Meuse, and Ourthe; but, in 1814, it was erected into a grand duchy, and given to the king of Holland, in exchange for the renunciation of his claims upon Nassau. (*Vandermaelen's Luxembourg; Berghaus, &c.*)

LUXEUIL (an. *Luxovium*), a town of France, dép. Haute-Saône, cap. cant., on the Breuchin, 15 m. N.E. Vesoul. Pop. in 1836, ex. com., 3,628. It is well built and clean, and has a good town-hall, a large hospital, a communal college, and manufactures of hats, leather, tin and iron goods, &c.; but it is chiefly remarkable for its hot or thermal springs, which are usually frequented by from 500 to 600 visiters. The hot baths of *Luxovium* were known to the Romans, who are said to have decorated them with fine buildings. (*D'Anville, Notice de la Gaule*, p. 430.) The traces of several Roman roads, aqueducts, and edifices, with various statues, medals, &c. have been discovered in and round the town. (*Hugo, art. Haute-Saône; Dict. Géog.*)

LUZON, the largest and most N. of the Philippine Islands, which see.

LYME-REGIS, a parl. and mun. bor., market-town, sea-port, and par. of England, co. Dorset, in Bridport div. of Lib. Lodgers and Rothenhampton, 20½ m. S.S.E. Taunton, and 132 m. W.S.W. London. Area of parl. bor., which comprises the two parishes of Lyme and Charmouth, 1,980 acres. Pop., in 1841, 3,376. "Lyme is a small and irregularly built town, situated among hills, which, by rendering it difficult of access, effectually preclude it from becoming a place of importance. This place, as well as Charmouth, is frequented in the summer as a watering place, and many respectable families are settled in the neighbourhood; but the streets are very irregular, and not lighted, so that, on the whole, it has the appearance of a poor and inconsiderable place." The pier or cobb (originally erected in the reign of Edward III., and greatly lengthened in 1836, at the expense of government) is 680 ft. long and 12 ft. broad, furnishing good shelter for shipping between Start Point and the Isle of Portland; and close to the pier is the

station-house. "The regular trade of the place, however, appears to be altogether insignificant; and it is chiefly valuable as a port of refuge for small vessels in bad weather." (*Port Boundary Report*). In 1866 there belonged to the port 13 vessels of the burden of 1,169 tons; the customs' revenues in 1866 amounted to 2,142*l.*, indicating a great diminution since the close of the last century when they amounted to about 16,000*l.* a year. This change is ascribed partly to the decay of its once considerable Newfoundland fishery and Mediterranean trade, and partly also to the separation of Bridport, united with Lyme till 1833. An old church, three places of worship for dissenters, a house used for assemblies, and an old town-hall, are the chief public buildings. Two schools for poor children are supported by subscription, and there are dispensaries and other charities for the sick and aged.

The bay of Lyme is undoubtedly very ancient, and claims to be one by prescription. Its first charter is dated 12 Edward I.; and its early consequences as a port is shown by the fact, that in the war with France under Edward III. it furnished four ships to serve at the siege of Calais. The town, bay is now governed by a mayor, 3 other aldermen, and 12 councillors, but has no commission of the peace. Corporation revenues, in 1847-48, 1844. The bay and 2 miles to the N. of C. from the reign of Edward I. down to the passing of the Reform Act, which deprived it of one town previously to that act the right of election was vested in the corp. burgesses and freemen. The Boundary Act enlarged its limits, so as to include the entire par. of Lyme and Charmouth. Reg. aldermen in 1848-49, 317. Markets on Friday; large cattle fairs, Feb. 13, and the 2.

the living being a curacy dependent on the vicarage of Bideford. There are likewise three places of worship for Wesleyan Methodists and other dissenters. A free school for both sexes, a girls' national school, and an infant school, provide instruction for the children of the poor, and there are several minor charities.

"The town is considered to be in an improving state, and several large outlays of capital have taken place in the last few years. A company has been formed for the purpose of supplying steam navigation to and from Portsmouth and the Isle of Wight, 2,000*l.* have been subscribed for the formation of gas-works, and the same sum for the erection of baths, dwelling-houses, also, have been and are now being built on an improved scale, the principal object of these improvements being to induce visitors to resort to the town during the summer. Little or no commerce is carried on here, and the only manufacture of the neighbourhood is that of salt, which some years ago was carried on to a very large extent, but lately has decreased. A large yearly fair is held for the sale of cheese, exported to various places along the Sussex coast." (*Ann. Corp. Rep.*)

Lymington is a town by prescription, its corporate officers since the Municipal Reform Act being a mayor, 3 other aldermen, and 12 councillors; but it has no commission of the peace. Corporation revenues in 1847-48 (chiefly from quay and river dues), 102*l.*

Lymington has over 3 miles to the N. of C. since the 25th of March, the right of election being vested, till the Reform Act, in the resident burgesses, of whom there were only 24 in 1831. The Boundary Act enlarged the limits of the bay, so as to include the entire par. of Lymington with a part of the par. of Bideford. Registered aldermen in 1848-49, 317. Lymington is also a polling place for the 8 division of Hampshire. Markets on Saturday; large fairs for cheese, butter, and cattle, May 12 and Oct. 2.

LYNCHBURG, a town of the U. States, cap. Campbell co., in Virginia, on James River, here crossed by two bridges, about 20 m. below its great falls, and 90 m. W.S.W. Richmond; lat. 37° 30' N. long 79° 22' W. Pop., in 1846, 6,386. It is mostly on the declivity of a hill, and has a court-house, a goal, a market-house, several churches, a Friends' meeting-house, a Lamen-

trian school, &c. A large proportion of the houses are of brick, and of 2, 3, and 4 stories. Lynchburg is one of the most flourishing commercial towns in the state, and from its situation, it commands an extensive trade not only with the W. part of Virginia, but with N. Carolina, Tennessee, Kentucky, and Ohio. It is one of the largest marts for tobacco in the Union, from 10,000 to 16,000 bbls. having been imported in it annually for the last 10 years. (*Broadford, 1837*) It has many tobacco factories, and warehouses for dry goods; and manufactures of cotton and woolen goods are carried on, and there are extensive flour-mills in its vicinity. The chief articles brought to its markets are tobacco, wheat, flour, hemp, butter, peach and apple spirits, whiskey, cider, beef, live hogs, lead, iron, &c., a considerable proportion of which is sent down the river to Richmond for further exportation. (*Ann. Corp.*)

LYNN.—A large proportion of the houses are of brick, and of 2, 3, and 4 stories. Lynchburg is one of the most flourishing commercial towns in the state, and from its situation, it commands an extensive trade not only with the W. part of Virginia, but with N. Carolina, Tennessee, Kentucky, and Ohio. It is one of the largest marts for tobacco in the Union, from 10,000 to 16,000 bbls. having been imported in it annually for the last 10 years. Lynchburg is one of the most flourishing commercial towns in the state, and from its situation, it commands an extensive trade not only with the W. part of Virginia, but with N. Carolina, Tennessee, Kentucky, and Ohio. It is one of the largest marts for tobacco in the Union, from 10,000 to 16,000 bbls. having been imported in it annually for the last 10 years. (*Broadford, 1837*) It has many tobacco factories, and warehouses for dry goods; and manufactures of cotton and woolen goods are carried on, and there are extensive flour-mills in its vicinity. The chief articles brought to its markets are tobacco, wheat, flour, hemp, butter, peach and apple spirits, whiskey, cider, beef, live hogs, lead, iron, &c., a considerable proportion of which is sent down the river to Richmond for further exportation. (*Ann. Corp.*)

chiefly colliers, come thither, each year, from other ports. Gross customs' revenue, in 1846, 49,613*l*. The harbour is capacious; but the approach to it is rendered both difficult and hazardous by numerous and perpetually shifting sand-banks, occasioned by the action of the tide on the light silt and sand forming the bed of the river. The estuary of the Ouse is nearly 1,000 ft. broad, and there is accommodation in the port for about 300 merchant-ships. Spring-tides rise about 18 ft., and during the prevalence of N. and N.E. winds, are thrown in with such violence and rapidity as sometimes to damage the shipping. "The harbour has also been injured since the completion of the Eau-brink cut, which has caused a great accumulation of alluvial soil along the King's staith and other quays lining the E. bank of the river; but this evil is now somewhat lessened by the erection of jetties on the opposite shore, which direct the course of the river more to the E. bank, by means whereof these deposits are scoured away." (*Mun. Bound. Rep.*)

King's Lynn, (called Bishop's Lynn before Henry VIII. conferred on it its present name.) received its first charter from King John, in return for valuable services done him by its inhabitants during the baronial wars. Its corporate privileges were confirmed and enlarged by several monarchs, and lastly by Charles II. The bor. is now divided into 3 wards, the municipal officers being a mayor and 5 other aldermen, with 18 councillors. Quarter and petty sessions are held under a recorder; and it is the seat of a county-court, before which 937 plaints were entered in 1848. Corp. rev., in 1847-48, 9,737*l*. Lynn has sent 2 mems. to the H. of C. since the 6th of Edward II., the right of election down to the Reform Act being vested in freemen by birth, servitude, gift, or purchase. Registered electors, in 1849-50, 1,100. Lynn is also a polling-place for the W. division of Norfolk. Markets, principally on Tuesday, but also on Saturday. Large fairs for London goods, Feb. 14. and five succeeding days, also for cheese a week after old Michaelmas, lasting two days.

LYONS (Fr. *Lyon*; an. *Lugdunum*), a large city of France, being the principal manufacturing town of that kingdom, in the dep. of the Rhone, of which it is the cap., 275 m. E.N.E. Bordeaux, 172 m. N.N.W. Marseilles, 245 m. S.E. Paris, and 70 m. W.S.W. Geneva; lat. 45° 45' 58" N., long. 4° 49' 24" E. Pop. of the city proper, in 1846, 159,783; but, including its suburbs, the pop. is above 200,000. It is situated at the junction of the Rhone and the Saône, chiefly on a tongue of land or peninsula between those two rivers, the length of which is nearly 3 m. and its average breadth about 3 furlongs, though in the N. part of the city increasing to upwards of 1 m. Some extensive and important quarters, as St. Just, St. George, St. Irénée, Vaise, &c., are, however, situated on the W. or right bank of the Saône, on and round the hill of Fourvières; and in the E., on the left bank of the Rhone, are the *Faubourg Guillotière* and the *Quartier des Brotteaux*. S. of the city, the handsome and regular suburb of *Perache* is rapidly extending towards the extremity of the peninsula; while on the N., beyond the fortifications, on the declivity of a hill extending from one river to the other, is the municipal commune of *La Croix Rousse*, comprising the suburbs of *Serin* and *St. Clair*. A tower on the hill of Fourvières, 680 ft. above the Saône, commands a landscape which combines the rich and the grand in the highest degree. At the spectator's feet is Lyons, with its two noble rivers; its bridges, squares, quays, and public edifices, the vessels that crowd the Saône, and the busy activity that pervades its streets, announcing a highly civilised, prosperous, and opulent community. "Unlike Paris and many other French towns, which stand isolated, as it were, in the country, with ploughed land and meadows coming close up to the barriers, Lyons appears as the nucleus of a vast population, melting gradually by its suburbs into clusters of villages, which break up into smaller villages, hamlets, villas, and manufactories. Even at the distance of 10 m., the country is pretty thickly dotted with buildings, some of which are seen sweetly perched on the S. and W. declivities of the hills which enclose the plain. The high and mountainous land on the W. side of the city is scarcely an exception; for sterile as it seems, it is enlivened by country-houses, villages, and manufactories. Beyond the hills which bound the plain on the N.E., is seen Mount Jura; on the E. we have part of the Alps; above which, at the distance of 100 m. from the town, Mont Blanc is distinctly seen like a white cloud or a mass of snow." (*MacLaren's Notes*, p. 35.)

The interior of Lyons exhibits little regularity, and chiefly consists of narrow, winding, and dirty streets, rendered dark by the extreme loftiness of the houses. These, though of stone, and solidly built, are old and *triste*, and several of the streets leading up steep declivities are inconvenient for carriages. The *quartier St. George* is disgustingly filthy, and greatly inferior in appearance to the suburbs of *Croix Rousse* and des

Brotteaux, which, like it, are chiefly inhabited by the working classes. But the wretched aspect of some parts of the city is in some degree counterbalanced by the magnificence of others. Three ranges of quays, two on the Saône and one on the Rhone, interspersed with 17 bridges, nearly all of modern construction, with the glacis and hill of Fourvières, encompass all that is situated between the two rivers, and form a noble and imposing outline. The Saône, which is far more useful to Lyons in a commercial point of view than the Rhone, is lined with numerous wharfs and landing-places; and along the Rhone from the *Faubourg St. Clair* to *Port Perache*, a distance of a league, is a line of elegant public and private edifices, and a public walk, planted with a double row of trees, commanding a fine prospect over the fertile plain to the E. The waters of the Rhone are rapid, cold, and clear, and it forms in every respect a remarkable contrast to the Saône, which has a sluggish current, and a muddy stream. The Rhone is very liable to sudden inundations, to prevent the devastating effects of which some extensive embankments have been raised on its left bank. Still the river, when swollen, frequently does much damage, as was fully evinced in the autumn of 1840, when the inundations carried away some of the bridges, laid a considerable portion of Lyons, and of the surrounding country, under water, and occasioned great damage. There were previously 10 bridges within the city, 8 of which crossed the Rhone. These were the *Pont de la Guillotière*, originally built in 1190, 529 yards in length by 24 feet wide, with 17 stone arches, but of these only 8 are over the water; the *Pont Morand*, constructed of wood in 1774, 228½ yards long by 14 wide; and between the two the *Pont Lafayette* (formerly *Charles X.*), a handsome bridge, 235 yards in length, the piers of stone, and the upper part of wood. The bridges over the Saône vary in length from 120 to 140 yards; the principal is the *Pont de Tilsit*, leading from the centre of the city, a stone bridge of 5 arches, 130 yards long by 15 wide, erected at a cost of 3,000,000 fr., or 120,000*l*. sterling. (*Hugo*.) Lyons has 55 places or squares, some large and regular, but, as may readily be inferred from their number, the great majority are very much the reverse. The *Place Bellecour* (formerly *Louis-le-Grand*), one of the largest and handsomest in France, and perhaps in Europe, in the very heart of the city, has two of its sides nearly 340 yards in length, the two others measuring 246 and 218 yards. One of the principal streets forms part of its N. face; its two shorter sides consist of symmetrical ranges of handsome buildings; and on its S. side is a fine plantation of linden trees. This square is ornamented with an equestrian bronze statue of Louis XIV., and forms, with the quays, the favourite promenade of all classes. The *Place Louis XVIII.* leads into the *Cours du Midi*, a broad and fine thoroughfare, planted with trees, which separates the city from the new town of *Perache*. The other principal squares are the *Place des Terreaux*, containing the town-hall and *Palais des Arts*; *des Cordeliers*, with a fluted column upwards of 60 feet in height, supporting a colossal statue of Urania; *de Comédie*, in which is the entrance to the *Grand Théâtre*; *Sathonay*; the *Place Louis XVI.*, in the *quartier des Brotteaux*, &c. In the N. part of the city a covered arcade has been formed, called the *Galerie de l'Argue*, nearly 500 feet in length, and containing many good shops. Lyons is supplied with water from the Rhone, and has numerous public fountains, but none worth notice.

The town-hall holds the first rank among the public buildings. This edifice, the finest of its kind in France, was erected between 1646 and 1655. It has a front nearly 160 ft. in width, flanked with a square tower and dome at either end. Its ballustrade is ornamented with two large statues of Hercules and Minerva, and in the centre is a clock tower, surmounted by a cupola, which rises to the height of 157 ft. above ground. The depth of the building is 383 yards, at the end of which another handsome front faces the *Place de Comédie*. Its interior contains a vestibule, in which are two colossal bronze groups emblematical of the Rhone and Saône; a fine staircase, and a saloon, 87 ft. long by 40 wide, which formerly contained many fine paintings, destroyed during the Revolution. Of the 18 churches, none is very remarkable either for size or elegance. The cathedral of St. John, on the right bank of the Saône, was begun in the 7th century, but not completed till the reign of Louis XI. It is a Gothic edifice, having at its four corners, 4 heavy square towers, in one of which is a bell, weighing 35,000 French lbs. The W. entrance is very much ornamented; the interior is characterised chiefly by simplicity. In this church is a remarkable clock, constructed at the end of the 16th century by a native of Basle, which formerly indicated besides the year, month, day, hour, minute, and second, the sun's place, the phase of the moon, and the saints' day, as they occurred. This curious piece of mechanism has been suffered to fall into decay. The church of *Ainay*, erected on the site of an ancient temple dedicated to the emperor Augustus, has 4 granite cu-

lunans and a bas-relief, originally forming parts of that edifice. Several of the churches date from the time of Charlemagne. Here is also a Protestant church and a synagogue.

The hospitals are the largest public buildings in Lyons. The *Hôtel-Dieu*, the most ancient and finest establishment of its kind in France, was founded by Childebert and his queen at the beginning of the 6th century: the present edifice consists of a continuous range of building, extending along the Rhone. It has a noble front, a fine entrance, and two domes, which, as well as the distribution and arrangements of its interior, are generally admired. This establishment receives annually 12,000 in-patients, besides affording medical aid to many persons without its walls. The *Hospice de la Charité*, also on the banks of the Rhone, apparently occupies little less space than the former, and is an asylum for 400 infirm persons of both sexes, besides many orphans, foundlings, and women *eueintes*. The *Hospice de l'Antiquaille*, for syphilitic and insane patients, stands on the hill of Fourvières, on the site of the Roman palace in which the emperors Claudius and Caracalla were born. The *Hospice de la Providence* has established numerous schools of instruction with the view of checking mendicancy, &c.

The prefecture occupies a spacious building, formerly a Dominican convent; its interior is well adapted to its present purpose, and attached to it are some fine gardens. The hall of justice, and the archbishop's palace, present little deserving of notice. The *Palais des Arts*, formerly the Benedictine convent of St. Pierre, consists of 4 large piles of building, enclosing a square court: different portions of this edifice are devoted to the exchange, and chambers of commerce, the museums of painting, antiquities, and natural history, a cabinet of medals, gallery of casts from the antique, *dépôt* of machinery for the silk manufacture, the academy, schools of drawing and natural history, society of agriculture, &c. The collection of paintings comprises some works of great excellence; and that of antiquities is rich in Roman and middle age specimens of art found in and about Lyons, mosaics, and Egyptian antiquities. The public library, and library of Adamaly (so called from having been presented by a citizen of that name), are deposited in the royal college, and together comprise 100,000 vols. (Hugo), among which are some valuable oriental works, and old MSS. The prefecture, mint, grand theatre (an elegant structure), theatre *des Célestins*, court of justice, archbishop's palace, new prison, *condition**, salt-magazine, &c., are among the other chief edifices. The botanic garden is situated within the city, and is a favourite place of public resort. About 1½ m. above Lyons is the beautiful *île Barbe* in the Saône, connected with its left bank by a handsome new suspension bridge.

Manufactures and Commerce.—Lyons is in France what Manchester is in England. And notwithstanding the active competition of Zurich, Basle, Crefeld, and other places on the Continent, and of Coventry, &c., in England, she still maintains her rank as the first silk manufacturing city of Europe. Her position is peculiarly favourable: she is situated at the point of junction of two large navigable rivers, and has a ready communication with the Mediterranean, on the one hand, at the same time that she is the *entrepôt* of a vast extent of inland country. The districts of France which produce the largest quantities of silk, are immediately adjacent, while Lyons is the natural *dépôt* and place of transit for the silk of Italy, in its way to the great manufacturing countries. Added to which, the manufacture has here had, for centuries, its principal seat: the pop. have been thoroughly trained and habituated to it; so that, though frequently disturbed by political events, and once or twice nearly annihilated, it has never failed, on tranquillity being restored, to return to its former locality. The silks manufactured here, are distinguished by the equality and perfection of the fabric; the brilliancy, though perhaps not the durability, of their dyes; and by the unrivalled superiority of their patterns, and the taste displayed in the designs. This superiority has been ascribed, with what justice we shall not stop to inquire, to the School of Arts (*Institution de la Martinière*), and the liberal encouragement of this branch of science by the city authorities, and the government. About 180 students are gratuitously instructed in the various branches of drawing and modelling, and there is a professor, who teaches the "*mise en carte*," that is, the adaptation of designs to the loom. The trade of Lyons, like that of all manufacturing towns, is subject to frequent crises, and periods of distress: a very serious one occurred in 1836-37, which led to formidable riots. But though many workmen implicated in the insurrections have settled in the rival towns of Switzerland, &c. there never, perhaps, were so many looms at work as at present, nor was the manufacture

ever more flourishing. The gross produce of the Lyonnese looms, in 1838, was estimated at 185 millions of francs, being considerably more than half the estimated value of all the silk goods manufactured in France. (See FRANCE, Vol. I. p. 847.)

According to M. Villermé, there were, in 1833, in Lyons and its neighbourhood, 40,000 silk looms; 17,000 in the city-proper, 9,000 in the suburbs of la Croix Rousse, la Guillotière, and Vaise, 5,080 in the neighbouring parts of the dep. Rhone, and 8,920 in the adjacent parts of Loire, Saône-et-Loire, Ain, Isère, and Drôme. Dr. Bowring was furnished with an estimate in 1834, which made the number of looms in the city 16,000, of which 4,000 were for figured stuffs; in the suburbs 9,000, half for figured silks; and in the country, for 12 or 15 leagues round, 7,000, almost wholly for plain silks: making in all 32,000 looms. According to an official estimate in 1835, the master weavers (*chefs d'atelier* or *maîtres-ouvriers*) in Lyons and its suburbs amounted to about 8,000; and the journeymen, or *compagnons*, to 30,000: in all, 38,000 weavers: but the *compagnons* include the wives and children of many of the master weavers. The number of individuals employed in accessory occupations, that is, in the culture of silk, the manufacture of looms, &c., cannot be ascertained; but it has been estimated by M. Villermé and M. Girod de l'Ain at from 27,000 to 30,000. Hugo says that, altogether, 80,000 persons in or about Lyons are supported, directly or indirectly, by the silk manufacture.

Silk weaving at Lyons is not conducted in large buildings or factories belonging to the silk merchants (*fabricans*)†; but on the domestic system, in the dwellings of the master weavers, each of whom has usually from 3 to 6 or 8 looms, which, with the greater portion of their fittings, are his own property. Himself and his family keep as many of these looms at work as they can, and employ *compagnons* for the remainder. The latter are not settled in Lyons; but visit it, and stay a longer or shorter time according to the demand for their labour. Apprentices and *lanceurs* make up the remainder of the working classes. The former are usually apprenticed from the ages of 15 to 18; the latter are children from 9 to 14, who prepare bobbins, and weave fabrics demanding less nicety than others. About 3-7ths of the looms are wrought by master weavers, nearly an equal number by *compagnons*, and the remaining 7th by apprentices and children. The *fabricans*, or silk merchants, of whom there are between 500 and 600 in Lyons, supply the patterns and silk to the owners of looms, to whom is entrusted the task of producing the web in a finished state. Half the wages paid by the silk merchants go to the owner of the loom, and half to the labouring weaver. A master weaver may gain by his own labour from 2 to 2½ fr. a day; and he who has 3 looms is supposed to receive from the two at which he does not himself work, about 900 fr., or 36l. a year. His rental may be about 150 fr.; the cost of lodging his two journeymen 80 fr.; and there remains besides his own labour a surplus of 670 fr. Those weavers are, of course, the most prosperous, who having 3 or 4 looms, employ their children to weave on them, and thus receive the whole wages paid by the manufacturer. 3 looms will clear to a family from 1,500 to 1,600 fr. (60 to 64l.) a year.

Wages have risen considerably of late years. In 1838, the price per ell paid for common plain velvets was 5½ fr., for *gras de Naples* 60 to 90 c., and for common figured silks from 1 to 1½ fr. A master weaver who made 2 fr. a day in 1834, could make at least 2½ fr. in 1838; and the journeymen need never earn less than 1fr. 75 c., and may frequently get 2 fr. The hours of work usually vary from 12 to 16 hours; but when the demand is brisk, they reach to 16, 18, and even 20. The weaving pop. is ill lodged, the master weavers generally having but two rooms at most, and these kept in a disgracefully filthy state. But they live very well; that is, they have abundance of nourishing food, much more than the pop. of other manufacturing towns in France. Most of the journeymen are boarded by their employers at from 45 to 50 c. a day; and have about 1½ lb. of good bread, ¼ litre of wine, a dinner of soup, butchers' meat, &c., with cheese or salad at supper. They rarely save money, and few of the *compagnons* raise themselves to become *chefs d'ateliers*. The weavers, speaking generally, are very ignorant; some years since not 1-4th part of the children in Lyons could read or write. But after all, according to M. Villermé, there is less profligacy in Lyons than in many other of the French manufacturing towns. (See Villermé, l. 365-69.) The proportion of illegitimate to the total number of births in 1835 was indeed as high as 1 in 3; but, in point of fact, a good many of the connections out of which these births arise are really but little different from matrimonial connections. The weavers, to escape the *octrois*, frequently visit the *cabarets* beyond the barriers,

* This is an establishment where, by the agency of heat, the unwrought silk is reduced to an equable weight and dryness. In 1831, the weight of silk, submitted to the *condition*, amounted to 886,266 kilogrammes.

† There is one exception: on the bank of the Saône, opposite the *île Barbe*, is a factory called *la Saurière*, employing from 400 to 500 hands, who may sleep in the building on payment of 30 sous a month, and board there also at a low rate.

to drink their wine, play billiards, &c., on Sundays and Mondays; but they are not addicted to intoxication or rioting, and it is affirmed, and we believe truly, that they are at present improving in morals, manners, and cleanliness; and certainly they have much room for amendment. Notwithstanding their good wages and liberal supplies of food, the best French authorities admit that the Lyonnese weavers are physically an inferior and degraded race, remarkably subject to scrofulous and scorbutic complaints, spinal diseases, and rheumatism; and according to M. Charles Dupin, half the young men in Lyons liable to military service are exempted on account of weakness, deformity, or deficiency of height, though the standard for recruits or conscripts in the French is considerably below what it is in the English army. (See Vol. I. 864.)

Happily, however, the upper and middle classes of Lyons, the latter comprising most part of the shopkeepers, and many of the master weavers, are eminently comfortable, rich, and thriving. Mr. Maclaren states that there are three times more villas round Lyons than round Paris; and the number of private and public works erected in and near the city during the last 20 years sufficiently evince the rapid increase of wealth and enterprise. The want of coal is the greatest obstacle to the improvement of the manufactures of the city, and to the extension of its industry. But despite this disadvantage, Mr. Maclaren states that the district of which Lyons is the centre is "advancing with great strides." (P. 36.)

Lyons has numerous dyeing establishments and printing offices, and manufactories of jewellery, liqueurs, &c.; but all these are insignificant compared with its chief branch of industry. It is the seat of a royal court, of tribunals of primary jurisdiction and commerce, a chamber of commerce, one of the five royal libraries of the kingdom, a university, academy, royal college, and academy of sciences, &c.; and has schools of theology, medicine, veterinary medicine, and rural economy; a royal society of agriculture, &c.; societies of medicine, jurisprudence and literature, a Protestant Bible society, deaf and dumb asylum, a *mont-de-piété*, savings' bank, maternity, and many other charitable institutions.

The early history of Lyons is involved in much obscurity. But it appears certain, from the statement of Dion Cassius, that Munatius Plancus, about *anno* 40 B. C., settled in it fugitives from some adjoining towns. (lib. xlv.) Augustus made Lugdunum the cap. of a prov., and being embellished and enlarged by succeeding Roman emperors, it became one of the principal cities of the Roman world. The old city was principally built on the hill of Fourvières, which, in fact, is merely a corruption of its ancient name of *Forum Vetus*. (D'Auville, *Notice de la Gaule*, p. 423.) Among the Roman antiquities which still exist at Lyons, are the remains of 4 aqueducts, several cisterns, a theatre, traces of a palace, and a naumachia, recently discovered within the limits of the botanic garden.

From the 5th to the 13th century, Lyons belonged successively to the Burgundians, Saracens, Franks, its feudal archbishops, and its municipal council. In 1312 it was annexed to the crown of France; and in the same century, owing to the immigration of many merchants from Italy, it began to be distinguished by its manufactures. It suffered much during the religious wars of the 16th century; but far more from the revolutionary frenzy of 1793. Its ancient fortifications were then destroyed; but it has been since enclosed on the N. by a line of earth ramparts. Among the distinguished individuals, natives of Lyons, were, in antiquity, the emperors Claudius and Caracalla, and Sidonius Apollinarius; and, in modern times, Jussieu, the botanist; J. B. Say, the economist; Jacquard, the inventor of the loom which bears his name; Degerando, the author of the able and elaborate work *Sur la Bienfaisance Publique*, &c. (Hugo, *arts. Rhone, Lyons*; *French Official Tables*; *Bowring and Symond's Reports*; *Villermé*; *Tableaux Physique et Moral des Ouvriers*; *Ingis*; *Maclaren*, &c.)

M.

MAAD (Hung. *Mada*), a town of Hungary, co. Zemplin, in the Hegyallya mountains, about 6 m. N.W. Tokay. Pop. 5,640, partly Lutherans and partly R. Caths. It is one of the places at which the Tokay wine is grown in the greatest perfection, and near it is the Imperial vineyard of Theresienberg.

MAASSLUIS, or MAASLANDSLUIS, a town of S. Holland, on a branch of the Maas, 9 m. W. by N. Rotterdam. Pop. 4,500. It has manufactures of sailcloth, cordage, leather, &c., and some building docks; and its inhab. take an active share in the herring and cod fisheries.

MACAO, a sea-port town and settlement of the Portuguese in China, prov. Quang-tong, on a peninsula pro-

jecting from the S.W. corner of the island Macao, on the W. side of the estuary formed at the mouth of the Tigre or Canton river, 84 m. S. by W. Canton; lat. 22° 11' 30" N., long. 113° 32' 30" E. The pop. is stated in the "Chinese Repository" to amount to upwards of 30,000; but we incline to think that 20,000 is nearer the mark, of whom about 15,000 are Chinese, and the rest chiefly Portuguese and slaves imported from Timor, &c.

The peninsula on which Macao stands is less than 2½ m. in its greatest length from N.E. to S.W., and not 1 m. in its greatest breadth. It is connected with the rest of the island by a long, low, and sandy neck, in one part 400 yards broad, but generally less. Across this isthmus a wall is erected, having in its middle a gate and a guard-house, called *Casa branca*, for Chinese soldiers; by means of which barrier, all communication between the peninsula and the rest of the island is cut off at the pleasure of the Chinese authorities. The Portuguese inhab. of Macao are rarely permitted to pass beyond this wall. The town has a very imposing appearance from the sea. It is built chiefly on the declivities of two hills, meeting each other at a right angle, in front of a small semicircular bay forming the harbour. A handsome row of houses faces this bay, with a parade in front embanked with stone to resist the encroachments of the sea, and interrupted once or twice by granite quays with steps leading down to the water. Behind this terrace the houses are arranged in a confused manner, and the gable ends of European residences and the steeples of the churches appear curiously intermixed with Chinese houses and temples. Macao has 12 churches, one of which, that of St. Joseph, is collegiate. There are few other edifices of any note. A spacious senate-house, in the heart of the town, forms a termination to the principal street. The Portuguese governor's residence, near the landing-place, is nowise remarkable, and the contiguous English factory is a plain commodious building. The Chinese live chiefly together in the central and back parts of the town, and along the inner harbour: some of them have well furnished shops, and they principally supply Europeans with provisions. Besides the college of St. Joseph, there are in Macao a royal grammar-school and several other Portuguese schools, a female orphan asylum, and other charitable institutions. It is defended by 6 forts, two of which are placed on a lofty height at either end of the harbour, and it is usually garrisoned by about 400 Portuguese soldiers. At one extremity of the town is a mansion called the *Casa*; in the grounds belonging to which is the celebrated cave of Camoens, sheltered on one side by a lofty rock, and on the other by a grove of bamboos, above which a tower commanding a fine view has been erected. In this sequestered retreat Camoens is said to have composed great part of the *Lusiad*, while holding the office of Portuguese judge at Macao. The land immediately without the town is fertile, and is appropriated to vegetable gardens and rice-grounds.

The harbour is on the W. side of the town, between it and Priests' Island, a small circular island, which formerly belonged to the Jesuits; but it has not depth enough to admit large ships, which accordingly anchor in the roads on the other side of the peninsula, from 5 to 10 m. E. of the town. All foreign vessels coming into the roads send their boats to the custom-house and pay a duty for all goods landed, however trifling. When a ship arrives among the islands, she is generally boarded by a pilot, who reports to the Chinese custom-house officer the nature of her cargo, and obtains a *chop* or permit allowing her to enter the Bogue or Bocca Tigris, with the understanding that she has nothing on board that is contraband. All females must, however, be landed at Macao, as the ship will not be allowed to proceed to Whampoa with them on board. The Chinese regulations do not allow any vessels, except such as belong to Portuguese or Spaniards, to trade at Macao. But the Portuguese inhab. lend their names for a trifling consideration to such foreigners as wish to be associated with them for the purpose of trading from the port; and vessels of other nations seldom experience any difficulty in obtaining the connivance of the Chinese officers to the landing or receiving of goods in the roads by means of Portuguese boats. Vessels of other nations, if in distress, and not engaged in the contraband trade, are admitted into the harbour for repair, on application to the senate. The latter is composed of the bishop, the chief justice, the military commandant, and several of the chief Portuguese inhab.; but a Chinese mandarin has substantially the supreme authority in the town. Except during the period of the year when the merchants of Canton are obliged to leave that city and repair to Macao, the latter is said to be dull and uninteresting. At that season, however, the carnival is celebrated with more than its usual sumptuousness in Catholic countries; and balls, masquerades, and concerts follow each other in rapid succession. Macao was given to the Portuguese by the Chinese emperor in 1585, in return for assistance afforded by them against pirates that had infested the

coast. (*Hamilton's E. I. Gaz. ; Commenc. Dict. ; and Private Information.*)

MACASSAR. See CELEBES.

MACCLESFIELD, a large manufacturing town, parl. and mun. bor. of England, co. Chester, locally situated in Prestbury div., of the hund. of its own name, on the Bollin, 16 m. S. by E. Manchester, and 143 m. N.N.W. London. Pop. of parl. bor., which includes, with the old bor., parts of the townships of Huddersfield and Sutton, 32,523 in 1841; and at present, 1850, the pop. is estimated at 40,000. The town, which is pleasantly situated on a slope near the borders of Macclesfield forest, has greatly increased in size during the last 20 years, and is now about 1½ m. long by 1 m. in breadth, consisting of one principal thoroughfare on the London road, crossed by two others leading to numerous subordinate streets. The buildings, in the more conspicuous parts of the town, are of superior construction: the streets also are well lighted, and the inhab. have plentiful supplies of good water, conveyed from springs in the adjacent hills. An open market-place, with excellent shambles, and a covered corn-market, stand near the centre of the town; and the newly erected town hall is a commodious and handsome building, tastefully decorated, and containing, besides courts of justice, offices, &c., a large assembly and concert room. The old church is a large structure, partly Gothic, with a handsome tower, formerly surmounted by a lofty steeple: it was originally erected by Edward I., in 1278, but has, at different times, been almost rebuilt, so that few parts of it can lay claim to any great antiquity. It affords accommodation for about 1,700 persons, and has an adjoining chapel containing several interesting monuments: the living is a perpetual curacy, till very lately in the gift of the corporation, but now in private patronage. Christ-church was erected, in 1775, at the private expense of Charles Roe, Esq., who endowed it with 100*l.* a year: it is a regular building, with a neat tower, having, in the interior, an elegant marble monument of the founder, by Bacon. Trinity church, in Huddersfield, a very recent erection, is beautifully situated on an eminence, and may accommodate about 900 persons. St. George's in Sutton (built in 1822) has accommodation for 1,500, and in the S. suburbs of the town, is a fifth church, remarkable for its neat construction, and light spire. There are also several places of worship for Wesleyan Methodists, and other dissenters. A free grammar-school, originally founded in 1502, was endowed by Edward VI. with property then producing only 25*l.*, but now estimated at 1,300*l.* a year, and rapidly increasing in value. A head and under-master, who have salaries of 300*l.* and 17*l.* a year (the former having a house and school-field, free of rent and taxes), give instruction in classics, elementary mathematics, history, geography, &c., the average number of scholars being about 60. This school enjoys certain advantages at Brasenose College, Oxford, and it has been proposed to set aside a portion of its property to found 4 exhibitions of the annual value of 50*l.* each, tenable for 4 years at any college either in Oxford or Cambridge. The wishes of the trading classes have likewise been consulted by the very recent establishment of a separate school, called the "Modern Free School," endowed with 250*l.* a year, and furnishing good instruction in those branches of knowledge best calculated to enable the scholars to carry on the trades, and support the commerce of Macclesfield. A charity school, national school, and several Sunday schools, with others maintained by voluntary subscription, furnish instruction to the children of the poor: and there are almshouses, various money charities, a dispensary, lying-in charity, and provident society.

"The silk manufacture of Macclesfield affords employment to the largest part of the pop.; a few, however, are employed in the cotton factories that have been lately established. This place participated deeply in the general distress occasioned by over-trading in 1825, and for several years subsequent to that period the silk trade was in a most depressed state. The effects of that shock, however, seem at length to have subsided, and business has resumed a healthy aspect." (*Mun. Bound. Rep.*) The trade has greatly increased since the date of this report, but is subject, more than other branches, to sudden shocks, productive of great distress to the working classes. There were at work in the par. of Prestbury (and chiefly in Macclesfield and its immediate vicinity) in 1839, 16 cotton mills and 48 silk-mills, employing 10,863 hands. The wages of the work-people employed in these mills varied, in 1841, from 2*s.* 6*d.* to 1*s.* a week. About 4,500 hand-loomers are engaged in weaving silk fabrics, chiefly silk handkerchiefs and scarfs of every description, saracens, Persians, silk-ferret, and galloon, with a few gros-de-Naples, giving employment altogether to about 9,000 persons, whose wages amount to from 6*s.* to 1*s.* a week; but there are a few industrious and expert weavers, who earn weekly as much as 2*s.* when in full work. The cotton manufacture, which was

introduced only a few years ago, is in a thriving condition, employing a pop. of about 3,500 in factories only; and hat-making is carried on to some extent. Numerous mechanics, makers of machinery, &c., depend indirectly on the staple trade of the town. The Bollin turns several mills, and the neighbourhood furnishes abundant supplies of excellent coal. Stone and slate also are quarried near the town, and form a considerable object of trade with the surrounding districts. The transit of heavy goods is facilitated by the Macclesfield canal, which connects it N. and S. with the great canal lines of England. There are two private banking establishments, with a savings' bank. A newspaper is published weekly, and there is a good news-room.

Macclesfield, which was incorporated by a charter of Prince Edward, son of Henry III., and subsequently by various sovereigns of England, has been divided by the Mun. Reform Act into 6 wards, and is now governed by a mayor and 11 other aldermen, with 26 councillors. Corp. revenues in 1849, 3,850*l.* It enjoys also a commission of the peace, with petty sessions, under a recorder. This important manufacturing town had no voice in the legislature, till the Reform Act conferred on it the privilege of sending 2 mems. to the H. of C. Registered electors in 1849-50, 1,066. Macclesfield is also one of the polling places for the N.E. division of Cheshire. Markets on Tuesday and Saturday: cattle, wool, and cloth fairs, May 6., June 23., July 11., Oct. 6., and Nov. 11. (*Parl. Reports, &c.*)

MACERATA, a city of Central Italy, Papal States, cap. deleg. of same name, on a hill between Chieti and Potenza, 21 m. S. by W. Ancona, and 170 m. N.E. Rome. Pop., in 1832, 15,600. It is well built, surrounded with walls, and entered by 6 gates. In the centre of the town is an irregular open space ornamented with several good buildings, including the cathedral, the palace of the delegate, and the theatre. Including the cathedral, there are 7 churches, in one of which are some good paintings, 13 convents, several literary associations, and a secondary university for theology, philosophy, and medicine, founded by pope Leo XII. in 1824. This city presents nothing antique, and its most interesting feature is the fine view it commands of the Adriatic, and occasionally of the mountains of Dalmatia.

"Macerata," says Forsyth, "contains a number of palazzi, and therefore a swarm of provincial nobility. The peasants observe an established uniform in dress, of which orange appears the prevailing colour. So constant are the women of this class to local costume, that the female head becomes a kind of geographical index. At Macerata they adhere to the ancient mode of plaiting and coiling the hair, which they transfix with long silver wire tipped at both ends with large knobs, evidently the antique *acus crinalis*—

"*Figat acus tortas sustineatque comas.*"

MART.

Macerata is a bishop's see, and the seat of a court of appeal for the delegs. Macerata, Camerino, Ancona, Ascoli, Fermo, and Urbino. Its manufactures and commerce are insignificant. Under the French, Macerata was the cap. of the dep. Musone. About 2 m. to the N., on the Potenza, are the remains of a theatre of considerable size, with vaults and foundations of other edifices, supposed to indicate the site of *Helvia Ricina*, colonised by Septimius Severus, and destroyed by the Goths. (*Forsyth's Italy*, p. 320.; *Rampoldi*.)

MACHYNLLETH, a market town and parl. bor. of N. Wales, co. Montgomery, near the Dyff, 30 m. W. Montgomery, and 175 m. W.N.W. London. Area of parl. bor. about 500 acres. Pop. of the town in 1831, 858. Machynlleth is an ancient, well-built town, superior to most in N. Wales for cleanness and respectability, the streets being remarkably broad and regular. The town-hall, a plain building, was erected by the Wynn family, in whom the manor is vested: the co. sessions are held alternately here and at Montgomery, and the magistratus sit here occasionally in petty sessions for the hundred. The church, a handsome structure, was rebuilt in 1827: the interior is conveniently fitted up, and the W. tower is embattled, and surmounted with crocketed pinnacles. There are places of worship for Independents, Calvinists, and Wesleyan Methodists, with attached Sunday schools, and a well-endowed national school furnishes instruction to poor children of both sexes. There is also a savings bank. "The flannel trade has long existed at Machynlleth, being chiefly carried on at farm-houses: the fabrics are sent for sale to Newtown. Weavers' wages (when on full work) vary from 7*s.* to 9*s.* a week, and with respect to their moral condition, it is remarked as being much higher than that of operatives in general, in other districts, but yet neither better nor worse than that of the labouring classes generally within the par. The truck system is partially practised in this vicinity, being fostered by the improvidence of the weavers, few of whom make any provision for emergencies. The prices of provisions are as follows:—four *l.* for 5 *l.*, potatoes

2s. for 40 quarts, mutton 5d. per lb., bacon 9d., butter 11d., and oatmeal 2d. per lb. This town formerly possessed an excellent shipping trade, and was, in fact, the port of Montgomery; but since the canal was brought to Newtown, and facilities were opened direct between Wales and the commercial districts of England, the carrying trade is in barges, and few ships now come to Machynlleth." (*Hand-loom Weavers' Report*, part 5.) This bor. unites with Montgomery and others in sending 1 mem. to the H. of C. Registered electors in 1839-40, 78: ditto in the entire district, 1,021. Machynlleth is celebrated in the history of the principality as the place in which Owen Glendwr, in 1402, convoked a parliament, where he was inaugurated Prince of Wales.

MACON (an. *Malisco*), a town of France, dép. Saône-et-Loire, of which it is the cap.; on the Saône, here crossed by a bridge of 13 arches, 28 m. N. Lyons; lat. 46° 18' 27" N., long. 4° 50' 8" E. Pop. (1846), 11,784. It is pleasantly situated, but is generally ill built; the streets are narrow, crooked, and paved with rounded pebbles, painful to walk upon; the squares, though clean, are mostly small, and destitute of ornament; and the houses, though mostly of stone, are *tristes et mesquines*. It was once partially fortified, but the works were never completed, and they are now laid out in public walks. A handsome quay borders the Saône, and is continuous with a planted promenade at either extremity. The ancient *hôtel de Montrevel*, now occupied by the town hall, theatre, and public library, with 9,000 vols.; the general hospital, two *hospices*, some of the churches, the prefecture, and the new prison, are the chief public buildings. Mâcon is the seat of tribunals of primary jurisdiction and commerce, a communal college, schools of mutual instruction and linear design, and of a society of agriculture, arts, and *belles lettres*; and has manufactures of coverlets, clocks and watches, copper and earthenware, pump machinery, barrels, &c. But Mâcon is principally dependent on its wine trade. The same chain of hills that overhang the rich vineyards of the Côte d'Or extends through the dép. of the Saône-et-Loire, and the part of the dép. of the Rhone called the Beaujolais. But whether it be from some difference of exposure or of soil, or other unknown cause, the wines produced in the district now mentioned are, though in many respects excellent, inferior to those of the Côte d'Or. In commerce the wines both of the Mâconnais or district round Mâcon, and of the Beaujolais, are known by the name of Mâcon wines, from Mâcon being the emporium where they are mostly sold. They are strong and durable, *corés, spiritueux, quelque fois trop fumeux, et toujours agréables (Jullien)*; and in general may be regarded as ranking next to the Beaune wines. The best growths are those of Torins, Romanèche, Chenas, and Pouilly. (*Henderson on Wines*, p. 166.) Many Roman antiquities have been found at Mâcon, and the ruins of its cathedral, destroyed during the revolutionary frenzy in 1793, form a very picturesque object. On the opposite bank of the Saône is the flourishing suburb of St. Laurent, the seat of a large corn-market. (*Hugo*, art. *Saône-et-Loire*; *Dict. Géog.*, &c.)

MACQUARRIE RIVER. See AUSTRALIA, Vol. I. p. 232, 233.

MACROOM, an inland town of Ireland, co. Cork, prov. Munster, on the Sullane, 20 m. W. Cork. Pop., in 1831, 2,068. It is a poor, mean place, consisting of a single street, mostly of cabins. It has a par. church, a R. Cath. chapel, a large school, a court-house, market-house, and a constabulary barrack. A manor-court for the recovery of debts to the extent of 2l. is held every three weeks. General sessions are held in Dec., and petty sessions on alternate Tuesdays. Markets on Saturday. Post-office revenue, in 1830, 226l.; in 1836, 235l. Near the town is a large cavern, the interior of which has not been thoroughly explored.

MADAGASCAR, a large island of the Indian Ocean, off the E. coast of Africa (from which it is separated by the Mozambique Channel), between lat. 12° 2' and 25° 40' N., and long. 44° 20' and 51° 30' E. Length, 930 m.; average breadth, 300 m. Area estimated at about 234,400 sq. m., being somewhat greater than that of France. This country, of which only a few years ago we had scarcely any knowledge, has recently been visited and explored by missionaries and other travellers; so that we now possess very satisfactory information respecting the island and its inhabitants. The coast is generally flat and low; but the interior is considerably diversified, and, though it is not traversed by any continuous chain, many parts, especially the E., N., and S. districts, may be called mountainous, the highest point, Ankaratra, in lat. 19° 40' N., long. 47° 20' E., is about 11,000 ft. above the sea. These mountains consist of granite, sienite, and quartz, covered in the lower parts with clay-slate, primitive limestone, and old red sandstone; volcanic rocks occur in several places, and coal strata, abounding with iron, are widely distributed through the island. Rock-salt and nitre occur near the coast; and iron pyrites, oxide of manganese, and plumbago, have

been found in some districts. The rivers of Madagascar are numerous, and many of considerable size, the greater number flowing into the sea on the W. side; but most of them are choked with sand, have frequent falls and rapids, and are almost entirely unnavigable. There are likewise numerous lakes, not only in the central parts of the island, but also in the low alluvial districts near the sea, some of which are remarkable for their size and beauty. The most fertile parts are the valleys, most of which produce rice or other vegetables, or else are clothed with a rich and luxuriant verdure. The climate of Madagascar is extremely diversified; that of the coast being oppressively hot, while in the interior the temperature seldom exceeds 85° Fahr. The heat at Antananarivo, the cap., fluctuates between 40° and 85°: the middle of the day in summer is often extremely sultry, but the mornings and evenings are always pleasant. From May to October (the winter months of this island) the ground is often covered with hoar-frost, and the heat seldom exceeds 44°. At other seasons, however, the fluctuations between heat and cold are extreme and sudden, the temperature in the morning being seldom more than 40°, whereas, in the same day, the afternoon heat often exceeds 80°. The climate of Madagascar is extremely prejudicial to Europeans, in consequence chiefly of the effluvia rising from stagnant lakes and swamps near the coast; but in the central parts, and especially in Ankova, the metropolitan prov. of the island, the marsh-fever does not exist. The weather on the coast is usually hot and damp or rainy; but in the interior the rains are periodical, in a great measure regulating the divisions or seasons of the year. The trade winds from the E. and S.E. prevail during the greater part of the year; but the rains are often accompanied by violent gales from the N.W., W., and S.W. Earthquakes are occasionally felt, and the capital has more than once suffered considerable damage from such visitations.

Among the animals peculiar to Madagascar, may be mentioned five varieties of the monkey, foxes, wild dogs and cats, hogs, goats, a peculiar kind of cattle and sheep similar to those of the Cape of Good Hope: crocodiles swarm in nearly all the rivers and lakes, and are objects of great dread to the natives; serpents, also, some of large size, abound in the woods, and lizards, scorpions, and centipedes, are very numerous and troublesome. Birds also, of various kinds, are found in the forests, the principal of which are the paroquet, flamingo, falcon, kite, turtle-dove, pigeon, turkey, and different varieties of land and water fowls. The sea abounds with fish of various kinds, and oysters are numerous on the coast. The soil in many parts is prolific and highly susceptible of improvement, and the island produces numerous and highly valuable plants. The forests yield abundance of trees of varied durability and value; some used as dye-woods, others in building, with ebony, betel, mangrove, dragon-tree, bamboo, sugar-cane, locust-tree, *Urania speciosa*, caoutchouc tree, plantain, banana, zahana (*Bignonia articulata*), hibiscus, mimosa, castor-oil plant, longoza (*Curcuma zedoaria*), cotton, indigo, and tobacco plants, allspice, pepper, ginger, turmeric, and rice. Various other vegetable productions have been introduced, such as the cocoa-nut, bread-fruit, yam, manioc, lemon, orange, peach, mulberry, quince, fig, and pomegranate. Several varieties of the Cape vine have been found to thrive well, the coffee-plant has been brought from the Mauritius, and the potato is largely cultivated as well as highly esteemed; but the common European *cerealia* have met with little encouragement. The Flora of the country is abundant; but the brilliant aspect usual to the gardens of tropical countries is here misused, in consequence of the rapid alternations of heavy rains and extreme drought.

The husbandry of Madagascar, pursued by a distinct class, consists, in a great measure, of the cultivation of rice, which is conducted with great care and success. Seed time is in September; at which season the grain, after being steeped in water, and subsequently kept in a warm place till it begins to sprout, is very thickly sown in a fine mould, almost covered with water artificially introduced into the fields. The water is afterwards drained off, manure is thrown over the seed, and as soon as the sprouts appear above the surface, moisture is again applied. The average produce in inferior grounds is said to be about 50 for 1; but the best cultivated grounds are alleged to produce seventy and even one hundred fold, the harvest being in January and February. Each rice field is separated from those adjoining by banks rising about 6 inches above the field, and affording great convenience to the labourers. Neither waggon, cart, sledge, nor beast of burden, is used in getting in the harvest, and the threshing is conducted either against a stone, or on the floor, by simply beating the ears with the hand. The secure storing of the grain, however, is an object of special attention; the Ovahs, the prevailing tribe of the island, have underground storehouses, made with extreme ingenuity; but other tribes have granaries above ground, bee-hive shaped, about 16 ft. high, made

of thick, clay-built walls, and entered only from the top. Manioc is another great object of farming industry; it is raised from cuttings, and about 18 months elapse between the planting and harvest. The roots, usually about 10 inches in length by 3 in diameter, are prepared for use by scraping and boiling, and are sometimes made into cakes. Cotton is cultivated to a considerable extent; and the pigeon-pea (*cytiscus cajan*) is raised for the purpose of rearing silk-worms. The European *cerealia* have been introduced by the missionaries; the plough and harrow have likewise been brought into use, and oxen broken in to cultivate the ground; but the natives prefer their old and imperfect methods of preparing the soil, to the adoption of readier plans, and superior implements. Next to the cultivation of the soil, the working of iron is the most important occupation of the people. In some parts the iron ore is found in large quantities on or near the surface, whence it is gathered in baskets and smelted for use; but when it is dug out of the ground, numerous small pits are made about 6 ft. in depth, and no further attempt is made to explore the riches of the interior. The ore is first crushed, then broken into small pieces, and afterwards submitted to the action of a charcoal fire in a rude furnace of stone-work, built up to the height of 2 or 3 ft. without mortar, and thickly plastered with clay on the outside, the blast being obtained by means of wooden cylinders, in which a rude sort of piston is fitted to drive the air through a bamboo cane into the fire. The native forges are equally simple; the anvil, about the size of a sledge hammer, is fixed in the ground near the fire, the water-trough is close by, and the smith, when at work, squats on a piece of board while his attendants surround him, armed with large hammers, and ready to strike the metal according to his directions. The articles thus manufactured comprise spears and javelins, knives, hatchets and spades, chisels and hammers, a rude sort of plane-irons, files, pots, spoons, lamps, and nails; besides which they have been taught by the English to make hinges, screws, and locks, as well as to draw copper and iron wire. The manufacture of swords and fire-arms was introduced by the French a few years ago, and the native goldsmiths and silversmiths evince considerable ingenuity in making rings, chains, and other gold ornaments, silver dishes, mugs, spoons, &c. The felling of timber (which appears to be a monopoly of the government) employs about 700 men; the pit-saw has been brought into general use, and the native carpentry has been so much improved by the application of European tools, that their work may be justly styled "strong, neat, and well finished." (*Ellis*, vol. i. p. 317.) The art of turning wood is practised by the best workmen of the capital; earthenware is made with considerable skill and taste, and many hands are employed in making rope and twine, as well as in tanning leather. The chief occupation of the people, however, next to the cultivation of rice, is the spinning and weaving of silk, cotton, and linen fabrics; but all the processes are so extremely simple, imperfect, and tedious, that it is a matter for surprise that the threads of their cloth are even and well-twisted, the weaving regular, and the patterns regular, and exhibiting fancy and good taste. The art of dyeing is also practised, and several of the native dyes produce bright and durable colours.

The pop. of Madagascar consists of 4 chief political divisions, the numbers of which are estimated to be as follows:—

The Ovahs (in the central table-land)	-	800,000
Sakalavas (W. side of the island)	-	1,200,000
Betsileos (S. of the Ovahs)	-	1,500,000
Betanimans and Betimasarka (on the E. coast)	-	1,200,000
		<hr/> 4,700,000

It is said, also, that this amount of pop. is considerably less than it was a few years back, owing chiefly to wars between the different tribes, the prevalence of the slave-trade, &c. It is, also, supposed that the practice of infanticide, which is alleged to have prevailed from time immemorial, has contributed to reduce the population. But most probably the influence of this practice is greatly overrated; and it is evident it cannot at all account for the recent decrease. The inhabs. differ materially in appearance and character, nor is there any doubt, though the people are nominally comprised in one political empire, and speak one language, that they include several distinct and peculiar nations. The distinction of colour separates the pop. into two great classes, the Ovahs, and a few other tribes, having olive complexions, handsome features, graceful persons, and lank dark hair, whereas the inhab. of the shore, and indeed the majority of the people greatly resemble the Papuas, being short and stout, almost black, with low foreheads, broad flat faces, large eyes and mouth, and long crisped hair. There are differences also in the languages spoken by various sections of the pop., and many of their customs vary so much, as to make it clear

that, however amalgamated, they are not one nation, but a combination of several distinct races. With the exception, however, of the Ovahs, they are little better than barbarians, run almost naked, despise a fixed life, are extremely superstitious, and practice most of the vices so generally prevalent among the savages of the neighbouring continent. Circumcision is universal, marriages are formed in very early life, and divorces are very common, and easily effected. The law permits polygamy, restricting the husband to 12 wives; but few have more than two, or at most three. Fidelity to the marriage-engagement, however, forms no part of the female character, and modesty is a virtue almost unknown. Their houses are usually of rude construction, except in the cap. of the Ovah country, where European improvements have been partially introduced. The diet of the people consists, in great part, of rice and manioc, with smaller portions of beef, poultry, &c., and the cookery is extremely simple.

Pedlary and hawking are favourite, though not profitable, occupations. The markets are favourite places of resort for all classes; and not only is there a daily general market at Tananarivo, but 4 or 5 large markets are held in different parts of the province, and well attended by a vast concourse of people from the adjoining districts. Animal and vegetable productions, native and foreign manufactures and cattle are exposed promiscuously; and in no nation are there more clever and persevering bargainers than in Madagascar. The slave-trade, also, which a few years ago was nearly extinct, is now said to be pursued on a large scale. Money has not been coined on the island: dollars are more or less known in all parts, through communication with Europeans; but the trade is more generally carried on by barter. Most goods are sold by measure: rice by the bushel, meat by the *cyr*, snuff by the spoon, fuel by the bundle, &c. Rice, which may here be considered the standard of value, costs about 1s. a bushel; 20 ducks or fowls may be purchased for a dollar, geese cost about 9d. each, and a fine turkey may be got for 1s. A bullock costs from 3 to 8 dollars, sheep average about 1s. 6d. each, and 20 good pine apples may be had for 3d. Labour is also extremely low, many working for mere food, and others gaining only 2d., or at most 4d. a day. An intercourse has long been carried on with Madagascar by Arabs from Muscat, Indians from the presidency of Bombay, Europeans from the Cape of Good Hope, and Americans from Brazil and the United States. The taste of the people for foreign goods was also on the increase a few years ago; and horses, saddles and bridles, scarlet cloth, gold lace, red satin, purple, green, and yellow silk, silk handkerchiefs, sewing silk, calico and printed goods, hosiery, gloves, finger rings, watches and musical boxes, hardware, salt, and, above all, arrac and rum, fetched very high prices in the markets of Ankova; but since the death, in 1828, of Radama, the most enlightened monarch that ever held sway in Madagascar, the foreign trade has greatly declined, and the policy of the present government seems to threaten the entire cessation of all trade with Europeans.

Madagascar is divided into 28 provinces, all of which have their separate chiefs; but for some years past the Ovahs have been reckoned the prevailing tribe, the chief of which is, in effect, the king of the island, receiving tribute from, and exercising sovereignty over, all the rest. The government is despotic, and the succession to the throne is commonly hereditary, the monarch having the right not only to appoint his immediate successor, but also to settle the line through future generations. He is the father of his kingdom, appoints every subordinate officer, enacts laws and orders their execution, decides cases and raises armies; but he often convokes assemblies of the people, for the purpose of obtaining information or advice on matters requiring mature deliberation, or in cases where the wishes of the aristocracy have to be consulted. The royal family is highly honoured, and no people can be more tenacious of etiquette, and the respect due to rank. The judges, who rank next to the blood royal, hear causes, decide disputes, and are exclusively privileged to communicate between the sovereign and people. Subordinate to these are the *farantsa*, the police and tax-gatherers of the country; the *amboin-jats*, or local magistrates; the *maroacra*, or military governors of provinces (a very powerful and important body; and the *sadinany*, or royal courtiers, who not only carry government dispatches, but constitute a general patrol for the country. The king receives tithes of all produce, enjoys the monopoly of timber, and is exceedingly rich both in slaves and cattle, receiving also a considerable *ad valorem* duty from the possessors of these valuable articles. The sovereign is also high-priest of the realm, and presides over the great national sacrifices. The religion of the country is a rude species of polytheistic idolatry, and the people almost without exception believe in witchcraft and the efficacy of charms. Christianity was introduced with temporary success by English missionaries, in 1818—1820; but it is believed that at present

it is almost powerless, in consequence of the royal edict of 1835, which not only forbade its public profession, but legalised the persecution, and even enslavement, of all natives becoming its adherents.

Madagascar, the earliest accounts of which were given by Marco Polo, from the narrative of others, was discovered, in 1506, by the Portuguese, who established a settlement close to the S. end of the island, and soon after tried, though with little success, to introduce the Rom. Cath. religion. It was at first resorted to merely as a place of refuge and provisioning station for ships; but in 1642 an attempt was made by the French to make it one of their colonies, which however proved futile, in consequence of its extreme unhealthiness; and in 1664 most of the colonists removed to the neighbouring island of Bourbon. The Jesuits meanwhile continued to exert themselves in the establishment of Christianity; but owing to the injudicious zeal of Father Stephen, the superior of the mission in Madagascar, the natives were exasperated at the innovations of the foreigners, some of the missionaries were massacred, and the rest were glad to escape from the island. Various attempts have subsequently been made by the French to establish a permanent settlement, and since the general peace of 1815 they have formed four small colonies on the E. coast, as well as on the contiguous island of Madame-St.-Mary. The English missionaries were allowed to visit Madagascar in 1818—1825, with full permission to disseminate their moral and religious views, and the sovereign Radama was favourable to the establishment of schools and the introduction of improved methods both of agriculture and manufactures. Since his death, however, there has been a stagnation in the trade with England, the missionaries have been forbidden to approach the island, all possible means have been adopted to destroy the effects which the exertions of Europeans had accomplished in eight years, and Madagascar may now be ranked among the barbarous countries of E. Africa. (*Roche's Voyage to Madagascar*; *Ellis's Hist. of Madagascar*, vol. i. *passim*; and *valuable private information*.)

MADDALONI, a town of S. Italy, king. of Naples, prov. Terra-di-Lavoro, cap. canton, 14 m. N.N.E. Naples. Pop. 10,500. It has several churches and convents, a house of refuge, a royal college, and a noble aqueduct, which conveys water to the royal palace at Caserta.

MADERA, a great river of S. America, a tributary of the Amazon (which see).

MADEIRA, a famous island in the N. Atlantic Ocean, belonging to Portugal, Funchal, its cap., on its S.E. side, being in lat. 32° 38' N., long. 16° 54' 26' W.: length of Madeira, about 46 m.; breadth about 7 m. Area, estimated at above 300 sq. m. It is a mass of basaltic rock, presenting to those approaching its N. coast, numerous disjointed crags, and tall isolated peaks, interspersed here and there with less elevated spots of verdure, the whole being based on enormous, dark-looking columns, rising perpendicularly several hundred ft. from the sea; which is usually so deep, even close in shore, that soundings are not found in less than 50 fathoms and upwards, except in Funchal road, where ships anchor in from 30 to 35 fathoms. The cliffs on all sides are very lofty: the *Pêla d'Ageria* (eagle's rock) on its N. coast, a black cubic-shaped mass of rock, is upwards of 1,000 ft. high; and C. Pargo, at the N.W. extremity of the island, rises 4,000 ft. above the sea; but the most curious feature on the coast is the Punta S. Lorenzo, at its E. extremity, a ledge of rock 6 m. in length by 1 m. in breadth, which, though less lofty than other parts, is remarkable for its bold projection into the sea, and its fantastically-broken cliffs and peaks. The rapid declivities of the island are furrowed by deep and narrow valleys, at the bottom of which flow rills of pure spring water; and up their sides vineyards are formed by means of successive terraces, to the height of 2,300 ft. above the sea. The mountain scenery of the interior is bold, and highly romantic; one part, a few miles N.W. of Funchal, being called, by way of distinction, "the Switzerland of Madeira." Here is a deep valley, or crater, inclosed on all sides, except seaward, by a range of magnificent precipices, rising upwards of 1,000 ft. above the vale, the summits and sides of which are broken into every variety of dark beetling pinnacle, or flattened and tree-clad buttress; while far below smiles a fair region of cultivation and fruitfulness, rich in every species of vegetation, though itself rather more than 2,000 ft. above the sea-level. The culminating point of the island is Pico Ruivo, rising 5,450 ft. above the sea, and covered with vegetation to its summit. Three rivers, or rather torrents, rise on its sides, and cross the island in several directions, contributing greatly to its fertility. The streams are carefully collected, and rendered more available for the purposes of agriculture, by means of artificial channels, or *levadas*, with sluices, constructed with vast labour. At present (1840) a great work of this kind is in the course of being completed, by which a copious stream, which is precipitated from the top of a cliff 1,000

feet in height, will be made subservient to the purposes of irrigation.

The climate of Madeira fluctuates less than that of any country N. of the equator: its mean annual temperature having been found, in a period of 18 years, not to exceed 65° Fahr., that of the hottest months (Aug. and Sept.) being 74°, and that of the coldest (Dec. and Jan.) 63°, the glass seldom falling below 53° even in the severest weather. The heat of summer, however, is considerably higher, being increased from 10° to 15° during the prevalence of the hot and parching E. winds (the *scirocco*) that blow off the African continent. The temperature of Funchal, however, is considerably higher than that of the island in general: there dews are slight, and the rains few and far between; but in the higher parts of the island, a cool climate is rendered more delicious by frequent dews and rains enriching vegetation, and rendering the air fresh and salubrious. This remarkable equality of climate, not only through the year, but during the days and nights, constitutes the chief recommendation of Madeira to invalids. Persons subject to chronic pulmonary complaints, untended by any material disorganisation, have derived much benefit from a voyage to Madeira; as have others afflicted with diseases of the windpipe; and a still greater number who are the victims of dyspepsia, or other maladies of the stomach, the cure of which is hastened by the regular habits and exercise usually taken by invalid residents in the island. The efficacy of the climate, however, in cases of confirmed *tubercular* consumption has been absurdly exaggerated. It may then, indeed, lengthen life a little; but it cannot effect a cure. During the last half century, vast numbers of invalids, of whose recovery no rational hope could be entertained, and who should have been left quietly to expire at home, have been hurried off to this island, at an expense which they could often but ill afford, for no purpose unless it were to amuse them with false hopes, or that they might occupy a place in Funchal church-yard. Invalids should not attempt the voyage before the middle of June, nor later than the end of September; spring is a trying season, owing to the prevalence of N.E. winds; and October is the first month of the rainy season of autumn.

Every part of Madeira, not encumbered with rocks, is extremely fertile; the hills are covered with luxuriant vegetation, and the most delicate flowers grow on their summits, which are constantly moistened with dew from the clouds overhanging the island. Trees and shrubs of the finest kinds are every where abundant, and tropical plants which have strayed from the gardens soon become naturalised to the soil. "Here," says Mr. Wilde, "all is sunshine: the green bananas, with their beautiful feathery tops, tell the visiter, that he has bid farewell to Europe; the orange trees hold out to him their branches, laden with golden fruit. Plantations of coffee trees fill the spaces between the houses, the splendid coral tree hangs over his head, and the snowy bells of the tulip tree mingle with the scarlet hybiscus. If he wish for exercise, he has the most inviting walks, and the most tempting shades to shelter him: wide-spreading plane trees, and willows of gigantic growth, bend their slender arms over the streams that murmur from the hills. As he begins to ascend from Funchal, the beauty increases, and the sea-view opens to his sight. The roads, though steep, are well paved, and the horses trained to an easy pace. He rides through a perfect vineyard, where in many places the vines are carried on trellises over the road, and large bunches of grapes hang within his reach. Hedges of geraniums, fuchsias, and heliotropes, border those narrow paths, and shade him from the sun; the *Ficus indicus* clothes the cottages, the *Salvia fulgens* and Guernsey lily are sprinkled over the vineyards, and the *Camellia japonica*, with its delicate white flower and waxy leaf, adorns every quinta. Higher up grow the yam, prickly pear, dragon-tree and cedar, the aloe, agave and hydrangea, the sweet potato, and the *Phormium tenax*; and heaths and pines crown the highest summits of the island." (*Narrative*, i. 89—91.) Thus it appears, that below the elevation of 1,200 ft., many of the most useful tropical plants, as the date, palm, guava, banana, coffee-plant, &c., are found, with numerous others peculiar to the warmer part of the temperate zone. Up to 2,500 ft., the fruits and grains of Europe, especially maize and corn, are raised; and nearly the whole of this district is covered with vineyards. The chestnut, which is extremely abundant, the beech, and other European trees, with the mahogany, attain an elevation of 3,400 ft., above which rise pines, heath, ferns, and grasses. Pasture is scanty: few cows are kept, and the products of the dairy are here expensive luxuries. Horses are little used, their place as beasts of burden being supplied by mules and asses of the Spanish breed. Goats and hogs are very numerous, and are allowed to run wild on the mountains, where also are found large quantities of rabbits. Poultry is abundant, and cheap; and small birds of magnificent

strange among the groves. Myriads of tiny winged insects crowd the gardens and vineyards, incessantly doing great damage to the grapes, but there are no numerous reptiles, and the tobacco are free from that insect plague that is usually one of the drawbacks of warm countries. The honey bee is abundant and produces fine honey. Many varieties of fish are caught on the coast, especially turbot and cod which are the favorite food of the Irish.

Agriculture is chiefly confined to the raising of wheat. Land is usually set out in small holdings varying from 10 to 40 or 50 acres and the crop is estimated, on the average principle, at half the produce according to a yearly valuation of the crops. Wheat barley and rye are produced but the crops average little more than a third part of the annual consumption. The wheat grown is sold to seed, though the starch which could be sent to market, to have amounted to 5,000 qrs. the barley to 2,000 qrs., and the rye to only 500 qrs. Wheat is sown in Oct. and reaped in June this crop being followed by another of beans or green peas. There is quite as much more of an ornamental grain than for any useful purpose and Indian corn which is abundantly cultivated to the climate and to which used as an article of food has still some barely been little grown.

Considerable attention has lately been devoted to the cultivation of the coffee plant which, through the demand for wine and vinegar may perhaps become of considerable importance. Fruits and vegetation are raised with little trouble, and the shore is the birth-place of Portugal is a grove of native palm-trees, would furnish any imported European with fruit Italy or Spain. There flourish all the ordinary fruits and garden vegetables of Europe in oranges and lemons, pears, figs, grapes, pomegranates, peaches and Val-de-Aix, pumpkins, etc. one may see bananas and guavas, from even the same grove to the W. India nutmeg apple, alligator pear (the fruit of the *Lawson Persea umbellata* tribe of myrtles), the exquisitely flavored fruit of the *Cassia torrefacta*; the Cape gooseberry, now so common in Europe and the same can be said to be delicious. But its use is to the great part of Madeira. The grape is an indigenous to the island and it is said to have originated by first planted from a vine carried thither by order of the Spanish Prince Henry of Portugal, under whose auspices it was raised by the Portuguese in 1482. Many other varieties of the grape have since been imported to the island by cold climate and volcanic soil being especially suitable for their growth.

The appearance of the bill stems, on which the stems chiefly grow and the necessity of concentrating nitrogen upon them have led to the practice of raising the "blue-bird" on manure and nitrogen supported by sustaining water. The stems are trained to branches and other supports for the purpose of exposing the grapes to the ripening influence of the sun, and the branches are frequently of enormous size. The great object of cultivation is to break the ground from 4 to 7 ft. deep according to the soil, and to lay a quantity of manure or straw earth at the bottom to prevent the roots from reaching the clayey and barren, which would otherwise hinder their growth. The ground is watered from time to time, if the summer be very dry and each time it is thoroughly stirred, but the sun is to be watered the water to the vines, through the canopy of leaves, is diminished.

The 1/2 side of the island, though sufficiently fertile, being the most exposed to cold winds and fogs, is set as a reservation to the culture of the vine up to the 8, where all the finest growths are raised. The best Muscato ordinary or Muscato is produced on rocky grounds exposed to the full influence of the sun & rays, the grapes being allowed to hang till they be deep ripe. The several groups still seen only appear in particular spots. The wine made from it is white, very harsh and austere, and requires to be long kept. The best Muscato wine is produced on the 4 side of the island, but it is alleged that not less than two-thirds of the wine grown even to this quarter is of secondary quality, so that its Muscato, as in all wine countries, the best growths (premiere cvee) are both scarce and dear. The process of making the wine is very simple. The grapes are plucked from the stalks, thrown into a vat, pressed, but with the foot, and afterwards with a weighted wooden beam. The proportion of the seed, and the collection of them for the distill, each fitted at the press, the latter takes out of the tub his load of the whole mass, the remainder being equally divided between the handpress and the beam. Each takes with him a sufficient number of potters to carry away their respective share, sometimes in barrels, but more frequently in goat skins, borrowed to the culture in Portugal where the English merchants have extensive parks and vine for storing the wine and carrying it through the different processes of fermentation, mixture, &c. They usually exchange money beforehand to the growers, to enable them to defray the expense of cultivation. (Barrow's Progress to South China, p. 11.)

Though naturally strong, a quantity of brandy is added in Madeira wine when raised from the vine to which it has been fermented, and another portion is added when it is about to be exported. The demand for Madeira wine in the U and S Indies where it is highly esteemed, has led to a knowledge of the improvements it derives from being exposed to a warm climate, and it has long been customary for ships outward bound for India and China to work in Madeira, and take large quantities of wine on board, which they bring home to England. But it must not be supposed that all the Madeira wine that has come to America and I deem it somewhat better than any brought direct from the island, so much even obviously depends on the quality of the wine sent to the East. But if due care be taken in the selection of the wine sent to traffic and I deem it is very rarely improved and unimpaired by the voyage, and it not only bears a higher price but is in all respects superior to the direct importations. Most of the objections which is directed to the course of the Indian voyage, and the saltiness of the wine is overruled.

These women may be kept for a very long period. - Like the various changes of the Harrietian bills they are truly American ones, retaining their conflict unimpaired in both extremes of climate whether so dry, and constantly improving as they advance in age. Indeed they resist in persistence to conflict until they have been kept for ten years in the wind and afterwards allowed to mature slowly, so that time is better and even then they will hardly have reached the utmost perfection of which they are susceptible. When of good quality and matured to above described they lose all their original hardness and acquire that agreeable pliancy that like circumstances which was so highly prized in the choicest wines of antiquity, swelling from strength and richness of flavor with an exceedingly fragrant and delicious aroma. The better taste, which is often very marked, is not unaccompanied, as some have imagined, by a want of finer elements, but is inherent in the wine.

The estate of Bladhre has fallen into more than thirty parts in England. The growth of the island is very limited, not exceeding 15,000 or 16,000 acres, of which a considerable quantity grows to the East and to the Indian and American Islands, where Bladhre was a fundamental estate in England, every sort of deception was practiced with respect to it, and large quantities of spurious rum were shipped off for the remote villages of the island. This naturally brought the whole into disrepute, so that slavery has here for several years the reputation of being a bad thing. It is difficult, however, to imagine the education should ever have been practiced to a greater extent upon Bladhre than it is now practiced upon slavery. It is not, therefore, improbable that a reaction may take place in favor of Bladhre, which has much to a much lower place in the public estimation than it deserves to hold. In 1807 500,000 gallons Bladhre were entered for home consumption, whereas the quantity entered in 1808 amounted to only 71,000 gallons, being less than 1 per cent. of the quantity entered for consumption in the same year. Such is the power of fashion, by which almost by a question that really good Bladhre is one of the very best of others.

The commerce of Mombasa is very considerable; the exports consist principally of wine, articles of export are (velvet, bull, dogskin, &c.) the gum of the tree and cow, which is taken there as incense, and provisions for ships, manufactured goods, sheep, cattle, daily burning and coal, oil, corn, of diamonds. The exports, however, their earnings, which arrived at and something the countries whence the they derived out, with the value of their cargoes. —

The imports from England, in 1932, comprised cotton, woolens and linen fabrics, and hosiery to the value of \$1,670,000, with coal, earthenware, butter and cheese and meat, rice, sugar, etc., making in all a total value of \$1,680,000. The American and Chinese, which all of the

between high and well-wooded hills, has within the last half century been converted into one of active mining and manufacturing industry, the furnaces now (1850) at work in this vicinity being estimated to produce 50,000 tons of iron a year. At Coalport, about 3 m. from the above-mentioned bridge, is a considerable manufactory of china. Markets on Friday: fair May 29. and last Tuesday in Oct.

The neighbourhood of Madeley is remarkable for an extraordinary convulsion of the earth, that took place in 1773, when about 20 acres of land were shifted from their site, and broken into irregular chasms, large oak trees were uprooted, and the Severn, blocked up for more than 200 yards by the displaced soil and fallen trees, was compelled to find a new channel, in which it now flows.

MADRAS (PRESIDENCY OF), an extensive division of British India, being the second in rank and the most southerly of the three presidencies. It comprises, with its tributary states, the whole of Hindostan S. of the river Krishna, the N. Circars, and Canara. It extends from 8° to 20° N. lat., and from 74° to 85° E. long. It is of a triangular shape; the base of the triangle being formed by a line drawn from Ganjam, on the coast of Coromandel, to Sadaasharagur, near the 15th degree of lat., on the coast of Malabar, the sides by their coasts, and the apex by Cape Comorin, at the southern extremity of India. It is consequently bounded on two of its sides, the E. and W., by the ocean, while on the third, or N., it has the dom. of the Nizam and the Rajah of

The principal rivers are the Godavery and Krishna, with their tributaries; and the Pennar, Palaur, Pun-nair, Cavery, Coleroon, and Vighay. These have all an E. course, and disembogue on the Coromandel coast. The three principal have been already described. (I. 571—913., II. 126.) The only other river worthy any particular notice, the Coleroon, is the N. branch of the Cavery, which, having separated from the latter, opposite Trichinopoly, bounds the district of Tanjore on the N., and falls into the sea about lat. 11° 30'. The streams running W. have short courses; the longest is the Ponany, which traverses the Paulghautcherry-pass, but it is of little use for navigation, being very shallow in the dry season. There are no lakes of any importance: that of Colair, in Masulipatam, is the principal. There are numerous salt lagoons, or inlets of the sea, on the Coromandel coast, but they are of little use for navigation; and the whole of the Coromandel coast has a shelving shore, and is beat by so heavy a surf, as to be at all times difficult to reach, and during the monsoon it is quite unapproachable. The inlet of Cochlin, on the Malabar coast, is not within the British territory. The Malabar coast within this presidency is also very destitute of good harbours.

The Climate—differs widely in the different portions of this presidency. The W. coast is exposed to all the fury of the S.W. monsoon, during which the rains are excessive, and often accompanied by heavy squalls and thunder storms. On the opposite coast, the rains are, on the contrary, brought in by the N.E. monsoon, a circumstance explained by the fact, that the Ghats are elevated enough to intercept the passage of the clouds. The N.E. monsoon lasts from October to March; but the monsoon rains are over in December; and much less rain falls on the Coromandel than the Malabar coast, where, as in Canara, the annual fall of rain is sometimes 114 in. The quantity falling in Coimbatore, in 1836-7, was only 9 in., and in 1837 8, 22-1 in. The heat is much more oppressive on the E. than the W. side of S. India, owing to the greater prevalence of dry weather and parching winds. If we may depend on the statement of Berghaus, the average annual temperature of Pondicherry, lat. 11° 55', is no less than 84° 7' Fah. (29·5 centig.), that of Madras being 82° (*Atlg. Länder, &c.*, I. 320.) At the mouth of the Krishna, in the N. Circars, in about 16° lat., the thermometer has been known to stand at 100° Fah. at midnight! (*Hamilton's E. I. Gaz.* I. 418.) The plain country, in the E. part of the presidency, is frequently very unhealthy, but on the Malabar coast this is not the case. The country above the Ghats, which has a mean temperature many degrees below that of the plains, is decidedly salubrious; it derives rain from both monsoons, having an equable climate, and an atmosphere usually clear, serene, and highly invigorating.

The Geology—of S. India has been noticed with that of the rest of Hindostan. (I. 903.) Sienite, granite, quartz, greenstone, mica, and hornblende are among the chief primitive rocks, in the Ghats, Neilgherries, &c. The upper soil on the coasts is usually sandy, and not very productive, but in the valleys of the interior, it frequently consists of a rich alluvium or loam. The soil of the Balaghaut districts, N. of Mysore, consists principally of the red and black earth, so prevalent in the Deccan.

Natural products.—Many portions of the soil in the table-land are highly impregnated with carbonate of soda, nitre, and other salts; iron is generally plentiful, and the iron ore of the district of Salem is extremely rich. Copper is found in Nellore, and a few other districts, and diamonds near Cuddapah. The presidency yields no other mineral products of much value. A considerable extent of surface, especially in the upper part of the country, is covered with forests, comprising teak, sandal, ebony, and other valuable timber trees. Teak grows on the E. as well as the W. Ghats, but that of the Malabar coast is the most available, and best known, in the market; a good deal being floated down to the coast by the small rivers, and sent to Bombay and elsewhere for ship-building. The toddy-palm (*Borassus flabelliformis*), cocoa-nut tree, the products of which form important articles of export from the W. districts; and other palms flourish on the sandy coast lands, which supply few other useful articles. The sugar cane, areca, yam, plantain, tamarind, jack, mango, melons, and various other fruits, ginger, turmeric, cotton, hemp, &c., some of which are indigenous, are pretty generally grown; pepper is an important article of culture on the Malabar coast, and Coimbatore is celebrated for the excellence of its tobacco. Rice, paddy, wheat, barley, maize, and all the other grains common in India, both wet and dry, are here cultivated: the first is grown chiefly on the plains of the coast; but it forms also the chief export of Coorg, though a high country, and is the great staple of Canara. The Balaghaut districts are almost wholly appropriated to dry grain cultivation.

system in S. Hindostan, extending on the N. to W. by 10 m. N. to S., having numerous peaks rising to between 5,000 and 6,000 ft., and one, Dodabetta, estimated at 8,760 ft. above the level of the sea. The W. Ghats are more continuous and generally more elevated than the E.: the latter, even in the district of Salem, where they are highest, seldom attaining to an elevation of 6,000 ft., while the former frequently rise 2,000 ft. higher. The table-land above or between the Ghats averages in Coorg nearly 5,000 ft. in elevation, and, in Canara, Balaghaut varies from 3,000 to 5,000 ft.; but it decreases rapidly in height as we proceed E. and N., and even in Mysore, Bangalore is only 2,807 ft., and Hurryhur only 1,831 ft., above the sea. S. of the Neilgherries, is the Paulghautcherry Pass, in Coimbatore, 16 m. in width, extending from sea to sea, and forming a complete break in the mountain-system of S. India. S. of this pass, a mountain chain, little inferior in height to the Neilgherries, stretches nearly due S. to Cape Comorin. This chain separates Cochlin and Travancore, on the W., from the district of Madura and Tinnevely, on the E. The Ghats elsewhere form the chief line of separation between the British territories and those of the subsidiary states.

Animals.—The elephant, tiger, chetah, bear, bison, elk, spotted deer, antelope, jackal, wild hog, jungle sheep, &c., inhabit this as well as other parts of India; tigers, however, are not so numerous as in the countries watered by the Ganges, and other low and jungly portions of Hindostan. Ivory is a product of some consequence in Coimbatore; from 700 to 800 elephants being destroyed in that prov. between 1832 and 1836. Domestic animals are most numerous in the E. and S. districts; Guntoor is celebrated for its cattle; and Coimbatore for its sheep, which are not hairy and long-legged like those of the Carnatic, but small, yielding good mutton and coarse wool, made into common sorts of clothing, carpets, &c. Live stock, above the Ghauts, is scarce and inferior.

Land-tax, &c.—With the exception of the N. Circars, (see CIRCARS, NORTHERN,) the greater portion of the territories included in the Madras presidency, are assessed for the land-tax on what has been called the *ryotwar* system. It is unnecessary, however, after the copious details we have already given in the article on British India (see *ante*, p. 22.), to enter, in this place, into any farther investigations with respect to the nature and operation of that settlement. It is sufficient to say that the land-tax in Madras is oppressive in amount; and that the system under which it is assessed, being subject to perpetual changes is, in fact, subversive of the security of property, and consequently of all industry, except what is indispensable to meet immediate wants. We do not mean to impeach the motives, or to depreciate the talents, of Sir Thomas Munro, and the other individuals most instrumental in the establishment of this system; but we do not well see, supposing they had set about devising a scheme for paralysing enterprise, and creating an insuperable obstacle to all improvement, how they could have hit upon one better fitted to accomplish such objects than the *ryotwar* assessment. It appears to have every quality that an assessment should not, and not one that it should, have; and it were idle to expect that either the revenue of the presidency, or the industry and condition of the inhabitants, should be materially improved, so long as it is permitted to shed on all sides its withering influence.

Agriculture, &c.—The imposition of an oppressive assessment is the more severely felt, as the land in the Madras presidency is generally much less fertile than in Bengal and many other parts of British India. Tanjore may be said to be the granary of the presidency, and produces the greatest land revenue. The widest breadth of cultivated land is met with in Rajahmundry, Tanjore, and Coimbatore. The modes of agriculture pursued in the different provinces will be found briefly noticed in the articles which have especial reference to them. Generally, however, it may be said that agriculture is at a very low ebb; that the occupiers, ground down by oppressive taxes, are for the most part miserably poor, and their implements and stock alike bad. Irrigation is extensively practised; and wherever a sufficient supply of water (whether from rivers, tanks, or wells) can be commanded, as in the delta of Tanjore, S. Arcot, &c., the crops of rice are very heavy. The land under dry grains is generally manured; and cow dung used as fuel in this presidency being subject to a tax, it is generally used as manure. Opium is rarely or not at all grown; and indigo only in small quantities, principally in the N. districts. Coimbatore exports annually upwards of 4,000 candles of tobacco to Malabar, Cochin, and Travancore; and large quantities to Trichinopoly and Mysore. The superiority of the tobacco grown in this province is attributed to the soil containing much saltpetre and peroxide of iron, as well as to the attention bestowed on its culture. The exhaustion of the land, from its cultivation, is, however, very great; the ground consequently requires frequent and regular manuring, and is cultivated every other year with dry grains. Tobacco costs on the spot where produced about 25 rupees per candy. Cotton is a staple product of Tinnevely; and it and sugar are raised in various other places.

Manufactures, &c.—The chief are those of cotton cloth; and formerly cotton fabrics and other piece goods were largely exported, especially from the N. Circars; latterly, however, the lower price and better quality of British piece goods have enabled them, to a great extent, to supersede those of India in most foreign markets; though the latter are still exported, especially from Tinnevely to the W. Indies and America. The natives have recently turned their attention to the imitation of English cottons, and, in some instances, it is said, with considerable success. The muslins of Chicacole, the woollen carpets of Ellore, and the silks of Berhampore (Ganjam), are of old celebrity; but in general manufacturing industry flourishes most in the S. districts, and the cloths of Madura are highly esteemed for their fine red dye. The state of manufactures appears to depend in a great degree on the state of the roads, and means of communication.

In the S. provs. the government has completed several good carriage roads, and in the N. they are also pretty good. Canara, on the other hand, may be said to be wholly without roads, and vehicles are unknown. The Malabar coast has a singular paucity of manufactures: its chief wealth arises from its large exports of rice to Arabia and Bombay, and of pepper and other spices, areca, cocoa-nuts, &c. A good deal of iron is made in Tinnevely; and saltpetre and salt are made in various parts; but the latter are inferior to those of the Bengal presidency. Above the Ghauts the arts are in a very rude state.

Weights and Measures.—At Madras, the *maund* of 40 seers or 8 ris = 25 lbs. avoird. ; the *candy* of 20 maunds = 500 lbs.; the *garce* for grain = 12.8 mds. At Trichinopoly, the *seer* for metals = 9 oz. 8½ dr. In Malabar, the *lotam* of 40 seers = 23 lbs. 3 oz.; the foot = 10.46 in. At Madras, the *mauney* = 2,400 sq. ft.; the *cawney* of 24 mauney = 1.3223 acres. (*Madras Almanack*, 1839.)

The government is vested, as in Bombay, in a governor, subordinate to the governor-general of India. He is assisted by a council of 3 members, one being the commander in chief, and 3 secretaries, placed over the revenue and judicial, political, and military departments. In each of the 20 districts there is a European collector, who exerts also the chief magisterial power. Zillah courts are holden in the principal towns of most of the districts; and there are four provincial courts of appeal at Chittoor, Masulipatam, Trichinopoly, and Tellicherry. In Madras is a court of Sudder and Foudjarry Adawlut, an admiralty court, and the high court of judicature for the presidency. The Church of England ecclesiastical establishment consists of the bishop and archdeacon of Madras and 19 chaplains, in different parts of the presidency. There are numerous Protestant-dissenting and Rom. Cath. chapels, Madras being the see also of a Rom. Cath. bishop. According to the government returns of 1836, about 188,600 children were receiving instruction at the schools within the presidency. The Madras military force, according to recent returns, consists of 50,257 men, of whom about 9,900 are Europeans.

Account of the Revenues of the Presidency of Madras during the Four Years ending with 1848-49

Heads of Revenue.	1845-46.	1846-47.	1847-48.	1848-49.
	<i>Rupres.</i>	<i>Rupres.</i>	<i>Rupres.</i>	<i>Rupres.</i>
Mint duties -	10,841	4,305	1,06,259	48,015
Post-office collections -	4,02,066	3,94,380	4,15,282	3,99,274
Stamp duties -	2,32,510	2,48,123	3,01,306	3,68,244
Miscellaneous civil receipts -	54,665	3,39,813	54,346	
Judicial fees and fines -	2,93,618	2,87,803	2,75,752	1,84,951
Land revenue -	3,46,01,048	3,58,99,104	3,65,48,058	3,64,56,955
Abkarry, and small farms and licences -	23,03,882	21,95,243	22,86,316	24,31,578
Moturpha -	11,50,850	11,14,721	11,43,941	11,29,424
Miscellaneous receipts in the revenue department -	2,27,414	2,66,467	3,04,286	3,09,505
Customs, sea, and inland -	16,51,054	15,10,404	13,59,816	9,28,764
Sale of tobacco -	9,00,752	8,85,854	8,95,965	9,13,820
Ditto of salt -	47,06,411	45,56,313	48,57,218	45,07,977
Marine duties -	78,850	84,388	71,999	70,593
Subsidies from Mysore, Travancore, and Cochin -	34,46,430	34,46,431	34,46,430	34,46,431
Interest on arrears of revenue, &c. (including interest on debt due by the Nizam's government) -	-	1,07,048	36,668	3,14,878
Total gross revenue -	5,00,60,481	5,13,40,417	5,21,03,672	5,15,14,537
Deduct allowances and assignments, &c. payable out of the revenue -	57,85,286	59,98,682	65,53,268	58,34,912
Charges for collecting the revenue -	4,42,75,195	4,53,41,765	4,57,50,404	4,56,79,625
Total nett revenue, after payment of allowances and assignments, and charges of collection -	3,82,84,936	3,87,40,499	3,88,11,615	3,91,17,169
Total revenue receipts -	3,82,84,936	3,87,40,499	3,88,11,615	3,91,17,169

History.— In the art. INDIA, BRITISH, will be found a table, showing the dates of the successive augmentations to the British possessions in the East. The city of Madras, with a territory 5 m. along shore by 1 m. inland, granted us in 1639, formed the first nucleus of our Eastern Empire. But we may here notice the chief successive acquisitions under the Madras presid. The Jaghire, or Chingleput, was obtained by the E. I. Comp. from the nabob of Arcot, in 1750 and 1763. In 1792, Malabar, Canara, Coimbatore, Dindigul, Salem, the Barramahli, &c., were acquired by conquest from the sultans of Mysore; in 1800 the Balaghaut districts were ceded; and in 1801, the remainder of the nabob of Arcot's territories were added to the foregoing. (*Madras Almanac for 1848-49; Parl. Reports and Papers; Hamilton's Hindostan and E. I. Gazetteer.*)

MADRAS, a marit. city of Southern India, cap. of the above presidency, in the distr. of the same name, on the Coromandel coast, 650 m. (direct distance) S. E. Bombay, and 870 m. S. W. Calcutta; lat. 13° 4' 42" N., long. 80° 16' 15" E. The area of the district or collectorate of Madras is only 30 sq. m.; but its pop. in 1836-37 amounted to 630,000; and the pop. of the city and its immediate environs, within a radius of perhaps 2½ m. round Fort St. George, is usually estimated at upwards of 400,000.

Madras is in all respects badly situated: it is almost wholly unapproachable by sea. "There being no indentation on the coast, nor any island to break off the surge, a heavy swell rolls in throughout the year. Vessels anchor in the open roads; the large ones keeping a mile or two from shore. The swell keeps them pitching and rolling as uncomfortably as when at sea. The danger is so great during the S.W. monsoon that vessels are not allowed to lie here for several months, and the anchorage seems deserted. Cargoes are loaded and unloaded by boats adapted for passing through the surf: these, called *catamarans*, consist of three flattened timbers, 8 or 10 ft. long, tied together horizontally, and sharpened a little at the point. One or two men propel it with a paddle, flatted at both ends, and dip first on one side and then on the other. When no boat could live five minutes, these catamarans go about in perfect safety. The men are often washed off, but instantly leap on again without alarm. A waterproof cap, for the carriage of letters to and from newly arrived vessels, is almost their only article of dress. The boats used are large and deep, made without ribs or timbers, of thin wide planks, warped by fire to a proper shape, and fastened together by strong twine. Against the seams straw and mud are fastened strongly by the twine, which ties the planks together. No nails are used, for none would keep a boat together with such thumping. The boatmen display energy and skill scarcely to be surpassed. Keeping time to a rude tune, they now take long, and now short pulls, as the waves run past; they at length push the boat forward on a foaming surf, and she is thrown upon the beach." (*Malcolm's S. E. India*, i. 53.) There being no pier of any description, passengers and merchandise have all to be landed in the rough way now described.

Madras presents, from the sea, nothing to create great expectations. Only a few public buildings are visible, and not much of the town, as the site is quite level. It is, however, a noble city, and has many fine streets. Fort St. George may be considered the great nucleus and centre of Madras. It is neither so large nor so regular as Fort William at Calcutta; but it is strong, and has the advantages of requiring a smaller garrison, and of being easily relieved by sea. It occupies a semicircular area, rather more than ¼ m. in length, by from 2 to 3 furlongs in width, in a commanding situation, immediately on the beach; and is surrounded by an esplanade traversed by roads, and shaded public walks. Within it were formerly, besides many public offices, some streets of private European dwellings, shops, and stores; but these have been mostly cleared away, and the Fort now contains only the barracks, arsenal, a bazaar for the sup-

ply of the garrison, the council-house, the old church, the exchange, on which a light-house with a lantern 90 ft. high is erected. The merchants and tradesmen have mostly removed their establishments to the new streets, opened in the N.E. quarter of the Black-town, and along the skirts of the esplanade. The Black, or native town, which is N. and N.E. the fort and esplanade, is well laid out, and is defended by a substantial brick wall. "The houses are far better, at an average, than those of the natives in Calcutta. Though there are not so many fine residences of rich *baboos* as in that city, there are some scarcely surpassed in elegance by any in America." (*Malcolm*, i. 54.) It has probably been improved of late years. Hamilton, in his *E. I. Gazetteer* says, it is irregular and confused, being a mixture of brick and bamboo houses, and makes a better appearance at a distance, than when closely inspected. A fine range of public edifices, including the custom-house, office for the Board of Trade, court-house, granary, and many store-houses, &c. forms its frontage towards the beach, protected from the fury of the surf by a breakwater of massy stones. The front of this terrace, and the drives on the esplanade, form the chief promenades of the inhabitants.

Madras differs from Calcutta, in having properly no European town, except the few houses within the fort. Most of the European settlers reside in suburban houses, and repair in the morning to their offices in the Black-town, returning in the afternoon. Their residences are chiefly on the Choultry plain, a large extent of surface, S.W. of the fort, and separated from it by the river Triplicane, which, in the neighbourhood of the city, is crossed by numerous bridges. The houses all stand in large plots of ground, shaded by trees, and divided by hedges of bamboo or prickly pear. Few are of more than one story, but they are in a pleasing style of architecture, having their porticoes and verandahs supported by stuccoed pillars. According to Heber, the rooms are not quite so large as those of the houses in either Calcutta or Bombay, but they are more elegant and agreeable. On the Choultry plain, near Fort St. George, is the governor's residence, a large building, with a spacious banquetting-hall; but opinions vary greatly as to its architectural merit. Heber says, it has some bad paintings of Coots, Cornwallis, Meadows, &c., and one good one of Sir R. Strange, but all are fast going to decay from the moisture of the sea-breeze. Near it are the Chepauk Gardens, in which is the residence of the Nabob of the Carnatic; and adjacent to these, is a mosque of grey-stone, with 5 arches in front, and 2 handsome minarets, the only Mohammedan structure of any note at Madras. The descendants of the former Portuguese inhabitants chiefly reside at San Thomé, a suburb on the shore, about 3 m. S. from the fort, with a small cathedral, and 2 neat chapels under the charge of a Portuguese bishop, and a few priests from Goa. The Protestant places of worship are St. George's cathedral on the Choultry plain, 4 other episcopal churches and chapels, a Scotch and an Armenian church, and Independent, Wesleyan, and Unitarian chapels. There are also 3 Rom. Cath. churches. The number of native Christians is, however, stated to be very small, though increasing. There are male and female orphan asylums, many schools, and other charitable institutions, conducted in a manner that has been highly eulogised; and numerous missionary establishments, both European and American.

Madras is the seat of all the chief government offices for its presidency, of the supreme court, a board of revenue, marine board, &c. In consequence of its unfortunate maritime position, it has less foreign trade than the capitals of either of the other presidencies. Its commerce is still, however, considerable, as it is the principal emporium of the Coromandel coast, and trades direct with Great Britain, and other European countries, the United States, the South American States, China, the Eastern Islands, the Birman Empire, Calcutta, and Ceylon. The principal articles of import are rice, and other grain, chiefly from Bengal; cotton piece-goods, iron, copper, spelter, and other British manufactures; raw silk, from Bengal and China, with betel or areca nut, gold dust, tin, and pepper, from the Malay countries; and rice and pepper from the coast of Malabar, with teak timber from Pegu. The exports consist of plain and printed cottons, cotton-wool, indigo, salt, Ceylon pearls, chank shells, tobacco, soap, natron, some dyeing drugs, and coffee, from the table-land of Mysore, the quantity of which is increasing. The great staples of sugar, rice, opium, saltpetre, and lac dye, of such importance in Bengal, are hardly known as exports here. The importation of sugar from foreign countries is prohibited at Madras. (*See Report on E. India Produce*, 1840.)

In Madras roads, large ships moor in from 7 to 9 fathoms, with the flagstaff of the fort bearing W.N.W. 2 m. from shore. From Oct. to Jan. is generally considered

the most unsafe season of the year, in consequence of the prevalence of storms and typhoons. On the 15th of Oct. the flagstaff is struck, and not erected again till the 15th of Dec., during which period a ship coming into the roads, or, indeed, any where within soundings on the coast of Coromandel, vitiates her insurance. The light within the fort may be seen from the deck of a large ship at 17 m. distance, or from the mast-head at a distance of 26 m. By the port regulations, no articles are to be shipped or landed without a permit, or after 6 p.m. Any merchandise attempted to be landed without the prescribed forms, or that is not entered in the manifest, is liable to double duty; and where a fraudulent intention shall appear, to confiscation. All goods (except on account of the E. I. Company) are to be shipped or landed at the wharf opposite to the Custom-house, or pay double duty. Goods exported in British or native vessels are exempted from duty, but they must, nevertheless, pass through the customs' books.

Meat, poultry, fish, and other provisions, are to be procured for shipping at Madras, but they are neither so good nor so cheap as in Bengal. Wood and fuel are rather scarce, and dear in proportion. Water is of very good quality. On account of the dearness of provisions, wages are considerably higher than at Calcutta, and comparatively few servants are kept. The style of living is much the same in Madras as at Calcutta, but visiting is not carried on upon so extensive a scale. In the cool season monthly assemblies are held in the Pantheon, a building erected in the suburb of Vepery, and occasional balls take place throughout the year. During the cool season, also, races are held at St. Thomas's Mount, about 7 m. from Madras. The road to the racecourse is certainly the finest in India, and shaded by trees through its whole length. At the foot of Mount St. Thomas is the principal cantonment for the artillery of the Madras army, with a noble parade ground, considered one of the best military stations in S. India.

Madras experiences less extreme heat than Calcutta, taking the average of the year, though so much nearer the equator. The *minimum* temp. in Jan. 1837, was 68° Fah.; the *maximum* in May of the same year, 99°: the mean annual temp. was 81·7°. Several extensive tanks and some swamps surround the city and its territory; but Madras is not said to be particularly unhealthy.

The territory on which Madras is situated formed the first acquisition made on the continent of India by the British, who obtained it by a grant from the rajah of Bijnagur in 1639, with permission to erect a fort thereon. The latter, which was forthwith built, was besieged in 1702 by one of Aurengzebe's generals; and in 1744 by the French under M. de la Bourdonnais, to whom it surrendered after a bombardment of three days. It was restored to the English at the peace of Aix la Chapelle, and sustained, with credit and success, a memorable siege by the French under Lally in 1758-9; since which it has experienced no hostile attack. (*Hamilton's E. I. Gaz.*; *Modern Traveller*, x.; *Malcolm's Travels in S. E. Asia*; *Madras Almanack*; *Parl. Reports*; *Commercial Dict.*, &c.)

MADRID, a celebrated city, and the modern cap. of Spain, in the centre of the kingdom, on the Manzanares, a tributary of the Tagus, 39 m. N. by E. Toledo, the former cap., 320 m. E.N.E. Lisbon, and 240 m. S. W. Bayonne; lat. 40° 25' N., long. 3° 38' 15" W. The estimates of the pop. differ very widely; but Madox, who has carefully inquired into the matter, states that it may be taken as amounting in 1847 to about 235,000, (*Diccionario Geografico*, &c. x. 593). This city, which till the time of Philip II. was little more than an obscure country town, stands in a stony barren district, more than 2,000 ft. above the sea, having no navigable river near it, and scarcely any potable water, and being, at the same time extremely cold in winter and unbearably hot in summer; the thermometer, at the former season, falling to 18°, and during the latter, rising to 110° or 115° Fahrenheit. The variability of temperature, combined with the prevalence of piercing E. and N. E. winds, during the greater part of the year, renders the climate very unhealthy, and especially prejudicial to persons threatened with pulmonary complaints, some thousands of whom are said to have died during the winter of 1829-30. (*Cook's Sketches*, i. 176.) All authors, indeed, agree that it would have been difficult to fix on a more unfavourable site. "From the Somo-Sierra," says Inglis, "to the gates of Madrid, a distance of nearly 30 m., not a tree, garden, nor country house, is to be seen, scarcely an isolated farm-house or cottage, and only three or four very inconsiderable villages. The land is chiefly uncultivated, and even that part under tillage and producing grain is mostly covered with weeds and stones. In the midst of this desert stands Madrid, which is not visible more than two leagues' distance. From this side it appears small and not striking; and although we may count upwards of

50 spires and towers, none are so elevated or imposing as to awaken curiosity, like that felt on first discovering the towers of churches in other Spanish cities. Even $\frac{1}{2}$ m. from the gate, the traveller might still believe himself to be 100 m. from any habitation: the road stretches away, speckled only by a few mules; there are no carriages, no horsemen, scarcely even a pedestrian; there is, in fact, not one sign of vicinity to a great city." (i. 53.)

It occupies a space of nearly 4 sq. m., on a slope inclining S.S.W. towards the Manzanares, usually an insignificant stream crossed by two magnificent bridges, the size and beauty of which contrast so strongly with the river beneath as to have given rise to the saying, that "the kings of Spain should sell the bridges, and purchase water with the money." The river, however, sometimes swells to a great height, and pours down a magnificent volume of water. (*Swainburne*, ii. 184.) The town is surrounded by a shabby brick wall, in which are 15 stone gates, the handsomest being those of Alcala, San Vicente, and Toledo. The interior comprises an old and a more modern quarter, the former, built before Madrid, was the metropolis of Spain. The E. and more modern part is certainly not devoid of beauty; and its wide and well-paved streets, lined with handsome and lofty houses, chiefly built with brick and grey granite, the extensive and well-planted walks, the squares with their elegant fountains, and the many large and well-built public edifices, remind the traveller that he is in one of the finest, though perhaps the dullest, capitals in Europe. The best entrance to the city is by the Saragossa road, through the gate of Alcala, a noble Ionic structure, with three arches, the central one being 70 ft. high. Within the walls, right and left, is the long, wide *Prado*, with its rows of trees stretching in fine perspective for more than $\frac{1}{2}$ m., and in front is the *Calle de Alcala*, reaching into the heart of the city, $\frac{1}{2}$ m. in length, wider than Regent Street, and flanked by a splendid range of unequal buildings, but all of large size, and good proportions. At its end is the great centre, in which most of the better streets terminate, and, now at least rather inappropriately, designated the *Puerta de Sol*. Here, close to the *Bolsa*, or exchange, is the great morning rendezvous, either for business or pleasure. The best streets uniting in this point are the *Calle Mayor*, the *Calle de la Montera*, and the *Calle de las Carretas*, all busy thoroughfares, with good and showy shops. The *Calle del Arsenal* leads to the palace, and the *Carrera de San Gerónimo* is the direct road to the gardens of the Buen Retiro. Among the squares of Madrid, the largest, with the exception of the space fronting the palace, is the *Plaza Mayor*, a rectangular area, 430 ft. in length, and 330 ft. broad, surrounded by a uniform range of stone buildings, 5 stories high, the lower part being open in front, and supported by pillars forming a handsome colonnade. The chief streets running into it are those of Atocha and Toledo, the latter passing through the *Plaza de Cebada* (formerly the place of execution for criminals), and through the gate to the bridge of its own name. None of these streets, however, will bear any comparison with the *Calle de Alcala*: many are good, and very many respectable, tolerably wide, and formed with lofty and well-built houses; but there is no other magnificent street. The bye-streets are narrow and crooked, especially in the S.W. quarter, where decay of material, closeness of building, and extreme filth, are the almost unvarying characteristics.

Among the public buildings, the most conspicuous is the royal palace, occupying, with its gardens, a space of nearly 80 acres, on the E. bank of the river. It stands on the site of the old Alcazar of Philip II., burnt down in 1734, and has 4 fronts of white stone (each 470 ft. in length and 100 ft. high), enclosing a spacious quadrangle. The interior is fitted up in a style of costly magnificence, perhaps not surpassed in any palace of Europe. The ceilings are *chefs-d'œuvre* of Mengs, Velasquez, Corrado, and Tiepolo; the richest marbles of Spain adorn its walls, and the rooms are hung with paintings by the best masters, and noble mirrors from the manufactory of St. Ildefonso. (*Swainburne*, ii. 168-177.) Many of the best pictures, however, have been removed to the royal picture-gallery in the Prado. Its armoury is especially curious, and presents numerous specimens of arms and accoutrements taken from the Moors by Ferdinand the Catholic and his victorious generals. (*Sir C. Brooke*, ii. 295.) The other chief public buildings are—the custom-house, a handsome range of building, 320 ft. in length; the Buena-vista palace, now used as a museum of civil engineering; and the palace of the council of Castile, in the *Calle de Alcala*; the post-office, in the *Puerta del Sol*; the king's printing-office, in the *Calle de las Carretas*; the duke of Liria's palace, containing a fine collection of pictures, near the gate of St. Bernardino, in the N. quarter of the city; the palace of the duke of Berwick; and the national gallery, in the Prado. Madrid, though a bishop's see, has no cathedral; but there are 67 churches; among which, however, the churches of San Isidro and the

Visitation are alone worthy of notice, the rest being externally and internally barbarous. "No mad architect," says Swinburne, "ever dreamt of a distortion of members so capricious, of a twist of pillars, cornices, or pediments so wild and fantastic, but that a real sample of it may be produced in some one or other of the churches of Madrid. They are, with two or three exceptions, small and poor both in marbles and pictures. Their altars are piles of wooden ornaments heaped up to the ceiling and stuck full of wax-lights, which more than once have set fire to the whole church." (Swinburne, ii. 164.) Previously to 1834 there were 66 convents; but several have since been pulled down to widen the streets, while others have been converted to different and, no doubt, more useful purposes than the maintenance, in pampered idleness, of hundreds of diabolical monks and nuns. The great walks constitute another grand feature of the city. The *Prado*, or public promenade, is as fashionably attended, especially on Sunday, as Hyde Park in London. It is nearly 2 m. long, and comprises a broad walk, called the *salon*, flanked by several of less width, thickly shaded with elm trees: contiguous to it is the garden of the *Buen Retiro*, the palace of that name having been demolished; and still further S. are the shady gardens called *Las Delicias*, leading to the Canal de Manzanares, which was once intended to connect Madrid with the Tagus at Toledo. These walks, in the afternoon of autumn, are crowded with the most respectable inhab., nor can any better idea of the out-of-door appearance of the pop. be got than by observing them on the Prado. In the spring, however, the scene is varied by visits to Aranjuez, a beautiful park near the Tagus, forming a verdant oasis in the midst of a desert. "The ladies," says Quin (p. 114.), "wear, with few exceptions, black silk dresses and shawls, or rather mantillas, of various colours, while their head-dress consists only of a slight veil attached to the hair by a comb, and falling on the shoulder; and the graceful manner in which they wear the mantilla and veil gives to them all a smart and attractive air. The dress of the men is in every respect similar to that of the French or English; but they usually cover their persons with large cloaks, which, from the manner of wearing them, have rather a graceful appearance."

The state of education in Madrid cannot be satisfactorily ascertained. Milano, indeed, mentions the existence of 166 primary schools and 2 colleges; but nothing can be inferred from such a statement, as every thing depends on the sort of instruction and the number of the pupils. The schools being generally, however, at least till very recently, under the guidance of the priests, there can be no doubt that the education they afforded was of the very worst description; and that, instead of expanding and improving the mind, it was only fitted and intended to imbue it with the grossest prejudices. Schools on the Lancastrian system have recently been introduced; but they are opposed by large classes, and at this moment the bulk of the pop. is involved in the grossest ignorance. The *Colegio Imperial* and the *Seminario de Nobles*, the two schools or colleges frequented by the better classes, are but little superior to the others: no choice is, however, left to parents as to the education of their children, the only alternative being the government school or no school. The instruction given to females is most superficial: reading, writing, and a little geography are taught, in connection with music and other accomplishments; but few ladies attain to any thing like literary distinction, and the majority are "ignorant almost beyond belief." Closely connected with the educational establishments are the various literary and scientific societies, most of which are under the protection of the crown. The Academy of History, which has a handsome mansion in the Plaza Mayor, was instituted in 1735, for the purpose of collecting authentic materials for the history and geography of Spain and her possessions, and has published, amongst other useful works, an historico-geographical dictionary of Spain and Navarre. The *Academia de la Lengua* has for its object the perfection of the Castilian language, and with this view has published a dictionary, grammar, and other works on Spanish philology. There are also academies of science, the fine arts, medicine, and rural economy, all of which are more or less useful in promoting their respective objects. The public collections comprise,—1. the royal library, with 200,000 printed volumes, besides many valuable Arabic and other MSS., and a fine collection of coins; 2. the library of San Isidro, formerly belonging to the Jesuits, and containing upwards of 60,000 vols.; 3. the museum of natural history, in which, besides other good specimens, is the great *megatherium*, described by Cuvier; 4. the botanical garden and library; and, 5., the national picture-gallery, equal in extent, and perhaps little inferior in excellence, to the largest in Europe. "To the lover of the Spanish school," says Inglis, "this gallery possesses attractions which no other can offer. Besides 42 pictures of Murillo, it contains 55 of Velasquez, 29 of Espanoletto, 17 of Juanes, 6 of Alonzo Cano,

and many by other native painters; there are also nearly 500 pictures of the Italian schools, and about 300 of the Flemish school; and in the *Sala Reservada* are several *chefs-d'œuvre* of Titian and Rubens. A full description of these pictures is given by Inglis in ch. vi. vii. of his valuable work; also by Cook, vol. i. 166—170.

Several newspapers are now published at Madrid, many of which are violent and abusive in the expression of their political sentiments; but few are sufficiently well conducted to exercise much influence on the public mind. The reprinting of Spanish works has been during some years conducted with great spirit, and translations have been made of popular English and French novels, scientific and elementary works, &c.; and many light writings, with a few more solid productions of unquestionable talent by Castilians of our own day, indicate a gradually increasing taste for literature, which, however, is far from general, even among the better classes.

The theatrical amusements of Madrid are confined to two small establishments, managed by the ayuntamiento or city council. At these theatres, called the *Teatro de la Cruz* and the *Teatro del Príncipe*, Spanish comedy and Italian operas are indiscriminately represented: the musical department is on the whole well conducted: the plays are of the most trifling description, more resembling low farces than regular comedies; but, at any rate, they represent pure and unadulterated pictures of the intrigues and low life of Spain, and exhibit a truth and spirit unknown on any other stage. A large theatre, begun some years ago near the palace, has not been completed. The great and all-absorbing amusement, however, of the people of Madrid (called by their countrymen *Madridlenos*), is the bull-fight, held on the Monday afternoons during the season, in a large open amphitheatre, outside the gate of Alcala. Monday in Madrid is always a kind of holiday, and in the afternoon all the avenues leading to the bull-ring are in commotion: the street of Alcala is filled throughout its whole extent with a dense crowd of all ranks, some on foot and others in carriages, all hastening to the same point. The amphitheatre will accommodate 17,000 spectators: the central area has a diameter of 230 ft., and is surrounded by a double fence, behind the exterior of which the benches rise tier above tier to the outer wall, where, at the top of all, and shaded with awnings and blinds, are the boxes occupied by persons of rank and property. The intense interest which the spectators of all classes, women as well as men, feel in this butcher-like sport, is visible throughout, and often loudly expressed; and, says Inglis, "it is certainly a fine spectacle to see thousands of spectators rise simultaneously, as they always do when the interest is intense: the greatest and most crowded theatre in Europe presents nothing half so imposing as this." The expenses of these exhibitions are very heavy; but the receipts are greater, leaving a handsome sum for the General Hospital, which, it is said, draws from them a revenue of 300,000 reals, or 3,000*l.* sterling.

Inglis says there is less wretchedness in Madrid than in Paris, London, and other great towns of France and England; but the condition of the lower orders has been since much altered for the worse, by the suppression of the convents, on which they were greatly dependent: many of the ecclesiastics have also fallen into the most abject distress, though distress arising from this source, in so far at least as the public are concerned, can only be temporary. There are numerous benevolent institutions for the relief of indigence, and the cure of disease, many of which are supported by handsome endowments. The royal hospital of San Fernando, a very large establishment somewhat like an English workhouse, and the mendicity institution for the reception of beggars, formerly the greatest nuisance in Madrid, are doing much good; and the General Hospital not only gives relief to the sick poor, but serves as a practical school for the students of the Academy of Medicine. A *mont de piété*, like that in Paris, lends money on security, with this difference, that at Madrid no interest is taken, the expense of the establishment being borne by the government.

Madrid has scarcely any manufacturing industry, nor is it possible, from its situation, at a distance from any navigable river, and in the midst of a stony, unproductive desert, that it can, in this respect, materially improve, even if that love of the *dolce far niente* should be given up, which seems to be the *summum bonum* of the *Madridlenian*. As it is, the workmen of the city are Catalans, Valencians, Aragonese, Asturians, and Galicians: in short, every article in Madrid, whether of manufacturing or farming industry, is exotic. Its fruit comes from a distance of 50 m., butter from Aragon, oranges and lemons from Valencia, and dates from Murcia. A manufactory of porcelain and another of carpets are carried on at the expense of the government, and, most probably, with as little profit as the mirror manufactory at St. Ildefonso and the saltpetre works described by Townsend, as entailing a heavy annual loss (vol. i. p. 269—278.). The consumption of Madrid, in

1826, is stated, by Inglis, to have been as follows:—230,000 sheep, 12,500 oxen, 70,000 hogs, 800,000 bushels of corn, 18,000 bushels of salt, 2,417,357 arrobas of charcoal, 4,800 arr. of oil, 13,250 arr. of soap, and 500,000 arr. of wine. (The arroba is equal to 25 lbs. avoird.) The price of provisions, and the general expenses of living, are very high, in consequence of the necessity of bringing almost every article from a distance, and the want of water carriage. The markets are well supplied with meat, poultry, and vegetables; but fish and milk are scarce. Beef and mutton are sold at about 4½d. the lb. of 14 oz., veal fetches 7½d., and pork 5d. per lb.; bread of the best quality (and finer can nowhere be had than in Madrid) is 3½d. per lb., ordinary wine of La Mancha about 6d. the arroba (4½ gallons). Fowls are sold from 2s. to 3s. 6d. the couple, ducks at 2s. each, geese at 3s. 6d., and turkeys from 4s. to 10s., according to the season. Coffee is about one third cheaper than in England; but tea and sugar are scarce, dear, and bad. Fruit is abundant, and very cheap. Fuel is one of the most expensive articles, and lodgings fetch as high rents as those in the best situations in London.

The state of society in Madrid will be best learnt from viewing the habits of the middle classes; for, indeed, it is next to impossible for a stranger, even with good introductions, to know enough of the aristocracy to form a correct judgment of their domestic habits, owing, we believe, in a great measure, to the general poverty, which, with the high rate of living in Madrid, is a very effectual bar to hospitality. Almost all families, except those in the very highest ranks, live as in Paris and Edinburgh, in stories or flats, each story being a distinct house. The outer door, which is of enormous strength, has a small window or grating, with a sliding shutter, and the usual salutation from the porter, when one rings for admittance is *¿Quién es?*—to which the proper reply is *Gente de paz* (people of peace); and the door, in ordinary cases, is opened. This precaution of surveying strangers before admission is, perhaps, attributable to a feeling of personal insecurity, consequent on bad government and religious persecution. A suite of apartments usually consists of a large, well-lighted, and respectably-furnished saloon, with a recess on one side, in which is a bed, wholly unconcealed, and without curtains: and at another side is a door-way leading into a smaller chamber, similarly furnished to that just described. The lady's boudoir is always handsomely decorated; and the worst rooms in an establishment are invariably the library or study, and the dining-room, both of which are small, and wretchedly furnished. The apartments are always kept remarkably clean. The manner of living in Madrid is somewhat more generous than in the N. provs. A rather rich soup is usually added to the everlasting *olla*, or *cocido*, which is much better made and more highly seasoned than in the rest of Spain*; and dinner is always followed by cakes, sweetmeats, and fruits, accompanied by a moderate supply of Valdepeñas and other good native wines. The inhabs., except the tradespeople, rise late, and breakfast on chocolate between 10 and 11. Lounging, reading, or a stroll to the cafés (where, however, they spend nothing) occupies the men, dressing and visiting the ladies, till dinner (about three), after which follows the siesta, a season of almost universal repose in Madrid. The shops then are either shut, or a curtain is drawn before the door: the shutters of every window are closed; scarcely a respectable person is seen in the streets; the stall-keepers spread cloths over their wares, and go to sleep; groups of the poor and idle are seen stretched in the shade; and even the Gallician water-carriers, seized with the general drowsiness, make pillows of their water-casks. The siesta over, the ladies sit in the balconies, and the gentlemen smoke their cigars, till the time for the lounge on the Prado; and then comes the *tertulia*, a very pleasant and social meeting for chit-chat and music, closing the day of Madrid. Dinner parties are seldom or never given, and there are no regular *parties* except balls; and those not frequent, and unaccompanied by any refreshment beyond *agua fresca*. The best national manners are not, as in other countries, to be found in the cap., where every thing is sacrificed to the rage for imitating the French and English—a feature which distinguishes the *Madridenos* from all other Spaniards. Morals in all classes, especially the higher, are in the most degraded state. Vells, indeed, are thrown aside, and serenades are rare; but gallantry and intrigue are as active as ever. The men think little of their marriage obligations, and pay no real respect to the other sex: the women make dress and show the business of their lives; court admiration, and are willing victims of unprincipled gallantry. Infidelity in married women is perhaps more frequent than in any of the towns of Italy, scarcely any married lady is without her *cortejo*. The connection, however, if not less sensual, is more lasting than in Italy—and intrigues

* The curious reader is referred to Sir A. C. Brooke's entertaining travels through Spain and Morocco (ll. 245.) for a recipe for making this dish in its different varieties.

are usually carried on unknown to the husband, who is generally too proud to connive at his wife's dishonour. Sexual immorality is common also among the lower orders; but there is not that drunkenness, brutality, and insolence which characterise the *canaille* of Paris and London; and the stranger may now walk about the streets in any part of Madrid without fear of being stabbed or plundered, a circumstance attributable more to the improvement of the lower orders than to the excellence of the police, which certainly deserves no eulogium. (Swinburne, ll.; Inglis, l. 56—240.; Quin's *Travels in Spain*; Cook's *Sketches of Spain* in 1829-33, vol. i. c. 8.; Galiano's *Lectures on Span. Lit. in the Athenæum* of 1834; *Journ. of Educ.*, vol. ix.; and *Private Information*.)

Madrid occupies the site of the ancient *Mantua Carpetanorum*, a fortified town belonging to the Carpetani. It was afterwards called Majoritum, was taken and sacked in 1109 by the Moors, who gave it its present name. Henry III. repaired and enlarged it at the beginning of the 15th century, and Philip II. made it the capital of Spain. Its subsequent history to the time of the French war is unimportant. On the 22d of March the city was entered by the French troops under Murat, and the royal family was induced to remove into France. Joseph Bonaparte was then made king; but both he and the French army were, two months afterwards, obliged by the inhabs., who rose in a body, to evacuate the town. In the December following, Madrid was occupied by Napoleon in person, and his brother Joseph was reinstalled. The English troops occupied it for a short time in 1812, and it was again visited in 1823, by the French under the Duc d'Angoulême.

MADRIDEJOS, a town of Spain in New Castile, prov. La Mancha, 39 m. N.N.E. Ciudad-Real, and 65 m. S. Madrid. Pop., according to Mifano, 6,900. It is situated in an extensive and exposed plain on the great road from Madrid through Aranjuez to Jaen and Granada, the neighbourhood being rendered not only unhealthy, but also, in some parts, unproductive by the inundations of the Amarguillo, which often greatly injure the town and deprive the people of their means of support. The only public buildings are 2 par. churches and an hospital; nor are there more than a dozen good houses in the place. A manufactory of serge is the only branch of industry in the town; but the neighbourhood is remarkable for its rich crops of saffron and for extensive sheep-farming. (Mifano.) Inglis describes the inhab. as "almost a population of beggars," and states that the agriculture of this district is in the lowest state, a great part of the soil being poor and barren, while the indolence and absurd prejudices of the farmers render the rest all but unproductive. (Vol. ii. p. 12.)

MADURA and DINDIGUL, a collectorate of British India, presid. Madras, prov. Carnatic, near the S. extremity of Hindostan, between lat. 9° and 10° 45' N., and long. 77° 10' and 79° 10' E., having N. Trichinopoly and Coimbatore, W. Cochin and Travancore, S. Tinnevely and the Gulph of Manaar, and E. the latter and Tanjore. Area 7,656 sq. m. Pop. (1836-37) 1,135,411, chiefly Hindoos of the Sudra caste. The N. and W. parts of this district are mountainous, the S. and E. level. The hilly parts are interspersed with fertile valleys, the principal being that of Dindigul; but the plain country of Madura is by far the most productive portion of the surface. It is intersected by the river Vighey, which rises in this district, and after a course eastward for about 145 m., falls into the Gulph of Manaar. A few swamps exist on the shore. The island of Ramisseram belongs to this district. The climate of the hills is cool and healthy, but the wind often blows with great violence: in the S. it is much warmer, the temp. in April and May ranging between 70° and 98° Fahr. Different kinds of paddy are grown in the low country, irrigation being there facilitated by plenty of streams and tanks; the husbandry is tolerably good, though not so perfect as in Tanjore. In Dindigul, the dry culture is to the wet as 4 to 1; and the inhab. are in much less comfortable circumstances than those of the S. Property is much subdivided; some individuals occupy only the 20th part of an acre, and few have more than 135 acres. Madura is celebrated for its piece goods, and its dyers; and its artisans in gold, silver, &c., are in many places much above mediocrity. Its chief exports are piece-goods, cotton, paddy, and chanks; its chief imports, betel nut, chay root, cocoa nuts, and oil seeds. The roads, bridges, and other public works in this district, have been of late put into very efficient repair by the government. Total public revenue (1837-38) 219,054L, of which the land-tax made 163,363L. This district is supposed to be the *Regis Pandionis* of Ptolemy, having been anciently governed by a Pandian family, and is one of the holy countries of Southern India. It has numerous fine temples, and other monuments of former Hindoo grandeur. It was transferred to the British by the nabob of Arcot in 1801.

MADURA, a town of S. Hindostan, cap. of the preceding

MADURA.

district, on the Vighay, 136 m. N.N.E. Cape Comorin, and 270 m. S.W. Madras: lat. $9^{\circ} 58' N.$, long. $78^{\circ} 14' E.$ It is surrounded by a bastioned but dilapidated stone wall; streets wide and regular, public edifices magnificent, but private dwellings mean and wretched. It has some of the most extraordinary specimens of Hindoo architecture extant. The palace is a vast pile, with a dome 90 ft. in diameter; but it is much dilapidated: the great temple, with its spacious areas, choultries, and 4 colossal porticoes, each a pyramid of 10 stories, covers an extent of ground almost sufficient for the site of a town. In front of the latter is a celebrated choultry, or inn, 312 ft. in length, ornamented with polished green stone columns, and grotesque sculptures. During the Carnatic wars, from 1740 to 1760, Madura underwent many sieges. The British civil station, and seat of the collector, &c., is in a pleasant situation, about $1\frac{1}{2}$ m. S. the town. (*Hamilton's E. I. Gaz.*; *Madras Almanacks*, 1838-39.)

MADURA, an island of the Eastern Archipelago, immediately adjacent to the N.E. coast of Java, with which island it is politically included, under the Dutch government. (*See JAVA*.)

MAESE. *See MEUSE.*

MAESTRICHT (an. *Trajectus ad Mosam*), a fortified town of Holland, prov. Limburg, of which it is the cap., on the Maese, 14 m. N. by E. Liege, and 57 m. E. Brussels; lat. $50^{\circ} 51' 7'' N.$, long. $5^{\circ} 41' E.$ Pop., in 1848, 32,000. It is one of the strongest towns in Holland, being defended by numerous bastions, trenches, &c.: it is well built, with wide, clean, and well-paved streets. The market is held in the great square, the centre of which is occupied by the *Hôtel-de-ville*, built in 1652, and said to be one of the finest structures in the kingdom: the *place d'armes* is also a fine open space planted with rows of trees, and much frequented as a promenade. Among the other public buildings are comprised the exchange, the church of St. Servais, the *ci-devant* college of Jesuits, the arsenal, and the theatre; and in the town are 10 churches, 2 hospitals, 2 orphan-asylums, a lazaretto, atheneum, fine public library, and society of agriculture. Maestricht is the residence of the governor of the prov. and the seat of a court of assizes and primary jurisdiction, as well as of a chamber of commerce, and it sends 6 deputies to the States of the prov. The industry of the town comprises the manufacture of woollen cloths and flannels, cotton and woollen yarn, fire-arms, pins, starch, and tobacco; besides which there are soap-factories, tanneries, breweries, and dye-houses. A considerable trade is carried on with various places on the Maese by means of barges, and packets ply daily between Maestricht, Liege, Namur, &c. Three large fairs are held here during the year for horses and cattle. On the other side of the river (crossed here by a stone bridge) is the citadel or fort of Petersberg, in the suburb of Wyk, famous for its extensive subterranean stone quarry, containing numerous intricate galleries and passages, and abounding with curious marine and saurian fossils, some specimens of which may be seen in the museum of the Jardin des Plantes at Paris. (*Vandermaelen, Dict. de Limburg*, &c.)

MAGDALENA, a river of S. America, and next to the Orinoco the principal in the republic of New Granada, through the centre of which it flows, from S. to N., through 9 deg. of lat. It rises in the small lake of Papas, in the Andes, about lat. $2^{\circ} N.$, and long. $76^{\circ} 25' W.$, and runs for at least 500 m. between the middle and E. chains of the Cordillera. Its entire course may be estimated at about 800 m.: it enters the Caribbean Sea about 65 m. N.E. Cartagena, and 40 m. S.W. Santa Marta. Its principal tributary, the Cauca, flows between the central and W. chains of the Cordillera, and joins it from the W., between 150 and 200 m. from its mouth. Its other affluents are the Sogamosa, Sesar, and Bogota. The towns of Naya, Honda, and Monpox are on its banks. The descent of the Magdalena is said to be as much as 20 inches a mile (*Dict. Géog.*); and the strength of its waters is such, that they preserve their freshness to a considerable distance from its mouth. The Magdalena is navigable as far as Honda, in lat. $5^{\circ} 14' N.$, near which the navigation is interrupted by cataracts; but its rapidity is such, that a distance of 10 leagues a day is reckoned very good progress in ascending the river, for a *champan*, or flat-bottomed boat, manned by 24 *bogas*, or rowers. The oppressive heat of the climate, the abundance of caymans, and the swarms of musquitos and other insects that infest the river, contribute to render the navigation both dangerous and unpleasant; but the Magdalena is, notwithstanding, the main route for the commercial and other intercourse of the inland prov. of New Granada with the ocean.

MAGDEBURG, a fortified city of Prussian Saxony, of which prov. it is the cap., on the Elbe, 74 m. S.W. Berlin, and 50 m. E.S.E. Brunswick, lat. $52^{\circ} 8' 4'' N.$, long. $11^{\circ} 39' 46'' E.$ Pop. in 1846, with its suburbs (ex. garrison), 55,816. Magdeburg is a fortress of the first class, and, from the augmentation and improvement of its defences since the war, it is now considered one of the

MAGGIORE (LAGO DI). 251

strongest in Europe. The citadel, on an island in the Elbe, serves also as a state prison, Baron Trenck and Lafayette having, among others, been confined in it.

Magdeburg is divided into the Old town, with the suburb Friedrichstadt, together composing the ancient fortress; and the New town and suburb of Sudenburg. The latter, however, has been for the most part surrounded with walls, and the fortifications are now so extensive that it is said it would require an army of 50,000 men to invest the city. Magdeburg has one good and spacious street, called the Broadway; but all the other streets are narrow and crooked. There are two large public squares, in one of which is the cathedral. This, which is one of the finest Gothic structures of N. Germany, was erected between 1211 and 1363, and has been recently repaired at a cost of 300,000 dollars. It has two towers, each 240 ft. in height, a lofty vault, a handsome high altar, and numerous tombs and monuments, among which is that of Otho the Great and his empress.

Magdeburg has in all 12 churches, one of which is for R. Catholics, a synagogue, an ecclesiastical seminary, a female high school, or royal boarding house for the education of girls, a teachers' seminary, with schools for agriculture, commerce, surgery, &c.; 5 hospitals, a lunatic asylum, a workhouse, a humane institution, a savings' bank, and various charities; an arsenal, extensive barracks, and other military establishments; several public libraries, and a theatre. It is a bishop's see, and is the seat of the government, of the board of taxation, the superior courts of justice, the council, and the military commandant of Prussian Saxony. From its position on the Elbe, it is an important *entrepôt* for the merchandise imported into and exported from the central parts of Germany by that river. In other respects, also, it is very favourably situated for commerce. A canal, commencing about 20 m. below the city, connects the Havel with the Elbe, giving Magdeburg a direct water communication with Berlin and Frankfort on the Oder; and it is also the centre of a number of great roads which lead to all the cities and towns of importance within a radius of 50 m. Its manufactures, which are pretty considerable, consist of silk, linen, cotton, and woollen fabrics; oil-cloth, hats, gloves, tobacco, soap, earthenware, refined sugar, chicory, vinegar, &c., with numerous tanneries, breweries, and distilleries. A large quantity of salt is made in its neighbourhood. It has several native banking establishments, and a branch of the royal bank of Berlin. Several newspapers are published in the town; which has uniformly an air of bustle and activity.

Magdeburg was repaired by Charlemagne, and improved and enlarged by Otho the Great. It has suffered numerous sieges. In 1631 it was taken by assault by the Imperialists under Tilly, by whom it was given up to military execution, and was nearly burned to the ground. It is the birthplace of the celebrated natural philosopher Otto de Guericke, and of the poet Schultz. (*Von Zedlitz, Der Preussische Staat*, iii. 204, 205.; *Berghaus, Allg. Länder*, &c. iv. 655, 656.; *Stein Handb.*)

MAGELLAN, or MAGELHAENS (STRAIT OF), a strait at the S. extremity of S. America, separating Patagonia from Tierra del Fuego, Clarence Island, and the Isle of Desolation. It extends from Capes de las Virgins and Espíritu Santo, on the Atlantic, to Capes Victoria and de los Pilares, on the Pacific Ocean, a distance of about 300 m., having a breadth varying from $1\frac{1}{2}$ to 40 m. It has an additional communication with the Pacific by Cockburn Channel and Magdalen Sound. Its shores are lofty and generally rugged, and its depth is in some parts very great, no bottom having been found with upwards of 1,500 ft. of line. Some safe and excellent bays communicate with it; but, generally speaking, its passage is extremely dangerous, both from the violence of the currents and the sudden and heavy tempests to which it is subject. It was discovered by Magelhaen, a famous Portuguese navigator in the service of Spain, in 1520. Drake traversed it in his voyage round the world; and it has since been frequently explored by British navigators.

MAGGIORE (LAGO DI), or Lake of Locarno, (an. *Lacus Verbanus*), a famous lake of N. Italy, lying partly between Piedmont and Lombardy, and partly within the Swiss canton of Tessin. It is long and narrow, stretching above 40 m. from Magadino at its N., to Sesto-Calende at its S. extremity, while in its widest parts, opposite to the mouth of the Toce, it is about 6 m. across, but its ordinary breadth does not exceed from 2 to 3 m. Its general direction is S.S.W. and N.N.E., and it may, in fact, be considered as an expansion of the Tessino, which enters it at its N. and leaves it at its S. extremity. In addition to the Upper or N. Tessino, it receives on its W. the waters of the Toce, and on its E. side those of the Tresa, flowing from the Lago di Lugano. Its only outlet is the Lower or S. Tessino. In some places it is not less than 300 fathoms deep; its waters, which are clear and of a greenish tinge, are well stocked with fish; and, like all Alpine lakes, its navigation is dangerous from sudden squalls.

The scenery of the Lago Maggiore is very varied. That of the upper part is bold and mountainous, its northern branch opening into one of the most beautiful valleys of the Rhetian Alps, which form a magnificent amphitheatre in the back ground. Towards the E. and S., the mountains gradually decline to the plain of Lombardy; and the lower part of the lake is of a more quiet and softened character, yet still very beautiful. Its immediate shores are richly fringed with wood, occasionally broken by picturesque crags, topped with castles and churches, and with numerous villages stretching along the water's edge. Though inferior in wildness and sublimity to the lake of Como, and perhaps, also, to that of Lugano, the softer beauties of this lake are generally allowed to be the more attractive, contrasted, as they are, with the distant grandeur of the Alpine chain. (*Corder's Italy*, i. 313.)

The Borromean islands, from which this lake has derived a great portion of its celebrity, are situated in a bay, on its W. side, opposite to the mouths of the Toce. Of these the *Isola Bella* and the *Isola Madre*, are the most famous. They are of small size, and, previously to the middle of the 17th century, were little better than bare rocks; but being the property of Count Vitaliano Borromeo, a descendant of the celebrated St. Carlo Borromeo, he resolved to make them his residence, and to convert them, according to the taste of the time, into a sort of Italian paradise. They were consequently covered with earth brought from the adjoining mainland, formed (especially the *Isola Bella*) into splendid terraces, lined with trees and statues, and ornamented with superb palaces. Unluckily, however, nothing is natural, all is art.

"On every side you look, behold the wall!
No pleasing intricacies intervene,
No artful wildness to perplex the scene;
Grove nods at grove, each alley has a brother,
And half the platform just reflects the other.
The suff'ring eye inverted nature sees,
Trees cut to statues, statues thick as trees!"
Pope's Moral Essays, iv. l. 114.

For a lengthened period, however, these islands were the theme of universal admiration; but as a simpler and purer taste began to prevail, they came to be regarded with very different feelings, and have latterly, perhaps, been too much depreciated. These are now usually looked upon by Englishmen, at least, as little better than "quarries above ground;" and as evincing only the wealth, extravagance, and bad taste of their founder. (*Eustace's Italy*, vol. iv., 8vo. edit.; *Simons's Italy*, p. 2, &c.)

MAGINDANAO, or MINDANAO, the most S. of the Philippine Islands, which see.

MAGNESIA *ad Sipylum* (now MANISA), an ancient town, of some celebrity, in Asiatic Turkey, 28 m. N.E. Smyrna. Pop. according to Elliott about 30,000, of whom 4,000 are Greeks, 2,000 Armenians, and a few Jews. It is situated near the Kodus, or an. *Hermus*, embosomed in hills long noted for the production of loadstones, and is one of the cleanest and neatest towns of Asia Minor, being in the width of its streets, and other respects, far superior to Smyrna. The principal buildings are two mosques, with double minarets, indicating a royal foundation, and the interior of each is adorned with paintings, lamps, ivory balls, ostriches' eggs, &c., such as are to be seen in the mosques of Constantinople. There are 28 other mosques, and the Armenians, Greeks, and Jews have their respective places of worship. A Jewish college, lunatic asylum, and the mausoleum of Amurath II are the only other public edifices, except the khans, which are numerous, and well built. The manufacture of cotton and silk goods, and goats' hair shawls, employs many of the inhab., and the town derives some importance from being on the great road between Smyrna and the interior of Asia Minor. (*Elliott*, ii. 56-54.; *Chandler*, i. 308.)

Magnesia was in all probability colonised by the Magnesians of Thessaly, not long after the foundation of Cyme and Smyrna, two other Æolian cities. It is celebrated as the scene of a signal victory obtained by the Romans, under the two Scipios, over the forces of Antiochus the Great, who was consequently obliged to retire beyond the chain of Taurus, and leave Asia Minor at the disposal of the conquerors. The inhab. afterwards displayed great bravery in defending their town against Mithridates. In the reign of Tiberius, A. D. 17, Magnesia, in common with 11 other cities, was all but destroyed by an earthquake, and owed its restoration in a great measure to the emperor's generosity. *Duodecim celebres Asia urbes collapsæ nocturno motu terræ; quod improvisior, graviorque pestis fuit: neque solitum in tali casu effugium subveniebat in aperta prorumpendi, quia diductis terris hauriebantur. Asperissima lues in eodem misericordiam traxit: centies sestertium pollicitus Cæsar et quantum arario pendebant in quinquennium remisit. Magnetes a Sipyllo proximi damno ac remedio habiti.* (*Tac. Ann.* ii. 47.)

It was a flourishing city at a late period of the Roman

empire, but at the commencement of the 14th century passed into the hands of Sarkhan, sultan of Icona, and finally was annexed, in 1448, to the dominions of Mahomet II., the conqueror of Constantinople.

The above city must not be confounded with *Magnesia ad Mæandrum*, close to the modern Inek-bazar, and about 50 m. S.S.E. Smyrna, which, though a place of some consequence, was greatly inferior to the *Magnesia ad Sipylum*. It is remarkable, however, for the ruins of a theatre, stadium, and magnificent octastyle Ionic temple, said to have surpassed in the harmony of its proportions even the temple of Diana at Ephesus. (*Leake's Asia Minor*, p. 245.)

MAHABALIPOORAM, or MAVALIPOORAM, a village and a curious assemblage of rock temples in Hindostan, on the Coromandel coast, distr. Chingleput, about 33 m. S.S.W. Madras; lat. 12° 36' N., long. 80° 16' E. The temples in their general character closely resemble those at Ellora and elsewhere, on the W. side of Hindostan; but, from their being cut in a granite rock, they are in better preservation. They have been chiefly consecrated to Vishnu, whose worship appears to have predominated on this, as that of Siva on the opposite coast of India. At the foot of a hill N. of the village is a pagoda, about 26 ft. high, nearly as long, and about half as broad, hewn from a single rock, and covered with sculptures. Near this temple, the surface of the rock, about 90 ft. in extent, by 30 in height, is covered with bas-reliefs, including a gigantic figure of Krishna, another of his favourite Arjoon, and representations of a number of animals. Opposite to this, and surrounded by a stone wall, are 2 brick pagodas of great antiquity; adjacent to which are 2 excavations in the rock, one supported by pillars, in a manner somewhat like the cave at Elephanta, and the other fronting a sculptured group, supposed to represent one of Krishna's adventures. Still proceeding S., the traveller crosses a rocky hill, in which is a spacious excavation, in the middle compartment of which is a figure of Siva between Brahma and Vishnu; while at one end of the temple is a gigantic figure of Vishnu sleeping upon a cobra-de-capello, and at the other an eight-armed goddess, mounted on a lion, rescuing a human figure from a buffalo-headed demon. Several of the figures are executed in a very superior style. About a mile further S. are other sculptured rocks, said to surpass those already noticed. One pagoda is about 40 ft. in height, by 29 in length and breadth; and another 49 ft. in length and breadth, and 25 ft. in height, but rent, as by some violent convulsion, from top to bottom; besides which there are three smaller structures, and large figures of a lion and an elephant, the last extremely true to nature. E. of the village, and washed by the sea, is an ancient stone pagoda, within which, also, are several sculptured figures. The sea has obviously encroached on this part of the coast, and it has probably submerged many temples that formerly existed here. Mahabalipooram is believed to have been anciently of considerable importance as a metropolis of the kings of the race of Pandion, in Hindoo mythology. (*Goldingham in Asiat. Researches*, v.; *Heber, &c., passim*.)

MAHADEO TEMPLE, a celebrated place of Hindoo worship in British India, prov. Gundwanah, on the Nerbudda, 60 m. S.E. Hussingabad; lat. 22° 22' N., long. 78° 35' E.

MAHANUDDY (*Maha Nadi*, the great river), a considerable river of Hindostan, having its source in the prov. of Gundwanah; lat. 21° 30' N., long. 81° E., and flowing mostly E. to the Bay of Bengal, which it enters by numerous mouths, about lat. 20° N., and between long. 85° 30' and 87° E., after a course of more than 500 m. At Cuttack, about 70 m. from the sea, the river, in the rainy season, has a breadth of about 2 m.; but it is, notwithstanding, fordable at this point from Jan. to June. During the rains it is navigable for a distance of almost 300 m. from the sea. Its deposits consist of a coarse sand, hostile to vegetation, but frequently containing diamonds of the first quality, and which are occasionally of considerable size. (*Hamilton's E. I. Gaz.*)

MAHE', a sea-port town of Hindostan. It belongs to the French, and was formerly their principal settlement on the coast of Malabar, but is now of little importance. It is admirably situated on rising ground, beside a small river, navigable for boats to a considerable distance inland, 40 m. N.E. Calicut. Pop., in 1835, 3,355, nearly all of native races. The town is well built, and has several handsome houses, 3 churches, &c. Its commerce is, however, small: and mostly confined to cocoa-nuts, pepper, arrack, &c. (*Official Returns*.)

MAHIM, a town of Hindostan, prov. Aurungabad, on the island of Bombay, near its N. extremity, in lat. 19° 2' N., and long. 72° 58' E. It has a Portuguese church and a R. Cath. college, and, in 1816, its pop., with that of some adjacent villages, amounted to 15,600.

MAIDA, a small town of the Neapolitan dom., prov. Calabria Ultra II., 8 m. S. by E. Nicastro. It is chiefly noted for an engagement fought in its vicinity, on the 4th July, 1806, when an English army under Sir John

Stuart entirely defeated a greatly superior French force under Ragnier.

MAIDENHEAD, a mun. bor. and market town of England, co. Berks, hund. Bray, on the S. bank of the Thames, 11½ m. E. by N. Reading, and 27 m. W. London. Pop. of the bor., in 1841, 3,315. The town consists almost entirely of one street extending from the river about 1 m. along the high road to Oxford, and lined with numerous respectable and a few handsome houses: it is tolerably well flagged and macadamised, but only partially lighted with gas. The guildhall, in the market place, is a spacious stone building: there is also a handsome chapel of ease, and the Wesleyan Methodists and Baptists have their respective places of worship. A national and infant school, with 3 Sunday schools, furnish instruction to the children of the poor, and there are almshouses and other charities for the sick and aged. The Bristol, Bath, and Exeter branch of the great western road is here carried over the Thames by a handsome stone bridge of 13 arches, and about 500 yards S. from it is another bridge of 3 arches, forming part of the Great Western Railway, which skirts the town in its whole extent. Maidenhead appears to be in a thriving condition: it has no manufactures, but is in the centre of an opulent neighbourhood, and derives considerable trading importance from its position on one of the most frequented roads of the empire. The bor. was first chartered by Edward III., and the corporation now comprises a mayor and three other aldermen, with 12 councillors. Corporation revenue, 1847-48, 630*l*. Markets on Wednesday; horse and cattle fairs, Whit-Wednesday, Sept. 29., and Nov. 30.

MAIDSTONE, a parli. and mun. bor., market-town, and par. of England, co. Kent, hund. of its own name, in the E. div. of the lathe of Aylesford, on the E. bank of the Medway (crossed here by a bridge of five arches), 30½ m. E.S.E. London, and 35 m. W. Canterbury. Area of par. and parli. bor., 4,420 acres. Pop., in 1841, 16,920. The town, which is about 1 m. in length from N. to S., and ½ m. in breadth, consists principally of a well-built street, leading N.E. from the bridge to a lengthened narrow street, along the road from Rochester to Tenterden; but exclusive of these there are many smaller streets. Among the principal public buildings are the co. hall, a modern structure, well adapted for the business of the assizes, the new gaol, an immense structure, erected, in 1818, at an expense of 200,000*l*., covering more than 12 acres of land, and ranking as one of the largest and best arranged in England, the barracks near the gaol, the county ball-rooms, and a small but pretty theatre. The market-house, the lower part of which is appropriated to the sale of corn, stands in the centre of the town, and behind it is a new market-place, conveniently arranged for the sale of provisions. The church, one of the largest in the kingdom, is an extremely handsome embattled edifice, with a lofty tower, formerly surmounted by a spire, destroyed by lightning in 1730: it was made collegiate in the reign of Richard II., and attached to an ecclesiastical college, destroyed with many others at the Reformation: the living is a perpetual curacy, in the gift of the Archbishop of Canterbury. There is also a new district church, erected, by the church-building commissioners, at an estimated cost of 12,000*l*., the incumbency of which is in the gift of the curate of Maidstone. Places of worship are also supported by the Wesleyan Methodists, Independents, Baptists, Unitarians, and the Society of Friends. A free grammar-school was founded, in the reign of Edward VI., by the corporation, which has two exhibitions at University College, Oxford: freemen have the privilege of sending their sons here gratis, for classical instruction, the master making a charge for other branches of education. This school is not in a very flourishing state, and its inefficiency has led to the establishment of a proprietary school, which is well supported and attended. A blue-coat hospital was founded, in 1711, for the clothing and education of 53 boys and 43 girls, and there are three other endowed charity schools, and a Lancastrian school. Four sets of almshouses furnish lodging, clothing, and money allowances to 20 old women, and various bequests and charities exist for the relief of the sick and aged poor. A philosophical society was instituted here in 1824, a good library and reading-room is established, and a newspaper is published once a week.

"Maidstone is in a very prosperous state, and there is no want of employment. There is a demand for houses of a superior class, and many have been built since the census of 1831; but many of the cottages are unoccupied, owing to the completion of public works, which had been going on for some years. The only manufactory of any importance is that of paper: there are six paper-mills in the par., employing about 800 hands. The felt, blanket, and hop-bag manufactories are of much less extent. There is a considerable traffic on the river, which has been for many years gradually increasing; and the annual tonnage of vessels passing through Hal-

lington lock, about 2 m. from the town, is, at present, supposed to average 120,000 tons, on which tolls are paid to the amount of about 2,600*l*. The principal articles of merchandise brought up the river, are coals and timber for the supply of the neighbourhood, and also of Tonbridge, Seven-Oaks, and the whole weald of Kent. A portion of the latter article is imported direct from the Baltic and America. The neighbourhood is celebrated for its abundant produce in hops and fruit, both of which are carried down the river with paper and stone." (*Mass. Corp. Report.*)

Maidstone received its charter of incorporation from Edward VI., in 1549, but forfeited it in the following reign, owing to the connection of its inhab. with the insurrection of Sir Thomas Wyatt. Queen Elizabeth granted another charter, with increased privileges; but this also became void, by a *quo warranto*, soon after the Revolution of 1688; and a new charter was granted in 1748, by George II. Under the Mun. Reform Act of 1837 the borough is divided into 3 wards, the corporate officers being a mayor and 5 other aldermen, with 18 councillors. Corp. revenues in 1847-48, 3,963*l*. The Lent and summer assizes are held here, as also the quarter-sessions for the W. division of Kent. The recorder holds quarter and petty sessions within the borough; and a county court is established in it, before which 1,830 complaints were entered in 1848. This borough has sent 2 mems. to the H. of C. from the 6th of Edward VI. Down to the Reform Act, the right of election was vested in the freemen (by birth, apprenticeship, and purchase) not receiving alms. The limits of the borough were not altered by the Boundary Act. In 1849-50, it had 1,732 registered electors. Maidstone is also the chief place of election for the mems. for the W. division of the county. Large markets on Thursday for hops, corn, horses, and cattle: fairs for cattle, &c., 1st Tuesday in each month, Feb. 13., May 12., June 20., and Oct. 17.

MAILCOTTA, a town of Hindostan, prov. Mysore, and a celebrated place of Hindoo worship, on a rocky hill, 17 m. N. Seringapatam; lat. 12° 39' N., long. 76° 42' E. The town, which is open and paved, has about 400 good houses, mostly occupied by Brahmins, and several rich pagodas, choultries, &c. The most striking edifice is a temple dedicated to Narasingha (the man-lion), which stands on the highest pinnacle of the mountain, and is approached by a staircase cut in the rock, and ornamented at intervals with smaller temples and arches. It has, besides, a temple to Krishna, a square building of vast dimensions, entirely surrounded by a colonnade, and which is said to be extremely rich in jewels and other articles of value; and held in such esteem that Tippoo did not venture to outrage the prejudices of his Hindoo subjects by plundering it. There is also a large and fine reservoir at Mailcotta, surrounded by numerous buildings for the accommodation of devotees. Near this town the Mahrattas defeated Hyder Ali, in 1772. (*Hamilton's E. I. Gazetteer.*)

MAINE, one of the U. S. of N. America, being at once the most northerly and easterly state in the Union extending between lat. 43° 7' and 47° 20' N. and between 67° and 71° W. long., having N.W. and N. Lower Canada, E. New Brunswick, W. New Hampshire, and S. and S.E. the Atlantic. Its area and pop. could not formerly be accurately determined; since about a third part of its surface, as claimed by the Americans, formed a territory in dispute between the U. States and Great Britain; but this question was happily settled in 1843; and its area may now be estimated at about 30,000 sq. m., and the pop. in 1840, at 500,000. Maine has a greater extent of coast, and more good harbours, than any other state of the Union. Its shores are all along indented by deep bays; and the opposite sea is studded with numerous fine islands, some of considerable size. Near the coast, the surface is level, but it rises on proceeding inland, and most part of the state is hilly. In the N.W. a mountain chain forms the watershed between the streams that join the St. Lawrence, and those that fall into the Atlantic; and a lateral branch from this chain, between lat. 46° and 46° 30', separates the basins of the Kennebec, Penobscot, &c., on the S., from that of the St. John's on the N. Several of the summits in Maine reach an elevation of 4,000 ft.; and Mount Katahdin, near lat. 46°, which rises to 5,335 ft., is reckoned the highest ground between the Atlantic and the St. Lawrence. It has been estimated that 1-6th part of the surface of Maine consists of water: there are numerous lakes, chiefly in the N., the largest of which, Moosehead, is 50 m. in breadth. The St. John's river is elsewhere noticed (*ante*, p. 89.): the Penobscot, Kennebec, Androscoggin, St. Croix, &c., have all a general S. direction, and several are navigable for the greater part of their length. The climate is cold: ice and snow last, in the N. and central parts, from October to April, and the summer is short: but the atmosphere is generally clear, the weather uniform, and the country salubrious. The soil on or near the coast is sandy and poor; but it improves greatly as it recedes inwards, especially along

the banks of the rivers. The greater portion of the state was originally covered with dense forests of fine fir, beech, &c. In the S., and some of the central parts, these have been mostly cleared; but they are still nearly unbroken in the N., though the value of the lumber cut down annually in the state is estimated at 10,000,000 dollars. Wheat, maize, rye, barley, potatoes, pease, beans, and flax, are among the chief agricultural products. Apples and pears grow to perfection; and cherries, plums, and grapes grow in the woods. E. of the Kennebec, and along that river, are some excellent arable lands; and between Kennebec and Penobscot are some of the finest grazing lands in New England. Till lately the rearing of sheep has been the most important branch of rural industry, the annual value of the clip of wool being estimated at about 2,000,000 dollars. Good marble is found in some districts, and lime-burning is extensively carried on. Iron ore is abundant, and some lead has been discovered. Maine has manufactures of cotton and woollen cloths, hats, shoes, leather, cordage, nails, spirits, maple sugar, &c. The annual value of its manufactures has been estimated at 10,000,000 dollars. Its exports consist chiefly of lumber, great quantities of which are shipped for the West India islands, as well as for the neighbouring states; dried fish, pickled salmon, beef, pork, butter, wool, grain, hay, pot and pearl ashes, marble, &c. In 1847, the value of the exports amounted to 1,634,203 dollars, and that of the imports to 574,050 dollars. A canal 20½ m. in length, from Portland to Segabo Pond, was completed in 1829; and the railway from Bangor to Orono, 10 m. in length, in 1836. Other railways have been projected, and some have been incorporated. In 1833, Maine had 50 banks, with an aggregate capital of 4,969,000 dollars. The legislative power is vested in a senate of 25 mems., and a house of representatives of 187 mems., who, together with the governor, are chosen annually by all the white male citizens above 21 years of age, who have resided in the state during the 3 months preceding the election, and paid taxes. The governor is assisted by an executive council, of 7 mems. elected by the legislature. The general assembly of the 2 houses convenes annually at Augusta. The Supreme judicial court has all the usual powers of a court of chancery. The judges are appointed by the governor with the consent of the council, and hold office during good behaviour. All judicial offices are, however, vacated at the age of 70 years. Each town is required by law to raise annually a sum equal to 40 cents for each inhab., which is distributed among the town schools in the ratio of the number of scholars in each. The state has 30 academies, a Baptist college at Waterville, theological seminaries at Bangor and Readfield, and Bowdoin College, with a medical school at Brunswick, established in 1794, and which, in 1839, was attended by 113 students. Maine is divided into 10 counties. Augusta is the political cap., but it is inferior in point of size to several other towns, as Portland (which see), Bangor, &c. Bangor, at the head of the tide-water, has lately become the most important place on the Penobscot. In 1840, its pop. amounted to 8,627, having nearly trebled since 1830; and it was then said to export annually between 300,000,000 and 400,000,000 feet of lumber. The militia of the state, which is in 8 divisions, consisted, in 1838, of 49,900 men. Maine has a smaller public debt than any other state of the Union, Georgia excepted, the amount in 1839 having been only 554,976 dolls. This state sends 8 mems. to congress. Maine was first permanently settled by the British in 1635, previously to which it had only been transiently occupied by the French. It subsequently became a proprietary government; but in 1652 it was annexed to Massachusetts, to which it remained attached as a subordinate district till 1820, when it was constituted a separate state of the Union.

The N.E. territory, disputed between Great Britain and the U. States, consisted of the upper valley of the St. John river, chiefly between lat. 46° 30' and 48° N., and long. 67° and 70° W., including an area of above 10,000 sq. m. The limits claimed, as well by the British as by the Americans, are laid down in the map of the British possessions in N. America, prefixed to the article CANADA in the former edition of this work; and there, also, is indicated the line between the possessions of the contending parties, as laid down by the late king of the Netherlands, to whose decision as arbiter the question was once referred. It will be seen, by an inspection of the map, that the arbiter did not adopt the views of either party, but decided on an intermediate boundary. The question was subsequently settled by negotiation on fair and equitable terms. The disputed territory was very fertile, and was well watered; but it was obviously more valuable from its position, than for any thing else. Had not the negotiations with respect to it come to a pacific termination, it would have made but a miserable compensation to the successful party for the mischiefs that would have been occasioned, even by a single campaign.

MAINE, a river of W. Germany. See MAYN.

MAINE, one of the old provs. of France, now distributed between the depts. Mayenne and Sarthe.

MAINE-ET-LOIRE, a dep. of France, reg. W., formerly comprising the greater part of the prov. of Anjou, chiefly between lat. 47° and 47° 50' N., and long. 0° and 1° W., having N. the depts. Mayenne and Sarthe, E. Indre-et-Loire, S. Vienne, Deux-Sèvres, and Vendée, and W. Loire-Inférieure. Greatest length, E. to W., about 70 m., breadth usually about 40 m. Area, 722,163 hectares. Pop. (1846) 504,963. Surface undulating. The Loire intersects the dep. from E. to W., dividing it into two nearly equal parts; and is joined within its limits by the Maine, Anthion, Thonet, Layon, &c. The Maine is a continuation of the Mayenne, which changes its name after it has been joined by the Sarthe. It passes by Angers, and unites with the Loire about 5 m. below that city. Its entire length is 8 m., throughout which it is navigable. In 1835, 440,196 hectares of the surface of this dep. were estimated to be arable, 80,023 in pasture, 38,260 in vineyards, 61,828 in woods, and 48,271 in heaths, wastes, &c. More corn is produced than is required for home consumption. Nearly 2,128,000 hectolitres are said to have been harvested in 1835, of which 1,005,000 were wheat, and 547,680 rye. Agriculture, as in the contiguous departments, is very backward: the lands in lease are all held on the *metayer* principle, the rent being a certain proportion, usually about half the produce: the occupiers are poor, uninstructed, and, of course, strongly attached to routine practices. Hemp and flax, prunes, melons, walnuts, apples, and various other fruits, are said to be of superior quality. The produce of wine is estimated at about 500,000 hectol. a year. Some of the white wines are rather well esteemed; but the greater portion of the vintage is either converted into brandy or vinegar. The latter, which enjoys a high reputation, is known in commerce as *vinaigre de Saumur*. Exclusive of wine, this dep. produces annually from 50,000 to 60,000 hectol. of cyder. The industry of the rural pop. is, however, chiefly exercised in rearing and fattening cattle for the Paris markets, and in breeding horses. In 1830 there were stated to be 223,539 head of cattle in Maine-et-Loire—a greater number than in any other dep. of the W. of France; but, on the other hand, the stock of sheep (180,000) was comparatively small. In 1835, of 140,411 properties subject to the *contribution foncière*, 68,686 were assessed at less than 5 fr., and 21,645 at from 5 to 10 fr. At the same time 332 properties were assessed at more than 1,000 fr. This dep. has the largest and most important slate quarries in France. These are situated near Angers, and are extensive excavations, in one place to the depth of 450 ft. below the surface. They employ more than 3,000 workmen, and several steam-engines, and are said to yield about 80 millions of slates a year. At Chollet (which see), and other parts, some extensive woollen, cotton, and other manufactures are established, employing a large number of hands, and producing goods of the estimated value of 20,000,000 fr. a year. At Angers is a large sail-cloth factory; wooden shoes are made at Moulicherne; and the dep. has numerous sugar refineries, breweries, distilleries, paper-mills, dyeing-houses, &c.; and at Angers is one of the two royal schools of arts and trades established in France (the other is at Chalons-sur-Marne), at which about 450 pupils are supported partly or wholly at the expense of government. Maine-et-Loire is divided into 5 arrondis.: chief towns, Angers, the cap., with 36,392 inhab., Baugé, Beaupréau, Saumur, and Segré. Total public revenue (1844), 13,183,971 fr. (*Hugo, art. Maine-et-Loire; Official Tables, &c.*)

MAINLAND. See SHETLAND ISLES.

MAJORCA (Span. *Mallorca*), the largest of the Balearic Islands in the Mediterranean Sea belonging to Spain, from the E. coast of which it is 110 m. distant, Palmas, the chief town, being in lat. 39° 38' N., long. 2° 15' E. Greatest length, 48 m.; do. breadth, 42 m.: estimated area, 1,340 sq. m. Pop., according to Minano, 181,806. Its shape is that of an irregular four-sided figure, the angles of which are formed W. by Cape Tramontana, N. by Cape Formentor, E. by Cape Peri, and S. by Cape Salinas. The surface is extremely uneven, and is divided into two pretty equal parts by a range of mountains, the highest of which, the Silla de Torillos, rises 5,114 ft. above the sea. These mountains are not volcanic, but consist chiefly of granite, sienite, and porphyry, over which lie beds of graywacké, clay, slate, and coal; lead and iron are found, but not in sufficient abundance for mining purposes. The rivers or rather torrents of Majorca are short, rapid, and very numerous, affording great facilities to irrigation. The climate is exceedingly mild, salubrious, and agreeable; the thermometer during winter scarcely ever falls below 48°, its average height being 66°, and cold and strong N. winds are of rare occurrence. The temperature of summer varies between 84° and 88° Fahr.; but the heat is seldom oppressive, owing to the constant sea-breezes. The red,

loamy soil of the mountains, though stony, is extremely rich, producing spontaneously great numbers of wild olives, grapes, &c.; in the plains it is much less fertile, owing to the superfluity of moisture, and the absence of any system of drainage. Agriculture is in a very rude and debased state; and the growth of corn, which in wet years totally fails, meets only half the consumption of the island, the annual imports of this article being about 6,000 fanegas, chiefly from Catalonia and Valencia. Olives are raised in very large quantities, the crops averaging about 180,000 arrobas yearly; the fruit is smaller than that of Andalusia, but as juicy as the best of the growth of Provence. Wine, both red and white, is abundant, especially near Banalbufar and Falaniche; considerable quantities are exported, and much is likewise used in the distillation of brandy. Fruit and vegetables, especially oranges, figs, melons, carots, pumpkins, and cauliflowers, grow plentifully, and attain a large size. Large quantities of saffron also are produced, of preferable quality to that of La Mancha. There is no want of fine pasture in the island; but little attention is paid to cattle-breeding. The sheep are large, and hogs sometimes attain the weight of 600 lbs. or about 38 stone. Mules and asses are reared in great numbers, and sent to Valencia and other provs. in the S. of Spain. Hares and rabbits, partridges, quails, snipes, &c. are abundant, and the coast swarms with fish of various kinds and good quality.

The trade of Majorca is, relatively to its size, very considerable, chiefly with Spain, France, and England; its exports comprise oil, wine, brandy, oranges, and other fruits, capers, saffron, wine, mules, and asses, with smaller quantities of home-made goods, as palm brooms and baskets, turnery wares, and water-proof hats for sailors, its imports consisting of wheat, salt beef, iron, sugar, groceries, woollen and cotton goods, hardware, &c., chiefly from France, England, and the N. of Europe; but the precise amount of the trade of Majorca cannot be ascertained.

The inhabitants are described by Fischer as bearing a striking resemblance, "both in their external appearance and general character, to the Catalans, being equally hardy and courageous, equally blunt and jealous of their honour, equally industrious and ingenious, equally good sailors and skilful farmers, with their continental neighbours; and their language is, in fact, nothing but a corrupt dialect of the Catalan."

Majorca comprises only two towns of any importance, and 28 villages, the rest being mere hamlets. Numerous detached farms and country houses, however, are scattered over different parts of the island; and in all the fine valleys one may meet with numbers of elegant villas, in which the higher classes, who are usually much attached to a country life, spend the greater part of the year. The roads have also been considerably improved within the last eight years, and there is a tolerably good communication between different parts. The cap. of Majorca is Palma (sometimes also called Majorca), situated in a bay, of its own name, on the S. side of the island, and having a pop. (according to Miñano) of 34,343 persons. It is agreeably placed in a delightful country, and is pretty strongly fortified; the houses are large and well built; but the streets, being narrow, dark, and ill-paved, give it a wretched and mean appearance. The chief public buildings are the governor's palace, a large structure with extensive gardens, a cathedral, exchange, town-hall, and theatre. The inhab. are active, enterprising, and laborious: and almost the whole trade of the island is concentrated in its port. The road of Palma affords excellent protection for shipping, except during storms from the S.E.; but the little harbour, called Puerto-Pi, is more secure, and furnishes anchorage for the largest frigates: the port is defended by two well-fortified castles. Among the other towns of Majorca, the largest, with their respective pops., are Lluymayor (8,630), Campos, remarkable for its mineral waters and salt pans (4,881), Santenay, celebrated for its stone-quarries (3,650), Falaniche, where is made the best brandy of the island (6,800), Manacor (8,905), Pollenza (7,223), and Soller (5,614). The small island of Cabrera lies 8 m. S.S.W. of Cape Salinas: it is covered with trees, and wholly uninhabited, except by convicts, of whom there is here a small *dépôt*.

The *Balearic Islands*, of which Majorca is the chief, were more anciently known as the *Xarxades*, so called, probably, from rising out of the sea, like the backs of hogs. The Phœnicians made settlements in them at a very early period; and they were succeeded by the Carthaginians under Hanno, who founded *Mago* (Mahon), and *Jawson* (Ciudadela), both towns of Minorca. The islanders were celebrated as the most expert slingers in the Carthaginian service during the Punic wars, and were afterwards equally noted as successful pirates, till Quintus Metellus subdued them, and hence obtained the surname of *Balearicus*. He was the founder also of two cities in Majorca, *Palma*, the present cap., and *Pollentia*, now Pollenza. Under the Roman empire, these

islands belonged to the judicial district (*conventus juridicus*) of New Carthage in Tarraconensis, and from the reign of Constantine I. to that of Theodosius I., they had their own government. On the breaking up of the W. empire, they became an easy conquest for the Vandals and Huns, from whom they were afterwards wrested by the Moors. The people becoming notorious as pirates and robbers on the coast of Christian Europe, Charlemagne headed an expedition against them, and succeeded, not only in taking the islands, but in keeping possession of them for six years, at the end of which, they were retaken by the Moors: nor were the latter finally expelled till 1285, when the entire group was formally annexed to the crown of Aragon.

MALABAR. This term is usually applied to designate the whole W. coast of Hindostan from Cape Comorin to Bombay, but, strictly speaking, Malabar only extends as far N. as the Malabar language is spoken, or to lat. $12^{\circ} 30'$. The British prov. of Malabar is a district or collectorate under the Madras Presidency, extending between lat. $10^{\circ} 12'$ and $12^{\circ} 15'$ N., and long. $75^{\circ} 10'$ and $76^{\circ} 50'$ E., comprising several portions of territory, as Wynad, &c., not belonging to Hindoo Malabar; and having N. Canara, Coorg, and Mysore, E. Colimbatour, S. Cochin, and W. the Indian Ocean. Length, N.W. to S.E., about 150 m.; average breadth about 42 m. Area, 6,263 sq. m. Pop. (1836-37) 1,140,916, of whom 844,186 were Hindoos, 282,027 Mohammedans, and 14,403 Rom. Catholics. In the E. the surface is mountainous, comprising a portion of the range called the W. ghats: the coast is low, and indented by many shallow inlets. Between these two regions the country mostly consists of undulating hills, separated by narrow valleys in general watered by a rivulet. Nearly all the rivers have a W. course. The chief are the Cochin, Beypoor, Ballapatam, Ponany, &c.: the bar of the first is navigable for ships drawing 15 ft. water; and the mouth of the second will admit vessels of 300 tons. Lakes and tanks inconsiderable. The year is divided into three seasons; the hot, from February to May; the wet, from May to October; and the cool, during the remaining months. Dense fogs are rare on the coast, but they usually envelope the ghats from April to the end of the year. The soil on the coast is sandy, but well adapted for the culture of the cocoa-nut, jack, areca, plantain, cinnamon, and other trees, pepper, coffee, the sweet potato, and other farinaceous roots, garden vegetables, &c. In the interior the soil is of the red kind common in the S. of India, and highly favourable for rice, which frequently yields two and sometimes three crops a year. The rice lands are sown after the first rains in April, and in four months the grain is ripe for the sickle. The second crops are raised by the transplantation of plants a month old, and are reaped in three months. The third crop is assisted by small reservoirs and tanks, and by turning water from streams. About 788 sq. m. are estimated to be under rice, and 120 in gardens and inclosures of productive trees. The sides of the hills are often formed into terraces for cultivation. The rest of the surface, especially in the uplands, is chiefly covered with forests, among which the teak-tree is very prevalent, and an important source of wealth to the district, the teak of Malabar being considered, upon the whole, superior to every other variety. Besides the above articles of culture, the mulberry, mango, tamarind, sugar-cane, ginger, turmeric, mustard, arrow-root, hemp, cotton, &c., are grown, and wheat and barley on the hills. There are few cattle. The elephant and wild hog do great damage on the borders of the forests they inhabit: the tiger, bison, elk, deer, &c., are also met with. Towns are rare in the interior, and villages there are spread over a large space, families usually living separate from each other within gardens inclosed by ditches and high banks. Iron is pretty generally found, and gold, though in small quantities, in the sands of some of the rivers. Coarse cotton cloths are manufactured in a few places from the raw produce of the district; coir is made from the fibrous covering of the cocoa-nut; oil from its kernel, and arrack from the toddy in very large quantities. The chief exports consist of the products of the cocoa-palm, amounting to about 805,500 rupees annually. From 10,000 to 15,000 candles of pepper, betel-nut to the value of 550,000 rupees, and cloth from the districts to the E. to the value of from 1,700,000 to 2,300,000 rupees, are annually exported. At Calicut, Tellichery, Cananore, and Ponany, the chief commercial towns, there are numerous Parsees and other opulent merchants. The roads throughout the district are in good order, and have convenient bungalows every 10 or 15 m. Public revenue (1836-37), 310,296*l.*, of which the land-tax amounted to 161,162*l.* In Malabar, as in S. Canara, inheritance goes by the female line, among the Nairs and other Hindoo castes which inhabit the country. On the coast, a large proportion of the inhab. are Mohammedans, and many Moplas, a people originally derived from Arabia. The Christian religion appears to have been planted in this part of India at a very early period, and many churches were found existing by the Portuguese. Ma-

labar was governed by various Nair dynasties, previously to its conquest by Hyder Ali, in 1761; on the fall of Tippee Saib, it became subsidiary to the British, and was incorporated with the Madras Presidency in 1803. (*Madras Almanack* for 1838 and 1839; *Hamilton's E. I. Gaz.* vol. ii.)

MALACCA AND NANING, a British colony, on the W. coast of the Malay peninsula, between lat. 2° and 3° N., and long. 102° and 103° E.; having N.W. the territory of Sangaloré, N.E. those of Rumbowé and Johole, S.E. that of Johore, and S.W. the straits of Malacca. Area estimated at 1,000 sq. m. Pop., in 1826, 37,706, of whom about 21,000 are Malays, 4,000 Chinese, and 2,400 Europeans, chiefly English, Dutch, and Portuguese. Surface mostly undulating; the hills are covered with jungle, and the valleys rendered swampy by the rains. The coast also is swampy S. of the town of Malacca, but to the N. it is generally bold and rocky. There are several rivers; but the largest is only navigable by small vessels for 10 or 12 m. from its mouth. Opposite the coast are many small granitic islands, which serve for burial places to the Malay inhab. of the colony. The country is geologically composed of a granitic formation, overlain by laterite, and this again by a layer of vegetable mould, which becomes thicker the nearer the coast. The soil near the sea-shore is very productive, but in the interior it is otherwise; and Naning is much more valuable for its tin mines than for the products of its agriculture. The climate is more salubrious perhaps than that of any other British coast settlement in the East. It has been found that during a period of seven years, the deaths among the troops stationed here amounted to less than 2 per cent.; and instances of longevity are frequent among both Europeans and natives. The mean annual temperature is about $77^{\circ} 6'$ Fah.; and there is but little change throughout the year in the barometer, which stands at about 30° . Rain falls continually at intervals of a few days; but as rather more occurs between September and January than at any other time, that period is termed the wet season. Violent squalls and storms of lightning, &c. occur during the S.W. monsoon. The produce of Malacca consists chiefly of rice, jaggery, sago, pepper, rattans, timber, cocoa-nuts, a few nutmegs, cloves, dammer, gambier, gum lac, ivory, gold dust, tin, fruits, poultry, and cattle. A few years ago the rice raised in the colony was scarcely sufficient for four months' consumption, the additional supply being brought from Acheen, Java, and Bengal. A principal cause of this was the former policy of the Dutch, who, while Malacca belonged to them, prohibited the raising of any kind of grain, in the view of rendering the inhab. wholly dependent for their supplies on Java. The British government, however, has given every encouragement to native agriculture; and, in 1835, the crop of rice amounted to two-thirds the annual consumption. Cocoa-nuts form a considerable portion of the food of the lower classes of natives, who also subsist partly by fishing. For the trade of the colony, see *post*.

This settlement is included in the presidency of Bengal, and is governed by a resident, with an assistant resident at Malacca, and a superintendent at Naning. The Dutch drew from it a surplus revenue; but since it came into our possession, the expenditure has always exceeded the income by about 100,000 rupees a year. In 1837-38, the revenue only amounted to 53,543 rupees, or 5,354*l*.

MALACCA, a town on the W. coast of the Malay Peninsula, cap. of the above British colony, at the mouth of the river of the same name, lat. $2^{\circ} 14'$ N., long. $102^{\circ} 12'$ E., about 100 m. N.W. Singapore, and 220 m. S.S.E. Pinang. Pop., in 1832, 12,120, of whom about 4,000 were Chinese, 3,000 Malays, 2,000 Chullahs, and 2,000 Europeans. "The town of Malacca is divided by the river above mentioned into 2 parts, connected by a bridge. On the left bank rises the verdant hill of St. Paul, surrounded by vestiges of an old Portuguese fort. Around its base lie the barracks, lines, and most of the houses of the military; the stadthouse, court-house, gaol, church, civil and military hospitals, the site of the old Inquisition, convent, the police-office, the school, post-office and master attendant's office. On its summit stand the ruins of the ancient church of our Lady *del Monte*, erected by Albuquerque, and the scene of the labours and miracles of that 'Apostle of the East,' St. Francis Xavier; also the light-house and flag-staff. A little to the S. rises the hill of St. John's, and in the rear rises that of St. Francis. On these eminences are the remains of batteries erected by the Portuguese and Dutch, commanding the E. and S. entrances to the town. Smaller knolls intervene, covered with the extensive cemeteries of the Chinese. The tombs are white, and constructed with much care, and surrounded by low walls of brick and chunan, in shape resembling a horse-shoe. The bazaars, and by far the greatest part of the town, are situated on the right bank of the river. The anchoring ground in the roads is secure; and though large vessels are obliged to lie at a distance of 2 m. from the shore, accidents have been rarely known to happen. Native craft anchor much

nearer, under the lee of one of the islets close in-shore." (*Newbold's Malacca*, i. 109-111.)

The principal public institution at Malacca is the Anglo-Chinese College, established in 1818. Its main objects are the cultivation of Chinese literature by Europeans, and of European literature by the Chinese, Malays, and surrounding nations, and the diffusion of Christianity. The college has a library, well stocked with European and Chinese books, Siamese MSS., &c.; and attached to it is an English, Chinese, and Malay press. This college was founded by Dr. Morrison, the Chinese scholar, from whom, also, it received a small endowment. But at present it depends almost wholly on the fees paid by the pupils; and its funds are by no means in a prosperous state. Such an institution would, however, appear to be deserving of public support. There are also in the town 5 Chinese schools, with about 100 scholars, besides several Hindoo and female schools, and schools established by the Malays, for their own instruction in English. A full account of the mode of education in the Chinese schools may be seen in Newbold's work on Malacca.

Malacca was formerly a place of considerable trade; but, owing to the superior advantages of Pinang and Singapore, its commerce has rapidly decreased within the last 10 years, and it is now very limited. It exports small quantities of gold dust, balachong, hides, hogs, fowls, jaggery, pepper, dammer, cordage, a little ebony and ivory; iron implements, fire-arms, nails, &c., manufactured by the Chinese smiths at Malacca, with rattans, lac, and aloe-wood. The gold and tin are not the produce of the British territory, but of the adjacent native states, whence they are brought to Malacca by native boats, or overland by coolies. The principal imports are earthenware, iron, rice, sago, opium, nankeens, European and Indian piece-goods, woollens, paper, provisions and liquors, for the European and Chinese inhab.; salt, sugar, tea, tobacco, &c., partly for home consumption and partly for re-shipment. The total value of the imports, in 1834-35, amounted to 467,459 doll.; total do. of exports 234,122 doll.

Malacca is said to have been founded in 1252, by Iskander Shah, a chief from Singapore, and it soon became a large and flourishing city, its influence extending over all the peninsula and the adjacent islands. It was first visited by the Portuguese in 1508, and captured by them in 1511. In 1641 it was taken by the Dutch, and in 1796 by the English. The latter held it till 1818, when it was restored to the Dutch; but in 1825 the latter finally exchanged it with us for the settlements of Bencoolen, &c., on the coast of Sumatra. But we much doubt whether its possession be of any material advantage, or, at least, whether the advantage be at all adequate to countervail the expense it occasions. (*Newbold's British Settlements in Malacca*; *Hamilton's E. I. Gaz.*, &c.)

MALACCA (STRAITS OF), a channel of the Eastern Seas, extending from lat. 1° and 6° N., and long. 99° and 104° E., between the Malay Peninsula on the N.E. and the island of Sumatra, on the S.W. Its length, N.W. to S.E., may be estimated at about 520 m.; its breadth varies from 25 m. opposite the Naning territory, to nearly 200 m. at its N. extremity. It is the best and most frequented passage from the Indian Ocean to the China Sea.

MALAGA, an important city and sea-port of Spain, k. Granada, and prov. of its own name, at the bottom of a deep bay, on the Mediterranean, 68 m. N.E. Gibraltar, and 254 m. S. by W. Madrid: lat. $36^{\circ} 43' 30''$ N., and long. $4^{\circ} 25' 7''$ W. Pop., according to Mifano, 51,899; but little dependence can be placed on this statement, and the pop. is believed to amount to near 65,000. It is built along the shore, at the foot of mountains gradually descending towards the sea: westward is the Vega, watered by the great river of Malaga, which delivers a large body of water from the E. end of the Serrania de Ronda; and on the other side rise naked rugged mountains, overhanging the shore, and scarcely leaving room for the town. But the most imposing view of Malaga is from the sea. "It stands in the centre of a wide bay, flanked by lofty mountains, and by the picturesque ruins of its ancient fortifications and castle, which cover the hill rising immediately to the E., and seem, from their great extent, like the remains of a former state." (*Lagüe*, ii. 136.) The streets, as in all Moorish towns, are very narrow, many being only 8 ft. wide, with others still narrower, badly paved, and dirty to a proverb: the houses are high and large, built round a court, the interior having a clean and neat appearance, owing to the abundant use of whitewash. There is only one square in the town, and the churches, as well as convents, are so crowded among the houses, that their beauty, if they have any, is effectually concealed. "Indeed," says Mr. Inglis, "the only handsome feature of the town is the Alameda, or public walk, the buildings round which are certainly magnificent: the other parts present a labyrinth of narrow intricate streets, inhabited by the tradespeople." (vol. ii. p. 139.) The chief public buildings and establishments are a cathedral, with a chapter, 4 par. churches,

a bishop's palace, 4 hospitals (one of which is for military), a legal seminary, royal college of medicine and surgery, a foundling asylum, a large *dépôt* for convicts, a custom-house, and 2 endowed schools. Among these, however, the only edifice worth notice is the cathedral, a large building, having a spire 270 ft. in height: like that of Granada, it is in the transition style, between the Gothic and classic; the roof, instead of being groined, is divided into numerous small circular domes, somewhat like the marigold windows of Gothic architecture; and the modern additions to the building, though not quite in keeping, are on the whole designed with good taste. (*Cook's Sketches in Spain*, ii. 100.) The high altar and the pulpit are of flesh-coloured marble; "but the part which most rivets the attention is the choir, called by the biographer Palomino the eighth wonder of the world, and admirable for the perfection of its carved works, representing in very bold relief the twelve apostles, and most distinguished of the saints." (*Townsend*, iii. 12.) On a sharp point of rock commanding the city stands a fine old Moorish castle, in good preservation, called the *Gibraltar* (prob. *Gebel-al-faro*, the great watch-tower), built on the site of a Roman fortress, but still wholly of Arabic architecture: it is altogether, both from its shape and situation, a very curious structure, and, if fortified on the modern system, might be rendered impregnable. Another Moorish building, in tolerable preservation, was formerly the *darsena* or dock for the ancient galleys, now used as a storehouse. (*Swinburne*, i. 322.) The *Alcazaba*, an Arabian palace, once occupied a site near the shore; but the greater part of it was pulled down to make room for the custom-house. At a short distance from Malaga is one of the magnificent but unfinished undertakings of Charles III., a bridge and aqueduct over the great river of Malaga, which flows about a league distant from the city; but this work, on which a great outlay was incurred, was rendered useless a few years afterwards by a work undertaken by a bishop, who, at his own expense, brought water into the city by a much shorter line. (*Cook*, vol. I. p. 19.)

Malaga is probably entitled to rank as the third or fourth port of Spain; but owing to the want of official returns, and the prevalence of smuggling, it is impossible to obtain any accurate account of its trade. The principal articles of export are wines and fruit, particularly raisins, almonds, grapes, figs, and lemons: there is likewise a considerable, though smaller, exportation of olive oil, with brandy, anchovies, cummin-seed, aniseed, barrilla, soap, &c. Lead is also brought thither for shipment from the mines of Alora in Granada. The imports comprise salt-fish, iron hoops, bar-iron, and nails; cotton fabrics, hides, earthenware, &c.; with woollen cloths, all sorts of colonial produce, butter and cheese from Holland and Ireland, linens from Germany, &c. The trade with England has been for some time diminishing, owing to our small demand for Malaga wine; but the trade with America has considerably increased, owing to its pretty large consumption both of the fruit and wine shipped at this port. Mr. Inglis has given the following details with respect to the trade of this port, which may be interesting to some of our readers:—"The wines of Malaga are of two sorts, sweet and dry; and of the former of these, there are three varieties: 1st, the common 'Malaga,' known and exported under that name, in which there is a certain proportion of burnt wine, which communicates its peculiar taste to the 'Malaga:' the grape from which this wine is made is white, and every butt of Malaga contains no less than 11 galls. of brandy; 2dly, 'Mountain,' made from the same grape as the other, and, like it, containing colouring matter and brandy, the only difference between the two being, that for 'mountain' the grape is allowed to become riper; 3dly, 'Lagrimas,' the richest and finest of the sweet wines of Malaga; it consists of the droppings of the ripe grape hung up, and is obtained without the application of pressure. The dry wine of Malaga is produced from the same grape as the sweet wine, but pressed when greener: in this wine there is $\frac{1}{2}$ more brandy than in the sweet wine; at least $\frac{1}{12}$ th part of the dry Malaga being brandy. The whole produce of the Malaga vineyards is estimated at from 35,000 to 40,000 butts; but, owing to the increasing stock of old wine in the cellars, it is impossible to be precise in this calculation. The export of Malaga wines may be stated at about 27,000 butts. The principal markets are in the United States and the states of S. America, to which countries the exports are rather on the increase. The average price of the wines shipped from Malaga does not exceed 35 dollars per butt; but wines are occasionally exported at so high a price as 170 dollars. Many attempts have been made at Malaga to produce sherry, but not with perfect success. The Xeres grape has been reared at Malaga, upon a soil very similar to its native soil; and the sherry made at Malaga might be introduced into the English market as sherry, nor, from its cheapness, could it fail to command a sale. One reason of the very low price of the wines of Malaga, is the cheapness of labour; field labour is paid by 2½ reals a

day (4½d.), wages during the fruit and vintage time being about double.

"Next to its wines, the chief exports of Malaga are fruits; as raisins, almonds, grapes, figs, and lemons. During Sept. and Oct. 1830, the export of raisins amounted to 268,845 boxes, and 31,916 smaller packages. Of this quantity, 125,334 boxes were for the United States; 45,513 for England; the remaining quantity being for France, the West Indies, the Spanish Ports, S. America, and Holland. The raisins are of three kinds, muscatel, bloom, or sun raisins and lexias. The muscatel raisin of Malaga is the finest in the world, and in its preparation no art is used, the grape being merely placed in the sun, and frequently turned. The bloom, or sun raisin, is a different grape from the muscatel, but the process of preparing it is the same; like the other, it is merely sun dried. The lexias acquire this name from the liquor in which they are dipped, and which is composed of water, ashes, and oil; these, after being dipped, are also dried in the sun. All muscatel raisins are exported in boxes, and also part of the bloom raisins. In 1829, the number of boxes of muscatel and bloom raisins exported amounted to 320,000, each box containing 25 lbs.; 8,000,000 lbs. in all. This quantity is independent of the export of bloom raisins in casks, and of lexias, the annual export of which does not exceed 35,000 arrobas. The export of raisins to England has fallen off; the export to America has constantly increased. In 1834, 75 ships cleared from Malaga for England, with fruit. In 1830, up to the 1st Nov., 34 vessels had cleared out. Of the other fruits exported from Malaga, grapes, almonds, and lemons, are the most extensively exported. In the months of Sept. and Oct., 1830, 11,612 jars of grapes were sent to England; 6,429 to America; and 1,660 to Russia. During the same period of time 5,235 arrobas of almonds (133,375 lbs.) were exported to England; and this constituted nearly the whole export: and during these months, also, there were exported to England 3,759 boxes of lemons; to Germany, 4,201 boxes; and to Russia, 840 boxes. There is also a large export of oil from Malaga." (*Spain*, ii. 145—149.)

Malaga has an excellent harbour, formed by a fine mole, 700 yds. in length, at the end of which is a lighthouse, furnished with a powerful light, revolving once a minute. A shoal that had grown up round the mole-head has been removed by dredging. The harbour, which will accommodate more than 450 merchant ships, may be entered with all winds, and affords perfect shelter. The port dues to a Spanish ship of 300 tons amount to about 11l. 10s.; those to an English vessel of the same burden being about 21l. Goods may be warehoused for any time not exceeding 12 months, on paying 2 per cent. *ad valorem* in lieu of all charges; but at the end of the year they must be either entered for consumption or re-shipped. (For weights and measures, commercial details, &c., see *Com. Dict.*, art. *Malaga* and *Spain*.)

Malaga, independently of its export trade, has manufactures of linen and woollen cloths, sail-cloth, ropes, paper, leather, hats, and soap; an iron foundry and a cigar manufactory; but, excepting the latter, they are all on a small scale, and insufficient for the consumption of the inhab. Pilchard and anchovy fisheries also give employment to a considerable number of the lower classes. The market is well supplied, the show of fruit in particular being unequalled in Spain. Mr. Inglis quotes the prices of several leading articles, as follows: Beef and mutton, 10 quartos (about 3d.) per lb.; pork, 14 quartos; a fowl, 7 reals (13d.); a duck, 15 reals; a turkey, from 20 to 30 reals; a rabbit, 10 reals; and a partridge, 4 reals. Poultry, however, is here not only exposed whole, but also cut up into joints, like butchers' meat. A barrel of anchovies may be bought for 2 reals (4½d.), and many other varieties of fish are remarkably cheap and plentiful. Potatoes are sold for 7 quartos the 6½ lbs.; and excellent wine may be procured for 2 reals a bottle. Bread, one of the dearest articles of food, fetches 12 quartos (3½d.), per lb., and eggs are sold for 1d. each. Melons, pomegranates, and prickly pears, which, with fish, constitute the principal food of the lower orders, are so cheap as scarcely to form an article of expenditure.

The general aspect of the pop. of Malaga is even more Moorish than that of Seville, and affords innumerable pictures of idleness. Hundreds of the lower classes appear in the streets doing nothing, sitting on the ground, loling against a wall, or lying on the steps of church doors, wrapped in brown, ragged, and patched cloaks. In fact, Malaga is noted for idleness and demoralisation. The necessities of life being so cheap, there are few motives to industry: begging is very common, and has been encouraged by the ill-judged bounty of the monasteries, which, however, were suppressed in 1835: but, when deprived of their legitimate resources, the *mala gente* (such being the *sobriquet* of these people) are at no loss to find, owing to the inefficiency of the police, a few quartos in some other way. The whole of them, indeed, are thieves; and in so degraded a state is public justice in this city, that crimes of the darkest hue pass unpunished.

The clasp-knife is in frequent use to gratify revenge, and murders often follow acts of robbery. (Compare *Inglis*, ii. 138, with *Townsend*, iii. 18.) This degraded state of morals is attributed, by Sir C. Brooke, partly at least, to the fact that convicts, called *presidarios*, are detained here previous to their departure for, and after their release from, the penal settlement of Ceuta, in Africa, which see. (i. 574.) An efficient government would, however, speedily change the whole aspect of society; the impunity that crime has so long enjoyed in this miserable country being the great cause of its prevalence. The more respectable classes of the people are described as agreeable, hospitable, and generally fond of society, the ladies being equally witty and high-spirited with those of Seville, quite as showy in dress, and not a whit more strict in morals. The Italian Opera is a favourite resort, and many ladies are good musicians. Numerous foreigners also reside in Malaga, especially English and Americans, who constitute, with a few of the government officers and merchants, the *élite* of society. Most of these have country seats in the environs, the beauty of which is not surpassed in any part of Andalusia. The weather during summer is intolerably hot, and at this season, especially during the prevalence of the hot S. winds, the inhab. exclude the sun as much as possible, and remain at home during the day; but when the heat is succeeded by the refreshing coolness of the evening, the whole pop. is astir, and after nightfall the young people bathe for hours in the sea, a practice quite as conducive to health as pleasure. Nervous and epidemic fevers are still, however, very prevalent, and sometimes carry off great numbers of people.

Malaga, like most other cities of Spain, has had various masters. Built by the Phœnicians, and called by them *Malacha*, it came successively into the hands of the Carthaginians and Romans, both of whom procured from it considerable supplies of salt-fish and provisions. It then passed into the hands of the Goths; and from them, in 714, to the Moors, who were at length driven hence by Ferdinand the Catholic, in 1487. The yellow fever carried off nearly 22,000 of its inhab. in 1803, and reappeared, though attended with less fatal consequences, in 1813. Malaga was taken by the French in 1810, after an obstinate conflict with a body of Spaniards, officered by monks, and commanded by a Capuchin friar; and remained in their possession till 1812. (*Inglis's Spain*, ii. 136—153.; *Townsend's Journey*, iii. 10—42.; *Cook's Sketches*, i. 18—24.; *Swinburne*, i. 320—327.; *Sir A. de Capell Brooke's Spain and Morocco*, ii. 202—207.)

MALAY PENINSULA, a long and narrow territory, forming a part of India beyond the Brahmaputra, and the most S. portion of continental Asia, lying chiefly between the 1st and 8th degs. of N. lat., and the 98th and 104th of E. long.: it has N. Lower Siam, with which it is connected by the isthmus of Kraw; and is on all other sides surrounded by the sea, called on the W. and S. the Straits of Malacca and Singapore; and on the E. the China Sea and Gulph of Siam. Length, N.N.W. to S.S.E., 450 m.; breadth varying from 50 to 150 m. Area estimated at 45,000 sq. m. As far as lat. 6° S. the country is claimed by the Siamese; but beyond that point the peninsula is subdivided among indep. native states and British colonies, which may be enumerated as follows, with their probable pop., as estimated by Lieutenant Newbold:—

Exterior Native States.	Pop.	Interior Native States.	Pop.
Quedah and Ligor . . .	50,000	Rumbow	9,000
Perak	35,000	Sungie-ujong	3,500
Selangore and Calang .	12,000	Johore	3,000
Johore (including Se- jamet and Muar) . . .	25,000	Jempole	3,000
Pahang	40,000	Jellabu	2,000
Kemaman	1,000	Srimenati	8,000
Kalantan	50,000	Aborigines scattered over the Peninsula .	9,000
Tringann	50,000		
Patani	10,000		
	253,000		36,680
British Possessions.			
Malacca and Naning (1836)			37,706
Province Wellesley (1835)			46,880
Total Population, 574,366		84,586	

Physical Geography.—The central and longest of the mountain chains, passing S. from the table land of Yunnan, through the Ultra-Gangetic peninsula, traverses this territory in its entire length. This mountain chain diminishes in height as it approaches the equator; and its highest peaks in Rumbow and Jahore probably do not exceed 3,000 ft. in elevation; while many peaks in the N. part of Quedah are supposed to rise to upwards of 6,000 ft. above the sea. M. Ophir, a detached mountain in about lat. 2° 30' N., and long. 102° 30' E., has been roughly estimated at nearly 5,700 ft. in height, but it is much more lofty than any other summit in the S. part of the peninsula. Between the above mountain chain and the coast, the surface is undulating, covered with dense

primeval forests, or interspersed with grassy plains, which are by far the most numerous and extensive in the N. An abundance of rivers descend to either coast, in their progress frequently forming marshes and lakes, some of which are of considerable size. Their banks are generally low, swampy, and covered with mangrove and other thickets; and though several of them are broad, and moderately deep, the sand-banks, coral reefs, &c. at their mouths, usually preclude their navigation by vessels of any magnitude. A number of verdant islets stud the coasts, especially the north-western and the southern.

Geology and Minerals.—The Malay mountain chain, as far as it has been hitherto explored, consists chiefly of grey stanniferous granite and clay-slate. At its S. extremity, porphyry occurs; hornblende is met with near Malacca; and quartz is very abundant around M. Ophir, and elsewhere. The geology of the R. coast is almost wholly unknown; but along the W., laterite, similar to that of the Malabar coast, is a very prevalent formation. Clay-slate, sandstone, argillaceous schist, jasper, limestone, greywacké, and limestone, are the other most prevalent rocks. Limestone composes a portion of several of the islands off the W. coast, while those off the S. coast are chiefly of granite or sienite. The Elephant rock in the Quedah territory is a mass of calcareous breccia, having many stalagmitic caverns, and interspersed with an abundance of fossil remains. At the S. extremity of the peninsula are evident traces of volcanic action; and numerous thermal springs, scattered over the country, testify the activity of subterranean heat at no great distance below the surface. These are sulphureous and saline. The springs at Ayer-pannas, near Malacca, were found by Newbold to have a temp. of 120° Fahr. at noon, and of 113½° at 6 A. M.

The Malay peninsula produces tin, gold, and iron: tin is, in fact, among its principal articles of export. Mr. Crawford observes, that tin, wherever found, has a limited geographical distribution; but that, where it does exist, it is always in great abundance. The tin of India has, however, a much wider range of distribution than that of any other region, being found in considerable quantity from long. 98° to 107° E., and from lat. 8° N. to 3° S. (*Indian Archip.*, iii. 450.) It has been latterly stated that it is found in abundance at Sakana, in the interior of Tavoy, lat. 12° 40', and in Siam even as far N. as 14°. At any rate the Malay peninsula appears to be the centre of the region in the eastern seas in which tin is distributed; and, including the island of Junk-ception, it has been roughly estimated that its annual produce of this metal amounts to 34,600 piculs of 133½ lbs. avoird. The ore of the peninsula is extremely pure, being that which is called stream. The ore of Sunjie-ujong, Naning, and Perak, is reported to yield 76 per cent. metal, whereas the ores of Cornwall, with all the advantages of European science and ingenuity, do not yield more than 75 per cent. But the process of smelting, as conducted by the Malays, being very defective, and adulteration frequent, the peninsular tin fetches only from 14½ to 15 dollars the picul; while the tin of Banca, wrought by Chinese, sells at from 16 to 16½ dollars. The export of peninsular tin may amount to about 2,000 tons a year, including from 400 to 500 tons received from the Malacca Straits and Banca. A large portion is brought to England, Malay tin being now very extensively imported for warehousing; large quantities are also carried to Holland, where there are refining houses.

The Malay peninsula does not by any means so well merit the term *Aurea Chersonesus*, which has been before applied to it, as the neighbouring island of Sumatra. The exports of gold from the S.W. coast of that island amount, according to Marsden and Hamilton, to 26,400 oz. a year, while the annual produce of the peninsula is roughly estimated at less than 20,000 oz. It comes chiefly from the E. coast, and M. Ophir, where it occurs disseminated through quartz, in thin granular veins, and in alluvial deposits. Iron is found in Quedah, but only in small quantities.

The Climate is remarkable for its continual moisture, to which circumstance the perpetual verdure of the peninsula is mainly owing. The year is divided into the wet and dry seasons; but the term "dry season," must not be understood in the same sense as when applied to the climate of Hindostan; for, during its continuance, even three successive days rarely pass without a shower. On the W. coast the dry season comes in with the S.W. monsoon in May; the wet season, with the N.E. monsoon in October. Thunder storms, whirlwinds, water-spouts, and other atmospheric phenomena are frequent, especially during the S.W. monsoon.

Vegetable Products are both numerous and valuable. They include a host of trees, the timber of which is adapted for house and ship-building; the finest fruits of tropical climates, bamboos, canes, rattans, &c., of which the jungles are in great part composed; the areca, sago, and gomuti palms, the catechu, dragon's blood, and India

rubber plants, the upas of the Javanese, &c. It has been denied that teak is indigenous to the country; but, according to Newbold, the inland Malays affirm that it is occasionally found, and is known under the name of *Jati*. The wild nutmeg is a native of the country. The true nutmeg, cinnamon, and clove have been long introduced, and thrive well. Tobacco, coffee, sugar, cotton, and the true indigo (*Indigofera tinctoria*), are cultivated with much success. Mr. Crawford (*Embassy to Siam*, &c., i. 178.) estimates that the Malay peninsula produces 28,000 piculs of pepper a year, or about 1-13th part of the total produce of the E. Rice, and other kinds of grain, are not grown in quantities sufficient for home consumption, and are therefore imported chiefly from Bengal and Sumatra.

Elephants roam over the peninsula in great numbers; the rhinoceros, tapir, wild hog, the royal and the spotted black tiger, 3 kinds of bears, and 2 species of bison, the axis, plandok, musk-deer, and several other kinds of deer, the vampire, and many varieties of bats, and numerous monkeys, are among the wild animals. The buffalo is a native, and is domesticated; but neither the cow, camel, horse, nor ass, are met with in a state of nature. The great density of the jungles is considered unfavourable to the increase of feathered game; but waterfowl are plentiful, and there are a great many pheasants of the richest plumage. Crocodiles, alligators, and several kinds of formidable serpents, are met with. The dugong, many turtles, and a plentiful supply of fine fish, are caught in the surrounding seas.

People.—The Malays have been ranked by some authors as one of the five great families, or varieties, of the human race. But this opinion is by no means generally entertained. Newbold says, "Both their features, and those of the aborigines in the native states around Malacca are decidedly characterised by the Mongol stamp." (i. 422.) And independent of the Malays having no peculiarity of form or feature to entitle them to be called a distinct variety, there appears to be sufficient evidence to show that they are a mixed race, of comparatively recent origin. Antecedent to the 12th century of our era, the coasts of the peninsula, and the adjacent islands, were inhabited, though thinly, by a tribe of *ichthyophagi*, and the interior by a race of negro savages, by whose descendants it is still occupied. In the course of the above century, a body of colonists, the ancestors of the present race of Malays, arrived on the continent, from Menangkabow, in Sumatra; and whether by intermarriage (as traditionally reported) or by conquest, extended their dominion over the whole peninsula. During the succeeding centuries they conquered Sumatra, the Sunda, Philippine, and Molucca Isles, with many smaller groups; and are now found in all those regions, and in Borneo, &c.; but without any centre of unity or power. The chief physical characters of the Malay race consist in a brown colour, varying from a light tawny to a deep brown; black hair, more or less curled, and abundant; the head rather narrow; the bones of the face large and prominent; the nose full, and broad towards the apex; and the mouth large. The average height of the men is about 5 ft. 2 in. A general character can hardly be assigned to a people so widely distributed. The Malay inhab. of the peninsula are, however, active, restless, and courageous; but their courage is not of a steady, deliberate character, but is rather a sudden ungovernable impulse, arising from a paroxysm of rage. "To their enemies they are remorseless, to their friends capricious, and to strangers treacherous." (*Hamilton*.) Perhaps, their treachery to strangers may, in part at least, be occasioned by the behaviour of the latter, or the antipathy excited against them by the behaviour of former strangers. Malcolm, who remained for some time in this region of Asia, says, that "in their intercourse with each other, domestic and private virtues prevail to as great an extent as among the adjacent nations. A propensity to gambling is a distinguishing trait in the Malay character; and more especially a taste for cock-fighting, to which sport the Malay is so passionately addicted, that his last morsel, the covering of his body, his wife and children, are often staked on the issue of a battle to be fought by his favourite cock." Malcolm admits that a "disregard of human life, revenge, idleness, and piracy, may be considered common to Malays. The universal practice of going armed makes thoughts of murder familiar. The right of private revenge is universally admitted, even by the chiefs; and the taking of life may be atoned for by a small sum of money." (*Travels*, ii. 124.) In the arts of peace they are greatly inferior to their neighbours of Java, Japan, Cochin-China, and Siam. The Malay language coincides with monosyllabic tongues in its general construction and analogies, but is properly polysyllabic in its form. It consists chiefly of Polynesian, an intermixture of Sanscrit and Arabic, and a dialect purely Malayan, which last, however, constitutes little more than 1-4th part of the written and spoken language. The literature of the Malays is almost entirely

derived from Hindostan, Persia, Arabia, Java, and Siam. Arabic is exclusively their sacred language; and their religion also has been derived from Arabia, all the Malays, with trifling exceptions, being Mohammedans.

The negro tribes which inhabit the interior of the peninsula are called by the Malays *Orang Benua*, men of the soil. They appear to be a distinct variety, differing from and being inferior to both the African and Papuan negro. The average height of the men is only 4 ft. 8 inches. The Malay negroes are thinly spread over a considerable extent of territory in and behind Malacca, and thence N. to Mergui; but they probably amount in all to only a few thousands. They are divided into several tribes, some of which are said to dwell altogether in trees or clefts in the mountains. A few have learned a little Malay, and occasionally venture among the adjacent Malay tribes, to purchase tobacco and utensils; but of letters they know nothing. Copious accounts of both the Malays and this people may be found in *Newbold's Malacca*, &c., vol. ii. ch. 12, 14, 15.; and various details respecting the races inhabiting the Malay countries are given in the art. E. ARCHIPELAGO in this Dict. (i. 149.). For the Commerce of the British settlements, see MALACCA, SINGAPORE, &c.

The principal articles of export from the native states are tin, gold-dust, spices, elephants' teeth, pepper, sago, sugar, canes, timber for ship and house building, dammer, ebony, bees' wax, betel nut, sapan, and eagle-woods, hogs, poultry, buffaloes, tiles, and an immense variety of fruits; in return for which, opium, salt, cotton, cloths, tobacco, rice, and some European manufactures, are the chief imports. The trade is principally with the British and Dutch settlements in the East, Siam, China, and the adjacent parts of the E. archipelago.

In the 16th century a large proportion of this peninsula appears to have been under the sway of the Siamese, but since that time it has been mostly divided into the petty states before enumerated, the historical details of which are destitute of interest. The successive settlements made by the Portuguese, Dutch, and British at Malacca, &c., are elsewhere noticed. The only recent event worthy of mention has been the subjugation of Quedah (or Keddah) by the Siamese, begun in 1821, and completely effected within about 10 years afterwards. (*Newbold's Malacca*; *Crawford, Malcom, Hamilton's E. I. Gaz.*; *Lawrence's Lectures on Man*, &c., passim.)

MALDA, a town of Hindostan, prov. Bengal, district Dinagepore, on the Mahanunda, built chiefly of the ruins of Gour, from which it is distant about 12 m. N. Early in the present century it had 3,000 houses huddled together along the bank of the river, which, during the rainy season, nearly insulates the town. The E. I. Company established a factory here as early as the 17th century; and there were formerly some prosperous French and Dutch silk and cotton factories in the town; but the trade of Malda has now sunk into irreparable decay, its manufactured goods being unable to withstand the competition of those introduced into India from Europe.

MALDIVE ISLANDS, or MALDIVES, a chain of islands in the Indian Ocean, extending between the 1st deg. of S. and the 7th of N. lat., a distance of about 560 stat. m.; and between 72° 48' and 73° 48' E. long. The Laccadive Islands, to the N. of the Maldives, may not improperly be considered a continuation of this island-system. They are of coralline formation, arranged in round or oval groups called *atolls*, separated by several channels, which may be safely navigated by ships of the largest size. The different groups are surrounded by coral reefs, on which the surf beats violently; but between the islands the sea is perfectly smooth, and forms safe harbours for small craft. These islands have been rarely visited by Europeans, though lying in the direct route to India. All that are of any extent are richly clothed with palms and other trees; but no edifice has been seen in sailing past them, whence it may be concluded that none exists higher than a cocoa tree. The Maldives produce millet and other small grains, of which they have two harvests a year; but they are unsuitable for rice and wheat, which are imported. Esculent roots and fruits are found in the greatest profusion; and poultry are extremely abundant, and bred with little or no attention. There are neither horses nor dogs, and but few horned cattle. Fishing is an important occupation, especially that of cowries, a species of shells used as money in small payments in Hindostan and other Asiatic countries, and in extensive districts of Africa. The inhab. trade with Hindostan, Sumatra, &c., arriving at Belasore and other ports of British India during the S.W. monsoon with cowries, coir, the produce of the cocoa-tree, salted fish, tortoise-shell, &c.; and sailing homeward with the N. E. monsoon, taking rice, sugar, manufactured goods, tobacco, &c. The people of the Maldives are Mohammedans, and probably of an Arabic stock. They live under a sultan, who, according to Hamilton, resides in Male, an island about 3 m. in circuit, fortified by walls and batteries,

on which above 100 pieces of artillery are mounted. The Sultan, however, considers himself dependent on the British government of Ceylon, to which he sends an annual embassy. (*Geog. Journ.* ii. 72-92; *E. I. Gaz.*)

MALDON, a parl. and mun. bor., river port, and market-town of England, co. Essex, hund. Dengy, on the Chelmer, 14½ m. S.W. Colchester, and 37 m. E.N.E. London. Area of parl. bor. (which includes the par. of Heybridge with the old bor.) 4,719 acres. Pop., in 1841, 4,968. "The town, which is neither paved, lighted, nor watched, and does not appear to be in a flourishing condition, occupies the ridge of a hill on the S. side of the Chelmer, and consists principally of one long street, running parallel to the river, the E. end of this street forming the portion called 'the Hythe:' two other streets, one from the centre of the town, and the other from its W. end, unite at the bottom of the hill, and extend across the Chelmer into an almost insulated flat called 'Potman's Marshes.'" (*Mun. Bound. Rep.*) The town-hall is an old building near the junction of the streets at the W. end of the town, and not far from it is an extensive range of barracks: there is also a small bor. gaol. Maldon had formerly 3 parishes; but two of them have been long consolidated. The largest church, that of All Saints, near the town-hall, is an ancient and very large edifice, with a square tower, surmounted by a curious *triangular* spire. St. Mary's is a spacious building, at the lower end of the town, said to have been founded before the Norman conquest; but the tower and W. end were rebuilt in the reign of Charles I. The united vicarage of All Saints and St. Peter's is in private patronage, the rectory of St. Mary's being in the gift of the dean and chapter of Canterbury. St. Peter's tower is the only part now standing of that disused par. church, and annexed to it is a building formed of the old materials, which has long been used as the depository of a valuable library containing 5,330 vols., bequeathed to the town, in 1704, by Archdeacon Plume, founder of the Plumian professorship of astronomy in the university of Cambridge: the tower part, which has since been much enlarged, is occupied by the national school, furnishing instruction to about 270 poor children of both sexes. The grammar-school, founded in 1621, received an additional endowment from Dr. Plume, who also gave it an exhibition in Christ's College, Cambridge. The estates vested in the hands of trustees yield about 52½, which, after some slight deductions for land-tax, and repairs, are paid over to the head-master: 6 free-scholars receive classical instruction gratis, paying a fee for other branches; and there are, besides these, about 12 pay-scholars. Dr. Plume left also a considerable property (the annual produce of which amounts to about 180½) for the clothing and instruction of 15 poor boys, and the foundation of a week-day lecture in the church; besides which, he built a workhouse, lately sold under the provisions of the Poor-law Amendment Act. There is also a large Lancastrian school, with two or three minor charities, and money-bequests. (*Char. Comm.*, 32d Report, p. 1.) The R. Catholics, Wesleyan Methodists, and Baptists, have their respective places of worship; attached to which, as well as to the churches, are respectably-attended Sunday-schools. Maldon is not a manufacturing town; but it carries on a considerable home trade in coal, iron, chalk, and timber, which it exchanges for corn, and other farming produce. There belonged to the port, on the 1st Jan. 1850, 154 ships, of the aggregate burden of 7,893 tons. Gross customs revenue, in 1846, 1,550½. The trade of the town, however, is said to be stationary or declining; and the principal cause assigned is the new navigation to Chelmsford, which has been carried 1 m. N. of Maldon along the adjacent village of Heybridge to the Blackwater. (*Mun. Corp. Report.*)

Maldon claims to be a bor. by prescription; but its first charter dates as far back as 1155, and was confirmed by Edward I. and subsequent monarchs. The present municipal officers comprise a mayor and 3 other aldermen, with 12 councillors; a commission of the peace is held under a recorder. Corporation revenues in 1848-49, 647½. Maldon has sent 2 mems. to the H. of C. since the reign of Edward I. Down to the Reform Act, the franchise was vested in the resident and non-resident freemen, by birth, marriage, servitude, gift, or purchase. The Boundary Act enlarged the limits of the bor., by including in it the par. of Heybridge. Registered electors, in 1849-50, 819. In cases of succession to burgage tenures, the custom of borough-English prevails here. Markets, well attended, on Saturday; cattle-fairs, Sep. 13. and 14. (*Parl. Rep.*, &c.)

MALDONADO, a fortified sea-port town of the Banda Oriental in S. America, on the N. bank of the Plata, not far from the mouth of the estuary, and 85 m. E. Monte Video. Its harbour is sheltered from S.E. winds by the small island of Gorriti, but it has little depth. Pop. uncertain. "Maldonado is a quiet, forlorn, little town, built with the streets running at right angles to each other, and having in the middle a large *plaza* or square, which, from its size, renders the scantiness of the popu-

lation more evident. It possesses scarcely any trade, the exports being confined to a few hides and live cattle. The inhabs. are chiefly landowners, with a few shopkeepers, and the necessary tradesmen, such as blacksmiths and carpenters, who do nearly all the business for a circuit of 50 miles round. The town is separated from the river by a band of sand-hillocks about a mile broad: it is surrounded on all other sides by an open, slightly undulating country, covered by one uniform layer of fine green turf, on which countless herds of cattle, sheep, and horses graze." (*Darwin's Voyage of the Adventure and Beagle*, vol. iii. p. 45.)

MALLOW, an inland town and parl. bor. of Ireland, co. Cork, prov. Munster, on the Blackwater, and on the high road between Cork and Limerick, 18 m. N. by W. the former, and 37 m. S. the latter city. Mallow, properly so called, is built on the N. side of the river, being united by a bridge of 15 arches, to its suburb of Ballydaheen on the S. side of the river. The latter is included in the parl. bor. as fixed by the Boundary Act, which comprises an area of 378 acres, and had, in 1841, a pop. of 6,851. It consists principally of one main and well-built street, nearly parallel to the river; and has a handsome parish church, a R. Cath. chapel, 2 Methodist chapels, an Independent meeting-house, a court-house, a bridewell, barracks, and infirmary, with commodious baths, a public reading-room, library, &c. On its W. side are the ruins of its old castle, the property of the lord of the manor. There are here two schools, one attended by about 200 boys, and the other by about 130 girls, both under the control of the Board of Education. The town is surrounded by thriving plantations, and is situated in a peculiarly rich and well-cultivated part of the country. "Though the river be not navigable, and that Mallow has no manufactures, it is yet considered one of the best country towns of its sort in Ireland. It is resorted to in summer on account of the mineral waters that it possesses, the properties of which are much the same as those of Clifton, and in the neighbourhood there is a very unusual number of country gentlemen's houses, occupied by families of the first respectability." (*Parl. Boundary Report.*) Several flour mills have been established on the Blackwater, and there is a brewery in the town, and a salt work and some quarries in its immediate vicinity; but the great dependence of the inhabs. is on its extensive retail trade, and on the resort of visitors to its Spa. Branches of the Provincial and National banks were opened here in 1835. Post office revenue in 1848, 656½. The union workhouse, opened in 1842, accommodates 1,450 inmates. Mallow was incorporated by charter of James I. in 1612, which vested the right of sending 2 mems. to the Irish H. of C. in the provost and 12 burgesses. But this charter fell, in no very long time, into disuse; and for above a century, the corp. has been extinct, and the right of electing the mems. for the bor. vested, down to the Reform Act, in the *freeholders of the manor*, which comprised 1,126 acres. Since the union, Mallow has sent 1 mem. to the Imperial H. of C.; and the Boundary Act altered the limits of the parl. bor., as already stated, by inc. in it the suburb of Ballydaheen, and exc. the country part of the manor. Reg. electors, in 1849-50, 213. The bor. has a court leet twice a year, and a court for debts under 2½ every third Wednesday. General sessions are held in April, and petty sessions every Tuesday. Markets on Tuesdays and Fridays; fairs on 1st Jan. (for pigs), Shrove Monday, 11th May, 25th July, and 28th Oct.

MALMEDY, a town of Rhenish Prussia, gov. Aix-la-Chapelle, cap. circ. on the Warge, close to the Belgian frontier, and 20 m. S. Aix-la-Chapelle. Pop. in 1838, 4,212. It has a noble church, formerly belonging to a rich Benedictine abbey, a fine private cabinet of medals, antiques, &c., and is the seat of the council for the circle, a police court, and board of taxation. It has some mineral springs, similar to those at Spa, and manufactures of fine woollen cloth, glue, and soap; but it is chiefly noted for its manufacture of leather for boot soles, with which it supplies a considerable portion of Germany. There are said to be 50 tanneries in active employment: hides are imported principally from S. America, and bark from the forest of Ardennes. (*Berghaus; Schreiber, Guide du Rhin*, &c.)

MALMESBURY, a parl. bor., market-town, and par. of England, co. Wilts, hund. of same name, on the Avon, 17½ m. N.N.W. Bath, and 86 m. W. London. Pop. of parl. bor. (which includes, with the old bor., two out-paras. and the several pars. of Brokenborough, Charlton, Garsdon Lea, Great and Little Somerford, Foxley, and Bremhilham), in 1841, 6,674. The town, formerly fortified and more extensive, is pleasantly situated on a hill close to the Avon, by which it is nearly encircled, and which is here crossed by six bridges. It consists of three principal streets, two of which running parallel are intersected by the third. In an open space near the centre of the town is the market-cross, an octangular turreted structure, with flying buttresses and highly carved, supposed to have been erected in the reign of Henry VIII. There appear to have been formerly se-

veral churches in Malmesbury; but it now contains only one, the living being a vicarage in the gift of the lord chancellor. The Wesleyan Methodists, Baptists, Unitarians, and Moravians, have likewise their respective places of worship, and there are three Sunday schools. Two free-schools, one of which is conducted on the national system, and well attended, furnish instruction to poor children of both sexes, and there are two sets of almshouses. "Malmesbury is not a place of any trade, nor is it even a considerable thoroughfare. No new buildings are rising in the suburbs, and it contains few houses appearing to be occupied by persons in independent circumstances: indeed, it has altogether the air of a place on the decline, and must now be considered as entirely an agricultural town. (*Parl. Bound. Rep.*)

The bor., which is of high antiquity, received its governing charter from William III.; and it was considered too insignificant to be included in the provisions of the Municipal Reform Act. It has sent 2 mems. to the H. of C. from the 23 Edward I.; the franchise, previously to the Reform Act, being in the high steward, alderman, and 12 chief burgesses. The Boundary Act enlarged its limits, by including with it the two out-par., as above mentioned. Registered electors, in 1849-50, 316. Markets on Saturday, and a cattle market on the last Tuesday of each month, except March, April, and June. Horse and cattle fairs, March 28, April 28, and June 5.

A nunnery was founded here at the close of the 6th century. Other monasteries were formed here in the two following centuries; and it was a place of considerable and rising consequence as the resort of religious recluses, including, among other establishments, an abbey, which afterwards attained to high celebrity. The Danes destroyed the town at the close of the 9th century; but monastic wealth and the beneficence of princes soon restored its prosperity, which it enjoyed almost without interruption till the Reformation. The chief monument of Malmesbury's departed greatness is its abbey, the entire buildings of which, with the church, covered about 45 acres. Little, beyond mere foundation walls, is now left except the church, which appears to have been a very magnificent structure, and presents some fine specimens of different eras of architecture, but chiefly of the early English. It was cruciform, with a tower rising at the intersection of the transepts, and another at the W. end, the front of which was exquisitely finished and adorned with sculpture, having also a very fine window filled with painted glass. During the civil wars, however, when Malmesbury was repeatedly besieged, both by the royalists and parliamentarians, the church, already partly dismantled, suffered great injury; both its towers were battered down, its cloisters demolished, and now only a fourth part of the building is standing; but the ruins are highly interesting, and the S. porch is one of the finest specimens of its kind in England. In the town are several other remains of ancient monastic and ecclesiastical buildings; and about 1 m. from it is a field called Cams-hills, in which are evident vestiges of a Roman encampment.

Malmesbury claims the honour of having given birth to Aldhelm and Johannes Scotus, William of Malmesbury, second only to the Venerable Bede among our early historians; and Hobbes, so eminent by his metaphysical and political speculations, was a native of Malmesbury, where he first saw the light in 1588. (*Parl. Rep.*; *Britton's Arch. Antiq. of G. Britain*, vol. i.)

MALMO, a strongly fortified sea-port town of Sweden, cap. the lan. Malmöhus, on the Sound, nearly opposite Copenhagen, and 110 m. S.W. Christianstadt. Pop. (1836) 8,769. It is irregularly built, but has wide streets and a fine market place. It has a citadel, two churches, two hospitals, manufactures of woollen cloth, stockings, prepared skins, carpets, hats, gloves, tobacco, starch, soap, looking-glasses, &c., and a brisk trade in the products of these establishments, and in corn; its port, however, admits only small vessels.

MALO (ST.), a fortified sea-port town of France, dép. Ile-et-Vilaine, cap. arrond., on the British Channel, 40 m. N.N.W. Rennes, and 200 m. W. by S. Paris. Lat. 48° 29' 3" N., long. 2° 0' 51" W. Pop. (1846) 8,469. The town is built at the mouth of the Rance, on the peninsula of Aron, connected with the mainland by a causeway. It is defended by strong walls with four bastions constructed by Vauban, and a castle built by Anne Duchess of Brittany. On its N. side it is inaccessible; but, from the want of outworks, it could not hold out against a regular siege. The town is in many parts well built, and has some excellent houses. Its chief public edifices are a cathedral, bishop's palace, town-hall, theatre, hospital, foundling asylum, communal college, and exchange. The port, on the S. side of the town, is commodious and secure, but is rather difficult of entrance, and dries at low water; though at high water springs it has a depth of above 40 ft. In 1836, however, the French Chamber passed a resolution for the construction here of a floating dock or basin. It has a

good roadstead N.W. of the town, and opposite the mouth of the Rance, which is defended by various forts; the principal, La Conchée, being constructed on an all but inaccessible rock, a considerable distance off shore. St. Malo is the seat of tribunals of primary jurisdiction and commerce, a board of artillery, &c., and is the residence of various foreign consuls. It has a hydrographical school of the first class, a chamber of manufactures, a royal tobacco factory, naval rope walks, and dry docks for the building of vessels of various sizes. It has also manufactures of fishing-nets and hooks, pulleys, and other marine fittings, soap, &c.; a considerable trade in provisions with the French colonies, a brisk coasting trade, and numerous vessels employed in the mackerel, cod, and whale fisheries. St. Malo has given birth to several distinguished persons; among whom may be mentioned the brave admiral Duguay de Trouin, Jacques Cartier, Maupertuis, La Bourdonnaye, &c. (*Hugo*, art. *Ile-et-Vilaine*, &c.)

MALPAS, a market-town and par. of England, co. Chester, hund. Broxton, 13 m. N.N.W. Chester, and 153 m. N.W. London. Area of par., 25,140 acres: ditto of township, 2,110 acres. Pop. of township in 1841, 1,022. The town, which stands on an eminence near the S. extremity of Cheshire, and on the E. side of the valley of the Dee, comprises 3 tolerably built and well-paved streets. The living is divided into 2 rectories, in the patronage of the Egerton and Drake families. The church (formerly the chapel to a Chiniac monastery), a structure of unbewn stone, consists of a nave and chancel, without either aisle or steeple; it is highly ornamented, and some of its decorations are supposed to belong to the Saxon era. There are also 2 chapels of ease within the par.; and several denominations of dissenters have their respective places of worship. A grammar school was founded here in the 17th century; but the free instruction is limited to 6 boys, appointed by Lord Cholmondeley. The master's salary from the endowment is 25*l.*, with a good house, &c.; and he is also permitted to receive pay scholars, of whom there were 15 in 1836. Alport's school (founded in 1719) has property yielding an income of 119*l.*, and furnishes good plain instruction to boys, girls, and recently also, to infants, with clothing for 14 boys. In 1836, there were in attendance 49 infants, 87 boys, and about 50 girls. The other charities comprise an almshouse for 6 poor women, with an allowance of bread and money; and large sums have been left, at different times, for the relief of the poor. (*Char. Comm.*, 31st *Rep.*) Malpas is an agricultural town, and derives its chief importance from its large market for cheese, and its position in the centre of a great dairy-farm district. Markets on Monday: cattle and cheese fairs, April 5., July 26., and Dec. 8.

MALPLAQUET, a small village of France, dép. du Nord, 16 m. N.N.W. Avesnes. This place is celebrated as the scene of one of the bloodiest and most obstinate conflicts of modern times. On the 11th of September, 1709, the allied army, under the Duke of Marlborough and Prince Eugene, attacked the French army under Marshal Villars in their entrenched camp near Malplaquet. The combat was maintained on both sides with undaunted courage and resolution; but in the end the allies succeeded in forcing the entrenchments. The victory, however, was purchased by the sacrifice of above 20,000 men, killed and wounded. Though vanquished, the loss of the French did not exceed half that number, and they effected their retreat in good order. According to Voltaire (*Siècle de Louis XIV.*, cap. 21.), who derived his information from Marshal Villars, the army of the allies amounted to 80,000, and that of the French to 70,000, though other accounts represent each army as about 100,000 strong; but, whichever be the more correct statement, there are certainly very few, if any, instances of so great a carnage in an engagement where the defeated army effected an orderly retreat.

MALTA (an. *Melita*), an island of the Mediterranean Sea belonging to Great Britain, 62 m. S.S.W. Cape Passaro, in Sicily, and 198 m. N. Tripoli, in Africa, Valetta its port and cap. being in lat 35° 54' 6" N., long. 14° 31' 10" E. Extreme length, 17 m.; do. breadth, 9 m.; area, 98 sq. m. Estimated pop. in 1848 (exclusive of Gozzo), 113,000: pop. of Gozzo, 17,000: the number of British in both islands being estimated at 5,000, and that of the other foreigners at 4,000. It is of an irregular oval shape, rising precipitously from the water's edge on the S. and S.W. The surface presents the appearance of an inclined plane, sloping gradually from its highest elevation (about 1,200 ft. in the S.W.) to the more level land on the N.E. side, where it dips into the ocean. The substratum con-

ports comprise manufactured goods (chiefly from Great Britain), colonial produce, wheat from Sicily and the Black Sea, wine and spirits, tobacco, and salt-fish, with numerous minor articles. At an average of the six years, ending with 1838, the value of the exports of the produce and manufactures of the United Kingdom to Malta, amounted to 164,632*l.* a year. Latterly, however, the exports have increased. They amounted in 1849 to 387,744*l.*; and are likely to increase with the general resort of foreign shipping to the island. Malta has, within the last few years, become the centre of a very extensive steam-packet system, the steamers from and to England, the Ionian Islands, Alexandria, &c. touching here. The French steamers, between Marseilles, Alexandria, and other parts of the Levant, usually perform quarantine at Malta. The industry of the island comprises the manufacture of cotton fabrics, the annual value of which may amount to from 70,000*l.* to 90,000*l.* Cabinet work is made for exportation to Greece and the Ionian Islands; soap, leather, macaroni, iron bedsteads, &c. are made on a smaller scale; and the Maltese goldsmiths are remarkable for the elegance of their gold filagree-work, neck chains, &c., the exports of which are valued at about 7,000*l.* a year. The currency of Malta consists partly of British silver and copper, introduced in 1825, but partly also of Maltese scudi of the value of 1*s.* 8*d.* English, of Spanish dollars valued at 4*s.* 4*d.*, and of Sicilian dollars at 4*s.* 2*d.* each. The weights most in use are the *rottolo* or pound = 12,216 English grains, and the *cantaro*, comprising 100 *rottoli* or 147½ *lbs.* avoird. Corn is measured by the *salme* = 8·221 Winchester bushels, and oil is sold by the *caffo*, which contains 5½ English gallons. Bills on London are usually drawn at 30 and 60 days' sight; and the deputy commissary-general must, at all times, grant bills on the treasury of Great Britain for British silver tendered to him, at the rate of the 100*l.* bill for every 101*l.* 10*s.* silver, receiving the silver of other countries at a fluctuating rate of exchange. There are two joint-stock banks in Malta, the united capital of which may amount to 20,000*l.*; they discount good bills, of short date, at 6 per cent., keep cash without charge, and issue notes payable at sight, which pass current through the island, except in transactions with the government. Any person may establish himself as a merchant, and numerous Englishmen, Frenchmen, and Sicilians carry on an extensive commerce; while among the native traders, perhaps the wealthiest of all are those who speculate in articles of consumption for the island, buying a great variety of goods, in small quantities, for ready money, and realising large returns by retail as well as wholesale trade. (For further particulars as to the trade, port regulations, and tariff, see *Commercial Dictionary*, art. MALTA.)

Government and Garrison.—Malta is a crown colony, the local government of which is conducted by a governor, immediately responsible to the secretary of state for the colonies. In legislative matters, however, he is assisted by a council of seven persons, appointed by the crown, and at present consisting of the Rom. Cath. bishop of the island, the military officer second in command, the chief justice, and chief secretary, with three unofficial members, appointed by the governor. All orders in council have the force of laws. The principal administrative departments are the chief secretary's office, quarantine department, custom-house, land-revenue department, and audit office. There are numerous courts of justice, in all of which the procedure is both intricate and expensive; besides which, the laws themselves are frequently contradictory, and generally require revision. The public revenue amounted in 1848 to 117,208*l.* derived from the rents of government property, customs and quarantine dues, and internal taxes; and this notwithstanding the reduction of the public burdens in consequence of the recommendations of the late commission of inquiry. The expenditure during the same year was estimated at 103,086*l.* inc. not only the salaries of the various government officers, but the expenses attending the maintenance of the public roads, as well as liberal contributions for the support of schools and public charities. The military force of Malta consists almost entirely of British troops, varying between 2,000 and 2,500 men. There is also an engineer and artillery corps, the entire maintenance of which, as well as of the army generally, falls on England. There is likewise a native regiment, comprising about 500 men, called the Malta fencibles; but their duties being exclusively local, and rather of a civil than military nature, the maintenance of this body (costing about 11,000*l.* a year) is defrayed out of the revenues of the island.

Religion and Education.—The national religion of the Maltese (secured by the English government) is Rom. Catholic, to which the people are strongly attached, scrupulously observing its rites, and celebrating its festivals; but, notwithstanding their sincere adherence to the church of Rome, they entertain little or no jealousy of the Protestants: both parties observe the greatest moderation and deference

for the religious opinions of each other. There are in all no fewer than 1,000 Rom. Cath. clergymen, the church property producing about one fourth part the rental of the island. The Protestant places of worship comprise the governor's chapel, naval chapel, Church missionary chapel, and Wesleyan mission chapel; besides which, a church has recently been erected at Valetta, for the exclusive use of the English garrison. The total number of Protestants does not, however, exceed 5,000. Education till recently has been much neglected; but within the last 15 years several new schools have been established, the principal being the Normal free schools at Valetta, Senglea, Notabile, in Malta, and Rabato in Gozzo, giving instruction in 1836 to about 1,500 children. Other primary schools are scattered through the villages, and there are about 80 private schools. The university of Valetta, founded in 1771 by the grand master, Pinto, and now occupying the convent of the suppressed Jesuits, is supported by the government, at an expense of between 1,000*l.* and 1,200*l.* a year, and had (including the lyceum) 375 students in 1836. The bishop has an ecclesiastical seminary at Notabile, giving religious instruction to about 50 boys. Instruction is commonly conveyed in these schools in the Italian language, the mother-tongue of the Maltese (a *patois* of Arabic, mixed with a little Italian), being wholly unwritten, and never applied to the purposes of literature. English is spoken by many of the higher classes, and is making considerable progress even among the lower orders in the cities. In the rural districts, however, Maltese is spoken almost without exception.

Manners of the People.—The Maltese are as dark as the natives of Barbary, but without the Arab features, the men being of middle height but erect stature, robust and active; while the women, though small, and of dark complexions, are graceful, with regular and sometimes handsome features. The working classes are described as laborious and frugal, living on very slender fare, the great bulk of them being employed either in agricultural labour, or quarrying and cutting stone for exportation to Constantinople and Alexandria. The Maltese are celebrated all over the Mediterranean for their good and intrepid seamanship. The dress of the higher orders is similar to that of other Europeans; but among the inferior or working classes the dress of the men is a short loose waistcoat, covering a cotton shirt; short loose trousers leave the leg bare from the knee, and on the feet are worn *korchs*, a kind of sandals, nearly resembling those of the ancient Romans. The women wear short cotton shifts, blue striped petticoats, corsets with sleeves, and a loose jacket covering the whole. A black veil, called the *faldetta*, is the out-of-doors head-dress of the women; whereas the men wear woollen caps in winter, and straw hats during summer. (*Sir R. C. Hoare's Tour*, ii. 288.) The morals of all classes are much higher than in most parts of S. Europe; and if there be less refinement of manners in the Maltese than among their continental neighbours, there is less vindictiveness and intrigue, while drunkenness and gambling are almost unknown. A few of the aristocratic families, ennobled by the knights of Malta, yet remain, but they form a very small portion of the pop., and few of them possess large property.

Cities and Towns.—The principal towns are Valetta, built in 1566, by the famous grand master, John de Valetta, as being more conveniently situated for a cap. than the old inland city called Citta Vecchia, the former cap. of the island, and identical with the ancient Melita. Valetta, on the N.E. coast, in the centre of a fine double harbour, in lat. 35° 54' 6" N., long. 14° 31' 10", has a pop. incl. the garrison, and its suburb, Vittoriosa (on the S.E. side of the great harbour), of about 60,000. It is very strongly fortified, and from its position on a hill, as well as the almost impregnable works and trenches that surround it, has a most imposing appearance; nor is the visiter less struck with its internal beauty. The streets, though generally steep, are wide and well paved with lava, while the public squares and quays along the harbour, are of noble proportions, indicative of the former wealth of the knights of Malta. The governor's palace and gardens, lying outside the walls, were formerly occupied by the grand-master: a public library (once belonging to the Order) contains upwards of 40,000 vols.; and the general hospital is not only used for the reception of sick troops, but has ample room for stores, and other purposes: the Floriana hospital is also a large building, occupying two sides of a quadrangle; and in the suburb of Vittoriosa is a third military hospital. Other hospitals are open for the relief of the native sick, and among the other public buildings may be mentioned the barracks, prison, theatre, university, collegiate church of St. John, and 19 other churches, including those in the suburbs. Valetta has a bustling animated appearance, from its being the great centre of the industry and commerce of Malta. Citta Vecchia stands on very high ground, overlooking nearly the whole island, about 7 m. W. of Valetta. The rock on which it is built is excavated into

large catamarans, - some of which are said to exceed 30 m. under ground. (Singapore p. 108) This old and decayed city is strongly fortified, and the cathedral is an extremely large and lofty structure underneath is a grille in which on the monks inform us St. Paul once quailed himself for some time after his shipwreck. They have equally authentic legends regarding other traditions close to the city. The towns are more village habitations which there are almost 10 hamlets, chiefly remarkable for their portulacae and well kept rice fields. The people generally speaking are good many of them having been recently much improved, but the inland transport is, nevertheless chiefly by barrow, mule, and even pack on the low carts lately introduced most with much success from the nation.

Geographical Islands - About 4 1/2 m W of Malin is the small island of Canna. It produces considerable quantities of cotton, the cultivation of which constitutes the chief occupation of the islanders. who still is an essential export from the Hebrides. An English garden is cultivated at Fannabry, a strong fort erected about 1800 & along the coast, and there are other military works well adapted for the defence of the island. Between Canna and Malin is another though very small island, called Canna, which belongs to a single proprietor, who derives from it the subs of a prince's pension.

HISTORY. Malta was probably first discovered by the Phoenicians who commenced by the Lancia the oldest known appellation of Gizeva.* From the Phenitians it passed to the Carthaginians, from whom it was taken by the Romans in the First Punic war and made a prefecture subject to the province of Sicily. St Paul, during his voyage from Palestine to Rome was wrecked here and being kindly received by the people performed some miraculous cures which made him so beloved with many converts and when he departed laden with such things as were necessary (Acts xviii 9-44, and xxvii 1-6). On the decline of the Roman empire, Malta fell under the dominion of the Goths, and after words of the Saracens It was subject to the crown of Sicily from 1084 till 1180 when the emperor Charles V conferred it on the knights hospitaliers of St John de Jerusalem, who had a short while previously been expelled from Rhodes giving them power to levy taxes import duties &c for the maintenance of the Order on condition that they should wage perpetual war against the Turks and Moors. It was besieged by a powerful Turkish armada for 4 months in 1565 but without success; the knights, under their brave grand master Jean de Valette founder of the city called by his name having succeeded in repelling all their attacks and compelling them to the end to retreat with vast loss During more than 180 years the island maintained itself against the Ottomans power till the Order was never sufficiently wealthy to attempt large conquests or equip numerous fleets At length however the impudency of the continuance of the physical contests in which the knights had long so long engaged became odious and in 1798 they concluded a treaty with the Turks, which secured for the Maltese in Turkey the same priority

city of stone are distinctly improving in quality. On the opposite side of the River, crossed here by an ancient bridge, shaped somewhat like an inverted Y, is the suburb of Norton in the E. rising a thriving and increasing place, and about 1 m. N. E. of the town is the village of Old Malton, formerly of some consequence, but now exhibiting all the symptoms of decay. (Part Second, Sec. 1.) The public rooms, theatres and work-houses, are handsome modern buildings, and near the bridge stand the remains of a castle, built by the 4th earl, and destroyed by Henry II. There are two churches, one of which is ornamented by a tall unfinished spire, the livings are curacies depending on Old Malton and in the gift of Earl Fitzwilliam. The Wesleyan Methodists, Presbyterians, and the Society of Friends have their respective places of worship, and there are 3 well attended Sunday schools. New Malton has 3 subscription schools for children of both sexes, but the grammar-school founded by Archbishop Hogenau, is at Old Malton. The River being navigable up to New Malton bridge, is made available for the shipment of large quantities of corn, hemp, hares, and other farm produce. Malt and tanning are carried on to a considerable extent, and there are two large parties breweries, but the chief dependence of the town is on the retail trade with the capital gentry of the neighbourhood. New Malton is a town by prescription governed by a bailiff. It has returned 3 members to the H. of C. since the 21st Edward I. Previously to the Reform Act, the franchise was vested in the burgage holders and inbarns raised to church and par. The limits of the town were enlarged by the Boundary Act so as to include the entire par. of New Malton, and the par. of Old Malton and Norton. Registered electors, Sept. 28, 1832, New Malton is one of the polling places at elections for the H. of C. and the petty sessions are held here for the E. div. of York. Fairs, Markets on Tuesday and Saturday (but chiefly on the latter for horses and cattle, sheep, hares, and breeding implements. Very large cattle fairs, Wednesday before Easter Day before Whitsunday and Oct. 11

MALVERN CREEK, a town, par. and unincorporated watering place of England, on Worcester and Fitchburg, 7 m. S. E. Worcester and 100 m. W. N. W. London. Area of par. 8,400 acres. Pop., in 1891, 2,311. This town, which for many years has been a place of fashionable resort, is contemplative of its delightful situation in

• The role of Group Therapy's greatest value
is the true group **which makes**
the group **the group** **the group**

stands on the S. declivity of the well-known hills bearing its name, and is neat and well built, comprising besides good houses for the travellers several hotels and restaurants; private residences for visitors. The church, a fine southern structure of Anglo-Norman and pointed architecture (largely remodelled in various parts in 1770) is 120 ft. in length, with an unadorned and picturesque tower rising 160 ft. above the intersection of the nave and transept. It formerly belonged to a Benedictine abbey, but here in 1641, and long one of the most important religious establishments of the diocese of the monasteries, when property was sold, the church was bought by the state and made parish-church. Here are the two quantities of the church of St. Paul in the diocese, and enjoys a good view of the town and extensive domain, simple architecture, and little ornament.

About 3 mi. N. is the village of Little Malvern, the road to which skirts the Malvern Hills, an extensive range composed of gneiss and quartz involved in parts with blue limestone and resting from N. to S. about 4 mi., with an average breadth of 3 mi. The quality is in many parts very good, but the summit of the ridge which attains a height of 1,404 ft., commands magnificent views over Wain and the con. of Hereford, Worcester, and Gloucester.

HALWA is a grove of Hindustani, strictly between lat. 26° and 27° N., and long. 74° and 80° E., having N. Rajpootana and Agra, W. Gujrat, E. Alibahad, and S. Oudiputna and Cawnpur, from which it is separated by the Morumbah. The general part of this grove is a table-land, extending from the Vindhyan mountains on the S. to the Chittore and Malabar ranges on the W. and E. and W. from Bhavnagar to Dehli; but which assumes slope to more than 1,000 ft. above the sea. It declines gently towards the W. in which direction flow most of the principal rivers; to the E. (Ganges) and the chief affluents, the Ghat Goud and Gomah, tributaries of the Jamuna, and the Mays, which falls into the Ganges of Canjey. The climate is usually mild and unobtrusive, except for about two months after the rains, when feroes are very prevalent. The total fall of rain from June to September has been estimated at 60 inches. The soil consists either of a heavy black loam, or a more compact brownish mould, both suited for their fertility. Wheat, grain, sugar, cotton,

hajree, mung, and maize, are among the chief grains cultivated; the first two furnishing the largest export. Rice is raised only in small quantities sufficient for home consumption; but opium, sugar, tobacco, cotton, linseed, garlic, turmeric, and ginger, are grown to a considerable extent. A little indigo, and the root of the *Morinda citrifolia*, which supplies a red dye, are also raised, and fruits, including grapes, flourish in great abundance.

Opium is by far the most valuable product of Malwah, the soil and climate of which appears singularly well adapted for the cultivation of the poppy. The Malwah opium is considered by the Chinese, for whose consumption it is chiefly grown, superior in strength, in the proportion of 7 to 5, to that of Bahar and Benares, though inferior in flavour. Since the pacification of central India, the quantity of opium produced in Malwah has increased very rapidly, so much so, that while the total exports of Malwah opium to China, in 1821, did not amount to 3,000 chests, they amounted to about 21,000 chests in 1839, worth above 2,000,000*l.* (*Documents relating to the Opium Trade*, p. 79.) In Malwah the culture of opium is freely carried on; the cultivator paying a proportionally heavy land-tax for the land occupied in its culture. Previously to 1830, the Bombay government endeavoured to obtain a monopoly of the sale of opium exported from the ports under that presidency, but with little success; for 2-3ds of the Malwah produce were carried to the Portuguese settlement of Damaum and elsewhere, to be exported. But at the above period, the attempted monopoly was abandoned, and a permit, or transit-duty, similar to that imposed in other states through which the opium passes, was laid on in its stead. Since then 9-10ths of the Malwah opium have been shipped at Bombay; and in 1832, the trade yielded to the British government an annual revenue of 300,000*l.* (see *Reports on E. I. Affairs*, 1830-32), which has since been materially augmented. The tobacco of the prov., especially that of the Bilash district, is also, beyond all comparison, the best in Hindostan.

Malwah is the chief seat of the Bheel race, as it was of the Pindarry and Mahratta powers. It is almost wholly divided among the dominions of native princes, the chief of whom are Scindia, Holkar, and the rajahs of Bhopaul, Kotah, Dewass, &c. Except the Maharajah of the Punjab, Scindia is the only prince in Hindostan who can be called independent of British authority; but his independence has more of semblance than reality, for the power of his dynasty has been completely broken by a succession of reverses: his dominions are surrounded by the territory of the British, or their allies, who are bound to negotiate with foreign states only through the intervention of the British. A stationary British camp is kept up in his neighbourhood; and he is obliged to receive an English resident at his court, and to furnish a contingent of 15,000 men to the Anglo-Indian army. The dominions of Scindia are estimated to comprise 32,940 sq. m., with a pop. of nearly 4,000,000; and to yield a gross annual revenue of 2,398,000 rupees, out of which the chief derives a nett subsidy of 1,561,000 rup. yearly. The chief cities belonging to Scindia are, Gwalior, his modern, and Oojein, his ancient cap. The states of the other chief native princes of Malwah have been briefly noticed under INDOR, BHOPAL, KOTAH, &c. (*Parl. Reports*; *Hamilton's E. I. Gaz.*)

MAMERS, a town of France, dép. Sarthe, cap. arrond., 24 m. N.N.E. Le Mans. Pop. (1846) 5,865. It is indifferently built, but has of late been greatly improved. It is a town of great antiquity, and was surrounded with entrenchments by the Normans, some remains of which are called the "fossés du Robert le Diable." It has a handsome Gothic parish church, a college, a prison, some public baths, a theatre, manufactures of hempen, cotton, and woollen fabrics, pearl buttons, &c. and several tanneries and breweries. (*Guide du Voyageur*.)

MAN, ISLE OF (an. *Mona*, *Munapia*, or *Monada*), an island belonging to the United Kingdom, in the Irish Sea, between lat. 54° 4' and 54° 27' N., and long. 4° 17' and 4° 34' W.; its N.E. extremity (the Point of Ayre), being 17 m. from Burrow-head, in Wigtownshire, its E. coast 34 m. from St. Bee's head, in Cumberland, and the town of Peel, on its W. side, 30 m. from Ballyquintin Point, in Ireland: greatest length, 35 m.; greatest breadth, about 13 m. Area, 280 sq. m., exclusive of the Calf-of-Man, a small disjointed fragment of the island, at its S. extremity. Pop., in 1841, 47,975. Its general aspect, as viewed from the sea, is bold and precipitous; a ridge of mountains runs through its whole length, and three of the highest points reach an elevation of more than 1,600 ft. above the sea; Snafeld, the loftiest, being 2,004 ft. high. Several rills and streams flow from the high ground in different directions; but there are no rivers nor lakes of any considerable size. The prevailing feature in the geology of the island is clay-slate, interspersed with mica-slate; and covered, near the coast, with grauwacké and old red sandstone. Limestone also is found on the S. side, near Castleton, intersected in some parts by veins of trap. The clay-slate is quarried

at a place called Spanish-head, near Castleton; and stones are raised in blocks averaging about 7 ft. in length, by 1 ft. in breadth, and 6 inches in thickness. Drawing and roofing slates are quarried on the W. side of the island, not far from Peel. Close to Castleton, on the shore, are limestone and marble quarries, which have been worked for many years, and furnished a part of the stone for St. Paul's Cathedral, London. The island also produces lead, zinc, and copper, raised in considerable quantities by the Chester mining company, and by private parties. But mining and quarrying are in a very depressed state; the tools employed are of the rudest description; and not even a common crane is to be seen in the quarries. (*Head's Home Tour*, vol. iii. p. 19.)

The climate of Man is considered milder during winter than that of the adjacent parts of Great Britain and Ireland. Frost and snow are rare; and when they do occur, they are seldom of long continuance. Owing, however, to the frequency of fogs and dews, as well as to the prevalence of E. winds, during many weeks of spring, the summers are deficient in heat, and the harvest is generally rather late. The climate however is, on the whole, favourable to health: cases of longevity are frequent, epidemics rare, and agues unknown. The soil is extremely various. Clay and marl, covered with white sand, predominate in the N. and N.W. extremity of the island, which is covered with scanty herbage, affording sheep pasture; but, proceeding S. and E., the quality of the soil improves, and, in the valleys especially, are some tracts, partly sand and loam, and partly stiff clay. No part of Man is, however, very productive; nor are any great pains taken to improve its natural resources. The mountains, commons, and other waste lands, include about 54,000 acres, leaving above 100,000 acres for tillage. Agriculture has considerably improved since the diminution of the herring fishery has made the men turn their attention to farming, which used to be exclusively the occupation of women: wheat, barley, and potatoes are raised in sufficient quantities for exportation, and within the last few years, the turnip husbandry has been introduced with some success by the English and Scotch settlers. The implements, however, are very rude; and the division of land into small farms has combined with the herring fisheries and smuggling to retard improvement. The extent of land under white crops, and the average produce of each in 1835, were estimated as follows:—

Wheat	8,000 acres, at 2½ qrs. per acre	21,250 qrs.
Barley	5,000 " 4 " "	20,000
Oats	12,000 " 3 " "	36,000

This was supposed to leave a surplus of about 5,000 qrs. of wheat, and 3,000 of barley, over the consumption. Peas are cultivated in the N. parts, clover is a favourite crop, and flax is raised by almost all the farmers for domestic use. The cattle of Man, which at present consist of a mixture of Irish and British breeds, are small and short-horned, running to fat, and not yielding milk till they are six years old. Ayrshire cows have, however, been recently introduced with much advantage. The native sheep, which are small, hardy, and usually of a white or grey colour, are slow feeders, long in coming to maturity, and very coarse-wooled; they are now, however, confined to the hills, the lowlands being mostly stocked with improved breeds. The island yields a race of hardy ponies, capable of much labour, and requiring little food; but for draught and farming purposes other breeds, chiefly Irish, have been imported of larger size and strength. Man had formerly a peculiar breed of hogs, now totally extinct, the animals at the present day being of various kinds, some of which resemble the Chinese variety. Red deer formerly ranged in the mountains but the game at present consists of hares, rabbits, partridges, snipes, and woodcocks. Foxes and polecats are not found, neither are there any poisonous animals on the island; but weasels and rats are very numerous, and detrimental to the farmers. The Manks tenures are remarkable: the different para. (of which there are 21), are divided into *freems*, each comprising 4 quarterlands, varying in size from 60 to 150 acres, and rising in yearly value from 10*l.* to 125*l.*: there are 760 quarterlands, and they are esteemed by the islanders as property of the highest nature, in fact strictly entailed estates. Other lands, called *metacks* and cottages, are devisable by will, and on the whole considered to be of a far inferior nature. The yeomen are very proud of these little freeholds, which range from 10 to 200 acres, and usually comprise portions of pasture as well as arable land; "but there can be no doubt," says Lord Teignmouth, "that the system is practically vicious, diminishing the wealth both of the farmers themselves, and of the public at large, containing indeed within itself the seeds of its own dissolution." (*Sketches of Scotland and the Isle of Man*, vol. ii. p. 202.) Most of the yeomen have large and expensive families, which the law of Man compels them not only to rear and educate, but to provide for; and hence their estates soon become encumbered, and they are effectually prevented from pursuing any im-

proved system of management, even if they felt inclined to its adoption, which is seldom the case; there being no more obstinate adherents to routine, and ancient practices, than the Manx husbandmen. Many of them thus become involved in debt, and mortgage their property, the redemption of which being seldom in their power, they are dispossessed of it, and compelled to leave the island, or to resort to trade or predial labour.* Hence the class of small proprietors is gradually disappearing: numbers of them having been swallowed up in the extending estates of the Scotch and English residents.

Man used to be one of the principal seats of the herring-fishery; but for several years past it has been comparatively deserted by the herring-shoals, and the fishery has, in consequence, become quite inconsiderable, though even now it is the frequent practice of the farmers to purchase a boat, and share in the excitement and profit of the season. This diminution, however, is not to be regretted, as the fishery was carried on from July to October, exactly when the services of the yeomen and others engaged in it, were most necessary at home. Being also a kind of lottery, in which, by a few weeks' labour, large sums were occasionally realised, it attracted crowds of adventurers, without either capital or skill; while the irregular life led during these pursuits tended to encourage intemperance, and was a main cause of the indolence for which the Manx have been long notorious. There has, in fact, been a material improvement in the habits and industry of the people since the decline of the fishery; and there are, perhaps, few things less to be desired for the island than its revival. The herrings appear off the coast of Man in June, remaining till September, when they seek the E. coast of Ireland to deposit their spawn. The fishing vessels now built are much larger than formerly; they are half-decked, with very short keels, and are good sea-boats, though apt to pitch to a dangerous extent in rough weather: they vary from 18 to 30 tons burden, and are manned by 8 or 10, and sometimes 12 men. Cornish, Welsh, and Irish fishers also visit Man; and, according to Sir J. Rennie's estimate, it appears that out of 250 boats, and 2,000 men employed in 1835, only 110 boats with their crews belonged to the island, 100 being Cornish or Welsh, and about 50 Irish. The cod-fishery has been neglected, owing to the want of adequate capital for the supply of proper vessels and lines.

The manufactures are chiefly domestic, and carried on by women, most of whom, when not in the field or farmyard, are employed at their looms or spinning-wheels, producing woollen, linen, and cotton cloths, both for the home and foreign supply, as well as nets for the use of the fisheries. Bleaching is conducted on a large scale in Laxey Glen, stuffs being sent thither from all parts of the island. A paper-mill and brewery are also established in the same neighbourhood. A woollen manufactory is established at Douglas; and hats, made of coarse wool, which cost about 2s., are said to wear extremely well. The exports consist principally of corn, potatoes, eggs, lime, and limestone, lead and copper ore, herrings, linen, sail-cloth, and paper. Owing to the Isle of Man having been formerly independent, a discrepancy has, for a lengthened period, existed between the duties on commodities in it and in Great Britain, the former being considerably lower than the latter. This distinction which still subsists, has occasioned, at different times, a great deal of smuggling, particularly on those articles on which high duties have been imposed in this country. This, however, is now materially reduced by adopting the plan of allowing only certain quantities of those goods on which the Manx duties are lower than those of England, to be imported into the island (viz. wine, 110 tons; spirits, except British, 80,000 gallons; tea, 75,000 lbs.; coffee, 8,000 lbs.; sugar, 10,800 cwt.; and tobacco, 60,000 lbs.): and by maintaining an extra number of customs officers and revenue cruisers for the suppression of smuggling. Nothing, however, can be more impolitic than the continuance of such a system. The public has, at a very heavy expense, purchased all the feudal rights of the Atholl family; and that being the case, it is high time that an end should be put to the anomalous absurdity of having a considerable island lying, as it were, in the very centre of the empire, and in the direct line between some of the principal trading towns, with discriminating duties on many important articles. In making any change, it would, of course, be necessary to make the inhabitants some compensation for the temporary inconvenience that it would occasion; but this might be done with advantage to the natives, and without expense to the public, by modifying and improving the internal regulations and legislative policy of the island, which would eventually lose nothing by the change. In 1836 there belonged to the

* The mortgages on land, held chiefly by the English, amounted, it is said, in 1835, to 800,000*l.*, which at 5 per cent. would amount to 40,000*l.* a year.

island 242 vessels of the burden of 7,229 tons, being a considerable increase on previous years; and as it lies in the line of the steamers plying between Liverpool and Glasgow, most of which touch at Douglas, it has begun to be largely frequented by visitors from these cities and other parts of the empire, whose influx has materially contributed to the improvement of its principal towns. To this cause, indeed, the present improved state of Man may be chiefly ascribed. It is also the residence of numerous half-pay officers, and others, who are induced to live here in consequence of the lower duties on many articles of domestic consumption.

The condition of the labouring pop. is moderately prosperous. Ordinary labourers receive about 1*s.* a day; and skilled labourers, if we may so call their clumsy tradesmen, get about 3*s.* a day, which, considering the low price of provisions, is certainly ample. There is no legal provision for the poor, who have to depend wholly on voluntary charity. Generally speaking, the cottages are of a very inferior description: they are frequently built of earth or sod, and thatched with straw, having a funnel of sail-cloth, as a substitute for a chimney. There are, however, a few improved cottages, and their number will, no doubt, increase with the spread of improvement.

The feudal sovereignty of Man, which was a *kingdom* prior to 1504, was held by the Stanleys, afterwards Earls of Derby, and their successors, the Dukes of Atholl, from 1426 to 1765, when parliament, conscious of the injury which the revenue and the public generally received from the contiguity of an island only feudally subject to the crown, and hence affording refuge to debtors, outlaws, and smugglers, purchased from the Duke of Atholl for 70,000*l.*, his civil and military rights and patronage, but with certain reservations as to fiscal matters and titular dignity. A further arrangement was made in 1826, and Great Britain now enjoys all the rights and privileges of sovereign of the island. The constitution, however, was left untouched; and for many years, at least, the legislative power has been vested in the House of Keys, a body comprising 24 members, now self-elected, but formerly chosen by the statesmen or owners of entailed estates. Their acts are binding in all cases, and the laws are so few and brief as to admit of being included in a small volume. Attornies occasionally plead in the courts; but the sutors quite as frequently defend their causes in person: law is cheap, and, as was to be expected, litigation is very common. There are two supreme judges in the island called *deemsters*, or "awarders of the law," officers of high antiquity, and exercising jurisdiction over all civil and criminal cases; being the presidents (under the crown and governor) of the two courts of chancery and exchequer, each of which is held eight times a year. The former of these has little more to do than to confirm or annul the decisions of the deemsters, who hold a primary court of judicature; and the exclusive business of the latter is to punish offences against the revenue laws. The common-law courts are held at different places for the 6 different *sheedings* into which the island is divided, and may be considered as courts of "common pleas," in which all actions, personal or real, may be tried, as in the deemsters' court, by a jury of 6 in real, or of 4 in personal actions. The appeals from this court are first to the House of Keys, afterwards to the governor, and finally to the Queen's Privy Council. A half-yearly gaol-delivery is made compulsory, and bailiffs act in the five chief towns to hear and determine cases of debt under 40*s.* (*Feltham's Tour*, pp. 35-44.; *Lord Teignmouth*, ii. 227-241.)

The established religion is that of the Church of England; all sects, however, enjoy full toleration. The clergy are under the bishop of Sodor and Man, suffragan to the archbishop of York, but holding no English barony, and hence having no voice in the legislature, though privileged to sit in the House of Lords. This see has been held by several highly celebrated divines; and among others, by Barrow, Wilson, and Ward. An ecclesiastical court is held twice a year, either by the bishop or his vicars-general, and an arch-deacon regulates the fabrics and minor concerns of the 17 parishes. These cures are commonly well attended to by respectable clergymen; but their stipends do not average 90*l.* a year; and the churches, though externally pretty, are miserably deficient in accommodation. The dissenters have made considerable progress in the present century; but the Methodists comprise even now only one tenth of the pop., and the other bodies of dissenters are unimportant. Bishop Wilson and other prelates have done much to promote education, not only by establishing schools, but also by translating the Scriptures and other books into the Manx language. Each parish has its school more or less richly endowed; and while elementary instruction is given in the Manx, every endeavour is made to instruct the natives in the English language. Indeed there can be no doubt, that, at no distant period, the pop. will be familiarly acquainted with our language; and this will be the surest method to disabuse them of the prejudices

REAL), a town of Spain, in Andalusia, E. the city of Jaen. Pop., according to 1844. It is situated in a spacious plain, and has regular built streets and handsome edifices, being a par church, Carmelite hospital. Woollen and linen cloths, bedding, are made here, with bricks and quantities, for the supply of the prov. The soil is both picturesque and fertile, with little tillage, abundant crops of olives, and little of wine and grain.

(A), a mark. dep. and peninsula of France, led in the prov. Normandy, between lat. 49° N., and long. 0° 40' and 5° W., encircled by the N. sides, and partly on the E., by the ch. (Manche), whence its name; and also, on the E. by the depts. Calvados and Mayenne and Ile-et-Vilaine. Length, 35 m.; greatest breadth nearly 40 m. Surface, 604,021. Surface, 604,021. Surface, 604,021. A chain of hills, of no great height, through the dep. in a N.W. direction, divides it into two nearly equal parts. Near its N. extremities are some marshy tracts. The coast is rocky, especially in the N., but good roads and commodious harbours. Cherbourg is the finest. In 1824, about 94,000 in woods, 30,300 in orchards, and 46,300 in fields. Agriculture is better conducted than in other depts. The produce of corn, which is not raised in the N., but the home consumption are an important substitute for it, the crop amounted to nearly 607,400 m. peas, and a good deal of hemp and flax, the dep. is beyond the limits of the vine, but 1,000,000 hectolitres of superior cider produced, and some perry. In 1830 there were 1,000 black cattle in the dep.; and fat cattle are among its principal products. In the same year, about 301,000 sheep, estimated annually 411,500 kilogr. of wool, though of quality. There is a considerable traffic in mules. Poultry are reared in great quantities of eggs being exported to England and Valognes. In 1845, of 192,098 properties subject to the *foncière*, 62,792 were assessed at 26,609 at from 5 to 10 fr. The oyster fisheries on the coast are important; but, as the fish are less plentiful than formerly, mineral products are iron, lead, coal, marbles, granite; which last is found of excellent quality. The *bauxite* isles, a group of small islands off the coast. Salt-works are established at several places. Manufacturing industry is employed in copper, zinc, woolen, linen, cotton, and materials. Cutlery, glass, paper, hair, are produced; and in some cantons, straw, willow, &c., are made, and parts of Normandy, and into Brittany. The trade is in agricultural produce and other. Manche is divided into six arrondissements, St. Lô, the cap., with 6,339 inhab., Avranches, Valognes, and Mortain. Public revenue (1844) 17,572,163 fr. This is Celtic and Roman antiquities. (*Hugs, Official Tables, &c.*)

MANCHESTER, a parl. bor. and par. of Great Britain, and the principal town in the world, co. Lancashire, on the Irwell, an affluent of the E. Liverpool, 35 m. S.W. Leeds, 10 m. N.W. Birmingham, and 163 m. N.N.W. 53° 29' 50" N., long. 2° 15' W. The par. of Manchester includes an area of 30 townships, and a total pop. of 353,390 persons. The table exhibits the area, pop., and the par. in the contiguous parl. bors. of Salford, the limits of which define the extent of the town. — [See top of next page.]

It appears, that the rate of increase was, during the 40 years ending with 1841, 10 per cent., and in the bor. of Salford, a rate exceeded only by Preston, and one town. In 1772, the pop. of the township was estimated by Dr. Percival at 21,461, and in 1841, making together 37,248; the eighth part of the pop. in 1841. The

of them have at least a chapel or meeting-house. It appears from the Public Return, that 102 places of worship were open to the use of Manchester in 1850, so that the number in Manchester and Salford together may be taken at from 150 to 160. The Independents opened a chapel in 1798, and the Wesleyan Methodists in 1796. Three congregations have been built out in Chorlton, Ardwick, and Harpurhey, and the ancient parishes of St. Andrew and St. Mary have been gradually going out of use.

Education.—The means existing in Manchester in 1850, for the diffusion of elementary instruction, may be learned from the following summary drawn up from the report of the Manchester Education Society:—

Description of Schools.	Manchester.			Salford.		
	Boys.	Girls.	For both Sexes.	Boys.	Girls.	For both Sexes.
1. Sunday schools.						
a. Church of England.	53	10,350	2,040	0	0,241	2,040
b. Catholic.	0	1,500	1,500	0	0	1,500
c. Dissent.	0	10,000	0	0	0	0
Total of Sun. schools.	53	21,850	3,540	0	2,241	3,540
2. Day schools.						
a. Church of England.	0	10,000	10,000	0	0,241	10,241
b. Catholic.	0	10,000	10,000	0	0	10,000
c. Dissent.	0	10,000	10,000	0	0	10,000
Total of Day schools.	0	30,000	30,000	0	2,241	32,241
3. Public schools.						
a. Church of England.	0	0,000	0,000	0	0,000	0,000
b. Catholic.	0	0,000	0,000	0	0,000	0,000
c. Dissent.	0	0,000	0,000	0	0,000	0,000
Total of Public schools.	0	0,000	0,000	0	0,000	0,000
Total.	53	51,850	33,540	0	2,241	35,781

It would appear from this statement that, in 1850, about 52,000 children were receiving daily instruction in Manchester and Salford, and that 33,540 were taught on Sundays. But doubts have been entertained in regard to the accuracy of these returns, and of the day scholars, nearly 10,000 were reported to be educated in private schools and dame schools, in two thirds of which the instruction is extremely defective. Within the last seven years considerable additions have been made to the better class of schools supported by the church and the manufacturers. But there can be no doubt that the education of the working classes is still, speaking generally, been limited to amount and inferior in quality.

Among the schools deserving particular notice the first place is due to the grammar school founded in 1581 by Hugh Chaddam, Bishop of Exeter. Its revenues amount to upwards of £4,000 a year, and in consequence of a donation of Chaddam in 1680, its endowments were increased by the opening of a new school, and a general reorganization of the establishment. The income of £4,000 however was deposited and as it did not effect all the alterations that were necessary, a bill was introduced to obtain further reforms.

It appears that the income of the school is now £4,000 a year, and the number of scholars is 100. The last chapel is a fine specimen of the architecture of the 16th century, and is a fine specimen of the architecture of the 16th century, and is a fine specimen of the architecture of the 16th century.

additions to boys who are or have been inmates in the houses of any of the masters, except in conformity to any regulations already printed, and that such houses are not to receive any benefit from the funds of the charity in any manner by which the expenditure of such funds may be increased, and with these directions, I shall refer it to the trustees to approve of such alterations in the scheme submitted in the report of 1850 as may be necessary to carry the same into effect, and as the donor shall find to be proper for the purpose of more efficiently carrying into effect the objects of the charity. Two establishments in England render on many occasions advantages on their schools. It has 10 exhibitions of £50 a year, made for 4 years, 10 bursaries of £50 a year, and several others of less value both at Oxford and Cambridge, besides which it derives great though not exclusive advantages from the religious Bazaar's exhibitions, connected with Bazaar and Bazaar for 3 years after the degree of B.A. The Institution is efficient, and it is said to rank amongst the best grammar schools in the kingdom. The College, founded by Humphrey Chabourne, in 1525, is likewise a

valuable educational establishment, comprising, besides language and school-rooms for boys, a valuable library of 20,000 vols., but it is said that the greater part of this library is obsolete, and that it is better suited for the scholar and the antiquary than for men of business. This college has also a museum of minerals of little real value but much valued by strangers and holiday jinglers. The number of scholars is restricted to 20, 10 of whom must belong to Manchester and Salford, the rest belonging to Bolton, Tarncliffe, Drayton, and Crumpton. A solid education is furnished and the scholars are otherwise appreciated and fitted up to trade. The Commercial School, established in 1845, are intended to furnish a good education to the children of the working classes. Other endowed charities for instructing children are designated with national and other schools very liberally supported, and considered to be the most efficient manner, and besides these the town has an orphan for the blind erected by public subscription and supported by an endowment bequeathed by Thomas Worsley Esq., of Oldham, and a deaf and dumb school established in 1815 and reconstituted in 1835. There are 30 scholars at the establishment. The Independent Wesleyan and Lancers have all excellent institutions, either in the town or in its immediate vicinity. The Institution given to them is, of course, conformable to the peculiar views of the founders.

A School of Design, assisted by government, has been founded in Manchester. It is attended by about 800 pupils, and though it has not hitherto had much success, it may reasonably be supposed that it will ultimately exercise a favourable influence in improving the quality of pattern, and the taste of the manufacturers and the public.

Probably however the new or Owen's college will become the principal seminary to Manchester. It has originated in the confidence of Mr. John Owen who left a large amount of property, of which 75,000 has been already realized for founding a college in this his native town. The buildings have not yet been constructed, but the professorial rooms, but we have no doubt the trustees will take such measures as may be most likely to give effect to the Owen's primary liberality by establishing the new college on an enlightened and liberal footing.

The Royal School of Medicine and Surgery is connected with the infirmary was founded in 1804. It has museums of human and comparative anatomy, a chemical laboratory, library &c. and is said to be well conducted. It is on the same footing as the metropolitan medical schools.

The charitable institutions of Manchester for the relief of the sick, aged, and destitute, comprise an infirmary to which large additions are now being made, partly from the produce of endowments given by Madam Louisa Lind a dispensary, a fever hospital or house of recovery, a lying-in hospital, an eye institution, a leprosy hospital, a night asylum for the destitute poor, a female penitentiary, a provision society, a dispensary for children, a dispensary for the sick of the town, and four other dispensaries, relieving altogether about 20,000 patients annually and supported by funds from bequests and subscriptions amounting to £10,000 a year. Besides which, there are various minor charities belonging to Manchester and Salford, the aggregate income of which amounts to £1,000 a year, so that upwards of £10,000 are annually expended in the relief of the poor, over and above the sum raised by rates, which amounted in 1847 to the sum of Manchester to £4,000, assessed upon property of the estimated value of 700,000 a year. The sum raised by rates, and expended on the relief of the poor in the par. of Salford in the same year amounted to £1,400, and in Chorlton to £200.

The library and philosophical establishments of Manchester are very numerous. They include, among others, a philosophical society, founded in 1791 and which has increased among its members Dr. Forster, the three Hartsys (father and sons) Dalton and other eminent men, whose writings and discoveries have been of general advantage, not only to the town, but to the world generally. Indeed, the provincial societies of the kind have earned as high a reputation. Its members (15 in 1845) have been translated into both the German and French languages, a geological and mining society, founded in 1825, a botanical and horticultural society, established in 1837 possesses gardens that cover 10 acres, a zoological society has extensive gardens on the Dry road, tastefully laid out, and containing a pond and beautiful collection of animals, a society of natural history has a good museum, and is supported by a large body of subscribers. The Royal Institution was founded in 1805, for the promotion of literature, science, and the fine arts. We have already noticed its fine building the principal hall of which has a statue of Dalton by Chantrey. The Athenaeum, established in the view of affording to the middle classes a suitable resort for reading, study, and conversation, is supported by about 1,000 members, who contribute each 1s. per

annum: it has a lecture room capable of accommodating 1,000 persons, and a library of 5,000 vols. The Cheetham Society, founded in 1843, has for its object "the publication of historical and literary remains connected with the counties palatine of Lancashire and Cheshire." It is limited to 350 mem., who pay an annual subscription of 1*l.*, which entitles them to a copy of all the works published during the year. There are two mechanics' institutes, one in Manchester and one in Salford; they are well provided with libraries, museums, apparatus, &c., and are pretty well attended. They have numerous evening classes for instruction in the various branches of a useful education, inc. French, German, &c. Subscription 5*s.* a quarter. There are three lyceums, specially intended for the improvement and recreation of the working and other classes. The Royal Victoria Gallery has an exhibition of objects in mechanics and science, and courses of lectures. A temperance society, formed in 1835, was the first to inculcate total abstinence from all intoxicating beverages.

In 1846, 3 fine parks were opened in the vicinity of the town for the recreation of the inhabs. The principal of these, called Peel Park, in honour of the late great statesman, Sir Robert Peel, about a mile W. from the Exchange, is tastefully laid out. The Salford library and museum, open to all ranks and orders of the people, is in a house in this park. The other parks, though not quite so accessible, are largely resorted to, especially on Sundays.

Banks.—The banking establishments of Manchester, which are numerous, and conducted on a scale corresponding to the commercial importance of the place, comprise, besides three private banking-houses, of great wealth and respectability, a branch of the Bank of England, and three joint-stocks: viz., the Manchester and Liverpool District Banking Company (1829); the Union Bank of Manchester (1836); the Manchester and Salford Banking Company (1836); and branches of the National and Provincial Bank of England, &c. A savings' bank, opened in 1818, had, on the 20th Nov. 1818, 556,888*l.* of deposits.

Four newspapers are published in Manchester; three of which, the *Guardian*, *Examiner*, and *Spectator*, advocate whig and radical politics, the *Courier* being conservative. The *Guardian*, which has the largest circulation, and the *Examiner*, are published on Wednesdays and Saturdays: the others appear on Saturdays only.

Prisons, Police, &c.—Manchester possesses several large establishments connected with its internal economy. The workhouse, which occupies an eminence N. of the town, is a very extensive and well-conducted establishment, fitted to accommodate 1,000 inmates. The Salford workhouse, in Greengate, has accommodation for about 400 inmates. Another workhouse, on an improved plan, has recently been erected in the township of Chorlton. The New Bailey prison in Salford, close to Albert Bridge, commenced by Howard in 1787, has been since greatly enlarged: it has accommodation for about 800 prisoners, and is well conducted; but, owing to the great increase of population and crime, it is inadequate to the wants of the hund. and has been frequently so overcrowded, that three persons had to sleep in one cell! To remedy this inconvenience, a new prison, the Manchester bor. gaol, was opened in 1850. It is constructed on what is supposed to be the most approved system, each prisoner being confined in a separate cell. It has accommodation for between 400 and 500 such inmates. A police-office court is held daily by a stipendiary magistrate, appointed by the chancellor of the duchy of Lancaster, with a salary of 1,000*l.* a year. The police was formed in 1842, and is completely under the control of the corporation, the regulations in regard to its government being embodied in the Manchester Municipal Act. In 1849, the force in the bor. of Manchester consisted of a chief constable and chief superintendent, 75 other officers and clerks of different grades, and 370 constables, making in all a force of 447 officers and men; to which about 40 officers and men have to be added for the bor. of Salford.

In Manchester, in 1849, the police took into custody 4,687 individuals;

whereof 1,796 were admonished and discharged by the magistrates,
2,811 — summarily convicted or held to bail,
and 650 — committed for trial.

Of the 650 committed for trial,

623 were sentenced and punished,
4 — ordered to plead if called upon,
98 — acquitted,
15 — bill not found,
10 — not prosecuted, not tried, and absconded.

In Salford, during the same year, 1,624 individuals were taken into custody;

whereof 573 were admonished and discharged by the magistrates,
300 — summarily convicted,
149 — committed for trial,
and 2 died.

Of the 149 committed for trial,

123 were convicted and sentenced,
18 — acquitted,
and the remainder not prosecuted, &c.

The police fire-engine establishment is perhaps the most effective in the kingdom, after that of the metropolis: it comprises, inc. both bors., 13 engines, completely furnished with every necessary implement, fire-escapes and water-barrels, and a body of 78 firemen, commanded by a superintendent. The Manchester gas-works are the property of the town, and the profits are applied towards its improvement: the works were established in 1817, but the streets were not generally lighted with gas till 1824. The main pipes extend, in various directions, upwards of 120 miles; and the gas costs 4*s.* 9*d.* per 1,000 cubic feet. The Salford gas-works are on a much smaller scale.

Water.—The Manchester and Salford Water-works Company, originally established in 1808, had two reservoirs, one at Beswick, 110 ft. above the level of the town, and the other at Gorton, 140 ft. above that level, and supplied about 2,000,000 gall. a day. But the capital, works, &c. of this company having been purchased by the corporation, the latter have constructed new and far more extensive water-works in the neighbourhood of Mottram, in Longdendale, 10 m. E. Manchester. These, when finished, will cost a very large sum, probably little short of half a million sterling, and will be one of the most gigantic undertakings of the kind effected in modern times, rivaling in extent and magnificence the aqueducts of ancient Rome. There are reservoirs at Woodhead, Torside, Rhode's Wood, Armfield, Hollingworth, and Godley, their total capacity being 567,859,797 cubic feet. The Mottram tunnel is 2,772 yards in length, or about a mile and two thirds, about 6 ft. wide, and rather more than 6 ft. high. The supply of water will amount to 27,700,000 gall. per diem! In August (1850) 65 m. of piping, varying in bore from 2 to 28 inches, for the new works, had been laid down in Manchester only, and it is supposed that the whole bor. will require at least 80 m. of piping.

The markets of Manchester are not such as a town of great wealth and magnitude might be expected to possess; and this circumstance is most probably owing to the fact, that the tolls are not the property of the town, but belong to the lord of the manor. There are no general markets, like those of Liverpool, Birmingham, and Newcastle; but several are scattered in different parts of the town. In Victoria Street, Swan Street (Smithfield), Camp Field, and Deansgate, are markets for butchers' meat and vegetables; and a fish-market was erected near the exchange in 1828. The cattle-market is held every Wednesday, in Cross Lane, Salford; a large area on its sides is fitted up with stalls, filled with various articles both of farming and manufactured produce.

The following table, drawn up from the *Reports of the Manchester Statistical Society*, shows the consumption of butchers' meat in Manchester and its environs (estimated pop. 243,500) in 1836:—

Description of Meat.	Average weight of Carcasses.	Number of		Quantity to each Person.
		Carcasses.	Pounds.	
Cattle - -	500 lbs.	40,820	22,859,200	66 lbs. 8 oz.

The market-days are Tuesday, Thursday, and Saturday, the first named being the manufacturers' day, and the last the chief market for agricultural produce and provisions. The fairs are held in Easter and Whitsun-week, the first week in Oct., and on Nov. 17. The first of these, called Knott-mill fair, is a mere popular festival, and the rest are cattle fairs.

Manufactures.—Manchester, though situated close to an almost inexhaustible coal-field, and deriving great advantages from the vicinity of three streams, available for machinery, would never, in all probability, have attained to her present magnitude and importance, as the first manufacturing town of the world, but for the invention of the steam-engine, and the wonderful improvements made since 1760 in the manufacture of cotton twist and fabrics, through the genius and discoveries of Hargreaves, Arkwright, Crompton, Cartwright, and others. How astonishing the revolution effected by the ingenuity and enterprise of a few obscure individuals! Before the spinning frame, which was invented in 1767, came into operation, the imports of cotton wool did not amount to 4,000,000 lbs. a year, and the value of the exports hardly exceeded 200,000*l.* Arkwright's patent was set aside in 1785, and since then the progress of the cotton manufacture of Great Britain, and especially of Manchester, has been rapid beyond all precedent. Previously to 1785, the imports of cotton wool had not reached 12,000,000 lbs. in any single year; but in 1787 they amounted to 23,250,263 lbs.! The progress of the manufacture was

been formed into a Union under the Poor Law Amendment Act.

Condition of the People of Manchester.—The increase of wealth in Manchester, during the last half century, has been quite unprecedented, and it has at present, in proportion to its size, a greater number of opulent capitalists than any other town of the empire. The capital vested in mills, machinery, and stocks of goods, is immense; and, in addition to the vast sums that are thus employed in their peculiar business, the capitalists of Manchester, and the adjoining districts, have been the great promoters of railways in all parts of the empire, and hold a very large proportion of the stock embarked in these undertakings. To achieve such great results, a combination of all those qualities that go to form accomplished men of business has been required; and no where do we find the persevering attention to details, added to the sagacity to distinguish between the doubtful and the certain, and the enterprise to embark in remote and apparently hazardous, though really safe schemes, that characterise the highest class of commercial men, so generally diffused as in Manchester. It is, in fact, the grand arena of industry and enterprise. Every one is striving to raise himself to distinction, and to outstrip his neighbour in the accumulation of wealth. But there are no mean jealousies, or unfair jostlings: there is more than room enough for every one; and every one knows that his success is wholly dependent on his own efforts.

The shopkeepers and middle classes of Manchester are more attached to old habits than those of most other towns. In proof of this we may mention, that by far the greater number of them continue to dine at the primitive and unfashionable hour of one. At no very distant period, indeed, they were accustomed to shut their shops from one till two; and though that be no longer the case, the banks will not, at present, with one or two exceptions, cash cheques sent to them at such a time, or allow their clerks to be interrupted when at dinner!

But it is not so easy to arrive at any very definite conclusions with respect to the condition of the lower classes in this great workshop. On the whole, however, we are inclined to consider it as tolerably satisfactory. No doubt, the condition of the English part of the population has been most injuriously affected by the prodigious influx of Irish immigrants, of whom and their descendants there are probably not fewer than 85,000 in the town. The Irish, it is but fair to say, are neither peculiarly disorderly nor peculiarly dishonest; but their competition has depressed wages, or hindered them from rising, and their example has been most pernicious, by accustoming the English to a lower standard of food and comfort. But despite the influence of this fruitful source of degradation, the workpeople of Manchester seem, when employed, with the exception of the hand-loom weavers, to be really well off. Unluckily, however, a number of individuals, partly belonging to the town, but mostly new comers from Ireland and other parts of England, are usually without employment, and in a state bordering on destitution. It is unfortunate, too, that so many of the workmen's wives should be employed in factories, as this takes them away from their families, and prevents them from bestowing sufficient pains on the training of their children, and their household affairs. It is singular, indeed, how ignorant workmen's wives, engaged in factories, and brought up as factory girls, are of most matters connected with domestic economy; and how

much more comfortable their families might be were they familiar with such details, even though their earnings were less. It is not true, however, that the condition of the workpeople has been deteriorated, and, in point of fact, it has, on the contrary, been materially improved. Most descriptions of labourers receive good wages; and such skilled labourers as are temperate and industrious are, speaking generally, in comfortable circumstances.*

The following table, drawn up by the Manchester Chamber of Commerce, exhibits the average rates of wages per week paid to the different classes of labourers in and out of factories in Manchester in 1846, since which period no material alteration has taken place:—

The lower classes of Manchester live principally in houses above ground, consisting for

the most part of cottages, of which many lengthened streets have been built of late years; but, in addition to these, great numbers inhabit cellars or underground floors, sometimes below the cottages, and sometimes below other houses. Some important particulars in regard to these and other matters will be learned from the following returns prepared by the Manchester police.

It is greatly to be regretted that effectual provision had not long since been made in Manchester and other large towns for their proper drainage and pavement, and for laying down rules as to the erection of houses. The authorities in Manchester have done all in their power, under the existing laws, to improve the streets; but there is no general building act for the town, and except in certain districts, where the magistrates have been entitled to interfere, each proprietor built as he pleased. Hence cottages have sprung up row behind row, without the streets or alleys between them being of sufficient width, or drained or paved; in some places, the streets have been, till very recently, full of pits filled with stagnant water, the receptacles of all sorts of filth. (*Report on Health of Towns*, p. 10.) Such a state of things was discreditable alike to the local authorities and the government: and no measure appears to be more imperatively required, seeing the vast and rapid increase of towns, than the enactment of such regulations as may be required to provide for the proper construction of the streets and houses, and consequently for the health and comfort of the population.

Cellars, however damp and unhealthy, are preferred by a large proportion of the lower classes both here and in Liverpool, not so much from their cheapness, as because they afford facilities for dealing in various sorts of articles, and because their inmates either are or believe themselves to be more independent than if they resided as lodgers in houses rented by other parties.

It is unhappily true, that many of the dwellings of the lower classes, especially those of the Irish, exhibit a great want of furniture, of cleanliness, and of comfort. This, however, is not owing, as many have supposed, to the growth of the factory system, but partly to the poverty, and still more to the perverse habits of the occupiers. In a tract written in Manchester, and published by authority in 1755, long before the factory

Totals, as given in the Police Returns, of the Houses, Cellars, and Population of the Borough of Manchester for the Years 1841, 1845, 1846, 1847, 1848, and 1849.

system had an existence, the houses of the poor are said to be "most wretched," "filthy and nasty" in the extreme, and "noisome and infectious." (See extract from tract in *Manchester as*

it is, p. 36.) There is really, therefore, no room or ground for saying, that any portion of the poor are worse lodged now than formerly; while, on the other hand, of 37,724 dwellings of the

* One of the most prolific sources of physical and social evil in this and other manufacturing towns consists in the fact that married women, from the necessity of attending to their work in the mills, are compelled to leave their infants in the charge of old women and girls to nurse during their absence. The latter are in the habit of administering to the infants, for the purpose of keeping them quiet, large quantities of Godfrey's cordial and other noxious potions containing opium and other narcotics; in consequence of which not only is the mortality of infants greatly increased, but they are comparatively stunted in their growth and proportionally unhealthy. It is

impossible to dispense with the work of females in the factories, for the manufacturer requires the nimble little fingers of women, not the large rough hands of men,—in fact, *males digittales parvi*, not *males manus parvi*. With a view to remedy this evil, a public meeting was held in September, 1850, under the auspices of the mayor, for the purpose of establishing public nurseries on the plan of the *crèches* of Paris, but with this difference,—the Manchester nurseries have not been established as *charities*, but as a means of nursing infants in an improved manner and at a very small cost. (Com. from Manchester.)

labouring classes, examined by the agents of the Statistical Society, no fewer than 27,281 were decidedly "comfortable;" and as respects the clothing and other accommodations of the poor, they are superior at present to what they have ever previously been. Their prosperous condition is evinced by the great average consumption of butchers' meat.

Owing to the immense number of factories, and of steam engines at work in them, there is generally a dense cloud of smoke hanging over the town; and such buildings as are not frequently cleaned have a dirty, blackened appearance. Attempts have latterly been made to obviate this inconvenience by compelling the mill-owners to adopt means for consuming or destroying the smoke arising from their works. And if this could be effected without imposing any very serious burden on the industry of the town, it would be a most desirable improvement.

But despite the disadvantage arising from the prevalence of smoke, Manchester is not unhealthy. No doubt a good deal of fever prevails at most periods of the year, in the poorer districts, especially in those where the streets are ill-paved, and the sewerage defective. But, on the whole, Manchester is less unhealthy than Liverpool, or Glasgow, or the old town of Edinburgh, which has no manufactures. The burials in the bor. of Manchester amounted in 1845 to 6,022, in 1846 to 7,810, in 1847 to 9,540, and in 1848 to 7,255.

The idle and absurd stories that were so industriously propagated with respect to the influence of factory labour on health and morals, are now pretty well exploded. Latterly, indeed, there would appear to be a considerable increase of crime; but this increase is, perhaps, more apparent than real, and is mainly a consequence of the improved state of the police, and of trivial offences that formerly escaped notice being (whether wisely or not we shall not stop to inquire) now visited with fine or imprisonment. The truth is that in respect of morality, the labouring population of Manchester has but little to fear from a comparison with that of any large town in the empire. The Rev. R. Parkinson, canon of the cathedral church, Manchester, in a speech at a public meeting in Feb. 1839, said, "I have no natural predilections for my present opinions. My birth and early education put me in a very different position from that which I now hold; but being at present an inhabitant of this town, having enjoyed ample opportunities of observing and judging, and being in a position which gives me no motive for a partial judgment, I maintain that, taking an average of all classes of our population, and that of other districts, we shall find the morality of this district not below that of the most primitive agricultural pop. I have the best authority for saying, that the streets of Manchester, at ten o'clock at night, are as retired as those of most rural districts. When we look at the extent of this par., containing at least 350,000 souls, being more than the pop. of half our counties, can we be surprised that there is a great amount of immorality? But a great proportion of that immorality is committed by persons who have been already nursed in crime in districts supposed to be more innocent than our own, and who swell our police reports, not so much because we hold out greater facilities for rearing them, as that they are apprehended through the superior vigilance of our police." This is pretty conclusive; and we may add, that the regard paid by females to decency, both of language and

deportment, is stated by intelligent witnesses before the Factory Commissioners of 1833-34 to be greater in Manchester than in most rural districts. It is a fact, too, that the proportion of illegitimate to legitimate children in the county is only 1 in 13, a low ratio for so dense and varied a pop., and not greater than in some purely agricultural cos.

We believe that the doctrines of chartism and ultra-radicalism have made less progress in Manchester than in most other great towns, the metropolis excepted, certainly less than in Glasgow. Stagnations of trade, by occasioning a want of employment and reducing wages, necessarily, also, occasion discontent and dissatisfaction; and in such periods, demagogues are not wanting to recommend political nostrums of all sorts as infallible remedies for the grievances under which they labour. But the great bulk of the pop. are, notwithstanding, attached to the principles of the constitution, orderly, and opposed to violence. And in this, no doubt, their opinions are in accordance with their own obvious interests; for, were they to become disorderly, or to cease to respect and uphold the rights of property, the prosperity of Manchester would be terminated; capitalists would withdraw from and shun her as if she were infected with a pestilence, and the mass of the pop. would sink into a state of squalid and irremediable poverty.

It is needless to observe that the interests of the employers of labour and those of the labourers, though apparently conflicting, are, at bottom, the same; and that neither party can prosper without that prosperity redounding to the advantage of the other. But, notwithstanding this identity of interests, there is, it must be admitted, but little sympathy between the great capitalists and work-people in this or any other large manufacturing town. This is occasioned by the great scale on which labour is now carried on in factories; and by the consequent impossibility of the manufacturers becoming acquainted with the great bulk of the people in their employment. They do not, in fact, so much as know their names; they look only to their conduct when in the mill; and are wholly ignorant of their mode of life when out of it, of the condition of their families, &c. The affections have nothing to do in an intercourse of this kind; every thing is regulated on both sides by the narrowest and most selfish views and considerations; a man and a machine being treated with precisely the same sympathy and regard. It is not to be denied that this is a state of things fraught with considerable danger; and that no society can be in a really sound or healthy state where the bond of connection between the different ranks and orders is such as now prevails at Manchester and other great towns. Indifference, on the one hand, necessarily produces disrespect, insubordination, and plotting, on the other. However, it is easier to point out a condition of this sort, than to suggest any means by which it may be obviated. We doubt, indeed, whether it admit of any effectual remedy. The whole tendency of society, in modern times, is to make interest, taking the term in its most literal and sordid sense, the link by which all classes are held together; and should any circumstances occur to make any considerable portion of society conclude that their interest is separate from or opposed to that of the others, there would, we apprehend, be but few other considerations to which to appeal to hinder the dissolution of such society.

In 1849 there were in the bor. of Manchester 1,220 beer-shops, and 480 public-houses, many of the establishments for the sale of spirits vying in splendour with the gin-palaces of the metropolis. Intemperance, however, is not on the increase. Great numbers of coffee-shops have recently been opened; and the influence of the temperance societies, though much exaggerated, has, on the whole, been highly beneficial.

Climate, &c.—The mean annual quantity of rain falling in Manchester (at an average of 33 years) is 36.140 inches, whilst the mean annual quantity falling in Lancaster (at an average of 20 years) is 35.714 inches; the comparatively slight variations in the temperature likewise contribute greatly to the healthiness of the town.

MANCHOOBIA.

According to Whittaker, the intention of Manchester, "the famous founders of the society sent a military division to a place then called Castlemore to which they gave the name Manchester, whence Manchester has been derived." In the time of the Saxons the old town was fortified, and about 877 another was built on its site. In 1282 according to the 4th of the same king Edward the First ordered Manchester to be fortified. In 1322 Henry the third was called a manor and is described as having two churches. In the 14th and 15th centuries it received great additions and improvements, so that in Edward's time it was described "the chiefest town without portwall, and most populous town of Lancashire." London was then, thus it is being referred to his time for the manufacture of woollen cloth, then called Manchester without that is, outside. The first authentic mention of the cotton manufacture in England is made by Lewis Blount in his *Treatise of Trade* published in 1614, where it is stated. The town of Manchester in Lancashire must be also have been remembered and worthy for their encouragement, commended who buy the yarn of the town in great quantity and carrying it out have the same again into Ireland to sell. Whether such trade industry was then, for they had cotton wool in London that comes first from Cyprus and Italy, and of course with the cotton and partly a fine flaxseed, seeds, from Valencia, and other such stuffs, and these were it to London, where the same is combed and card and cut and spun into the several parts who have thought at the same time, to provide themselves of the said fine industry (Cotton at p. 64); it tells the details of Manchester were employed the most industrious in the W. of England. The town was named to be a mile long, with open and clean streets and good buildings, and it "is described as the largest, most rich populous and busy city in England, having about 100,000 inhabitants within the parish." Famous were the excellent artists of tapestries and other things were made soon afterwards, but the great success of wool and woollen manufactures did not take place. It was when much wool was first introduced into the town. From that time down to the present time Manchester has been a scene of rapidly increasing industry and has been distinguished by the invention and enterprise of its citizens in working up supplies every quarter of the world with clothing and wealth, the reward of successful labour. There is even at times a large rapid and extraordinary surplus. *History of Lancashire*, 18th ed., p. 148-151, Whittaker's Manchester, Manchester at 60, *Pictorial Rep.*, 1881, p. 100, *Illustrated News*, 1880.

The **INDOCHINA** (The **Indo-China** an extensive region of N E Asia, belonging to China, and the adjacent part of the present ruling dynasty. The thing of the Chinese empire being between 4° and 10° and between 105° and 107° bounded to by the Japanese sea of Okhotsk to the North of Yalu and Sea of Japan to the China Proper and W by the Chinese sea of Okhotsk and Mongolia, from which latter it is separated by a double parallel composed with the great wall of China, and by a line running down the Yangtze and other rivers to the Japanese straits at the S of Korea. Estimated area, 700,000 sq. m. Pop. unknown. The S portion are the only parts of the empire that have been visited by Europeans, our knowledge of the remainder being derived only from the doubtful measurements of a Chinese geographer. It is therefore more than probable that almost any country land to the advantage of European travellers into the country it will be found necessary to make considerable alterations to our maps and descriptions of what is there more than a mere map. The reports are chiefly in the great valley formed by the Yangtze and Yangtze with their common tributaries, and to extend to the northern mountainous chain || one on the S running from the mountains of Corea along the whole line of coast to the S boundary, and having a probable extension of 1000 to 1500 the Chinese mountains called by the

These soldiers, who are required, usually, to deliver into the Imperial collector, a fixed quantity of pearls. The chief lakes are the Issyk-kul and a large sheet of water near the sources of the Chirchik in the prov. of Khiva, and the Issyk and Py. which give their names to the deep W district of the prov. Tatarstan: there are a few others in different parts of the country, but only of small size.

The nature of the Siamese soil and its natural productions generally are little known. The people in this is being chiefly occupied cultivating by the plow in the rice, and only little attention is being, but agriculture is confined to the 4 districts and the forests as well as hemp and cotton are extensively cultivated. The staple productions, however are glassing and products, the former being an excellent government monopoly. The province of Siam being on the banks of Fatherly, produces corn, cotton and some large quantities of which with glassing are sent by sea to the 4 provinces of China. The forests which stretch the whole of most of the mountains, supplies with pine, fir and bamboo, (long reeds, sugar pine, etc.) and are being found on the plains especially the 4. The domestic animals of Central Siam are common in the more cultivated districts, but the cattle are small and the breed of sheep peculiar to this country called Angkor is small, and much valued. Some the 4 districts, cows, etc. dogs are kept and especially are to be seen in many parts of the 4 provinces. The wild animals comprise the crocodile, wild ox and have been found for their horns which are a considerable article of trade with the Chinese. Fish, especially salmon and considerably the durian, are abundant in the rivers and held in high estimation by those who eat the flesh.

The Executive authority is divided into three provinces, 1. Kiang being comprising the one Province near the frontier of China, 2. Kotsu comprising the country N. of the Yangtze and 3. Yehochu comprising the whole country W. and N. W. of that river. The government of the first of these provinces is considered to stand highest, in the order place as to being less the other provinces and under a government more strictly military than any other portion of the Chinese empire. The government and regulations are all military ones and the two others all civil affairs of peace of age before to serve under the districts to which they belong by birth of which there are 6 now being distinguished by its province they themselves is the headquarters of the empire and the residence of the supreme government. It begins on the border a territory of the Yangtze is also bound to high volume in comparison of the Yangtze with the territory in lower China of the existing territory of China. With respect to trade between these are inferior to Fung Kwang along on the borders of China. The one ports frequented by the Chinese junks are Kienchen, at the N. end of the Gulf of Amoy and Kanton on the same Gulf. S. of this last mentioned. The other cities of Kanton, such as Canton the old cap. and other distinguished the different provinces have no claim to equal higher than others though many of them are surrounded by walls and government by small bodies of soldiers.

The general history of the Hesperian or Spanish Period was an account of their physical constitution, has already been given at some length in the article here in this work (p. 104, etc.). To state the reader to refer to the further particulars, see also, *Monograph of the Hesperian Period*, vol. 1, p. 104, etc. *Journal of the Hesperian Association*, and also *Journal of the Hesperian Association*, vol. 1, p. 104, etc. and also vol. 2, and etc.

MADONIA, owner of the Madison Ave. 1000

MADONIA, born of the Madonna Ave. 1907

Tranto, cap. cant., in an arid plain, 22 m. E.S.E. Taranto. Pop. about 5,000. It is a straggling but well built town, with wide unpaved streets, many handsome churches, several convents, an orphan asylum, and a large palace, formerly belonging to the Francavilla family. The town during the middle ages, and until 1790, was called Casalnuovo; but at the latter epoch it re-assumed, by royal privilege, the name of the ancient city, on the site of a part of which it is built. When Swinburne visited it, it was noted for nothing except the taste of its inhabitants for dog flesh, the skins of the slaughtered dogs being, at the same time, tanned into an imitation of Turkey leather for the supply of the neighbourhood. It had no other trade or manufacture. The remains of Manduria, destroyed by Fabius Maximus in the second Punic war, consist of its walls, standing several feet above ground, and double, except on the S. side, where the fortifications appear to have been left incomplete. The outer wall, and its ditch, measure 8 yards in breadth; behind this bulwark is a broad space, and then an inner wall, which together measure 14 yards. According to Craven, the walls are no where more than 6 ft. in height, having probably been lowered to furnish materials for the construction of the modern town. In the vicinity is a well, mentioned by Pliny, as constantly preserving the same level, whatever quantity of water be added to or taken from it; *lacus ad margines plenus, neque exhaustis aquis minuitur, neque infusus augetur*. (Hist. Nat. lib. ii.) This singular well still exists, and was visited by Swinburne and Craven. (Craven's *Tour*, &c., pp. 165—169.; and Swinburne's *Trav.* i. 223, 224.)

MANFREDONIA, a sea-port town of the kingdom of Naples, prov. Capitanata, on a bay of the Adriatic, about 19 m. S.W. the promontory (Testa di) of Gargano, and 20 m. N.E. Foggia; lat. $41^{\circ} 37' 53''$, long. $15^{\circ} 55' 40''$. Pop. 6,000. ? "In point of symmetry, it may vie with any town in Europe, having been constructed on a regular plan, which never underwent any alteration; and which, notwithstanding the unfinished state of some of the edifices, and the dilapidated aspect of others, gives it an air of grandeur and uniformity very remarkable. It is walled towards both land and sea: from the last a narrow ledge of rocks, almost always under water, divides its bulwarks. One long and wide street runs throughout the city, from one gate to the other; for there are but two gates on the land-side, though two others open to the port, which is protected from the effects of the N. wind by a small mole, and commanded by a strong castle, defended by a ditch and drawbridge. The walls are fortified with large round bastions. The harbour is reckoned safe; but its want of depth renders it fit for small vessels only." (Craven's *Tour*, 68, 69.) Four streets run parallel with the principal thoroughfare, and are intersected at right angles by smaller ones. Though narrow, the streets are well kept; and the inhab. are both cleanly and industrious, in a degree not at all usual in S. Italy.

Vegetables and fish are good, plentiful, and cheap at Manfredonia, but water and wine are indifferent, as are oranges, which form an important article of commerce throughout Apulia. It exports considerable quantities of salt, obtained from the salt lagoons which border the coast of the bay to the S. of the town. It has also a considerable trade in corn, quantities of which are shipped from its port.

About a mile S.W. of the town stood the ancient Sipontum, once a considerable city of *Magna Græcia*, and traditionally said to have been founded or colonised by Diomed. Its site is now principally occupied by a low marsh, abounding with wild fowl, and productive of the malaria which infects Manfredonia. The only remains of the ancient city are its cathedral, and two columns of cipolino marble, both in a dilapidated condition. The former is a small Gothic edifice, with a handsome portico, but little adorned within. It is still the seat of an archiepiscopal see, founded in 1094. Sipontum, which was colonised by the Romans A. U. C. 558, had fallen into such irreparable decay in the 13th century, that Manfred, king of the Two Sicilies, having founded, in 1266, the town which bears his name, but which he called *Novum Sipontum*, removed thither the few inhab. of Sipontum, bestowing on them many valuable privileges and exemptions. But, though it has always enjoyed some commerce, Manfredonia never attained to the prosperity or celebrity of its ancient predecessor, and has long been stationary. (Swinburne's *Travels in the Two Sicilies*, i. 149—151.; Craven's *Tour in the S. Provs. of Naples*, 67. 70.; Cramer's *Ancient Italy*.)

MANGALORE, or COREAL BUNDER, a sea-port town of Hindostan, prov. Canara, of which it is the cap., on a sandy promontory between a salt lake and the Indian Ocean, 440 m. S.S.E. Bombay; lat. $12^{\circ} 53' N.$, long. $74^{\circ} 57' E.$ Early in the present century it had 30,000 inhab. The town is well built, and has a fort, now dismantled, which opposed a gallant and successful resistance to Tippoo, in 1783. The port does not admit vessels drawing more than 10 ft. water, except at

spring tides; but there is good anchorage in the roadstead, in from 5 to 7 fathoms. The exports are chiefly rice, to Muscat, Goa, Bombay, and Malabar; betel nut, black pepper, sandal wood, cassia, and turmeric. Raw silk and sugar are imported from China and Bengal, and oil and ghee from Surat. Mangalore was at an early period much resorted to by Arabian traders; and most of its present inhab. are of Arabian descent. The vessels employed in its trade belong chiefly to other ports. Salt is made at Mangalore, but it is of bad quality. (Hamilton's *E. I. Gaz.*; *Parl. Report*.)

MANILLA (Sp. *Manila*), a fortified sea-port city of the Philippine Islands, and the cap. of the Spanish settlements in the East, on the E. side of the Bay of Manila, island of Luzon, and on the river Passig, about $\frac{1}{2}$ m. from its mouth; lat. $14^{\circ} 36' 8'' N.$, long. $120^{\circ} 53' 30'' E.$ The pop. of the city and its suburbs was said to amount, in 1818, to from 70,000 to 80,000; and is at present variously estimated at from 100,000 to 150,000, including, besides Tagalas, or natives, from 4,000 to 5,000 Spaniards and other Europeans, with Chinese, Negroes, the descendants of the foregoing races, and foreigners from all parts of the world. The bay and city of Manila have a very picturesque and imposing aspect from the sea. The former is surrounded by mountains covered with verdure, which, on the E., decline gradually towards the shore. At their feet, on this side, is a small plain, on which the city stands; its buildings consisting almost entirely of the volcanic tufa, of which the plain and its vicinity are geologically constituted. Manila comprises the city-proper and ten suburbs. The former is on the left or S. bank of the Passig, across which it communicates, by a handsome stone bridge of 10 arches, with its important suburb of Bidondo, and those of Tondo, Santa Cruz, &c. This bridge, which is about 149 Castilian *varas* (or yards) in length, by 8 in breadth, was founded in 1630; but it has been rebuilt since 1814, when it was for the most part destroyed by an earthquake.* The city-proper, little more than $\frac{1}{2}$ m. in circ., is surrounded with strong walls, and a broad ditch, and has not more than 10,000 or 12,000 inhab. At the mouth of the river is a small battery, and the town is further protected by the citadel of Santiago, near its N.W. extremity; but Manila could not make any effectual resistance to a European force. The city, which is entered by six gates, is regularly laid out; and, according to Meyen, by whom it was visited, in 1831, it is superior in point of appearance to either Lima or Santiago. (*Reise um die Erde*, ii. 207.) The streets have carriage-ways, composed of a mixture of loam and quartz, and are provided with footpaths, and lighted at night. The houses in the city are solidly constructed, though, on account of earthquakes, they are seldom more than one story above the ground-floor. The houses in the suburbs, however, are not so substantial. In Bidondo, for example, they are almost wholly composed of bamboo, and are raised from the ground, to the height of 8 or 10 ft., on thick poles, as is customary among ultra-Gangetic nations. Most of the houses are furnished with balconies and verandahs; the place of glass in the windows is supplied by thin semi-transparent pieces of shell, which, though more opaque, repel heat better. Bidondo is the most interesting portion of Manila, and that in which its trade mostly centres. It is principally inhabited by Chinese and Tagalas, and looks very like a Chinese town.

The public edifices are mostly within the walled city. The new *aduana*, or custom-house, is a large fine building, constructed at a great expense; but, like the Dublin custom-house, its size is out of all proportion to the business to be transacted in it. The residence of the Captain-General, and the principal government offices, are also in a large edifice, occupying one of the sides of the *Plaza Mayor*, or principal square. This square measures about 100 yds. either way, and has, in its centre, a bronze statue of Charles IV., on a marble pedestal, presented to the city by Ferdinand VII. in 1824. There are, in Manila, a vast number of churches and ecclesiastical establishments; and the number of clergymen is said to exceed that of the garrison, which is estimated at about 7,000 men! We need not, therefore, be surprised to learn that religious observances are here scrupulously complied with, while real piety and sound morality are at the lowest ebb. The city was erected into an archbishopric in 1698; and the cathedral and archbishop's palace are among its most conspicuous structures. The Augustine, Franciscan, Dominican, and Jesuit convents, the arsenal and cannon foundry in the citadel, the university (founded in 1645), the missionary college, the various schools for natives and Europeans, the hospitals, orphan asylums, and other charities, and the royal cigar manufactory, in which 350 males and 2,000 females are said to be employed, include the other principal public buildings

* Meyen, *Reise*, &c., ii. 210. The *Dial. Gæg.* says that the bridge was restored in 1814, mais en grande partie renversé par le tremblement de terre de 1824.

and establishments. The promenades round the city are frequented in the evening by the more opulent classes, on horseback, or in their carriages. The neighbourhood is interspersed with orange, areca, tamarind, and mango groves; gardens; coffee, cocoa, and cotton plantations; rice grounds, &c.

The Passig is navigable for vessels of 600 tons in ballast, or for laden vessels of from 250 to 300 tons, as far as the bridge; and for large shallow boats, drawing from 2 to 3 ft. water, as far as the lake in which it rises, about 9 m. inland. There are 12 ft. water, at low ebb, in the channel through the bar at the entrance of the river; for the further deepening of which a steam dredging-boat has been employed since 1837. The rise and fall of the tide in the river is from 1 to 3 ft. A lighthouse, at the end of the pier, marks the entrance of the Passig on the left-hand side. Ships of all sizes anchor in Manila roads, at from 1 to 2 m. off shore, except during July, Aug., and Sept., when the S.W. monsoon throws in a heavy sea, which extends quite to the entrance of the river. At this season,

therefore, small vessels load and unload in the river, and large vessels at Cavité, an anchorage sheltered by a neck of land to the S.W., and about 6 or 7 m. by water from the mouth of the river, their cargoes being conveyed, to and from Manila, in secure decked boats, of from 50 to 70 tons burden.

Manilla is the only port in the Spanish Philippines with which Spanish vessels to or from Europe, or foreign vessels from any quarter, are allowed to trade. Spanish vessels trading to China, Singapore, &c. are, however, allowed to proceed to various outports, and there take on board their outward cargo. The principal articles of export are sugar, which is by far the most important; hemp, and stuffs made of hemp; rice, of which large quantities are sent to China, indigo, sapan and other woods, tobacco, cigars, coffee, cotton, tortoise-shell, hides, ebony, &c. The tobacco of the Philippine Islands is excellent, and might be produced in any quantity; but its growth is comparatively limited by its being made a government monopoly. (See PHILIPPINE ISLANDS.)

The following is an Account of the Quantities and Values of the Principal Articles exported from Manila in 1837.

The greatest portion of the foreign trade of Manila is in the hands of the U. States. We subjoin

An Account of the Exports of Sugar and Hemp in the under-mentioned years to the U. States and to Europe.

SUGAR.			
Years.	To U. States.	To Europe.	Total.
	<i>Piculs.</i>	<i>Piculs.</i>	<i>Piculs.</i>
1845	71,107	14,990	86,097
1844	69,123	8,934	78,057
1843	55,250	7,302	62,552
1842	97,896	16,208	114,104
1841	108,345	16,720	125,065
HEMP.			
	<i>Piculs.</i>	<i>Piculs.</i>	<i>Piculs.</i>
1845	54,569	176,198	230,767
1844	70,106	147,420	217,526
1843	77,000	103,000	180,000
1842	88,000	178,308	266,308
1841	91,435	111,447	202,882

Subjoined is a statement of the import trade of Manila in 1838, which we procured direct from that city; but it is right to bear in mind that the official accounts from which it has been drawn up are so defective, that the amounts specified can only be considered as rough approximations; and are, no doubt, under the mark.

Account of the Quantities and Values of the principal Articles imported into Manila in 1838.

Articles.	Quantities.	Value.
Iron	31,274	\$7,494
Copper, grey	4,443,373	\$80,434
Do, white	1,126,338	\$71,050
Shingles	324,198	\$5,308
Stripes	295,170	\$5,445
Handkerchiefs	87,361	\$24,724
Prints	198,346	\$4,530
Woolens and woollens	187,667	\$18,197
Almonds	551,015	\$37,734
Macaroni	22,368	\$5,798
Glass and earthenware	776	\$7,740
Manilla	-	\$14,806
Total value in Sp. dollars	-	1,665,265

Of the above, goods to the value of 1,145,000 dollars were imported, in Spanish vessels, from China, Singapore, and elsewhere. About 120 ships entered the port of Manila in 1838; of which, 46 were Spanish, 26 British, 28 American, and 11 Chinese.

The port charges on foreign vessels consist of a tonnage-duty of 2 reals, or a quarter-dollar, per register ton; and fees, varying from 15 to 20 dollars, according to

the size of the vessel, for port-captain's and health officers' visits, passport, &c. The tariff is bottomed on a custom-house valuation, fixed every 5 years. Most foreign commodities, imported in foreign vessels, pay an import duty of 14 per cent. *ad valorem*, except wines and spirits, which mostly pay a duty of from 30 to 60 per cent., unless the produce of Spain. Cotton-twist of certain colours, cutlery, ready-made clothes, European fruits, confectionery, and vinegar, pay 40 per cent. If imported in Spanish vessels, and 50 per cent. If in any other. British and other foreign cotton and silk manufactures made in imitation of native cloth, Madras and Senegal cottons, &c., pay 15 per cent. If imported in Spanish, and 25 per cent. if in other ships. Machinery of all sorts for the promotion of industry, cotton-twist of certain colours, gold and silver, plants and seeds, are imported duty free; but tropical products, the same as those of the Philippines, gunpowder, swords, and other warlike stores, &c. are prohibited, unless landed in bond for re-exportation. Exports of nearly all descriptions, by Spanish vessels, pay only from 1½ to 2 per cent. *ad valorem*, and by foreign vessels double this duty; but manufactured tobacco, rope from Manila, hemp, and gold and silver, coined or uncoined, if exported to Spain, go duty free. The principal currency of Manila consists of Spanish dollars, of 8 reals and 36 grains; but 5. American dollars are also current. The weights in use are the Spanish lb., which is nearly 2 per cent. heavier than the English, the arroba = 25½ Eng. lbs. nearly, the quintal = 108 lbs., and the picul of 5 arrobas, or 1¼ cwt. Eng. The coyan is a measure for rice, &c., varying from 96 to 126 lbs. According to a recent list, there are in Manila 47 Spanish merchants and 11 foreign firms. The Spanish merchants have a chamber of commerce and a joint-stock insurance society. The U. States, France, and Belgium have consuls, and each of the Canton marine insurance companies has an agent here. There are, however, neither fire nor life offices nor agencies; nor is any newspaper, price-current, or other periodical publication issued in Manila.

Manilla existed as a native town prior to the Spanish invasion; it was taken by the Spaniards, and made the cap. of their E. dominions, in 1571. It has frequently suffered very much from earthquakes, especially in 1645 and 1762, and 1824. In 1762, it was taken by the English; but ransomed by Spain for 1,000,000. sterling. (Meyen, *Reise um die Erde*, ii. 203-215., Hamilton's *E. I. Gazetteer*; and valuable Private Information.)

MANNHEIM, or MANHEIM, a town of W. Germany, grand duchy of Baden, lower circ. of the Rhine (Unterheinkreis), of which it is the cap., on the Rhine, where it is joined by the Neckar, 82 m. N. Carlsruhe, and 87 m. S.E. Mayence; lat. 49° 29' 15" N., long. 8° 30' 7" E. Pop., in 1845, 21,700. It was once strongly

Quilbed, and has in different times suffered severely from dyes and bombardments, but towards the end of last century its defenses were leveled by the French, and their site is now laid out in gardens and public walks. Mannheim is a regularly constructed, handsome town through it is, notwithstanding, mountainous and dramatic. It consists of 11 streets, crossed at right angles by 10 others, all perfectly straight, broad, well paved, and equidistant, and its houses being uniform it is difficult for any one, not resident, to distinguish one part of the town from another. It has several handsome public squares, which, though the town is deficient in good water have mostly fountains. The spacious Paradeplatz and the Parade, or principal thoroughfare, both planted with trees, afford pleasant promenades. The principal public edifice is the palace, a huge structure of red sandstone, built by the elector palatine when he made Mannheim his cap. in 1720, but more remarkable for size than elegance. A part of it is inhabited by the elector's grand ducal household, the adopted daughter of Napoleon and Josephine and to one wing are the statue of antiquities and natural history the picture gallery with some fine French and Flemish paintings, collections of plaster casts and engravings and a library, said to contain of 70,000 vols. *Herzogsbibliothek*, built by the elector, comprising the old theatre was shortly laid in ruins during the bombardment of Mannheim in 1794, in which date it remains. The new theatre, a handsome fabric, is empty of seats up and is rich in scenic decorations. It is said to have one of the best theatrical companies and orchestra of Germany; and is distinguished as being the place at which Schiller's tragedy of the Robbers was originally produced. Opposite the theatre is the house in which Klotzsch was assassinated. Mannheim has about an equal number of Lutheran and Roman Catholic churches, of which that formerly belonging to the Jesuits is the finest. It has also a synagogue on a lofty eminence with a tower 115 ft high and a good collection of instruments, an organ and various sundry, an exchange surrounded by gardens, woods, hospitals, a savings bank, a lyceum, with schools of drawing, painting, sculpture, surgery &c. The Rhine is bordered by a fine terrace in the spacious grounds belonging to the palace, whence an extensive view of the surrounding country is obtained, and the the harbor is crossed by a bridge of boats. Mannheim has some public baths, and a club called "The Harmonie," with a reading room, &c. The abundance of living has attracted a good many English residents.

This town is the seat of the supreme court of justice for the grand duchy, and of one of the first subordinate courts of appeal in Baden. It was formerly a manufacturing town of some importance, and among other articles, wreaths, of a compound called Mannheim gold, were made in large quantities, but this branch of industry is nearly extinct. It still however produces carpets, wools and silk goods, silken, dyed, starch, glass, paper, and printing, and has several coach-building establishments, carpenter, cooper, and something greenery. Its wealth is chiefly in large quantities and agricultural

with trade by the Rhine (R.), where it was first. Mannheim was a more numerous French and called to Baden, but in Baden (Baden), a city (Lander, &c.) of Spain, now Cap. 12,000. It stands a country irrigated by a well and strongly impregnated among its up a religious church, 6 centuries, a well built, industry barracks, that rank among the old are pretty equally manufacturing persons and, fine broad streets, and gasworks are a corporation in Cologne district one of them more, lamp, oil, and wine, which, with the goods above mentioned, find a ready sale in the weekly markets, and the two fairs held here Sept. 1 and Nov. 10.

MANFIELD, a market-town and par. of England, co. Huntingdon. In the N. W. of cap. (London) 12 m. 10 ft W. Huntingdon, and 110 m. N. by W. London. Area of par. 5,000 acres. Pop. in 1841, 5,700. It is situated in the forest of Bowland near the great river Ussie from which it takes its name, and though old-fashioned and irregularly laid out, it contains many good modern houses, and is paved and lighted with gas. The chief buildings are the court-house, a structure well

adapted for county meetings; a theatre, and the church, a commodious Gothic edifice, containing some curious monuments, and fine specimens of painted glass. The Presbyterians, Wesleyans and Catholics (Methodists), and the Society of Friends have their respective places of worship, in which as well as the church, are attached well supported Sunday schools. A grammar-school was established here in 1577 by Queen Elizabeth, who endowed it with a part of the church land of the par. and founded for it 12 scholarships, of 10 each, of James Lattin (Lattin) but the management appears to have been unsatisfactory, and it had in 1841 only 17 scholars, including the master's scholars. (See Census, 1841, p. 10.) There are two other charity schools, one of which was founded in 1778 for teaching and clothing 50 boys and 20 girls, and for paying apprentices fees with the female. Besides the above, there are several other charities and money bequests. The town is chiefly engaged in the hosiery and lace trade, and in cotton spinning; it had in 1841 5 cotton-mills which employed above 600 hands. There are some large iron foundries, for large castings; and the town has also a considerable trade in iron and steel, as well as in the various kind of iron goods, carried to its vicinity. A railway connects it with the Finsbury canal and from its proximity to the N. Midland railway, it seems probable that it will, at an early period, be linked with that line. Party contains for the local are held here, and it is the station town for the N. division of the co. Harbors on Thursday, large cattle fairs, 5th April, 10th July, and the 1st Thursday in Oct.

About 14 m. from Mansfield to the village and township of Mansfield-Woodhouse (par. in 1841 1,400), many which are some curious and pretty pictures ranging off a Roman villa. Within a few miles are Worksop Manor, formerly belonging to the Duke of Portland, but now the property of the Duke of Devonshire, who has devoted to putting it down. Clumber, the seat of the latter (Thursby, of Lord Howard) and Woodhouse, of the Duke of Portland. Hence, in popular language, this part of the co. is called the ducery.

MANSFIELD, (L.E.) an Antiquarian and Commercial, a town of France, dep. Sarthe, of which it is the cap. on the Sarthe, here crossed by three bridges, 80 m. N. E. by N. Angers, and 120 m. S. W. Paris. Pop. in 1841, 10,000. It stands partly on the declivity of a hill, and partly beside the river. The latter portion is very beautiful, and has narrow crooked streets, impassable for carriages, but the upper town, though irregular, is open, and tolerably well built, its houses being of stone, roofed with slate. A handsome new square has been laid out, having a large square in its centre, and there are two great public promenades, one along the bank of the Sarthe. The Romans surrounded the ancient city with walls, a portion of which on the N. N. E. side, remains nearly perfect, but the massive tower is of no strength. Le Mans has several remarkable ecclesiastical structures. Its cathedral, begun in the 9th, but not finished till the 14th century is a fine Gothic edifice, 216 ft. in length, with a large square tower, 99 ft. in height, the supports of which to the interior are ornamented with numerous statues. The choir is inferior in elegance only to that of Amiens; and the stained glass windows in the 3. arm of the cross is much admired for its richness. The church of St. Julien is an interesting edifice of the 11th century. Another church built in the 14th century presents a combination of the Gothic and ancient style. The new prefecture, the town-hall, and the theatre are handsome buildings. Le Mans has two hospitals, a lunatic, with a library of 15,000 vols., a public library, with 60,000 printed vols. and 600 MSS., in excellent preservation, several other libraries, numerous of historical history antiquities, and painting, the latter having several works by Guido. A Ducal Tavern, Vendry, &c. a royal society of arts, a commercial college, schools of drawing, military &c. It has manufacturing of linen and coarse woollen stuffs, was cotton, &c. and a considerable trade in them, and in corn, iron, salt, wine, brandy, and agricultural produce. Le Mans has suffered much from the ravages of war at different periods; and, in 1793, it was the scene of the last struggle between the Republicans and Vendean forces.

Mans, or Mans, (L.E.) a village of France, dep. Sarthe, of which it is the cap. of the canton of Mans, in the N. of the town of Mans, in a marshy plain watered by the Orlon, and crossed S. E. by the rugged heights of Parthenay and Ardenay, are about 7 m. N. of Mans, and 17 m. W. by S. Angers. The walls, probably built soon after the battle of Le Mans, in 1213, are similar to those of Bourges, and enclose an oval space in which the city stands; they have square towers and the whole exhibits an interesting specimen of Norman fortification. A ditch, or fosse, round the walls is supplied by the Orlon; which, at certain seasons, would inundate the plain were it not absorbed by a chain (aqueduct), through which it waters and a subterranean vent. Mantinea had eight

temples, besides a theatre, stadium, hippodrome, and several other monuments enumerated by Pausanias. (*Arcadia*, ch. 8—11.) Some imperfect remains of the theatre are still visible, but no other ancient building can be identified; and every thing, except the enclosing walls, is in a state of total dilapidation. (*Dodwell*, ii. 422.)

But Mantinea is wholly indebted for its long-continued celebrity to the great battle fought in its vicinity, *c.* 363 B. C., between the forces of Sparta and Thebes, and their allies; in which Epaminondas, the leader of the Thebans, and the most illustrious, perhaps, of all the warriors of Greece, fell in the moment of victory. Xenophon is very brief in his account of the battle; but it may be collected from his statement that, on the whole, the plan of the Theban general succeeded in all its parts. The charge of the Theban and Thessalian cavalry, which commenced the attack, was completely successful and prepared for the deeper impression made by the column of Theban and Arcadian infantry. But, in the critical moment, when the phalanx of the Lacedæmonians had been broken, and a decisive victory appeared to be secured, Epaminondas received a mortal wound; and, being carried to a rising ground, whence he might view the scene of combat, would not allow the weapon to be extracted till assured that the victory had been won, when he almost immediately expired. But his fall, and the consternation thence arising, paralysed the successful army. They kept the ground they had gained, but did little or nothing more. Hence it was that the result of this great contest disappointed the expectations of those who had supposed that it would be decisive of the fate of Greece. "The Gods," says Xenophon, "decided otherwise. Each party claimed the victory, and neither gained any advantage; territory, town, and dominion was acquired by neither; but indecision, trouble, and confusion, more than ever before prevailed throughout Greece." (*Xen. Hæc.* i. vii. c. 5. *ad finem*.) This, however, is the statement of a partisan of Sparta, and is not quite fair. The Theban confederacy was, on the whole, decidedly successful. They effectually broke the power and humbled the pride of Sparta; and, by re-establishing the independence of the Messenians, the old and inveterate enemies of the Lacedæmonians, they obtained a new guarantee against any dangerous increase of their power in future. (*See Milford's Greece*, sect. viii. cap. 28.)

Mantineia was taken and sacked by Antigonus during the wars of the Achæan league; and its name was changed, in honour of the conqueror, to Antigonia, which it retained till the time of Adrian, who restored its original appellation.

MANTUA (Ital. *Mantova*), a fortified town of Austrian Italy, prov. Lombardy, cap. deleg. Mantua, on both sides the Mincio, 21 m. S.S.W. Verona, and 37 m. E. by N. Cremona; lat. 45° 9' 16" N.; long. 10° 49' 10" E. Pop., in 1837, 26,865. Its situation is peculiar, being in fact nearly surrounded by lakes, partly natural, and partly formed by damming up the waters of the river. The mounds, or dams constructed for this purpose, are sometimes called bridges, from their being perforated with arches, to allow the superfluous water to escape; and by these the town is connected with the *Borgo di Portezza*, or strong citadel of Porto on the N., and with the *Borgo di San Giorgio*. The latter, as well as the town itself, is surrounded by strong walls; to the S.E. is the outwork of Pradelba, and to the S. the fortified island of Cerese, or T, from its alleged resemblance to that letter. The fortifications, though not imposing in their appearance, are very strong, and kept in excellent order; and their strength and the position of the place render it one of the bulwarks of Italy. Mantua has some good streets and squares, but, on the whole, it is ill-built and dirty. Many of the inhab. live in cellars, its pop. has declined, and it has a decayed appearance. Its best part is the Piazza Virgilliana, a large square, surrounded with trees, and open to the lake. The climate is subject to great extremes, and in summer the exhalations from the surrounding swamps make it very unhealthy; though, of late years, the Austrian government has exerted itself, by draining part of the marshes, and opening a passage for the stagnant waters, to lessen its insalubrity. Several of the public edifices in Mantua were designed or adorned by Giulio Romano. But the cathedral, planned by that great artist, is said by Woods to be a bad imitation of the church of Santa Maria Maggiore, at Rome; it has double ranges of side isles, and the columns stand very wide apart. The church of St. Andrea, begun in 1470, but not completed till 1782, was designed by Alberti, and is said by Woods to be very superior to the cathedral, and to be, indeed, one of the handsomest churches in Italy: it has fine statues of Faith and Hope, by Canova. The old ducal palace (*Palazzo Vecchio*) is a large imposing building; and, were it perfect, would be one of the finest palaces in Europe. It is beautifully floor'd with porcelain, and was formerly splendidly adorned with Flemish and Mantuan tapestry and rich

furniture; and, though repeatedly despoiled, it has still to boast of a room painted in fresco, by G. Romano. But the most celebrated fresco of Romano, "the Fall of the Giants," is in the palace of the T. At the extremity of one of the bridges is a handsome gateway, attributed to Romano, who also erected the open arcade on the bridge over the Mincio, in the heart of the city. Romano inhabited a house opposite the church of St. Barnabas, in which is his tomb. There are numerous convents, a Jews' synagogue, a civil hospital, two orphan asylums, a *monte-di-piè*, a workhouse, an asylum for 50 poor Jews, an arsenal, cavalry barracks, a large prison, a new and a summer theatre, an imperial academy of arts and sciences, a lyceum, a gymnasium, a public library with 80,000 vols. and many MSS., attached to which are a museum and a fine gallery of sculpture, which has a celebrated bust of Virgil, a botanic garden, and various other scientific and literary institutions. Mantua is a bishop's see, the residence of an Austrian delegate, and the seat of the council, and civil, criminal, and commercial tribunals for the delegation. In the days of her prosperity, and when governed by her own dukes, Mantua is said to have had a pop. of 50,000, and extensive manufactures; and, though the latter be greatly fallen off, she still produces limited quantities of silk, woollen, and linen fabrics, with leather, parchment, paper, cordage, &c., and carriages and boats for the navigation of the Po.

Mantua is very ancient, her foundation being probably antecedent to that of Rome. She derives her principal celebrity from her being the native country of Virgil, that great poet having been born in her immediate vicinity, *c.* 70 B. C.

Mantua Museum domus, æque ad sidera cœtus
Evecta Aonia, et Mæynonia memula plebs.
Silvas Italicæ, lib. viii. l. 595.

Mantua appears, from the contrast, in the first Eclogue, between her and Rome, not to have been a place of much importance in Virgil's time; and Martial applies to her the epithet of *parva*. (*Ep.* xiv. 192.) Her unlucky vicinity to Cremona made her territory be divided among the veterans of Augustus. (*See art. CREMONA*, in this work.)

After the conquest of N. Italy by Charlemagne, Mantua became a republic, and continued under that form of government till the 12th century, when the Gonzaga family acquired the supreme direction of its affairs. They were subsequently raised to the title of dukers, and held possession of Mantua till 1707, when it was taken by the Austrians. Under the French, it was the cap. of the dep. of the Mincio. (*Forayth; Eustace; Woods; Oesterr. Nat. Encyc.*, &c.)

MANZANARES, a town of Spain, prov. La Mancha, 94 m. E. by N. Ciudad Real, and 100 m. S. Madrid. Pop. 9,100. It stands in the loftiest and bleakest part of the prov., on the high road between Madrid and Seville; being, according to Ingils, "a place of considerable size, and proportionate poverty." A par. church of Gothic architecture, a castle, hospital, and cavalry barracks are the only public buildings; the private houses are better built than in most towns of Spain. The inhab. are chiefly employed in the production of saffron, for which the neighbourhood is celebrated, and of the Val-de-Pefias wine, highly esteemed all over Castile; the only other branches of industry being the manufacture of coarse woollens and linens for home supply. Not far from Manzanares are the ruined walls and tower of the ancient *Marrus*; a city described, in Antonine's *Itinerary*, as being on the road from *Laminium* (Alhambra) to *Toletum* (Toledo).

MANZARES, a small river of Spain, tributary to the TAGUS, and flowing by MADRID, which see.

MARACAYBO, MARACAIBO, or NUEVA ZAMORA, a fortified city of Venezuela, cap. dep. Zulia, and prov. Maracaybo; on the W. shore of the strait connecting the lake of Maracaybo with the sea, 175 m. E.S.E. Santa Marta, and 320 m. W. by N. La Guayra. Lat. 10° 39' N., long. 71° 45' W. In 1801, its pop., including a number of Spanish refugees from St. Domingo, was estimated at 24,000; and it may still, perhaps, amount to 20,000. It stands on an arid and sandy soil, partly on the shore of a small inlet of the strait, and partly on a tongue of land which projects into it. Several of its houses are built of a compound of lime and sand, without stone, but they are nearly all thatched with reeds; and, as the greater number consist wholly of reeds and straw, the town has a mean appearance, and is very subject to fires. A handsome par. church, a chapel, a Franciscan convent, and an hospital, are the only public buildings of which modern travellers make mention. The harbour of Maracaybo, within the bar at the entrance of the straits, has deep water; and is defended by the 3 castles of San Carlos, Zapara, and Bajo Seco, situated on the islands of the same names, among the shoals forming the bar. The *Bajo Seco*, or dry shoal, is in advance of the other islands; and the best channel to the harbour, on the N.W. side, has 13 ft. water. The climate of Maracaybo is oppressively hot; during a part of the year water is scarce;

220 MARACAYBO (LAKE OF)

and in the summer, when violent thunder-storms and earthquakes occur, the city often suffers greatly from very heavy rains. This port has superior facilities for ship-building, and its shipwrights have produced some fine schooners. A brisk traffic is carried on with the interior by the numerous vessels which navigate the lake. The Indians are said to be good sailors, and they have generally a taste for a sea-faring life. Many, however, devote themselves to the care of cattle, large herds of which are reared in the vicinity. (*Geog. &c. Account of Colombia*, i. 217-222; *Mod. Trav. xlvii.*; *Enggr. Amer.*; *Boyc. of Geog.*, American edit.)

MARACAYBO (LAKE or LAOON OF), a large lake, or inlet of the sea, in the N. part of S. America, republ. Venezuela, dep. Zulia, prov. Maracaybo. It extends between lat. $9^{\circ} 5'$ and $10^{\circ} 30' N.$, and long. 71° and $72^{\circ} 30' W.$, and is of an oval, or rather "diamond-like" shape, communicating, at its N. extremity, with the Gulf of Maracaybo, by a strait nearly 30 m. in length, and varying in breadth from 5 to 10 m. Length of the lake, N. to S., nearly 100 m.; greatest breadth, about 70 m.; circ. probably about 280 m. Inside it has water enough to float the largest vessels; and, being easily navigated, serves for the conveyance to Maracaybo of the produce of the interior intended for consumption in, or exportation from, that city. But a shifting bar, at the mouth of its strait, where it unites with the sea, in lat. $11^{\circ} 5'$, having only 14 ft. water, renders it inaccessible to large ships. It receives several considerable rivers, so that its waters are perfectly fresh, sweet, and fit for drinking, except in the spring, when strong N. winds impart towards a swell from the gulf, which renders them brackish. The lake is not very subject to violent tempests. It abounds with fish and waterfowl; but tortoises, elsewhere so common in Colombia, are not met with in it. Its banks are in many parts sterile, and only cultivated on the W. side; and they are, in general, so unhealthy, that the Indians prefer mounting their huts on iron-wood posts in the water, to fixing them on the shore. It was from the Indian villages or towns, built in this way, that the whole country is said to have derived from the Spaniards the name of Venezuela, or Little Venice. Four of these towns are still standing on the N. part of the lake, at the iron-wood on a mass of stone, etc. (*Geog. &c.*)

is a remarkable "the luminous" that, during the day, which, in marked that they in cool weather of Maracaybo, of compass to the the assistance of *Proc.* i. 72; *Mod.* of Colombia;

of Paria, prov. 4 300 m. W. N. W. well-built walled city of a fertile high lies 10 m. W. type and handsome tomb of Holak, nearly of Jangha-

tion. Maraga is also celebrated for its beautiful and highly productive gardens and plantations, watered by canals drawn from a small river, over which are two bridges, erected in the 11th century. The town has a large manufactory of glass; but the Indians are chiefly employed in the cultivation of the fertile country round the town.

On the top of a mountain rising behind Maraga are the remains of an observatory, built by Holak, for the use of Hazer-e-Deen, one of the most famous Oriental astronomers; and at the foot of the hill are several caves, temples, stupas in form, though not equal either in size or beauty, to those of Hindostan. (*Kanmer's Paria*, p. 144, &c.)

MARANHAM, or **SAN LUIS**, a city and sea-port of N. Brazil, cap. of the prov. Maranhão, on the W. coast of the island of the same name, in the bay of Marão, 200 m. E. by S. Para. Lat. $2^{\circ} 51' 30'' S.$, long. $44^{\circ} 16' W.$ The Inhab. are variously estimated at from 12,000 to 20,000, of which a large proportion are negroes. The city is built on unequal ground, extending inwards about 1½ m. from the water's edge. It is laid out in a straggling manner, with numerous squares and broad streets, the latter being only partially paved. There are many neat and good-looking houses; the better sort consist of a ground floor, and a story above; the lower part being usually employed as a shop, and lodging for servants, and the upper as the apartments of the family. These houses have mostly balconies, and are handsomely fitted

MARAZION.

up. In the poorer and unpaved streets the houses consist of only a ground floor, and having thatched roofs and unglazed windows, their appearance is extremely mean and shabby. Adjoining the shore is an open space, one side of which is nearly taken up with the governor's palace, town-hall, and prisons, which occupy a long, uniform, and handsome stone building, of one story in height; another of its sides is occupied by the cathedral. This, which was formerly the Jesuit's church, is said to be the finest of any in the maritime cities of Brazil, except that of Para. The Jesuits' college is now the episcopal palace. There are a great number of other churches and convents, a treasury, two hospitals, various public schools, and a custom-house, which, though small, was till recently quite large enough for the business of the place. Later, however, its commercial importance has been much increased, and it is the principal port of the empire for the shipment of cotton and rice; the other articles of export consist principally of hides and horns, catfishes, tannin, sugar-cane, cocoa, &c. We subjoin an

Account of the Number and Tonnage of the Ships which cleared out from the port of Maranhão in 1827 and 1828, specifying the Countries to which they belonged, and the Value of the Cargoes:—

Countries.	1827.			1828.

We have no authentic information as to the Importation of slaves into Maranhão; but there can be no doubt it is very considerable, and may, perhaps, be estimated at above 5,000 a year.

The harbour of Maranhão is rather difficult of access. It is usual for vessels arriving on the coast to make the light-house on the island of St. Anna, about 60 m. N.E. Maranhão. The harbour of the latter consists of a narrow creek, defended by some indifferent forts. It is so beset with shoals and flats, as to render a pilot always necessary, but with such there is no real danger. It has about 16 ft. water at low ebb; but it is said to be filling up, and that the probability is that the port will, at no very distant period, be transferred to Alcantara, on the opposite side of the bay. It is a preferable port having deeper water, &c. The island of Maranhão, having a circumference of four large leagues, and about 10 accommodations from founded by the French. (*See Brazil*, 379, 381; *Enggr. Am.*, &c., p. 315.)

MARAZION, or **MARKET-JEW**, a decayed bur., sea-port, market-town, and township of England, St. Hilary par., co. Cornwall, E. div. of hund. Penwith, 62 m. S.E. W. Bodmin, and 260 m. W. by S. London. Pop., 1,200. It is situated on the shore of St. Michael's Bay, on the side of a hill, which shelters it from the cold N. winds. The par. church is 3 m. distant, but it has a chapel of ease, and places of worship for Wesleyan-Methodists and other dissenters. An endowed school is held in the guildhall, a national school and three Sunday schools furnish instruction to the children of the poor; and there are a few charities. Its principal trade consists in the importation of timber, coal, and iron, for the supply of the town and neighbouring mines. The market, held on Saturday, is well supplied, especially with ready-made shoes; and 2 large cattle fairs are held on Thursday in Lent and Sept. 29.

Though a bur. by subscription, this town was chartered by Queen Elizabeth, the corporate officers being a mayor and 4 aldermen, with 12 corp. burgesses, whose privileges were not interfered with by the late Man. Reform Act. It is supposed to have sent members to the H. of C. at a former period, but certainly not subsequently to 1606. Its name, Market-Jew, has been supposed to be derived from its having been, in the period of its prosperity, a great trading place for the Jews, but the presumption is unsupported by history; and it appears more rational to conclude that it is a corruption of its ancient name Marghanon, or Marghaton.

Marburg, a town of the Austrian empire, being next to Grätz, the principal in the prov. of Styria, cap. circ. on the Drava, and on the road from Grätz to Laybach, 36 m. S. E. the former city. Pop. in 1867, 4,375. Mr. Turnbull says, it is "a good town, and surrounded by a beautiful country, richly planted with vines. The climate here is far more congenial to their growth than on the N. side of the hills, and excellent wine is produced." (From L. 129.) Near it, the Archduke John has a vineyard and villa. Marburg has three suburbs, an old castle, a church, in which are several good pictures, an hospital, theatre, gymnasium, military school, swimming school, &c. It is the seat of the council for the circ., furnishes leather and ransoms, and has some trade in corn, wine, and iron; but its inhabitants derive their chief subsistence from the active transit trade between Hungary and Croatia and Styria. (Turnbull's *Austria*, *Styria*, &c. *Germany Not Surveyed*.)

MARCH, a market-town, township, and par. of England, belonging to Duddington par., Isle of Ely, hund. Wharfedale, on the Old Nor. 10 m. N.W. Ely, and 7 m. N. London. Area of township, 10,440 acres. Pop., in 1881, 5,117. Excepting the church, which is large and handsome, the town contains nothing worthy of remark; the streets being generally narrow, and the houses, for the most part, low and meanly built. Its situation on the Nor., which is navigable, makes it the centre of a considerable trade; corn, hemp, flax, cheese, &c. being shipped here; and coal, timber, and London goods imported. Markets on Friday, 4 days, Monday before Whit-tuesday, Wedn-Monday, and 2d Tuesday in Oct., chiefly for horses, cattle, and cheese.

MARIGNO, a village of N Italy, Sardinian States, near the Bernina, in an extensive plain, 2½ m. E by S. Alghero. This village will be ever memorable for the great battle fought here, on the 16th of June, 1805, between the French under Napoleon, and the Austrians under Mares. Napoleon, believing that the Austrians had withdrawn from the neighbourhood of Marignano, sent, on the day previously to the battle, despatched Dumas with a strong corps to Rivolta. By this means, his army was reduced, when attacked by the Austrians on the following morning, to little more than 30,000 men, whereas the Austrians had nearly 60,000 troops in the field. The contest was most obstinate and bloody, but, despite a desperate resistance, the Austrians carried the village of Marignano, broke the left wing of the French,

MARGATE

and entangled them to retreat. But, at this critical moment, when the line of the day appeared all but dashed, Dumas, who had returned by a forced march, came upon the field. This gave the French new strength, and inspired them with new courage. The Austrians, exhausted by their previous efforts, were immediately attacked at all points, forced back, and completely defeated, with the loss of all their cannon and baggage, and of a vast number of men left dead on the field and taken prisoners. Lissitz, whose opportune arrival turned the fortune of the day, was killed, charging at the head of his division.

MARGARITA. an island off the N. coast of S. America, belonging to the repub. of Venezuela, and attached to the *dup Cumana*. It lies to about lat. 11° N., and long. 64° W., separated from the continent by a channel, 20 m. in width, through which all ships coming from Europe, or windward of Cumana, Barcelona, or La Guayra, must pass in going to those parts. Length of the island, E. to W., 27½ m., breadth varying from 8 to 20 m. Pop. estimated at 10,000. Viewed at a short distance from the N. it appears like two islands, there being a tract of low swampy land in its centre, which is in some parts not more than from 10 to 15 ft. above the level of the sea, but other parts of the island rise to a considerable elevation, and Maricao, near the W. extremity, a mountain of micaceous schist, is upwards of 2,000 ft. in height. The coast-lands are arid and barren, but the interior is comparatively fertile, producing maize, bananas, and various fruits, with sugar, coffee, cocoa, and other W. Indian products, though not in sufficient quantities for the demands of the island. A great deal of poultry, and other live stock, is reared, and exported to the continent, and Margarita has an active fishery, and some salt-works. It was formerly much celebrated for its pearl fishery; but this has greatly declined, and the pearls now found are said to be of inferior size and quality. The pearl-fishery was principally conducted at the rocky island of Coche, between Margarita and the main land. The island has some manufactures of cotton stockings and hammocks, of very good quality. Assassinate, the cap., and residence of the governor, in the centre of the island, is pretty well built. There are three sea-port towns or villages; one of which, Panquetar, on the S. E. coast, has a pretty good harbour with anchorage in 7 or 8 fathoms water (*Blond's Description Coast Atlas*, p. 440.) This island, which is of little value to any other point of view might, were it occupied by a European power, be of considerable service as a depot for the supply of the adjacent continent. It is better situated for such a purpose than Trinidad. It was discovered by Columbus, in 1498. (*Urey Account of Colombia; Humboldt's Personal Narrative, &c.*)

MARGATE, a sea-port town and much-frequented watering-place of England, on Kent, in the Isle of Thanet into the St. Augustine, 16 m. E. N. E. Canterbury, and 26 m. E. London. Area of par., 2,618 acres. Pop., in 1841, 31,000. The town is finely situated, partly along the shore, and partly on the declivity of two hills, one of which presents a bold cliff towards the sea. The older streets are narrow and irregular, lined with the fever-looking houses, but in the upper parts and outskirts of the town are several handsome streets and squares formed by houses which for size and regularity of construction would not disgrace the metropolis. The whole is well paved, lighted with gas, and plentifully supplied with good water. The town-hall and market-house is a plain but substantial building of recent erection, supported on cast-iron pillars, and fronted by a Tuscan portico. The assembly-rooms in Court Square have long ranked among the largest and most elegant in England; a new theatre stands on the E. side of Hawley Square, where also is a large public library. Numerous bathing houses line one side of High Street, and near the Parade R. of the town is a very complete establishment formed in the cliff, and furnishing hot and cold baths of a very superior description. There are two churches; one an old heavy looking building with a low square tower, the other at the opposite side of the town being a very handsome modern Gothic structure, with a light octagonal tower, built at an expense of 10,000*l.* The R. Catholics, Independents, Baptists, and Society of Friends have also their respective places of worship, to which are attached well-attended Sunday-schools. A national school furnishes instruction to about 160 boys and 160 girls, and there are 3 other large day-schools. Drapers' almshouse, founded in 1708, a dispensary and lying-in charity, are the principal charitable institutions; and in the immediate vicinity close to the beach, is a large convalescent infirmary, founded in 1793, and since so much enlarged as to furnish accommodation for about 120 patients. The harbour dries at low water. To obviate this defect a stone pier, projecting 900 ft. into the sea, was erected from the designs of the late John Rennie; still, however, this was insufficient for the purpose, there not being more than from 4 to 5 ft. water at the pier head at low ebb. Since 1836, however, a winding jetty, over

nected with the pier, has been constructed, which projects into deep water, and may be approached by steamers or other vessels at any time of the tide, except when it blows a gale from the N. or N.N.E. The pier is a favourite promenade for the town's folk and visitors.

Margate enjoys a considerable coasting trade, and has some commerce with Holland and Germany; but neither these nor its fishery are of any importance compared with the advantages that accrue to it from the thousands of visitors who annually resort thither from the metropolis. The town, indeed, like many others, owes its present importance to the invention of steam: for though prior to 1817 it was a respectable and well-frequented watering-place, the means of access to London were so difficult and tedious, that none but those who could afford a week or two of uninterrupted leisure were ever induced to visit it. But within the last fifteen years the water-communication with London has been so greatly facilitated, that Margate may now be considered as within five or six hours of the metropolis. Several handsome steamers ply regularly between London bridge and Margate; and for some years past the number of persons landed from these steamers at Margate is supposed to have averaged above 90,000 a year. The fares being extremely reasonable, Margate is frequented chiefly by the families of tradesmen and others belonging to the middle classes, for whose amusement there are numerous bazaars, libraries, &c., with the Tivoli Gardens, in the suburbs, very similar to the well-known, but now extinct, Vauxhall of London. Great numbers of persons engaged in business during the week join their families here late on the Saturday, returning to London early on the Monday morning; and it is from the flying visitors that the steam-packet companies derive their chief revenues.

Margate is within the jurisdiction of Dover, by the lord-warden of which the constable of the town is appointed; and as a port, it is subordinate to Ramsgate. It is the chief place of a poor-law union, comprising all the pars. in the Isle of Thanet.

MARIA-THERESIANOPEL, or THERESIEN-STADT (Hungar. *Szabátka*), a royal free town of Hungary, co. Bacs, in the great plain between the Danube and Theiss, 25 m. S.W. Segedin, and 100 m. S.S. E. Pesth. Pop. said to be about 35,000, chiefly Hungarians and Servians. Its territory, or commune, comprising an area of 300 sq. m., is larger than that of any other town of the Austrian dominions. (*Berghaus*.) The "National Encyclopædia" says, it is well built, and has numerous handsome public edifices; including several churches, a gymnasium, large barracks, a town-hall, &c. It has manufactures of linen cloth, leather, and tobacco, and a large trade in horses, cattle, sheep, raw hides, and wool.

MARIANNA, an episcopal city of Brazil, prov. Minas Geraes, of which it is the cap., on the Carmo, a tributary of the Doce, 8 m. E.N.E. Villa Rica. Its pop., in 1822, was estimated at from 6,000 to 7,000. (*Mawe's Brazil*, 238.) It stands principally in a small plain, bounded by rocky hills, the small knolls, and projections of which are crowned by its churches. The city itself is nearly square, and consists principally of two well-paved streets, regularly laid out, and conducting to a kind of square. The houses are whitened, and have a neat appearance. The supply of water is ample, and is of material importance in the cultivation of several extensive gardens; but, being surrounded by lofty eminences, the air is close and hot, and the town unhealthy. There are several churches and a large cathedral. The Carmelite and Franciscan convents, the ecclesiastical college, which has sundry privileges, the bishop's palace, surrounded with fine gardens, and the town-hall, are among the other chief public buildings. It has very little trade, and depends chiefly on the mines and farms in its vicinity. (*Mawe's Brazil; Dict. Géog.*)

MARIAZELL, or MARIANZELL, a village of the Austrian empire, prov. Styria, in a mountainous district, about 55 m. S.W. Vienna. Pop. about 1,000. It would be unworthy notice in a work of this kind, but for its celebrated shrine of the Virgin, which renders it the "Loretto" of the Austrian empire, and a principal place of Christian pilgrimage. The town, which stands at an elevation of about 2,200 ft. above the sea, is small and mean-looking; and consists principally of inns and ale-houses for the accommodation of the visitors, the influx of which only ceases when the roads are impassable by snow. The only building of note is the church, rebuilt, since 1827, on the site of one erected in 1363, by Louis I., king of Hungary, over the chapel, in which the image of the Virgin is placed. The church, as it now stands, is of Roman architecture, except the porch, which is Gothic. It is a spacious edifice, 286 English ft. by 99 inside, and is surmounted by a spire, 275 ft. in height. Some of the side altars and chapels are handsomely decorated; but its principal object of curiosity and devotion is the small stone chapel, erected by a margrave of Moravia, in 1202, instead of the wooden hut in which the

Gnaden Statue, 'Statue of Grace,' had stood from about 1150, when it was luckily brought thither by a Benedictine monk. This image, like that of Loretto, is ascribed to St. Luke; and, like it, also, is but an indifferent specimen of the apostle's skill in statuary. It is a rudely-carved wooden figure, only 18 in. in height, representing the Virgin, with the Saviour on her knee. Both are as splendid as brocade, gold, gems, and bad taste can make them; their faces are of a negro hue; the effect, perhaps, in part, of the smoke of the solitary lamp kept constantly burning in the dark and gloomy recess in which they are cooped up. The altar and other decorations of the shrine are said to be of solid silver, and the chapel is surrounded by a costly fence of the same metal. A thousand acres of land were assigned for the support of the church; and its treasury was very rich previously to the reign of Joseph II., having received many valuable donations from preceding sovereigns, princes, and private individuals. But Joseph, though he succeeded to the dominions of his mother, inherited none of her superstition: unawed by the sanctity of the place, he did not hesitate to strip the shrine of the greater portion of its wealth; and profanely threw the silver angels that guarded the high altar, and even the figures of his father and mother, into the melting-pot! The present emperor and empress have, however, made a propitiatory visit to the cell; and have endeavoured, by their pious liberality, to atone, in some measure, for the sacrilegious depredations of their less scrupulous predecessor.

The ecclesiastical establishment of Mariazell consists of about 20 resident priests, deputed from the Abbey of St. Lambrecht, who here form a kind of subsidiary Benedictine college, under a pro-rector. During half the year all find abundant employment among the penitents, who arrive here from all parts of the empire. Shortly after the erection of the church, the popes granted the same indulgences to the shrine of Mariazell, as were attached to St. Peter's at Rome; and thenceforward it became crowded with pilgrims. Previously to the reign of Joseph, the pilgrims are stated to have amounted to about 100,000 annually; and it is alleged that, at the celebration of the 16th jubilee of the miraculous image, in 1787, no fewer than 380,000 individuals did homage to the sable Maria! We confess, however, that we do not attach implicit credit to this statement; but it is, at all events, certain that the number was very great. The *Austrian Encyclopædia* says that the shrine is, at present, annually visited by 100,000 pilgrims; and, according to Mr. Turnbull, the number is fully 80,000. (*Austria*, i. 196.) It is customary for the pilgrims from different places to set out together; and formerly, it was no unusual circumstance for a band of pilgrims from one province or city to have a contest for precedence with those from another; so that disturbances, which frequently ended in bloodshed, were perpetually occurring. The government has however put an end to these unseemly brawls, by ordering that the pilgrimages from different places should take place at different times. Accordingly, most of the towns of any importance in Upper and Lower Austria, Styria, Bohemia, and Moravia, and some in the W. parts of Hungary, have their stated days on which the devotees assemble, and form their processions of piety and pleasure after the manner described by Chaucer in his *Canterbury Tales*. In all, about 80 processions take place annually from different parts of the empire. Vienna furnishes 4 distinct parties, 3 in June or July, and one in August; the last, which is also the largest, generally consists of about 3,000 persons of both sexes, and all ages, travelling chiefly on foot, and performing the journey in 4 days. In their progress they are jumbled together, without any regularity, until they come within about a mile of the shrine. Here they halt; and some hours are generally occupied in marshalling the confused assemblage into regular devotional order. Banners are unfurled; sacred emblems exposed to view; the maidens and youths are placed in the van of the procession, after whom follow the elder pilgrims, male and female, in distinct parties: and thus they advance to the church, by slow and measured steps, stopping at certain appointed stations on the way, and chanting in their native tongue, whatever it may be, some one of the litanies, in general chorus. Arriving by thousands in a day, they fill to suffocation every inn and house of accommodation within the town; but the larger portion are, notwithstanding, obliged to bivouac in the fields around; where they spend the night in jollity, drinking and singing songs, which are frequently of a kind not especially suited for virgin ears. (*Turnbull*, i. 197—199.; *Russel*.) It is needless to add, that by far the largest proportion of those who join these processions are but little influenced by religious motives. The enlightened portion of the community despise them as miserable mummeries; and the motley crowd principally consists of the ignorant, the idle, the frolicsome, and the profligate. They are, in fact, an outrage upon religion and morality.

The holy image has been but an indifferent protection of the village of Martineau. Six times has it been destroyed by fire, and its pop. temporarily reduced to ruin. The last conflagration occurred in 1897, when the roof and towers of the church were destroyed, and, out of 111 houses, only 10 escaped. The inhabitants are generally poor. They depend principally on the supply of opium, and of narcotics, cigars, rum, and such like to them, to the natives.

The Iron-ore district, 5 or 2 m. distant from Martineauville, was the most important of the Austrian empire. Every species of mining is executed in them, from the largest masses and steam-engines, down to cranks, which are sold to rival those of Berlin. Martineauville has also some copper and sulphur works: a great deal of timber is sent from its neighbourhood to Vienna and the Black Sea. (*Quartier Nax Kärze*, *Friedrich's Austria*, t. 166 170; *Germany and the Germans*, II 191—200; *Monstrelet's Austria*, &c., *Sumner*, p. 166—184.)

MAHIE-DALANTE, one of the French W. India Islands. (See GUADALUPE.)

MARIENBURG, a town of the Prussian empire, possesses a bridge of boats, 47 in. This little town is on the east of the grand for nearly two centuries on the summit of a small the tower, and on equal the river, stand the ruins mentioned in the history there is an ever imposing a grandeur of the former which it was destined and commenced towards

the end of the 15th, or the beginning of the 16th century. In 1511 it was greatly enlarged, by the addition of that part which was afterwards known as the Old Castle, and, about the same time, the remains of the great manor was transferred to Martinstown from Vennor. Surrounding grand mansions with the middle and lower castles, erected, according to Ledwith, chiefly between 1525 and 1575, and the church of Kille-Dunee, in the immediate vicinity, which is still in existence, and forms a very prominent feature in the landscape of these ruins. In 1644, the Old Castle was burnt to the ground; but the rest of the building escaped, and, after undergoing many vicissitudes, was put to complete repair by the present king of Prussia, when great prices. It comprises a chapel, in which are numerous monuments of the grand masters, relics of the Knight-Masters, with their halls, dormitories, refectory, subterranean caverns, chapter-house &c. in tolerable preservation. The chapter house, by far the most interesting part of the edifice, is a large square apartment, with 16 windows, displaying the arms of the grand masters seated in niches above the windows.

W. Frauen. It has a gymnasium, a royal school of agriculture, a school for the improvement of neglected children, an hospital for blind soldiers, to which is attached the Lousleben, an institution for the blind widows of soldiers, a large printing establishment, &c. It has, however, few manufactures, and little trade, except in retail, the inhabitants being principally employed in the supply of commodities to the various public establishments. (See also, *Der Fremden-Führer* &c. &c.)

MARIGLAMO, a town of the Mariposan dem., prov. Mariposa, pop. const. 19 m. M. B. Maples. Pop. estimated at 6,000. It has some ruins, which have been supposed to have formed part of an ancient palace of the Incas.

MARINO (SAN), a town and capital of Italy, under the protection of the Pope, lying about the middle, as well as the most eastern, side in Europe. The territory of the republic, enclosed on all sides by the impetus of Tiber, in the Papal States, consists of a conical mountain, about 2,000 ft. high, and some adjacent hills, with 1 town and 6 villages, comprising an area of about 50 sq. m. and a pop. of 1,000. The town stands on the side of the mountain above mentioned, about 10 m. S W Rieti and 25 m. N W W Larian. Lat. 42° 44' 20" long. 12° 37' 5". Pop. 1,000. It is accessible by only one road, and is irregularly built. It has a principal square, in which is the town-hall; a church, in one of which are the tomb and statue of St. Martin, the founder of the town, 6 convents and 2 castles. Its inhabitants are chiefly occupied in agriculture and cattle-breeding, or in the manufacture of silk. Most of the country labour, of the republic resides in the village of Borgo, at the foot of the hill on which the town is situated.

The legislative powers of the government are vested in a certain, or council, of 60 members, elected for life, 20 from among the nobles, 20 from the citizens, and 20 from the rural pop., and to a lesser council, or tribunal of appeal, composed of 10 members. The executive powers belong to 3 captains regent chosen every 6 months, by the nobles at large above 25 years of age: the appointed president is the eldest of 60, and justice is administered by a commissioner who must not be a foreigner. Every family is obliged to furnish an individual capable of bearing arms to the military force of the republic amounting, in all, to between 600 and 700 men but only about 40 men are ordinarily kept on duty. The state supports an hospital, and 4 superior and 3 elementary schools. Public revenues about 6,000 roubles or grows 6-year which is sufficient to meet the expenditure. The town grew up round a hermitage founded here by an individual of the name of Mariani, or Marino, belonging to Danubians, afterwards ennobled in the calendar of saints, in the 16th century, and the insignificance and uninteresting character of the territory appears by making it unworthy of attention, to have enabled it to preserve its independence during the disturbed periods of the dark and middle ages. It was occupied by Louis Burgin, but for a short period only, and was taken, in 1720, by Cardinal Althorow; but the pope disavowed the proceeding and restored San Marino to its privileges. In 1793, Napoleon offered to increase the territory of the republic but, this being wisely declined, he presented it with a piece of cannon. (Lectures, &c. of Hodge, *Author's Tour to Italy, &c.*

MARKET-BORWORTH. See BORWORTH (MAG-
NET)

MARKET DRAYTON a market-town and par of England, partly in N Staffordshire, on Salop, and partly in N Shropshire, on Stafford, on the Tern, a trib. of the Severn, 18 m N E Shrewsbury and 126 m N W. London. Area of par 12,000 acres Pop., in 1841, 4,200. The town, which stands on the W side of the river, and in the co. Salop, having been recently much improved, is now clean and well built, with tolerably wide streets. The church, originally erected in the reign of Stephen, was all but rebuilt in 1780. There are also places of worship for R. Catholics, Wesleyan Methodists, and Independents, with attached Sunday schools. The charitable institutions comprise a free school, founded in the reign of Queen Mary, a national school and a set of almshouses and dispensary, with a few small money bequests. Drayton was formerly a place of more consequence than at present, its market having been among the largest in England, till the formation of the Liverpool and Birmingham Junction Canal gave superior advantages to Stour in Staffordshire. There are two paper-mills and two horse-hair manufacteries close to the town, but most of the inhabitants are engaged either in retail trade or farming pursuits.

Drapton is a hamlet of prescription, governed by a mayor and two constables, chosen at a court held by the lord of the manor; and petty sessions are held here for the Drapton div. of Salop. Markets on Wednesdays, chiefly for corn, spurs, for harness and harness-makers, Wednesday before Palm Sunday, Sept. 15, and Oct. 20.

About 1 m. from Dryden, on Stonehenge, a battle was fought between the partisans of the houses of York and Lancaster on the 16th of Sept. 1488. Lord Audley, the Lancastrian general, was slain in the engagement; the spot where he fell being marked by a stone, close to the Downham road.

WARET-HARBOROUGH. See HARBOROUGH
(HARBOR)

MARKET JEW See MAGAZINE.
MARKET BASIN, a small market-town and par. in England, Lindsey div., co. Lincoln, cap. Waltham, on the river of the same name south of the Atherstone, 12½ m. N E Lincoln, and 120 m. N London. Area of par 1,260 acres. Pop. in 1841, 2,079. This town derives nothing, chiefly on account of the large cattle and sheep fairs, which are attended by persons from almost all parts of

the co. The church, an ancient structure, with an embattled tower, has peculiar windows, resembling those of the church at Louth. The living is a vicarage in the gift of the Lord Chancellor. The R. Catholics and Wesleyan Methodists have also their respective places of worship; and its only charities are a free school (now incorporated with the national school, and a set of almshouses. Markets on Tuesdays; and fairs on alternate Tuesdays, between Palm Sunday and Sept. 25. About 1½ m. W. Market Rasen is the village of Middle Rasen, remarkable for a small church presenting a most beautiful specimen of early Norman architecture.

MARLBOROUGH, a parl. and mun. bor. and market-town of England, co. Wilts, hund. Selkley, on the Kennet, 27 m. E. Bath, and 70 m. W. London. Area of parl. bor. (which includes, with the old bor., the par. of Preshute), 4,380 acres. Pop., in 1841, 4,139. The town consists of one broad main street, crossed by others of inferior dimensions. The houses are irregularly built, and apparently of great antiquity, having high and curiously carved gables; a portion of the High Street also has a kind of colonnade projecting from the houses. The guildhall is supported on pillars, the lower part being open for the accommodation of the people frequenting the market; above are the council-chamber, sessions-hall, and assembly-rooms. There is also a handsome market-house, the upper part of which is used as a national school. The prison, which serves as a bridewell and house of correction, was built in 1787; but it is too small to admit either of separate confinement or proper classification, and there is no provision for hard labour. There is also a very large hotel, partly built with the materials of the old castle, which once stood at the S. end of High Street. The old church of St. Mary the Virgin, near the guildhall, is of early Norman architecture, with a low square tower: the living is a vicarage, in the gift of the Dean of Salisbury. The other church, which stands at the W. end of High Street, is of more modern construction, and distinguished by its light pinnacled tower: the living is a rectory, in the patronage of the Bishop of Salisbury. The Independents, Wesleyan and Calvinist Methodists have likewise their respective places of worship, with attached Sunday-schools. The national school furnishes gratuitous instruction to 100 boys and the same number of girls; besides which, there are two church Sunday-schools. It has also a free grammar-school, founded by Edward VI., and endowed with estates producing about 70*l.* a year: the instruction is almost exclusively classical; and the school has the privilege of sending an exhibitor, on the Somerset foundation, to Brasenose College, Oxford.

Marlborough, which has little trade, derived its chief importance from being on the great road between London and Bath; but it has lost this advantage, as the Great Western Railway runs through a line of country considerably N. of the town. Malting and rope-making are extensively pursued. Large quantities of corn and cheese are sent to London and Bristol; their carriage being greatly facilitated by the Kennet and Avon Canal, which commences at Newbury, and joins the Avon near Bath, having an entire length of 57 m. "The town has likewise several excellent inns and shops, possesses a large market for the agricultural district, and may be considered in a prosperous state, and highly respectable." (*Mun. Bound. Rep.* p. 2., *Marlbro.*)

The bor., which received its first charter from King John, in 1206, and a subsequent one, in 1577, from Elizabeth, is governed, under the Mun. Reform Act, by a mayor, 3 other aldermen, and 12 councillors; but it has no separate commission of the peace. Corp. revenue, in 1844-49, 1,041*l.* Marlborough has sent 2 mems. to the H. of C. since 24 Edw. I.; the right of election, down to the Reform Act, being vested in the mayor and burgesses; but it was, in fact, a mere nomination bor., belonging to the Marquis of Aylesbury, the proprietor of a large estate in the vicinity. Registered electors, in 1849-50, 244. Markets on Saturday; large fairs, 10 July, 1 Aug. and 23 Nov. (*Mun. Corp. Rep.*; *Parl. B. Reps.*, part vi.; *Oxford Calendar*; *Priv. Inform.*)

MARLOW (GREAT), a parl. bor., market-town, and par. of England, co. Bucks, hund. Desborough, on the N. bank of the Thames (here crossed by a handsome suspension-bridge), 29 m. W. London. Area of parl. bor., which includes the several pars. of Great Marlow, Little Marlow, Medmenham, and Bisham (the last being in Berks), 14,910 acres. Pop., in 1841, 6,237. The town, formed by several streets, meeting in a large open market-place, is irregularly built; but is well paved and lighted, and contains many substantial houses, and a good town-hall. The par. church, opened in 1835, is a handsome structure, surmounted by a spire. The living is a vicarage, in the gift of the dean and chapter of Gloucester. There are, also, places of worship for Wesleyan-Methodists and Baptists, with attached Sunday schools. A charity-school, for 24 boys and 12 girls, a national school, for children of both sexes, and a set of almshouses, are the principal benevolent foundations.

Great Marlow has little trade, except what results from its position, in the midst of a rich and productive country, inhabited by wealthy land-owners. On the Loddon, however, are several paper-mills; and, "on the whole, the town is slowly recovering from a state of great depression, consequent to the removal, some years ago, of the military college." (*Parl. Bound. Rep.*) The bor. has returned 2 mems. to the H. of C., with some interruptions, since 28 Edw. I.; the right of election being vested, down to the Reform Act, in householders, paying scot and lot. The Boundary Act extended the limits of the parl. bor., by including with the old bor. 3 out-paras. Registered electors, in 1849-50, 357. Market, well attended, on Saturday; fairs, for cattle and farming produce, May 1-3 and Oct. 29. (*Parl. Papers*, &c.)

MARMANDE, a town of France, dép. Lot-et-Garonne, cap. arrond., on the Garonne, here crossed by a bridge of one arch, 30 m. N.W. Agen. Pop. (1846), ex. com., 5,199. It is regularly laid out, well built, and clean; has several good public edifices, and is nearly surrounded by an esplanade, planted with trees. It has a small port, suitable for steam-boats, which ascend the Garonne as high as Marmande. It is the seat of courts of original jurisdiction and commerce; and has manufactures of woollen and linen fabrics, cordage and sailcloth, and several brandy distilleries. (*Hugo*, art. *Lot-et-Garonne*, &c.)

MARNE, a dep. of France, reg. N.E., formerly included in the prov. of Champagne, chiefly between lat. 48° 30' and 49° 20' N., and long. 3° 30' and 5° E., having N. Ardennes and Aisne, W. the latter dep. and Seine-et-Marne, S. Aube, and E. Haute Marne and Meuse. Length, E. to W., about 70 m.; greatest breadth, nearly as much. Area, 817,037 hectares. Pop. (1846) 367,309. The hills in this dep. do not rise to more than 1,300 ft above the sea; its general slope is from S.E. to N.W., in which direction nearly all its rivers flow. It derives its name from the Marne, which divides it into 2 nearly equal parts. This river rises in the dep. of Haute-Marne, about 3 m. S. Langres; it flows, at first N.W., and afterwards generally W., through the depts. Haute-Marne, Marne, Aisne, Seine-et-Marne, Seine-et-Oise, and Seine; and falls into the Seine at Charenton, about 1 m. S.E. Paris, after a course of about 300 m., for 215 of which it is navigable. It has some considerable affluents; and Vitry, Châlons, Château-Thierry, and Meaux are on its banks. About 2-3ds of this dep., including all its central portion, has an arid barren soil, composed principally of chalk, covered with a thin layer of vegetable mould. But on the borders of this sterile tract are the vineyards which produce the celebrated champagne wine; and surrounding it is a country with a deep and rich alluvial soil. In 1834, the cultivated land was estimated at 614,825 hectares, pastures at 38,454 ditto, vineyards 18,495 ditto, woods 78,901 ditto, and heaths, wastes, &c., 16,961 ditto. Considerably more corn is grown than is required for home-consumption. Its average annual amount has been estimated at 3,000,000 hectol.; but, according to the official tables, 4,570,000 hectol. were harvested in 1835, chiefly wheat, oats, and rye. The culture of the vine is, however, by far the most important branch of industry. The dep. is supposed to furnish annually from 650,000 to 700,000 hectol. Of this quantity, however, the finest growths, produced in the arronds. of Epernay and Rheims, make but a small portion. The red wines "*se distinguent par beaucoup de finesse, de délicatesse, et d'agrément; ils occupent un rang distingué parmi les meilleurs vins fins du royaume.*" (*Jullien*, 21.) But the white wines, which include the finest varieties of champagne, are by far the most celebrated. They are of three sorts, *still*, *mousseux*, and *grand mousseux*. The *vrais gourmets* prefer the first, or still wines, of which *Sillery* (which *see*) is the best; but the greater number of amateurs prefer the *mousseux*, being that variety of the sparkling wine which merely creams on the surface: the *grand mousseux*, or full frothing wines, are less esteemed. The wine of Ay, the best of the *mousseux* variety, is an exquisite liquor, worthy, according to the President De Thou, of being called *Vinum Dei*! The best of the red wines are those of Verzy, Verzenay, Mailly, Bouzy, St. Basle, Clos-Thierry, &c. The vineyards round Epernay are valued at from 4,000 to 10,000, and even 20,000 fr. the arpent; and about 5,400 *pieccs* of wines of the finest growths are produced annually in its arrond. and that of Rheims, about a half of which is exported to foreign countries. Rheims, Epernay, and Aÿ are the chief seats of the wine trade. Epernay has extensive vaults, excavated in tufa, and admirably fitted for the preservation of wines. (*See* EPERNAY.)

Agriculture, according to Hugo, is in a tolerably advanced state. Near St. Menesould orchards are numerous. More cattle are reared than in any of the adjacent depts., the number, in 1830, being about 120,000. In the same year the dep. was estimated to have 506,000 sheep, the breeds of which have been much improved by crossing with Merinos and English varieties. In 1834, of

179,318 properties subject to the *contribution foncière*, 98,523 were assessed at less than 5 fr., and 24,897 at from 5 to 10 fr.; 134 were assessed at 1,000 fr. and upwards. *Il y a de l'aisance dans le pays, mais il n'y a pas de grandes fortunes. On n'y voit point le contraste affligeant de l'extrême opulence et de la misère; la mendicité n'y règne point.* (Hugo.) Marne has but one iron mine; but it furnishes excellent mill-stones, potter's clay, &c. Manufactures of various kinds of woollen fabrics, woollen yarn, &c. are established at Rheims; and hats, silk goods, paper, glass, earthenware, cordage, leather, candles, and soap are made in different places. Marne is divided into five arronds.; chief towns, Chalons-sur-Marne the cap., Epernay, Rheims, St. Menchould, and Vitry-le-François. It sends 6 mems to the Ch. of Dep. Number of electors (1838-39), 2,208. Total public revenue (1831), 12,229,636 fr.; expenditure, 8,998,985 fr. (Hugo, art. *Marne*; *Official Tables*; *Jullien, Topographie de Vignobles*; *Henderson on Wines*, p. 153. &c.)

MARNE (HAUTE), a dep. of France, reg. N.E., between lat. 47° 35' and 48° 40', and long. 4° 40' and 6° E., having N. the depts. of Marne and Meuse, E. Vooges and Haute Saône, S. the latter and Cote d'Or, and W. Cote d'Or and Aube. Length, N.N.W. to S.S.E., 80 m.; average breadth, about 30 m. Area, 625,043 hectares. Pop. (1846), 262,079. The plateau of Langres and the Faucilles mountains traverse the S. and E. parts of this dep., covering the greater part of its surface with their ramifications. They, however, nowhere rise to any great elevation; Mont-aigu, the highest point in Haute Marne, being only 1,630 ft. above the sea. The chief rivers, are the Marne, which intersects the dep. lengthwise; its affluents the Ornain, Blaise, Meuse, and Aube, rise in this dep., and have, more or less, a N. course. Surface mostly stony or calcareous; there not being more than 11,000 hectares of rich soil. In 1824, however, the arable land was supposed to comprise 235,611 hectares; pasture land, 25,528 do.; vineyards, 13,136 do.; woods, 174,275 do.; and heaths, wastes, &c., 27,969 do. The farmers devote their attention to the growing of corn, the culture of the vine, and the rearing of live stock. The produce of corn exceeds the demand for home consumption: the annual supply is estimated at nearly 1,800,000 hectolitres, chiefly wheat and oats. The produce of wine amounts to between 400,000 and 500,000 hectols. a year; but the quality is very inferior to that of the wines of Marne. Cherries and walnuts are grown in considerable quantities. The pasture lands are excellent; and, in 1830, there were 84,000 head of cattle, and 221,000 sheep in the dep.: the annual produce of wool is estimated at 160,000 kilogrs. In some cantons of the arrond. Vassy, a good many turkeys are reared. Bees are numerous, and wax and honey are valuable products. This is one of the best wooded depts. in France, and St. Dizier has a considerable trade in timber, sent in large quantities to Paris by the Marne. Iron is the only metal found in the dep., but the working of the iron mines, and the manufacture of their produce, hold a high rank among the occupations of the people. The dep. has upwards of 50 smelting furnaces (*hauts-fourneaux*), and 100 ordinary forges. Iron plates, rasps, files, and hardware of all kinds are manufactured; and the cutlery of Langres has long enjoyed a high reputation. Chaumont has manufactures of gloves and haberdashery. Linen and cotton thread, wax, candles, leather, brandy, and vinegar are the other chief articles made in the dep. In 1835, of 124,714 properties, subject to the *contribution foncière*, 72,624 were assessed at less than 5 fr., and 16,700 at from 5 to 10 fr. Haute Marne is divided into three arronds.; chief towns, Chaumont the cap., Langres, and Vassy. It sends 4 mems. to the Chamber of Deputies. Number of electors (1838-9), 1,064. Total public revenue (1831), 6,788,593 fr. (Hugo, art. *Haute Marne*; *Official Tables*, &c.)

MAROS-VASARHELY, or SZEKELY-VARSARHELY (Germ. *Neumarkt*, Wallach. *Ouckorej*), a royal free town of Transylvania, the cap. of the Szekler-land, and of the *stăule*, or presidency, of Maros; on the Maros, 53 m. N.N.E. Hermanstadt. Pop. 7,000. "Although there is nothing very imposing in the wide streets and small houses, of which Maros-Vasarhely is mostly composed, it is rather an important place; and, in winter, many of the gentry in the neighbourhood take up their residence within it. Moreover, both Protestants and Catholics have colleges here; the Protestant has 800, and the Catholic 300, scholars; and these institutions give something of a literary air to its society. Maros-Vasarhely is also the seat of the highest legal tribunal in Transylvania, the Royal Table; and it is, in consequence, the great law-school of the country. Almost all the young nobles who desire to take any part in public business, as well as all the lawyers, after having finished their regular course of study, think it necessary, under the name of *Juraten*, to pass a year or two here in reading law, and attending the court.

"The great pride of the town is the fine library of

the Teleki, founded by the Chancellor Teleki, and left to his family, on the condition of its being always open to the public. It contains about 80,000 vols., which are placed in a very handsome building, and kept in excellent order. It is most rich in choice editions of the Latin and Greek classics." (*Paget's Hungary and Transylv.*, li. 293, 294.) The town has a Rom. Cath. gymnasium and seminary, a reformed college, with a library and printing-office, two convents, a flourishing casino, or literary club, and considerable trade in agricultural produce, particularly tobacco, which is grown in large quantities in its vicinity. (*Paget*; *Berghaus*; *Oesterr.*; *Nat. Encyc.*)

MARSALA (an. *Lilybæum*), a city and sea-port of Sicily, at its W. extremity, adjacent to Cape Boeo (the *Promontorium Lilybæum*), in the intend. of Trapani, 16 m. S.S.W. Trapani; lat. 37° 48' 10" N.; long. 22° 25' 10" E. Pop., in 1831, 23,388. It is of a square form, and is surrounded by an old wall, flanked at the angles with bastions, but destitute of a glacis. It might be easily rendered a strong military post; but, at present, it is without ordnance, quarters, or bomb-proof stores. The town, which is pretty well built, is bisected by a broad and regular street, called the Cassaro, on one side of which is the cathedral, a large edifice, ornamented with 16 fine marble columns of the Corinthian order. It has 16 churches, numerous convents, a *retiro*, or place of retirement under monastic regulation, 3 abbeys, a gymnasium, a seminary, an hospital, with 70 beds, a *monie-di-pièta*, barracks for cavalry, an old castle, &c. Among its curiosities is a bell-tower, which vibrates perceptibly when the bell is rung.

Lilybæum was famous for its port; but, though secure, and well adapted for the use of the galleys of the ancients, it would not have accommodated the larger ships of modern times. Captain Smyth says, that where deepest, the ancient port could not have had more than 14 ft. water. The Romans, in their struggles with the Carthaginians, attempted over and over again to fill up the port, but uniformly without success. This, however, was effected, in 1570, by Don John of Austria, who, to prevent the Barbary corsairs from taking refuge here, filled up the port with rubbish. The modern is not, therefore, identical with the ancient harbour, but is about 1 m. S. from the town. It has a mole, constructed by Mr. Woodhouse, for the convenience of the shipment of his wine: large ships anchor S.W. from the city, about 2 m. off shore, in from 8 to 11 fathoms water. The entrance to the port is a good deal encumbered with rocks and reefs; the knowledge of which is as indispensable to the modern, as it was to the ancient, mariners. (*Smyth's Sicily*, p. 233.)

Marsala is indebted for its importance in modern times to its wine trade; which has grown up, within the last half century, through the skill and intelligence of the Messrs. Woodhouse, Englishmen, who began business here in 1789. The wine, however, did not begin to come into much repute till 1802, when it was supplied, by order of Lord Nelson, to the Mediterranean fleet. It is a dry wine, the best qualities closely resembling the lighter sorts of Madeira; but the extensive demand for it in this country is, no doubt, ascribable more to its cheapness than its quality. It is, however, in all respects, superior to Cape Madeira, with which it principally comes into competition. The success of the Messrs. Woodhouse has led others to embark in the business; and Mr. Ingham and Mr. George Wood have, also, very large establishments at Marsala. The entire produce of the district is estimated at about 30,000 pipes, of which from 18,000 to 20,000 are exported, partly to the U. States and the W. Indies, as well as to England. In 1823, the entries of Marsala for home consumption in the United Kingdom amounted to 68,730 galls.; whereas, in 1849, they amounted to 444,541 galls.; but, for some years past, the consumption has been pretty stationary.

Besides wine, Marsala exports corn, cattle, oil, salt, and soda; but in no great quantities. In 1839, 37 British and 9 American ships, of the aggregate burden of 6,508 tons, cleared out from Marsala. (*Macgregor's Report on the Commercial Statistics of the Two Sicilies*, passim. *Commercial Dict.*; *Official Accounts*, &c.)

Lilybæum, from its proximity to Carthage, and the excellence of its port, was, for a lengthened period, the capital of the Carthaginian possessions in Sicily. It was a place of great strength; being fortified by strong walls and a deep ditch, into which the sea appears to have flowed (*Polybius*, lib. i. cap. 42.); indeed, a portion of the ancient ditches still exist in tolerable preservation. (*Hoare's Classical Tour*, li. 73.) The size of the city may be inferred from the fact of its requiring a garrison of 10,000 men, exclusive of the citizens, for its defence. The successful resistance it opposed to Pyrrhus, by whom it was attacked with great fury, and its defence against the Romans, sufficiently evince its strength and importance. After having ineffectually attempted to carry it by assault, the Romans converted the siege into a blockade; and the city only surrendered at

the end of *five* years, when the defeat of Hanno made farther resistance unavailing. (*Ancient Universal History*, xvii. 531., &c., 8vo. ed.) Under the Romans it was the residence of a quæstor; and is called by Cicero, *civitas splendidissima*. (In Verrem, v. cap. 5.) Very few remains now exist of its ancient grandeur; vases, coins, &c., are, however, occasionally dug up; and in the town-hall is a group of two lions destroying a bull, said to be worthy the best period of Grecian art.

MARSEILLES (Fr. *Marseille*, an. *Massilia*), a large commercial city and sea-port of France, dep. Bouches-du-Rhône, of which it is the cap., on the E. side of a bay of the Gulph of Lyons, 30 m. W.N.W. Toulon, about 170 m. S.S.E. Lyons, and 4.0 m. S.E. Paris; lat. 43° 17' 49" N, long. 5° 22' 15" E. Pop. of the city, ex. suburbs, in 1846, 133,216; and, inc. suburbs, 160,000; but this statement is said to be under the mark, and it is alleged that, including strangers, the pop. is now (1850) at least 180,000. (*Conducteur dans Marseille*.)

"The situation of Marseilles," says Mr. Maclaren, "is one of the most beautiful I ever saw. It occupies the centre of a basin about 6 m. or 7 m. broad, bounded by lofty precipitous hills. The whole space from the city, back to the hills, is adorned with villas and hamlets; for every merchant or respectable shopkeeper here has his *maison de campagne*. These buildings are showy, sometimes large and splendid. They are called *Bastides*, and I learn that their number is not less than 5,000." (*Notes on France and Italy*, p. 39.) The country around is, however, extremely arid; and the wind called the *mistral* is blighting and noxious in the extreme. The city is somewhat of a horse-shoe shape, and built round its port. It is divided into two parts:—The first, or old town, occupying the site of the ancient Greek city, on rising ground, on the N. side the harbour, is confined, ill-built, with narrow dark streets, or rather lanes, not half ventilated, and inconceivably filthy. The second, or new town, constructed in the modern style, with regular streets, and handsome squares and houses, stands on the S. and E. sides of the port; being separated from the old town by a magnificent street, which extends in a right line from the Porte d'Aix to the Porte de Rome, traversing the city in its entire length N. to S. The middle part of this street, called the *Cours*, is sheltered by trees; the houses on either side are good; it has some handsome fountains, and is one of the chief places of public resort; but the favourite public promenade is the *Rue Cannebière*; a fine broad street, running at a right angle from the foregoing to the inner extremity of the harbour, and completing the line of demarcation between the old and new town. Marseilles has been fortified at different periods; but its walls were finally destroyed in 1800; and their place is occupied by boulevards planted with trees, beyond which the city is rapidly extending, particularly towards the E. and S. It still, no doubt, is defended by the fort of *Notre Dame de la Garde*, on a steep eminence to the S.; but it is more remarkable for the beauty of its situation than for its strength: the harbour (see *post*) is protected by a fort on either side its entrance, by the Château d'If, on the island of the same name, and by some additional works on the islands of Ratoneau, Pomegue, &c., nearly opposite its mouth.

Marseilles has numerous public edifices, but none merits any detailed notice. The cathedral occupies the site of an ancient temple of Diana; it is extensive, but heavy-looking. Its interior is a mixture of various orders; and its ornaments, which are mostly of the 11th and 12th centuries, are in bad taste. In fact, none of the churches within the city have any considerable claims to notice. The church of St. Madeleine (formerly *des Chartrons*), in the suburbs, an edifice constructed in the 17th century, is far superior to any one else; it has a handsome façade, and 2 steeples (*campaniles*), remarkable for their light appearance. There are in all about 20 Rom. Cath. churches, several chapels, 2 Greek churches, a Protestant church, and a synagogue. The Prefecture is the finest of the public buildings. The town-hall, on the N. quay, is a heavy edifice, composed of two separate piles of building, connected by a light and elegant arch on the first story. Its ground floor is appropriated to the exchange. There are numerous hospitals, and other charitable institutions. The Hôtel Dieu, one of the first established hospitals in France, was founded in 1188; it has usually from 500 to 600, and is capable of accommodating 750 patients. The *Hôpital de la Charité*, founded in 1640, an asylum for aged persons, and for orphans, foundlings, &c., has usually from 800 to 850 inmates. The Lazaretto, one of the largest and most perfect establishments of the kind in Europe, is situated to the N. of the city, and is surrounded by a triple wall. Ships may clear from it while in quarantine. Marseilles has also a lying-in hospital, a *bureau de bienfaisance*, asylums for poor children, a *mont-de-piété*, and a savings' bank. One of the largest public edifices, formerly a Bernardine convent, accommodates the Royal College, which has between 300 and 400 students; the Royal Society of Science, Literature, and Art; the public library

of 50,000 printed vols., and 1,300 MSS., with cabinets of natural history, medals, and antiquities, &c. and a gallery of paintings, comprising works by Carracci, Salvator Rosa, Rubens, Vandyk, Jordaëns, and other artists of the Italian and Flemish schools. The observatory, on the highest point of the old town, has apartments appropriated to schools of navigation, geometry, &c. The Grand Theatre, built after the plan of the Odeon in Paris, is spacious and handsome. It has 6 tiers of boxes; but is in general ill-attended. The *Théâtre Français*, a small building, open on Sundays for vaudevilles, and on other days for occasional concerts, is more frequented. The other chief public buildings and establishments are the hall of justice, the new prison, the custom-house, arsenal, barracks, mint, bishop's palace, various public halls, the fish market, &c. Marseilles has a botanic garden, and some excellent public baths. It is well supplied with water from fountains and public wells, but it is not introduced into the houses. At the extremity of the Rue d'Aix is an unfinished triumphal arch, of the Corinthian order, originally erected in honour of the Duc d'Angoulême, after his invasion of Spain in 1823; but it is now intended to commemorate the Revolution of 1830, one of the effects of which was to expel the Duc d'Angoulême from the kingdom! Marseilles has but few remains of antiquity. Except a fountain, with an inscription in Greek, an obelisk, and the remains of an aqueduct, none is worthy of mention. It is doubtful, indeed, whether Marseilles possessed any grand or remarkable edifices in antiquity; and if she did, the corroding influence of the sea air, which proves so detrimental to the modern buildings, has been a powerful agent in their destruction. But the Marseillais, for a lengthened period, took little interest in the preservation of the relics of past ages; and, says Hugo, "lorsque l'esprit de conversation entra dans les mœurs, il n'y avait plus rien à conserver."

Marseilles is the see of a bishop, suffragan under Aix; the seat of tribunals of primary jurisdiction and commerce; a chamber of commerce; the residence of a commissary-general and a treasurer of marine; and the head-quarters of the 8th military division of the kingdom. Consuls from all the principal states of Europe and America are resident in it. Besides the public institutions before noticed, it has a diocesan seminary, a royal society of medicine, societies of agriculture and *belles lettres*, a statistical society, an athenæum, and several commercial and other clubs. 3 newspapers (2 of them daily), and several literary journals are published in the city; the principal of the former are the *Sémaphore de Marseille* and the *Gazette du Midi*.

The port, to which Marseilles is wholly indebted for her early and long-continued prosperity, is a fine basin, stretching from W. to E. about 1,000 yards, into the very centre of the city. It has from 16 to 18 ft. water at its entrance, and from 12 to 24 ft. within; so that it is extremely well fitted for moderate-sized merchantmen, of which it will accommodate from 1,000 to 1,200. The ships come close to the quays, by which it is surrounded on all sides, except at its entrance, which is defended on its N. side by the tower of St. John, a work of the 15th century, and on its S. side by Fort St. Nicholas, constructed by Louis XIV. The careening basin, on the right side of the harbour, occupies the site of the ancient necropolis.

Unluckily, this fine basin becomes, from its position, the common sewer, as it were, or receptacle for all the filth of the city; and, as it is not agitated by tides, which are here hardly perceptible, nor by storms, from which it is screened on all sides, nor swept by any current, the water is completely stagnant; and, unless the mud were removed by dredging-machines, it would in no very long time be entirely filled up. But in hot weather, the stench arising from this torpid reservoir, and from the detestably filthy streets of the old town, is absolutely intolerable, at least to those not habituated to it; and has doubtless been the cause of Marseilles having suffered so dreadfully on various occasions from the plague, and, more recently, from the cholera. Such a state of things is a disgrace to a civilised country. And we agree with Mr. Maclaren in thinking, that, next to the enforcing of proper sanatory regulations in the old town, the best thing that could be done to improve the city would be to cut a canal from the *Anse de Joliette*, on the coast, to the harbour, which would at once create a current, and freshen and agitate the water in the latter. In its present state, Marseilles has been truly described as a "vast cloaca." We doubt, indeed, whether there be a single water-closet in the city.

There is excellent anchorage ground for men of war and other large ships, about 2 m. W.S.W., between the isles of Ratoneau and Pomegues, which have been connected by a mound. Ships from the Levant perform quarantine at Pomegues; and on Ratoneau Island is an hospital for those whose health is dubious. A lighthouse, with a revolving light, 131 ft. in height, is erected on the Isle de Planier, about 10 m. from the city, and there is an-

other in Port St. Jean. Ships having got within 3 or 4 m. of the Isle d'If, usually have to pay a pilot. The charge for pilotage is 4 sous per ton in, and 3 sous per ton out, for French vessels and vessels belonging to powers having reciprocity treaties with France. With the exception of the above pilotage charges, and the charges on vessels performing quarantine, there are no port charges on ships entering or clearing out from Marseilles.

The trade of Marseilles is very extensive, and is rapidly increasing. It is the grand emporium of the E. of France, and the centre of 5-10ths of her commerce with the countries bordering on the Mediterranean. The exports consist principally of silk stuffs, wines, brandies, and liquors, woolens and linens; madder, all soap, refined sugar, perfumery, stationery, and all sorts of colonial produce. Imports are sugar, coffee and other dye stuffs, corn, from the Black Sea of Africa, cotton, from Egypt and abroad, and various descriptions of goods from England, India, wool, tallow. Marseilles represents almost the W. France and Algeria. She is now a station for the intercourse carried on with Malta, Alexandria, and Constantinople; and, besides the steamers employed by the government as packets, she has, in 1855, 19 steam packets belonging to private companies. Mr. Mariaren says that most of the private steamers have English-made engines, and English riggers, and that they burn English coal, and have for about 30,000 tons.

Amount of the Hunter, Tonnage, and Crews of the Ships that entered the Port of Marseilles in 1855 from Foreign Ports, specifying those from different Countries.

N., long. $74^{\circ} 10'$ W. Pop. estimated at 4,000. It has some good houses, a cathedral, which is a conspicuous object in approaching it, both by land and sea, some convents, &c.; but it suffered much from the attacks of the Indians during the revolutionary war, and does not appear to have regained its previous importance. Its harbour which is one of the best on this coast, having sufficient depth of water and good holding ground, is defended by several batteries, and by a castle on an isolated rock, commanding both the town and the harbour. Santa Marta was founded in 1576, and made an episcopal city four years afterwards. Before the revolution it had risen to considerable importance as a commercial city, and was the port into which manufactured goods for Hispaniola were almost exclusively imported. (Cochran, in *Mod. Trav.* xvi 387, 388; *Blond's American Coast Pilot*.)

MARTIQUES (LES), a marit town of France, d^{ép.} Bouche-du-Rhône, on an island in the channel between the lagoons of Berre and the Mediterranean, on either bank of which channel are its suburbs of Ferrières and Jouquières, 18 m W N W Marseilles. Pop. (1836), including its suburbs, 7,350. Its situation, amid pools and canals, has made it be called the Venice of Provence. It is well built, and has several good streets and quays, and handsome buildings; but it is ill supplied with water. Its port is much resorted to by fishing-boats. Merchant vessels are built here; and it has an active trade in olive oil, fish, wine, and salt. (*Hugo, art. Bouches du-Rhône, &c.*)

MARTIN (ST), one of the Virgin islands, in the W Indies, belonging partly to the French and partly to the Dutch; about lat. $16^{\circ} 4'$ N. and long. $69^{\circ} 2'$ W; between Anguilla and St. Bartholomew, 13 m N W, the latter, and 76 m N N W Barbuda. Area estimated at 30 sq. m. Though hilly it has no elevation 2,000 ft. in height. It is watered by numerous rivulets; and in the S. are numerous lagoons, from which great quantities of salt are obtained by the Dutch. The coasts, which are deeply indented, afford several good roadsteads, of which Philipsburg and Marigot are the best. The soil is light, strong, and frequently arid; but it is tolerably healthy. The northern, and larger portion of the island belongs to France, forming a commune of the colony of Guadeloupe, and having an area of 3,371 hectares, of which, 1,861 are cultivated, 341 in pasture, 674 in woods, and 2,816 unproductive. The annual produce of sugar averages about 900,000 kilogs., syrup about 11,000 kilogs., and rum about 30,000 gallons; a good many cattle are also reared. Pop. of the French division about 3,000, five sixths of whom are slaves. The southern, or Dutch, division of the island is less fertile and richly wooded than the French, but more profitable, on account of the salt it produces, which is sent to the neighbouring islands, and to N. America. It is also estimated to yield annually about 25,000 cwt. of sugar, and 150,000 gallons of rum. (*Savin's Handbook*, iii 528.) The Dutch portion is said to be about as populous as the French. Nearly all the white pop. of St. Martin are of English descent. The Spaniards first colonized this island, but abandoned it in 1660, after which it became a subject of contention between the French and Dutch, who subsequently divided it between them. It has been frequently taken by the English. (*Hugo*, iii. 308; *Nation's Statist. sur les Colonies Françaises*; *Savin, &c.*)

to 2,000 ft., above the sea. These, and other mountains, are evidently extinct volcanoes; having their characteristic conical form, and abounding with lava, and other volcanic products. The flanks of the mountains are mostly covered with a dense and luxuriant forest vegetation, and are in many parts under culture to an elevation of 1,200 ft. About a third part of the island consists of pretty level land. It is watered by numerous rivulets, but of these only three or four, which descend to the W. coast, are navigable in any part of their extent. At the S. extremity of the island is a small salt-lake. The coasts present many bays and inlets, but the harbours on its E. side are difficult of access, being obstructed by numerous islets, and extensive banks of mudrocks. On the S. side is the bay of Marin; and on the W. is that of Fort Royal, forming one of the best harbours in the Antilles. In the N W is the roadstead of St. Pierre, where ships ride safely, except during W. winds. The mean annual temp. in the plains is about 65° , the maximum in the shade being 80° , and the minimum 60° F.; but the heat is tempered by sea breezes

during the day, and land-breezes at night. The moisture of the atmosphere is excessive; and it is estimated that at the level of the sea 56 inches of rain fall annually. Most of this rain descends from July to Oct., a period of the year termed the *Average*; when the hurricanes, from which the island has often suffered severely, are most frequent. The weather for the remaining 9 months is generally fine, but Martinique, like the neighbouring island of St. Lucia, is very unhealthy. Mineral springs are abundant, of a chalybeate, saline, or siliceous nature, and useful in cutaneous and liver complaints. The surface consists chiefly of disintegrated pumice-stone, intermixed with vegetable mould, forming a light and very fertile soil. In 1826, it was estimated that 20,300 hectares were under culture; that savannahs and pasture lands occupied 31,773 do.; woods and forests, 20,307 do.; and unproductive lands, 14,308 do. The following official account has been given of the distribution of the cultivated lands, their produce, &c., in 1835:—

Articles.	Hectares cultivated.	Slaves employed in Culture.	Produce.
Sugar-cane	28,777	24,410	Raw sugar - 22,330,000 lbs. Do. - 190,700 Syrup & molasses - 6,730,120 Rum - 1,000,300
Coffee	2,917	2,207	Do. - 22,000,000 lbs.
Cocoa	919	-	Do. - 10,000
Cocoa, do.	664	-	Do. - 10,000
Corn, do.	12,705	2,677	Do. - 2,000,000 lbs.
Mulberry	-	-	Do. - 10,000
Various	-	2,077	Do. - 10,000
Total	45,117	32,371	

Of late years, agriculture has made considerable progress in Martinique. The plough has come more into use, and manuring is more extensively practiced, and the culture of the sugar-cane, to which the colonists have turned their chief attention since 1820, has been greatly improved. The cane is of two kinds, the *Ottobrun* variety, and the yellow cane of Batavia. It was first naturalized about 1630. The coffee plant was introduced in 1723, but its culture, like that of most other products, is diminishing in favour of sugar. A few cloves, and some other species, are grown, and the government has attempted, though hitherto with little success, to introduce the culture of indigo. Martinique formerly produced a pretty large supply of tobacco, but it is now quite insignificant. Manioc, bananas, sweet potatoes, maize, &c., are the principal starchy vegetables. The island has about 40,000 head of live stock, of all sorts, about 18,000 being black cattle and 9,000 sheep. In 1826, there were three earthenware and tile factories, and 10 lime-kilns, employing 300 slaves; three are, however, the only manufacturing establishments in Martinique. Carpenters, masons, and such-like workmen are pretty numerous, but there are few of any other description. Most part of the skilled workmen belong to the free coloured class, and only work when they have expended their wages, and are in want of necessaries. A number of hands, both free and slaves, are employed in fishing; and between 600 and 800 are occupied in navigation and the coasting trade. Subjected is an

Account of the Quantities and Values of the principal Articles exported from Martinique in 1835.

Articles.	Quantities.	Value.
Raw sugar	22,330,000 lbs.	15,770,000
Refined	190,700	200,000
Rum	1,000,300	100,000
Coffee	22,000,000 lbs.	221,000
Cocoa	10,000	200,000
Cocoa, do.	10,000	200,000
Corn	2,000,000 lbs.	70,000
Cash	10,000	10,000
Cash, gold and silver	-	10,000
Other articles	-	200,000
Total	-	16,470,000

The imports consist chiefly of salted meat, butter, and fish, corn, flour, peas, oil, timber; cotton, linen, and other manufactured goods; wines, soap, candles, hardware, jewellery, apparel, &c.; chiefly from France and the French colonies. In 1826, the value of the imports amounted to 13,000,000 fr. In the same year, 265 French vessels, of the aggregate burden of 48,761 tons, entered, and 263 left the ports of the island, in addition to which, 600 foreign vessels entered, and 467 cleared out.

The government is vested in a governor, assisted by a privy council, composed of the military commandant, the 3 principal civil officers of the colony, and 3 privy councillors nominated by the king; and in a colonial council of 30 members elected for 5 years. Every individual of French descent, 25 years of age, born or having resided two years in the colony, and paying taxes to the extent of 200 fr. a year, or having property worth 20,000 fr., may be an elector; and inhab. paying taxes, or pro-

possessing property of double the above amount, are eligible to the colonial council. In 1836, there were 819 electors, and 507 individuals eligible to the council. Martinique is divided into the arronds. of Fort Royal and St. Pierre, 4 cantons, and 26 communes. Justice is administered by a royal court at Fort Royal, courts of assize and primary jurisdiction in each arrond., a justice of the peace in each canton, and a functionary, uniting both the civil and military jurisdiction, in most of the communes. The military force amounts to 2,090 men, besides which there is a militia of 4,108 men. There are 3 schools of mutual instruction, 2 in the cap., and 1 in St. Pierre; and primary schools in almost every commune. At St. Pierre is a superior female seminary. There are orphan asylums, and various other charities, in the two principal towns; and 2 newspapers are published, both at St. Pierre. The total expenditure of the colony, in 1837, was estimated at 4,387,866 fr., the local receipts to meet which amounted to only 2,265,711 fr.

Martinique has only three towns worthy of mention. Fort Royal, the cap. and seat of government, on the N. shore of the bay of same name, in the S.W. part of the island. Pop., inc. com., about 11,500. It is well built, its chief public edifices being the par. church, government offices, naval storehouses, arsenal, barracks, hospital, two prisons, and the residence of the *préfet apostolique*, the superior ecclesiastic of the island. It is defended on the N. by Fort Bourbon, and on the S. by Fort Louis, on a small peninsula, by which it is shut off from its port; but it communicates with the harbour, by a canal, cut within a few years. Near Fort Royal are numerous pleasant country residences. St. Pierre (which see), also on the W. coast, is the largest town in the French W. Indies. La Trinité, on the bay of the same name, on the E. side of the island, has a pop. of about 4,600, large warehouses, a prison, some barracks, an hospital, and a handsome church. Its roadstead and harbour are secure; the latter has good holding-ground, but it is difficult of access. Its entrance was formerly protected by a fort, now in ruins.

This island was discovered by the Spaniards in 1493. In 1635 it was settled by the French. In 1762 the English took it from the latter, but restored it in the succeeding year. In 1794 it was again taken by the English, who gave it back in 1802; it came a third time into our possession in 1809, and was finally restored to France in 1815. The Viscount Beaubarnais, and his wife Josephine, subsequently espoused by Napoleon, were natives of Martinique. (*Notices sur les Colonies Françaises*, i. 27-134.; *Official Tables*; Hugo, art. *Martinique*.)

MARWAR, a native state of Hindostan. See JODHPUR.

MARYBOROUGH, an inland town of Ireland, Queen's Co., of which it is the cap.; prov. Leinster, on a branch of the Barrow, 46 m S.W. Dublin. Pop., in 1821, 2,677; in 1841, 3,633. "It is a town of very little importance or wealth, possessing a very inconsiderable market, compared to Mount Mellick and other towns in the co.; but within the last few years the quantities of grain brought to market have increased." (*Man. Board. Report*.) It is straggling and meanly built. The new co. prison has 75 cells and 36 other prisoners' rooms. The district lunatic asylum has accommodation for 104 patients. It has 3 schools, one for boys, another for girls, and one for both, partly supported by and connected with the Educational Board, which, in 1839, were attended by 743 children. When the territory of Leix was made shire-ground, at the close of the reign of Philip and Mary, this place, previously a border fortress, was fixed on as the assize town, and named from the reigning queen. It changed masters several times during the war of 1641. It has several good public buildings, among which are the par. church, a Rom. Cath. chapel, a convent, Presbyterian and Methodist meeting-houses, the infirmary for the co., the district lunatic asylum lately erected for King's and Queen's Cos., Westmeath and Longford, the new co. court-house and prison, with barracks, schools, &c. It is a constabulary station. The corporation, under a charter of Elizabeth, in 1570, consists of a burgomaster, two bailiffs, and an indefinite number of burgesses and freemen. It returned 3 mems. to the Irish H. of C. till the Union, when it was disfranchised. The assizes for the co. are held here; and general assizes in April and October, and petty sessions weekly. Rathleague, the seat of Lord Congleton, and Ballyn, the seat of Sir Charles Coote, are in the immediate vicinity of the town.

MARYLAND, one of the U. States of N. America, on both sides Chesapeake Bay, between lat. 38° and 39° 40' N., and long. 75° and 79° 20' W., having N. Pennsylvania, W. and S.W. Virginia, E. Delaware, and S.E. the Atlantic. Area estimated at about 10,800 sq. m. (*Flint*.) Pop., in 1840, 470,019, of whom 89,737 were slaves. The two portions into which Chesapeake Bay divides the state are called the E. and W. shores; the former being low, undulating, and alluvial, while that on the W. side, though at first of the same character, gra-

dually rises on proceeding westward; and the N.W. part of the state is traversed by some offsets of the Alleghanies, which have an elevation of about 3,000 ft. The Potomac, which divides the state from Virginia, and the Susquehannah, which falls into the innermost extremity of Chesapeake Bay, are the only considerable rivers. The climate of the hill country is healthy and agreeable; but along the coast the heats in summer are sometimes oppressive, and destructive fevers frequently prevail. The mean annual temp. at Baltimore is about 53° Fahr. The soil is particularly fertile in the valleys between the mountain ranges of the W.; but elsewhere it is of very various qualities, and towards the coast is often sterile. Large quantities of excellent wheat, of a variety supposed to be peculiar to this state, is raised, especially on the E. shore; the crop, however, is rather precarious; and Indian corn is probably the principal produce. (*Encyc. of Geog.*, Amer. edit., iii. 513.) Tobacco is the other great staple, and is grown almost exclusively on the W. shore. (For an account of the quantities of these staples inspected in Maryland, see BALTIMORE, in this Dict., i. 285.) Most part of the products of the more N., and some common to the more S. states, are cultivated. Fruits and sweet potatoes are grown in abundance; a little cotton is raised for domestic purposes; and hemp and flax are grown in the W. The forests abound with trees, producing mast, which feeds great numbers of hogs. Beef and mutton are also plentiful; and large quantities of provisions are shipped from Baltimore. The fisheries are actively carried on in the bay and along the coast; and, in 1836, upwards of 40,000 barrels of herrings, 5,500 do. shad, and 16,000 do. mackerel, were inspected at Baltimore. Coal of good quality is found in the W. part of the state, in two principal fields, one of which extends over an area of 400 sq. m. Iron is every where abundant; and the bog-ore wrought on the E. shore yields at an average from 40 to 50 per cent. of metal. Sulphuret of copper, chrome and alum earths, green vitriol, and various fine marbles, are among the other mineral products. The manufactures consist principally of coarse cotton fabrics, and of hardware, salts, earthenware, &c. The principal articles of export are flour and tobacco; and, next to these, lumber, iron, Indian corn, pork, flax seed, and beans. Exclusive of her very extensive trade with other parts of the Union, the total value of the exports from Maryland to foreign countries, during the year ending June, 1849, amounted to 8,400,660 dolls., and that of the imports, during the same year, to 4,976,731 dolls.

The canals and railways of Maryland are on a large scale. The Chesapeake and Ohio Canal, intended to unite Georgetown, in the district of Columbia, with Pittsburgh on the Ohio, was commenced in 1828, and, in 1839, 136 m. had been completed. It is generally from 60 to 70 ft. wide; though in parts it is contracted to 50 and expanded to 150 ft.; its depth is 6 ft. The rise to William's Port, 105 m. from Georgetown, is 353 ft., which is "overcome by 44 locks 100 ft. long by 15 ft. wide. There are in this distance 119 culverts, and 6 aqueducts, one of which is 1,714 ft. long: the culverts, aqueducts, and locks, are all built of solid stone masonry; the cost of the work, thus far, is estimated at about 4,100,000 dolls. The legislature of the state has also appropriated 1,000,000 dolls. for the construction of branch canals to Baltimore and Annapolis." (*Bradford*.) The aggregate length of the railroads in Maryland, in 1849, was between 360 and 370 m.; and the Baltimore and Ohio railway is the most stupendous national work undertaken in America. Its length, when finished, will be at least 300 m., within which a rise of 885 ft. must be overcome. In 1849, 178 m. of the work had been completed. In 1849, there were in the state 21 banks and 2 branch banks, with an aggregate capital estimated at 8,704,711 dolls. The legislative government is vested in a senate and a house of delegates, together styled the General Assembly of Maryland. The H. of Deleg., comprising 82 mems., is chosen every second year by the votes of the free white male citizens above 21 years of age, who have resided a year in the state, and 6 months in the county for which votes are tendered. The senate is composed of 21 mems., and is elected every 6th year. The governor and executive council are elected annually by the people, and appoint all subordinate officers of state.

Annapolis is the seat of the state government; but Baltimore is the commercial capital, and, in pop. and importance, the fourth city of the Union. (See BALTIMORE.) Maryland is divided into 20 counties, Frederick, Hagersburg, and William's Port, are the other principal towns, and 6 judicial districts, each comprising 2, 3, or 4 counties. Each of these districts has a chief judge and 2 associates; the 6 chief judges constituting the court of appeal for the state. Judges hold office during good behaviour. The militia, in 1838, consisted of an aggregate of 46,864 men. Maryland has a fund for the support of free schools, which, in 1831, amounted to 142,063 dolls., and possesses several large and important colleges, including Maryland University and St. Mary's College,

with a library of 12,000 vols., at Baltimore; St. John's College, at Annapolis; Mount St. Mary's, at Emmitsburg, &c. In 1849, the aggr. state debt amounted to 15,900,000 dolls., now well provided for. The inhab. are mostly Rom. Catholics or Methodists.

Maryland was first colonised by Lord Baltimore, and about 200 Rom. Catholic emigrants in 1634. It remained a proprietary government until the revolution of 1688, when it became a royal prov.; but in 1716 it was restored to the descendants of its original possessor, and retained by them till the independence of America. Its constitution was formed in 1776, and dates next in order to that of Virginia; it has, however, received several important alterations and amendments at different periods. (*Darby's Views of the U. States; American Almanack, 1849-50; Encyc. of Geog., Amer. edit.*)

MARYPORT, a sea-port town of England, co. Cumberland, par. of Cross Canonby, Allerdale Ward, on the Solway Frith, close to the mouth of the Ellen, 25 m. S.W. Carlisle. Pop., in 1841, 5,311. It is neat and well-built, and, from its salubrity, is much frequented by summer visitors. A modern townhall, and sundry places of worship, are its chief public edifices. A national school furnishes instruction to children of both sexes, and there is a school of industry for girls. The present importance of Maryport, which, in 1750, was a mere hamlet, is attributable to the rise of an extensive coal-trade with Ireland and Scotland, no fewer than 197,061 tons of coal having been shipped here in 1849. It has also ship-building yards; and sail-cloth, ropes, blocks, &c., are made on a pretty extensive scale. A pier has been erected, and there are commodious quays and staiths; but the harbour dries at low water, and has only 12 ft. at high water springs, and 8 at neaps.

MASCALL, a town of Sicily, intend. Catania, cap. canton, at the E. base of Mount Ætna, on a small river about 2 m. from the sea, and 10 m. S.W. Taormina. Pop., in 1831, 3,063. Its district is exceedingly fertile, and the town was formerly flourishing, but it is now rapidly decaying, while several of its dependent villages are proportionally thriving and increasing, particularly Giarre and Riposto.

MASSA-CARRARA (DUCHY OF). See MODENA.

MASSACHUSETTS, one of the U. States of N. America, in the N. part of the Union, in the distr. known by the name of New England; and which, though comparatively small, is one of the most important and flourishing states belonging to the Confederacy. It extends between lat. $41^{\circ} 13'$ and $42^{\circ} 52' N.$, and long. $69^{\circ} 50'$ and $73^{\circ} 30' W.$; having N. Vermont and New Hampshire, W. New York, S. Connecticut and Rhode Island, and E. the Atlantic, the islands of Martha's Vineyard and Nantucket in that ocean being comprised in this state. Greatest length, W.N.W. and E.S.E., 190 m.; ordinary breadth, between 40 and 50 m.; area, 7,800 sq. m. Pop., in 1830, 610,408; in 1840, 737,699, or 93 to the sq. m., being the most densely peopled state of the Union. Generally speaking, the country ascends according to the distance inland, the general slope being from W. to E. The coast presents a capacious, deep, and admirable bay, between Cape Ann and Cape Cod; from which the state has derived its name. A sandy, and in some parts marshy plain extends several miles into the interior: this is abruptly succeeded by a hilly country, which occupies all the central parts of the state, abounding with valleys of various extent, numerous rivers, and extensive pine plains. The valley of the Connecticut river separates this region from the third, or mountainous, or most westerly division of the state. It is well watered, but no large river rises within it. Next to the Connecticut, the chief is the Merrimack, which runs through its N.E. parts, and falls into the sea near Boston. There are no large lakes, but numerous ponds. The climate varies according to elevation; but is generally dry and healthy, and the atmosphere serene. The thermometer, it is said, in the plains, during summer, often exceeds $77^{\circ} C$ Fahr., and sometimes rises to 100° . In some of the central and W. districts the soil is strong and rich; but in general it is poor rather than otherwise; though the active perseverance of its inhab. and good cultivation have rendered it highly productive. In no part of the U. S. have greater advances been made in agriculture: but latterly the pre-eminence of Massachusetts in this respect has not been maintained, and her crops have declined. Maize, rye, wheat, oats, barley, peas, beans, buckwheat, potatoes, hops, flax, and hemp are the chief agricultural products. Great quantities of cider also are made, and fruits and garden vegetables extensively grown. But notwithstanding, Massachusetts is indebted to the southern states, especially to N. York, Maryland, and Pennsylvania, for by far the largest portion of her supplies of flour and corn; and to these and the other states she is indebted for cotton (about 240,000 bales), staves, coal, &c. Beef, pork, butter, and cheese, are of excellent quality, and so abundant as to form a considerable article of export; the W. part of the state is

especially distinguished for its extensive dairies. Mr. Stuart speaks in high terms of the cheerful appearance and flourishing condition of the rural districts of Massachusetts. "The whole of the villages, from Northampton to Boston, Belchertown, Ware, and Worcester, are handsomely laid out, and comfortable places; and every thing about them is so neat, and so much in order, that it is delightful to see them. About Northampton there is more appearance of real comfort and beautiful village scenery than I have seen any where else." (l. 294.) Agriculture is here, however, of inferior importance to manufactures and commerce, in which Massachusetts ranks second perhaps to no state in the Union, unless it be New York. Nearly 60 millions of dollars are said to be invested in manufacturing stock; of which a large proportion is employed in Lowell, which, next to Pittsburgh, is the chief manufacturing town in the U. States, and may be styled the Manchester of America. (*See LOWELL.*) Next to cotton goods, boots and shoes are the chief manufactured articles; from 3 to 4 million pairs are annually made at Lynn and other places in this state, principally for export to the southern states and the W. Indies. Spirits, leather, cordage, wrought and cast iron, nails, woollens, paper, straw bonnets, hats, oil, and muskets, are the other principal manufactures. There is a large national establishment for the manufacture of arms at Springfield. There are numerous iron mines, and some also of lead. Excellent marble and granite, slate, limestone, &c., are obtained. The whale, cod, and other fisheries of the U. States centre principally in Massachusetts, and are at once a principal employment and a most productive source of wealth. The chief exports of this state, exclusive of its manufactures and the produce of its fisheries, are beef, pork, lumber, spirits, flax seed, &c. During the year ending the 30th of June, 1849, the value of the foreign produce imported into Massachusetts amounted to 24,745,917 dolls., while the value of her exports to foreign countries amounted to only 10,254,862 dolls.; the excess of the value of the former above that of the latter being defrayed by bills on New York, Philadelphia, and other states, which are always largely indebted to Massachusetts. The aggregate burden of the ships belonging to Massachusetts in the same year amounted to 636,599 tons, being more than 1-5th part of the tonnage of the Union, and more than that of any other single state, New York excepted. (For further details as to the trade of Massachusetts, see BOSTON.) The internal communications are very extensive and important. In 1849 it had 21 railways of the aggregate length of 844 m.; the revenue from which, in 1848, amounted to 8,900,667 dolls. Of these, Quincy railway, the first work of the kind finished in the U. S., was completed in 1827; but the principal are those from Boston to Providence, Worcester, and Lowell, that from Worcester to Springfield, and the Western railway, now completed from Boston to Albany, New York. There are also several canals of considerable length: that connecting Boston harbour with the Merrimack (completed in 1808) was the first canal of any size undertaken in the Union. Massachusetts had, in 1850, 119 banks, with a united capital of 34,630,011 dolls.; and, in 1848, 41 savings' banks, the aggregate deposits in which amounted to 11,970,445 dolls.

Till lately the legislature of Massachusetts had a greater number of members than that of any other state of the Union: but the amended constitution of 1840 reduced the senate to 40 mems.; and the number of representatives to 356, elected by towns of more than 1,200 inhab. Of the representatives, Boston, the cap., sends 25; Lowell, 9; Salem, 6; and Charlestown and New Bedford, 5 each, &c. The right of election is in every male citizen 21 years of age who has resided within the state for a year, and within the town or district for which he desires to vote for 6 months preceding the election. Elections take place annually for senators, representatives, the governor, lieutenant-governor, and a council of 9 mems., intended to assist the executive, and chosen from among the people at large by a joint vote of the senators and representatives. The salary of the governor is 2,500 dollars a year. The supreme court of justice sits at Boston; it consists of a chief justice, 4 assistant judges, and other officers. There is a court of common pleas, and other courts are established in each co.: the different judges of all the courts are appointed by the governor and council, and hold office during "good behaviour." Every able-bodied white male citizen between 18 and 45 (with certain exceptions) is required to enrol himself in the militia; but the active militia consists of only 10,000 men, called out at different times. Education is very widely diffused. In 1848-49, the number of scholars attending public schools in winter was about 185,000. There are 67 corporate and 1,096 unincorporated academies and superior private schools. In 1848-49, the sum of 754,943 dolls. was raised by taxes for the support of schools. The principal educational establishments are—Harvard university, near Boston; Phillips, Dummer, Leicester and Derby academies; William's and Amherst colleges;

several theological seminaries, and other special schools. Learned societies, mechanics' institutes, lyceums, reading societies, and public libraries, are numerous. The number of churches as compared with the pop. is greater in this than in any other state of the union; and the inhabs. are distinguished by their industry, sobriety, and good morals. The public debt at the close of 1839 amounted to 5,000,000 doll.

This state was first permanently settled by a party of emigrants from England, who landed at Plymouth in 1620. Another settlement was formed at Salem in 1628, and both were united by charter under the same government with Maine in 1692. The first engagement with the forces of the mother country occurred at Lexington in this state, 19th April, 1775. Massachusetts sends 12 mems. to congress. (*Mitchell's United States; Darby; American Almanack*, 1834-41.)

MASSA-DUCALE, or DI-CARRARA, a town of N. Italy, belonging to the Modenese dom., cap. duchy of same name, on the road between Genoa and Leghorn, 3 m. from the Mediterranean, and 28 m. N.W. Lucca. Pop. estimated by Rampoldi at 7,000. It is distinguished by the beauty and salubrity of its situation, and is clean and well built, but has few remarkable edifices. Its ancient cathedral was pulled down by Eliza Baccocchi, sister of Napoleon, when queen of Etruria, on account of its being too near the royal palace. It has an academy of sculpture and architecture, a seminary, college, hospital, public library, and an old castle now used as a prison. It is the see of a bishop; and has manufactures of silk stuffs, and some trade in soap, oil, and other agricultural products, and in the fine marble of its vicinity, as to which see CARRARA in this Dict. (Vol. I. p. 546.)

MASSAFRA, a town of the Neapolitan dom., prov. Otranto, cap. canton, on the road from Bari to Taranto, 10 m. N.W. the last-named city. Pop. about 7,000. "Massafra is prettily situated on the slope of a hill interspersed with tufts of trees and shrubs; but when near it, it assumes a most singular appearance. The rock on which it stands is perforated and worked into a thousand fantastic shapes. The houses stand on the brink of a narrow valley, or rather chasm, worked through the rock by the action of running water." (*Burgess's Greece*, &c. i. 22.) The town is walled, and is conjectured by some authors to occupy the site of the *Messapia* of antiquity; but others contend that *Messagna*, between Oria and Brindisi, is the modern representative of that ancient city.

MASSAT, a town of France, dép. Ariège, cap. cant. in a fertile valley, 14 m. W.S.W. Foix. Pop. in 1836, 7,180. There are in its vicinity numerous iron mines, the working of which employs a considerable portion of the people.

MASUAH, the principal sea-port of Abyssinia, on the Red Sea, on an island separated from the continent by the narrow but deep channel of Adowa, 260 m. N.E. Gondar, and 420 m. S. by E. Djidda: lat. 16° 30' 45" N., long. 39° 24' E. Pop. 2,000. ? The island in which Masuah stands is only about $\frac{1}{2}$ m. in length, and $\frac{1}{4}$ m. in breadth, one-third of its extent being occupied by houses. The town has several stone houses, two stories high; but most of them are in ruins. The other dwellings are mere huts, built, as in Arabia, with poles and bent grass. The only public buildings are four mosques, of small size and rude architecture. Owing to the total absence of springs, water is very scarce, and is collected in large public tanks, that occupy nearly a third part of the island. The harbour, though having a narrow entrance, can accommodate about 50 vessels; and is safe, deep, and easily accessible. The trade carried on between Masuah and the ports of Arabia is of considerable importance. From Djidda are brought many articles of European manufacture, embroidered velvets, arms, glassware, silks, and satins; while Mocha furnishes Indian

fabrics of every quality, from the finest muslins to the coarse Surat cloths, used as articles of dress in a great part of Africa. The exports comprise a considerable number of slaves, gold-dust, ivory, rhinoceros' horns, and corn, brought from the interior by a large caravan, which arrives in Feb. The Naybe demands 10 per cent., *ad valorem*, on all exports and imports, and the same amount of duty is levied by the Imâm. (*Valentin's Travels*, ii. 46-68.)

MASULIPATAM. See CIRCARS (NORTHERN).

MASULIPATAM, a fortress and town of British India, presid. Madras, cap. of the above distr., on the Coromandel coast, 230 m. N.N.E. Madras; lat. 16° 15' N., long. 81° 14' E. The fort is of an oblong figure, 800 yds. by 600, in the midst of a salt morass, and close to a canal communicating with the Krishna. By means of this canal the surrounding country may be entirely inundated, a circumstance constituting the chief strength of the place. The *pettah*, or native town, is about $\frac{1}{4}$ m. to the N.W.; it is very extensive, and, for a Hindoo town, tolerably well built. Masulipatam stands on the only part of the Coromandel coast which is not beat with a heavy surf. Its port receives vessels of 300 tons; and it was for a lengthened period a place of considerable trade with Bengal, China, Birmah, Persia, and Arabia. Its commerce is now, however, greatly fallen off, and scarcely extends beyond Calcutta on one side, and Bussorah on the other. Its chief exports are piece-goods and tobacco. The chintzes of Masulipatam, though not equal to those of Europe, have been long, and deservedly, celebrated, and are very generally worn in some parts, especially in Persia. This town is the residence of the district collector and judge. It was conquered by the Bhamenee sovereigns of the Decca, in 1480, ceded to the French in 1751, and taken by the British in 1769.

MATANZAS, a sea-port town of Cuba, ranking next to the Havannah, in commercial importance, on the N. coast of the island, at the bottom of a deep bay, 52 m. E. Havannah; lat. 23° 2' 28" N., long. 81° 37' 44" W. Pop., in 1827 (incl. garrison and strangers, estimated at 3,000), 14,341: of the resident pop., 6,333 were whites, 1,141 free people of colour, and 3,067 slaves; but, at present (1850), the pop. is, probably, not under 50,000. It is pretty well built, has some good streets, and about one third part of its houses are of stone. It has a large hospital, a good par. church, barracks, theatre, 2 market-places, 2 printing-offices, a bathing-establishment, &c.; and in the neighbourhood is a considerable sugar-refinery, belonging to an English firm. The bay of Matanzas, defended by the castle of San Severino, is extensive and is exposed only to the N.E. wind. The harbour, in front of the city, is protected by a ledge of rock, 4 ft. below the surface, which serves as a natural breakwater, to defend the vessels at anchor within it from the swell. There are two channels by which to enter, the one by the N., the other by the S. end of the ledge; but the S. channel is fit only for coasting vessels. There are two rivers, one on each side of the town, which deposit so much mud at their mouths as greatly to diminish the extent of the anchorage-ground, and render it necessary to load and discharge the shipping by lighters and launches. (*Turnbull's Cuba*, 217-219.; *Comm. Dict.*, &c., passim.)

Matanzas, though situated in one of the most fertile districts of this noble island, was an inconsiderable place till within the last 40 years. Under the old colonial government, it was merely a subsidiary port to the Havannah, and was not allowed to carry on any direct intercourse with foreign countries; but this impolitic restriction being removed in 1809, Matanzas immediately became the centre of a considerable trade; and the town and its commerce have since continued to increase, with the rapidly increasing cultivation of sugar and coffee, and other colonial staples in the adjoining districts. The great importance of the trade of Matanzas will be seen from the subjoined account of the

Shipments of Sugar, Coffee, and Molasses, from Matanzas in 1847, Vessels cleared out, &c.

MATARO (an. *Illero*), a sea-port town of Spain, in Catalonia, 20 m. N.E. Barcelona. Lat. $41^{\circ} 33' N.$, long. $2^{\circ} 30' E.$ Pop., according to Mifiano, 12,949. The more ancient or Moorish portion of the town stands on a slight eminence, at a short distance from the shore, and is surrounded by walls: its streets are narrow and crooked, with the exception of the Riera, which is wide and straight, lined with rows of trees, and forming an agreeable promenade. The new town, which stretches eastward along the sea-shore, is much larger and more regularly built, with wide streets, and respectable houses. A parish church and a general hospital, with 2 or 3 large buildings, formerly used as monasteries, are the only public edifices. The town is celebrated for the excellence of its red wine and brandy, much of which is exported to the U. States. Its cloth fabrics, which were favourably noticed by Townsend (i. 102.), have much declined; and, since the emancipation of the colonies, its exports of cotton-prints, ribands and lace, have become quite inconsiderable. The port has a ship-building yard; and there is good anchorage for merchant-ships close in shore. "The neighbourhood is very picturesque, and the country-houses and cottages have an air of greater neatness and comfort; the windows are glazed, and the insides of the dwellings display a good stock of furniture. No beggars and fewer ragged people are seen; industry is evidently active; the ground is better cleared, fences (made of the American aloë) are more general and more neatly constructed; nobody is seen basking in the sun. In short, there is altogether a new order of things, quite different from that seen in any other part of Spain." (*Inglis*, ii. 304.)

MATHURA, or **MUTTRA**, a celebrated town and place of pilgrimage in Hindostan, prov. Agra, on the Jumna, 30 m. N.W. Agra; lat. $27^{\circ} 31' N.$, long. $77^{\circ} 33' E.$ It is highly venerated by the Hindoos, from its being the birthplace of their deity Krishna, and consists chiefly of one continued street of temples and ghauts, which, though they do not exhibit the architectural magnificence of similar structures in S. India, have, nevertheless, considerable elegance and richness. Mathura was taken in 1019 by Mahmoud of Ghiznee, who despoiled it of an immense quantity of gold, silver, and gems, threw down many of its temples, and desecrated others by converting them into mosques. Under Achar and his successors, however, the Hindoos were permitted to rebuild and improve the city; and a temple, erected about that period, is said to have cost 60 lacs of rupees. But this splendid edifice was destroyed by Aurungzebe, who built on the spot a mosque with the materials. Another large mosque, built by a Mohammedan governor, is now in a state of decay. Some extensive cantonments are separated from the town by an interval of broken ground covered with ruins. Mathura has a fort, in which is an observatory, founded by the rajah Jye-Singh of Jyepoor. At the end of the last century it was the head-quarters of the commander of Scindia's infantry: it was, however, taken, without opposition, by the British in 1803. (*Hamilton's E. I. Gaz.*)

MATLOCK, a village and par. of England, celebrated for its mineral waters, hund. Wirksworth, co. Derby, on the Derwent, 14 m. N. by W. Derby, and 125 m. N.N.W. London. Area of par., 3,960 acres. Pop., in 1841, 3,782. The town is beautifully situated, partly in a valley and partly on the slope of a hill rising E. from the Derwent, here crossed by a neat stone bridge: the houses are chiefly of stone. The church, picturesquely situated on the brow of a rock, rising perpendicularly above the river, and embosomed in trees, is a small edifice, in the perpendicular English style, with a square tower at its W. end: the living is a rectory (ann. val. 320*l.*), in the gift of the Dean of Lincoln. There are also four places of worship for Wesleyan Methodists, Independents, and other dissenters, with attached Sunday-schools, providing religious instruction for between 400 and 500 children of both sexes. There is also an endowed school, for clothing and educating 30 boys. In 1839, a cotton-mill employed about 300 hands; it has, also, a large paper-mill; and the lead mines in the neighbouring hills employ about 150 hands. A museum of mineralogy, established here a few years ago, contains a great many valuable specimens of ore, &c., peculiar to this district. Visitors purchase considerable quantities of Derbyshire spar. But the chief dependence of the inhab. is on the supply of those

who come here during summer, to use the mineral waters; which are considered beneficial in cases of glandular affections, scrofula, bilious disorders, pulmonary complaints, and diabetes. The springs, which first attracted notice, for their medicinal qualities, in 1698, when the first, or old bath, was built, are about $1\frac{1}{2}$ m. S. of Matlock, on the W. bank of the river; and here are the hotels, libraries, and lodging-houses, to which the visitors chiefly resort. Other two springs have been discovered, each of which is now enclosed, with a handsome edifice, conveniently fitted up with baths and pump-rooms. The waters have a temperature of about 66° or 68° Fahr., and hold in solution only a small quantity of carbonate of lime, their specific gravity being less than that of ordinary water: it would hence appear, though having a lower temperature, greatly to resemble the Buxton and Bristol waters.

The scenery of Matlock-dale is peculiarly picturesque and romantic, diversified with rugged beetling crags, strongly contrasted with the fine verdure of the valley; the most prominent objects being the High Tor and Masson Hill. The former rises almost perpendicularly about 300 ft., the upper half of which is a broad mass of naked brown rock, from which fragments often fall into the river which flows immediately below, obstructing the channel, and greatly increasing the impetuosity of the stream after heavy rains. Opposite the High Tor, but of a less bold, though loftier, character, is Masson Hill; on the summit of which are the heights of Abraham, rising about 750 ft. above the river, and not only overlooking the whole dale, but commanding an extensive prospect over a considerable part of Derbyshire. Willersley Castle, the seat of Mr. Arkwright, son of the great founder of the cotton manufacture, stands on a commanding eminence E. of the Derwent. (*Parl. Rep.; Priv. Inform.*)

MAUCHLINE, a neat village of Scotland, co. Ayr, on an eminence 1 m. N. from the river Ayr, 27 m. S. by W. Glasgow. Pop., in 1841, 1,336. The only public buildings are the par. church, Free church, and a chapel of the Associate Synod. It has a woollen mill, which employs about 25 hands: and hand-loom weaving and tamboouring for the Glasgow manufacturers employ about 200 hands. It has also a manufacture of beautifully jointed and varnished wooden snuff-boxes, similar to those made at Cumnock and Laurence Kirk. There are 4 schools in the town, of which 3 are endowed: 2 subscription libraries, and a savings' bank. The village of Catrine (i. 563.), is 3 m. S.E. from the town.

This place, trifling as it is, has been "married to immortal verse." Burns lived for nearly 9 years at the farm of Mossiel, $\frac{1}{2}$ m. N. of the village: and Mauchline was the birthplace of "bonnie Jean," and is the scene of two of his inimitable poems, "The Jolly Beggars," and "The Holy Fair."

MAULMAIN, or **MOULMEIN**, a sea-port town of India beyond the Ganges, cap. British prov. Martaban, at the mouth of the great river Than-lueng, having N. the Birmese town of Martaban, on the opposite side of the river, and W. the island of Balu, which serves as a natural breakwater to defend the port from the heavy seas than would otherwise be thrown in from the W., 100 m. S. S. E. Rangoon, 27 m. N.N.E. Amherst; lat. $16^{\circ} 29' 36'' N.$, long. $97^{\circ} 35' 6'' E.$ It was founded so late as 1825, when the site was selected by Sir A. Campbell, as eligible as well for a commercial as a military station. It is about 200 ft. above the level of the river, and extensive and fertile plains stretch eastwards from it towards the mountains. Its port is good, and, from its extensive command of internal navigation, it promises to become a considerable emporium. The principal articles of export are teak timber, and rice; but there is also a considerable export of Pegu cutch, stic-lac, betel-nut, ivory, cocoa-nut, sapan wood, rice, &c. The imports consist principally of European cotton goods, and marine stores. The principal trade of the place has hitherto been carried on with Calcutta, Madras, Rangoon, and Pinang; but, in 1837, a direct trade was commenced with London. Ship-building is carried on to a considerable extent. We have no very recent accounts of the pop.; but, in 1848, it was estimated at 35,000. An English newspaper (the *Maulmain Free Press*), from which we borrow the following details, is published once a week:—

Imports, 1847.				Exports, 1847.

MAURA (SANTA).

"The principal article of commerce at Maulmain is teak timber, with which from 25 to 30 ships annually load for England. The quantity of teak exported to that country from 1840 to 1847, and its estimated official value, was as follows : —

Year.	No. of Tons.	Price per Ton.	Value.
1840	4,952	Rs. 25	12,380
1841	6,399	25	15,998
1842	11,817	25	29,543
1843	10,529	30	31,587
1844	14,345	30	42,375
1845	13,360	40	53,440
1846	16,798	45	75,591
1847	7,873	50	39,365

"Maulmain is a free port, on the same footing as Singapore, &c. There is no custom-house and no duties on seaborne goods; but foreign sugar, and sugar from Singapore and Malacca, is contraband.

"The coins in use are the Company's rupee and its subdivisions, the same as current in Calcutta. The English sovereign is generally worth 11 rupees, and the Spanish dollar 250 rupees per 100 dollars.

"The weights are the Madras vials equal to 3.065 lbs. avoirdupois, or say 3 lbs.; in this there are 100 ticals. The Bengal bazar measure of 82 lbs. is also occasionally used.

"The measures principally used are called baskets; they are of uncertain size. A basket of cleaned rice is about 65 lbs. in weight; of mixed, about 60 lbs.; paddy, 51 lbs.

"Ship-building is well adapted to the place, and some of the finest teak ships in the world have been built here. There are several dry docks, though not of a very efficient description, for repairing vessels. Her Majesty's government bought here, during 1847, upwards of 5,000 tons of teak for the royal dock-yards in England.

"The Tenasserim Provinces are about 500 m. long and 40 to 80 broad, forming an area of 30,000 sq. m. They extend from 17° 30' to 10° 10' between the parallels of longitude 97° 30' to 99° 20'. The population of the provinces exceeds 150,000. The towns of Tavoy and Mergul, to the southward of Maulmain, are the only other places of importance in the provinces. Their trade is confined to country craft. A constant intercourse is carried on between Maulmain and Rangoon (the commercial capital of Burmah), and a vessel arrives and departs from one port to the other almost daily.

"Maulmain is subject to Bengal in civil matters, and to Madras in military. It is ruled by a commissioner and several assistants.

"From May to Sept. are the rainy months, and perhaps in no other part of the world does it pour down so vigorously. In the 4 months of July, August, September, and October, 195 inches of rain have been known to fall, of which 70 inches was in the single month of July. Notwithstanding this excessive moisture, the climate is exceedingly favourable to the European constitution, and is considered about the healthiest in Asia. The number of deaths in an European regiment of 800 men averaged 3 per cent. per ann. in a range of 5 years." (*Maulmain Free Press*, 20th Oct. 1848.)

MAURA (SANTA) (an. *Leucas*), one of the Ionian islands, off the W. coast of Greece, and separated from it only by a channel about 100 yards broad, and so shallow, as in some places to be fordable: 48 m. S. E. Corfu, and 7 m. N. Cephalonia, its cap. Amaxichi being in lat. 33° 50' 15" N., long. 20° 43' E. Length, 23 m.; average breadth, 8 m. Area, about 180 sq. m. Pop., including troops, in 1836, 17,385. It is intersected by a chain of mountains, running N. and S. through its whole extent, and rising in some places to the height of 3,000 ft., whence secondary ridges branch off in various directions, forming a few small valleys admitting cultivation; but most of the produce is raised on a narrow strip of land, stretching about 20 m. along the N. W. side of the island, and comprising the residences of the greater part of the pop. The soil is generally very scanty; and many parts of the surface exhibit nothing but bare rock, interspersed with small patches of verdure: indeed, only about 1-8th part of the surface is capable of cultivation. In the valleys, the soil is either alluvial, or a red loamy earth, tenacious of moisture. There are no rivers; and, though numerous torrents flow from the mountains during the winter months, their channels are quite dry in the summer. There is a winter lake, if we may so call it, about 6 m. S. of Amaxichi, in the bottom of a valley, surrounded by lofty mountains, which dries in summer, and produces rich crops. At the S. end of the island is a shallow lagoon called the Venetian harbour, now rapidly filling up by the accumulation of sand and mud, the banks of which are said to be exceedingly unhealthy. The temperature of Santa Maura, like that of the other islands, is extremely variable: the thermometer in autumn often rising or falling 20° in 24 hours. In the valleys it seldom falls to the freezing point; but occasionally there is snow on the hills. The quantity of rain, and the seasons in which it falls, are much the same as in the adjacent islands. The low grounds are very un-

VOL. II.

MAURITIUS (THE).

293

healthy; and fever usually prevails at Amaxichi during summer, attended with a mortality in some years of 1 in 19 of the pop.: indeed, most of the natives, except those living on the mountains, present a very sickly appearance. (*Major Tulloch's Reports*.) The quantity of corn raised in the island is barely sufficient for half the consumption of its inhab.; but wine, olive oil, and several varieties of fruit, are produced in great abundance. The sides of the hills afford excellent pasture, and are grazed by large numbers of sheep and goats. Game is plentiful, and bees form an object of rural economy. The salt-pans near Amaxichi produce annually from 5,000 to 6,000 tons of basalt, which, as well as wine, oil, and cotton, are the chief articles of export. The inhab. are of Greek origin, and belong to the Greek church. Many of them are employed as fishermen and sailors; while others, especially at harvest season, cross to the neighbouring continent in quest of agricultural employment.

It has several good ports, and some towns; but none is of any importance, except the cap. AMAXICHI (which see).

The ancient Leucas once formed a part of the continent; for Homer expressly terms it *Ἀστυὶ Ἥρακος*, in opposition to Ithaca and Cephallenia. So late as the time of Thucydides, the Peloponnesian fleet was more than once conveyed across the isthmus; and Livy informs us, that it had its peninsular shape even in the Macedonian war. *Leucadia, nunc insula et vadoso freta quod perfossum manu est. ab Acarnania divisa, tum peninsula erat occidentis regione arcis faucibus cokerens Acarnania. Quingentus ferme passus longe fauces erant: late haud amplius centum et viginti. In his angustiis Leucus posita est, colli applicata verso in orientem et Acarnaniam.* (*Hist. lib. xxxii. 17.*) The cut here mentioned, called Dioryctus, was 3 stadia in length, and, in Strabo's time, was crossed by a bridge. The famous Leucadian promontory (now *Cape Ducato*) is a long ridge of white marble rocks, projecting S. about 2 m., terminating in a precipice 200 ft. high. It was surmounted by a temple of Apollo, and Virgil represents it as an object of dread to mariners: —

Mox et Leucatae nimbos cacumina montis,

Et formidatus nautis aperitur Apollo.

Æn. lib. 274.

but it is wholly indebted for its immortality of renown to its being

The Lover's refuge, and the Lesbian's grave.

— the spot whence Sappho precipitated herself into the ocean, resolved either to recover the affections of Phaon, or to die in the attempt. (*See Ovidii Epist. Sappho Phaoni*, lin. 165., &c.)

Not far from the promontory stood the very ancient town of Nericum, mentioned by Homer as *ἑνερικὸν πρὸς ἑλιδῶν*, "a well-built city," and of which there are still some small vestiges. The position of the ancient Leucas is fixed by Livy in the above passage close to the narrow strait which divides the island from Acarnania; and Dr. Holland mentions the ruins of an ancient town about 2 m. S. of Amaxichi, exhibiting the remains of massive old Greek walls, ascending a narrow ridge near the sea, and of numerous sepulchres, which appear among the vineyards covering its declivity. (*Travels in Greece*, p. 63.) The modern history of Santa Maura is closely connected with that of the IONIAN ISLANDS generally; and to that article the reader is referred. (*Holland*, ii. 34; see also *Dodwell's Greece*, i. 62., &c.)

MAURITIUS (THE), or ISLE OF FRANCE, an island in the Indian Ocean, belonging to Great Britain, situated between 19° 58' and 20° 32' S. lat., and 57° 17' and 57° 46' E. long., from 70 to 80 m. N. E. the Isle de Bourbon, and 500 m. E. Madagascar. It is an irregular oval; length, N. E. to S. W., about 36 m.; breadth varying from 18 to 27 m. Area estimated at nearly 500,000 acres. Pop., in 1846, 161,089, of whom 49,305 were ex-apprentices (slaves) and their children, 56,245 Indian immigrants, and 1,627 military, sailors, &c. "From whatever quarter it is approached, the aspect is singularly abrupt and picturesque. The land rises rapidly from the coast to the interior, where it forms three chains of mountains, from 1,800 to 2,000 ft. in height, intersecting the country in different directions. Except towards the summit, these are generally covered with wood, and in many parts cleft into deep ravines, through which numerous rivulets find their way to the low grounds, and terminate in about 20 small rivers, by which the whole line of coast is well watered, from the foot of the mountains to the sea. Though, from its mountainous and rugged character, a great part of the interior is not available for any useful purpose, yet extensive plains, several leagues in circumference, are to be found in the high lands; and in the valleys, as well as along the coast, most of the ground is well adapted either for the ordinary purposes of agriculture, or for raising any description of tropical produce. Extensive forests still cover a considerable portion of the districts of Mahébourg, the Savanna, and Flacq, and in the centre of the island are several small lakes. The soil, in many

X

parts, is exceedingly rich, consisting either of a black vegetable mould, or a bed of stiff clay of considerable depth; occasionally the clay is found mixed with iron ore and the debris of volcanic rock. In the neighbourhood of Port Louis, and generally in the immediate vicinity of the sea, there is but a scanty covering of light friable soil over a rocky surface of coralline formation. The whole coast is surrounded by reefs of coral, with the exception of a few openings, through which vessels can approach the shore; and at these points the different military posts for the defence of the island have been established. There is a marked difference in the climate of this island in different situations; the windward (or S.E.) side enjoying a lower temperature by several degrees than the leeward (N.W.), owing to the cooling influence of the S.E. breeze, which prevails during most part of the year.

"In so far as regards temperature, rain, physical aspect, and diversity of climate, this island exhibits a very striking resemblance to Jamaica; though, being S. of the line, the seasons are reversed; summer extending from Oct. to April, and winter during the rest of the year. The principal rainy season is from the end of December to the beginning of April, but showers are frequent at all times. Hurricanes are of frequent occurrence, and create great devastation, with much loss of life; they principally occur in January, February, and March. So far as can be ascertained from the statistical returns of the island, the climate does not exert any prejudicial influence on the health of the white resident pop., though it is by no means favourable to the negro race." (*Tulloch's Report on the Sickness, &c., of the Troops in W. Africa, &c.*, p. 2, 4 c)

Previously to 1825, the sugar and other articles imported from the Mauritius into Great Britain were charged with the same duties that were laid on such articles when imported from India. But, at the epoch now alluded to, the produce of the Mauritius was admitted into our markets at the same duties as W. Indian produce, which were then materially lower than those imposed on the produce of our Eastern possessions. This alteration of the duties gave a great stimulus to cultivation in the Mauritius, particularly to that of sugar, which has since been raised, to the almost total exclusion of coffee, cotton, and indigo, that were previously produced in considerable quantities, the coffee especially being of excellent quality. Wheat and maize are raised in small quantities, with yams, manioc (introduced by the French), potatoes, bananas, and other vegetables. But the island is almost wholly indebted for its supplies of provisions to Hindostan, the Cape of Good Hope, Madagascar, the Isle de Bourbon, &c. Next to sugar, black-wood, or ebony, of which there is an immense supply, and tortoise-shell, are the principal articles of export.

The produce of sugar in the Mauritius amounted, in 1812, to less than one million lbs. In 1814 it amounted to 1,084,214 lbs.; and, in 1818, to about 8,000,000 lbs. Since then, but especially since the modification of the duties in 1825, there has been a most extraordinary increase in the growth of sugar in this island. It amounted in

Mts.		Mts.	
1825 to	72,946,877	1845 to	114,203,207
1826 -	84,480,189	1846 -	112,494,727
1840 -	81,925,399	1847 -	114,285,749

Most part of the sugar produced in the island is sent to England, the imports thence into the U. K. having

886,676 cwt., and in to the supplies sent shipped for Australia, extraordinary extension the attention of the other great colonial the U. er of this important settlement was ad M. de la Bourdonnaye, appointed The Isle de France had hitherto that of Bourbon, and was, at the governor, in the most impoverished as imaginable. But M. de la Bour- My perceived the importance of the so excellent harbours rendered of the ce to any European power having, e, possessions in India; and he set went with a zeal, sagacity, and suc- retly been equalled, and never sur- extending the culture of the sugar , and indigo, he introduced the ma- nica, and cinnamon, cloves, pepper, ish islands; though the latter, with area, have not answered his expect- he seat of government at Port Louis

* These are French lbs., and are about 2 per cent. heavier than English lbs.

which he may be said to have created as well as fortified: and constructed numerous roads, aqueducts, and other useful public works. His administration continued only for 11 years; and in that short space he contrived to change the whole aspect of the country, and rendered it a most prosperous and valuable colony.* Even after the possessions of France in India had all fallen into our hands, the Mauritius continued to be of importance to her, and proved how justly M. de la Bourdonnaye had appreciated its capabilities as a naval station. It was estimated that, during the first 10 years of last war, the value of the British ships captured by privateers and other cruisers from the Mauritius amounted to 2,500,000*l*. At length, a formidable armament being sent against it in 1810, it surrendered to our arms, and was definitively ceded to us in 1815.

Every body knows that this island is the scene of St. Pierre's intimitable tale of Paul and Virginia. The wreck of the *St. Geran*, so striking and affecting an incident in the story, is a real event, which took place on the 18th of August, 1744. (See *Almanac de l'île Maurice pour 1837*; and *Parl. Papers*.)

MAYBOLE, a bor. of barony and market-town of Scotland, co. Ayr, distr. Carrick, of which it is the cap., on the slope of a hill with a S. exposure, 8 m. S. Ayr, and 28 m. S. by W. Glasgow. Pop. of par. in 1841, 7,027. The town consists mainly of an antique well-built street, interspersed with numerous modern buildings. The superiority of the old houses is owing to Maybole having been, in ancient times, the town residence of the aristocracy of Carrick; and the remains of sundry baronial mansions are still more or less entire. Of these the most imposing is "the Castle," once occupied by the Earls of Cassilis, ancestors of the Marquis of Ailsa, and now (1836) by the factor of the latter. It has recently been completely repaired and renovated. The bor. has a par. church, a Free do. and a U. Presbyterian chapel. Handloom weaving, in connection with Glasgow, is extensively carried on, employing from 600 to 800 hands. The weavers are mostly Irish; boys and females engage in the work, and perpetuate the poverty inseparable from the business. A weekly market is held in the town; and it has 3 branch banks, and a savings' bank. The parish school and the other schools bear a good character. There are 2 subscription and 3 circulating libraries. The assessment for the poor amounted, in 1847, to 600*l*. Some of the best farming in Scotland may be seen in the vicinity of Maybole, especially on the estate of Mr. Kennedy of Drummellan.

Maybole, being the cap. of the bailiery of Carrick, was the seat of the courts of the district previously to the abolition of hereditary jurisdictions in 1747. The remains of Crossraguel Abbey are situated near the town, on the W. A celebrated disputation, which lasted three days, between Quintin Kennedy, one of its abbots, and John Knox, took place, in 1561, in a house in Maybole, now "the Red Lion Inn;" it is needless to add, that it ended, as is universally the case with such disputes, in a drawn battle, each party claiming the victory, and conceiving that he had demolished his antagonist. (*McCrie's John Knox*, p. 241. ed. 1839; *New Statistical Account of Scotland and Ayrshire*, p. 348.)

MAYENNE, a dep. of France, reg. N.W., formerly comprised in the prov. of Maine; between lat. 47° 45' and 49° 24' N., and long 0° 5' and 1° 20' W., having N. Manche and Orne, E. Sarthe, S. Maine-et-Loire, and W. Ille-et-Vilaine. Length, N. to S., 55 m.; average breadth about 20 m. Area, 514,866 hectares. Pop. (1846) 268,439. A mountain chain, though of no great height, bounds Mayenne to the N., from which two ranges strike off to the S., one forming the E., and the other a part of the W. boundary of the dep. It slopes gradually from N. to S., in which direction it is intersected near its centre by its principal river the Mayenne. The latter rises in the dep. of Orne, about 12 m. W. Alençon, running at first S.W., and afterwards generally S., through the depts. of Mayenne and Maine-et-Loire; in the last of which, after receiving the Sarthe and Loire, it assumes the name of the Maine, and falls into the Loire, after an entire course of nearly 130 m. (See also *MAINE-ET-LOIRE*.) Mayenne, Laval, Château-Gontier, and Angers are on its banks. There are numerous small lakes in this dep. In 1834 it was supposed to comprise 384,296 hectares of arable land; 69,236 do. pasture; 26,379 do. woods; and 24,429 do. heaths, wastes, &c. More corn is grown than is required for home consumption. In 1835, the total produce was reckoned at upwards of 3,000,000 hectolitres, chiefly wheat, oats, and rye. The annual produce of cider is said by Hugo to be about 600,000 hect. Some inferior wine is produced, but in small quantities only. Flax, hemp, chesnuts, and some other fruits,

* The signal services rendered by M. de la Bourdonnaye here and in India met with a most ungrateful return. On his return to France, in 1748, he was thrown into the Bastille, where he was imprisoned for more than three years, without, as it turned out, there being the smallest foundation for any one of the charges made against him! He died, the victim of this disgraceful treatment, in 1755. (See *Biographie Universelle*, art. *Mémoires de la Bourdonnaye*.)

are the other principal products. Property is very much subdivided; and many of the farms, or rather patches called *closeries*, are so very small that they do not admit of the use of the plough, and are cultivated by the spade only! In 1835, of 86,803 properties subject to the *contribution foncière*, 27,137 were assessed at less than 5 fr., 12,009 at from 5 to 10 fr., and 12,221 at from 10 to 20 fr., and only 17 were assessed at 1,000 fr. or upwards. We need not, therefore, be surprised to learn that the occupiers are generally destitute of either capital or enterprise, and strongly attached to routine practices. In 1830, there were about 214,000 head of cattle and 144,000 sheep in the dep.; the produce of wool being estimated at 175,000 kilogr. a year. The woods yield excellent timber, a good deal of which is appropriated to ship-building. Some extensive manufactures of linen stuffs and yarn were formerly established at Laval and Château-Gontier. But though these have fallen off, the linen and cotton fabrics, including printed handkerchiefs, &c., of the dep., still enjoy a high reputation. The iron trade of Mayenne is of considerable importance; and it also furnishes superior paper. It is divided into 3 arronds.; chief towns, Laval the cap., Mayenne, and Château-Gontier. Total public revenue (1844), 7,898,863 fr. (*Hugo*, art. *Mayenne*; *Official Tables*.)

MAYENNE, a town of France, in the above dep., cap. arrond., on both sides the Mayenne, 18 m. N.N.E. Laval. Pop. (1846) 8,970. The town-proper stands on the right, or W., bank of the river; the portion on the opposite bank, though comprising a third of the entire pop., being only a suburb. They are connected by a bridge. This is an ill built town; its streets are steep, irregular, and inconvenient, and its houses old and odd-looking.

Mayenne has a ruined castle, two par. churches, two hospitals, a good town-hall, &c.; and manufactures of linen and cotton fabrics; the former of which has, however, greatly declined of late years, while the latter has increased. (*Hugo*, art. *Mayenne*; *Guide du Voyageur*.)

MAYN, or MAIN, a river of central Germany, which has its source in Bavaria. It is formed by the union, about 24 m. N.W. Bayreuth, of the White and Red Mayn; the former rising in the Pichtelberg, and the latter in the Frankenjura, about 8 m. S.S.E. Bayreuth. The resulting river flows, with a gentle current, generally W., but with a very tortuous course; first traversing the circles of Upper and Lower Franconia, in Bavaria, then dividing Hesse-Cassel and Nassau, on the N., from Hesse-Darmstadt, on the S., and intersecting the territory of Frankfurt; till it ultimately falls into the Rhine, nearly opposite Mentz, after an entire course of about 230 m. Though shallow, it is of equal depth, and is navigable throughout 7-8ths of its extent, as far as the confluence of the Regnitz, near Bamberg. The Mayn is of considerable importance as a means of traffic; and Frankfurt, especially, owes all its consequence, as a commercial city, to this river. But few rivers, at least in civilised countries, presenting such facilities for improvement, have been more neglected; and, in addition to other inconveniences, the number and amount of the tolls levied on the Mayn oppose serious obstacles to its navigation. A vessel, in passing from the Rhine to Wertheim, in Baden, has to pay tolls amounting to 23 kreutzers per cwt., or 14*s*. a ton, besides fees, &c. A commission has, however, been recently appointed, for examining the state of the river, and introducing some improvements. The Mayn will, probably, at no distant period, form a part of the line connecting the Rhine and the Danube; a canal having been already commenced, which is to run from Dietfurth, on the Altmühl, to Bamberg, on the Regnitz. Besides the Regnitz, the Tauber, Mümling, and Gersprenz are its chief affluents from the S., and the Rodach, Saale, Kinsig, and Nidda from the N. Bayreuth, Bamberg, Wurtzburg, Aschaffenburg, Hanau, Offenbach, and Frankfurt are either on, or immediately adjacent to, the banks of the Mayn. (*Diet. Géog.*; *Berghaus*; *Private Inform.*, &c.)

MAYNOOTH, an inland town of Ireland, prov. Leinster, co. Kildare, on the Lyall Water, an affluent of the Liffey, 14 m. W. Dublin. Pop. in 1841, 2,129. It is without trade, and depends principally for its support on the contiguous college. It has a par. church, a Rom. Cath. chapel, and the ruins of a large castle, once occupied by the family of Kildare.

The Royal College of St. Patrick, Maynooth, was founded in 1795, for the education of persons designed for the Roman Catholic ministry in Ireland. It is vested in a board of trustees, of whom the Roman Catholic archbishops are members *ex officio*, the remainder being selected from the Catholic hierarchy and nobility, in the proportion of 7 of the former to 6 of the latter. The government of the college is administered by a board of visitors, partly chosen by election, and partly nominated by the Crown, under the provisions of the late act; but the powers of the visitors in general do not relate to or interfere with any matter having refer-

once to the tenets, discipline, or authority of the Romish church. These important matters are entrusted to the care of the elected visitors, who must be members (and usually dignitaries) of the Roman Catholic church. The chief functionaries of the establishment are the president, vice-president, and 3 deans; besides whom, there are 3 professors of Divinity, and 7 others, giving instruction in various branches of literature and science. The number of students, on the first opening of the classes, in 1795, amounted only to 50; but it has since progressively increased to 450, to which it was limited, by the inadequacy of its funds, to admit of further augmentation. But under the new regulations provision is made for 520 students. These are to be comprised, 250 in four junior classes, and 250 in three senior do., with a class of 20 superior students, who each derive, exclusive of other allowances, an income of 55*l.* a year from a fund left by a Lord Dunboyne for that purpose. The funds for defraying the expense of the establishment were derived, previously to 1845, from an annual parliamentary grant (usually of 8,928*l.*), and from bequests and fees. These, however, were quite insufficient for the proper support of an institution having to provide for the education of the Catholic clergy of Ireland. The salaries of the professors and the accommodations of the students were alike inadequate and paltry; while, despite this miserable economy, the institution was getting into debt, and the number of pupils was unequal to the wants of the priesthood. It is needless to say that the consequences of such a state of things were most prejudicial to the public interests; and to obviate these, and to place the institution on a footing more suitable to its important object, the annual parliamentary grant (of 8,928*l.*) was changed in 1845 to a permanent grant of 26,360*l.* a year, a sum of 10,000*l.* being, at the same time, voted for the repair and enlargement of the buildings and library. The trustees of the college have been also authorized to hold such land and other fixed property as may be left for its behoof, up to the value of 3,000*l.* a year.

In consequence of this liberal addition to its funds, the emoluments of the professors, and the education and accommodation of the pupils, have been materially improved; so that the most beneficial effects may be expected to result from the measure,—directly, by the greater allurements it holds out to professors of superior merit and attainments to enter the college; and indirectly, by the grateful sense which they and the pupils cannot but feel, of the liberality and munificence of the government. Hitherto the students have belonged, with but few exceptions, to the middle and lower classes of R. Catholic farmers and occupiers. Public examinations are held twice a year. The site of the establishment is a tract of 54 acres, adjoining the town; and the buildings, which form three sides of a quadrangle, comprise a chapel, refectory, library, lecture-rooms, dormitories, and professors' residences. The library contains about 10,000 vols., chiefly on theological subjects.

There certainly has been much to object to in the course of education that has been followed at Maynooth; and the priests which it has sent forth have, for the most part, contrasted very unfavourably with those educated at foreign seminaries. We, however, are inclined to think that this untoward state of things has been principally ascribable to the poverty and destitution in which the college was so long permitted to languish. Its professorships could be no object to men of ability; and the teachers and students must have been equally disgusted when they compared the pittance allowed them by the state, with the vast sums lavished on the established church, though supplying only the wants of a small minority of the population. But a great change for the better may be now fairly anticipated. The new endowments will make chairs in Maynooth be sought after by men of superior attainments; while the better education, and the greater comfort in which the students will be supported, will make it be resorted to by a higher order of pupils, and will tend to soften prejudices and asperities, and to make the priests less indisposed to the English connection.

Considering that Maynooth had received an annual grant of nearly 9,000*l.* a year since its foundation in 1795, the intolerant opposition made to the wise and liberal measure of 1845 could hardly have been anticipated. Happily, however, it was not allowed to thwart its success, which was important not on its own account merely, but also as being (as we trust is the case) the first step towards that endowment of the Catholic clergy of Ireland, which is, in all respects, so indispensable to the well being of the country.

MAYO, a marit. co. of Ireland, prov. Connaught; of which it occupies the N.W. portion; having N. and W. the Atlantic, E. Sligo and Roscommon, and S. Galway. Area, 1,355,048 acres; of which 425,124 are unimproved mountain and bog, and 57,940 water, consisting principally of Loughs Mask, Conn, Carra, &c. The coastline is extremely irregular, from its being more deeply indented with bays and arms of the sea than any other

part of Ireland. On the W. it is fenced with numerous islands, and it has several fine harbours, of which, however, very little use is made. It has every variety of surface, rising, in parts, into high mountains and rugged wastes; but comprising, also, a large extent of comparatively flat and fertile land. The substratum is generally limestone; and, from the thinness of the soil and the humidity and mildness of the climate, it is better suited for grazing than for tillage. Property in a few hands. There were formerly some very extensive grazing farms in this co., but their number and size have been very greatly diminished within the last half century. Land being here indispensable to existence, the competition for small patches is quite intense; and it is said that any amount of rent that may be asked is sure to be promised! It was formerly usual to let land on the village, or partnership, system; but of late years this practice has luckily been getting into disuse. Unfortunately, however, the *con-acre* system seems to be rapidly extending; and this is, if possible, worse than the other. (See *ante*, p. 40.) If the ground be very rich it is usual, on this system, to begin by planting potatoes on the grass; but the far more common practice is to prepare for potatoes by paring and burning the surface and spreading out the ashes as manure. Hence, notwithstanding the increase of cultivation, the condition of the land, and of the great bulk of the occupiers of land, has deteriorated, and is as bad as possible. Average rent of land 6*s.* 1*d.* per imp. acre; but the best grazing lands fetch above 40*s.* per Irish acre. Iron used to be made in this co.; the works have, however, been long abandoned, on account of the want of fuel. It has, also, some valuable slate quarries; but its mineral riches have been but very imperfectly explored. The linen manufacture, which had been pretty widely diffused, has materially declined, and its place has not been occupied by any other department of industry. Principal rivers, Moy, Guishden, Deal, Owenmore, and Robe. Principal towns, Castlebar, Ballina, and Westport. Mayo is divided into 9 baronies and 63 parishes. It sends 2 mems. to the H. of C., both for the co. Registered electors, in 1849-50, 1,014. In 1841, Mayo had 68,425 inhabited houses, 70,910 families, and 384,487 inhab., of whom 194,198 were males, and 194,689 females.

MAZAMET, a town of France, dep. Tarn, cap. cant. on the Arnette, a tributary of the Tarn, 32 m. S.S.E. Albi. Pop., 1846, 6,626. Its pop. and prosperity are increasing; it has some manufactures of woollen cloth; several dyeing establishments and paper-mills, and considerable annual fairs for cattle, wool, &c.

MAZANDERAN, a prov. in the N. of Persia (an. a part of *Hyrkania*), separated from Irak-Adjemi by the lofty ridge of Elburg, and bounded N. by the Caspian Sea, E. by Khorassan, and W. by Ghilan. Length from W. to E., 200 m.; average breadth, 50 m.; area 10,000 sq. m. Pop. 150,000 (exclusive of the nomad tribes of Kadjars, Kodjavends, and Modanlus). The S. parts of the prov. are mountainous, abounding with oak timber and full of swamps; but the valleys are fertile, producing the finest rice in vast quantities. Besides many smaller streams, the Mazanderan has two principal rivers, both having their sources in the Elburz mountains, and falling into the Caspian Sea. With respect to temperature, the prov. may be divided into a warm and cold climate, the former being that of the flat country near the sea, and the latter that of the mountain region; in all parts, however, the climate is extremely variable with respect both to temperature and moisture. (*Fraser's Caspian Sea*, p. 48.) Winter and spring are the healthiest seasons; for during the summer and autumnal heats, such exhalations arise from the fens and marshes overspreading this part of Persia, as to render the air most insalubrious. Agues and dropsies, rheumatism and eye diseases, are the prevalent disorders, and the natives have generally a sallow and bloated appearance. Heavy rains fall in Oct., Nov., and Dec.; snow also falls, but never lies long on the ground; and in spring the rivers almost invariably overflow. The cultivation of rice is the most important branch of agriculture. Cotton and sugar, also, are raised; but the canes are small, and the produce is dark, moist, and of very inferior quality. Tobacco does not succeed, nor is opium much cultivated, though the poppy grows abundantly. Barley is sown occasionally in spring as a green crop for horses and cattle; it is cut about the middle of May, after which the ground is ploughed, and planted with rice. Wheat is little cultivated, and is of bad quality; but excellent flour is imported from Astrakhan. Unhusked rice is used as dry food for horses and mules. Silk was formerly raised only in small quantities, but it appears that since the government monopoly ceased some few years ago, more attention has been paid to it, and its price has fallen. The trade of the prov. is chiefly with Russia in rice, silk, and cotton, which it exchanges for silk, cotton, and woollen fabrics, corn, tobacco, cutlery, &c.

The inhabs. are described as "vain, ignorant, and arrogant, considering themselves as persons of mighty im-

portance, superior to all strangers. Their ignorance of every thing beyond their own prov. is profound to a degree hardly credible. Their bigotry in religious matters is excessive, though chiefly confined to forms; for there are few who do not transgress every article of inhibition: all of them drink strong liquors and eat opium." In their appearance and dress they greatly resemble other Persians, but swarthy and almost black men are of more frequent occurrence than elsewhere. The natives are regarded as the most warlike of the Persians; and, in the time of Timour Bec, they defended their retreats and castles with so much courage and ability, as to secure their independence. This prov. is also said to have been the grand seat of the war between the Sefeed Deeve (or White Demon) and Rustom, prince of Zablestan; and the relief of his sovereign, who had been besieged in the city of Mazanderan, is one of the most glorious exploits recorded in the life of the Persian hero. The chief cities are Sari, Balfrosh, Ferabad, and Amul. Most of the towns and villages are open, well built, and delightfully situated either on verdant hills or in fertile and well-watered valleys. Among the numerous public works of Shah Abbas the Great, is a magnificent causeway of great length, running nearly parallel to the Caspian. The pavement, even now, is perfect in many places, though it has hardly ever been repaired. In some places it is above 20 yards wide, with ditches on each side; and on it are many bridges, under which the water is conveyed to the rice-fields. (*Fraser's Trav. on the Shores of the Caspian; Kimeir, &c.*)

MAZZARA (an. *Emporium*, or *Massara*), a sea-port town of Sicily, on its W. coast, intend. Trapani, cap. distr., on the Salemi (an. *Mazzara*), at its mouth, 11 m. S.E. Marsala, lat. $37^{\circ} 39' 56''$ N.; long. $12^{\circ} 24'$ E. Pop., in 1831, 8,365. It is surrounded by an old wall of Saracenic construction, flanked by small square towers, and has an old ruinous castle at its S.W. angle. The domes of its churches give Mazzara an imposing aspect from the sea; but the contrast, on entering the town, is no less striking. The streets are narrow, unpaved, filthy, and swarm with pigs: the public buildings, for civil purposes, are large, heavy, and mean; and those for ecclesiastical purposes, being very numerous, we need not wonder that it should have become a common saying, "that every house in Mazzara has a priest and a pig;" the latter being by far the more useful animal of the two. The principal square has a singular appearance, from the antiquated style of its architecture; probably of the 11th century, from its having an equestrian statue of Count Roger destroying a Saracen, over the cathedral gate. Besides the cathedral, an edifice, remarkable for its fine cupola, the principal buildings in this square are the bishop's palace, the senate-house, and the residence of Count Gazziri. "In the cathedral porch are preserved three sarcophagi; the finest of them bears a bas-relief, representing the battle of the Amazons; the second, the rape of Proserpine; the third, and most inferior, the Calydon hunt. At the convent of St. Michael is a Roman tomb, and some marble inscriptions; these, with a small collection of Punic, Saracenic, and Roman coins, are nearly the sum of the antique remains. Nor are there any modern specimens of the fine arts." (*Smythe's Sicily*, 226.) Mazzara has an hospital, a college, and a theatre. Its port, which now, as in antiquity, is formed by the mouth of the river Salemi, is convenient enough for boats and small craft, but larger vessels are obliged to anchor in an exposed roadstead, in from 8 to 10 fathoms water. The entrance of the port is ornamented by a statue of St. Vitus, the tutelary saint of the town, in whose honour a festival is held here in August. Notwithstanding the badness of its port, Mazzara enjoys a considerable trade. It has a *carricatore*, for the warehousing of corn, of which it exports considerable quantities; and it also exports pulse, wine, fruit, fish, barilla, madder, oil, and soap. (*Smythe's Sicily*, 224—228, &c.)

Mazzara, or Emporium, was taken by storm by Hannibal, previously to his commencing the siege of Selinus; but it does not appear to have been a place of much importance in antiquity. There can, however, be no doubt, were Sicily subject to a vigorous and enlightened government, capable of developing its gigantic resources, that Mazzara would rise to very considerable distinction as a shipping port. It was here that the Saracens landed when they invaded and conquered Sicily. (*Smythe, ubi supra; Ancient Universal History*, xvii. 360. 8vo. ed.; *Hoare's Classical Tour*, &c., i. 75—77.)

An extraordinary phenomenon, called the *Marobea*, being a violent agitation of the sea, is witnessed on this part of the Sicilian coast. "Its approach is announced by a stillness in the atmosphere, and a lurid sky; when suddenly the water rises nearly 2 ft. above its usual level, and rushes into the creeks with amazing rapidity; but, in a few minutes, recedes again with equal velocity, disturbing the mud, and occasioning a noisome effluvia: during its continuance, the fish float quite helpless on the turbid

surface, and are easily taken. These rapid changes generally continue from half an hour to upwards of two hours, and are succeeded by a breeze from the S., which quickly increases to heavy gusts." Captain Smyth has some speculations as to the cause of this singular phenomenon, for which we beg to refer to his work. (*Smythe's Sicily*, pp. 224—228.)

MEATH, a marit. co. of Ireland, on its E. coast, prov. Leinster, having N. the cos. of Louth, Monaghan, and Cavan, W. Westmeath, S. King's Co. and Kildare, and E. Dublin and the Irish Sea. Area, 567,127 acres, of which only about 5,600 are said to be unimproved or waste. Surface mostly flat, or only slightly undulating; soil, clay or loam, on limestone or gravel, and generally very fertile. Grazing used formerly to be the principal occupation; but, since the close of the American war, tillage has been gradually extending, and is now spread over more than 4-5ths of the co. Notwithstanding the richness of the soil, and the favourable situation of Meath, the state of agriculture, and of the great bulk of the occupiers, are alike bad. A rotation of crops is only beginning to be introduced; corn frequently follows corn for a long series of years; when fallows do occur, they are in general wretchedly executed, so that the land is in general foul and in bad order. Latterly, however, a better system has begun to make its way into the co., and the stock and implements of husbandry have been a good deal ameliorated. Even the better sort of farmers are, for the most part, very badly lodged; and the cabins of the cottiers and labourers are in the last degree filthy and wretched. Potatoes constitute $\frac{1}{2}$ of the food of the bulk of the people; oatmeal and churned milk are sometimes added, but they rarely taste butchers'-meat, the pig being usually sold to assist in paying the rent. There are some large estates; but property is better divided than in most Irish cos. Tillage farms vary from 5 to 50, and some few extend to 100 acres. Average rent of land, 18s. an acre, which is higher than that of any other Irish co., except Dublin. Minerals and manufactures of no importance. Irish language pretty generally spoken. Principal river, the Boyne. Principal towns, Navan and Kells. Meath is divided into 12 baronies and 147 pars. In 1831, it had 29,796 inhab. houses, 31,632 families, and 176,826 inhab., of whom 88,993 were males, and 87,833 females.

MEAUX (an. *Jatinum*, afterwards *Meldi*), a town of France, dép. Seine-et-Marne, cap. arrond., on both sides the Marne, which is here crossed by an old stone bridge, 24 m. E.N.E. Paris. Pop., in 1846, 7,774. It is pleasantly situated, and is tolerably well built. Its ramparts have been laid out in public walks; and it has some good promenades along the river, and a spacious public square. The cathedral, one of the most remarkable Gothic edifices in France, was begun in 1282, but not finished till the 16th century: it is 328 ft. in length, 137 ft. in breadth; the height of its vault being 150 ft., and that of its tower 213 ft. Its choir and sanctuary are extremely elegant; but it derives its chief interest from its containing the remains and monument of Bossuet; who, having been raised to the bishopric of Meaux in 1681, continued in possession of the see till his death, in 1704. The controversial writings of this great glory of the Gallican church display extraordinary learning and acuteness; but it is to his *Discours sur l'Histoire Universelle*, and his *Oraisons Funébres*, that he is mainly indebted for his imperishable renown. Exclusive of the cathedral, the public buildings comprise the episcopal palace, in which is the writing-table of Bossuet, a public library, with 14,000 vols., the college, town-hall, theatre, two asylums, a Protestant and two par. churches, and cavalry barracks. Meaux has manufactures of cotton stuffs, earthenware, and glue. Numerous flour-mills are constructed on the Marne, the produce of which is sent to Paris, and the town has a good deal of trade in this and other articles of farm produce: its traffic is greatly facilitated by the canals of Ourcy and Cornillon. Meaux is very ancient: it was made a bishopric in 375; was twice sacked by the Normans in the ninth century; and was annexed to the French crown by Philippe-le-Bel. The French Protestants first preached publicly in this town, and it was the first to abandon the league, and submit to Henry IV. (*Hugo, art. Seine-et-Marne, &c.*)

MECCA, one of the most famous cities of the eastern world, the birth-place of Mohammed, and the great centre of attraction to all the pilgrims or *hadjis* of the Mohammedan faith, in Arabia, prov. El-Hedjaz, 51 m. E. from the port of Djidda (which see), on the Red Sea, and 270 m. S. by E. Medina; lat. $21^{\circ} 28' 17''$ N., long. $40^{\circ} 15'$ E. Pop. 28,000. This celebrated city, which, being forbidden ground to Christians, was known to Europeans only through indirect and suspicious information from Mohammedans or African renegades, was a few years ago visited, in disguise, by Burckhardt; who has given a very full though rather tedious description of the localities, climate, inhabitants, government, religious ceremonies, and pilgrim visitors, not only of this city, but also of Medina (which see). Mecca

(literally meaning "the place of assembly," but pompously entitled by the Arabs *Om-el-Kora*, "mother of towns," and *Beled-al-Ameyn*, "region of the faithful,") stands in a long, narrow, barren, sandy valley, running N. and S., called in the Koran "the valley without seeds." It is a straggling town, nearly 2 m. in length, but nowhere more than about 600 paces in breadth; the streets, which are irregular, unpaved, and dusty, are generally wider than those of other eastern cities. The handsomest entrance is from Djidda, the S.W. quarters comprising some of the best houses; but on the other side of the great mosque, which is the nucleus of Mecca, there are 3 or 4 other good streets; the best of which, perhaps, is the *Mesaa*, the great resort of the Turkish pilgrims, and the noisiest, as well as most frequented, part of the town. "Indeed," says Burckhardt, "the *Mesaa* resembles a Constantinopolitan bazaar. Many shops are kept by Turks from Europe and Asia Minor, for the sale of swords, watches, copies of the Koran, and second-hand Turkish dresses; and there are numerous venders of pies, sweetmeats, &c. Here, too, are numerous coffee-houses, crowded during the Hadj from 3 in the morning till 11 at night; barbers' shops, auction rooms, &c. W. of the *Mesaa* branches off a street called *Soucyga*, or the Little Market, which though narrow, is the neatest street in Mecca, being regularly cleaned and sprinkled with water. Here the rich India merchants offer for sale their piece-goods, Cashmere shawls, muslins, perfumes, Mecca balsam, aloewood, civet, &c., strings of coral, necklaces of carnelian, seal-rings, and various kinds of China ware, and Abyssinian slaves. In fact, the *Soucyga*, being the coolest spot in the town during mid-day, is on that account the most frequented; and here all the gentlemen-hadjis take their morning and evening lounge, smoke their pipes, and hear or tell the news." (*Burckhardt's Arabia*, i. 212-219.)

The quarter called *Shamye* is likewise well built, being chiefly inhabited by merchants or *olemas* (clergy) attached to the mosque, and frequented at the pilgrim-time by merchants from Damascus; in whose shops are found silks, cambrics, gold and silver thread, handkerchiefs, carpets, dried fruits, pistachios, &c. Near those last mentioned, also, is another respectably-built quarter, called *Garara*, inhabited by some of the wealthiest native merchants. These are certainly the best parts of the town, comprising lofty stone houses, often 3 stories high, surmounted by handsome terraces, and (what is unusual in eastern towns) having rows of windows fronting the streets. The town, however, is not lighted, is scantily supplied with water, and contains many quarters, which, in filth and closeness, might vie with the dirtiest parts of Constantinople. Though once walled on 3 sides, Mecca is at present entirely open; but the neighbouring mountains are sufficiently high to form a tolerably strong barrier against an enemy; and on the rising ground S. of the city stands the great castle, a massive square structure, with thick walls and solid towers, comprising a bomb-proof magazine, a reservoir for water, and accommodation for 1,000 men. With this exception, Mecca may be said to be almost destitute of public buildings; for the houses belonging to the sherifs, though handsome, are merely private, and not large dwellings, and the *medreses*, or colleges, are now converted either into store-houses or lodgings for pilgrims. This circumstance is, no doubt, attributable to the veneration of the people for their holy house, and this feeling prevents them from erecting any structure which might seem to rival the great object of their affection.

The *Beitullah*, otherwise called *El Haram*, the chief glory of Mecca, and the resort of every pious Mussulman who regards the injunction of the Koran*, is a building by no means remarkable either for size or beauty; standing on low ground, in an oblong enclosure about 350 ft. in length and 300 ft. in breadth, formed by colonnades, roofed with numerous small plastered cupolas, supported by 450 pillars, about 20 ft. in height, of marble, or Mecca stone. The temple has been so often ruined and repaired, that it has no traces of remote antiquity. The walls, arches, and minarets at the angles of the building are gaudily painted in stripes of yellow, red, and blue; but paintings of flowers in the usual Mussulman style are nowhere seen, and the colonnades are very clumsily paved. The

* "They who shall disbelieve and obstruct the way of God, and hinder men from visiting the holy temple of Mecca, which we have appointed for a place of worship unto all men, — the inhabitant thereof and the stranger have an equal right to visit it, — and whosoever shall seek impiously to profane it, we will cause him to taste a grievous torment. Call to mind, when we gave the site of the house of the Kaaba for an abode unto Abraham, saying: Do not associate any thing with me; and cleanse my house for those who compass it, and who stand up and bow down to worship. And proclaim unto the people a solemn pilgrimage, let them come unto thee on foot, and on every lean camel, arriving from every distant road, that they may be witnesses of the advantages which accrue to them from the visiting, and may commend the name of God on the appointed days." *Saif's Koran*, ch. 22.

Kaaba, or Holy House, which occupies the centre of the enclosure, and is the great attraction for all pilgrims, lays claim to a far more remote origin than that of Mohammedanism; and, though we may safely doubt the alleged fact of its having been built by Abraham and Ishmael, assisted by the angel Gabriel († there can be no question that its genuine antiquity ascends beyond the Christian era. In all probability, the Kaaba is alluded to by Diodorus Siculus, when speaking of a temple held in superior sanctity by all Arabians. In the second century Maximus Tyrius attributes to the Arabs the worship of a stone; and this, if not identical with, is, at any rate, analogous to the "black stone" of Mecca, which, as Gibbon justly remarks, is deeply tainted with the reproach of an idolatrous origin. (*Gibbon*, ix. 247.) The Kaaba, which was all but rebuilt in 1627, after having suffered great damage from fire, is an oblong massive structure, 18 paces in length, 14 do. in breadth, and from 35 to 40 ft. in height; its door being coated with silver, and embellished with gold ornaments. At the N.E. corner, near the door, is the "Black Stone" previously alluded to, obligingly brought by the angel Gabriel as his contribution to the building: it forms part of the sharp angle of the structure, 4 or 5 ft. above the ground; being oval-shaped, 7 inches in diameter, of a dark brown colour, somewhat resembling lava; and surrounded by a border of cement and silver, to prevent its being worn away by the kisses and touches of the pilgrims. Round the building is a broad marble pavement; and at the S.E. corner is another stone, much revered by all visitors, but of a less noble origin, and less holy than the other. The 4 sides of the kaaba are covered with a curtain of embroidered black silk stuff, called the *kesona*, annually brought from Cairo at the time of the Hadj, and renewed with some not very decorous ceremonies. The holy fountain of Zem-zem, (said to be that so opportunely found by Hagar, when her son Ishmael was dying of thirst,) which supplies the town with water for drinking or ablution (its use for other purposes being forbidden), is enclosed in a substantial square building, having a handsome marble-faced entrance, with marble basins for ablution, and a room appropriated to the pilgrims, who come here in crowds to taste the miraculous fountain. From before dawn till near midnight, the well-room is constantly filled with visitors; all of whom, if not disposed to buy the services of the attendant, may themselves draw freely from the well. Various stories are afloat respecting the origin and virtues of this sacred spring, which, of course, are all believed by orthodox visitors, few of whom leave Mecca without carrying away some of the water in copper or tin bottles, to give away to their friends, and for their own use during illness, and their ablution after death. These are the chief buildings within the enclosure; but none of them can be considered as consecrated, except during the hour of prayer; for at other times, barbers, and all kinds of retail vendors, porters, idlers, &c., are to be met with at every turn. (*Burckhardt*, vol. i. p. 278.) In several parts of the colonnade, public schools are held for the instruction of young children; while, in other parts, a few professors deliver theological lectures, which meet, however, with little patronage from the pilgrims, who, with all their anxiety to visit the holy house, are, like all Turks, too much attached to the *dolce far niente* to trouble themselves with the doctrines either of theologians or men of science. The exterior of the mosque is adorned with seven quadrangular minarets, from the summits of which a view is obtained of the busy scene around. There are 19 gates, distributed without any order or symmetry; and the outside walls are formed by the surrounding houses, which during the pilgrimage are let, at enormous rents, to the wealthiest hadjis, with whom it is a grand object to be as near as possible to the holy house. The windows of these houses overlook the inclosure; and hence their occupants are enabled to join in many of the mosque services without stirring from home. The service of the mosque occupies a vast number of people, as the Imams, Muftis, officers of the Zem-zem, Mueddins, Olemas, lamplighters, and menial servants, all of whom receive regular pay, besides sharing the presents made by the pilgrims. The revenues of the mosque were formerly very extensive; but its wealth has greatly declined, nor does it now possess any treasures except a few golden lamps, the establishment being kept up almost wholly at the expense of the sultan. The first officer of the mosque is the *Nayb el Haram*, or warden, who keeps the keys of the Kaaba, receives the pilgrims' contributions, and directs the repairs of the building. Next to him is the Aga of the eunuchs, a body of about 40 negroes who perform the duty of police officers in the temple; preventing disorders, and washing and sweeping the pavement round the Kaaba. In the

† The curious reader is referred for a very full account of the traditional notions entertained by the Mohammedans respecting the origin and antiquity of the Kaaba, to Burckhardt's extracts from Arabic works of well-known authority. (*Travels in Arabia*, i. 236-311.)

time of the Ramadan, or great festival, the mosque is particularly brilliant; not only from the number of pilgrims of every age, rank, and nation within the enclosure, but also from the thousands of lamps which illuminate the colonnades. On the termination of the Hadj, however, the temple assumes a very different appearance. Disease and mortality, caused by fatigue, unhealthy lodgings, bad fare, and, in some cases, by absolute destitution, fill the mosque with the sick and dying; all of whom are anxious to have the satisfaction of expiring in view of the Kaaba, of receiving the Imam's prayers, and of being sprinkled with the sacred water of Zam-zam. Whoever enters Mecca, whether pilgrim or not, is enjoined by the law to visit the temple immediately, and not to attend to any worldly concern before he has discharged that solemn duty. Certain religious rites, such as walking seven times round the Kaaba, and reciting certain prayers, are performed in the interior of the mosque; then comes the ceremony of walking seven times between the hill of Asafa and Merona; and, lastly, the pilgrims must submit to have their heads shaved by the barbers of the mosque. All these ceremonies must be repeated by every Mussulman, who enters Mecca from a journey farther than two days' distance; and they must be again more particularly performed at the time of the pilgrimage to Arafat, a hill about 15 m. E. of Mecca, to which Mohammed used to retire to pray, and which, on this account, is esteemed particularly sacred by all Mohammedans.

The concourse of pilgrims to the holy mount is often immense: Burchhardt says he counted about 2,000 tents dispersed over the surrounding plain; but the greater number of the pilgrims were without tents: between 20,000 and 25,000 camels were to be seen scattered among the pilgrims, whose numbers, he concludes, must have exceeded 70,000. The camp was from 2 to 4 m. long, and between 1 and 2 m. in breadth. But we suspect that these returns are very decidedly beyond the mark; and the taste for pilgrimages is now rapidly declining throughout the Mohammedan world. A visit to Arafat is indispensable to the pilgrims; none by any chance omit it, nor can the title of Hadji be assumed except by those who have been present at the ceremony. Mecca, like Jerusalem, boasts of many places rendered sacred by tradition. The birth-place of Mohammed and his daughter Fatima, the tomb of his wife Hadja, and the cell where the prophet wrote the Koran, are shown to the pilgrims, who are expected to make contributions for their maintenance. But a visit to these places forms no item of religious duty; and but few depart in any way from the prescribed routine, as such acts would interfere with their profits either as merchants or beggars, and thus frustrate a very important, if not chief, object of the expedition.

The inhab. of Mecca are, with the exception of a few Hadjan Bedouins, either foreigners or the offspring of foreigners. The ancient tribe of Koreysh, to which Mohammed belonged, is almost extinct; and there are now in Mecca only three or four Koreysh families, the head of one of which is the Nayb, or keeper of the great mosque. The neighbourhood, however, of the great mart of Djidda, the annual arrival of immense caravans, and the holy house, attract thither vast multitudes of strangers; a portion of whom remain behind, and settle permanently in the city, adopting Arabian habits, and intermarrying with the native pop. The most numerous are the descendants of Arabs from Yemen and Hadramaut; next to them in numbers are those of Hindoo, Egyptian, Syrian, African, and Turkish origin; besides whom there are Persians, Afghans, Kurds, and people, in short, of almost every Mohammedan nation, all of whom are careful in preserving a traditional knowledge of their original country. The inhab., however, though differing so much, nationally considered, wear the same sort of dress, have the same customs, and care much less for national costume and manners than in any other part of the East. Their colour is a yellowish brown; and in features they closely resemble the Bedouins: the lower classes are generally stout, with muscular limbs, while the higher orders are distinguished by their meagre emaciated forms and black piercing eyes. All classes are fond of dress, and the earnings of the poor are mostly spent on clothes. The women wear Indian silk gowns, with large blue striped trousers reaching to the ankles, and a white kind of hood to cover the face. There are few families in moderate circumstances that do not keep slaves, most of whom are Nubians and Abyssinians, brought thither from the port of Suakin: many African females are kept as concubines, and, in case of their having issue, the masters usually legitimate the offspring by marrying them. The sale of concubines is confined to the middle and lower classes; the more wealthy regarding the practice as disgraceful. The inhab. of Mecca, as also of Djidda and Medina, are far more lively and communicative than either the Syrians or Egyptians, and in this respect they resemble the Bedouins. Indeed, vivacity of temper, acute intellect,

sagacity, and suavity of manner, are characteristics of almost all the native inhab.; while, at the same time, their proud, independent spirit, for which they are equally remarkable, is infinitely preferable to the cringing servility of the Turks of Anatolia and Syria. Religion exercises little control over them; and, though they are proud of aping the manners recorded of Mohammed, and thoroughly versed in the Koran, few Mussulmen are so inattentive to the moral duties inculcated by the Prophet. For the most part, indeed, they exhibit great prodigality of character. Drunkenness, gambling, cheating, false-swearing, and the grossest sensuality, are of every-day occurrence, and it is a common saying among the people, "Forbidden things abound in the city forbidden to infidels." Learning and science, which once flourished in Mecca, are now almost wholly neglected. The many *madrasas*, or colleges, for which the city was formerly renowned, are turned either into corn-magazines or lodging-houses for pilgrims; its large libraries have disappeared; the great mosque is at present the only place where teachers of eastern learning are to be found, and the Meccaways themselves, who wish to improve in science, go to Damascus or Cairo.

The employments of the people are in trade and the service of the Beitullah; but there are few employed in the mosque who do not, clandestinely at least, engage in commercial affairs. There are but few ar-

icles at Mecca diminish in some degree the heavy expenses of the journey. The Mogrebins (pilgrims from Morocco and N. Africa) bring their red bonnets and woollen cloaks; the European Turks, shoes and slippers, hardware, embroidered stuffs, sweetmeats, amber, trinkets, &c.; the Turks of Anatolia bring carpets, silks, and Angora shawls; the Persians, Cashmere shawls and large silk handkerchiefs; the Afghans, tooth-brushes made of the spongy boughs of a tree growing in Bokhara, beads of yellow soap-stone, and plain coarse shawls manufactured in their own country; the Indians

those of the highest and lowest ranks, live together in a state of freedom and equality, keeping but few servants, and generally dividing among themselves the various duties of housekeeping. The two principal caravans which rendezvous at Mecca are those of Damascus and Cairo, both of which always arrive at fixed periods, generally a day or two before the departure of the Hadj for Arafat. The former of these is very large, and is, at the same time, very well regulated. The caravan of Cairo is much smaller, and its route, along the Red Sea, is more dangerous and fatiguing; but many of the Egyptian and African merchants now come by sea from Suez, Cosseir, and Suakin to Djidda, and thus avoid the weariness of a long land journey. The Persian caravan sets out from Bagdad, and crosses the desert; but it is now of little importance, as all but the poorest Persian pilgrims come round by sea from Basorah, between which place and Djidda there is a large and steadily increasing trade.

The climate of Mecca is sultry and unwholesome; especially in August, Sept., and Oct., when a hot suffo-

cating wind prevails. The wet season is in Dec.; but the rains are not so continuous as in other tropical countries. Intermittent and inflammatory fevers, dysentery, elephantiasis, and stone, are common diseases; and, with respect to the general health of the town, Burckhardt says, "I seldom enjoyed perfect health while in Mecca: I was twice attacked by fever, attributable chiefly to bad water, and, even on those days when I was free from disease, I felt great lassitude, depression of spirits, and total want of appetite." (vol. i. p. 450.)

The territories of Mecca, Tayf, Gonsfide, and Yembo, were, previously to the Wahabee and Egyptian conquests, under the command of the Sherif of Mecca, who held his authority from the Grand Seignior; but when the Porte was no longer able to send large armies with the Hadj caravans to secure her power in the Hedjaz, the Sherifs became independent. The Wahabees (who are to the Mohammedan religion what the Protestant churches are to Christianity) took possession of Mecca in 1802, and retained it till 1813, when Mehemet Ali restored the holy cities to the nominal protection of the Porte, while at the same time he placed them effectually under his own control. (*Burckhardt's Arabia*, i. 171., *ad finem*, and ii. 1—86.)

MECHLIN (Fr. *Malines*), a city of Belgium, prov. Antwerp, cap. arrond., on the Dyle, a tributary of the Scheldt, and on the road between Antwerp and Brussels, 14 m. S.S.E. the former, and 14 m. N.N.E. the latter. Pop., in 1845, 27,234. The Dyle divides Mechlin into two parts. It is regularly laid out with broad, well-paved, and clean streets. Houses grotesque, antiquated, and frequently of a large size; but, being painted in front, they look clean and cheerful. The fortifications were demolished by the French, in 1804. The most remarkable public building is the cathedral, a Gothic edifice, commenced in the 12th century. The body of this building is by no means commensurate with the present altitude of the morisco tower attached to it, and still less with the height to which it was originally intended to be carried. This massive tower, with its truncated steeple, begun in 1452, is 370 ft. above ground, being the height of the cross of St. Paul's, London; and, had it been completed according to the original design, it would have been 610 ft. high. The Last Supper, the altar-piece, is by Rubens: the heads of the apostles and style of drapery are said to be in his best manner; but the Christ is a failure, and the picture is mildewed. The church of the Récollets has the famous picture of the Crucifixion, by Vandyke.* "This," says Sir Joshua Reynolds, "is, perhaps, the most capital of all his works, in respect of the variety and extensiveness of the design, and the judicious disposition of the whole. It may be considered as one of the first pictures in the world, and gives the highest idea of Vandyke's powers." (*Reynolds's Works*, ii. 273. ed. 1819.) There are pictures by Rubens in the cathedral, and some of the other churches, of which the Adoration of the Magi, in the church of St. John, is, probably, the best. After the churches, the bishop's palace, town-hall, arsenal and cannon foundry, the Franciscan convent, and the *Béguinage*, a large asylum for 800 widows, or aged women, are the principal public buildings. Mechlin is the see of an archbishop, who is primate of Belgium, and has a revenue of about 4,000*l.* a year. It is the seat of a tribunal of primary jurisdiction, and the residence of a military commandant. It has an ecclesiastical seminary, a college, an academy of painting, a society of the fine arts, and a *mont-de-piété*. It has been long celebrated for the manufacture of lace, of a coarser and stouter kind than that of Brussels; but this has latterly been, to a considerable extent, superseded by the Nottingham lace, and it is said that only eight houses are now engaged in the business. Among its other fabrics are those of cashmere shawls, and gilt leather chairs: the latter were at one time an article of export, and it is said that upwards of 400 workmen are still engaged in their manufacture.

Mechlin furnishes a peculiar species of beer, of a light body, which acquires, by keeping, a vinous flavour and quality. Another delicacy peculiar to this city is the "*Déjeûner de Malines*," a dish much admired by travellers as well as natives, into which pigs' feet and ears enter as important constituents.

Mechlin has an extensive trade in flax, corn, and oil. The tide ascends the Dyle to a league above the city, which is accessible for vessels of considerable burden from the Scheldt. Mechlin is connected with Louvain by a canal navigable by vessels of 160 tons: it would also, but for the absurd opposition of its magistrates, have been the central *dépôt* of the Belgian railways; but this has been fixed without its boundary, a circumstance which those by whom it was occasioned now deeply regret.

As early as the 6th century, Mechlin appears to have

* This is Sir Joshua Reynolds's statement. Mr. Murray, on the contrary, says that this is the altar-piece of the cathedral! *Non nobis, &c.*

been a place of importance, and the cap. of a lordship. It suffered severely from war, plague, and fire in the middle ages; and in modern times has been repeatedly taken by the Spaniards, Dutch, English, and French. (*De Cloet; Heuschling; Belgium*, by Emerson Tennent, Esq. M. P.; *Murray's Handbook for N. Germany, &c.*, *passim*.)

MECKLENBURG, a territory in N. Germany, between lat. 53° and 54° 20' N., and long. 10° 35' and 13° 57' E.; having N. the Baltic, E. and S. the Prussian dom., and W. Hanover, Denmark, and Lubeck. Area, 5,343 sq. m. Pop. about 572,500. It is divided into

1. MECKLENBURG-SCHWERIN (GRAND DUCHY OF), a state of N. Germany, between lat. 53° 7' and 54° 20' N., and long. 10° 37' and 13° 18' E.; having E. Pomerania and Mecklenburg-Strelitz, S. Brandenburg, W. the Hanoverian and Danish provs. of Luneburg and Lauenburg, the principality of Ratzeburg, belonging to M.-Strelitz, and the territory of Lubeck, and N. the Baltic. Length, E. to W., about 110 m.; average breadth nearly 45 m. Area, 4,833 sq. m. Pop., in 1849, 534,394. Mecklenburg belongs to the great plain of N. Germany; it is not, however, a dead level, but has an undulating surface, interspersed with some ranges of low hills, one of which, the Ruhneburg, rises to nearly 600 ft. above the level of the Baltic. It has several rivers of some size, as the Rechnitz, constituting its N.E. boundary, the Warnow, Stepnitz, &c., flowing to the Baltic, the Elde, a tributary of the Elbe, and others; and a great number of lakes, that of Muritz, which has an area of more than 50 sq. m., and is elevated 216 Rhenish ft. above the sea, being by far the largest lake in N. Germany; next to it is the lake of Schwerin, having the cap. of the duchy on its banks. Notwithstanding its high lat., this grand duchy has a milder climate than most parts of Germany. The mean temp. of Germany being taken at 51° Fahr. (8° R.), that of Mecklenburg will be about 52° 5' F. (9° R.) But the winter is severe, the average temp. of that season being little above the freezing-point; the atmosphere, also, is particularly humid, which, added to the moisture of the soil, renders catarrhs and consumptions frequent. The surface and soil are very various. On either border of the principal range of hills a poor sandy tract extends, covered with heath; and few parts of Germany are worse cultivated or more thinly inhabited than that between Schwerin and Gustrow, a distance of nearly 40 m. To the S. of this district the soil is somewhat better; and beyond Gustrow, towards what was formerly Swedish Pomerania, the sand gradually changes into a fertile loam, well adapted to the growth of rye and wheat. Near the Baltic the soil is, for the most part, a meagre sand, intermixed with stripes of loam. With the exception of the sandy heaths, the face of the country is cheerful and pleasing; the land is mostly enclosed; the woods, which are extensive, are scattered over the country, and on the borders of the lakes good meadow lands occasionally present themselves. Mecklenburg is essentially an agricultural country. It is generally divided into large estates. The demesnes of the sovereign comprise 4-10ths of the land, and those of the nobility, knights, &c., nearly 5-10ths; leaving about 1-10th in the possession of the municipalities and a few monastic institutions. Farms are generally very extensive; they vary from 300 to 1,000 or 1,200 acres. About one fourth part of the prov. is cultivated by proprietors resident on their own estates, and who are frequently very intelligent and well-informed; about a half is occupied by farmers, and a quarter by peasants or boors. The severity of the winter makes it necessary to have farm buildings sufficient to accommodate the live stock, in addition to the corn, hay, &c.; and hence a gentleman's house has near it, besides labourers' cottages, more than five times the extent of barns, stables, cow and sheep houses, &c., that would be required in England for the same extent of land. Farms, when let, are usually held by tenants on leases, varying from 7 to 21 years. The rent varies, of course, according to the quality of the soil, situation, &c. It is uniformly almost paid in money, and the rotation of crops prescribed in the lease must be strictly adhered to. The best farms brought, in 1827, according to Mr. Jacob, about 12*s.* an acre; the medium lands from 6*s.* 4*d.* up to 8*s.* 4*d.*, and the sandy districts in the S. from 2*s.* to 3*s.* 2*d.* an acre; but he thinks that the larger portion of land in the grand duchy did not then produce more than 5*s.* an acre. Taxes are lower than in most parts of the Continent. The various taxes and other out-goings borne by the proprietor may be estimated at about 1*d.* an acre. The stock on the larger farms usually belongs to the tenants; but that on the smaller farms, held by peasants, usually belongs to the landlords.

The cultivation of wheat (especially the red variety) has increased greatly of late years, and Mecklenburg is now one of the principal countries of Germany for the export of wheat. Rostock wheat is, however, inferior to either English or Dantzic wheat; so much so, that while wheat is being shipped from Rostock at 18*s.* a quarter, it

will fetch 27s. or 28s. at Dantzic. Next to corn, peas, beans, potatoes, and turnips are principally grown. Hemp and flax are reared, but in no great quantities; and the culture of tobacco has very much diminished. Of late years horses, instead of oxen, have been employed in field labour. The system of cultivation corresponds with that of Holstein and Sleswick. After a year's fallow three corn crops, usually rye, barley, and oats, are taken in succession, the land being sown down with grass seeds; along with the 3d corn crop, a crop of hay is taken in the 5th year, and the 6th and 7th years the fields are in pasture. (*Jacob's Second Report.*) The climate is too cold for the vine, though latterly it has been raised to some extent at Crevitz, and some bad wine has been produced. The horses and horned cattle, which are both numerous and excellent, find a ready sale in every part of Germany, and are a source of great profit to the landed proprietors. The breed of horses has been much improved, by means of the grand ducal stud at Rodefin and several private studs. Sheep have been a good deal increased of late: the stock in the grand duchy is now estimated at about 1,200,000, and wool has become a principal article of export. Herds of hogs and flocks of geese are met with in every part of Mecklenburg. The former wander, nearly wild, through the forests, feeding on acorns and roots, and the geese literally cover the banks of the lakes and rivers. The latter supply a considerable part of Europe with quills; and their breasts, smoked and cured like bacon, are much esteemed as a delicacy.

The pop. has increased very rapidly within the last 25 years, a consequence partly of the breaking up of the old feudal system, and partly of the introduction of the potato, &c. The number of inhab., in 1818, was 377,934, whereas, in 1837, it was 476,499, being an increase of 26 per cent. During the 10 years previous to 1838, the deaths amounted to 10,069, and the births to 16,070 a year. Mecklenburg is still, however, the least populous portion of Germany; there being only 99 inhab. to the English sq. m. Till within the last 20 years the peasants were in a state of mitigated slavery. They could acquire, enjoy, and transmit property, but they were *adscripti glebe*, and bound to the soil, so as to be sold or let with it. The government took measures, on the restoration of peace, to abolish this relic of the feudal ages; and, about 1820, all the peasants who still remained in the condition of serfs (for many of the proprietors had previously emancipated those on their estates) were declared free, though their actual manumission did not take place till about 1826. They are now, however, quite free, and may labour where and under whatever conditions they please to stipulate with their employers. Previously to the emancipation of the peasantry, a man was estimated to cost during harvest 1s. 4d., during hay-making 1s. 1d., and at other periods from 6d. to 1s. a day. Probably but few changes have yet taken place, either in the condition or appearance of the peasantry. The country, at a passing view, seems, from the magnitude of the farm-buildings and the number of enclosures and woods, to be more prosperous than, on a closer examination, is found to be the case. "On a nearer approach, it is scarcely possible to avoid feeling disgust at the miserable filthiness and apparent poverty of the peasants' dwellings and of their clothing; though a difference may be discerned on the several properties, according to the greater or less degrees of prudence and kindness of the various proprietors." (*Jacob's Rep. on Agric.*)

The condition of the peasants, of whom a large proportion are noble, appears, in fact, to be much depressed. The author of *Germany and the Germans*, in 1835-36, says, "The landsman, unlike his neighbour in Holstein, is poor. I sought in vain for the appearance of comfort and plenty which had delighted me in Holstein; and yet, like the latter, Mecklenburg is one of the most fertile provs. in the N. of Germany, and exports provisions in large quantities to Prussia and Hamburg, while the natives are obliged to content themselves with potatoes, horse-beans, and *sauer-kraut*. During my tour through the more remote villages, I found it impossible to procure a comfortable dinner. Fresh meat was entirely out of the question; the general bill of fare at the inns consisted of potatoes, bread, butter, and eggs, and those of a superior class added bacon and *sauer-kraut*. My drink was confined to wretched beer or schnapps; and, when I demanded wine, they looked at me as if my intellects were deranged. My bed was not unfrequently a straw pallasse, and the only covering a feather bed, enveloped in a gay-coloured cotton cover; the whole supported on a bedstead, 5 ft. long, composed of deal boards nailed together, in form not unlike a packing-box. These miserable arrangements are common to all the remote districts of Mecklenburg, Pomerania, and Prussia.

"As Germany supplies Europe with princes and princesses, it would appear as if Mecklenburg alone were sufficient to furnish it with nobles; for it is reckoned that the nobility include the half of the pop.,

the possessions of 6-8ths of these dignified persons being limited to their genealogical trees. During my progress through the country, I met with a *Herr* (baron) who exercised the profession of relieving men's chins of what is sometimes considered an incumbrance; and at one of the inns I found a *Herr graf* (count) for a landlord, a *fräulein gräfin* (countess) for a landlady; the young *herren grafen* filled the places of ostler, waiter, and boots, while the fair young *fräulein gräfinen* were the cooks and chambermaids. I was informed that, in one village, the whole of the inhab. were noble except four, and these were married to noble *fräuleins*." (*Germany, &c.*, i. 43, 44.)

In Mecklenburg the general principle is, that every place shall provide for its own poor, either separately or in common with others. All proprietors are bound to provide for the poor on their estates; and, in furtherance of that object, are entitled to levy a sum of about 8d. a year from the day-labourers, and 4d. from the maid-servants, &c., on the estate, though but few avail themselves of this privilege. When crown lands are let, there is always a clause in the contract, regulating what the farmer, the dairy farmer, the smith, and the shepherd are to pay for behoof of the poor. The higher classes, public officers, &c., should pay 1 per cent. of their income to the poor's funds. All poor persons have a legal claim to assistance, and such work must be found them as they can perform.

About 80,000 cwts. of salt are obtained annually; but, with the exception of lime, minerals are of little importance, and mining is quite neglected. Manufactures are not very considerable. The principal are those of woollen and linen fabrics; but the former employed, in 1834, only 1,128 hands, who produced goods of the value of about 271,000 doll., about 1-5th part of which was exported. Mecklenburg is famous, even in Germany, for the distillation of corn spirits. Every one may carry on the business of distiller, without tax or restriction of any kind; and this facility has, no doubt, tended to increase that taste for ardent spirits which, unhappily, distinguishes the peasantry. A few cotton, paper, glass, tobacco, soap, and wax-light factories, with breweries and tanneries, complete the list of manufacturing establishments. The government is, however, devoting a good deal of attention to the improvement and diffusion of manufactures, and at least one school of arts and trades is now established in every town. Mecklenburg has an extensive trade in farm produce, which is facilitated by the proximity of the Elbe and the Baltic, especially the former, the principal part of the foreign commerce of the duchy being carried on through Hamburg. The value of the exports is estimated, at an average, at about 4,000,000 doll. a year; of which, corn, pulse, &c., furnish 2,300,000, wool 800,000, butter and cheese 400,000, and cattle 250,000 doll. The import trade is also considerable; but no accurate statement can be made, either of the exports or imports, from the want of custom-house accounts. The commercial policy of Mecklenburg is as liberal as can be desired: she has no duties on imports, except a trifling excise at her ports; nor any frontier-dues beyond a trifle in the shape of a road-toll, which does not, however, appear to be strictly enforced. The only commercial towns and ports of any consequence are Rostock and Wismar. The other towns have merely a retail trade, a large part of which is in the hands of Jews. In the S. Prussian money and measures are current: but the Hamburg measures of length and the Lubeck measures of capacity are in use, in most parts of the grand duchy. The Mecklenburg rod is larger than the Rhenish, in the proportion of 1 to .809; the *morgen* varies from 200 to 400 sq. rods. The pound is to that of Hamburg as 401 to 400: the centner = 8 liespfund = 112 lb.; but in Rostock the liesp. has 16 lb.

The government is intimately connected with that of Mecklenburg-Strelitz. Each grand duchy has its separate states, which, also, meet separately; but the states of both grand duchies assemble once a year, alternately at Sternberg and Malchin. The joint assembly has the right, in conjunction with the Grand Duke of Mecklenburg-Schwerin, to make laws for and impose taxes on the whole of Mecklenburg: it consists of the landed proprietors among the nobility, and of deputies from towns, &c., in all amounting to between 500 and 600 members. When the states are not assembled, a committee sits at Rostock. The executive power is entrusted to a *directorium*, consisting of 8 grand-ducal councillors, 3 heads of noble families (*Erb-Landmarschälle*), and a deputy from the town of Rostock, which is itself a sort of little republic, or *imperium in imperio*. The grand duchy is divided into 5 principal districts—the duchy of Schwerin, or circ. of Mecklenburg; the duchy of Gustrow, or circ. of Wenden; the district of Rostock; the principality of Schwerin, and the lordship of Wismar; besides which, there is a small extent of territory, which sends no representatives to the states, and over which 3 conventual establishments have jurisdiction.

Justice is administered in primary courts in the towns

and villages, in patrimonial courts on the estates of the nobility, with courts of secondary jurisdiction at Schwerin, Gustrow, and Rostock, and a high court of appeal at Parchim, which is the supreme legal tribunal for both grand duchies. With the exception of between 3,000 and 4,000 Jews, the inhab. are nearly all Lutherans. There are upwards of 1,000 primary schools, about 40 superior public schools (*Bürgerschulen*), 5 gymnasia, and the University of Rostock, with several ecclesiastical and other special seminaries. Previously to 1826, there was but one bookselling establishment in the grand duchy; but, since that period, the diffusion of education and the cultivation of literature has led to the establishment of 11 others, besides 12 printing-offices. (*Berghaus*.)

The public revenues of the grand duchy amount to 4,600,000 fr. per annum, and the public debt to 18,000,000 fr. The dukes of Mecklenburg had formerly 5 votes in the College of Princes, in the Diet of the Empire. Since 1815, Mecklenburg-Schwerin has held, with Mecklenburg-Strelitz, the 14th rank in the Germanic Confederation. They have conjointly 2 votes in the general assemblies, but only one in the Committee of the Diet. Mecklenburg-Schwerin furnishes a contingent of 3,580 men to the army of the Confederation.

Schwerin is the political cap.; but Ludwigslust, a town with a pop. of about 5,000, 14 m. S.W. Parchim, is the usual summer residence of the grand duke. The palace, which is a large fine edifice, has a cabinet of pictures and a collection of slavonic antiquities; the surrounding grounds are well laid out; but the neighbourhood is dull and not very healthy.

2. MECKLENBURG-STRELITZ (GRAND DUCHY OF), a state of N. Germany, consisting of 2 separate territorial divisions; the first and largest, or the duchy of Stargard, lying between lat. 53° 9' and 53° 47' N., and long. 12° 40' and 13° 57' E., having W. Mecklenburg-Schwerin, and surrounded on all other sides by the Prussian territories; and the second, or principality of Ratzeburg, between lat. 53° 40' and 53° 51' N., and long. 10° 29' and 11° E. United area, 997 sq. m. Pop., in 1848, 96,92. The general features of the country are the same as those described in the above art.; its mean elevation is, however, somewhat less than that of Mecklenburg-Schwerin, though the Helpterburg, near Woldeyk, rises to 640 ft. above the sea. The chief river in Stargard is the Havel, and in Ratzeburg the Stepenitz. The land is divided among the sovereign, the nobility, and the towns, in the proportions of about 7-10ths to the first, 2-10ths to the nobles, and 1-10th to the municipalities. Nearly 1-4th part of the grand ducal property consists of forest lands. Agriculture and cattle-breeding are the chief branches of industry here, as in Mecklenburg-Schwerin. The manufactures are even more insignificant than in the latter grand duchy, and almost confined to leather, beer, and spirits, with copper wares in Ratzeburg. There is a brisk trade in rural produce. New Brandenburg is, next to Gustrow, the largest wool-market, and Old Strelitz the largest mart for horses, in Mecklenburg. Furstenburg has some trade in timber and butter.

The government is a limited monarchy, as in Mecklenburg-Schwerin. Justice is administered in 8 courts of primary jurisdiction, the superior courts of Rucklicht and Ratzeburg, and the court of chancery in New Strelitz, from which appeal lies to the supreme tribunal at Parchim. The principal public schools are, the *Gymnasium Carolinum* at New Strelitz, the high schools at New Brandenburg, Friedland, and Ratzeburg, and the school of arts (*Bildungsanstalt*), at Mirow. New Strelitz is the cap. and residence of the grand duke. The other chief towns are New Brandenburg, Friedland, and Old Strelitz. Mecklenburg-Strelitz holds, with Mecklenburg-Schwerin, the 14th place in the German Confederation, and has also, with it, 1 vote in the committee, having in the full diet 1 vote independently. It furnishes 718 men to the army of the Confederation.

Mecklenburg has been several times conquered and disposed of by foreign powers; as by Henry the Lion, in the 12th century by Ferdinand II., who gave it to Wallenstein, and by Napoleon; but it has always reverted to its original dynasty. The reigning family is the only sovereign house of Slavonian origin, and is one of the most ancient in Europe, with all the principal reigning families of which it has been allied. The separation of Mecklenburg into two states took place in 1701, and both were recognised as grand duchies in 1815. (*Berghaus, Allg. Länder, &c.* iv. 395-411.; *Stein, Handbuch der Geog.*; *Jacob's Second Report on Agriculture*; *Parl. Papers*, 1826; *Almanack de Gotha*, 1841; *Germany and the Germans, &c.*, *passim*.)

MEDINA, or MEDINET-EL-NABI, "the town of the prophet," one of the sacred cities of Arabia, the burial-place of Mohammed, and, next to Mecca, the great centre of attraction to Mohammedan pilgrims, in the prov. el-Hedjas, 100 m. N.E. its port of Yembo on the Red Sea, and 200 m. N. Mecca. Lat. 25° 13' N., long. 40° 3' 15" E. Pop. of town and suburbs, according to

Burckhardt, 18,000. This celebrated city stands in a plain, close to a chain of hills which bounds the great desert westward. It is not open, like Mecca, but surrounded by a wall about 40 ft. high, and flanked by 20 towers; it was additionally fortified with a ditch by the Wahabees; but this is in most places nearly filled up. It is entered by three fine gates; one of which, towards the S., called Bab-el-Masry, is said by Burckhardt to rank second only to the noble gates of Cairo; a fourth gate, in the S. wall, was closed by the Wahabees, and has not since been re-opened. The houses are well built, of a dark grey stone; but it has a desolate appearance, owing to the lessened resort of pilgrims. Ruined houses and tottering walls are seen in every part of the town; and "Medina presents the same disheartening view as most of the eastern towns, which now afford but faint images of their ancient splendour." (*Burckhardt's Arabia*, ii. 150.) The principal street, in which are most of the shops, leads from the Cairo gate to the great mosque; another, of respectable size and breadth, runs from the mosque to the Syrian gate; but many of its houses are in ruins, and there are few shops. No shops or bazaars, however, are found in other parts of the town; and, in this respect, Medina differs from Mecca, which is one continued market. The suburbs cover more ground than the city itself, from which they are separated by an open space, narrow on the S., but widening on the W., before the Cairo gate, where it forms a large public place called *Mondikha*, always crowded with camels and Bedouins. Provisions are sold here in sheds erected for the purpose, and the numerous coffee huts are beset the whole day with visitors. The greater part of the suburbs consist of large court-yards, built round with low houses, tenanted chiefly by the humbler classes. Each *hosh*, or court-yard, contains 30 or 40 families; the cattle belonging to the little community occupy the centre of each; and the only gate of entrance is regularly closed at night. Opposite, however, to the gate of Cairo are several regular and well-built streets, with houses similar to those within the town; one of these, called *Ki-Ambarye*, comprises some of the handsomest residences in Medina, besides two rather large mosques, all now remaining, except the great temple, out of 14 mentioned by the Arabian historians. The town is supplied with good water, both from wells and open streams.

The glory of Medina, and that which places it, as a sacred city, almost on a level with Mecca, is the possession of the tomb containing the remains of the Prophet. This tomb, with the tombs of Abou-Beker and Omar, the friends and immediate successors of the prophet, are inclosed within the great mosque, situated at the E. end of the town. Though smaller than the mosque at Mecca, it is built upon the same plan, with minarets at the angles, and forms an open square, surrounded on all sides by covered colonnades. The tombs are enclosed within a curtain, in a square building of black stone, detached from the walls of the mosque, and surrounded by a close iron railing. People of rank are admitted gratis within the sacred precinct, called *El Hedjra*; and any one, indeed, who has money to spare, finds but little difficulty in being admitted. The ridiculous stories, long current in Europe, as to Mohammed's coffin being suspended in the air by a loadstone, are unknown in the East; and most part of the statements that have been put forth, as to the richness and magnificence of the tombs and the great mosque, have been absurdly exaggerated. The tomb of Fatima, the favourite daughter of the Prophet, and the wife of Ali, is also within the great mosque; but it is doubtful whether it really encloses her remains. The lofty dome, which rises above the tombs, is seen at a great distance from town. The ceremonies observed by persons visiting Medina are somewhat different from those customary at Mecca; nor is it absolutely required of the hadjis to visit the prophet's tomb; and hence is it that the enjoined religious duties are considerably less tedious. The building is lighted at night with lamps and candles, sent either from Cairo or Constantinople. The mosque has four gates, of which the principal, by which the pilgrims first enter, called Bab Merouán, is certainly very superior in beauty to any of the gates at Mecca. The police, cleansing and lighting of the mosque, are entrusted to about 40 eunuchs, somewhat similar to those of the Beitullah at Mecca, supported, like them, by salaries from Constantinople, and by fees and presents from the hadjis. Besides these, and the Imáms, Mueddins, and Olemas, who are as indispensable here as at Mecca, there are upwards of 800 inferior servants. The mosque, founded by Mohammed himself, immediately after his flight from Mecca, on the spot where his camel first rested in the town, was enlarged by Omar after the prophet's entombment, and surrounded with walls by Othman. Subsequent caliphs and nobles of Arabia greatly embellished it; but the whole edifice was burnt down A. D. 1508; and so complete was the destruction, that only the interior of the tomb was spared. The present building was erected,

In 1514, by Kayr Bag, then king of Egypt; since whose time only a few immaterial improvements have been made by the Ottoman emperors of Constantinople. (Burckhardt's *Arabia*, ii. 161—205.) The burial ground of Medina, called *El Baka*, is another object of extreme veneration, in consequence of its containing the tombs of Ibrahim, Othman, Abbas, the sons of Mohammed, &c. Another place of pilgrim-resort is Djebel-Ohod, about 2 m. from the town, the scene of a conflict between the small army of Mohammed and a very numerous band of idolatrous Koreysh, under Abu Sofyan. The Prophet's uncle, Hamse, fell in the engagement, with 75 others, all of whom are buried on this mountain, the exact spot being marked by a mosque.

The people of Medina, like those of Mecca, are chiefly either foreigners or of foreign extraction, drawn thither by the prophet's tomb, and the gains which it ensures to its neighbours. The number of Sherifs, indeed, descended from Haseen, the Prophet's grandson, is very considerable; but most of them come from Mecca, or elsewhere, and nearly all are olmas, or clergymen. The pop. presents, therefore, as motley a race as that of Mecca; and Arabians of every district, Egyptians, Africans, Syrians, and Turks of Anatolia, are found here, more or less naturalized by intermarriage, those long settled being characterized, as at Mecca, by the Arab face, expressive cast of features, and stout thick-set person.

With respect to commerce, Medina widely differs from Mecca; for, while the latter is enriched by a transit trade scarcely inferior to that of any great city in the East, the trade of the former is merely for the consumption of the town and its neighbourhood, the articles being chiefly received from Egypt, by way of Yembo. The provision-trade is a lucrative branch of traffic; and the richer merchants often realise enormous profits when the caravans stay for any considerable time, and exhaust the stores of the smaller dealers. The Bedouins supply the town with sheep, butter, honey, and charcoal, taking in return corn and clothing, but the trade is subject to great fluctuations, in consequence of continual enmities between the tribes. The date and lotus fruit are produced in large quantities in the neighbouring gardens, the former of these being the prime article of food, and brought thither from all the surrounding country. As respects native industry, Medina is as ill situated as Mecca; wanting the commonest mechanics, and not even possessing a pottery. Weaving, dyeing, and tanning are arts wholly unknown, nor is there a single person in the whole city capable of making either a nail or a horse-shoe, unless it be at pilgrim-time, when many of the poorest badjis endeavour by hard labour to earn the money necessary for their journey homewards.

The climate of Medina is, during the winter, much colder than at Mecca. Rain falls irregularly at that season; often in violent storms, lasting for 2 or 3 days, but in some years so sparingly as to cause a general dearth, from the want of proper irrigation. The summer-heat is alleged to be greater than in any other part of the Hedjaz; and the salt-marshes, stagnant pools, and exhalations from the neighbouring date-groves, are powerful agents in producing those intermittent fevers, which are so common, and often fatal, in the city, especially to visitors. The deaths, indeed, are reckoned by Burckhardt (though, no doubt, very vaguely) at 1,200 annually; which, assuming the pop. at 18,000, is 1 in 15: and if this be near the truth, it is clear it must long ago have been depopulated, but for the continued supply of inhabitants from other countries.

Medina, though, probably, not entitled the cities of what, by the best authority the Hedjaz, has always, since the establishment of Mohammedanism, been considered as a separate and independent even of Mecca. The recently, been appointed by the Grand Si absence of precise information, it is in homet AH now exercises supreme power holy cities of the Mohammedan world. ii. 145—202; *Mod Trav.*, &c.)

MEDINA DEL CAMPO, a town of Spain, kingd. of Leon, prov. Valladolid, on the Zaperdial, a trib. of the Douro, 37 m. S.E. Valladolid, and 63 m. N.W. Madrid. Pop. 2,000. The town on both sides the river (crossed here by a stone bridge), has a neat square, with a handsome sculptured fountain in its centre. The houses are mostly very old, and many of them quite in ruins. A collegiate and 6 other churches, several monasteries (now uninhabited), and 3 hospitals, one of which has considerable architectural merit, are its chief public buildings; but most of them show, by their dilapidated appearance, the degraded condition of the place. The inhab. are chiefly employed in agriculture. It has 2 weekly markets, and a fair in February, well attended by traders from Toledo, Segovia, Cuenca, &c.

Medina del Campo occupies the site of the ancient *Mithyone Comperis*, and was formerly a place of considerable importance; but in the 17th century, after the

discovery of America, a large part of its pop. emigrated, and its decay has since been hastened by the internal troubles of the country. (*Milano*.)

MEDINA DE RIO SECO, a town of Spain, kingd. of Leon, prov. Valladolid, on the Sequillo, a trib. of the Douro, 55 m. S.E. Leon, and 122 m. N.W. Madrid. Pop. 4,700. It stands in an open plain, W. of the river, crossed here by 3 bridges, and has narrow, badly-paved streets, and shabby decaying houses: there are 3 churches, 4 monasteries, 3 hospitals, and a castle; but, with the single exception of the church of St. Maria, all the public buildings are in a ruinous condition. The inhab. were once so celebrated for their industry and the variety of manufactured goods exhibited at its fairs in April and September, that the district acquired the name of *India chica* (the Little Indies); but every trace of its former prosperity has now disappeared, and the pop. ranks at present among the most degraded and least industrious in Spain. (*Milano*.)

MEDINA SIDONIA, a town of Spain, in Andalusia, prov. Cadix, 22 m. E. by S. Cadix, and 65 m. S. Seville. Pop., according to *Milano*, 2,337. It is an old walled town, beautifully situated on the brow of a rocky eminence, looking seaward over a fine champagne country. A castle, 3 par. churches, 6 monasteries (now uninhabited), and 3 hospitals, are the only public buildings. The chief employment of the inhab. is the manufacture of earthenware, which is conducted on a large scale, furnishing the principal supply for Cadix, Seville, and, indeed, the whole of Andalusia. The neighbourhood is celebrated for its fine pastures; and the rearing of cattle forms the chief occupation of the rural pop.

MEDITERRANEAN SEA (the *Mare Internum* of the ancients, and, more recently, the *Mare Mediterraneum*), a large and very important ial sea, bounded N. by Europe, E. by Asia, and S. by Africa, communicating at its W. extremity, by the Straits of Gibraltar, with the N. Atlantic Ocean, and at its N.E. extremity, by the Dardanelles and Bosporus, with the Black or Euxine Sea. It extends, in a general sense, from lat. 30° to nearly 46° N., and from long. 6° 54' W. to 36° 8' E. Greatest length, 2,200 m.; do. breadth, from Venice to the Bay of Sidra, 1,300 m.; estimated area (acc. to Stein), nearly 600,000 sq. m. It is of an oblong, but very irregular, shape, especially on its N. side, into which project southward the two large peninsulas of Italy and Greece, which thus divide the Mediterranean into three basins, the most westerly of which is inclosed between the Straits of Gibraltar and the narrow straits between Sicily and the

are generally steep and bold; but in parts, as in Spain and France, near the mouths of the Ebro and the Rhone, and in Lucca, Tuscany, the Papal States, and Naples, as far S. as C. Campanella, the shores are low and gently shelving, varied only by a few bold rocky headlands; the S. side of Sicily and the W. shores of the Adriatic, are, also, with a few exceptions, flat and sandy, but in Istria, Dalmatia, and, in short, all along the E. side of the Adriatic, the coast is bold, broken, and irregular, often presenting cliffs rising between 600 and 700 ft. in perpendicular height, with deep soundings close to the shore. The shores of the Archipelago partake, more or less, of the same bold character, except in a few bays, where rivers, by the constant deposition of alluvial soil at their mouths, have formed low beaches, extending considerably beyond the high rocks usual to this coast.

The S. coast of Anatolia, which has a less indented line of shore, though by no means low, is much less

craggy and precipitous; extremely high promontories here and there stretch out into the deep sea; but beaches, more or less shelving, of shingle, gravel, or sand, are by far the most common on this coast. The cliffs about Iskenderoon are of great height, running round the bay, and furnishing complete security for shipping, except from the E., or land, breezes, which are both violent and dangerous. The shores of Syria are mountainous between Tripoli and Tyre, but present, in many places, a large extent of low and flat coast, especially towards the S. extremity.

Near the mouth of the Nile the country presents a low uninteresting flat, with rocky reefs and shoals, projecting from 5 to 7 m. from the shore; and this continues as far W. as long. 27° E., beyond which a series of not very high cliffs, varied here and there by sandy bays (the largest being those of Sidra and Cables), marks the whole African coast as far as C. Sparte. Submarine rocks and projecting shoals of mud and sand, not less than the roving piratical habits of the Moors, render the navigation of these shores both difficult and dangerous; and, in this respect, the S. side of this sea presents a striking contrast to the N., where, generally speaking, deep soundings may be had close in shore; while, in parts, particularly between Nice and Genoa, and near Gibraltar, no soundings can be found under 1,000 fathoms and upwards. The in-shore navigation presents some difficulties, in consequence of a few hidden rocks; but the chief skill of the mariner is required in the Archipelago, where, though there be few hidden dangers, it requires first-rate experience of its shifting winds and currents to guide him safely through its many intricate channels (*Purdy's Sailing Dir. for the Med.*, part ii. p. 61.; *Lyell's Geology*, i. 347.)

It is a curious fact, that, though the Mediterranean generally be so deep that soundings, even where possible, are of no practical utility, except in some of its bays and harbours, the depth of the channel between Sicily and Tunis, according to Sonnini and Smythe, no where exceeds 30 fathoms, the average not being greater than the depth of the Straits of Dover between England and France. (*Smythe's Hydr. Maps of Sicily and Africa, and Memoir.*) The temperature of its water is, at an average, from 72° to 76°, or 34° Fah. higher than the W. part of the Atlantic Ocean; but it does not appear, from the experiments of Marcet and Woollaston, that its density exceeds that of many ordinary samples of sea-water. (*Lyell's Geology*, ii. 17.) The chief feeders of the Mediterranean are the Ebro, Rhone, Po, and Nile, with the various waters brought from the Black Sea by the strong current that sets W. through the Dardanelles. But, notwithstanding this vast supply, the evaporation is so rapid, that water constantly passes in through the Straits of Gibraltar, to restore the equilibrium. The Mediterranean has long been considered a tideless sea; but this is not strictly true: for, in the Adriatic, as well as between that sea and the coast of Africa, tides rise from 5 to 7 ft., and their influence is felt, more or less, along the shores of Sicily, and on the W. side of the Morea. The existence of this tide, indeed, may suggest an explanation of the loss of so many vessels in that region of mist and terror, the Gulph of Sidra, where there is always a lofty swell and accumulation of waters during the prevalence of N.W. winds. A tide of 8 or 9 ft. also ebbs and flows at pretty regular intervals in the smaller gulph of Cables, on the same coast. In the Straits of Messina and Bonifacio, at Naples, in the narrow channel of the Euripus, and on both shores of the Straits of Gibraltar, there is an ebb and flow amounting to 3 ft. and upwards; but whether these movements are to be attributed to lunar influence, or to other causes, has not been determined. (*Purdy*, part ii. p. 9.; *Lyell*, i. 375.) The currents peculiar to this great inland sea vary in its different parts: a current sets E. along the African shores, which is turned northward along the coast of Syria, and then westward along that of Cyprus and Karamania; the current in the Archipelago sets almost continually to the S., being increased or retarded, according to the winds; in the Adriatic, the current runs N.W. up the coast of Albania, and S.E. down the Italian shores, bringing with it the waters of the Po. A strong current runs through the Faro of Messina (the Scylla and Charybdis of antiquity), and, by meeting a lateral current, causes numerous eddies and whirlpools. (*See SCYLLA and CHARYBDIS.*)

But this strait, notwithstanding the statements in the classics, presents no real danger; and, in the late war, it was traversed by the fleet under Lord Nelson. (*Smythe's Sicily*, pp. 110—113.) In the Straits of Gibraltar, the main current sets eastward, at a rate varying from 3 to 6 m. an hour: it is true that an under-current has long been supposed to run in an opposite direction; but the fallacy of this hypothesis has been fully shown by Mr. Lyell; and it seems that the only outlet for the superfluous water is by the lateral current, which runs westward close to the African shore. (*Geology*, ii. 19.) With respect to the winds of the

Mediterranean, it may be observed that the prevalent winds, except during spring, vary between N.W. and N.E., while those in spring are from S.E. to S.W. But the winds are extremely variable, and it is said that 3 or 4 vessels may occasionally be seen carrying different, and sometimes opposite, winds at the same time. The *Bora*, a violent N.E. wind in the Adriatic, the *Etesian*, or N.E., winds (called also *Tramontana*), which blow for several months together in the Archipelago, and the *scirocco*, or *solano*, are peculiar to this sea. The last of these is described by Capt. Smythe as being extremely troublesome, and producing great dejection and lassitude. "At its commencement," he observes, "the air is dense and hazy, with long white clouds floating just above, and parallel to, the horizon. The thermometer rises to 90° or 95°, sometimes 100°, and the barometer gradually sinks to about 29.60°. It generally continues during three or four days; during which period, such is its influence, that wine cannot be fined, or meat effectually salted: oil-paint laid on during its continuance will seldom harden. But, though blighting in its general effects during summer, it is favourable to the growth of many useful plants in winter, when, indeed, it has few disagreeable qualities." (*Sicily*, p. 6.)

Waterspouts are of very common occurrence, especially on the coast of Asia-Minor, where as many as sixteen have been seen at one time. Many volcanic phenomena have also been observed in this sea; among which may be mentioned the sudden appearance, in 1831, of an island, about 30 m. S.W. of Sciacca in Sicily, and its equally sudden disappearance, three years afterwards. These movements may result from the close proximity of the large igneous region of Italy and Sicily. The presence of electric fluid in the atmosphere is also proved by the play of flame round the mast-heads, called by sailors "the fire of St. Elmo." Several springs of fresh water rise in different parts of the Mediterranean: the largest of these is in the port of Taranto, near the mouth of the Galesus, where the fresh water ascends in such a volume, and with such impetuosity, that it may be taken up at the surface without the least impregnation of salt; but the most celebrated of these fountains is that of Arethusa, in the harbour of Syracuse. (*See ARETHUSA*, i. 152.)

The Mediterranean abounds with fish of many different varieties, as well as with mollusca. The tunny and anchovy fisheries are a source of great profit on the coasts of Italy and Sicily: the sword-fish is very common; and the *murex purpura* supplies the fine Tyrian dye, now, as anciently, celebrated for the brightness of its red colour. Coral is found on many parts of the Barbary coast, and in some of the bays of Corsica and Sardinia. The chief fishery, however, is in the Straits of Messina, where there is a coral-ground upwards of 6 m. in length.

In the Scriptures, the Mediterranean is called "the Great Sea" (Num. xxxiv. 6.). Herodotus calls it (i. 185.) "the Sea;" and Strabo, "the Sea within the Columns" (ἡ θάλασσα ἐν τῶν στύλων). It is probable that it witnessed the first rude attempts at navigation. "Having," as Dr. Smith has justly observed, "no (perceptible) tides, nor, consequently, any waves, except such as are caused by the wind only, the Mediterranean was, by the smoothness of its surface, as well as by the multitude of its islands, and the proximity of its neighbouring shores, extremely favourable to the infant navigation of the world; when, from their ignorance of the compass, men were afraid to quit the view of the coast, and, from the imperfection of the art of ship-building, to abandon themselves to the bolsterous waves of the ocean." (*Wealth of Nations*, book i. cap. 3.) At all events it was navigated, and its islands occupied, in the remotest antiquity: it subsequently was traversed in all directions by the ships of the Phœnicians, and their descendants, the Carthaginians; and, at a later period, by those of the Greeks and Romans. During the middle ages, and down to the discovery of America, it was the grand centre of the commerce and navigation of the old world; and the Venetians and Genoese, by whom its trade was for a while principally engrossed, attained, in consequence, to great wealth and consideration. The discovery of America, and of a route to India by the Cape of Good Hope, opened new and far more extensive channels for maritime enterprise. But we incline to think that the depression of the Mediterranean trade, in the 16th, 17th, and 18th centuries, was principally owing to the circumstance of the countries round the Black Sea, the Levant, and the whole N. shore of Africa, having been shortly before subjugated by the Turks, the implacable foes of art, civilisation, and refinement. Happily, however, their empire has been, to a considerable extent, dismembered; and, within the course of the present century, the trade of the Mediterranean has begun to resume something like its former importance. The opening of the Black Sea, and the rise of Odessa and other towns on its shores, the renewed intercourse with India by Alexandria, the occupation of Malta by the English, and of Algiers by the French, the independence

of Greece, and the establishment of steamers between the principal ports of the sea, have prodigiously extended its commerce and navigation. And when the old, worn out, imbecile despotism of the Turkish government has been overthrown, and the fine and fertile countries, now under its degrading yoke, have been emancipated, a vast additional stimulus will be given to its commerce; so that the fair presumption seems to be, that the ancient importance of the Mediterranean, as a field for the successful prosecution of commercial navigation, is destined, at no very distant period, to be again equalled, and, most probably, surpassed.

The Mediterranean has on its shores the capital cities of Naples, Palermo, Athens, Tripoli, Tunis, and Algiers. Among its principal emporiums may be specified Marseilles, Genoa, Leghorn, Civita-Vecchia, Venice, Trieste, Syra, Smyrna, Alexandria, Malaga, and Barcelona. Its most important naval stations are those of Malta and Toulon: Gibraltar is, as it were, the key of the sea.

To the scholar and classical traveller the Mediterranean has the most powerful attractions. Her shores were the earliest seats of art, science, and civilization. She has been surrounded and occupied by the most renowned nations of antiquity; and her coasts and islands have still to boast the ruins of some of the noblest and most splendid cities of the ancient world. In short, to use the language of Dr. Johnson, "the grand object of all travelling is to see the shores of the Mediterranean. On those shores were the four great empires of the world; the Assyrian, the Persian, the Grecian, and the Roman. All our religion, almost all our law, almost all our arts, almost all that sets us above savages, has come to us from the shores of the Mediterranean." (*Purdy and Noris's Sailing Directions; Smythe's Sicily, and Hydro. Charts; Beaufort's Karamania, and Charts; Dict. Geog., &c.*)

MEDWAY, an important river of England, which has its embouchure in the estuary of the Thames. It rises in the S.E. corner of Surrey, between the N. and S. chalk ranges; being joined at Penshurst Place by streams from the S. of Sussex. Its course is thence N.E. to Maidstone, and then N. to Rochester and Chatham, about 2 m. below which it turns nearly E., expanding at the same time into a wide estuary, interspersed with islands. After prosecuting an easterly course for 8 or 10 m., it turns once more to the N., uniting with the estuary of the Thames at Sheerness. The tide is interrupted by locks, otherwise it would flow up the river to Maidstone. In consequence of works begun in the reign of Charles II., and resumed at different periods, it has been rendered navigable as far as Tonbridge; affording a channel of communication of much importance to the surrounding country. From Sheerness to Chatham there is water to float the largest ships; and the ground being soft, and the reaches short, it forms an admirable harbour for men-of-war, many of which are usually laid up here when out of commission. (*See CHATHAM, l. 583.*) The Medway was called by the ancient Britons *Vaga*, to which the Saxons prefixed the syllable *Med*, signifying mid or middle, because it ran through the middle of the kingdom of Kent: hence it came to be called Medweg, and latterly Medway. Considering the shortness of its course, the Medway is one of the deepest of European rivers. (*Hasted's Kent, l. 278., 8vo ed.; Statistical Account, &c., l. 33.*)

MEERUT, a district of British India, presid. Agra (Bengal), chiefly between lat. 28° 30' and 29° 30' N., and long. 77° and 78° E., having N. the collectorate of Mozuffernuggur, E. that of Moradabad, S. Boolundshahur, and W. Paniput, &c. Area, 2,250 sq. m. Land revenue, in 1822, 14,04,216 rup. The chief towns are Meerut, Sirdhuna, Katouli, and Hustinapoor.

Masur, a town of British India, presid. Agra, cap. of the above district, in an extensive grassy plain, 30 m. N.E. Delhi. This, which, like Cawnpoor, is a military station, is a much more agreeable residence than the latter. The town is surrounded by a dilapidated brick wall, and has a ruined fort or citadel. The streets are narrow and mean, and the houses mostly of mud; but it has some good architectural remains of mosques and pagodas; and without the walls are various Mohammedan tombs, built of red stone. A small stream, which swells into a river during the rainy season, is here crossed by a handsome bridge. The cantonments are at some distance N. of the town, from which they are separated by a long and busy bazaar. The barracks are one story in height, and disposed in regular ranges, at intervals, along a space about 2 m. in length: the bungalows of the officers are surrounded with gardens, enclosed by tall hedge-rows. The church of Meerut is probably the largest in British India, being 150 ft. in length, by 84 ft. in breadth, and capable of accommodating 3,000 people. There is a good free school here, with about 100 native pupils. Meerut was a city of some consequence before the Mohammedan invasion of India. It was taken by Mahmoud, of Ghisnee, in 1018, and by Timour in 1399. It was occupied, with

its district, by the British in 1803, and is now the residence of a revenue collector and a judge, and the headquarters of a force of about 20,000 men, of whom about 2,300 are Europeans. (*Hamilton's E. I. Gaz.; Modern Trav., x. 5, 2.; Pari. Reports, &c.*)

MEININGEN (SAXE), or SAXE-MEININGEN-HILDBURGHAUSEN (DUCHY OF), an indep. state of Central Germany, consisting of a crescent-shaped territory, between the 50th and 51st degs. of lat., and long. 10° 10' and 11° 25' E.; enclosed on the S. by the territories of Cobourg and Bavaria, and on the other sides by the dominions of Cobourg, Schwartzenburg, Prussia, Hessel-Cassel, and Weimar. Area, 968 sq. m. Pop. (1849), 163,322. This duchy comprises a portion of the Thuringian forest mountains; one of which, the Dollmar, rises to 2,370 ft. above the sea. The remainder of Saxe-Meiningen is chiefly comprised in the vale of the river Werra, by which it is traversed in a N.W. direction. This last portion of the duchy, though one of the most fertile districts in Germany, does not, however, produce enough of corn for the consumption of its inhab. Tobacco, turnips, and fruit are staple products; and the forests and cattle of the duchy are among its most important sources of wealth. Mining is pretty actively pursued; iron, a little copper, coal, alum, vitriol, &c., being produced: it has also marble quarries, and furnishes about 120,000 cwt. of salt a year. The manufacture of hardware and the weaving of linens and woollens are the chief remaining branches of industry; but a number of hands are also employed in making wooden articles, toys, &c. The government is a limited monarchy, and, in nearly all respects, similar to that of Saxe-Weimar (which see). The high court of appeal in Jena is the supreme tribunal for this duchy. The inhab., who are nearly all Lutherans, are quite as well educated as those of the rest of Saxony. Primary schools are numerous; there are superior schools, or colleges, in all the towns, and the state has a considerable share in the direction and patronage of the University of Jena and of the Prussian gymnasium at Schlensingen, near Erfurt. Public revenue, in 1849, 1,440,000 fl., which was about equal to the expenditure. The public debt, at the same time, amounted to 4,217,000 fl. Saxe-Meiningen has one vote in the full council of the German Confederation, and a vote in the committee, conjointly with Saxe-Weimar, Cobourg, and Altenburg, together with which it holds the 14th place in the diet. It furnishes 1,150 men to the army of the Confederation.

Her late Majesty, Queen Adelaide, was a princess of Meiningen.

MEININGEN, a town of Central Germany, cap. of the above duchy, on the Werra, here crossed by two stone bridges, 31 m. N.N.E. Fulda. Pop. about 6,300. It is encircled by wooded hills, is well built and laid out, and surrounded with ramparts and ditches. In the palace, which has been the residence of the dukes since 1681, are collections of paintings, engravings, natural curiosities, the archives of Meiningen and Weimar, and a library of 24,000 vols. The house of assembly for the states of the duchy, the *bernhardinum*, or gymnasium, the female seminary, riding-school, theatre, and hospital, are the other principal edifices. It has some manufactures of woollen, linen, and mixed fabrics, with tanneries, breweries, &c., and has some of the best public gardens in Germany. (*Berghaus, Allg. Länder, &c., iv. 261-9.; Stein's Handb. der Geog.; Alm. de Gotha, 1841.*)

MEISSEN, a town of the kingd. of Saxony, prov. Meissen, on the Elbe, here crossed by a handsome bridge, 14 m. N.W. Dresden. Pop., in 1845, 8,080. "The castle, the Gothic church, and the lofty houses, perched high upon a rocky eminence, have a most imposing effect as you approach Meissen; but the streets are narrow, and the town has internally a gloomy appearance, which is considerably increased by the smoke constantly issuing from the porcelain manufactory." This establishment occupies the castle, built, it is said, by the emperor Henry I. "The beautiful pottery ware that goes by the name of Dresden china, is all manufactured here; and though the Meissen potteries are now rivalled by those of Berlin and Vienna, they were at one time the first, and may still be considered the most celebrated in Europe." (*Strang's Germany in 1831, i. 84, 85.*) The Gothic cathedral is remarkable for the fine open-work of its spire and the elegance of its interior. In it are several antique monuments of the Saxon princes, and some fine old paintings by Albert Durer and Cranach: the latter has introduced into the altarpiece the portraits of Luther, his wife, and his friend, the Elector of Saxony. The neighbouring convent of Afra has been converted into a royal school. The chapter-house, 3 hospitals, and the orphan asylum, are the other chief public establishments. Besides the porcelain factory, founded by a chemist named Böttcher, in 1710, Meissen has manufactures of hats, stockings, leather, colours, &c., though none is very considerable. (*Berghaus; Stein, &c.*)

MELBOURNE. See SUPPLEMENT.

The portion on the right or N bank of the Memel, called St. Agatha, is the most extensive: it is built on the declivity of a hill, and has a spacious square, an old Gothic par church, with some fine stained glass, the posthumous, formerly a Benedictine abbey a convent, some square-baths, and the remains of the Abbey of St. Peter, founded under the Merovingian dynasty. The portion on the left bank of the river is less than either of the others, it comprises the clergy barracks. Memel has a commercial college, a public library with 10,000 vols, a society of agriculturists, arts, and sciences, a school of drawing, &c., with manufactures of woollen cloth, printed cotton and linen goods, and glass, and some trade in corn and other products destined for the Paris market. Memelstadt is mentioned by Caesar in his Commentaries. It was taken by his lieutenant, Labienus, in the middle ages, it was several times captured by the Germans and English, and was held by the latter from 1613 to 1660. (Jings, art. *Strasburg*, &c.)

MEMEL, a fortified sea-port town of the Prussian dom., being the most northerly of any size in the kingdom, and one of the principal shipping ports on the Baltic, prov. Prussia, gov. Königsberg, on the N E side of the entrance to the great salt lake, or lagoon called the Kurische Hafl, but within the bar 10 m N W Tilsit, and 74 m N N E Königsberg, lat 56° 43' N, long 21° 5' E. Pop. in 1801, 3,700. It consists of the portions called the Old Town, New Town, and Frederick's Town, and has several suburbs. It was surrounded by walls in the time of the Teutonic knights, and has a citadel, founded in 1706, now partly used as a prison. It has 1 church (St. Catherine), Calvinist, and 1 Rom. Cath.; a synagogue, criminal, exchange, theatre, high school, school of industry, female missionary school for neglected children, an hospital, and various charitable institutions. It is the seat of a tribunal for the district (Landrecht), of judicial tribunals for the district and town, a house of taxation, police commission, &c., and has manufactures of woollen cloth and soap, with docks for ship-building, sawing works, distilleries, &c. The harbour is large and safe, with deep water but the bar at the mouth of the Kurische Hafl, has within more than 12 f. water, and sometimes not more than 12 or 14 f., so that ships drawing more than 15 or 16 f. water are frequently obliged to land and unload a part of their cargoes in the roads, where the anchorage is not indifferent, particularly when the wind is at the N or N W. A light house, originally 76 f. but now 100 f. high, has been erected on the N E side of the entrance to the harbour. The light, which is fixed and powerful, may be distinguished, in clear weather, at more than 60 m distance. Timber particularly oak plank and fir of the very best quality is the great article of export from Memel: but corn, staves, flax and hemp, threaded for crocheting, hides, bones, bristles, wax, &c. are also largely exported. Timber, hemp, and flax, and most other articles shipped from this, and, indeed, from most Baltic ports, are branded, that is, they are inspected, and stamped into three qualities, according to their degree of goodness, by persons appointed by government for the purpose. (See art. *Prussia*, in this Diet.) We have a pretty considerable intercourse with Memel, especially when there is a demand for foreign corn in England. We send to it small quantities of colonial produce, entire cloth and yarn, and cutlery and considerable quantities of coal, which, however, is reckoned scarcely so brilliant. The trade of ship-building has recently been carried on to a considerable extent at Memel, and, in 1808, the vessels of the aggregate burden of 15,771 tons of 4,000 lbs each, belonged to the port. The principal drainage of export of timber is reckoned at about from 75,000 to 80,000 loads of timber, 1,000 loads each timber and plank, 700 mill-cut pipe-staves, and about 300,000 ft of plank. The exports of other articles are so very fluctuating as hardly to admit of their being reduced to an average.

MEMELINGEN, a town of Saxony, and formerly a free city of the empire, prov. Saxony, dep. distr. on a tributary of the Elbe, 40 m S W Augustburg. Pop. 7,000. It is walled, and has a handsome town hall, an arsenal, barracks, a theatre, an academy of instruction, and foundry, &c. It has manufactures of woollen, cotton and linen stuffs, stockings, ribbons, of cloth, copper and iron wares, &c. with tanneries, linen and cotton printing and dyeing establishments, and an active trade in the produce of them, and in salt, wool, corn, hops, &c., which it sends to Switzerland and Italy. (Jougnan, *Dict. Lander*, iv. 105.)

MEMEL STRAIT, a strait or channel of N Wales, separating the island of Anglesey from Caernarvon: it runs N E and S W about 14 m, varying in width from about 200 yards to about 8 m. Parliament having contributed a sum of money to assist in improving its navigation, the dangerous rocks, by which it was formerly encumbered, have been removed, so that

vessels of moderate burden are able to pass without difficulty through the strait, when it would not be possible for them to do so before.

The Memel strait is now principally celebrated for the magnificent bridges by which it has been recently crossed, Holyland being the nearest port in Ireland, and the usual convenient place at which to ship and receive the Dublin mails. It became of great public importance that the means to it should be rendered as safe and expeditious as possible. The usual ferry across the strait was in the vicinity of Bangor, and this being frequently attended with both danger and delay it was resolved to erect nearly at the same place, a chain bridge elevated sufficiently above the water to allow ships to pass freely underneath. This undertaking was begun in 1819, and completed in 1820. There are seven stone arches, each of 140 ft span, and the length of the roadway or chain part, is 275 ft. The bridge cost in all £11,704, and its elegance and solidly reflect great credit on the engineer, Mr. Telford.

But this great work has been far surpassed by the tubular bridge, erected in 1825-26, forming a portion of the railway between Chester and Holyland. It consists of two lines of cast tubes of wrought iron, each line being 1412 ft in length stretching across the strait one for the railway carriages going to, and the other for those returning from Holyland. The tubes rest on abutments and towers on each side the strait, and on a tower in the middle of the lower; the water way or length of the tubes, or bridge, on each side the central tower, being 600 ft. Like the hanging bridge, it is elevated 40 ft above the level of high water and consequently gives no interruption to the navigation. This stupendous work, the construction of which forms a new era in engineering, was projected and carried by Robert Stephenson, Esq., at a cost of above £50,000.

MENTE, a town of France, dep. Lozère, of which it is the cap. on the Lot, 60 m S N E. Rodez. Pop. in 1806, 2,600. It is badly built and laid out, but is well supplied with water by numerous public fountains, and surrounded by a bastioned terrace a public promenade. The cathedral a Gothic building, has two fine spires. The old episcopal palace, now the prefecture, has a gallery and hall enriched with many paintings by Bernard, an artist of the French school. It has also a public library of 5,000 vols; a commercial college a court of primary jurisdiction, a society of agriculturists, a museum, and art, a chamber of manufactures, &c. Its suburbs flourish some woollen cloth, mixed serge de Mendre, which are sent into Spain, Italy, and Germany.

MENTHE (Flemish *Mennin*), a town of Belgium, prov. W Flanders, dep. east on the Lys, immediately within the Belgian frontier, and 61 m S W Courtrai. Pop. in 1801, 2,000. It is a small town, built on a hill, and is surrounded by strongly built bastions and walls, and is further defended by extensive outworks, including a citadel, bastion, and 6 forts. A bridge of stone across the Rhine, 1,000 Rhine-ft in length, projected by a side de part, connects Mente with its fortified suburb of Castel, a town of 2,000 souls, near which is an island in the river that is also strongly fortified. A garrison of 30,000 men would be required for the proper defence of the various works. The city is entered by 10 gates, 5 on the land side, and 5 along the river; all which, except an special casemates, are closed at 10 p. m. It has several good streets and squares, which present various indications of improvement; generally however, it is in most parts irregular and the streets, which are narrow and dirty are rendered darker by the latrines of the houses, many of which have strongly ornamented windows. The appearance of the town is, in fact, that of an ancient city converted into a modern fortress, but it is, notwithstanding, interesting from its antiquity, and its numerous public edifices. The cathedral, built in the massive round arches Gothic style, was commenced in the 10th, and finished in the 13th century. Like the cathedral of Worms and Speyer. It has a double choir and a high altar at both the E and W extremities. It was nearly destroyed by fire in 1793, and suffered greatly during the siege of the town by the Prussians, in 1795, but, of late years, extensive repairs have been made upon it, by the

of the Rhine, empty opposite its junction with the Lys, 18 m. W S W Courtrai, and 50 m. S E. Courtrai. lat. 50° 57' N., long. 2° 10' E. Pop. estimated at 20,000, but the garrison of about 6,000 men. It is built partly on level ground, and partly on the declivity of a hill, in the form of a semicircle, the Rhine forming the base of the arch. It is surrounded by strongly built bastions and walls, and is further defended by extensive outworks, including a citadel, bastion, and 6 forts. A bridge of stone across the Rhine, 1,000 Rhine-ft in length, projected by a side de part, connects Mente with its fortified suburb of Castel, a town of 2,000 souls, near which is an island in the river that is also strongly fortified. A garrison of 30,000 men would be required for the proper defence of the various works. The city is entered by 10 gates, 5 on the land side, and 5 along the river; all which, except an special casemates, are closed at 10 p. m. It has several good streets and squares, which present various indications of improvement; generally however, it is in most parts irregular and the streets, which are narrow and dirty are rendered darker by the latrines of the houses, many of which have strongly ornamented windows. The appearance of the town is, in fact, that of an ancient city converted into a modern fortress, but it is, notwithstanding, interesting from its antiquity, and its numerous public edifices. The cathedral, built in the massive round arches Gothic style, was commenced in the 10th, and finished in the 13th century. Like the cathedral of Worms and Speyer. It has a double choir and a high altar at both the E and W extremities. It was nearly destroyed by fire in 1793, and suffered greatly during the siege of the town by the Prussians, in 1795, but, of late years, extensive repairs have been made upon it, by the

aid of voluntary contributions; the nave has been newly roofed with slate, and the great E. tower has been surmounted with an iron cupola, 70 ft. in height. The interior has numerous monuments of the former archbishops of Mentz, who were sovereign princes, and electors of the empire. It has also monuments of various other historical personages. The side chapels abound in fine old carving: the doors, of solid brass and great height, opening to the market-place, were cast by the founder of the cathedral, and have engraved on them the charter given to the city by Archbishop Adalbert, in 1135. There are 6 other R. Cath. par. churches, several conventual churches, and a Calvinist church, most of which deserve notice. On the quay beside the river are two large red buildings; one of which, the ancient electoral palace, has been converted into the custom-house; and the other, the Teutonic House, once occupied by Napoleon, is now the residence of the military governor. The former palace of the Prince Dalberg, nearly destroyed by fire in 1793, is used for the courts of justice. The arsenal, on the bank of the Rhine, the theatre, a new and handsome edifice, and the episcopal and vice-governor's palaces, are among the remaining principal public buildings. But Mentz derives its principal celebrity from its having been the residence of Gutenberg, and the cradle of the art of printing. The house in which Gutenberg lived has been taken down, and its site is occupied by a casino, belonging to a literary club. In an adjacent court is a statue of Gutenberg, in bronze, from a model by Thorwaldsen; but this work is said (by Chambers) to be clumsy, gigantic, and tasteless; and it is proposed to raise a monument more commensurate with the signal merits of the individual in whose honour it is to be erected. Mentz has a gymnasium, an ecclesiastical seminary, schools of medicine and veterinary surgery, a public library of 90,000 vols., in which are preserved some of the earliest extant specimens of printing; a museum of natural history, antiquities, coins, &c. Outside the walls are some fine gardens along the bank of the river.

Mentz, formerly the first ecclesiastical city of the empire, is now of importance chiefly as its strongest fortress and principal military post. A mighty revolution has taken place since the visit of Dr. Moore, towards the end of last century, when the abbés, with their handsome equipages, lorded it over the well-behaved troops. "The chapter and the grenadiers have now precisely changed places. You see the meagre occupants of the stalls skulking to mass in threadbare *soutanes*, their looks proclaiming them no longer the monopolisers of the old hock of the neighbourhood; while the Austrian and Prussian soldiers are parading about in the insolence of military superiority. The cafés, the billiard-rooms, the promenades, are thronged with these smoking and swaggering guests, who impart a sort of unhallowed vivacity to the gloomy haunts of superstition and monachism. The university building is converted into barracks, and hospitals and guard-rooms strike one at every corner." (*Autumn on the Rhine*, p. 5.) Mentz is garrisoned by a nearly equal number of Prussian and Austrian troops, and is commanded by a governor, elected alternately every five years from either nation. It is the seat of a military tribunal, and the high court of justice for Rhenish Hesse; its civil authorities being appointed by the government of Hesse-Darmstadt. The town is so environed, on the river side, by its fortifications and other erections, that the Rhine is but little available for commercial purposes, and the accommodation for craft is very inferior. Nevertheless, Mentz is the chief commercial town in the grand duchy (*see also* HESSE-DARMSTADT, I. 990.), and, next to Cologne, the chief mart for Rhenish produce in Germany. It has a considerable trade in corn, wine, timber, &c., and manufactures of leather, soap, hats, glue, vinegar, tobacco, musical instruments, &c.; steam-communications with Mannheim and Holland, and a steam-navigation assurance-company.

Though Mentz abounds in historical associations, its existing vestiges of antiquity are very few. Agrippa, the general of Augustus, established an entrenched camp on the site where Drusus Germanicus, about *anno* 10 B. C., erected a fort called *Moguntiacum*. Drusus afterwards founded a second fort (*Castellum*) on the opposite bank of the Rhine; and the two were at a subsequent period connected by a Roman bridge, portions of some of the piers of which may still be seen when the water is low. (*Schreiber*.) In the citadel is the Eichelstein, a stone tower, alleged to have been erected by Drusus. At Zahlbach, not far from Mentz, are the remains of an ancient aqueduct; and, between the two, a Roman cemetery has been discovered. The city, which was almost wholly destroyed in the wars at the fall of the Roman empire, was restored by Charlemagne, who erected a church, and rebuilt the bridge with timber. In the 13th and 14th centuries Mentz was a place of some note for literature and the arts. In 1631, it was taken by the Swedes; in 1644, 1688, and 1792, by the French; it was bombarded and taken by the Prussians in 1793; but,

being re-taken by the French in 1797, it became, during their ascendancy, the cap. of the dep. Mont-Tonnerre. (*Schreiber, Guide du Rhin*, p. 126-136.; *Autumn near the Rhine*, p. 1-13.; *Berghaus, Allg. Länder, &c.*, iv. 358, 359.; *Chambers's Tour*, &c.)

MEQUINEZ, a large city of Morocco, and one of the residences of the emperor, 70 m. E. Salee, and 235 m. N.N.E. Morocco; lat. 33° 56' N., long. 5° 59' W. Pop., differently estimated, at from 50,000 to above 100,000. It stands in a beautiful, well-watered, and very fruitful valley; and is surrounded by a wall about 6 ft. high, built for a defence against the marauding Berberbers. It owes its present extent and consequence to the late sultan, Muley Ismael; who, after having secured to himself the undisputed sovereignty of the kingdoms now forming the empire of Morocco, made Mequinez one of the caps., considerably enlarged it, and erected a fine palace, which, owing to its having only one story, is of great apparent extent. In the centre of the enclosure, which contains several well laid-out gardens, is the emperor's harem, formed by a four-sided colonnade, above which are various apartments for the women, eunuchs, and female attendants. The rooms are each about 20 ft. long, by 12 ft. broad, and 18 ft. high; the walls are inlaid with red and blue tiles, and the light is communicated by means of 2 large folding-doors. Between the chief apartments are paved courts of chequered marble, in the centre of most of which is a fine marble fountain. The houses of Mequinez are neater than those of Morocco; but the streets are not paved; and hence in rains they are infested with mud, and in dry weather with dust. The millah, or Jews' quarter, is walled round, extensive, and in good repair; but the Negroes' quarter is now a mere ruin. About a century ago a convent was formed here by the King of Spain, for the relief and spiritual comfort of Rom. Cath. captives and Christian travellers; but it was deserted by the monks, previously to the accession of the late emperor, Muley Soliman. The inhab. are described as being more courteous than those more to the S.: they are hospitable to strangers, invite them to their gardens, and entertain them sumptuously. The women are beautiful, and have fair complexions, with black eyes, white teeth, and dark hair; and have a suavity of manners rarely to be met with even in the most polished nations of Europe. (*Jackson's Morocco*, pp. 126-129.; *Geog. Journ.*, vol. i.)

MERDIN (an. *Marde*), a city of Asiatic Turkey, at the N.W. extremity of the pash. of Bagdad, 50 m. S.E. Diarbekir, lat. 37° 19' N., long. 4° 20' E. Pop. about 11,000, of whom 1,500 are Armenians, and 200 Jews. It is situated on the slope of the Karadja-dagh, or ancient *Mount Masius*, and overlooks a very extensive and fertile tract of country. It is commanded by a castle, crowning the summit of a rock, and is very difficult of access, the best road to it leading up a steep about 1½ m. in length. The houses are all built of hewn stone, and appear to be very old; the windows are small, grated with iron, the streets narrow, and the buildings, being on an acclivity, seem to rise one on the top of the other. The walls are kept in tolerable repair, and a few old pieces of cannon are mounted on the towers of the castle. Merdin is the frontier town of the pachalik towards Constantinople, and the residence of a mutsallim appointed by the pacha. The industry of the inhab. is confined to the manufacture of cotton fabrics and Turkey leather; but it has little external trade, in consequence of not being on any of the great caravan-routes. The neighbourhood produces an abundance of cotton, grain, and fruits, which find a ready sale in the market of Merdin. (*Olivier*, tom. iv. p. 242-245.; *Kinnaird*, p. 265.)

MERE, a small market-town and par. of England, co. Wilts, hund. its own name, 20 m. W. Salisbury, and 96 m. W. by S. London. Area of par., 7,400 acres. Pop., in 1841, 3,139, of whom 1,462 belong to the town-tything. The town is very indifferently built, having in its centre an ancient cross, the interior of which serves as a market-house. The church is large, with a square tower at its W. end: the living is a vicarage in the gift of the Dean of Salisbury. The Wesleyan-Methodists, also, support a place of worship and attached Sunday-school. A silk-mill has recently been erected, and, in 1839, employed 71 hands. Dowls, also, and bed-ticking, are made here on a small scale; but the town (formerly of considerable importance, having a castle on an adjacent eminence) is now in a miserably decayed condition.

MERGUL, a town of the Tenasserim coast, in India-beyond-the-Brahmaputra, cap. of the British prov. of Mergul, on the river Tenasserim, at its mouth, in lat. 12° 12' N., long. 96° 25' E. Pop. probably from 6,000 to 7,000, including natives and British residents, with Chinese, Siamese, Peguans, and descendants of Portuguese. It is built along the declivity and skirts of a steep hill, and, when taken by the British, was surrounded by a wooden stockade. But it is not a place of any strength, being accessible to ships, and commanded by a high island in front. The streets are wide, but badly paved; and they

would be much siltier than they are but for the situation of the town on a slope, which facilitates their being cleared by the rain. The houses are nearly all of bamboo, reeds, matting, and other fragile materials. A mean brick gateway stands at the entrance to the town from the river side, which, with some bastions at the angles of the works, a few small pagodas, and some houses erected by Europeans, are the only structures of any solidity. The harbour is safe for small vessels, having 13 ft. water over the bar at low water, with 18 ft. rise at springs. The climate is mild and salubrious: European invalids, sent thither from Rangoon during the war, speedily recovered their health. Mergui was taken by storm by the British in 1824. (*Low. Hist.*, &c., in *Journ. of the Royal Asiatic Soc.* ii. 326—329.; *Hamilton's E. I. Gaz.*)

MARUÏ ARCHIPELAGO. See *TAKAMAKU PROVINCE*.

MERIDA (an. *Augusta Emerita*), a town of Spain, in Extremadura, on the N. bank of the Guadiana, 29 m. E. Badajoz, and 176 m. N.E. Madrid. Pop., according to Mifano, 4,890. It is situated close to the river, on a slight eminence, in the midst of an open and gently undulating country, naturally very fertile, but almost uncultivated, and unhealthy in summer. Its chief public buildings are 3 par. churches, 8 ruined monasteries, 2 hospitals, and a prison: it is, in fact, one of the most decayed towns in the Peninsula, and is wholly unimportant except for its antiquities. But the remains of the power and magnificence of its Roman masters render it an object of great interest. These are scattered in all directions: in the walls, the houses, the churches, and even in the pavement of the streets are discovered fragments of columns, bases, capitals, friezes, statues, and inscriptions. Similar vestiges, and in a more perfect condition, are to be seen in the suburbs. The principal ruins comprise an amphitheatre (used also as a naumachia), circus, theatre, triumphal arch, baths, &c. The seats of the amphitheatre appear quite perfect; the vaulted dens for the beasts are uninjured; and the conduits by which the arena was filled with water are still distinctly visible. In one of the streets may be seen a large triumphal arch, 160 ft. high, but without any inscription or sculptures. The baths are surprisingly perfect, but not large; and round the top of the bathing-rooms runs a cornice of most curious and delicate workmanship, almost as perfect as if it had recently been executed. The bridge over the Guadiana is of stone, and portions of it may be of Roman architecture, but the greater part of the Roman bridge was swept away by a flood in 1610, and the present bridge has been constructed since. Two arches of this structure were blown up, in 1812, by the British troops under the Duke of Wellington. There are likewise 2 aqueducts, one of Roman, and the other of Moorish architecture, of brick and granite, the former having three, and the latter two tiers of arches.

Augusta Emerita was founded by order of Augustus, some 25 B.C., who planted in it some of his veterans, called *emeriti*, whence its ancient and modern names. Though its ancient magnitude appears to have been greatly exaggerated, it was, no doubt, one of the largest Roman cities in the peninsula, and became the metropolis of Lusitania. From the Romans it passed, in 713, to the Moors, who destroyed and altered many of its old buildings. In 1228 it opened its gates to Alphonso IX., after his signal victory over the Moors in the contiguous plain of Matanzas; and from this period downwards it has been attached to the kingdom of Castile and Leon. (*Recollections of the Peninsula*, p. 178—181; *Cook's Spain*, i. 143—144.; *Mifano*; *Ancient Universal History*, xiii. 492 8vo. ed.)

MERIDA, a town of S. America, repub. Venezuela, dep. Zulia, cap. the prov. Merida, on the Chama, 220 m. S.W. Caracas, and 326 m. N.E. Bogota. Previously to 1812, when it was destroyed by an earthquake, this was the largest city in Venezuela, and had a pop. of 12,400. It continued, for some years, to be little better than a heap of ruins; but it has been again rebuilt, and is now, probably, become more populous than before. It has a cathedral, several chapels, convents, &c., an ecclesiastical seminary, a college for philosophy, civil law, &c. The inhab. are said to be, for the most part, in good circumstances. The coloured races dye wool and manufacture carpets and other woollen and cotton fabrics. (*Geog. Account*, &c. 370-74; *Mod. Trav.* xvii.)

MERIONETH, or MERIONYDD, a marit. co. of N. Wales, having N. the cos. of Caernarvon and Denbigh, E. and S. those of Montgomery and Cardigan, and W. St. George's Channel. It is of a triangular shape, and contains 424,320 acres. This, next to Caernarvon, is the most mountainous co. in the principality. Among the principal summits are those of Arran-Fowdy, Cader-Idris, and Arrenig, respectively 2,958, 2,914, and 2,809 ft. above the sea. It has, however, some fine vales, especially that of Festinog, celebrated for its romantic scenery. There are some considerable tracts of low swampy land along the sea coast; and in parts consider-

able tracts have been gained by embankments. The soil is very various; but, generally speaking, it is poor, and suited only for pasturage. Oats is the grain principally cultivated; but wheat and barley are also raised, though in no great quantities. Agriculture is in a very backward state, little or no attention is paid to a rotation of crops, and it is a frequent practice here, as well as in Denbigh, to burn the surface for manure. In some parts of the co. potatoes are pretty extensively cultivated. The principal dependence of the farmer is, however, on his cattle and sheep, of which great numbers are fed on the mountains, and in the valleys not fitted for husbandry. The small native Welsh ponies, called *Merlins*, are now rarely met with, except in this co. and Montgomery. They are sure-footed and exceedingly hardy. Dairy farming is carried on to a considerable extent. Farms usually small; and being mostly held at will, without any conditions as to management, the low state of agriculture need not be wondered at. Average rent of land, in 1810, 3s. 11d. an acre. Speaking generally, the cottages are wretched in the extreme; though happily they have been a good deal improved in some parts of the co. The minerals seem to be of less

42,917 in 1841, but now (1850), probably, 52,000. "The town lies on the E. side of the valley, down which the Taff descends to Cardiff, scattered in detached masses about the valley and on the hills, sending forth branches in different directions; and fresh groups are continually rising in the neighbourhood of the great iron-works, so that it is somewhat difficult to point out where any collection of houses ends or begins." (*Bound. Rep.*) The houses, generally speaking, are mean-looking, comprising "labourers' cottages, or small ale-houses, beer-shops, or retail shops;" but in the centre of the town there are three tolerably respectable streets, forming a triangle, at one point of which is the parish church, a modern and well-built structure: the living is in the gift of the Marquis of Elys. There is, also, a

chapel-of-ease, besides several places of worship for dissenters; and the various Sunday-schools of the town give religious instruction to nearly 6,000 children of both sexes. National, Lancastrian, and other subscription schools, have likewise been formed, and are well attended. A philosophical society and several book-clubs have been established; and there is abundant proof that education is advancing among all classes. A theatre has been built within these few years, and there are two good hotels. In the environs are many handsome seats, belonging to the wealthy iron-masters; and 3 m. N. of the town, on an insulated hill, stand the ruins of Morlais Castle, a very ancient building, demolished during the late civil wars.

The rise of Merthyr has been rapid, almost beyond belief. Towards the middle of last century it was an insignificant village: in proof of this, it is sufficient to state, that, in 1756, the lands and mines for several miles

subsistence of the pop. The exports, foreign and coastwise, of the iron brought down by the canal and railway, exceed, at present, (1850) 350,000 tons a year.

The Reform Act created Merthyr a parl. bor., with the privilege of sending one mem. to the H. of C., the electoral limits comprising the par. of Merthyr-Tydvil, except parts of the hamlets of Forest and Taff and Cynon, the entire par. of Aberdare, and the hamlet of Cefn-Coed-y-Cumner, in the par. of Vainor. Reg. electors, in 1849-50, 790. Merthyr is also one of the polling-places at elections for the co. Petty sessions are held here for the upper div. of hund. Caerphilly; and a court of requests sits monthly for the recovery of debts not exceeding £. A county court has, also, been established in the town, before which 1,484 plaints were entered in 1848. An act was

passed in 1830 for the better security of life and property in this district; and the three pars. of Merthyr-Tydvil, Aberdare, and Gellygare are under the superintendence of a stipendiary police magistrate, having a salary of 600*l.* a year, half of which is levied on the furnace works of his jurisdiction, and half on the im-

Merthyr alone. Markets on Wednesday and e fairs May 14., 1st Monday in July, and 1st ag. E, or MESSAGNA, a town of the Neap., prov. Otranto, cap. cant., 8 m. S.W. p. 5,000. It has several convents, an handsome palace, belonging to the Francavilla manufactures kitchen utensils; and has some and grain, considerable quantities of which are grown in its vicinity. Mesagne is supposed by many Italian authors to be the representative of the an. *Mes-*

MESHED, a city of Persia, the cap. of Persian Khorassan, and esteemed as "holy" from its containing a very superb sepulchre, enclosing the remains of Imâm Reza and the caliph Haroun al Raschid, 455 m. E. by N. Tchep- ran; lat. 36° 17' 40" N., long. 59° 36' E. Pop., according to Kinnelr, 50,000. It stands in a rich and well-watered plain, is surrounded with a strong wall, and is divided into 12 quarters, of which 5 are in ruins. The houses are meanly built of sun-dried bricks, and the ark or palace is unworthy of its name. There were formerly 16 medresas or colleges; but most of them are either deserted or in ruins. Indeed the city has now little worth notice, except its fine and well supplied bazaar, and the mausoleum of Imâm Reza, the magnificence of which, with its silver gates, jewelled doors, rails once of solid gold, glittering domes and minarets, and handsome arcades, is almost unequalled in Persia. It has, however, been often plundered; and its resources are said by Mr Fraser to be greatly reduced. Meshed carries on a considerable trade with Bokhara, Balkh, Candahar, Yezd and Herat; and many of the inhabitants are employed in weaving velvet and making fine pelisses, both of which are much esteemed throughout Persia. (*Kinnelr's Persia; Fraser's Khorassan, &c.*)

MESSINA (an. *Zancle* and *Messana*), a celebrated city and sea-port of Sicily, cap. intendency, near the N.E. extremity of the island, on the strait of its own name, 8 m. N.W. Reggio, 56½ m. N.N.E. Catania, and 120 m. E. by N. Palermo; lat. (of its lighthouse) 38° 11' 30" N., long. 16° 34' 40" E. Pop., in 1831, including that of its canton, 53,772.* The city has a most imposing appearance from the sea, forming a fine circular sweep, about 2 m. in length, on the W. shore of its magnificent harbour, from which it rises in the form of an amphitheatre; and being built of white stone, it strikingly contrasts with the dark forests that cover the mountains in the background. Prior to 1783, the harbour was fronted by a magnificent terrace of lofty houses, called the *Pallaxata*, having in front a broad quay decorated with statues and fountains. But the great earthquake of that year laid the city almost entirely in ruins, and though the terrace still exists, it is shorn of its former grandeur. The quay in its front, called the *Marina*, has now, as formerly, numerous fountains, and is the favourite promenade. Ruined buildings, and other vestiges of the earthquake, occupy a considerable portion of the city; and few houses have now more than 2 stories. Swinburne, who visited Messina before 1783, complained that its interior was dirty, with narrow streets, gloomy houses, little bustle of trade, and still less show of luxury. According to Smyth, however, the modern city is regularly built, well paved with square blocks of lava, and several of its streets are wide and handsome, ornamented with numerous churches, convents, statues and fountains. The square in front of the cathedral, and that of *San Giovanni di Maña*, are both well-built and handsome. The fountain in the centre of the former ranks with the finest in Sicily. The cathedral, erected soon after the conquest of Sicily by the Normans, has been repeatedly damaged by earthquakes. It is a Gothic building, with a heavy and gloomy exterior: the interior, though devoid of taste, is richly ornamented. The principal entrance is handsome; and the nave is supported by immense granite columns taken from the ruins of a temple of Neptune. The great altar and the roof of the choir are set off with mosaics and precious stones: the carved work of the pulpit is said to be a *chef-d'œuvre* of the Sicilian sculptor Gaggini. The church of Monte Virgine has some good paintings in fresco, and that of St. Giorgio is very rich in marbles and inlaid work, and has some tolerable pictures. Adjacent to the viceroy's palace, a noble building at the S. extremity of the city, is a large open space planted and laid out in public walks. The other public buildings include a large hospital, several asylums of various kinds, 2 theatres, town-hall, exchange, bank,

* According to the official returns the pop., in 1798, was only 48,000, so that it would appear to have nearly doubled in the interval.

colleges, &c. Messina is surrounded by an old irregular wall, built by Charles V. The citadel, a pentagonal fortress, crowned on the S. side of the harbour, is constructed according to the principles of Vauban, but though well provided with bomb-proof quarters and stores, it is badly situated and commanded in almost every part. Two strong and well built forts have, however, been constructed on eminences above the town, that would greatly annoy and harass an enemy during any operation against the citadel. The town is further defended by a fort placed so as to command the mouth of the Fiumara, which are the only places where an enemy could land with cannon. The port, to which Messina is wholly indebted for her prosperity, and even existence, is formed by a lengthened curved tongue of land, that might almost be supposed to be an artificial circular mole, projecting from N. E. from the main land, and then bending round to the W. in the form of a gibbet.* The entrance on the N., about 700 yards across, is defended on the W. or main-land side, by the bastion of Porto Reale, and at the extremity of the curved promontory by Fort Salvatore. A light-house has been constructed on the extreme E. verge of the promontory. The whole basin thus enclosed is about 5 m. in circuit, and, having deep water throughout, is capable of accommodating the largest fleets. It is, in fact, not only the finest harbour in the Mediterranean, but one of the finest of which we have any certain knowledge. Much of war must be the centre of the basin is about 20 fathoms; but merchantmen lie alongside the quay, and have every facility for loading and unloading. The protique-office, the fish-market, and the custom-house, are all on the Marina. The lazaretto, the best establishment of the kind in Sicily, is in the E. angle of the harbour. The situation of Messina, on the strait between Italy and Sicily, and her admirable port, give her great advantages as a commercial entrepôt, and were Sicily and Naples subject to an enlightened government, able and willing to put down abuses, and to call into activity their long dormant energies, Messina would certainly be one of the greatest emporiums of the Mediterranean. Even as it is, her trade is very considerable. Her exports consist principally of oranges and lemons, olive oil, silk, linseed, wine and spirits, alumina, liquorice, rags, corn, salted fish, &c. Almost all the silk exported from Sicily is shipped here. The imports consist of colonial produce, and cotton and woollen fabrics, hides, hardware, &c. We subjoin an

Account of the Quantities and Value of the principal Articles exported from Messina in 1817.

(*see, 328.*) But, how deficient cover in these reports, Messina has advantages of another sort that entitle her, in the estimation of her citizens, to look down with contempt on most other places. These consist in the possession of an autograph letter of the Virgin Mary, addressed to the Messinians, and securing them of her especial protection, and what is, if possible, still more precious, a lock of the Virgin's hair, given by her to the persons entrusted with the conveyance of the letter! To question the genuineness of these valuable relics would, in Messina at least, be rather hazardous, and, under such circumstances, we need not wonder that it is firmly believed that, on one occasion, the city was saved from ruin by the opportune arrival of a supply of corn, sent by the Virgin. The only wonder is, that she has allowed it to be so often brought to the brink of destruction by earthquakes, and devastated by the plague. A splendid *fiore* is annually given in the great square in honour of the exalted protectress and benefactress of the city. Very few vestiges of the ancient city remain; a consequence, no doubt, of the numerous earthquakes by which it has been visited.

The accounts of the origin and early history of Messina differ considerably. It is admitted on all hands to be very ancient, and most probably derived the name it has so long borne from a settlement having been made in it by a body of emigrants from Messene, in Greece. Having been seized by the Mamertini, it became, under them, one of the most populous, wealthy, and powerful cities of Sicily. It was the first town of the island that came into the possession of the Romans (*Colloquy of the Antiquary*, I. 372, *Journal d'Interpretation*, II. 115 &c. ed.).

The principal political events in the history of Messina, in modern times, are its successful resistance to Charles of Anjou, by whom it was besieged, after the Sicilian Vespers, and its revolt against the Spaniards in 1674, followed, in the ensuing year, by the defeat of the latter in the vicinity by a French force. In 1743 the plague broke out in Messina, with the most destructive violence, sweeping off the greater number of the inhabitants.

METZ (an *Diocœsum*, afterwards *Mosmetensis* and *Mosæ*, whence its present name), a strongly fortified city of France, *dep. Moselle*, of which it is the cap., at the junction of the Moselle and Saône, 20 m. W. N. W. Strasbourg, and about 100 m. E. N. E. Paris; lat. 49° 7' 30" N., long. 6° 1' 10" E. Pop., in 1806 41,576. Metz is a fine old city, but, like most fortified places, the streets are narrow, and the houses lofty. Near the river it is more open, the quays are broad, and the bridges magnificent. The river is clear and rapid, and swells to an expanded stream where not confined by the embankments, as it is within the fortifications. (*Jacob's Tour of Germany*, &c., p. 426.) Metz was fortified by Marsilius Vanheim and Salicelle. It has several strong outworks, and a citadel on the Moselle, but the latter was partly dismantled during the Revolution, and its capitulations have been laid out to public walks, which command a noble view of the valley of the Moselle and its bounding hills. The city has 9 gates and drawbridges, but only 6 are in use. The most conspicuous public building is the cathedral, a vast pile, commenced in 1044, but not finished till 1346. It is about 300 ft. in length, the height of the nave being about 140 ft. and that of the tower about 410 ft. The latter, which is a fine specimen of Gothic architecture, has in it a bell weighing 22,000 lbs. The whole edifice is remarkable for lightness. Mr. Jacob says that the cathedral of Metz was the most perfect Gothic structure he saw on the Continent, and that, though not so old as Westminster Abbey, it may vie in external beauty with that venerable pile. The military hospital, built in the reign of Louis XV., is a noble edifice, consisting of two ranges of building, and capable of easily accommodating 1,500 patients. The *Hôtel de Gouvernement*, a large, though rather heavy fabric, fronts the episcopal; it is appropriated to the courts of justice and the city library; the latter has above 20,000 vols., among which are numerous works printed in the 18th century, and about 600 MSS., some of the 15th century. (*Guide du Voyageur*.) The barracks, military magazines, prefecture, town-hall, and mint, several of the churches, the new market, the theatre, with a portion of the Tuilleries, &c., are among the other edifices. The Moselle and the Saône, in and near the city, are crossed by at least 20 bridges. The principal school of artillery and military engineering (*École de Génie, or d'Application*) in France is established here. Its library has a choice collection of about 10,000 vols. of military and scientific works, with sundry MSS. of Vauban and other distinguished persons. Exclusive of the above, Metz has two other public libraries, with several convents and charitable asylums, a Protestant church, a synagogue, a royal college, a university academy, an ecclesiastical school, and other seminaries, a school for the fine arts, a royal society of arts and belles lettres, an agricultural society, a society for the encouragement of primary in-

* There is some discrepancy in the authorities as to these measurements; but the above must be nearly correct.

quality. The breed of horses has been improved by the stud of Rosières. Hops of an improved breed are numerous, and their seed and lard are sent to distant parts of France. A great many poultry are reared. Property is much subdivided. In 1835, of 171,593 properties subject to the *contribution foncière*, 100,343 were assessed at less than 5 fr., and 24,437 at from 5 to 10 fr. Turf and lime are among the chief mineral products; there are some quarries of marble and alabaster, and a few iron mines; but the latter have been abandoned. The salt mines and springs at Dieuse, Vic, Moyenvic, &c., yield about 45,000,000 kilogr. of salt, and 1,000,000 lo. of soda a year. About 22,000 hands are said to be employed in the manufactures of cotton cloth and yarn, woolen stuffs, glass, and earthenware, and in embroidery, dyeing cotton stuffs, tanning, &c. At Baccarat is a large glass manufactory, employing a great many hands.

Meurthe is divided into 5 arronds.: chief towns, Nancy the cap., with 88,568 inhab., Toul, Château-Salins, Sarrebourg, and Lunéville. Total public revenue, in 1844, 10,116,950 fr. (*Hugo*, art. *Meurthe*; *Official Tables*.)

MEUSE, a dep. of France, reg. N.E., formerly part of the prov. of Lorraine, chiefly between lat. $48^{\circ} 25' N.$, and $49^{\circ} 34' N.$, and long. 5° and $6^{\circ} E.$; having N. Dutch Luxemburg and the déps. Ardennes and Moselle, E. Moselle and Meurthe, S. Vosges and Haute Marne, and W. Marne and Ardennes. Length, N to S., 80 m.; greatest breadth, about 40 m. Area, 620,656 hectares. Pop., in 1846, 325,710. Surface generally hilly, the hills being ramifications of the Vosges and Faucilles mountains, with an average height of from 1,000 to 1,300 ft., though they sometimes reach an elevation of 1,600 ft. The Meuse traverses the dep. in its entire length; the other principal rivers are the Ornain, Chiers, and Aire. The plateau, in the E., separating the basins of the Meuse and the Moselle, and other portions of the surface, are not very productive; but there are, notwithstanding, about 225,000 hectares of rich soil in the dep., chiefly in the valleys of the Meuse and Ornain. In 1834, according to the official tables, 335,190 hectares were arable, 48,472 do. in meadows, 13,540 do. in vineyards, 7,267 do. in orchards, &c., and 137,755 do. in woods. The produce of corn in 1835 was estimated at 2,440,000 hectolitres, of which 1,192,000 were wheat. Potatoes, oleaginous plants, hemp, and flax, are among the other articles of culture. Gooseberries are extensively cultivated in the gardens round Bar and Ligny, and enter largely into the confectionary, for which those towns are celebrated. The produce of wine is estimated at about 400,000 hectol. a year. The wines of Bar-le-Duc, Bussay-la-Côte, Fresnoy, Ligny, &c., are delicate light wines, ranking in the first class of *vins ordinaires*; but they do not keep above two years, and do not bear carriage. (*Jullien*, 43.) Along the Meuse are rich pasture lands; and at Vold, cheese, similar to that of Gruyère, and excellent butter, are made. A good many cattle and sheep are reared in the dep.; but live stock is in general indifferent. The produce of wool is estimated at upwards of 140,000 kilogr. a year. In 1835, of 157,180 properties subject to the *contribution foncière*, 80,566 were assessed at less than 5 fr., and 23,169 at from 5 to 10 fr. Iron, slates, and good building-stone, are the chief mineral products. There are between 20 and 30 iron furnaces (*hauts fourneaux*) in the dep.; and the establishments at Thionville and Stenay produce each about 1,500,000 kilogr. of iron a year. About 500,000 kilogr. a year of cotton yarn are made at Bar-le-Duc, which, also, has fabrics of paper, glue, &c., and is the *entrepôt* of a large trade in timber from the forests of the dep. There are numerous glass-works, with lime-kilns, potteries, beet-root sugar factories, &c. Many working cutlers, shoemakers, and other artisans, emigrate for a part of the year from this into other parts of France, and even to the adjacent foreign countries, with the products of their industry, or in search of employment. Meuse is subdivided into 4 arronds.: chief towns, Bar-le-Duc, the cap., with 12,678 inhab., Commercy, Montmédy, Verdun. Total public revenue (1844) 10,412,024 fr. (*Hugo*, art. *Meuse*; *Official Tables*, &c.)

MAUSE or MASS (Dutch *Maas*, an. *Moss*), a river of W. Europe, flowing through the N.E. part of France, Belgium, and the S. of Holland; its basin being situated between those of the Marne and Scheldt to the W., and of the Moselle to the E. It rises in the dep. of Haute Marne, in France, 10 m. N.E. Langres, in about lat. $48^{\circ} N.$, long. $5^{\circ} 30' E.$, and runs at first generally N. through the déps. of Haute Marne, Vosges, Meuse, and Ardennes. Near Charlemont it leaves France, but it continues its previous direction to Namur, where it receives the Sambre from the W. It here makes a sudden bend to the N.E., in which direction it continues through the provs. of Namur, Liège, and Limburg, to about lat. $51^{\circ} 30' N.$ It afterwards curves to the W., flowing between N. Brabant and Guelderland; and finally at Woudrichem, in lat. $51^{\circ} 49'$, and long. 5° , enters the Rhine or Waal, which loses its own name and assumes that of the Maas. (*See RHINE*.) Its entire course

those of his staff 8,000 mines of gold and silver to Mexico; but the ignorance and warlike which prevail in the country have greatly diminished their importance as a source of wealth.

Rivers.—Mexico suffers various disadvantages from the want of water, and the rivers, as compared with the extent of territory are few and unimportant. The Rio Grande del Norte indeed, has a course of more than 1,200 m. and the Colorado runs about 700 m. into the Gulf of Mexico. The Rio Grande de Santiago, called by the natives Toluca, rises in the centre of Mexico, not far from the capital, and, after traversing the lake Chapala, falls into the Pacific at San Blas. The Balsas, or Zamiata, and the Yopon are the only other rivers on the W side of the plains, and on the E side are the Tula and Tapanco and the Toluca, flowing into the Gulf of Mexico, but they have here at their mouths, which prevent the entrance of large vessels. The other rivers are short, and might more properly be called torrents. The lakes are numerous and extensive; and the adjacent,

banks of their great rivers. The frequency of fogs, and the consequent humidity of the atmosphere, is the greatest drawback on the climate of the *terras frigiditas*; but this, however, is more than compensated, produces great beauty and strength of vegetation.

The *terras frías*, or cold regions, include all the vast plains elevated 5,000 ft. and upwards above the level of the sea. In the city of Mexico at an elevation of 7,000 ft., the thermometer has sometimes fallen below the freezing point. This, however, is a rare occurrence, and the winters are there usually as mild as in Naples. In the coldest season the mean heat of the day varies from 50° to 70° Fahr., while in summer the thermometer seldom rises in the shade above 75°. The mean temperature of the city is about 64°, and that of the table land generally may be taken at about 60°, being nearly equal to that of Rome. But, wherever the table land rises to more than 5,000 ft. above the sea, it has, though between the tropics, a cold and disagreeable climate. Under the parallel of Mexico the height of perpetual snow varies from about 15 to over 15,000 ft. Vegetation in the central plateau is not, owing to the rarity of the air so vigorous as on the *terras calidas*, or along the coast, and the plants of Europe do not succeed so well as in their native soil. In the tropical and central regions of Mexico, and as far N as lat. 20° there are only two seasons: that of the rains, lasting from July to the middle of Sept. and the dry season, continuing from Oct. to the end of May. From the 15th to the 25th parallel the rains fall less frequently, but the dry season is compensated by the abundance of snow during Jan. and Feb.

The climate of the table land is, on the whole, favourable to human life. But, though intermissions occur of rare occurrence, the natives are continually afflicted by a peculiar epidemic, called by them the *mal de San Mateo*; but it owes its origin more to the habits of the people than any other cause. Indeed, laziness, and the consequent privations, have thinned the pop. more than epidemic complaints. The indolence of the natives prevents all exertions to raise more food than required for the wants of a single ordinary season; and so one ever thinks, when there is a surplus, of laying up a stock against future contingencies. Hence, when droughts and severe frosts occur, they are compelled to seek their subsistence in the forests where roots and wild berries constitute their sole diet, and multitudes are often starved off by hunger and unwholesome food.

Animals.—The zoology of Mexico is not imperfectly known. The domestic animals introduced by the Spaniards have so much increased that vast herds range wild through these thinly inhabited regions. The wool of the sheep is of inferior quality, but this is attributable more to neglect and mismanagement than to nature; goats are much used in the mining districts. Buffaloes abound in the prairie bordering on the Arkansas and Red River, and during winter they migrate westward, in quest of pasture, to the milder climate of the plains along the lower part of the Rio Grande del Norte. Carnivorous animals are not numerous. Bears abound in the low country of Yucatan.

Agriculture.—Mexico, not only from its extent through 11 degrees of latitude, but also from the varying elevation of its surface, and consequent variety of climate, produces most of the plants peculiar to the tropics, as well as those belonging to the temperate regions of E and middle Europe. Indeed, says Humboldt, "there is scarcely a plant to the east of the world which is not susceptible of cultivation in one or other part of Mexico; nor would it be an easy matter for the husband to obtain even a tolerable acquaintance with the multitudes of plants scattered over the mountains, or crowded together in the vast forests at the foot of the Cordillera." (Basil, tom. ii. p. 180.) The soil also is, in most parts, extremely fertile, and wherever water can be procured for irrigation, the most abundant crops may be raised with very little labour. This, however, is very far indeed from being an universal advantage, and it is, in fact, more than doubtful, whether a very fertile soil and a genial climate, that makes warm clothing and comfortable lodgings of comparatively little importance, be sufficient either with active industry and exertion or with a high state of civilization. In most parts of Europe, continuous industry is indispensable to existence; but it is otherwise in Mexico and many other countries, and it is found that industry is uniformly proportioned to the strength of the motive by which it is excited, and that, wherever the ordinary necessaries and comforts of life may be procured with little labour, the mass of the people are invariably indolent. To suppose, indeed, that they should be otherwise is to suppose what is contradictory and absurd. This effect of the peculiar nature of the soil and climate was less sensible in Mexico under the Spanish government, because it was then daily receiving adventurers from Europe, instead with European colonies, and anxious to accumulate a fortune. But now that the influx of such parties has nearly ceased, and that there are no such stimulus and

E. COAST—cont.

Mexico is divided, as respects climate, into the *terras calidas*, or hot regions, the *terras frigiditas*, or temperate regions, and the *terras frías*, or cold regions. The first, or the *terras calidas* include the low grounds, or those under 5,000 ft. of elevation on the E and W coasts, comprising the greater part of the states of Tamaulipas, Vera-Cruz, Tabasco, and the peninsula of Yucatan, on the former. The *terras calidas*, on the W coast, are less extensive, the square area of the Cordillera approaching nearer to the sea. The mean temperature of this region, or at least, of that portion of it between the tropics, may be estimated at about 77° Fahr. being from 50° to 10° above the mean temperature of Naples. It is especially suited for the growth and cultivation of sugar, indigo, cotton, and bananas, which flourish in the utmost luxuriance.

This region suffers under the various disadvantages of being nearly inaccessible by sea for half the year, and of being extremely unhealthy during the other half. The winter on the E coast, extends from about Oct. to the vernal equinox; and during this season, in the Gulf of Mexico N or N W winds (as north) are extremely prevalent, blowing with more or less violence. Frequently especially in the month of March the N winds approach to the strength of a hurricane, and continue to blow with the utmost violence and without intermission, for 2, and sometimes, even for 10 or 15 days together. During the whole of this season the navigation of the gulf is exceedingly dangerous, but as there the heat is moderate and the coast free from fever and infectious healthy. Cholera however it is happens, that during the other half of the year or from the vernal equinox to October when the N winds are comparatively rare, and the parts are mostly accessible, the heat is oppressive, a great quantity of rain falls, and the coast becomes the seat of pestilential fevers. A European arriving for the first time at Vera-Cruz or any other part of the coast between the tropics, in August, September or October has but little chance of escaping the venereal pox, or yellow fever, and individuals who have merely landed at Vera-Cruz, and passed on immediately for Jalapa, have, notwithstanding, caught the infection. The country, however, does not extend its ravages beyond the low grounds on the sea-coast, and at the height of 5,000 or 5,500 ft. above the sea it is wholly unknown. The parts of Acapulco and the low grounds along the W coast are also extremely hot and unhealthy, and, owing to the prevalence of strong gales, approaching to hurricanes, during the months of July, August, September, and down to October the navigation is then extremely dangerous.

The *terras frigiditas* or temperate regions, which are of comparatively limited extent, occupy the slope of the mountain chains, or terraces, which bound on either side the central table land. It extends from about 5,000 to about 5,500 ft. of elevation. The mean heat of the year is from 50° to 70° Fahr. and the extremes of heat and cold are here equally unknown. The Mexican oak, and most of the fruits and cereals of Europe, flourish in this genial climate. The cities of Jalapa, on the E, and of Chihuahua, on the E. W. slope, are in this region, and are famous for their salubrity and for the abun-

adventitious motives ; price, every thing apperance and language ; the accompaniments of a fair to be, for a length characteristics of the

solid foundation; but these were mostly gone into without due consideration, and without any practical knowledge of the country, of the practices that had been followed, and the difficulties to be overcome. We need not, therefore, be surprised at the enormous losses the companies sustained at the outset, and of their want of success in the first instance. But, had the Mexican government been able and willing to repress disorder, and to enforce the observance of contracts, it is probable that the produce of the mines would have been very different at this moment from what it really is. Unluckily, however, no government has yet been established in Mexico with power, even if it had the desire, sufficient to put down disturbances or to enforce engagements. So long, indeed, as the companies were struggling to put their mines in order, they sustained comparatively little inconvenience from this circumstance; but, as soon as they had succeeded in bringing them once more into a productive state, and were beginning to have some prospect of a return for their enormous outlays, they were annoyed by questions as to title, and by the setting up of claims on the mines of which they had never heard before. Owing to these causes, as well as the general insecurity of property, the bad condition of the roads, and imperfect mining processes, the results have, on the whole, been very unfavourable, notwithstanding the reduction of the export duty on specie from 10 to 3 per cent.

The following statement of M. Chevallier, as to the insecurity of the miners, in 1835, discovers a state of things disgraceful to the government; and such, indeed, as could hardly have been credited on any inferior authority. "How," asks he, "can the mines be worked with any feeling of security, when it requires a little army to escort the smallest portion of the precious metal to its place of destination? Between the mine of Real del Monte and the village of Tezeyuco is a mountain pass, where a grand battle was fought between the miners and the banditti of the country. The former were defeated, overpowered by numbers; but not without having sold their lives as dearly as possible. The mine is now guarded by artillery and grape-shot, and the Englishmen employed there are regularly drilled in the use of the musket." In such a state of things the wonder is, not that the produce of the mines has declined, but that it continues to be so great as we find it to be. The mineral riches of the country are, however, inexhaustible; and there wants only a government able and willing to afford security to make the produce of the mines greater than ever. The subjoined statement, which cannot, however, be altogether depended on, exhibits an

The theory of mining is little understood by the Mexicans, the oldest modes of working being still generally practised, notwithstanding the improvements that have been introduced by the English; and the machinery for draining the mines and raising the ore is of the most primitive description. Indeed, many of the mines have been abandoned, owing to the imperfections of the machinery, which, under more favourable circumstances, might be again worked with profit. The ignorance of the miners is only equalled by their obstinate adherence to old, and elsewhere long exploded, practices. But this should not be matter of surprise, if the testimony of M. Chevallier respecting the education of engineers may be depended on. The school of mines (*Mineria*), the mere building of which cost 120,000*l.*, is at present in the most pitiable condition. It is unprovided with the means even of the most elementary instruction. It contains a vast chemical laboratory, but without the instruments requisite for the most simple experiments. The collection of minerals is in disorder, badly classed, and very incomplete; the library and the mechanical cabinet are deplorable. The school seems to have shared the fate of the public treasury — of having been pillaged three or four times over. The very building seems on the point of falling to pieces. But it cannot surely be supposed that the anarchy which has led to such deplorable results is to continue for ever. If nothing may be hoped for from within, it is to be wished that foreign interference may rescue this fine country from the barbarism in which it is now involved.

The quantity of silver annually extracted from the mines of Mexico very much exceeds that furnished by all the mines of Europe; but, on the other hand, the gold is not much more abundant than in Hungary and Transylvania; the proportion which the gold of Mexico bears to silver being as 1 to 26 nearly. Little native silver is found in any of the mines: sulphuretted and black prismatic silver is both very common and exceedingly productive in the veins of Guanaxuato and Zacatecas, two of the richest mining districts: the muriate abounds in the mines of Catorce and San Pedro, near San Luis de Potosi; and the martial pyrites of Pachuca yield three marks to the hundred weight. The Mexican ore, however, is poorer than that of Europe, 1,600 oz. of ore yielding only about 4 oz. of silver. The gold is produced by washing the earth and sand in some few places; but in the province of Oaxaca occur veins of native gold, usually mingled with the silver veins: the returns, however, seldom exceed 1*½* oz. to the cwt. (*Poinsett's Notes on Mexico*, p. 226.) Slave labour is not tolerated in the mines; but it would be difficult to find workmen so ignorant, brutalised, and wholly worthless as the native miners. Indeed, the ill success of the English mining companies is owing, in part at least, to the want of honest and efficient labourers. The business of the mines is followed by the native tribes from generation to generation: they lead a migratory life; removing, with their families, to districts where they expect the greatest profit from their labour: they are always paid by a share in the produce; regular wages, however high, being invariably rejected. The principal mines are in the states of Guanaxuato, Zacatecas, San Luis Potosi, Chihuahua, Durango, Guadalajara, and Mexico. The richest mineral tract lies between the 21st and 25th parallels of N. lat. Many of the mines have been very imperfectly wrought; and by far the larger part of the richest veins is yet unexplored. It is worthy of remark, also, that the ores appear to increase in richness on proceeding N. The mines in the confines of Durango and Sonora are peculiarly rich, lie near the surface, and hold out, wherever they have been tried, a promise of riches superior to any that Mexico has yet produced.

Iron is found in great abundance in Guadalajara, Mechoacan, and Zacatecas; but no mines of that metal were worked before 1825. Copper is raised in Mechoacan and Guanaxuato. Large quantities of copper money have been coined in the mint of the city of Mexico, the total value, during the seven years ending with 1837, having amounted to 4,712,000 dollars, or 942,400*l.* Tin is obtained partly from mines, but principally from washings in the ravines. The lead mines, though rich, are quite neglected. Zinc, antimony, and arsenic have been found; but neither cobalt nor manganese. A quicksilver mine is wrought in the state of Querétaro. Carbonate of soda, used for smelting the silver ore, is found in great abundance crystallised on the surface of several lakes.

Manufactures. — The selfish policy of Old Spain, by which she endeavoured to keep her colonies as much as possible dependent on her own markets, or on supplies furnished by her, led to the enactment of laws prohibiting the rearing of silk-worms, and the cultivation of flax, and of the vine and olive. Coarse woollen and cotton fabrics, worth about 1,500,000*l.* were formerly made; but these have greatly diminished since the revolution. The system on which the cloth and other factories are conducted is disgraceful to persons having the smallest pretensions to civilisation, and is wholly subversive of all improvement. Each factory is, in fact, a prison, in which the work-people are treated with the greatest rigour, and from which there is no escape; the proprietor, instead of paying his workmen in money, supplies them with spirits, tobacco, and food, at prices fixed by himself. An intelligent German, who resided 40 years in Mexico, states, that the high walls, strong double doors, barred windows, and severe corporal punishments common to these factories, make them as bad as the worst-conducted gaol in Europe. Criminals and insolvent debtors are condemned to work in the factories as a punishment. This state of things existed before the Revolution, and we regret to say that it has not been at all improved by the free intercourse which the Mexicans have now for several years enjoyed with the manufacturers and capitalists of Europe and the United States. "One might," says M. Chevallier, "have supposed that when the ports were thrown open to the commerce of Europe, manufactories would soon have been established in a country where manual labour is cheap, where the workmen are submissive and skilful at imitation, where the soil produces the raw cotton, where the Spaniards had multiplied their flocks of sheep to a great extent, and where the rearing of the silkworm might be carried on with astonishing facility. The native Mexicans are, however, destitute of all spirit of enterprise, and strangers cannot attempt any permanent establishment in a country from which, during every session of congress, they are periodically threatened with expulsion. A more than ordinary display of industry would excite the jealousy of the natives; for nothing exas-

perceive a Mexican more than to see Europeans and North Americans growing rich before his face. A flourishing factory, established by a foreigner, would be very likely to be pillaged during the first popular tumult. Instances of the kind have already occurred. The only European manufactory existing at Mexico, is one founded by M. Duport, a French merchant, for making mantas, a coarse cotton stuff much worn in the country. The looms were made at Patterson, near New York. When the Mexicans had achieved their independence, and were organising their government, they created a fund for the encouragement of national industry (*banco de avuls*), and endowed it with an additional duty of 2½ per cent. on foreign importations. In this way a few hundred thousand piastres were soon procured, which were expended in the vain attempt to establish manufactories. At present, the receipts for this fund are thrown into the abyss of the national deficit, which every year increases in depth, and where they are lost like a drop of water in the sea. Cigars, hats, glass, and earthenware, are produced on a large scale; but the factories are, for the most part, extremely ill-conducted. Mexican leather

of 12 years before and after, the returns for exports alone rose from 11,000,000 to 19,000,000 of dollars, the difference being chiefly in the quantity of specie. How much greater would the increase have been, if the trade had not been fettered with vexatious duties, first on articles of Spanish produce in the markets of Seville and Cadiz; 2. on shipping for Mexico; 3. at Vera Cruz, and, 4. with an *alcavala*, or transfer duty, at every step, from the merchant to the consumer? On the breaking out of the civil war, the ports of Tampico, Mazatlan, and San Blas were opened by the new government; and soon afterwards foreign vessels were admitted into all the ports on the same terms as Spaniards. The Spanish capitalists retired to Cuba or Spain; and their places were supplied by British and American merchants, who established themselves in the interior, and supplied the inhabs. in return for dollars with manufactured goods, the superior quality and cheapness of which has, no doubt, had some influence in depressing native manufactures. The jealousy of the natives, however, and the absurd threats of the government against foreign artificers and traders, has tended to prevent their settling in the country, and engaging in any considerable undertaking, other than the mines; and the depressed state of the latter, which have always furnished the principal article of export, has tended still further to depress and paralyse commerce. The roads, too, instead of being improved, have been suffered to fall into a state of almost irreparable decay. In this respect, the evidence of M. Chevalier is decisive. "The splendid road which, during the domination of the Spaniards, was constructed across deserts and precipices, by the merchants of Vera Cruz, to the summit of the upper country, is a melancholy instance of the carelessness with which the public interests of the country are directed. During the war of independence, this road was cut up in various points; and, down to this day, the enfranchised Mexicans have not replaced a single stone, nor filled up a single trench, nor even cut down one of the trees, which, in the absence of any considerable traffic, and under the influence of a tropical sun, are rapidly growing up to a magnificent size in the very middle of the road. In the upper country nothing would be more easy than to open noble means of communication. The soil is naturally level; and basaltic rocks, particularly adapted for the construction of roads, are found in great abundance. But even where there are roads, the Mexicans make little use of them. They carry to a yet more extravagant length the inconceivable predilection of the Spanish race in favour of transporting their goods on the backs of animals. You expect to meet with carts and waggons: no such thing; every thing is conveyed on the backs of mules or Indians. Troops of little consumptive donkeys bring into the city in parcels, not much bigger than a man's two flats, the charcoal required for the culinary operations of the inhabs. The price of every bulky article is thus increased to an enormous degree. The interior districts are as inaccessible as if they were cut off by an enemy's army, and famine frequently ensues." The following table furnishes an official Account of the Ships, with their Tonnage and the Value of their Cargo, which entered at and cleared from the principal Ports of Mexico in 1844, 1845, and 1846.

when the coasts are accessible they are extremely unhealthy. Owing, also, to the rapid ascent from the shores to the interior, the construction of roads, and the transport of commodities to and from the inner provinces, is alike difficult and expensive. No doubt, however, an efficient government and an industrious people would speedily, in a great measure, overcome these obstacles to an extensive intercourse with the foreigner. But Mexico has neither the one nor the other; and, at present, her trade is confined within the narrowest limits. Down to 1778, when the Spanish government relaxed the old prohibitive system, the foreign goods legally imported into Mexico comprised only a few Chinese and European manufactures; the former brought annually in one galleon of about 1,400 tons, and the latter sent over in three years exclusively in ships chartered by government from Seville or Cadiz. On the opening of the trade in 1779, private capitalists engaged in it, and after that period, at an average

The above statement, though not complete, shows the comparative import and export trade of Mexico. The declared value of the exports from the U. K. to Mexico in 1846 amounted to 779,039. The nature of the direct

trade with this country will be seen by the following statement of the different articles of home and colonial produce sent to Mexico in 1846:—

act is called the *grito*, or outcry, when two or three articles are drawn up, to state the motives or objects of the insurrection. If the matter is of some importance, the outcry is called a *plan*. At the third act, the insurgents and the partisans of government are opposed to one another, and mutually examine each other's forces. At the fourth act they come to blows; but, according to the improved system lately introduced, the fighting is carried on in a very distant, moderate, and respectful manner. However, one party is declared victor, and the beaten party *disprovinces*. The conquerors march to Mexico, and their triumphal entry into the capital constitutes the fifth act of the play; the vanquished meanwhile embark at Vera Cruz or Tampico with all the honours of war."

The laws are alleged to be mild and just, but they are almost powerless; for nothing can well be conceived more appalling than the state of anarchy described by the very intelligent traveller just quoted.

"With tranquillity, unfortunately, every thing else is also lost. There is no longer any security. It is a mere chance if the diligence from Mexico to Vera Cruz proceed the whole way without being stopped and robbed. It requires whole regiments to convey the conductors of planters to Vera Cruz. Travellers who cannot afford to pay for an escort go armed from head to foot, and in little caravans. Here and there, rude crosses erected by the side of the road, and surrounded by heaps of stones, thrown by passers by, in token of compassion, point out the spot where some wayfarer, and almost always a stranger, has perished by the hand of robbers." "The immediate environs of the most populous cities are infested by malefactors, and even in the interior of cities, not excepting the capital, there is no longer any security. There are numerous instances of people being robbed on a Sunday, and at the hour even when the greatest number of people are abroad, within a league of Mexico. An English *chargé d'affaires* was lassoed on the Alameda, the public walk, in the middle of the day. In the evening, after sunset, notwithstanding the numerous guardians of the night (*serenos*), notwithstanding the videttes of cavalry at every corner of the streets, notwithstanding the law prohibits the riding on horseback through the streets after eight o'clock, in order to prevent the use of the lasso, a man is not safe in Mexico, not even in his own house. If, in the evening at 8 or 9 o'clock, you visit a friend, before the porter consents to open the enormous gate lined with iron or bronze, there pass as many formalities as if it were a question of letting down the drawbridge of a fortress. Persons on whose words I think I can rely have assured me that as many as 900 dead bodies are yearly deposited in the morgue of Mexico."

Revenues.—The amount of the revenue at different dates has been as follows:—

	Doll.		Doll.
1700	5,000,000	1837	10,494,390
1763	5,705,578	1838	12,338,385
1802	20,300,000	1839	14,485,140
1845	10,600,608	1840	16,943,399
1850	13,289,682	1851	16,413,068

About half the receipts proceed from the customs' duties: the other sources are, the mint, monopolies of tobacco, salt, pulque, and gunpowder, lotteries, post-office, stamps, tolls, and privileges. The produce of the state lands, none of which have been yet put up to sale, is estimated to be capable of producing from 3 to 4 millions of dollars.

Army.—The army consisted, in 1839, of about 20,000 men, exclusive of an active militia of about 20,000. But the troops are without science or a proper feeling of honour, so that they are really worth very little. The military, however, is a favourite service, from the high pay and privileges of the soldier. There are 6 fortresses—San Juan de Ulloa, Campeche, Perote, Acapulco, and San Blas.

Religion.—The Roman Catholic is the only publicly recognised religion, but others are tolerated. The church establishment consists of the archbishop of Mexico and 9 bishops, having an aggregate income of 880,000 doll., with 3,677 parochial clergy. There are also 10 cathedrals, having 168 canons and other dignitaries, and 1 collegiate church. The regular clergy comprises 1,978 monks, chiefly Franciscan; and there are 156 convents. Ecclesiastical property is free from taxation, and they have the sole management of all money bequeathed for pious uses. The annual income of the ecclesiastics is valued at about 12,000,000 dollars. The Spanish monks and priests were expelled during the revolution; and their places are filled by creoles, whose morals are at the lowest ebb. Religion has little influence over the white pop., and the hold of the church over the Indians, never complete, is now fast lessening; for they are all, more or less, inclined to idolatry. (*Edwards's History of Texas.*)

Education.—The necessity of education is recognised by the new constitution, which requires that the priests

should teach all persons to read and write; but the regulation has little practical effect. Under the old government, botanical pursuits were much encouraged: chemistry and mineralogy were taught in the school of mines; but the progress of science, literature, and the arts have all been checked by the unsettled state of the country since the revolution.

"In fact," says M. Chevalier, "elementary instruction has remained what it was in the time of the Spaniards. The clergy had then the exclusive management of it, and having so still, show but little inclination to enable the poor to read the books published under the régime of a free press. There are even fewer schools than there were, in consequence of the diminution in the number of the clergy. Education of a superior kind is even worse provided for. Under the Spaniards, there existed at Mexico a school for the fine arts, richly endowed: I have been unable to discover its existence now. There is a building called a museum, where I found nothing of interest except a collection of the portraits of the viceroys since the time of Cortes, and a few Aztec manuscripts. Some years ago, the establishment of a polytechnic school was decreed, but the decree has yet to see the commencement of its execution. There is not even a military school, though the attention of the government is almost exclusively devoted to the army. There is nothing deserving the name of a school of law or medicine; and it may be well imagined that schools of industry or commerce are wholly unknown."

Population.—The amount of the pop. has been estimated at different periods, both before and after the Revolution; but, owing to the jealousy of the old government, and the distracted state of the country since the declaration of independence, very little credit can be attached to these estimates. The following are those by the best authorities:—

1794	-	-	Humboldt	-	-	5,300,000
1808	-	-	Do.	-	-	6,500,000
1813	-	-	Poinsett	-	-	6,362,125
1825	-	-	Do.	-	-	6,500,000
1827	-	-	Ward	-	-	8,000,000
1836	-	-	Chevalier	-	-	7,000,000

The lower estimate of Chevalier may be explained by the emancipation of Texas and California, and by the continuance of the disturbances. The classes of the pop. are singularly varied, and are characterised by distinctions more striking than those in any other country. Four distinct and rival classes may be enumerated: 1. the *Chapetones*, or pure Spaniards, never exceeding 80,000 in the palmy days of New Spain, but now hardly amounting to 24,000, and, politically considered, a degraded class; 2. the *Creoles*, or native whites of European descent, forming the wealthiest and most powerful part of the pop., estimated by Chevalier at 1,300,000; 3. the *Indians*, or native Mexicans, constituting the great mass of the rural labourers, and supposed to amount to 3,800,000; 4. the mixed castes, comprising *Mestizos*, *Mulattos*, *Zambos*, *Quadroons*, and *Quintaroons*, somewhat exceeding 1,900,000.

The king of Spain formerly exercised a right of conferring the exclusive privileges enjoyed by the white pop. on individuals of any shade by a decree of the audiencia, *Que se tenga por blanco*—that he be deemed white. These distinctions of colour have been done away with, as far as political privileges are concerned, by the revolution, which admits persons of all colours to the equal enjoyment of civil rights; and hitherto, indeed, this has been by far its best if not its only good effect. The mulattoes and zambos principally reside in the low country, the whites on the table land. The Indians are divided into numerous tribes, speaking upwards of twenty languages, totally distinct from each other, and of which fourteen grammars and dictionaries have been published. Their character remains much the same as it is alleged to have been at the time of the conquest. Indolence, blind submission to their superiors, and gross superstition, are as much their characteristics now as formerly. The form of their religion is changed, and that is nearly all: they take the same childish delight in the idle ceremonies and processions of the Catholic church as they once took in the fantastic mummeries of their aboriginal idolatry. They are scattered over the country as labourers, distributed in villages, or else live in the towns as artisans, workmen, or beggars. In a few instances they have accumulated property, and acquired respectability; but, in general, they are indolent, ignorant, and poverty-stricken. We believe them to be wholly incapable of any high degree of civilisation; but they might, perhaps, be improved, were measures taken to enforce their education, and to make a fair distribution among them of the many thousands of acres which have been thrown out of cultivation by the consequences of the revolution. They are classed in two great divisions: 1. *Manos*, comprising those who have a fixed residence, cultivate the land, adopt the habits of civilised society, and maintain an amicable intercourse with the other races; 2. *Bravos*, comprising those who live a wandering life, sup-

porting themselves by hunting, and avoiding all intercourse with the other classes, with whom many of their tribes are in a state of perpetual warfare. The latter principally inhabit the N. states along the river Gila, and the extensive and little known mountain ranges on the upper part of the course of the Rio Grande del Norte and the N. W. of Texas, called the Bolsor de Mapimi, from the lake of Man. An independant tribe, called Mayas, inhabits the tract between Yucatan, Tabasco, and central America. It has made some progress in civilisation, cultivating maize and cocoa, and wearing garments made of cloth prepared from cotton and the bark of the caoutchouc tree.

"Mexico," says Chevalier, "is a country so rich, that famine scarcely visits even the most indolent. In the *Sierras calcinadas*, and even on the plateau, the natives are content to dwell with their families in a cabin of bamboo trellis-work, so slight as scarcely to hide them from the stranger's gaze, and to sleep either on mere mats, or at best on beds made of leaves and brushwood. Their dress consists simply of a pair of drawers, or petticoat, and a *scraps* (a dyed woollen garment), which serves for a cloak by day, and a counterpane by night. Each has his horse, a sorry beast, which feeds at large in the open country; and a whole family of Indians is amply supplied with food by bananas, chili, and maize, raised, almost without labour, in a small enclosure round the hut. Labour, indeed, occupies but a trifling portion of the Indian's time, which is chiefly spent in drinking *pulque*, sleep, or singing to his wretched mandolin hymns in honour of Notre Dame de Guadeloupe, and occasionally carrying votive chaplets to deck the altar of his village church. Thus, he passes his life in dreamy indifference, and utterly careless of the ever-reviving *fronteras* by which the peace of Mexico is disturbed. The assassinations and robberies which the almost impotent government allows to be committed with impunity on the public roads, and even in sight of the capital, are to him only matter for conversation, the theme of a tale or ditty. And why should he trouble himself about it? Having nothing in the world but the dress in which he stands, his lance, spurs, and guitar, he has no fear of thieves; nor will the poniard of the assassin touch him, if he himself, drunk with pulque or chingarito, do not use his own."

Antiquities.—Humboldt, Bullock, and other European travellers, have furnished excellent descriptions of numerous ancient monuments, which show that the native Mexicans, before the loss of their independence, had been in some respects a comparatively civilised and ingenious people. Among the most extraordinary are pyramids, somewhat similar in exterior form to those of Egypt, and in some instances even of larger dimensions. The base of the pyramid of Cholula is a square of 1,423 ft. on each side, and its height is estimated at 177 ft. A far more elegant building, of similar shape, is situated in the N. part of the state of Vera Cruz; it is formed of large blocks of porphyry, highly polished, and arranged in six stages, diminishing in size according to the elevation, and having all its materials most nicely adjusted. The base is a square of 82 ft. on the sides; it is 65 ft. high; and the ascent to its top is by a flight of 57 stairs: the front is richly adorned with hieroglyphics and curious sculptures. The mountains of Texcuco are nearly covered with the remains of ancient buildings and cities. The ruins of Palenque, near the Rio Chacamas, a branch of the Usumasinta, extend upwards of 20 m. along the ridge of a mountain; and their architecture resembles more that of Europe than Mexico. The remains of an Aztec city, called by the Spaniards La Casa Grande, are to be seen about a league S. of the river Gila, in the state of Occidente. They are spread over a space of more than a square league. In the centre is a *teocalli*, laid down according to the cardinal points, its sides being 445 ft. by 276 ft. It has 3 stories and a terrace, but no stairs. Within are 5 apartments, each 27 ft. long, 11 broad, and 11 high. A wall with towers surrounds the main building. The traces of an artificial canal to the river are visible. The neighbouring plain is strewed with fragments of red, blue, and white earthenware, and pieces of obsidian, which prove that the Aztecs had passed through a country abounding with this volcanic substance before they dwelt on this spot, previously to their final settlement in Mexico. In the W. part of the state of Chihuahua are similar ruins of great extent, which are also considered to have been the site of one of the temporary stations of the Aztecs during their migration southwards. Besides sculptures, vases of elegant form have been found, similar to those of Etruria and Egypt. Roads formed of large hewn blocks of stone may be traced, not only in the neighbourhood of those ruined cities, but at great distances from them.

History.—The first settlers in Mexico are believed to have been the Toltecs, a tribe of Indians from the rocky mountains, who fixed themselves, after several migrations, near the present city of Mexico, and flourished there for nearly four centuries. Drought, famine, and pestilence

at length exterminated them, but not till they had imparted some degree of civilisation to the barbarous Chichimecas, who were the next possessors of the soil, and were in their turn displaced by the Aztecs, who, in 1160, migrated southward from a country N. of the Gulf of California, and first fixed themselves in the city of Zumpango, in the valley of Mexico, but afterwards in some islands in the lake Texcoco. Here they maintained themselves by fishing and agriculture, till, in 1325, they founded their chief city on the island of Tenochtitlan, and called it *Mexico*, in honour of their martial deity Mexitli. This nation rapidly increased in power; and, if the remains of monuments and large cities were a just test of civilisation, the Aztecs might claim to rank pretty high among the nations of antiquity. But they had invented no alphabet, and had nothing better than a rude species of picture writing to record events, and were ignorant even of the useful metals. Their barbarism is sufficiently shown by their custom of sacrificing great numbers of human victims on coronation fêtes. Montezuma I., the greatest of their sovereigns, extended the Aztec dominions on one side to the Gulf of Mexico, and on the other to the Pacific Ocean; but it must be stated at the same time, that many tribes within this tract yielded only a reluctant obedience, and some even retained their independence. Such, briefly, was the state of Mexico when Muniz de Balboa first landed on its shores. Its conquest was effected by Fernando Cortes, who sailed thither in 1519 with a small force, comprising, on the whole, only about 700 men. He was met at Vera Cruz by ambassadors from Montezuma the younger, sent to discover his intentions, and to command him to withdraw from the country. But Cortes having refused to return till he had communicated in person with the emperor, at once proceeded to the capital. Here having got possession of the person of Montezuma, Cortes endeavoured by his intervention to effect the subjugation of the empire. But the Mexicans having recovered from the surprise into which they were at first thrown by the seizure of the emperor, resolved at all hazards to attempt the expulsion of the Spaniards. Montezuma was soon after killed in a conflict in the city; and Cortes was compelled to retreat to Tlascala. Here having re-organised his small force, secured the co-operation of a large body of Indians, and built brigantines to be employed in the navigation of the lake Texcoco, he again pushed forward to the city; and having recommenced the siege, took it after an obstinate resistance of 75 days. The fate of the cap. decided that of the empire. Province after province submitted, and the power of Spain was extended from Vera Cruz to the Pacific. Cortes, on his return to Spain, was received at first with high honours and liberal rewards; but his court favour soon declined: the emperor refused to appoint him captain-general of Mexico; and, after some adventures, suited to his ardent and determined spirit, he died near Seville, in 1554, at the age of 63.

Under the Spanish arrangements Mexico was a subordinate kingdom, governed by a viceroy, with powers nearly equal to those of the sovereign, checked only by the *residencia*, or court of investigation, before which he was liable to be called to account for his administration, on his return home, and by the *audiencia*, or court of final appeal in Mexico. By these arrangements, also, the natives were to be considered as freemen and vassals of the crown; and the Spanish discoverers, settlers, and their posterity, were to have a preference in all civil and ecclesiastical appointments. The natives were thus, in fact, excluded from holding all offices of trust or profit. The great object of the Spanish government was to keep the country in the hands of the European or white population; and the means adopted to effect this object were, 1st, to discourage native manufactures, for the benefit of those belonging to the mother-country; 2dly, to make all the ecclesiastical establishments wholly dependent on the king, without any interference of the pope. The growth of flax, hemp, and saffron was prohibited under severe penalties; that of tobacco was made a government monopoly. The cultivation of the vine and olive was likewise prohibited; that of coffee, cocoa, and indigo tolerated only under certain restrictions, and in such quantities as might suffice for the demands of the mother-country. This system was maintained nearly three centuries; during which Mexico continued to be a blank in the history of nations, and known only by the issue of the precious metals. In 1808, however, the news of the abdication of Charles VI. of Spain gave a shock to the royal authority which it never recovered. The natives and coloured population embraced this opportunity of asserting their claim to the rights of freemen, which was opposed by the *audiencia*, who also seized on the viceroy, Hurrigarry, and sent him prisoner to Spain, where he was confined till the general amnesty. An open insurrection against the European authorities broke out in 1810, at the head of which were Hidalgo and Morelos, two priests of New Spain; and under the auspices of the latter the first national congress assembled at Chilpancingo in 1812. One of its

earliest acts was a declaration of the independence of Mexico.

For several years the history of the revolution is only that of a sanguinary guerilla warfare, leading to no permanent results. At length, in 1821, Iturbide, who had previously been a royalist, declared suddenly in favour of the liberals, and published his celebrated manifesto of Iguala in favour of a constitutional monarchy. His cause was embraced with such enthusiasm by the whole population, that he succeeded not only in putting down the Spanish government, and forming a national congress, but also prevailed on that body to make him emperor of Mexico, under the title of Augustin I. His dissolution of the congress, however, by military force, raised a feeling against him, which, finding it impossible to repress, he abdicated the throne. He was not only allowed to withdraw from the country, but rewarded for his past services by an annual allowance of 5,000*l.*, accompanied by an edict of outlawry in case of return. In spite, however, of this prohibition, he returned clandestinely, and was soon discovered, apprehended, and executed.

On the expulsion of Iturbide the congress was re-assembled, a provisional government formed, and an executive appointed consisting of Victoria, Bravo, and Negrete, all persons of proved patriotism. The government was modelled on that of the United States; but the hopes then formed of its stability have proved fallacious. Since this epoch repeated attempts at revolution have convulsed the country. During the whole of the struggle for independence, the population had been split into two parties; at first distinguished by the names of Imperialists, who adhered to the mother-country, and Republicans, who asserted its independence: but these parties afterwards merged into those of Centralists and Federalists; the former advocating a single superintending government, and the latter that of the independent government of states, only federally connected. This struggle between the rival parties has now continued for about 17 years, and been a fertile cause of insurrection. Texas and California have already separated from the confederacy, and it is probable that their example will be followed by other states. In fact, there can hardly be said to be any thing like regular government. The Centralists are lords of the ascendant to-day; but a successful *insurrección* (as the Parisians term it) may dash all their prospects to-morrow. Meanwhile, all the bonds of society are loosened, property has become almost worthless from its utter insecurity, and life is not safe from assassination and violence. Whether the proposal of the S. American republics to unite their interests with those of Mexico, and form together one grand federation, will be accepted, and whether, if accepted, it would contribute to the improvement of Mexico, is matter for speculation only; but certainly that country, as it exists at present, affords one of the most melancholy examples that modern history has presented of an extensive, fertile, and well-situated region being reduced, through anarchy and misgovernment, to a state bordering on barbarism.

Mexico, or *Mexico* (Mex. *Tenochtitlan*), the cap. of the United States of Mexico, and anciently the chief city of the empire of Montezuma, 7,426 ft. above the sea; lat. 19° 25' 40" N., long. 101° 25' 30" W. Pop., 150,000. It stands nearly in the centre of an elevated plain, or plateau, surrounded by mountains, and having an area of about 1,700 sq. m., 1-10th of which is covered by 4 lakes, the largest of which (Texcoco), nearest the city, has an area of 77 sq. m. The old city of Mexico, or that taken by Cortes, was built on a group of islands in the lake Texcoco; but though the modern city occupy its site, it is, owing to the diminution of the waters of the lake, partly originating in natural and partly in artificial causes, situated about 2½ m. W. from the lake. The ground on which it stands is, as might be anticipated from the statement now made, low and swampy; the largest buildings are erected on piles, and the roads leading to it are raised 6 or 8 ft. above the surrounding flat. Though within the tropics, it is so elevated that its mean temperature is only 65° Fahr., coincident with that of May in England. It is said, by Humboldt, to be "undoubtedly one of the finest cities ever built by Europeans in either hemisphere; being inferior only to Petersburg, Berlin, London, and Philadelphia, as respects the regularity and breadth of its streets, as well as the extent of its public places." The architecture is generally of a very pure style, and many of the buildings are of noble construction, though usually of somewhat plain exterior. Two sorts of hewn stone, porous amygdaloid and porphyry, are used in the better parts of the city. The balustrades and gates are of Biscay iron, ornamented with bronze; and the houses, which are 3 or 4 stories high, have flat-terraced roofs, like those in Italy and other S. countries. (*Nov. Espagne*, ii. 51.) The streets are wide, well-paved and flagged, but not lighted or watched at night; so that robberies and assassinations are scarcely less common than in Spain. They run al-

(Geog., Amer. edit. 10. 188.) Mr. Stevenson gives it an area of 18,385 sq. m. (*Annals of Civil Engineering*, p. 38.) Its mean depth is estimated by Darby at 300 ft., or about the same as that of Lakes Superior and Huron; it is elevated 620 ft. above the tide level, being 14 ft. under the level of Lake Superior, and 4 ft. above that of Lake Huron. In general it is remarkable for the absence of bays, harbours, and islands on its N. W. side, however, is Green Bay, an inlet of about 24 m. in width, accessible to vessels of 300 tons, near which are the Manitowish and Beaver islands. Lake Michigan receives numerous rivers on every side, but they are not very important. The countries all round the most southerly portion of this lake are rapidly settling; and it has already become the centre of a very extensive commerce, being connected by railway with Lake Erie and New York, on the one hand, and by canal with the Mississippi and New Orleans on the other. The flourishing towns of Milwaukee, Chicago, N. Buffalo, &c. stand on its banks. The waters of this lake are clear and salubrious, and it abounds with fish. It is navigated by vast numbers of large steam-boats, schooners, and brigs. (*Encyc. Americana*; *Darby's Geog. View*, &c.; *Stamps of Geog.*, Amer. edit.)

MIDDLEBURG, a town of Holland, prov. Zealand, of which it is the cap., nearly in the centre of the island of Walcheren, 4 m. N. by E. Flushing, and 27 m. S. W. Rotterdam; lat. 51° 29' 4" N., long. 3° 27' 20" E. Pop. 16,000. Though no longer fortified, it preserves its circular mould of earth, divided into bastions and surrounded by a broad and deep ditch. The approach to Middleburg is somewhat more varied than to most Dutch towns, the roads passing through a number of small plantations and country houses. It is nearly circular, some of its streets are wide and handsome, and the whole are tolerably regular. The market-place forms a spacious square; and part of the town is traversed by canals, crossed by draw-bridges. The whole is extremely clean; the private houses are uniform, and some of the public buildings spacious, particularly the town-house and the Oostkerk (east church); the former is in the Gothic style, and has several statues and paintings. The other objects most worthy of notice are several of the churches, a high spire, commanding a prospect over the whole island, the public walks along the bastions, and the Meiswater, an extensive reservoir or backwater. The chief literary institution is the gymnasium, or academy, which affords nearly the same course of instruction as a university, but without the privilege of conferring degrees. It has also a Latin school, a school of design; the Zealand society of literature, arts, and sciences, which possesses a good library, a collection of medals, &c.; and a society of agriculture.

galleries of S. Durham. It consists of a main street facing the river, and of another wide avenue running at right angles to it, at the corner of which are the commercial hotel and reading-rooms, surmounted by an observatory. There are also several other respectable streets; and on the whole the town is regularly and substantially built, under the superintendence of a joint-stock building company. The church, erected at an expense of £3,000, raised by subscription, and opened in 1800, is a neat Gothic structure, with a rather elegant spire. A national school has been formed, and the church has likewise a well-attended Sunday school. The Wesleyan Methodists, Baptists, and Primitive Methodists, have also their respective places of worship, with attached Sunday schools, furnishing religious instruction to about 600 children of both sexes.

Middleborough, the site of which only twenty years ago was occupied by a solitary farm-house, has already become the most considerable part of the Teme, though still regarded as subordinate to Shrewsbury, from which it has taken most part of its coal-trade, and a large portion of its ship-building. Its rapid rise is owing to its convenient position near the bar of the Teme, and the spirited conduct of Messrs. Funnell, Beckhouse, and other wealthy coal-owners, who, in connection with other shareholders, have both excellent staiths for loading colliers at the wharfs, and constructed a railway leading from it to the important coal-field near Bishop's Auckland, a distance of 23 m. The export of coal from Shrewsbury, being principally from Middleborough in 1865, amounted to 365,350 tons, and in 1867 to 402,225 tons. The entire cost of the railway was about £40,000; and the gross annual income was some time since about 70,000*l.* (the average dividends being about 10*l.* per cent.) The staiths, which are 480 yards in length, and worked by two large steam-engines, are capable of shipping 4,000 tons of coal per diem. Docks have been excavated, which comprise a water area of several acres. Steam tug-boats are constantly employed in bringing in and taking out vessels over the bar of the river; steamers run twice or three times a week during summer between this port and Sunderland and Newcastle; and there is a weekly steamer to and from London. Two ship building yards, an extensive pottery, and some tail-cloth and rope manufactories are in active operation. The commerce of Middleborough, independent of coal, is already important; and its inhabitants have distinguished themselves by their activity and industry. (*Irish Railway Comm. Rep.*; *Mr. G. Hand's Home Tour*; *Oram's Atlas of England*; *Price's Inform.*)

MIDDLESEX, a co. of England, containing the greater part of the metropolis, having E. the river Lea, which divides it from Essex, N. the co. Hertford, W. Buckingham, and S. the Thames, which separates it from Surrey and Kent. It is one of the smallest of the English counties, comprising only 180,680 acres, surface very various. The highest eminences are Hampstead, Highgate, and Harrow-on-the-Hill. In some parts along the Thames there are extensive tracts of rich loam; but the higher grounds are mostly gravelly and clayey, and not naturally fertile. There are numerous unenclosed commons in different parts of the co., and Hounslow Heath, on its S. W. angle, is as poor and unimprovable a tract as can well be imagined. Contrary to what might have been expected, agriculture is but little advanced in this co.; and, although considerable improvements have been made, the implements and processes of husbandry are still very inferior. But by far the largest portion of the co. is in grass, and the business of haymaking is as well understood here as in any part of the kingdom. The rich tract of land along the Thames from Kensington to Isleworth is principally occupied by market gardeners, who send a large supply of fruits and vegetables to the London market. The cows kept for the supply of London with milk are all short-horned. Property is very much divided, and in several districts it is mostly partitioned out into villas and pleasure-grounds; farms seldom exceed 300 acres, and their average size is supposed to be about 100. Leases pretty common, and mostly for 14 and 21 years. Average rent of land in 1842, 4*s.* 1*d.* Minerals of no importance, but in the vicinity of London in many places vast quantities of land have been dug up and converted into bricks. Middlesex is well watered; besides the Thames and the Lea, by which it is bounded, it is intersected and partly bounded on the W. by the Colne; and it is also intersected by the Brent, and by the Grand Junction Canal, &c. It is divided, exclusive of the metropolis, into 6 hundreds and 76 par. It returns 14 members to the H. of C.—viz. 3 for the co., 4 for the city of London, 1 for Westminster, 2 for the Tower Hamlets, 3 for Finsbury, and 3 for Mary-le-bone. Registered electors for the co. in 1845-50, 14,129. In 1841, Middlesex had 207,889 inhabited houses, and 1,878,636 inhab.; of whom 724,804 were males, and 657,737 females. Sum expended for the relief of the poor in 1846-47, 420,007*l.*

MIDTUN, a manufacturing market-town and gland, honor of Clitheroe, hundred Salford, co. Lanc. 6 m. N. N. E. Manchester, and 16 m. N. by W. 1. Area of par., 11,510 acres. Pop. of par. (by 8 townships) in 1841, 18,688, pop. of townships. This town, which in 1775 was an inconspicuous village, containing only 300 inhab., has, owing to its position on the cotton-trade, become a large place, with a good streets and well-built houses. The church, rebuilt in 1534, has a low tower, partly of wood, and some fine carvings and painted windows. The living is a rectory, in the gift of Lord Suffolk, the lord of the manor. Within the par. are, also, 3 episcopal chapels, and 7 places of worship for different denominations of dissenters, with 17 attached Sunday schools, furnishing religious instruction to about 2,400 children. A free grammar-school was founded in 1579; and within the last few years, 3 subscription schools have been formed for the education of the children of the working classes.

the top of the spire and statue, 356 ft. There are 52 piers, 98 pinnacles, and, inside and out, no fewer than 4,400 statues. (*Wood's Letters of an Architect*, p. 207.) In fretwork, carving, and statues, it goes beyond all churches in the world, St. Peter's itself not excepted. "Its double aisles, its clustered pillars, its lofty arches, the lustre of its walls, its numberless niches, all filled with marble figures, give it an appearance novel even in Italy, and singularly majestic." (*Classical Tour*, &c., iv. 7, 8.) In this cathedral there is no screen, and the chancel is entirely open, and separated from the nave only by its elevation. Neither are there any chapels, properly so called; and the high altar stands, as in the Roman *Basilica*, and, indeed, in all ancient churches, before the choir, and between the clergy and the people. The pillars, or rather clusters of pillars, which support the vault, though above 90 ft. in height, are only 8 ft. in diameter, from which comparative thinness they scarcely conceal any part of the interior from the eye. The pavement is of different coloured marbles, disposed in various figures. The dome is surmounted by a tower and obelisk, which last was erected about the middle of the 18th century, adding, however, little to the beauty or magnificence of the edifice. On the top is the figure of the Virgin, to whom the church is dedicated. In a subterraneous chapel immediately beneath the dome is the shrine, enclosing the remains of St. Charles Borromeo, archbishop of Milan in the 16th century, to which numerous pilgrims resort. On the whole, however, the cathedral is, both internally and externally, overlaid with ornaments; and there can be no doubt that the removal of 2,000 or 3,000 of its statues would be a signal improvement; but, with all its faults, it is certainly the finest Gothic edifice in Italy; and, in the opinion of some travellers, the finest church after St. Peter's.

Several other churches in Milan are worthy of notice. The first is that of St. Ambrose, the scene of many ecclesiastical councils and civil conflicts, and in which the German emperors usually received the Lombard crown. It is of high antiquity, and possibly some remains of the original edifice, erected by St. Ambrose towards the end of the 4th century, may form part of the modern building; but the bronze doors, and the court in front, surrounded by arcades, are acknowledged to belong to the 9th century; and the most ancient part of the building, having any character of architecture, appears to be of the same period. This church is divided by arcades into a nave and two aisles, and vaulted in nearly the same manner as the church of the Carthusians at Rome (the great hall of Diocletian's baths). Among its curiosities are the tombs of St. Ambrose and other saints, some Greek mosaics, old paintings in stucco, sarcophagi of considerable antiquity, and a large brazen serpent, said to be that fabricated by Moses in the wilderness! The churches of St. Victor, St. Mark, San Celso, St. Eustorgio, the Madonna della Grazia, &c., are among the handsomest or most remarkable in Milan, and some of them are adorned with rare works of art. Eustace, however, notwithstanding his disposition to eulogise, says that many of the churches "lose much of their majesty, and even of their beauty, by the profusion of rich and splendid decorations that encumber them. The materials of all are costly, the arrangement of most is tasteless; yet there are few which do not present some object of curiosity worthy of a visit." (*Classical Tour*, iv. 27.) The steeple of St. Gothard is a curious specimen of the architecture of the 14th century.

In the old Dominican convent is the famous *Cenacolo*, or "Last Supper," by Da Vinci. This magnificent work has suffered severely from damp and age, and, also, as is alleged, through the wantonness of the French soldiers and prisoners when they were quartered in the building. But what better could be expected from common soldiers, when a superior of the convent did not hesitate to cut away the feet of the principal figure, that a doorway might be heightened! It occupies one side of the refectory, and is about 30 ft. in length, by 15 in height. It has been so often repaired and retouched, that it is now nearly in the condition of Sir John Cutler's silk stockings: three of the apostles' heads are said to be all that remains of the original work, and even they owe their colouring to the pencil of restorers. Morghen's admirable engraving gives now, perhaps, the best idea of the picture and of the genius of the painter. On the wall opposite the "Last Supper" is a fresco, by Mototarra, an artist of the 15th century; more curious on account of its age, than remarkable for beauty.

The Royal Palace (*Palazzo del Corte*), now the residence of the viceroy of Austrian Italy, a noble structure fronting the square of the cathedral, was erected by the French on the site of the old Sforza palace. It has numerous spacious apartments, and some admirable frescoes by Appiani. The floors are beautifully inlaid, and some of the rooms are hung with Gobelins tapestry; but the magnificent paintings, representing the exploits of Napoleon, that formerly decorated the two large saloons, have been removed. The government, judicial, and

archiepiscopal palaces, the city-hall or mansion-house, the mint, and the custom-house and treasury, are among the other principal edifices. The large hospital (*Ospedale Grande*), is of much greater extent than Bethlehem Hospital in London; being about 880 ft. in length, by 360 ft. in depth, and inclosing several open courts. It is not remarkable for its architecture, but is under excellent regulations. It was founded by Francis Sforza in the 15th century, and was left by one individual 4,000,000 livres (about 120,000*l.*), and by another three fourths of that amount. It is open to all applicants, whatever their country, religion, or disorder: attached to it is a dispensary, whence medicines are distributed to the poor *gratis*, on the specification of any physician. The most extensive building in Milan is, however, the Lazaretto, beyond the walls, also founded in the 15th century, for those infected with the plague. It consists of four ranges of building, about 1,200 ft. each in length, inclosing an area of more than 30 acres. The city abounds in charitable institutions, including several other hospitals, four asylums for poor children, two workhouses, a government loan-bank, in a magnificent edifice built in 1496, &c. (*Oesterr. Nat. Encyc.*)

One of the principal attractions of Milan, especially to strangers, is the famous *Teatro della Scala*. This, which is the largest theatre in the Austrian empire, and, next to San Carlo at Naples, the largest in Italy, has 6 tiers of boxes, exclusive of the pit, which accommodates 800 visitors. Simond gives the following account of his visit to this theatre. "The house, which is certainly very fine, exceeds perhaps any in Paris or London, and the full band in the orchestra filled it well. Soon, however, the flapping of doors, incessantly opening and shutting, the walking to and fro over that part of the pit which is without seats, and, above all, the universal chattering, overpowered the music. Disappointed in our expectations of hearing this, and finding our attention to what was passing on the stage altogether fruitless, we turned to the spectators, and observed that the boxes, which are little rooms very neatly fitted up, had, by degrees, filled with company; and the lights in some of them (for there were none in the house except the row of lamps on the stage) enabled us to see the people receiving company, taking refreshments, gesticulating in earnest conversation, and laughing. In those boxes where there were no lights, the company remained invisible, and a sort of *chiaro-scuro* pervaded the fore part of the house. But, when the ballet began, the general hubbub at once ceased, and heads suddenly popped out, cards and conversation being suspended to look at the dancing. This, though much inferior to that of Paris or London, evidently possessed attractions superior to those of music, which was no sooner resumed, after the ballet, than the noise began again as before. A box at the opera, holding 8 persons, of whom 4 only can see, costs 11 francs; and 3 additional francs are paid by each person for his ticket of admission." (*Travels*, p. 17, 18.) There are 8 other theatres, 2 of which are open for performances in the day-time.

Milan has many spacious and extensive barracks, nearly all of which are in the W. suburbs. The largest, or *Caserna Grande*, occupies an area of about 900 ft. in length, by 700 ft. in width, having in front, and on either side the Foro (*Foro Bonaparte*), an esplanade, planted with trees, and laid out in elegant public walks. Behind the Caserna is a large open space, called the Place of Arms (*Piazza d'Armi*), from which the Simplon road opens by the *Arco della Pace*, one of the finest monuments erected in modern times. This arch, commenced in 1807 and finished in 1837, designed and principally completed by the Marquis Cagnola, is altogether of marble, richly adorned with statues and bas-reliefs. It is nearly 73 ft. in length, 42 ft. in depth, and 74 ft. in height; but to the summit of the principal statue is 98 ft. Four fluted Corinthian columns decorate either front; and on the top a bronze herald of victory stands at each angle; and facing the city is a colossal bronze statue of Peace, in a car drawn by 6 horses. On another side of the *Piazza d'Armi* is the amphitheatre, built by the French in 1806, a poor imitation of the antique structures of the same kind. It is nearly 300 yards in length, by 168 in breadth, and is capable of accommodating 30,000 spectators. It may be made an amphitheatre, a circus, or a *naumachia*, "for charioteers to drive, and athletes to wrestle, and a navy to give battle on an ocean 4 ft. deep; for the area could be laid under water at pleasure. The walls of this counterfeit of Roman work are scarcely 25 ft. high; and their thin facing of stone, already giving way, shows the rubbish underneath. But the palace annexed to this circus is adorned with columns of red granite, of great size, and each made of a single block. It is, in every respect, as beautiful as the rest is paltry and contemptible." (*Simond*, p. 19.)

The private palaces of Milan have received little notice from travellers, but some have considerable elegance, as the Palazzo Belgioioso, formerly the villa of Napoleon, and afterwards the residence of Prince Eugene Beau-

Spain, the Cathedral, Viki Station, and Vissari
cannon. In addition the Arm de la Pura, the city is
built by 10 gates, of which the Porta Orientale is the
most and most remarkable.

Many things are due to the general appearance than Tivoli or Capri, in which order to objects of capital interest, art, and science. The Austrian Library founded in 1689 by Lord T. Suriano, comprises, according to the Austrian Survey, 30,000 printed vols. and 3,000 MSS. Many of the latter are highly valuable, including the auto-graph of Leonardo da Vinci, some MSS. supposed to date as far back as the 10th century containing fragments of Cicero's lost orations (discovered by Maffei) assigned to the library by a half of painting with several fine works by Titian, De Vinci, Lippi, Albano, &c. and drawings by Raphael, Piero de Cortona, Caravaggio, &c. The library formerly the principal establishment of the University is now converted to the use of the Royal Academy of Arts and Sciences. It has a superb collection of pictures by almost all the best and second-rate masters of Italy; collections of coins and engravings, some by the gift of the possessor of the model arts, a well-furnished observatory, a good library and a superb garden. Many of the private collections to art and literature are deposited, in the Vatican palace, in a library of 30,000 printed vols. and many MSS. a considerable collection of coins, and many curious collections of antiquities.

Utility is the end of government for Austria Italy and of the provincial assembly the court of appeal and high criminal court of Lombardy. It is the residence of a delegate and an archbishop, an archbishop, a grand-master, a military ordinary, a high judicial council, many military schools and four different colleges of medicine, military university surgery and architecture, a military geographical institute, various sections of literature, agriculture, etc., and a tribunal of commerce.

This city is the center and most important emporium of the silk trade of Lombardy. Not only do the trans-shipment of the Lombarde Venetian provinces to silk centers here, but many of the neighboring states either sell their silk to Milan, or send it (either in bales or foreign currency) and this is the case not for raw silk alone, but also for organized and woven English weaves. In particular frequently make their advances of Milan to the emporium of silk. The spinning and throwing of silk is now exclusively confined to the city and its immediate neighborhood, and many of its throwing-mills have closed recently. *(Bureau's Report.)* Vol- umen silk-throwers here contain great carpets, artificial flowers, paper politicians were given for sale together elsewhere. *(Bureau's Report.)* For are exclusively made in Milan and it has a royal tobacco manufactory. In addition to silk Milan has an extensive commerce in rice and Parmesan cheese, and is next to Venice the largest bank mart in Italy. As a place of residence it has the advantages of cheap and plentiful provisions, every facility for study and amusement, a well-regulated police, and public safety. Among its drawbacks are the bugs of cholera and the dogs of the outbreak; the climate is however considered healthy.

Brickmann, supposed to have been founded by the Emperor Constantine, was assigned to the Roman province by Augustus, some 700 B. C. In the 6th century it held the rank of the sixth city in the Roman empire, and it was one of the few in Italy which have survived the devastations of the Middle Ages, and brought down the opportunity to restore them. It remains, however, but few antiquities, the only good specimen of ancient Roman architecture remaining being a range of 14 triumphal arches, adorned with their arches, gates, the church of San Lorenzo. In the 15th century Milan was the capital of a republic and a subsequently became the capital of a duchy in the hands of Visconti and Sforza. After the battle of Pavia it was held by Spain, until, in 17

FOR THE

WILL-4-2011

then, exp. station, on the E. side of an elevated narrow promontory, at the bottom of a bay 20 m. W. by S. the fare point of thirty lat. of Ughatshan 10° 10' N. long. 10° 10' E. Pop. 10,000. It is divided into the upper and lower town, both of which are irregularly built, and though it has a number of large edifices, none of them are remarkable. The character, with the exception of that of its Forts, are generally common, and the convents poor and dirty. The prison is a dirty stink the public hospital is badly provided, and the streets are quite uncleanly in bad taste. (Seymour's Journal p. 148.) The town is particularly distinguished by its architecture being so strongly by nature and art, than it has to be compared to the character of Shill; Russian subordinates (Kashanians) it has a station on the highest point of the promontory, 100 ft above the sea, commanding the town and the port. Beyond it is a spacious garden, called the Park of Ughatshan. The promontory is bounded on all sides by steep rocks, terminating down the sea and right according to Capt. Smyth is easily rendered impregnable. In the lower town is the barracks of Mysor, one of those allotted to the Pasha *Shah Nour* (1831) and ship 6, as existing to this part of Shill; the waters of Shill in consequence, perhaps, of the melting of snow, are great abundant in summer.

Utahans in the uniforms of a military commandant. The interior are occupied chiefly in the tanning factory and in the export of wool, silk, fur, sheep, cattle, horses and mules, corn, wheat and flaxseed, and other crops. The land is a fertile earth by falling water with much of the water is principally with irrigation. Legumes and Corn. In the 6 large and the smaller deep. Ships may enter almost of the town to from 10 to 20 fathoms deep mud, about 2 m. from the shore.

The Gush of Hissas (on Shalving Hissas) between the peninsula on which the town stands and Cape Hissas, has been the theatre of some important events. The first of these occurred some 1500 B. C., when the ancient Phoenicians founded a Carthaginian fleet, and showed by numerous acts to conquer by sea as well as by land. Another and far more important episode, which influenced indeed in no small degree, the fate of the Roman world took place in this gush some 2500 years ago, when the fleet of the powerful Ptolemy was obviously defeated and all but destroyed by Cleopatra Caesar, so much to the general Agrigra. Another important history, still less so, and the destruction there referred to. A third action took place here to add between the fleet of the Persians and that of the Greek mercenary fleet.

BILBOURNE POST, a decayed tow north-west, and part of England, to Rotherham, South Yorkshire, on the road 20 m. S. by S. Tinsley, and 140 m. W. S. W. London. Area of par. 2,140 acres. Pop. 1,431, 2,076. The town, though considerably enlarged and improved within the last few years, is very irregularly built, consisting chiefly of detached houses, and having the appearance of a mere village. An extensive golf-links stands in the high ground, and near it is the market-house well supported stone ware-house. The church an English northern structure, is surmounted by a massive square tower supported by two pinnacles and two semicircular arches, the tower is a canopy to the gift of the Bishops of Angouleme. The Wesleyan Methodists and Baptists have likewise their respective places of worship, with attached Sunday schools. Millwrights and formerly cotton-wool manufacturers of domestic working, and also cloth, but they have long ceased to exist. The glove trade, however, was introduced here from France about 25 years ago, and it is stated in *Hall's History of the Olden Family*, published in 1846 (p. 76), that about 2,000 dozen pairs were then annually produced, and that great efforts had been made by several individuals and persevering manufacturers to equal the French in this department, and that

of the entire system. For

MILETUS, (Gr. Μίλητος), a once famous but now ruined city of Asia Minor, the cap. of Ionia, near the mouth of the Mæander (hod. Menderes), 65 m. S. Smyrna. This is a very ancient city, and had borne several names before it received that of Miletus, given to it by Neleus, son of Codrus, king of Athens, who conducted thither a colony of Ionians, anno 1120 B. C. Few cities have been more celebrated for their population, wealth, commerce, and civilisation. The citizens of Miletus early distinguished themselves by their skill in navigation, and still more by the number of the colonies they had established along the coast of the Hellespont, the Propontis, and the Euxine; which enabled them to engross the greater part of the trade in slaves, which, in antiquity, were principally furnished by the country round the Euxine, as well as the trade in corn, fish, and furs. She was also famous for her numerous works of art, the magnificence of her festivals, and the luxury, refinement, and opulence of her people. Among her most illustrious citizens were the venerated names of Thales, one of the sages of Greece; Hecateus, one of the most ancient historians; the philosophers Anaximander and Anaximenes; Cadmus, the first who wrote in prose, and Timotheus, a famous musician and poet.* She also gave birth to Aspasia, the most accomplished and celebrated of courtesans; and Venus had nowhere more numerous and beautiful priestesses. Miletus was, in fact, the Athens of Ionia, *urbem quondam Ionia totius belli pacisque artibus principem*. (Mela, lib. i. cap. 17.)

Near the *Posideum Promontorium* (hod. Cape Ar-bora), about 12 m. S. by W. Miletus, was an oracle and splendid temple of Apollo, surnamed Didymæus. This temple having been burnt down by Xerxes, was rebuilt on a still more magnificent scale, by the Milesians. Part of the ruins yet remain; and "the columns are so exquisitely fine, the marble mass so vast and noble, that it is impossible, perhaps, to imagine greater beauty and majesty of ruin." (Chandler.) Miletus had also within her territory, Mount Latmos, famous for the loves of Endymion and Diana; and the fountain Byblis, so called from the unhappy sister of Apollo, who here expired of love and grief. (Ovidii Met. lib. ix. lin. 454, &c.)

But *quantum mutatus!* Miletus is now a mean deserted place, which still, however, bears the name of Palat, or Palatia, the Palaces. The principal existing memorial of her ancient grandeur is a ruined theatre, which must, when entire, have been a magnificent structure. It is 457 ft. in front, and is visible at a great distance. The site of the ancient city is encumbered with heaps of rubbish, and overrun with thickets, interspersed with fragments of walls, broken arches, fallen columns, and pedestals. It is evident, from the remains of a number of mosques, that Mohammedanism had once flourished here; but, with a single exception, the ruins seem to have belonged to mean and paltry structures.

In antiquity, Miletus underwent many vicissitudes. Having joined in the revolt of the Ionian cities, she was besieged and taken by the Persians, in the reign of Darius Hystaspes, anno 493 B. C., when the inhab. were obliged to evacuate their city. But being afterwards allowed to return, Miletus again rose to great wealth and distinction. She opposed a vigorous resistance to Alexander the Great; but, instead of punishing, the conqueror magnanimously restored the city to her ancient freedom. She appears to have been indulgently treated by the Romans; and continued to be a considerable city, till she fell, in an evil hour, under the ferocious and brutal sway of the Turks, who first sacked, and subsequently destroyed, this ancient glory of Ionia! To complete her misfortune, her port is now almost filled up.

The government of Miletus, and of the other cities of Ionia, was usually popular and republican; but, like their mother cities, they were distracted by faction, and frequently subjected to oligarchs or tyrants. Of the Milesian tyrants, the most celebrated was Thrasybulus, whose answer to the inquiry of Periander of Corinth may be seen in *Aristotle's Politics*, lib. iii. cap. 10.

Miletus and the principal states of Ionia, including the islands of Chios and Samos, being connected by the ties of a common origin and interest, were in the habit of sending deputies to a general council or assembly, to debate and determine upon measures for promoting their union and security. This council met at Panionium, so called from the circumstance, on the N. side of Mount Mycale, opposite Samos, about midway between Ephesus and Miletus; the place was regarded as sacred, and was put under the especial protection of Neptune, the chosen guardian and favourite divinity of the Ionians. (*Ibi est Panionium, sacra regio, et ob id eo nomine appellata, quod eam communiter Iones colunt.* — Mela, ubi supra; see also *Pliny, Hist. Nat.* lib. v. cap. 19.; and *Hero-*

* This Timotheus must not be confounded with his namesake whose music embellished the sites given by Alexander the Great, and whose wonderful powers are the subject of Dryden's noble ode. The latter belonged to Thales. (Biographie Universelle, art. Timothee.)

dotus, lib. i. cap. 148.) Thales, who saw that, without a more intimate union, the Ionians could make no effectual resistance to foreign aggression, advised his countrymen to establish a really federal system of government, and to concert and execute their public measures in common. (*Herod. lib. i. cap. 170.*) But this judicious advice was not acted upon; and it was only on urgent occasions, such as the invasion of Ionia by the Persians, that a sense of common interest and danger prevailed over their mutual jealousies and antipathies, and made any considerable number of the cities act in unison.

Most commonly the debates and decrees of the assembled deputies seem to have referred only to matters connected with religion, precedence, or ceremony. This appears evident from the circumstance of the deputies meeting at Panionium, when the Ionian cities were subject to the Persians and others, as well as when they were independent. (For farther information as to Miletus, see *Herodotus*, lib. i. caps. 142, 143, 148, &c., and lib. vi. caps. 18. and 21.; *Strabo*, lib. xiv.; *Chandler's Travels in Asia Minor*, caps. 42, 43. and 45.; *St. Croix, de l'Etat et du Sort des Anciennes Colonies*, pp. 223—229., &c.)

MILFORD HAVEN is an extensive basin, or inlet of the sea, deeply indenting the S. part of the co. Pembroke, in S. Wales, and forming one of the most capacious and safest asylums for shipping in the British dominions. St. Anne's Head, forming the N.W. extremity of the entrance to the Haven, lat. 51° 41' N., long. 50° 10' 25' W., is 145 ft. in height, and is surmounted by two light-houses, with fixed lights, respectively 15 and 45 ft. in height. The entrance is about 1½ m. in width; what may be called the Haven is from 10 to 11 m. in depth; but it branches out into an immense number of deep bays, creeks, and roads. The water is deep; and being completely land-locked, and the anchorage-ground of the very best description, ships ride within the Haven as safely as if they were in dock. At springs the tides rise from 28 to 30 ft., affording unusual facilities for the repair of ships, enabling them to get to sea with comparatively little difficulty, and to sail in even though the wind should be contrary. It may be entered without a pilot as well by night as by day.

MILFORD TOWN, on the N. side of the basin, 6 m. W. by N. St. Anne's Head, was founded in 1784. It is finely situated; is especially remarkable for the mildness of its climate, and has some good buildings, including a handsome church. A dockyard constructed here in 1790 has, however, been removed to Pater-Dock, on the S. side of the haven, and the town has not increased in the degree that was anticipated. It is probable, too, that the advantage of having the rendezvous for the fleets in stations better adapted for watching the coasts of France will always prevent Milford, or any other port on the haven, from attaining that importance as a naval dépôt which the excellence of the haven might seem to insure; while the barrenness of the surrounding country, and the want of all internal communication with any considerable manufacturing district, have prevented, and most likely will continue to prevent, any of the places on the haven from becoming of much consequence in a commercial point of view. The mail-packets for Waterford sail from Pater. (*Stat. of the Brit. Empire*, i. 51.; *Nicholson's Cambrian Guide*, p. 425.)

MILHAU (an. *Emilianum*), a town of France, dép. Aveyron, cap. arrond., on the Tarn, 30 m. S.E. Rodez. Pop., in 1836, 9,437. It is generally well built, and its streets, though narrow, are regular. It has several squares and public fountains, and a good bridge over the Tarn. Few vestiges exist of its ancient castle and walls; the latter were demolished by Louis XIII. in 1629, after which, says Hugo, *La ville cessa de s'occuper des affaires politiques ou religieuses, et tourna tous ses efforts vers le commerce et l'industrie, qui en ont fait la ville la plus riche et la plus peuplée du département*. It produces woollen cloth, leather and leather gloves, silk twist; and has a considerable trade in cheese, timber, cattle, wool, almonds, wine, and other agricultural products. It is the seat of a court of primary jurisdiction, a tribunal and a chamber of commerce, a communal college, society of agriculture, &c.: it was one of the strongest holds of the Calvinists in the French religious wars.

MILLEDGEVILLE, a town of the U. S. of N. America, state Georgia, of which it is the cap., and seat of government, on the Oconee, at the head of the steamboat navigation. Lat. 33° 6' N., long. 83° 20' W. Pop. between 2,000 and 3,000. Its state-house, penitentiary, and arsenal, are large and conspicuous buildings; and it has several churches, academies, and printing-offices. It is a place of deposit for cotton, and has some trade; but in this respect it has been in a great measure superseded by Macon, a village about 30 m. S.W. (*Encyc. Americana*, &c.)

MILO (an. *Melos*), an island of the Archipelago, belonging to Greece, in the group of the central Cyclades, the summit of Mount St. Elias; in its S.W. angle, 2,036 ft. above the sea, being in lat. 36° 40' 25" N., long. 24° 23' 14"

E Pop. 2,505. This island is said by Ptolemy to be circular (*Oceanus rotundissimus*, lib. iv. cap. 12); but it is really of an oblong shape, being about 13 m. in length from E. to W., and where broadest about 7 m. across: it is indented on its N. side by a spacious bay, stretching N. W. and S. E. about 8 m., which has deep water throughout, and forms one of the best asylums for shipping in the Levant. This island is obviously of volcanic origin: Mount Calaneo, indeed, is at this moment a semi-active volcano, emitting smoke and sulphurous vapours; in many places the earth is hot, and there are numerous hot springs, one of which, in a natural grotto, is used by the natives as a sudatory. It also furnishes abundant supplies of iron, alum, sulphur, and salt.

A considerable portion of the surface is rugged and mountainous, and has a naked and sterile appearance, but the valleys and low grounds are extremely fertile, such small portions of them as are cultivated producing corn, wine, oil, cotton, oranges, and other fruits in the greatest profusion. In point of fact, however, Milo is now almost depopulated, and nearly a desert; a result that is partly to be ascribed to the ravages of the plague, the badness of the water, which is generally brackish, and the prevalence of malaria; but far more to the influence of that brutalising despotism under which it has groined for centuries. Milo, the capital, situated near the bottom of the bay, is rendered unhealthy from the vicinity of salt marshes, and is an inconsiderable, wretched place.

Castro, another town, near the entrance to the harbour, on its E. side, is built on the summit of a conical hill, the houses appearing to rise above the roofs of each other. A little to the S. W. of Castro, near the shore, are the ruins of the ancient city. The remains of a theatre, built of large masses of the finest marble, and fragments of solid walls have been discovered. In the vicinity are numerous catacombs, cut in the porous rock. (*Thurmerfort, Voyage du Levant*, lettre iv.; *Olivier, Expédition Othomane*, li. cap. 9; *Turner's Travels in the Levant*; *Purdy's Sailing Directions for the Gulf of Venice*, &c. p. 97.)

Such is the present state of this once famous island. Milo is said by Thucydides to have been independent 700 years before the Peloponnesian war. The most probable opinion seems to be that the Melians were descended from the Lacedæmonians; but, however that may be, they declined taking any share in that contest, and though pressed by the Athenians to espouse their cause, declared their neutrality. The Athenians, however, having the command of the sea, determined to coerce the Melians into submission to their mandates, and though the first expedition sent against them failed of its object, the second was more successful. Thucydides gives the substance of the speeches made by the Athenian commanders to the Melians previously to their commencing hostilities; and on no occasion has the rubber's plea, that whatever the powerful may please to

be done on its oyster fisheries, the produce of which is highly esteemed, and distinguished as the "Milton native." The right of the fishery, within certain limits, formerly belonging to the abbey of Faversham, and afterwards to the crown, is now held on lease from the lord of the manor by a company of free dredgers, composed of the principal fishermen of the town; and in 1751 there were 119 families immediately dependent on the trade in oysters, which is principally carried on with the metropolis. The town has four wharfs; and, besides oysters, considerable quantities of corn and farm produce are shipped for the London market. Both the town and port are under the jurisdiction of a portreeve, elected annually by the inhabitants, paying poor's rates.

Milton disputes with Richborough the honour of having furnished the Roman epicures with the oysters alluded to by Juvenal:—

"*Rotundior olim fuit*
Ostrea." *Sat. iv. 141.*

1 town and par. of
res. 12 m. S. by E.
Area of par.,
The town, on the

W. escarpment of the Cotswold hills, consists of a long irregular street, extending N. to S. along the road from Gloucester to Chippenham, and crossed by another leading to the par. church, near the market-house. The church is a large cruciform structure, surmounted by an octagonal embattled tower, rising from the intersection of the nave and transepts; the living is a rectory in private patronage. The Wesleyan Methodists and Baptists have also their respective places of worship, with attached Sunday schools; and there is a well-attended national school, for children of both sexes, besides a respectably endowed grammar-school. Minchin-Hampton, which is only 4 m. S. E. of Stroud, the centre of one of the largest clothing districts of the co., has numerous cloth-factories on the banks of the numerous brooks in the vicinity, and in 1836 it had 13 woollen-mills, furnishing employment to 735 hands. Nearly 100 hands were then, also, engaged in hand-loom weaving. Trade, however, has for some years been on the decline, and its fluctuations have caused great distress among the weaving pop.: the average earnings of each family when in full work amount to 10s. per week, of which 6s. 18d. may be assumed as the produce of hand-loom labour. Markets on Tuesday: fairs for cattle, horses, and cheese, Trinity-Monday and Oct. 10. See STRAUP. (*Hand-loom Weavers' Rep.*, &c.)

MINCIO (an. *Mincius*), a considerable river of N. Italy, which has its source in the Lago di Garda; and which, flowing S., with many windings, by Mantua, unites with the Po 12 m. S. E. that city. In the upper part of its course, till it approaches Mantua, it is rather rapid; but from near Mantua to the Po it has a sluggish current, and is navigated by the boats that ply on the latter. Virgil, who first saw the light on the banks of this river, has celebrated its praises:—

"*— hinc ingens ubi fluitans oritur*
Mincius, et tempe præstant arundinis ripæ."
Georg., lib. iii. Ep. 14.

MINDEN, a strongly fortified town of the Prussian states, prov. Westphalia, cap. reg. of its own name, on the Weser, here crossed by a bridge 600 ft. in length, near the Hanoverian frontier, 60 m. E. N. E. Munster, lat. 52° 17' 47" N., long. 8° 53' 25" E. Pop. (1845) 9,308. It is irregularly built, and has no remarkable edifice, except a handsome cathedral, and new and good barracks. Minden has a gymnasium or college, a normal school, an orphan asylum, 4 hospitals, and other public institutions, and is the seat of a court of justice for the town and district, and of a board of taxation; but the court of appeal for the regency is at Paderborn. Manufactures considerable; consisting of woollens, stuffs, linen, hosiery, hats, gloves, tobacco, soap, refined sugar, &c. A number of saw-mills are employed in the preparation of the wood brought down the Weser, and it enjoys a considerable share of the transit trade on this river between Bremen and Prussian Westphalia, Hesse-Cassel, &c. In the neighbourhood are coal mines and salt springs, both very productive. The fortifications of Minden have been much improved since 1815. This

now, however, included in the kingdom of Greece, and will, most probably, recover some portion of its former prosperity.

MILTON, or **MILTON-ROYAL**, a fishing town and par. of England, lath. Stray, co. Kent, hund. its own name, 11 m. N. E. Maidstone, and 36 m. E. by S. London. Area of par., 2,340 acres. Pop., in 1841, 2,505. The town, on the declivity of a hill sloping down to a creek which opens into the channel between the Isle of Sheppey and the coast of Kent, is old and irregularly built. It has a market-house and chambers near its centre; and at its N. end is an old court-house. The church, which stands at a considerable distance from the present town, is a spacious fabric, with a square tower of flint stone laid in even rows. The living is a rectory, in the gift of the dean and chapter of Canterbury. There are places of worship, also, for Wesleyan Methodists and Baptists, with attached Sunday schools; a free school was founded in 1714.

violent N. winds, which are extremely injurious to plantations. Wheat and barley are the grains chiefly cultivated; both being of middling quality, and scarcely sufficient to supply two-thirds of the consumption of the island. Red and white wines are made in large quantities, and about 10,000 arrobas a year are exported, but the olive will not thrive in consequence of the cold N. winds. Capers grow spontaneously, and form an important article of export. Flax, hemp, saffron, and the cotton plant succeed well, but are little attended to. Fruits of various kinds are abundant, though much inferior in flavour to those of Majorca. Vegetables, also, are plentiful, and of good quality. The island is well suited for pasturage, and is well supplied with cattle, sheep, goats, and mules: wool is exported in considerable quantities; and the cheese of Minorca is considered by the Italians as equal, if not superior, to Parmesan. Bees, also, are reared in great abundance, and furnish large supplies of excellent honey and wax. Partridges, quails, and other game, are plentiful. Lizards swarm; and there are several varieties of venomous reptiles, but no beasts of prey. Fish, especially anchovies, abound on the coast, and the oysters of Minorca are held in high estimation by the Catalonians.

The trade of Minorca, chiefly carried on at Port Mahon, consists in the export of wine, wool, cheese, capers, honey, and wax, chiefly to Spain, but also to Genoa,

hills separates the waters flowing towards the Black Sea from those that fall into the Baltic. In the S. is a large extent of marsh land, along the banks of the Pripiat. Exclusive of this river and the Dniepr, the other principal rivers are their affluents, the Beresina, Stry, Gorla, Pashia, &c.: the Dwina forms, for a short distance, the N. and the Niesmen the W. boundary of the government. There are a number of small lakes, and in spring a great portion of the country is inundated, so as to form a vast sheet of water. Though one of the poorest and worst cultivated parts of the empire, Minsk produces more corn, principally rye, than is required for home consumption. Hemp and flax are important products, as are potash and tar. The forests are very extensive; sawing and trading in timber is one of the pop., and numerous large rivers to Kherson on the one, Königsberg on the other. The is mostly ill-conducted; pasturage but the sheep yield only inferior wool. Some little iron is reared. Some little iron weaving and distilling are pretty well carried on; there are some factories; and at Pinsk, in the S.W., Russia leather is prepared. The trade of the gov. is chiefly conducted by strangers. In 1832, only 2,150 children were receiving public instruction, and

there were but 3 printing establishments in the gov. Chief towns, Minsk the cap., Boubronish, and Sloutak.

MINSK, a town of Russian Poland, cap. the above government, and one of the largest in Lithuania, about 400 m. W.S.W., and 160 m. W. by S. Eroduo. Lat. 53° 54' 9" W.; long. 27° 52' 15" E. Pop. 14,600. Its streets are narrow, irregular, and dirty, and its houses nearly all of wood; but the town has, upon the whole, a respectable appearance, and some good buildings, among which are several Greek, Greek-united, and Rom. Cath. churches, a synagogue, a gymnasium founded in 1773, and a handsome theatre. It is the see of a Greek archbishop, and a R. Catholic bishop, and has manufactures of woollen cloths, hats, and leather. Under the Poles, Minsk was the cap. of the palat. of same name. (*Schnitzler La Russie*, p. 402—408.)

MIRANDOLA, a town of N. Italy, duchy of Modena, cap. cant., on the Burana, 18 m. N.N.E. Modena. Pop. 4,600. It is walled, and has a castle, but its fortifications have fallen into decay. Among its principal edifices are a handsome cathedral and numerous churches, an hospital, and a palace belonging to the Cico family. It has manufactures of silk stuffs and twist, and woollen and cotton yarn, and an active trade in these articles and in rice, a good deal of which is grown in the neighbourhood. (*Rampoldi; Dict. Géog.*, &c.)

MIRECOURT, a town of France, dép. Vosges, cap. arrond., on the Madon, a tributary of the Moselle, 16 m. N.W. Epinal. Pop., in 1836, 5,597. It is ill-built, and has no remarkable public edifice: it is, however, the seat of tribunals of original jurisdiction and commerce, and has a public library of 6,500 vols., &c. It is principally noted for its manufactures of violins, guitars, barrel organs, and other musical instruments, which occupy most part of the male pop., while the females are employed in making lace. (*Hugo, art. Vosges*.)

MIREPOIX, a town of France, dép. Ariège, cap. cant., on the Lers, a tributary of the Ariège, 15 m. N.E. Foix. Pop., in 1836, inc. com., 4,060. It is well built and clean, and has a large hospital, a par. church, a town-hall, and a bridge over the Lers, all handsome structures. Its inhabs. manufacture coarse woollen and cotton cloths.

MIRZAPORE, a distr. and town of British India, presid. Bengal. The district is included in the prov. of Benares, and is in about lat. 25° N., and between long. 82° and 83° E. Area, estimated at 3,650 sq. m. Pop. uncertain, but probably about 1,000,000. Land revenue (1829-30), 10,82,391 rupees. The cap., Mirzapore, is on the Ganges, 20 m. S.W. Benares. Lat. 25° 10' N., long. 83° 25' E. It has numerous handsome European and native houses, Hindoo temples and ghauts, and is the chief mart for silk and cotton goods in the British middle provs. Cotton stuffs and carpets, of a superior kind, are made here; and there are some iron works in the vicinity. (*Hamilton's E. I. Gaz.*)

MISITRA. See SPARTA.

MISKOLCZ, a large market-town of Hungary, co. Borsod, of which it is the cap., on the great road from Pesth to Upper Hungary, 23 m. N.E. Erlau. Pop. acc. to the *Austrian Encyc.*, nearly 27,700, principally Protestants. It is well built, and has numerous churches, a Protestant and a R. Catholic gymnasium, a Greek national school, a synagogue, a Minorite convent, &c. The wine grown in the vicinity is the chief article of traffic at Miskolcz.

MISSISSIPPI, one of the U. States of N. America, in the S.W. part of the Union, between the 30th and 35th degrees of N. lat., and the 88th and 91st of W. long., having N. Tennessee, E. Alabama, W. Arkansas and Louisiana, and S. the last-named state and the Gulph of Mexico. Length, N. to S., 335 m.; average breadth, about 140 m. Area, estimated at about 47,000 sq. m. Pop., in 1840, 375,651; of whom 195,211 were slaves. North of lat. 31° the W. boundary is wholly formed by the river Mississippi; the country along which is a continued swamp, occasionally interspersed with patches sufficiently elevated to admit of cultivation. From this low plain the surface gradually rises towards the E., where a tract of moderately high land, stretching from S.W. to N.E., forms the watershed between the rivers joining the Mississippi in this state, and those flowing separately into the Gulph of Mexico. Many other hill ranges, of no great height, traverse the state, giving to the greater part of it an undulating surface. Next to the Mississippi, the Yazoo, Pearl, and Pascagoula rivers are the principal, and lie wholly within this state. The Yazoo, a tributary of the Mississippi, has a general S.W. direction, and an entire length of 240 m., 50 m. of which are navigable. The Pearl and Pascagoula rivers have a general S. direction, and both flow into the Gulph of Mexico. Both are navigable, also, to a considerable distance from their mouths.

Mississippi has about 30 m. of sea-coast, but no harbour except Pascagoula. A few low islands lie along the coast, but they are generally sterile, and of little

consequence. The climate nearly resembles that of Louisiana, but it is said to be healthier. But, during summer, fevers and bilious affections are more or less prevalent in all parts of the state. A large proportion of the soil is fertile, and covered with timber; oak, hickory, black walnut, maple, and pine being the principal forest trees.

The sugar-cane grows in the S., and the orange on the lower banks of the Pearl and Pascagoula rivers; in the central region, maize, rice, tobacco, indigo, figs, grapes, melons, sweet potatoes, &c., attain to excellence; while apples and pears thrive in the N. Tobacco and indigo were formerly the staples of Mississippi; but cotton is now the principal product, and its culture engrosses by far the greater portion of the attention of the planter. The crop of 1837 amounted to nearly 320,000 bales, and there has been a considerable increase in the interval. Most estates raise enough of Indian corn for their own consumption, and breed hogs sufficient to supply them with bacon. The trade of the state centres in Natchez.

In 1837, Mississippi had 56 organised counties. Jackson, on Pearl River, is the seat of government; but its pop. is small, and it has no recommendation other than its central situation. Natchez is by far the most important town in the state. The legislative power is vested in a senate of 23 members, chosen for four years, and a House of Representatives, elected for two years, by the white male citizens, 21 years of age, who have resided a year in the state. The governor is elected for two years, and the General Assembly meets also biennially at Jackson. Justice is administered in a high court of errors and appeals, a superior court of chancery, 11 district courts, and circuit courts in each co., which last have original jurisdiction in civil causes above 50 dollars. Imprisonment for debt has been recently abolished, and the Penitentiary system adopted. In 1838, the state had 23 banks and 15 branch banks, with a united capital of 21,900,000 dollars. In 1840, 80 m. of railroad had been completed in the state. There are colleges at Washington, Oakland, and Clinton; though only the first, established in 1802, and called Jefferson College, seems to have made much progress: it has usually about 100 students. In Natchez, Woodville, Monticello, &c., are flourishing public schools; but no general system of primary education was in force till 1846. In 1839, 26 periodical publications were issued in Mississippi.

This territory was first settled by the French about 1716, and originally formed part of Louisiana. It was ceded to Great Britain in 1763. It was united in a territorial government with Alabama in 1801; and, in 1817, was admitted as a separate state into the Union. It sends 2 representatives to congress. (*Pliny's Geog. of the U. S., Appendix; Darby; American Almanack*, 1837—1851, &c.)

Mississippi (from an Indian word, meaning "Father of waters"), a great river of the United States of N. America; forming, with its various tributaries, one of the most extensive water systems in the world, and draining above 1-7th part of the N. American continent. It extends N. and S., between the 29th and 48th parallels of N. lat.; and from the sources of the Alleghany, eastward, to those of the Missouri, westward, is a distance of 1,830 m., measured in a straight line between the 77th and 111th meridians of W. long. Length, from Lake Itasca, the source of the Mississippi Proper, 3,200 m.; but, from the sources of the Missouri, the true head of this mighty river, 4,400 m. Estimated area of the country drained by it and its tributaries, about 1,100,000 sq. m. The Mississippi divides the territory of the Sioux Indians, with the states of Missouri, and Arkansas, lying on its W., from the Huron territory and the states of Illinois, Kentucky, Tennessee, and Mississippi, on its E. side; but the entire basin receives the drainage, not only of these districts, but also of Ohio and Indiana, with parts of Pennsylvania and Alabama, besides that of an immense extent of hitherto unsettled country in the "Far West." The lake Itasca, in which the river rises, and which was first discovered by Schoolcraft in 1833, at a level of 1,320 ft. above the sea, is a beautiful sheet of water, about 8 m. in extent, lying among pine-covered hills of diluvial formation, based on primitive strata. The river flows thence N.N.E., about 180 m., to Lake Cass, where it takes a S.S.E. course, and pursues it, with some deviations, to the junction of the Ohio. (*Geog. Journal*, iv. 242—251.) Its velocity during its passage through the lake-region, bordering on British America, is in many parts very considerable. There are several falls, the largest being the Big Falls, at a spot where the stream divides, and forms several islands: about 60 m. lower down, also, are the Falls of St. Anthony, 9 m. above the confluence of St. Peter's River; and here the stream, flowing in two channels, each between 200 and 300 yds. broad, is precipitated over a limestone rock, 16 ft. in perpendicular height. At this point ends the upper course of the Mississippi; though rapids occur for several miles farther down, and even as low as the junction of the *Rivière des Moines*,

generally deemed good; though the season be short, and the boats run only during day-light. It seems probable, however, that, as the country becomes more settled, steamers will be found, not only to carry up merchandise, but to take return-passengers. The main difficulty of navigation (*Werner's Gaz. of Missouri*, p. 35) arises from its falling banks, the timber interbed in the mud of its channel, its sand-bars and rapids, and the rapidity of its current, which ranges from 3 to 6 m. an hour. All these may be overcome by using the necessary precautions, but the falls entirely interrupt the navigation, and a portage becomes necessary at the point where, for about 25 m., the Missouri rushes down a succession of tremendous cataracts and rapids.

Above the falls, the current is frequently interrupted by shoals and rapids; and, as the river issues from the Rocky Mountains, its banks are steep on both sides for more than 6 m., by rocks rising perpendicularly from the water's edge to the height of nearly 1,500 ft., and forming a outline and extraordinary spectacle. This stupendous range of rocks was denominated by Lewis and Clarke "the Gates of the Rocky Mountains."

In the lower parts of the river well-wooded valleys occur, varying from 4 to 6 m. in breadth and, as far up as 600 m. from its union with the Mississippi, the country is partially settled; but above the Falls upon prairie develops themselves, stretching indefinitely on either side in naked grass plains, forming the home of buffaloes, wild white bears, antelope, and mountain sheep, regions that are traversed only by the Red Indian, the hunter, and the trapper (*Phil's Geog. of U. States*, i. 320-325; *Darby*, p. 325-326).

The Ohio, though of far less magnitude than the Missouri, is certainly more beautiful, and, at present at least, more important in a practical sense. It is formed by the junction, at Pittsburgh, of the Allegheny and Monongahela (the former rising 15 m. E. of Cumberland in Pennsylvania, while the latter has its source about 60 m. S. E. of Clarkburg, in Virginia). Its level at this point is stated by Darby to be about 650 ft. above the Atlantic, its breadth somewhat exceeds 600 yards, and it immediately assumes that broad, placid, and beautiful aspect which it maintains, except at the rapids of Louisville, all the way to its confluence with the Mississippi. Its valleys are of great depth and fertility, generally high, dry, and healthy, and the country on both sides presents a variety of scenery not elsewhere to be found in the Mississippi valley. It varies in breadth from 600 to 1,400 yards. At Cincinnati it is nearly 600 yards, which may be regarded as its mean breadth. At Louisville, at the rapids, the descent of the river, in 9 m., is 12½ ft., but the current is not so broken but that boats have, in many instances, ascended the falls. A canal, however 3 m. in length, and 200 ft. wide, with a depth sufficient for large steam-boats, was completed in 1831, by which the rapids are avoided. The rise of the Ohio, during the floods, which occur between March and July, varies from 45 to 60 ft., but in the dry season it may be flooded, in several places near Louisville. Its higher parts are annually frozen over, and the navigation is usually suspended 5 or 10 weeks, during winter by floating ice. Its current, when at mean height, is estimated at 3 m., and when very low at 2 m., an hour. It has many islands, but there are none between the states of Ohio and Kentucky. The principal towns on the Ohio, below Pittsburgh, are Wheeling, Gallipolis, Cincinnati, Louisville, and Jeffersonville. The length of the Ohio, from Pittsburgh to the Mississippi, including its windings, is about 500 m. It enters that river nearly in a S. E. direction. "In ordinary seasons, and under ordinary circumstances," says Mr. Stuart, "these rivers are nearly 3 m. wide, and with a volume of water pretty much alike at the point of junction. When floods take place, and the Ohio is the highest, it was no easy matter, before the introduction of steamers, to accomplish its ascent at the confluence, but when the Mississippi is the highest, the Ohio is often, as it were, dammed up for several miles. On the one side, you perceive the Mississippi, presenting a vast agitated and turbid body of water, and on the other hand, the Ohio, comparatively clear and calm, descending from the N. The point where their streams unite, though rising 30 ft. above them when at an average height, is not visible in great inundations, when their united waters form a prodigious lake." (*Stuart's American*, ii. 324.)

The Ohio separates Virginia and Kentucky on the S., from Ohio, Indiana, and Illinois, on the N. Its N. affluents are, the Big Beaver, Manassas, Shenando, and Washoe, the last of which is navigable for 400 m. from its mouth. The S. tributaries are, the Kentucky, Sandy river, Green river, Cumberland, and Tennessee, all rising on the W. side of the Alleghenies, and flowing by very tortuous courses, through some of the richest districts of the United States. The last two rivers are navigable for steamers, during spring, upwards of 200 m. from their mouths; and the Ohio, with its tributaries, cannot have less than 5,000 m. of navigable waters. It

is traversed, in all directions, by an immense number of steamers, and, taking all circumstances into account, few rivers can vie with it, either in utility or beauty. (*Phil.*, p. 326; *Darby*, p. 326-328; *Murray's Empire*, American ed., iii. 161.)

The Arkansas, which, in point of magnitude, ranks next to the Missouri, joins the Mississippi, on its W. bank, in lat. 36° N. Its length has been estimated at above 1,000 m., and in summer it pours a broad and deep stream over dry sandy plains, which absorb the water, that, several hundred miles below the mountains, it may be crossed, in summer without waiting as high as the banks. During the floods, however, it is navigated by steamers, far above the limits of the state which has assumed its name. (For further particulars, see *American*, i. 154.)

The Red River, and its branch the Washita, join the Mississippi from the W., in lat. 30° 37' N., 50 m. above Baton-rouge. The most remote sources of the former are in the range of mountains called Sierra del Guadalupe, skirting the E. bank of the Rio Bravo del Norte, in New Mexico. It runs E., through a mountain about 600 m., and then turns S. E., it pursues till its junction with the Mississippi, its length being 1,400 m. It is navigable about 300 m., but the existence of a low, clogged with drift-timber, about 60 m., is an effectual bar to its further navigation for small boats. It is believed, that the Missouri mountains of Arkansas, near source S. by E., having a length of about 100 m., the Red River and Arkansas have their spring-floods, and supply an immense volume of muddy water, to swell the vast lagoons which are formed at the mouth of the Mississippi during its inundation. Their waters, owing to entire impregnations, and the suspension of enormous earth, are at once brackish and noxious to the taste; indeed, that of the Red River is so bad at Marchesboro, as to be wholly unfit for culinary purposes. The Yanco and Big Black River are the only E. tributaries of the Mississippi below the Ohio; and are not of sufficient importance to require a separate notice. (*Murray's Empire*, Amer. ed., iii. 326; *Phil.*, i. 330; and *Darby*, p. 318.)

Inundations.—This mighty river, the recipient of all the waters flowing eastward from the Rocky Mountains, and westward from the Alleghenies, is subject to periodical inundations, the effect of which is greatly heightened by the flatness of the country in the lower part of its course. It is intersected, also, in every direction, by numerous natural canals, or bayous, which, during the floods, are constantly in motion, and render it impossible to carry on any internal intercourse, except by means of boats. The waters, however, which are thus sent down from the colder regions of the W. and N., and the temperate region of the Ohio valley, are not supplied simultaneously; the southern rivers sending down their floods early in the year, while the northern furnish their supplies as late as Midsummer. Hence, the Mississippi appears to have two annual floods; the first, in ordinary seasons, beginning with the new year.

At its mouth, 13 ft.; at Baton-rouge, 120 m. higher, 30 ft.; at Fort Adams, and generally thence to the Ohio, 45 ft.; and in the Upper Mississippi, the rise is from 15 to 20 ft. The inundation near the mouth being a consequence of the large expanse of the country over which the waters are spread. To secure the land from these inundations, immense embankments, or levees, as they are sometimes called, have been formed along the Mississippi and the canals, (or bayous, as they are called) through which its waters overflow. The principal of these embankments at the head of the island of Orleans, and extends down the river for about 120 m. The water, however, not unfrequently bursts through this embankment, and submerges the adjoining country.

Depth, and Fitnes for Navigation.—The Mississippi differs from most of the other great American rivers, in the uniformity of its width and depth for many hundred miles. Indeed, it is navigable, at every period of the year, consistently above the junction of the Mis-

souri, and at least 2,000 m. above its mouth. The width of the main river averages about 900 yards below the Ohio, and its medial depth varies from 90 to 120 ft. (*Stuart's America*, ii. 347.) The current of the Lower Mississippi, though strong, does not equal that of the Missouri. Its velocity may be ascertained from the progress made by boats in descending the stream. When the water is low a boat will float from 45 to 60 m. a day; when in a middle state, from 60 to 70 m.; and, during the inundation, from 90 to 100 m. This, however, applies only to that part of the river above the Arkansas; for, below this, a small dilatation occurs, and the swamps also receive a vast body of water, by which means the current becomes less rapid. As soon as the river enters the Delta, its rapidity is farther slackened through the diffusion of its waters into various subordinate channels. From this point to New Orleans no variation is perceived; but, between the Arkansas and the Delta, the velocity of the current is diminished nearly a third; and thence to the sea about a half. Outside the bar the current sets eastward; but there are counter-currents, which, in no small degree, perplex the mariner on entering or leaving the river. The white waters of the Mississippi do not readily mix with the sea, and may be readily distinguished from 9 to 14 m. from Balise.

By far the most dangerous obstruction to the navigation of the Mississippi arises from the multitude of large trees precipitated from its banks into the water. These frequently become firmly fixed in the bed of the river. Some of them are called *planchers*, because they are immovable, and constantly expose their pointed shafts above the water. Others are denominated *sawyers*, from their alternately rising above and falling below the surface. It is dangerous for boats to run against either of these; and the best way of avoiding them is to keep in the mid-channel, where they seldom make their appearance; and, for farther security, the steamers have now frequently double bows. The num-

most distant affluents)

Vast as are the natural capacities of the Mississippi for navigation, they have been, and, no doubt, will continue to be, greatly extended by canals and artificial means. It is already united with the grand chain of lakes and the basin of the St. Lawrence; and goods taken on board at New York may at present be conveyed to New Orleans without being unshipped, and conversely.

Sailing-boats are totally unable to stem the current of the Mississippi above Natches, and are obliged to have recourse to oars and long poles; nor is it easy to give any adequate idea of the laborious and tedious operation of propelling them against the stream, from 12 to 16 days being usually consumed in ascending from New Orleans to Natches (330 m.). The navigation, however, has been prodigiously facilitated by the introduction of steamers, which stem the current at a rate varying from 5 to 6 m. an hour: indeed, a family in Pittsburg considers it a light

matter to visit relations on the Red River, at the distance of 2,000 m.; nor is it a difficult matter to accept an invitation to breakfast at a distance of 70 m. down the stream. "In fact," says Mr. Stuart, "it is refreshing to see the large and beautiful steam-boats scudding up the eddies, as though on the wing. Where they have run out the eddy and strike the current, it is a still more noble spectacle. The foam bursts in a sheet quite over the deck; the boat quivers for a moment with the concussion, and then, as if she had collected her energies, she resumes her stately march, and mounts against the current five or six miles an hour." (*Stuart's America*, ii. 286.)

The steamers built for, and employed in, the navigation of the Mississippi are said to have amounted, in 1839, to 378, of the average burden of about 200 tons each. The following is an

Account of the Tonnage of the Principal Ports of the Mississippi Basin in June, 1842.

Ports.	Aggregate Tonnage.
Pittsburg	35,771
Cincinnati	16,428
Leavenworth	15,865
Nashville, on the Cumberland	2,911
St. Louis	2,979
New Orleans, on the Mississippi	240,222
St. Louis	32,356
Total of tonnage	544,922

With the exception of N Orleans, which has a great many sailing vessels engaged in the trade to other parts of the Union, the West Indies, &c., almost the whole of this tonnage consists of steamers.

The principal drawback on the navigation of the Mississippi consists in the fool-hardiness of the captains of the steamers (nearly all of which are propelled by high-pressure engines), which too often results in explosions and other accidents, that frequently occasion great loss of life and property. But the salutary act of congress, passed 7th July, 1838, has gone a good way to prevent these catastrophes. The passage prices (including board) are, from Pittsburg to Cincinnati, 10 dollars; to the mouth of the Ohio, 20 dollars; and to New Orleans, 25 dollars; but the prices for deck-passengers amount only to 1-4th part of the above fares. The common and only safe rate of these steamers is about 12 m. an hour with the stream, and 6 m. against it. The number of flat-bottomed keel-boats worked by manual labour is rapidly decreasing; and the probability is that steam-navigation will very soon supersede every other medium of communication on the Mississippi, whether for passage or commerce. (*Darby's View of the United States*, pp. 296—325.; *Frost's Geog.*, passim; *Amer. Almanack*, *Stuart's Amer.*, vol. ii.; *Murray's Encyc. of Geog.*, *Amer.* ed. vol. iii.; *Peck's Geog. of Illinois*, &c.)

MISSOURI, one of the U.

In point of extent, the second part of which it is situated, 40° 30' N., and long. 90° and 1° W., unsettled Indian territory by which it is separated from Tennessee, and S. Arkansas. average breadth, 230 m. At m. Pop., in 1840, 302,702; 6 Pop. in 1845, 511,937.

No part of this state can be called mountainous, though its S. W. portion has some elevated land. The country in the S. E. is a morass, forming a portion of the great Arkansas swamp; the rest of the surface consists principally of rolling prairies continuous with those of Illinois, Indiana, and Ohio. It is watered by the two largest rivers of the American continent, which, notwithstanding its internal situation, afford it facilities for communicating with the most distant countries: the Mississippi has a course of 560 m. along its E. boundary, and the Missouri intersects the state near its centre, and joins the Mississippi within its limits. There are numerous tributaries of the above rivers, which are navigable to some distance; as the Osage, Gasconade, Grand River, Chariton, Merrimac, &c. The Osage is navigable for keel boats for above 200 m. On the banks of the rivers, especially the Missouri, the soil is deep, and extremely fertile, and, also, in the alluvial prairies of the N. The hill country is much less productive, a considerable part of it being either barren or covered with pine woods. But in those parts where the soil is the least fertile, mineral products are abundant, and, in fact, these at present constitute the chief wealth of the state. Great quantities of iron ore and coal exist throughout the Missouri valley; and lead, antimony, zinc, manganese, cobalt, arsenic, plumbago, nitre, salt, Jasper, and marble, are found elsewhere. The great mineral district of Missouri extends over about 2,000 sq. m. to the S. W. of

St. Louis. This region is principally celebrated for its lead mines. Potent may be considered its centre; in 1855, upwards of 75 lead mines had been opened within 15 m. of that town. The ore is the galena or sulphuret of lead, and is found in detached masses, yielding from 45 to 55 per cent. of metal.

Copper, tin, gold, and silver are met with in some places, but the precious metals are not in sufficient quantities to pay for their working.

The agricultural staples consist of hemp, flax, tobacco, and corn of various kinds. Common and sweet potatoes, turnips, garden vegetables, and artificial grasses are plentiful. Cotton is cultivated in the S., but not to any great extent. Large herds of cattle, horses, and hogs are reared; and beef, pork, tallow, hides, and live stock constitute, together with lead, furs, buffalo hides and tongues, lumber, and maize, the principal articles of export. The prairie are excellent natural pastures, "and the business of rearing cattle is almost reduced to the simple operation of turning them upon these prairies, and letting them fatten until the owners think proper to claim the tribute of their flesh." Some of the prairies appear particularly fitted for sheep walks, but sheep are not yet reared in any great numbers. The principal manufacturing establishments are smelting works, forges, shot factories, &c. in the mining district, and flour and sawing mills on the various rivers. A good deal of shot is annually exported from Herculesburg and other towns.

In 1820, Missouri comprised 23 organized counties. St. Louis, on the Mississippi, is the chief commercial town, and was formerly the cap.; but the seat of government has been removed to Jefferson city on the Missouri, nearly in the centre of the state. The legislature consists of a Senate of 16, and a H. of Representatives of 48 members, both being elected by the white male citizens 21 years of age, who have resided in the state for a year previously to the election; but the electors of representatives must, also, have resided for 3 months in the co. for which they vote. The senators are elected for 4 years, and the representatives for 2 the General Assembly convenes every 2 years. The Governor, who has a salary of 3,000 doll. a year, and Lieut.-gov. are chosen by the people every 4 years, and are not again eligible till after the lapse of a similar period. The state is divided into 4 judicial districts, in each of which the supreme court sits twice a year. There are 11 circuit courts, with civil and criminal jurisdiction, and a superintending control over the county courts. The judges are nominated by the governor, and confirmed by the senate. They hold office for 5 years; but not beyond 65 years of age. The constitution provides trial by jury for the slaves; and otherwise enforces humanity on the part of their owners. 1/10th part of the land of every township is appropriated by Act of Congress for the support of primary schools; and the entire fund, derived from the sale of salt springs, &c., and other special funds, have been devoted to purposes of public instruction. St. Louis has a Catholic university, which, in 1846, was attended by about 100 students; St. Mary's college, in Perry co., is well attended; there are some other colleges, and flourishing private seminaries in the state; and the Missouri university had, in 1846, 52 students. A railway from Marion to New Paltz has been commenced, and several others have been projected. Missouri sends 3 representatives to the Congress of the U. States.

At the beginning of the 19th century a brisk traffic in furs and minerals being maintained between the Europeans and Indians, induced the former to settle in this territory. About the middle of that century, St. Louis, St. Genevieve, and other towns, were founded by the French; but in 1763 the country was given up to Spain. In 1803, it was restored to the French, who ceded it to the U. States in 1803. Missouri became a State of the Union in 1820. It sends 3 representatives to Congress. (*Missouri Gazetteer for 1836, Darby's Atlas of the U. States; American Almanack, 1824-1850.*)

MISSOURI (RIVER). See MISSOURI.

MISTRETTA (an *Amatrice*, or *Mystratone*) a town of Sicily, island. Catania, on a high hill, 5 m. S.W. Catania. Pop. about 6,000.

MITCHELSTOWN, an inland town of Ireland, prov. Leinster, co. Cork, on an affluent of the Pucknow, 35 m. N.N.E. Cork. Pop., in 1841, 4,151. It consists of a well-built square, and 3 principal streets. It has a par church, and Rom. Cath. chapel, both handsome modern structures; a college, which maintains 13 poor Protestant gentlemen, and 10 girls; a school, endowed by the Kingston family; a small barrack, and a market-house. A minor court for pleas of the amount of 50 is held every third Monday, and petty sessions every Wednesday. It is a constabulary station. Markets on Thursdays, Saturdays on the 10th Jan., 10th March, 10th May, 10th July, 10th Nov., and 2d and 9th Dec. Post-office revenue in 1839, 384; in 1840, 384. Adjoining the town, on the W., is the magnificent seat of the Earl of Kingston, erected in 1823.

MITTAU, a town of European Russia, cap. Cour-

land, on the Aa, 35 m. S.W. Riga, lat. 55° 30' N., long. 25° 45' E. It is said by Schoder to have had, in 1600, a pop. of 12,000; which, if we may depend on subsequent statements, had increased, in 1846, to 25,300; but we incline to think that either or both of these statements must be erroneous. It is but indifferently built; the houses being mostly of wood, and the streets, with a few exceptions, unpaved. It has a castle, erected in 1730, which served in 1796 as an asylum for Louis XVIII. of France, and is now the residence of the governor and the official authorities. It has a gymnasium and a good library, a theatre, capable of accommodating 2,000 spectators, an hospital, a literary society, &c. The nobility and gentry of the prov. assemble here at stated times for the despatch of business connected with the administration of the prov., and many of them reside in town during the winter, when it becomes unusually gay. Its situation is low, sandy, and exposed to inundation. (*Schoder, Le Russ. &c., p. 305; Grun-*

owing to the town at this time. In 1849 there belonged to the town 25,000 tons of shipping, of which above 10,000 tons were steamers. In the year ending June, 1850, the export of cotton from Mobile amounted to 220,541 bales, of which 214,000 were shipped for foreign ports, and 111,400 counties. The total value of the exports from Alabama during the year ending 30th June, 1849, almost the whole of which was shipped here, amounted to 11,000,735 dollars; the imports are comparatively trifling, amounting only in the same year to 607,147 dollars. (*See ALABAMA, in this Dict., l. 47; and American Official Returns, &c.*)

MOCHA, the principal port in the Red Sea frequented by Europeans, is that part of Arabia called Yaman, about 60 m. N. from the Strait of Bab-el-mandeb; lat. 12° 15' N., long. 42° 30' E. Pop. variously estimated, but may, perhaps, amount to from 5,000 to 7,000. It is encircled with walls, and is strongly fortified. Its appearance from the sea is imposing, but internally it is poor and mean.

Mocha is situated on the margin of a dry sandy plain. It is built close to the shore, between two points of land, which project and form a bay. Vessels drawing from 10 to 15 ft. water may anchor within this bay at about a mile from the town, but large ships anchor without the bay in the roads, in 5 or 7 fathoms water; the grand mosque bearing E. S. E., and the fort to the S. of the town S. by E., distant about 3 m. from the shore. The great article of export from Mocha is coffee, which is universally admitted to be of the finest quality. It is not possible to form any very accurate estimate of the quantity exported; but we believe it may be taken at 10,000 tons or perhaps more. The greater portion is sent to Djibda and Suva, but there is a pretty large export to Bombay and other parts of India, whence some is sent to Europe occasionally, however, the exports from Mocha and Hodida, direct for Europe, are very considerable. Besides coffee, the principal articles of export are, dates, adjees, or paste made of dates, myrrh, gum Arabic, oilbalm, civet (Caspia Arum), sharks' fins, tragacanth, horns and hides of the rhinoceros, balm of Gilead, ivory gold dust, civet, aloes, saffron, &c. The principal articles of import are, rice, piece goods, iron, and hardware, &c. The ivory, gold dust, and civet, sent with at Mocha, are brought from the opposite coast of Abyssinia, whence are also brought slaves, gum, &c.

MODBURY, an old bor., market-town, and par. of England, hund. Ermington, co. Devon, 30 m. S.W. Exeter, and 151 m. S.W. London. Area of par., 2,910 acres. Pop., in 1841, 2,000. The town, which is very irregularly laid out, has four principal streets, meeting in a large open market-place. The church is large and well built, having a spire 124 ft. high; the living is

a vicarage, in the gift of Eton college, to which Hen. VI. gave the estates of an alien priory of Benedictines that formerly stood near the church. The Wesleyan-Methodists, Independents, Baptists, and the Society of Friends have their respective places of worship; and there were, in 1835, three Sunday schools, furnishing religious instruction to about 300 children. A Lancastrian school is attended by 70 boys; and about 80 children receive instruction in two infant schools.

Modbury had formerly a considerable share in the manufacture of serge, plush, and felt hats; but these branches of industry have long decayed, and the present inhab. are mostly engaged in agriculture and retail trade. The town, which is a bor., though without an act of incorporation, is governed by a portreeve and other officers; and in the reign of Edward I. it sent 2 mems. to the H. of C.; but it afterwards was divested of this privilege, because of its inability to bear the expense! Markets, for corn and other provisions, on Thursday; large cattle fairs, the second Tuesday in each month, and an annual fair, May 14.

MODENA (DUCHY OF), called by the Italians *Stato Estense*, a state of N. Italy, consisting of the united duchies of Modena and Massa Carrara, principally included between the 10th and 11th degs. of N. lat. and the 44th and 45th of E. long.; having N. Austrian Italy; E. the N. delegs. of the Papal States; W. Parma, and a portion of the Sardinian dom.; and S. Tuscany and the Mediterranean. Area estimated at 2,317 sq. m., and the pop. at 562,678. The N. part of this duchy consists of a portion of the great plain of Lombardy; the S. is traversed from W. to E. by the Apennines, one of the summits of which in this duchy, M. Cimone, rises to upwards of 6,500 ft. above the sea. The Po constitutes a small portion only of the N. boundary; next to it the principal rivers are its affluents, the Panaro, Secchia, Crostolo, Enza, &c.; which have their sources on the N. slope of the Apennines, and flow N. to the Po; and the Magra and Serchio, which rise on the S. slope of the Apennines, and fall into the Mediterranean. The climate differs on the different sides of the mountains. On the N. it is similar to that of Parma and the Lombardo Venetian kingdom; snow falls and cold weather lasts for several weeks in the winter; while to the S. of the mountains the climate is like that of Genoa, and the olive and orange flourish in the open air. The plain country is very fertile, and abundantly watered by rivulets and canals. In the mountains there are many peasant proprietors, but not in the plains. A great evil here, as in other parts of Lombardy, is the practice of the lords and the possessors of lands in mortmain letting to middlemen, who relet to metayers; under which tenure are all the lands of the duchy. The tenant furnishes half the cattle, and the landlord the other half. Apparently there is not a labourer's house in the country, all being metaying farmers. (*Arthur Young's Trav.* ii. 157.)

The distribution of the land is much the same as in the rest of the plain of Lombardy, where, according to Chateaubriand, very few farms exceed 60 acres. The metayers should receive half the produce for their labour and attention, but the actual quantity falling to their share varies considerably according to circumstances, and in many cases is not more than 1-3d part of the crops produced. The custom of sharing the produce is, however, almost universal; and a lease at a fixed rent being extremely rare, we need not wonder at the low state of industry. (*Chateaubriand, Italy and its Agric.* p. 17., &c.) Rice, wheat, maize, fruits, wine, oil, and hemp are the principal articles of culture; but the supply of corn is notwithstanding inadequate for the consumption. The wine of the duchy is strong, but not of superior quality: the oil S. of the mountains is equal to that of Genoa, but that produced in the N. plains is very inferior. Bees, poultry, and hogs are numerous. Cattle breeding is not very extensively pursued, except in the valley of Garfagnana, where it is almost the sole occupation of the inhabs. The pasturages on the mountains are excellent; but only the duke and a few of the larger proprietors possess any considerable flocks of sheep. Horses few; oxen of the Lombard and Swiss breeds, and asses, supplying their place for draught, &c., on almost every farm. The declivities of the Apennines are clothed with fine woods of oak, beech, pine, and chestnut; indeed, chestnut flour forms the principal food of the peasantry in the upland region for a considerable portion of the year. The labouring classes, even in the more productive parts of the duchy, live very sparingly; soup of Turkish wheat, or *polenta*, salads, and beans or other pulse, fried in oil, are their ordinary food. Butcher's meat scarcely ever appears except on the tables of the more opulent farmers, and their best beverage is refuse wine, or wine of the second pressure.

Next in importance to rural husbandry, is the culture and manufacture of silk, though the products be of indifferent quality. The other manufactures are on a small scale. They consist principally of canvass, leather, paper, glass, and earthenware. In Garfagnana some iron is

forged. The finest statuary marble is found in inexhaustible quantities at Carrara; and amber, petroleum, sulphur, &c. are met with elsewhere.

This duchy is divided into 6 districts, Modena, Reggio, Guastallo, Frignano, Garfagnana, and Massa-Carrara. Exc. Modena, the cap., the other principal towns are Reggio, Carrara, Massa, and Finale. The government is an absolute monarchy, and perhaps the most despotical in its form of any in Europe. The duke monopolises both the legislative and executive power; but he avails himself of the services of a prime minister, 2 secretaries of state, and a privy council. The Austrian civil code of laws have been adopted since 1815. There are tribunals of primary jurisdiction in Modena, Reggio, and Massa, and a high court of appeal in Modena. A college is established in each of the principal towns, and the capital has a university and some superior schools; but owing to the jealousy of the government and the restraints laid on the press, public instruction is in a very backward state. The military force consists of 3,500 men. It is recruited by volunteers; the recruit receives a premium, and the family of which he is a member is exempted from all personal taxes. The public revenue is estimated at about 1,700,000 florins a year.

The greater part of this territory was erected in 1452 into a duchy, under Borso D'Este, son of Pope Nicholas III. It was taken by the French in 1797, and subdivided into the depts. of Panaro and Crostolo. In 1814 it was given to the present ducal family, a collateral branch of the House of Austria.

MODENA (an. *Mutina*), a city of N. Italy, cap. of the above duchy, in a fine plain between the Panaro and the Secchia, 24 m. W.N.W. Bologna: lat. 44° 38' 35" N., long. 10° 55' 13" E. Pop., about 27,500. Modena has a citadel, and is surrounded with ramparts, which, however, conduce less to its strength than to its beauty. It is regularly laid out, well built, and clean. It has been much improved and embellished within the last fifty or sixty years, and is divided into the new and the old city by the *Strada Maestra*, a part of the Emilian way, which intersects it from end to end. The general architecture of Modena is striking and agreeable; almost all its streets are bordered with arcades over their footways. The ducal palace is the finest public building; it stands isolated in the great square, and, unlike the palace of Parma, it has been completed, and is superbly furnished, and kept up in suitable style. It had formerly a noble collection of paintings; but some of its *chefs d'œuvre* were purchased by the elector of Saxony, and conveyed to Dresden in 1746, and others were taken away by the French: still, however, it is one of the best collections in Italy; it includes works by Raphael, Carlo Dolci, Andrea del Sarto, Guido, Guercino, the Caracci, and Procaccino, the Crucifixion by Pomarancio, a copy of the famous *Notte* by Correggio, &c. The ceiling of the gallery is painted in fresco by Francesconi; and in one of the rooms is a recumbent Cleopatra by Canova. The ducal library, known as the *Biblioteca Estense*, is a valuable collection of 60,000 vols. Two of the best scholars, and most laborious, diligent, and able writers of whom Italy has to boast, Muratori and Tiraboschi, were successively librarians during the last century. In the square before the palace is a fine statue of Duke Francis III., the founder of the university. The cathedral is a Gothic edifice of considerable antiquity and imposing appearance, but not in a pure style. It is principally remarkable for a square marble tower, one of the loftiest in Italy, in which is kept the famous bucket, once the cause of a serious feud between Modena and Bologna, and which has been immortalised by Tassoni in the *Secchia rapita*. One of the most celebrated works of Guido, the *Presentation in the Temple*, formerly adorned the cathedral, but it was carried off by the French, and has not been restored. (*Conder's Italy*, ii. 45.) The churches are numerous; but few deserve notice, except those of St. Vincenzo, St. Agostino, and the Dominican church, with some colossal statues. The city has several hospitals and asylums, a theatre, some public baths, better inns than most Italian towns, various good scientific collections, and a public library of 80,000 vols., comprising many rare editions of the 15th century, and some valuable MSS. It is well supplied with water by numerous subterranean cisterns; and is united to the Panaro by a canal navigable by boats of 30 tons. Its inhab. depend principally on the supply of necessaries to the court and government functionaries. Weaving and spinning silk were formerly important branches of industry; but these have greatly declined; and manufactures of hemp, woollen cloths, leather, hats, and glass have, to a great extent, taken their place. It has a large weekly market for agricultural produce, provisions, &c.

Mutina is supposed to have been founded by the Etruscans. It is said, by Livy, to have been colonised by the Romans, A. V. C. 569, (xxxix. 55.); and it is styled by Cicero, "*firmissimam et splendidissimam populū Romanū coloniam*." (Phil. v. 9.) A few Roman anti-

quities, mostly tombs, still exist at Modena. It suffered many disasters in the times of Attila, Odoacer, and the Lombard kings; and was afterwards governed successively by its bishop and magistrates, and belonged to the Popes, Venetians, and the dukes of Milan, Mantua, and Ferrara, before it became the property of the house of Este. Under the French it was the cap. of the dep. Panaro. The learned antiquary Sigonius, the poets Molza and Tassoni, and the celebrated anatomist Fallopius, were natives of Modena. (*Conder's Italy*, li. 42—46.; *Cramer's Anc. Italy*, i. 86, 87.; *Thomson*; *Starke*, &c., passim.)

MODICA (an. *Motyca*), a town of Sicily, intend. Syracuse, cap. district of its own name, on the Scicli, 31 m. W.S.W. Syracuse. Pop., in 1831, incl. cant., 25,834. It is situated among craggy rocks, and generally ill built. According to Smyth, it has some fine edifices; but it appears to possess few conveniences, for a recent English traveller could find only one inn in the town, which was wretched and dirty in the extreme. Among the public buildings are a castle, numerous churches and convents, a ducal residence, a town-hall, 2 hospitals, several public schools, and a government loan-bank. The Franciscan convent is said to possess some fine mosaics. In the adjacent valley of Ipsica are numerous troglodytic caves, fully described by Smyth (*Sicily*, p. 190.) and Russell (*Tour in Sicily*, pp. 134—137.) In 1833, a good many houses and upwards of 100 persons were buried by the fall of a mountain near Modica.

The district of which this town is the cap., has an area of nearly 120,000 acres, with several towns, and a pop. of about 80,000. It was endowed with peculiar privileges by Roger, king of Sicily, the principal being that its courts of justice should be independent of those of Sicily. These privileges would appear to have been productive of a good effect. "There is a very superior spirit of activity and industry among the natives, attended by greater affluence and comfort than any other agricultural part of Sicily displays, though it is not naturally so fertile as the rest. Modica is, in general, rocky and hilly, with very bad roads; but it boasts several fine plains, and romantic ravines. The soil is mostly loose, calcareous, and dry: but many successful agricultural efforts are made to render it productive, as is testified by the abundant produce of corn, tobacco, oil, wine, soda, hemp, canary-seed, cheese, butter, and carobs; while, from the attention paid to pasturage, the cattle are in great request. This co. also produces bitumen and salt; and there is so great a quantity of game, as to form an article of export. The trade is principally with Malta, which is supplied from hence with the above necessities, in exchange for cloth, spirits, hardware, and colonial produce." (*Smyth's Sicily*, p. 191.)

MOFFAT, a village of Scotland, celebrated for its mineral springs, co. Dumfries, delightfully situated on the Annan, at the head of an extensive valley, and bounded, almost immediately on the N. by an amphitheatre of hills, the highest in the S. of Scotland, 45 m. S. Edinburgh, and 20 m. N. by E. Dumfries. Pop., in 1841, 1,413. It is extremely neat, clean, and well-built, consisting principally of a wide street along the line of road from Dumfries to Edinburgh. Latterly, however, or since the opening of the Caledonian railway, which has a station at Beattock bridge, within 2½ m. of the village, it has been much enlarged; a great number of new houses having been built, partly for the accommodation of fixed residents, and partly of visitors to the wells. In fineness of situation and purity of air, it is superior to most watering-places in the kingdom. It has a par. church, a free church, a dissenting chapel, and some very good inns. The mineral springs, which are sulphureous and chalybeate, rise at no great distance from the town, on the slope of the adjacent hills. One of these springs was discovered in 1633, the other in 1749.

MOGADORE, or **MOGODOR**, called by the Moors *Shuora*, a sea-port town, and the principal emporium of Morocco, on the Atlantic, about 105 m. W. Morocco; lat. 31° 50' N., long. 9° 20' W. Pop. estimated at 10,000. It stands on a patch of granular sandstone rock, which, at high water, is nearly insulated by the sea. The country around is low, flat, and unproductive; so that vegetables have to be brought from gardens from 4 m. to 12 m. inland, and cattle and poultry from a still greater distance. Water is also scarce, and rather dear; being either rain water collected and preserved in cisterns, or brought from a river about 2 m. distant. The white stone buildings give the town an imposing appearance from the sea. It is divided into 2 contiguous portions, both surrounded by walls: that called the citadel, comprises nearly half the entire town, with the royal palace, the houses of most of the governors and chief officers, the custom-house, the foreign consulates, and a street of well-built shops of red sandstone, formerly occupied by European traders. Beauclerk says, that the houses in this part are well-built and lofty, that the streets are swept, and that it was cleaner than any other town he had seen in the Moorish dominions. It is shut off

from the rest of the town by a high wall, with a strong gate, which is closed at 9 o'clock every night. The other portion of Mogadore is not so well laid out, nor so clean, the Jews' quarter, in particular, being excessively filthy: it has, however, a very extensive mosque, with a high square tower, and other public buildings. It is entered by 3 principal gates; which, with many in the interior, are closed at sunset. To the S. of the citadel is what is called the port, being an inner roadstead, protected by a rocky island, about 1½ m. in length, 3 m. from the shore. It has not more than 10 ft. or 12 ft. water at ebb tide, and 23 ft. when deepest; it is therefore fit only for small vessels, large ships anchoring outside the harbour, the long battery bearing E., distant 1½ m. The island bounding the harbour is appropriated exclusively to a state prison; and is supposed to be defended by a few crazy pieces of ordnance, ensconced behind mud-wall embrasures. The landing-place is a long stone slip, near the arsenal, protected on the W. by a long battery, mounting several brass cannon, and containing a large tank, and a number of prison cells. The arsenal, with which this battery communicates, is a really handsome structure, consisting of a large range of bomb-proof casemates, flanked at either end by an elegant square tower, with turrets at their angles, connected by a battery of 2 tiers, having in its centre a lofty arched gateway. The long battery defending the whole town on the W., is an extensive line-wall along the shore, crowned with brass ordnance, and having beneath a range of bomb-proof casemates capable of containing 4,000 or 5,000 men. On the land side, Mogadore is protected from the attacks of the Arabs by a round tower, furnished with brass cannon. All the fortifications were erected under the superintendence of a European engineer in the last century, and, to an unskilful eye, they appear strong, and well executed; but Beauclerk says they are too flimsy to bear 5 minutes' breaching. The long battery offers, however, a fine promenade for enjoying the fresh air of the ocean.

The trade of Mogadore was formerly very extensive; her port was open to the ships of the different European countries, most of whom had consuls here. Most part of the commerce between Europe and Morocco is still carried on through Mogadore; but England and Sardinia are the only states that retain consuls. The principal imports are English woollen and cotton stuffs and hardware, German linens, tin, copper, earthenware, mirrors, glass, sugar, pepper, paper, &c. The exports principally consist of sweet and bitter almonds, gum Arabic, and other gums, bees' wax, cow and calf skins, ivory, ostrich feathers, gold dust, olive oil, dates, &c. Accounts are kept in *nutkeels* of 10 ounces; the ounce being divided into 4 *blankiels*, of 24 *suces* each. The blankiel may be valued at 1d., the ounce at 4d., and the nutkeel or ducat, at 3s. 4d. The corn measures are, for the most part, similar to those of Spain. The quintal = 119 lbs. avoird. The market lb., for provisions = about 1½ lb. avoird. The canna, or cubit, = 21 English inches, is the principal long measure. Mogadore has no peculiar manufacture; but a good deal of the excellent woollen cloth of the country is sold in its markets.

The mutton of Mogadore is of a very inferior quality, and the beef but poor. Kids form a great part of the consumption of those who indulge in meat: fowls are very cheap, and a dozen eggs may be bought for 1d. Red-legged partridges are always to be had in abundance. The climate is decidedly healthy, the heats being moderated by the sea breezes. Agues are, however, sometimes prevalent (*Beauclerk's Journey to Morocco*, 230—237.; *Jackson's Morocco*.)

MOGHILEF (Pol. *Mohylef*), a town of Russian Poland, gov. Podolia, cap. circ. on the Dniestr, 58 m. E. S. E. Kamienetz, and 180 m. S. W. Kief. Pop. nearly 7,000, of whom many are Jews. From its situation, sheltered on every side by mountains, its climate is milder than that of the rest of Podolia; its fruits are excellent, and the silk-worm thrives well. It has several Greek, Rom. Cath., and Armenian churches, and a Greek convent; and is the residence of an American bishop. It has a brisk trade with Wallachia, and the adjacent provs., in raw produce, and some well-attended fairs.

MOHACZ, a mean but large village of Lower Hungary, on the Danube, co. Barany, 25 m. E. by S. Fünfkirchen. Pop. 8,300. Near this village, on the 29th of August, 1526, the Turks, under Solyman the Magnificent, obtained a great victory over the Hungarians. Louis, king of Hungary, 2 archbishops and 6 bishops, many nobles, and about 22,000 private soldiers, are said to have been killed in the battle and the pursuit. In 1687, the Turks were themselves defeated in the vicinity of this village by the imperialists, under the Duke of Lorraine.

MOHILEF, or **MOGHILEV** (Pol. *Mohilew*), a gov. of European Russia, formerly included in the gov. of Vitepsk, between the 52d and 55th degs. of N. lat., and the 29th and 33d of E. long.; having N. Vitepsk, E. Smolensk, S. Tchernigov, and W. Minsk. Length, N. to S., 210 m.; average breadth nearly 85 m. Area about 17,470 sq. m.

Pop., in 1844, 231,300. The only physical difference between it and the gov. Vitspak is, that it belongs to the bu-

castle and is surrounded by a wall and ditch, has narrow, crooked, and gloomy streets, and poor houses. The division, is, on the contrary, along the sea-side, and has all vessels which frequent the harbours. The traces of an ancient place are still visible. The port, between this and the N., is insecure; but there is either side the town, where 10 fathoms water with a sandy bottom. *Parl. Rep.*, pp. 154, 155; *Purdy's*

rn, par. and parl. bor., contrib. in name, co. Flint, 10 m. W. by N. W. London. Pop. of par., in 1841, 3,557. The town, close to the Alyn, and sur- rounded by small and irregularly built; some town-hall, and, in the centre, some handsome seats and elegant man- sions. The structure of the 16th cen- tury, embattled tower, and monuments. The Wesleyan and Baptists, have, likewise, a worship, with attached Sunday school. There is no other particular in the town, however, there is lead and iron mines, which, in 1841, were. (*Bound. Rep. and Parl. Rep.*) instituted, by the Reform Act, a division (to Flint. Registered 849-50, 765. The co. assesses are Wednesday and Saturday. Fairs, on Aug. 2., and Nov. 21.

the town is a noted spot called after a victory gained in the 8th cen- tury over the Picts and Saxons: a monument, commemorates the event. On Chester road, are some remains of an ancient boundary between Wales and England. *Parl. Pa-*

VALLACHIA and MOLDAVIA. of Bohemia, and, next to the Danube, through the S. and E. It flows. It rises in the Bohemian mountains, and thence generally to the E. at Melnik, in about 30', after a course estimated at 100 m. It is properly the head of the Danube, and is continuous with the latter in a large body of water to it than the river. It receives the Woltawa, Lusch- an: Rosenberg, Budweis, and others. The Danube and Elbe railway 75 m. in length, com- mences in Upper Austria, to Budweis, and is navigable for boats of from 10 to 20 tons. The line consists of one line only, and is drawn by horses. The line is very expensive through an ill-considered plan, which was covered with rails, which were covered with iron, and others of cast iron in their place. The road has hitherto chiefly con- sisted of Upper Austria into Bohemia. It was founded, in 1837, to cost 12,000 shareholders, at 50 fl. a share, they have derived no profit (*Oester. Nat. Bank.*, &c.)

leaps), a sea-port town of the Adriatic, cap. canton, on the Adriatic. Lat. 41° 12' 22" N., long. 13° 12' 00" E. Its appearance from the sea is very narrow, though its streets be narrow and its houses, among which some elevations in a chaste style of architecture almost equal in beauty to those of the capital. It has a cathedral, a college, &c., and is the see of a bishop. It is sheltered by a mole, in sheltered by a natural breakwater; the entrance at either extremity of the mole, a salt-petre manufacture, building; and has a considerable trade in corn, oil, almonds, &c. (*Ram- baudi; Diet. Géog.*, &c.)

1), a mun. bor., market-town, and of its own name, co. Devon, W. Exeter, and 164 m. N. by S. 4,169 acres: pop., in 1841, 4,374.

The town, occupying an extensive W. of the river, at the junction of several high roads, comprises a large market-place, and several well paved and lighted streets, the whole having a peculiarly clean and neat appearance. The cathedral is a handsome and commodious building, one which is a small part. The church, adjacent to the market-place, is built in the perpendicular style the living is a perpetual curacy to the gift of the dean and chapter of Windsor. The Independencia and Wesleyans have also their respective places of worship, and there are 3 Sunday schools, attended by about 300 children of both sexes. A grammar-school, founded in 1614 is respectfully maintained, and there are 3 other schools supported by endowments and subscriptions. 6 Mission has a superintendence of various chaplains and priests, employing about 70 families, besides which there is a mission school, which, in 1850 employed 70 hands. The lace manufacture has lately been introduced, but with no great success. The bar is governed according to the *Man. Reform Act* by a mayor 3 other aldermen, and 10 councillors. It is one of the polling places of elections for the 14 divisions of the co. Quarterly and petty sessions are held here, and a court of record sits once in three weeks. Markets on Tuesday, Thursday and Saturday, that on Saturday being one of the largest in N. Devon. Great markets (not observed as before), Saturday after Feb. 15 and April 17, Wednesday before June 15 and after Aug. 15, Saturday before Oct. 15 and Dec. 15, chiefly for cattle. (Parl. Paper 47.)

MOLLECAS, or SPICE ISLANDS. See ANTONIA.

MOMPOX, or MOMPOT, a city of S. America, capital New Granada, and, next to the cap. the most important in the prov. Cartagena, on the Magdalena, about 30 m. above the confluence of the Cauca, lat. 9° 14' 30" N. long. 74° 30' 30" W. Pop. estimated at 10,000, or with the neighbouring villages, 15,000. At a distance on ascending the river the white houses, with their red roofs, have a new and clean appearance, but, on a nearer approach, this is exchanged for the general distressed look of Spanish cities. The town is above a mile in length; the streets are of a good breadth, crossing each other at right angles and some are even furnished with footways. The only decent-looking houses, however, are in the centre of the place the rest being more shabby. (Mission.) It has a custom-house and a fine quay, built very high, on account of the floods which take place in Dec. Several gun-boats are stationed here, for the protection of the navigation. Mompox is a place of some commerce. The chief exports are corn, hides, and Brazil wood. Pumpkins and Cucumbers transact some business, sugar and rhubarb to this extent. Antelope hides, gold, and sugar the produce of the Upper Magdalena. Mompox is surrounded by swamps, and liable to inundations; and alligators come up to the very banks of the river to feed on the fish thrown from

boating, and, the d to the the things only, and slight, on delicate, so streets extensive laughter for takes the hand, for the d. Time he day is L. This is indeed adapted, alluded to fully to a d. 1850-5.

It Italy on of the breadth, and 6. the

Medioevangel. Area, 30 sq. m. Pop. about 7,000 Being situated on the N. by lofty mountains, its climate is very cold, and it produces large quantities of oranges, lemons, and other fruits, from which the revenue of the prince, amounting to about 1,000 a year is mostly derived. The pastures are immensely good, and cattle numerous. Its inhabitants are occupied almost wholly with agriculture, fishing, and petty commerce.

Monsieu, the cap. (on *Porto de São Sebastião Monsieu*) is built on an elevated promontory overlooking into the sea, about 3 m. S. W. E. Nova. Pop. 1,500. It is walled and defended by a fort, and has an appearance of strength, but is entirely commanded by an adjacent hill. The largest town in the province is Mombasa, about 30 m. S. W. E. Mombasa, with a valuable port and 3,000 inhabitants.

This principally was founded in the 16th century, and has remained ever since in the Oriskany family. Two reigning princes to a pair of Princes, with the title of *Don de Volontaria*, and usually resident in Porto. (Almanac de Oporto, &c.)

MONAGHAN an island co. of Ireland, prov. Ulster, having N. Tyrone, S. Armagh, S. Louth and Meath, and W. Carrick and Fermanagh; area, 60,000 acres, of which 5,000 are unimproved mountains and bog, and 7,000 water. Surface hilly, but the hills are mostly sterile and moderately fertile. There are some large, and a great many small, estates. The land is very much subdivided, so much so, that it is said by Mr. Wakefield that the larger class of farms do not average 20, nor the smallest 5 acres (1 *Rev.*), and but both classes have taken place in this respect, in the interval. Commerce is very general here, and agriculture is in the most depressed state. Principal crops, oats, potatoes, and flax, the latter being very extensively cultivated; but a good deal of wheat is now grown, and its culture is extending. Considerable improvements have lately been effected in the breed of cattle, and a good deal of better is made, though there are no large districts. Cattle are very generally kept by the cottagers for the sake of their milk. A great deal of work is done by the spade. Average rent of land, 10s. 6d. an acre. The flax manufacture was at one time very widely diffused over the co.; most of the small farmers having looms; but this combination of employment, which has been injurious alike to agriculture and manufactures, is now, owing to the greater cheapness of machine-made yarn and flaxen, greatly diminished. The value of the unbleached flax sold in the co. in 1851, was estimated at about 125,000. (Revenue Report, Appendix B. p. 51.) The co. has vast beds of limestone, and lead ore, and indications of coal have been discovered. There are no rivers of any importance. Monaghan has 5 baronies, and 79 parishes, and sends 3 members to the H. of C., both for the co. Registered electors, in 1848-50, 1,515. Principal towns, Monaghan, Clontarf, Carrickmacross, &c. In 1851 the co. had 25,070 inhab. houses, 25,254 families, and 25,045 persons; of whom 25,071 were males, and 25,271 females.

MONAGHAN an island town of Ireland, prov. Ulster, co. Monaghan, of which it is the cap. on the main road from Dublin to Londonderry, nearly half way between them. Pop. in 1841, 4,150. The town, occupying a central square, called the Diamond, with several diverging streets. Its public buildings are the par. church, Roman Catholic chapel, three Presbyterian, and two Methodist meeting houses; the co. goal on the radiating plan, court-house, Sessions house for the assizes of Magistrate Kilmara, and Clougher a national school, a cavalry barracks, a market house, and the co. infirmary. It does not appear to possess any important advantages or commodities, except as a market-town, chiefly for the sale of agricultural produce. *Rev.* (New Board Report) The corporation, consisting of a provost, 12 burgesses, and commonalty sent 3 members to the Irish H. of C. down to the Union, when it was dissolved. The sessions for the co. are held here, with general sessions 4 times a year and petty sessions on Thursdays. It is a considerable station. It has a considerable linen trade, a large brewery, and is a great mart for agricultural produce. Markets on Mondays, Tuesdays, Wednesdays, and Saturdays; fairs on the 1st Monday in every month. The latter annual fairs meet the town. Post-office revenue in 1851, 700; in 1850, 944. Branches of the provincial and British banks were opened in 1851 and 1852.

MONASTIR, or BITOLIA, a town of European Turkey, prov. Macedonia, cap. north of some castles, on the Vardar, 31 m. N. N. E. Yantra, and 50 m. W. N. W. Salonika. The pop. has been estimated at 15,000, but we believe to think that this is much beyond the mark; it is the principal emporium for merchandise passing from Albania into Roumelia. It suffered great injury from fire in 1835; and was plundered by Ali Pasha. (Stat. Socy, &c.)

MONDORADO (an. *Brindisi*), a city of Spain, in Galicia, cap. prov. same name, 20 m. N. N. E. Lugo, and 75 m. W. Oviedo. Pop. according to Millaud, 5,070. It is situated on the N. side of the Asturian chain, and to old and irregularly built. Its principal public buildings are a cathedral, with 11 dignitaries and 16 canons, a par. church, 3 convents, now converted into hospitals, and a royal university and college. Linen-weaving, stocking, and brick-making are the only branches of manufacturing industry in the town, two large fairs are held in May and Oct., and the sub-district of the neighbourhood is better adapted for building than any other in Spain. (Millaud.)

MONDOVI a town of the Savoyian dom., div. Cune, cap. prov. Mondovi, on and round a hill near the Elvez, 19 m. S. by S. Cune. Pop. in 1851, incl. comm., 14,000. It is divided into four parts; the town proper, called the *Plaza*, on the hill, at an elevation of 1,500 ft. above the

level of the sea; and the three suburbs of Carassone, Bred, and Piano della Valle, built at its foot. The distance between the upper and lower part of the town is considerable; and the road by which they are connected is inconveniently steep. The town proper has a small citadel, and is surrounded with walls, of no great strength, instead of ramparts. It has a great number of religious houses and churches; the latter including a cathedral, with a handsome altar and sacristy. Its inhab. are chiefly clergy and country gentry, and it has very little commerce or wealth. The suburbs, on the contrary, are entirely devoted to trade, and have manufactures of woollens and cottons, with tanneries and iron forges; but the chief branch of industry is the spinning of silk. Mondovi is the see of a bishop, and has several seminaries of education. It is comparatively modern, having been founded, according to an inscription on one of the chapels in the cathedral, in the year 1232. It was taken and sacked by the French, under Marshal Soult, in 1799. Beccaria, the natural philosopher, was a native of Mondovi; but he must not be confounded with the Marquis Beccaria, author of the famous treatise on Crimes and Punishments, who was a native of Milan.

MONGHIR, or MUNGGER, a town of British India, prov. Bahar, distr. Bhaugulpore, 80 m. E. Patna; lat. 25° 23' N., long. 86° 26' E. Pop. estimated at 30,000. It is finely situated on a bend of the Ganges, and is of great extent, its ramparts being about 1½ m. in length by 1 m. in width. The houses, however, are much scattered, and in one quarter only are so close as to resemble a town. Monghir, while a British frontier town, was a station of considerable importance: and when Heber visited it, was in a better condition than most native towns. Though the houses are generally small, there are many with an upper story; and the roofs, instead of the flat terrace or thatch, as in Bengal, are generally sloping and covered with red tiles. The principal edifices are an old Hindoo temple, now occupied by some invalid soldiers; an elegant small mosque; the residences of the commandant and other military officers; barracks for 5 companies of sepoys; and the remains of a palace built by a brother of Aurungzebe. The shops are numerous; "and I was surprised," says Heber, "at the neatness of the kettles, tea-trays, guns, pistols, toasting-forks, cutlery, and other things of the sort, which may be procured in this tiny Birmingham. I found afterwards that the place had been from very early antiquity celebrated for its smiths, who derived their art from the Hindoo Vulcan, who had been solemnly worshipped, and was supposed to have had a workshop here. The only thing which appears to be wanting to make their steel excellent is a better manner of smelting, and a more liberal use of charcoal and the hammer. As it is, their guns are very apt to burst, and their knives to break; precisely the faults which, from want of capital, beset the works of inferior artists in England. The extent, however, to which these people carry on their manufactures, and the closeness with which they imitate English patterns, show plainly how popular those patterns are become among the natives." (i. 290—293.) Monghir has also excellent gardeners and tailors. A great deal of clothing for the native army is made here, with shoes in the native and European fashion, furniture, palanquins, carriages, &c. There are several native schools, and the town is a station of the Baptist Missionary Society. (*Hamilton's E. I. Gaz.*; *Heber's and Valentia's Trav.*; *Mod. Trav.* ix.)

MONGOLIA, an extensive tract of country in the N. E. part of Asia, and one of the colonial possessions of China, between the 35th and 53d degs. of N. lat., and the 83d and 123d of E. long.; being bounded N. by the gov. of Irkutsk, N.E. and E. by Manchouria, S. by China, and W. by Chinese Tartary. Length, from E. to W., about 1,700 m.; greatest breadth, 1,000 m.; area, about 1,400,000 sq. m. The limits, however, are subject, in consequence of wars among the tribes, to constant and great variation. Pop. conjectured by Timkovsky to be about 2,000,000. Mongolia may be generally described as an elevated plain, almost destitute either of wood or water, enclosed southward by the mountains of Thibet, and northward by various offsets belonging to the great Altaic Range. The central part of Mongolia is occupied by the great sandy desert, or Ta-Gobi, which stretches from S.W. to N.E. about 1,200 m., with a breadth, in some parts, of from 500 to 700 m. (*See ASIA*, i. 169.) The most desolate part of the Gobi is called, by the Chinese, the Shamo, or sand sea, from its surface consisting of moveable sand. The desert is, however, intersected by some comparatively fertile tracts, and in other parts a few stunted trees are met with. The chief mountains of this region are, 1. the Altai and its various subordinate chains, extending eastward, under the names of Tangon, Khangai, and Kente, as far as the banks of the Amour, by which the range is deflected northward and joins the Yablonoi-khreibet; 2. the Tchastaloola and Inchan ranges, which commence in lat. 42° N., long. 107° E., and curve N.N.E. and north-

ward as far as the Amour in lat. 53° N., where they join the Altai. The mountains of Inner Mongolia are very little known. The rivers are numerous, chiefly in the N., belonging to the basins either of the Irtysh or Amour. Connected with the former are the Selenga, Orkhon, and Tula, which unite their streams and flow into lake Baikal: the Keroulun and Onon, which are tributaries of the Amour, rise near each other on opposite sides of the Kente range, and, taking a N.E. course, unite in lat. 53° 30' N., and long. 121° E. In the S. are the Leaou-ho, rising on the E. slope of the Irchan range, and falling into the gulph of Leaou-tong, and several rivers in the region of Koko-nor, some independent, and connected only with lakes, but others tributary to the Hoang-ho. The chief lakes S. of the great Gobi desert are the Koko-nor, the Oring, and Dzaring, the two latter being near the sources of the Hoang-ho. Inner Mongolia has no lakes of any importance, and those in the N. region, inhabited by the Kalkas, are of inferior size; but Kobdo, the N.W. district, is a country of lakes as well as mountains, the principal being Upaa-nor, Altai-nor, and that called the Ite-arai-nor, which receives the waters of the Djabkan, the largest internal river of Mongolia. The air of this country is cold, owing chiefly to its great elevation, but also to the abundance of sulphate of natron, with which the steppes are in many parts covered. Timkovsky reports that the temperature, during Oct. and Nov., ranged between 2° and 10° Fahr.; but he was assured that this was an unusually severe season. Great quantities of snow and rain fall in the Kalkas country; where, also, fogs and heavy dews, with cold mornings, are common in the height of summer. There is no great diversity of soil throughout this vast territory, which is generally sandy, stony, and barren. The banks of the rivers and the mountain valleys abound in good pastures, and in some places there is land fit for tillage. The N. part of the Kalkas region, in particular, is well wooded, and would be very suitable for agriculture; but the people are wholly nomad, and averse to the formation of permanent settlements. The S. sides of the Altai abound also with gold and silver; but the Mongols are entirely destitute of the knowledge necessary for the working of mines.* S. of Ourga, in lat. 47° N., begin the arid steppes of Gobi: the soil is gravelly, pasturage and water are rare, the grass is short and poor; and yet in these tracts, so little favoured by nature, are to be seen numerous herds of large camels, vigorous horses and oxen, with flocks of sheep and goats, all in good condition. The steppes abound in salt, and the atmosphere is dry and bracing; but there is a total absence of wood, and the ground is quite unfit for agriculture. Caravans are liable to great hardships in passing through the great desert, owing to the want of water and pasturage: the valleys, hills, and mountains offer nothing to the view but a yellow sand. S. of the 39th parallel the arid soil ceases, and is succeeded by lands well watered by rivers, and pretty well adapted to agriculture. Wheat is raised by the Mongols of Koko-nor, and also by those living more eastward, in the fertile districts near the great wall of China. The people however, generally speaking, are too indolent to be good cultivators: they sow millet, barley, and wheat, but in small quantities, and in the most careless manner. Most of them, indeed, pass their whole lives in the open air, on the steppes, and disdain the laborious occupation of cultivating the ground.

"When we asked them," says Du Halde, "why they did not raise even a few vegetables in small enclosures, their prompt reply was, that herbs were the food of animals, whose flesh was the only proper support of man." (*Desc. de la Chine*, iv. 38.) In fact, so great is their love of idleness, that, even in those countries which abound with wood and pasturage, they never make any provision for the winter, except, perhaps, a few stacks of hay; and consequently when there is a heavy fall of snow, and the cold is severe, they sometimes lose 9-10ths of their flocks and herds. The quadrupeds of Mongolia are the wild horse, wild boar, stag, goats of various kinds, bears, wolves, hares, foxes, sables, and squirrels: the birds are cranes, wild geese and ducks, moor-fowl, quails, and swans. Of the domestic animals it may be remarked that the horse, though small and shabby-looking, is strong and spirited; that the camels have two humps, and that the sheep are white, with long black ears, and furnish very delicate meat. The Mongols have dogs, but very few cats; and mules, as well as asses, are bred in large quantities by the tribe of Karatchin immediately N. of the great wall.

Mongolia is composed of 26 aimaks, or principalities, all recognising the sovereignty of the emperor of China, and each governed by one of its oldest princes, called *taidshis*. The division of the Mongol hordes is founded on the necessity of a military administration; but all the officers

* Du Halde mentions some tin-mines in the Kalkas country; and Malte-Brun says that there are iron-foundries about 50 versts from Kiahtha; but Timkovsky doubts their existence. (*Comp. Du Halde*, iv. 32.; *Malte-Brun*, ii. 454.; and *Timkovsky*, ii. 284.)

superintend likewise the direction of civil affairs. According to this military division (introduced by the Manchoes), the whole nation is divided into 135 banners, which are again subdivided into regiments and companies. Each Mongol is bound to serve as a horseman from his 16th to his 60th year. The property of the soil is in the princes, to whom their subjects pay a moderate contribution of cattle, supplying them also with servants and shepherds for guarding their flocks and herds. These princes decide in the last instance all disputes between their subjects, according to the laws established to preserve order in their armies; but the supreme administration is confided to the tribunal of foreign affairs at Peking, which appoints inspectors-general for the different principalities; these are always chosen from the Manchoo nation. With respect to the attachment of the Mongols to the present Manchoo dynasty of China (Ta-Thsing) it is difficult to speak positively. The Mongols still maintain their ancient hatred of the Chinese; and, though the latter have been enabled to subdue the warlike spirit of these nomads, and to declare them tributary, the court of Peking sends to Mongolia about 10 times the value of the tribute received from it, under pretext of rewarding the zeal and fidelity of its princes and military officers. Thus, the native Mongol chiefs are bribed into subjection and obedience; but they are, at the same time, vigilantly watched by the Manchoo inspectors, and any misconduct, or show of opposition, is speedily visited by an abridgement or deprivation of their usual presents. The religion of the Mongols is Buddhism, supposed to have been introduced in the 17th century. The temples are not numerous, nor are the lamas much distinguished from the common people by their knowledge and morals. They learn to read Tibetan, because the sacred books and services are copied and printed in those characters; but few of them are even tolerably acquainted with the language, or know the origin and meaning of the religious ceremonies. The lamas observe celibacy, and follow a strictly monastic life: there are also female recluses, who submit to an austere and holy life; but some are married.

The proper or E. Mongols are divided into three great nations; the Kalkas, northward, the Tahakhars, near the wall of China, and the Sunnit, who range over the great desert of Gobi. Their physical conformation, language, general habits, and history, have already been described at some length in the article *Asia*, in this work (Vol. I. pp. 192—194.), to which the reader is referred for these particulars. The dress of the men is very simple, consisting of a long dark-blue robe, either of cotton or cloth, secured by a leather girdle; their shirts and under garments are of coloured nankeen, their boots of leather, and very thick: in winter they wear pelisses of sheepskin, and fur caps. The costume of the women resembles, in many respects, that of the men. The saddles and bridles of the Mongols are furnished with copper or silver. A bow and arrows, with a short sword, are the arms of a soldier; and muskets or rifles are used only in the chase. Their tents consist, like those of the Khirgiz, of a skeleton of osier, covered with felt, of which there are in winter three layers: the door commonly faces the S.; the hearth is in the centre; and the right side, near the entrance, belongs to the women. The tents of the common people are low, close, and disagreeable; but those of the richer Mongols are spacious and lofty, comprising two or three distinct apartments, the best of which is covered with a Persian or Turkish carpet. Milk, cheese, and butter, with a little mutton and game, form the chief food of this robust and active nation: brick-tea is the principal beverage of the rich as well as the poor. In summer, also, they drink *airak*, a fermented liquor made from milk, besides *koumiss* and brandy, purchased from the Chinese. Hunting, horse-racing, wrestling, and archery are their chief amusements: they seem to have no idea of dancing, but their songs are poetical and highly characteristic. The Mongols marry young: a plurality of wives is not forbidden, and divorces are frequent, the least discontent on either side being deemed a sufficient reason for the step. They generally bury their dead, but sometimes burn them, and occasionally even leave them exposed to the birds and wild beasts. Almost every Mongol is a skilful warrior and huntsman; but there are very few workmen or artificers; and, on examining his dress, furniture, and saddle, we find that he is supplied with every thing by the Chinese, who give in exchange for horses, camels, oxen, and sheep, large quantities of brick-tea, tobacco, brandy, silk, cotton, and woollen fabrics, boots, and various utensils in iron, tin, and copper. To carry on this trade, the Chinese go to Mongolia to the towns of Dolon-nor and Kalgan, or to the great entrepôts of Kiakhta and Ourga, in the country of the Kalkas. The Mongols receive considerable profits from the conveyance of goods through their country: payment is made by the Chinese sometimes in silver, but more frequently in articles of merchandise. (*Timkovsky's Travels through Mongolia*, II. 207—358.; *Des Halde, Desc. de la Chine*, IV. 21—28.; *Chinese Rep.*, I. 117—121., &c.)

MONMOUTH, a mark. co. in the W. of England, adjoining Wales, having N. the co. of Brecknock and Hereford; E. Gloucester, from which it is separated by the Wye; S. the Bristol Channel; and W. Glamorgan, from which it is separated by the Rumney. Area, 317,440 acres, of which 270,000 are supposed to be arable, meadow, and pasture. It is divided into 2 not very unequal parts by the Usk, which flows through it from N. to S.; the tract to the W. of that river being comparatively rugged and mountainous, and that to the E. comparatively level, and well-wooded. The S. part of both divisions along the Bristol Channel, contains large tracts of marshy land; in some parts of a deep, rich, loamy soil; and in others, of a black peat earth. Large embankments have been raised in different places along the shore, to protect the marsh land from inundation. In other parts of the co. the soil, which is in general good, mostly consists, in the elevated grounds, of a red sandy loam, and in the valleys of a red clay; the substratum is frequently limestone. The arable land is generally clean, and in good order; but the rotation of crops might be a good deal improved. Draining is extensively practised. Cattle principally of the Hereford breed; and inferior only to the same breed in their native co. There are numerous orchards; and, in a few places, hops are cultivated. Stock of sheep estimated at from 170,000 to 180,000. There are some large estates; but property is, notwithstanding, a good deal subdivided. The size of farms varies from 60 to 300 acres, 140 acres being supposed to be about the average. They are generally held at will; and the want of leases is much and justly complained of. Average rent of land, in 1843, 18s. 3d. an acre. Principal minerals, coal, iron, and limestone. The abundance of these has led to the establishment of many very extensive iron works, especially in the N. and W. parts of the co.; which were estimated to produce, in 1850, about 200,000 tons of iron. The access to the mines has been facilitated by the formation of canals and railways. A good deal of flannel is made in different parts of the co. Besides the Wye, Usk, and Rumney, it is watered by the Avon, Sirhowey, and Ebwy. Monmouth has 6 hundreds, and 127 parishes; and sends 4 mems. to the H. of C., viz. 2 for the co., and 2 for the bor. of Monmouth. Registered electors for the co., in 1849-50, 5,079. In 1841, Monmouth had 24,944 inhab. houses, and 124,255 persons; of whom 70,606 were males, and 63,749 females. Sum paid for poor-rate, in 1848-49, 35,061l. Annual value of real property, in 1815, 298,931l.; ditto, in 1843, 591,162l.

MONMOUTH, a parl. bor., market-town, and par. of England, cap. of the above co., hund. Skenferth, on the Wye, 25 m. N. by W. Bristol, and 112 m. W. by N. London. Pop. of parl. bor. (which includes the par. of Monmouth, and a part of that of Dixon), in 1841, 5,822. The town, which is well built, well paved, and lighted with gas, comprises a principal avenue, with other smaller streets, one of which leads to an old stone bridge over the Wye. The guildhall, in the market place, is a neat and commodious edifice; and at the N. end of the town is a prison, which, though externally of imposing appearance, is much too small for the wants of the district. The par. church, partly rebuilt in 1740, has a spire 200 ft. in height: the living is a vicarage in the gift of the Duke of Beaufort. Another small church stands at the S.W. angle of the town, besides which, there are four places of worship for Dissenters, with attached Sunday-schools. A free grammar-school was founded here in the reign of James I.; an infant-school has recently been opened, and there is a large almshouse for 20 old men and women. "The town is not flourishing in appearance, and, in point of prosperity, is said to be almost stationary. Independently of the conversion of pig-iron into bars, and of tin plates, the chief trade of Monmouth consists in the export of bark and timber to Bristol and Ireland, and the general supply of the neighbouring agricultural districts. Coal, for the use of the town, is obtained from the forest of Dean, by means of a railroad: but it is alleged to have been an unprofitable speculation to the projectors." (*Mun. Corp. Rep.*) Monmouth is also a considerable thoroughfare; and from its situation on the romantic banks of the Wye, is likely to maintain its respectability, its neighbourhood having been selected as the residence of numerous persons of independent fortune. Woollen caps were once largely manufactured in Monmouth. They are referred to by Shakespeare (*Henry V.*, act v., scene 7.); and it was ordered by the act 13 Elizabeth, cap. 19., that they should be universally worn on Sundays and holydays.

Monmouth, which was first incorporated in 1550, has been governed since the passing of the Mun. Reform Act by a mayor and 3 other aldermen, with 12 councillors: it has likewise a commission of the peace, under a recorder. The bor., in conjunction with Usk and Newport, has sent 1 mem. to the H. of C. since the 27th Henry VIII., the right of election down to the Reform Act being vested in burgesses residing within 7 m. of the bor. The electoral limits were left unchanged by the

gradually rises to its present importance. (*Hugo, art. Yarn-et-Garonne; Guide du Voy. en France, p. 63.*)

MONT-BLANC, in Savoy, at once the highest mountain of the Alps and of Europe. (Vol. I. p. 68.)

MONTBRISON (an. *Mons Briso*), an ancient town of France, dep. Loire, of which it is the cap., 337 m. S.E. Paris; lat. 46° 39' 41" N., long. 4° 4' 22" E. Pop., in 1846, 46,000. It was formerly fortified; and is irregularly laid out with narrow streets, and low shabby houses. A cathedral, founded in 1204, and still in an unfinished state, a prefecture, hospital, college, with a library of 15,000 vols., theatre, corn-exchange, and infantry barracks are the principal buildings; but the cathedral only has any architectural beauty. Though the cap. of a dep., and the seat of a tribunal of primary jurisdiction and commerce, and of a society of agriculture, Montbrison is very unimportant, having no manufactures, and only a limited retail trade; indeed, it has been proposed to make the large manufacturing town of St. Etienne, 11 m. S. by E. Montbrison, cap. of the dep.

MONT-DE-MARSAN, a town of France, cap. dep. Landes, 64 m. S. Bordeaux. Pop., in 1836, 4,000. It is situated on the side of a declivity close to the navigable river Midouze (crossed here by a stone bridge of two arches), and is clean, well-paved, and regularly laid out, the principal buildings being the par. church, townhall, court of justice, college, public baths, barracks, a small theatre, and a library with 1,200 vols. The suburbs are planted with trees, and laid out in walks. It has manufactures of coarse woollen cloths, blankets, and sail-cloth, and some trade, with Bayonne, in wine and brandy. It is the seat of a tribunal of primary jurisdiction, and of a society of agriculture and commerce.

MONTEFIASCONE, a town of central Italy, Papal States, deleg. Viterbo, on a mountain, 9 m. N.N.W. Viterbo. Pop. about 5,000. It has a fine cathedral, and many other religious edifices, but is celebrated principally for its light, white, muscadell wines; but these, as they do not bear carriage, are seldom met with out of the country where they are produced.

MONTELEONE (an. *Hippodam* and *Ville Valente*), a town of the Neapolitan dom., prov. Calabria Ultra II.,

yards, and a considerable trade with Paris, chiefly in corn, flour, and wood for fuel.

MONTEVIDEO, a fortified sea-port city of S. America, cap. of the repub. of Uruguay, on a peninsula extending into the estuary of the Plata on its N. side, 136 m. E. by S. Buenos Ayres; lat. 34° 54' 11" S., long. 56° 13' 18" W. Pop. variously estimated, but may probably be about 12,000. It is well fortified, and has a citadel. The houses, which are of stone or brick, are seldom above one story in height; they are flat-roofed; and timber is so scarce, that their floors consist, for the most part, of brick or bare earth. The streets being unpaved, are either clouded with dust, or loaded with mud, as the weather happens to be dry or wet. The city is ill-supplied with water, which has to be brought from a well 2 m. distant, or from pits dug near the sea side; or is else merely rain-water, collected in cisterns. There are but few public buildings, and those of no great importance; the cathedral is said to be a handsome edifice, but it is badly situated.

The port of Montevideo is the best on the Plata. It is a large circular basin, open to the S.W.; generally the water is shallow, not exceeding from 14 to 19 ft.; but the bottom being soft mud, vessels are seldom damaged by grounding. It should, however, be observed, that the depth of water in the harbour, as well as throughout the whole of the Rio de la Plata, depends very much on the direction and strength of the winds. The harbour is exposed to the pamperos, or S.W. winds, which sometimes blow with so much force and continuance as to cause the rise of a fathom or more in the depth of water; but they rarely do any damage to vessels properly moored with anchors to the S.W. and S.E., and once to the N. On the opposite side of the bay is a mountain called Montevideo, whence the city has derived its name; on its summit is a light-house, having the lantern 475 ft. above the sea.

Montevideo has considerable commerce; the imports principally consist of British cottons, woollens, and hardware, flour, wine and spirits; linens, sugar, tobacco, boots and shoes, salt, &c. The great articles of export consist of animal products, of which the following quantities were exported in 1846 and 1847:—

	1846.	1847.
972,101	1,786,112	
175,220	453,640	
195,781	1,228,658	
218,048	1,407,117	
80,076	649,913	

In 1847, was estimated at a principally with Great Britain, Spain, and Cuba.

a colony from Buenos Ayres a matter of dispute agues. It was taken by me, in 1836, the cap. of

co. of N. Wales, having Salop, and S. and W. sal-shaped, and contains contains divide this co. exception of some con- of the Severn is the most len, partly in this co., art, rugged and mountainous; but in the vales it is very fertile; on the tillage is not supported acres. The Severn has affines of this co., on the and runs in a N.E. di- very distant from, its S. important affluent the

ductive district. It was unsuccessfully besieged by Caligat in 1867. (*Hugo, France Pén., II. 6.; Guide du Voy. en France.*)

MONTEPULCIANO, a town of central Italy, grand duchy of Tuscany, prov. Arezzo, on a lofty hill, 37 m. S.E. Siena. Pop. from 2,000 to 3,000. It is surrounded by a wall with battlements, and has numerous ecclesiastical establishments, a college, an hospital, and manufactures of soap, oil, and wine flasks. It is celebrated for its dessert wine, which, with excusable partiality, is preferred by Noddi to all other wines:—

"Montepulciano d'agel vino è il re." *Sotto in Toscana.*

MONTEREAU (an. *Condeat*), a town of France, dep. Seine-et-Marne, at the confluence of the Seine and Yonne, each of which is crossed here by a stone bridge, 42 m. S.E. Paris. Pop., in 1826, 4,879. It has a fine open market-place, and is well built, clean, and respectable: a par. church, town-hall, hospital, and three hotels, are the only public edifices of any importance. It is the seat of a tribunal of commerce, and has an extensive manufacture of earthenware, with some tan-

Wyrowy, which also belongs to this co., on the borders of Salop. The agriculture of this co., especially in the vales and along the border of Salop, has been a good deal improved; but withal it is extremely similar to, and quite as backward as, that of Denbigh and Merioneth (which see). The climate, though moist, is mild and salubrious. The vales of this co. have been long celebrated for a superior breed of horses. Montgomery has, also, long been, and still continues to be, the best wooded co. in Wales. It was formerly regarded as one of the principal sources of the supply of oak timber for the navy; but many of its finest oak woods have been cut down; and though a good deal of new wood has been planted, it is doubtful whether it be sufficient to supply the place of that which formerly existed. Average rent of land, in 1843, 9s. 7d. an acre. There are a number of fine and commodious farm-houses and offices; but, in general, they are very defective, and the cottages are quite as bad as in Merioneth. Slate is generally diffused over the co., and forms, indeed, the basis of the mountains. Slates are quarried at Llangynog and other places; coal is raised on the borders of Salop; and there are some lead-mines, but none that are very productive. Montgomery

is the principal seat of the Welsh flannel manufacture, which is extensively carried on at Newton, Llanidloes, Machynlleth, and Welshpool (which see). The co. is divided into 9 hunds. and 47 pars. It sends 2 mems. to the H. of C., viz. 1 for the co., and 1 for the town of Montgomery and its contributory bors. Registered electors for the co., in 1849-50, 3,219. In 1841, Montgomery had 13,643 inhab. houses, and 69,219 inhab., of whom 34,283 were males, and 34,936 females. Sum expended for the relief of the poor, in 1847-48, 28,172*l*.

MONTGOMERY, a parl. bor., market-town, and par. of N. Wales, cap. co. of its own name, 20 m. S.W. Shrewsbury, and 146 m. W.N.W. London. Pop., in 1841, 1,176. Though small, it is a clean well-built town, in a hollow at the foot of a high hill. The guildhall stands on an eminence near the ruins of an ancient castle, close to which is the co. gaol, a modern stone building, well adapted for its purpose. The church, a cruciform structure, in the early English style, has a handsome tower, erected in 1816, and an exquisitely carved screen, and some curious monuments; the living is a rectory in the gift of the crown. The Calvinists and Wesleyan Methodists have also their respective places of worship; and there are 2 Sunday schools, and a small endowed school. No trade or manufacture is carried on in the town; and it deserves notice merely from its being the cap. of a co. and a parl. bor. It was incorporated by Henry III. under a steward and 12 burgesses; who enjoyed, till the passing of the Reform Act, the privilege of sending 1 mem. to the H. of C. This act, however, made Llanfylline, Llanidloes, Machynlleth, Newtown, and Pool, contributory bors. with Montgomery in the election of the mem. Registered electors for the entire district, in 1849-50, 1,048, of whom about 120 belong to Montgomery. The election for the co. takes place here; and sessions are held alternately with Newtown. Markets on Tuesday; fairs, March 26., first Tuesday in May, June 7., Sept. 4., and Nov. 14.

Montgomery is very ancient: its castle was built prior to the Norman conquest, and, from its size and strength, was frequently an object of contention during the wars between the English and Welsh. In 1354, it was in the possession of Roger Mortimer, from whom it passed to the crown. In the 15th century, the stewardship of the town and castle was granted to the Herberts of Cherbury. The famous Lord Herbert, celebrated alike for his chivalry, wit, and learning, was born here in 1581. It is the birth place, also, of the late Dr. Abraham Rees, the learned editor of the voluminous and valuable *Cyclopædia* which bears his name. (*Nicholson's Camb. Guide; Parl. Papers.*)

MONTILLA (an. *Montulia*), a town of Spain, in Andalusia, prov. Cordova, 19 m. S. by E. Cordova. Pop., acc. to Miffano, 12,800. It is well built, and has two par. churches, an orphan asylum, three hospitals, a royal school of Latin and rhetoric, and a bonding warehouse for wine. Its trade is considerable, chiefly with Cordova, both in manufactured goods and farm produce, particularly wine, horses, mules, and horned cattle, which, though small and ungainly in appearance, are very hardy and serviceable. An annual fair is held in Sept., and well attended.

MONTLUCON, a town of France, dép. Allier, cap. arrond. on the Cher, close to the canal De Berri, in a valley bordered by vine-clad hills, 38 m. W. S.W. Moulins, and 171 m. S. by E. Paris; lat. 46° 20' N., long. 2° 40' E. Pop., in 1836, *ex com.*, 4,280. It was formerly fortified, and is well built and situated. A par. church and hospital are the only public buildings. It produces some coarse woollen and linen fabrics; and has a considerable trade in corn, wine, cheese, and cattle.

MONTMARTRE, a town of France, dép. Seine, only a few furlongs N. of Paris, on a conical hill of the same name, commanding an extensive view of the French metropolis and its suburbs. Pop., in 1836, 6,234. It is the favourite resort of the Parisians on Sundays and holidays, and comprises several inns and other houses of entertainment, with some neat-looking villas and private residences. An asylum for 60 old men, a private lunatic establishment, and two schools, have been founded here, and it has oil-cloth manufactories, scagliola-works, and woollen mills, with mines of gypsum, which supply the whole of Paris with plaster. In 1814, the hill was fortified by the Parisians, who defended it for a day against the allies.

MONTPELLIER (Lat. *Mons Pessulanus*), a city of France, dép. Hérault, of which it is the cap., on the *Lez*, about 5 m. from the Mediterranean, and 77 m. W. by N. Marseilles; lat. 43° 36' 66" N., long. 3° 52' 45" E. Pop., in 1846, (*in com.*), 40,105. It is beautifully situated on the declivities of a low hill, commanding views of the Alps, the Pyrenees, the Cevennes, and the sea. It was formerly walled, and a place of considerable strength; but of its ancient fortifications, there are now only a few gates, a tower, and some portions of the wall on the N.E. side of the city. It still, however,

has, at one extremity, a citadel built by Louis XIII.; while, at its other extremity, is the *Place* or *Promenade de Peyrou*, one of the noblest public walks in Europe. This place is entered by a Doric arch, and ornamented with long lines of ballustrades, covered ways, various sculptures, a bronze equestrian statue of Louis XIV., and numerous fountains, including a magnificent hexagonal *château d'eau* of Corinthian architecture. This, like the other public fountains of Montpellier, is supplied by an aqueduct about 8½ m. in length, constructed in the middle of the last century; and which, for a distance of 880 metres, or more than ½ m., is raised on a double row of stone arches, and, in point of elegance, rivals the boasted *Pont du Gard*. Between the town and the ramparts of the citadel is the Esplanade, a fine open space planted with trees and ornamented with reservoirs, &c.; the boulevards surrounding the town also afford good public walks; and in the outskirts are many newly-built and handsome terraces. The city itself is very ill laid out; its streets are narrow, steep, and winding, and its squares small and irregular; but its houses are generally good, and, according to Hugo and others, it is kept remarkably clean. The public buildings are quite unworthy so considerable a city. Of eight churches, none demands any particular notice; the cathedral is distinguished from the rest only by being larger and uglier; a singular-looking porch, and a tower at three of the angles of the nave, are the principal external ornaments of this edifice. Adjacent to it is the School of Medicine, occupying what was formerly the bishop's palace, a large building with several fine apartments. This school, founded by the Arabs driven from Spain in 1180, enjoys a high and well-deserved celebrity, as one of the best conducted establishments of its kind in France; and is all that now remains of the once famous university of Montpellier. It has a new and fine amphitheatre; an examination-hall, in which is an antique bronze bust of Hippocrates; a council-hall, with portraits of professors from the period of the 13th century, including also a portrait of Rabelais; a library, with 25,000 vols., including many editions of the 15th century, and 600 valuable MSS. in different European and Asiatic languages; a pretty extensive anatomical museum, several spacious laboratories, &c. The general hospital has accommodation for upwards of 600 patients; and there are large and well-conducted lunatic and lying-in hospitals. The botanic garden of Montpellier, which dates from the reign of Henri IV., was the first established in France, and, though small, comprises 8,000 species of plants: it is one of the four principal and best arranged botanic gardens in the kingdom, which distinction it owes to its having been the scene of the labours of the late celebrated M. de Candolle. But its greatest interest to Englishmen is derived from its possessing, in one of its most sequestered parts, the tomb of Narcissa, the daughter-in-law of Young, whose funeral the poet has vividly described in "Night the Third."* One of the principal attractions in Montpellier, is the museum, founded, in 1825, by the Baron Fabre, a native of the town. It occupies four spacious and well-lighted halls, and comprises collections of paintings, engravings, statues, medals, and other objects of *virtù*, a library of 15,000 volumes, &c., the whole estimated to be worth 2,600,000 fr. The theatre, built in 1786, is well planned, and capable of accommodating 2,000 persons; it is, however, little frequented, and the pit, which is without seats, usually serves as an exchange. The palace of justice, the town-hall, exchange, prefecture, admiralty, barracks, several prisons, including a central prison, with workshops, the Calvinist chapel, synagogue, &c. are the remaining principal buildings, but none deserves especial notice. There are several very good hotels; one of which is said by Inglis to be the best in the S. of France.

Montpellier is a bishop's see, the cap. of the ninth military division of the kingdom, and the seat of a royal court for the déps. Aude, Aveyron, Hérault, and Pyrénées-Orientales, a court of original jurisdiction, a tribunal, and a chamber of commerce, boards of taxation, customs, artillery, and engineering, an university, academy, and a royal college. It has schools of veterinary medicine, engineering, drawing, architecture, geometry, and music; societies of agriculture, arts and sciences, medicine, and archaeology, a government loan-bank; Protestant Bible societies, a prison society; and numerous other charitable associations; several asylums, &c. It has manufactures of woollen cloths, cotton handkerchiefs, muslins, table and other linens, hats, silk, cotton, and woollen hosiery; with cotton-thread factories, distilleries, sugar refineries, breweries, chemical works, &c. It is connected with its port Cette, 17 m. S.W., by a railway, and has a brisk trade with it, and with other towns and villages, exporting large quantities of fresh and dried fruits, wool, and other kinds of rural pro-

* It is stated in Johnson's (*Croft's*) *Life of Young* that Narcissa, or Mrs. Temple, died at Lyons, in her way to Nice; but she, in fact, died at Montpellier.

duce, in addition to its manufactured products. It was formerly a place of great resort for English invalids, on account of the alleged salubrity of its climate.

"About twenty-five years ago," says Inglis, "200 English families were sometimes resident here; but since fashion, caprice, or experiment, have sent consumptive patients to die in Madeira or Naples, instead of Montpellier, that number has been reduced to 40 or 50 families, who, indeed, resort thither less for the sake of health than economy. It is undeniable, however, that the air of Montpellier (however little that bustling city may resemble the retired spot pictured by the imagination) is dry and salubrious, possessing the mildness of a southern climate, and yet having its heat tempered by the sea-breeze. It is also a cheap residence, the more so from the diminished influx of strangers. Two well furnished rooms may be obtained for about 10s. a week; and living is not expensive. Beef and mutton fetch from 5d. to 6d. per lb., fish, of about 20 different sorts, may be had at prices varying from 6 to 20 sous: fruit and vegetables are both cheap and good; wine ranges between 1 and 2 francs the bottle."

Montpellier has given birth to many distinguished persons, among whom may be specified Chaptal the chemist, Cambaceres, Daru the historian, &c. It appears to have been founded in the 8th century, and was for a while dependent on the kings of Majorca. It was acquired by Philip of Valois in 1349, but was not finally annexed to France till the reign of Charles VI. The Calvinists got possession of it under Henry III., and held it till 1632, when it was taken after a long siege by Louis XIII. (*Inglis's Switz. and France*, p. 207.; *Frossard, Tableau Pitt. de Nîmes et de ses Environs*, li. 54—63.; *Hugo, art. Hérault; Guide du Voyageur en France*.)

MONTREAL, a town and river port of British America, and the second city and chief seat of the commerce of Lower Canada; on the S. side of the island of Montreal, in the St. Lawrence, 142 m. in a direct line S. W. Quebec; lat. 45° 30' W., long. 73° 25' N. Pop., with its suburbs, in 1844, 40,137. Its site is not so commanding as that of Quebec, but it is in every other respect superior to that city. It is not so crowded; and some even of its older streets are of tolerable breadth. Montreal is divided into the Upper and the Lower Town; the difference in their elevation is but slight, but the former, being the more modern, is the handsomer division. It has several suburbs, including which it stretches along the river for 2 m. from N. to S., and has, for some distance, a nearly equal breadth inland. The battlemented wall, with which it was formerly surrounded, has long fallen into decay, and it is now entirely open, the wooded heights around being covered with villas and pleasure grounds. In the Lower Town, Paul Street, the chief commercial thoroughfare, extends parallel with the river the whole length of the city; and in the Upper Town several streets proceed in the same direction, communicating with Paul Street by cross streets. In the Upper Town and suburbs, which are mostly inhabited by the principal merchants, many of the houses are handsomely and solidly built in the modern style; but in the Lower Town they are principally of a gloomy looking grey stone, with dark iron window shutters and tinued roofs. Along the bank of the river is an extensive line of quays and warehouses. Many of the houses in the suburbs are built of wood, but there are no wooden buildings within the space once encompassed by the walls; and this city and Quebec have more of the aspect of old European towns than any other towns in America.

The most remarkable public edifice is the Rom. Cath. cathedral, opened in 1829, and superior to any other church in British America. It is of Gothic architecture, 255½ ft. in length by 134½ in breadth. It is faced with stone, and roofed with tin, and has 6 towers, of which the three belonging to the main front are 220 ft. in height. On the roof is a promenade, 76 ft. in length by 20 in breadth, elevated 120 ft. The principal window is 64 ft. in height, and 32 in breadth. The interior is capable of accommodating from 10,000 to 12,000 persons, who may disperse by numerous outlets in 5 or 6 minutes. It comprises 7 chapels, and 9 spacious aisles. There are several other Rom. Cath. churches, mostly belonging to the order of St. Sulpice; to the members of which Montreal chiefly owed its foundation, and who still hold the seignory of the island upon which it stands.

The seminary of St. Sulpice, a large and commodious building adjoining the cathedral, occupies three sides of an oblong area, 132 ft. in length by 29 deep, and is surrounded by spacious gardens. A handsome additional building, 210 ft. by 45 ft., has been lately erected, at an expense of 10,000*l*. In these establishments, students in most of the higher branches of learning are taught at very moderate charges. The principal English church is a handsome building, in the Grecian style, surmounted by a high and beautiful spire. It has also a Scotch kirk, an American Protestant church, and chapels belonging to the Methodists and Scotch dissenters. The Montreal General

Hospital, erected in 1821-3 by voluntary subscription, a large and well-built edifice, is said to be one of the best regulated institutions of the kind in America. A large conventual structure, the *Hôtel-Dieu*, occupied by a superior-matron and thirty-six nuns, is appropriated to the reception of the sick and indigent: and the convent of the Grey Sisters partly serves as an asylum for the aged and infirm, the insane, foundlings, &c.

The *Sœurs Noires* have an extensive convent, founded in 1650; its inmates consist of a superior and 60 nuns, whose duties are directed to the education of young girls. The court-house and prison are substantial buildings, occupying the site of the former college of the Jesuits. The government-house, bank, barracks, ordnance-office, and 4 market-houses, are among the remaining principal buildings. In one of the squares is a colossal statue of Nelson, placed on a Doric column, the pedestal of which has bas-reliefs representing his principal actions. Besides the educational establishments noticed above, Montreal has a college, with a principal and 4 professors, a royal grammar-school, parochial, union, national, Sunday, and other public schools; and many good private French and English seminaries. The university of M'Gill college, endowed by a citizen of Montreal, in 1814, with a valuable estate, and 10,000*l*. in money, and chartered in 1821, is conducted on a liberal and enlarged scale. Montreal has a penitentiary, a house of industry, a savings' bank, a natural history society, a mechanics' institution, a central auxiliary society for promoting education and industry, Bible and tract, agricultural and horticultural societies; several public libraries, an excellent news-room, &c. Several newspapers and other periodical publications issue from the presses of the town. According to Mr. M'Gregor, there is a greater spirit of improvement in this city than in Quebec. There is much activity observable among all classes connected with trade. The position of Montreal at the head of the ship navigation of the St. Lawrence, and near the confluence of that river with the Ottawa, as well as its situation with respect to the U. States, necessarily make it one of the greatest emporiums of America. (*Brit. America*, li. 309.)

The harbour, though not large, is secure, and vessels drawing 15 ft. water may lie close to the shore. Its general depth of water is from 3 to 4½ fathoms. Its chief disadvantage consists in the rapid of St. Mary's, about 1 m. below, which vessels often find it difficult to stem. To obviate the obstructions in the navigation above Montreal, the Lachine canal, 9 m. long, 20 ft. wide, and 5 ft. in depth, was undertaken in 1821, and completed at an expense of 130,000*l*. The communication with the opposite sides of the river is carried on by several steam and other vessels; and, during the summer, a regular steam-boat communication is kept up with Quebec. At this season, vast rafts of timber come down, and pass the city for Quebec; and scows, bateaux of about 6 tons, and Durham boats, bring to Montreal the produce of Upper Canada. Neither is the trade of Montreal suspended in winter, like that of Quebec. Thousands of sledges may then be seen coming in from all directions with agricultural produce, frozen carcasses of beef and pork, firewood, and other articles. Montreal is the centre of the commerce between Canada and the U. States, carried on by Lake Champlain and the Hudson: and not only is it the dépôt of all the adjacent country, but most of the business done in Quebec is carried on by branches from the Montreal houses. In 1847, 876,127 bar. of flour were exported from Montreal, the total value of her exports during the same year being estimated at 697,794*l*. Formerly this city was the head quarters of the fur trade, but its interest in it has greatly declined. It has, however, cast-iron foundries; distilleries; breweries; soap, candle, and tobacco manufactories; several ship-building establishments; and machinery for steam-engines. Various articles of hardware, linseed oil, floor-cloth, &c., are made in the town. The markets are abundantly supplied with good butchers' meat, fish, poultry, fruit, vegetables, &c. Mr. M'Gregor says that better accommodations are to be found here than in Quebec; and the society is as good.

Montreal was, till lately, the seat of the united Canadian legislature. But the latter is now transferred alternately to Toronto and Quebec, the former seats of the separate legislatures of Upper and Lower Canada. This transference was occasioned by a disgraceful riot which occurred at Montreal in April, 1849, when the House of Assembly was burnt to the ground, with the colonial archives and public library. A city where such a gross outrage could be perpetrated was certainly no very fit place for the meetings of the legislative body: and it now, as stated above, meets alternately at Toronto and Quebec.

About 3-4ths of the pop. are of French descent; the remainder, consisting principally of emigrants from the U. Kingdom, Americans, and Iroquois Indians. Montreal, originally called Villenarrie, was taken from the French, in 1760. (*M'Gregor's British America*, li. 300—317.; *Encyc. of Geog.*, Amer. ed.; *Parl. Reports*.)

MONZA.

intercepting the sea-breeze, the island enjoys a comparatively high character for salubrity. (*Tussock's Report on the Sandwich, &c. in the W. Indies*, p. 28.) In 1848, only 63

MORAVIA.

347

reged here with much violence. It is also exposed to the attacks of dacoits and other plunderers, never having been fortified except by an occasional rampart during the

the sea, Moravia enjoys a milder climate than most countries in the same lat. The mean temperature of the year at Olmutz is about 48° Fah. The wind is mostly from the S., and the atmosphere clear. A large proportion of the soil is very fertile, and if advantageous markets could be found, large quantities of corn might be raised for exportation; but, in consequence of the want of the latter, the attention of the inhabs. has been of late devoted more to manufactures than to agriculture, and Moravia is no longer a country whence supplies of corn might be drawn, at a short notice, on a very large scale.

An estate of mean size comprises from 850 to 1,400 acres of arable land, from 140 to 420 acres of meadow land, and 1,000 to 2,500 or more of wood, according to the situation. The estates conferring the right of representation in the assembly, and which are only held by knights or nobles, are of all sizes from a few acres to many sq. miles in extent. These estates can, strictly speaking, be also held by a commoner, but only on his paying a portion of the taxes twice over, and on his renouncing the right to all kinds of patronage and judicial authority. The estates of mean size may be estimated at 2-3ds of the whole; but about 80 estates exceed 32 English sq. m. in extent. In purchasing land, a profit of from 4 to 4½ per cent. per annum is generally looked for. The size of the peasant's holdings is very various: in the plains it may be about 28 English acres; but in the hilly parts, where the pop. is thinner and the soil less productive, it is 30, 40, and in some parts 70 acres. Half holdings, quarter holdings, as well as cottiers with small gardens, are also frequent. It is supposed that of the peasant families, 2-3ds hold land, and about 1-3d may be considered as mere labourers. The mode of cultivation adopted by the peasants in the low lands consists in a rotation of three crops, viz. wheat, rye, summer corn, fallow; the fallow being only partial. In the hilly parts, the fallows are used for potatoes, turnips, flax, &c.; in the mountains tillage is more irregular. On most of the small estates of the nobles, a better rotation of crops, with clover, green food, and meadows, prevails, according as the soil, or the local advantages of common grazing (which is very extensive) render it necessary. The following rotations, among others, are pursued:—1. Potatoes, with manure; 2. Barley, or oats, with clover; 3. Clover hay; 4. Clover as pasture; 5. Rye; 6. Oats. In heavy soils:—1. Winter corn with dung; 2. Barley, with clover; 3. Clover; 4. Wheat; 5. Green fodder, with manure; 6. Wheat; 7. Pease and beans; 8. Rye. In the low lands millet is a good deal cultivated; in the mountains flax. On the estate of a Moravian nobleman, which is cultivated in a superior manner, but is by no means of a superior quality of soil, as compared with other estates in the same prov., the following is the average produce of corn per acre:—

	Maximum.	Minimum.	Mean.
	<i>Bushels.</i>	<i>Bushels.</i>	<i>Bushels.</i>
Wheat	42	14	24½
Rye	35	10½	21
Barley	49	16	25
Oats	46 2-3	17½	28
Potatoes	408	175	290

Distilleries, and even breweries, are commonly established on the low farms; and, within a few years, beet-root sugar manufactories have become frequent.

It is not usual to let lands on lease in this part of the Austrian empire. The few cases in which this mode of tenure occurs, must rather be considered as exceptions than as a rule. From the peasants' holdings the lord usually derives,—1st. All that was stipulated on the original cession of the land, whether in the shape of a rent charge in money or otherwise. 2dly. The *Landeswism*, or fine on transfer, whether by sale or inheritance (usually 5 per cent.). 3dly. The *Robot*, or personal service, the maximum of which has been fixed by law. This consists generally in 3 days' work, with a waggon and horses, weekly, for the peasant's whole holding; the half-holding gives 1½ day's work, and the quarter-holding 2 or 3 days' labour, weekly; cottagers give from 10 to 13 days per annum. 4thly. The right of grazing on uncultivated fallows and stubble; which, however, the peasant may exercise upon the land of his lord. 5thly. The great and small tithes, which are often ceded to the church, or have been otherwise transferred. Dominical property (allodial estates) pays in general no tithe. The peasant may cede, or leave by will, his holding to whichever of his sons he pleases; but it is then usually charged with a sum for each of his brothers and sisters. The custom prevails of leaving it to the eldest son; but it is often ceded during the life of the father, who retains a certain proportion of the produce for his own use: this generally happens when the father wishes to free his son from liability to the conscription.

Flax is cultivated in considerable quantities by the descendants of German and Bohemian settlers, in the

circles of Brunn and Olmutz: it is celebrated for its fineness and length, and is second only to that of Silesia. In certain favourable situations, the soil and climate of Moravia are well adapted to the grape; and for some time after this was ascertained, the appropriations of land to this kind of culture were so considerable, that government supposed it necessary to interfere, and to issue, in 1803, an order prohibiting the laying out of new vineyards. Wine is mostly grown in the S. circles of Znaim, Brünn, and Hradisch: the average yearly produce is estimated at 436,600 *cimers*; a good deal of which is exported to the adjacent provs. Large quantities of brandy and beer are also made. Fruits of many kinds are so plentiful, that Moravia is usually styled the orchard of Austria. The forests, formerly much diminished by imprudent waste, are now better attended to. The pasture grounds are extensive in the mountains, and a large proportion of the Austrian heavy cavalry horses is furnished by this prov. Cattle are not very extensively bred; considerable numbers are sent thither from Poland to the markets of Olmutz, and from Hungary to those of Ausvitz. In 1837, of 90,007 head of oxen sold in Olmutz, 74,184 were from Galicia. Large flocks of sheep are depastured in the mountainous districts; their numbers having increased with the increase of the woollen manufacture. The breeds have been materially improved by crossing with merinos, &c.; though, from want of proper care, the wool of Moravia is still inferior, and most part of the raw material required is imported from contiguous provs. Hogs and geese are bred in great numbers for exportation, and game is very abundant. There are valuable mines of iron, copper, lead, and coal; gold and silver mines were wrought previously to the troubles of the 15th and 16th centuries, when they were abandoned, and the works have not since been resumed. Alum, marble, and excellent building stone are found: among other minerals is a species of stone, which, when first dug up, is so soft that it may be moulded with the hand, but which hardens on exposure to the air: a great many pipe-bowls are made from it.

Manufactures and Trade.—Notwithstanding its inland position, this prov. has made a very considerable progress in manufactures, and has become, since the close of last century, one of the most thriving portions of the Austrian empire. Woollens, linens, and cottons are all made on a large scale; the first two consuming not only all the wool and flax raised in the country, but requiring a large importation from other parts. Wool is brought from Hungary; flax from Silesia and Austrian Poland. The oldest woollen manufactures are in the neighbourhood of Iglau, in the W.; but those of Brunn are now the most extensive and important. Woollens are also extensively manufactured in other towns; and, exclusive of the goods produced in manufacturing establishments, large quantities are made by the peasants and others for domestic use. Linen and thread are also largely produced; and cotton factories, some of which are on a very extensive scale, have been established, though with but indifferent success, in many parts of the prov. Dyeing, especially fine Turkey red colours, is successfully and extensively carried on at Brunn, almost all the cloth made in Moravia being sent thither for that purpose. The other manufactures, such as those of silk, leather, paper, pot-ash, glass, beet-root sugar, &c., are also of considerable importance; and their products are exported to the contiguous countries, and to Hungary, Austria, Italy, and the Levant. The imports consist chiefly of wool, oil, flax, raw cotton, silk, cattle, wine, and hardware. The only navigable river is the Morawa; and hitherto goods have been almost always conveyed in waggons. For these there are two great commercial roads, both leading from Vienna; the one passing by Prague, Znaim, and Iglau, in the west; the other by Brunn and Olmutz in the centre of the prov. But the facilities for trade are now in the course of being vastly augmented by the formation of the railway from Vienna to Bochnia, in Galicia, which passes through the valley of the Morawa in this prov. as far as Maggodi, having branch railways to Brunn and Olmutz. The completion of this great undertaking will be of signal advantage to the prov.

The government of Moravia, which is entitled a marquisate, is administered by a governor with direct authority from Vienna. Like the other provs. of the empire, it has its States, or assembly of the clergy, nobility, knights, and citizens; but the power or influence of this assembly is very limited. It meets annually, not to determine the amount of the taxes, but their distribution and mode of collection. The prov. is subdivided into 8 districts or circles, each of which has one or two tribunals of original jurisdiction, and a high court of appeal sits in Brünn.

Education is very generally diffused in this prov., and the bulk of the people are comparatively civilised. In 1838, it had 1,886 elementary schools, which were attended by no fewer than 272,638 children, being about

1-8th part of the pop.: there is also a great number of superior schools, and the prov. is well provided with the higher class of seminaries. Among others, it has a university at Olmütz, which, in 1838, was attended by 528 students; it has also faculties of science at Brunn and Nicholasburg; an academy of the provincial states at Olmütz; schools of rural economy at Brunn and Olmütz, attended, in 1838, by 192 pupils; and 11 gymnasia, which, in the same year, had 87 teachers, and 2,766 pupils. But, how creditable soever to the government, still it must be borne in mind, that the useful sciences, or those, rather, that are directly subservient to the progress of the arts, and in some degree, also, to the business of administration, are those only that meet with any encouragement, either here or in any other part of the Austrian dominions. All speculative studies, and especially those connected with the principles of politics and political economy, are not merely discouraged but proscribed:—"Ce que veut avant tout la politique Autrichienne," says M. Saint-Marc Girardin, "c'est le calme et le repos; elle veut que le peuple soit tranquille, et pour cela elle veut qu'il soit heureux. Elle veut aussi qu'il ait de l'instruction, mais cette instruction qui apprend à l'homme à mieux se servir de ses forces et de celles de la nature, qui fait les bons ouvriers, les bons laboureurs, et non cette instruction qui agace l'intelligence, qui lui apprend à douter, à raisonner, à examiner. Voulez-vous être mécanicien, manufacturier, agriculteur, architecte? Vous trouverez à cet égard, en Autriche, tout ce qu'il vous faut: écoles, collèges, professeurs, laboratoires, collections. Voulez-vous être avocat, publiciste, homme de lettres, c'est-à-dire raisonner, discuter, douter? Allez ailleurs, allez bien loin; ce n'est point en Autriche que vous trouverez de bonnes écoles pour de pareilles fantaisies. L'utile plutôt que le beau, le pratique plutôt que la théorie, le soin du corps plutôt que le soin de l'intelligence, voilà la maxime fondamentale de l'Autriche. De là suit la mesquinerie des études classiques, et la prospérité des études usuelles, le néant et l'obscurité profonde de l'université de Vienne, et la juste renommée de son institut polytechnique." (*De l'Instruction Publique en Autriche, par un Diplomat Etranger*, 1841, p. 94.)

For a lengthened period after their conversion to Christianity, the Moravians were divided between the Latin and Greek churches; but the doctrines of the Reformation spread widely in this prov. in the 16th century. The intolerant proceedings of the Austrian gov. obliged, however, many Protestant families to emigrate into other countries, and many others to embrace the religion of the House of Hapsburg; so that at present the Rom. Cath. faith greatly predominates over every other. There is now, however, the most perfect toleration for all sorts of creeds. The archbishopric of Olmütz is, next to the primacy of Hungary, the richest see in the empire; and the chapter of Olmütz enjoy the valuable privilege of choosing this high functionary from among their own members. The Calvinists have their superintendent at Brunn, and the Lutherans theirs at Ingrowitz. The inhab. are mostly of the Slavonian stock, divided into many different tribes; but among the pop. there are estimated to be about 450,000 Germans, residing mostly in the towns, 30,000 Jews, and a few Bohemians, Hungarians, &c. This territory was anciently inhabited by the Quadi and Marcomanni. These, or cognate, tribes are said, after the dissolution of the empire of Attila, to have founded a republic here, which maintained a precarious independence for some centuries, and was afterwards erected into a kingdom, extending, in the 9th century, over Bohemia, Brandenburg, Silesia, and part of Hungary, &c. Moravia subsequently belonged alternately to the Bohemians and Hungarians: it was finally annexed to Austria, together with Bohemia, in 1527. It was the great theatre of war between the French and Austro-Russian armies, in 1805. (*Oesterr. Nat. Encycl.; Berghaus; Allg. Lander*, &c. iv.)

MORAY, or Elgin, a marit. co. of Scotland, on the S. side of the Moray Frith, being the middle district of the old prov. of Moray, having N. the Moray Frith, E. the co. Banff, S. Inverness, and W. Inverness and Nairn. It consists of a N. and principal portion, and of a smaller portion on the S., detached from the main body by the intervention of a part of Inverness; and comprises in all 307,200 acres. With the exception of a considerable tract of low, light, arable land along the shore, the rest of the surface is rugged and mountainous. The climate on the coast district is comparatively mild for its latitude; and for a lengthened period wheat has been successfully raised in this district, which occasionally supplies some of the best samples to the London market. This district is also well suited for the turnip husbandry, which has been extensively introduced, and agriculture has been in other respects materially ameliorated; though, on the whole, the progress of improvement has been less rapid in this than in most districts of Scotland. Sheep-farming is not carried on upon a large scale; but the stock of cattle has been improved by crossing with the breeds of Skye and Argyle. Property mostly in large estates.

Farms of all sizes; the farm buildings were formerly wretched, but those on the principal farms have been mostly rebuilt, and are now substantial and commodious. Average rent of land, in 1843, 5s. 6½d. an acre. Manufactures unimportant. Lead, iron, lime, freestone, and slate are met with; but the first two are not wrought, and of the others only the freestone to any extent. It is partly intersected and partly bounded on the E. by the Spey, and on the W. by the Findhorn, and has the Lossie in its centre. The salmon-fisheries, especially those on the Spey, are important and valuable. This co. is united with Nairn under one sheriff and in returning 1 m. to the H. of C. Registered electors for the co., in 1849-50, 571. The bors. of Elgin and Forres unite with other bors. in sending 3 mems. to the H. of C. It is divided into 20 pars., and in 1841 had 8,154 inhab. houses, and 35,012 persons, of whom 16,090 were males, and 18,922 females. Valued rent of the co. 65,600℥ Scotch. Annual value of real property, in 1815, 73,288℥.

MORBIHAN, a marit. dep. of France, formerly a part of the prov. Brittany; between lat. 47° 15' and 48° 15' N., and long. 2° and 3° 45' W.; having N. Côtes du Nord, E. Ille-et-Vilaine, and Loire Inférieure, W. Finisterre, and S. the Atlantic. Length, E. to W., about 70 m.; breadth varying from 30 to 45 m. Area, 699,641 hectares. Pop., in 1846, 472,773. The coast-line is very irregular, presenting many inlets of the sea; from one of which a capacious bay, called by the Bretons *Morbihan*, or the "Little Sea," the dep. derives its name. Several islands, including Belleisle and Groix, belong to this dep. The N. and centre parts of Morbihan are hilly; but towards the S. are some tolerably extensive plains. The principal rivers are the Vilaine, with the Oust in the E., and the Blavet, Scorff, &c. in the W. Some of them are navigable for some distance, but none is of any considerable size. The canal of the Blavet, from Hennebon to Pontivy, is wholly included in this dep., and a great part of the canal from Nantes to Brest is within its limits. The climate is mild, but damp, W. winds are most prevalent. The atmosphere is cloudy, and violent storms are frequent in winter. A large proportion of the soil is stony; the vegetable mould is every where scanty, but towards the coast it is tolerably fertile. In 1834, it was estimated that 260,971 hectares were arable, 69,052 do. in pasture, 34,462 do. in woods, and 16,880 do. in orchards and gardens; while no fewer than 291,530 do. were occupied by heaths, wastes, &c. Agriculture is extremely backward; but more corn, principally rye, oats, and wheat, is grown than is required for home consumption; and a good deal of rye bread is made for exportation. The cultivation of the potato is on the increase. Turnips, hemp, flax, &c. are grown; and about 700,000 hectol. of cider are produced annually. Near Guer is the model farm of Coetbo, where 300 pupils are instructed in the details of agriculture and the auxiliary sciences, at the expense of government. The rearing of cattle is an important business, and the breeds of both oxen and sheep are in the course of being improved. Butter, both fresh and salted, is an important article of commerce. The annual produce of wool is estimated at 220,000 kilogr. The horses, though small, are strong and good. Bees are very extensively reared; and Hugo states that 450,000 kilogr. of honey, and 30,000 kilogr. of wax, are annually exported, worth together about 375,000 fr. In 1835, of 96,602 properties, subject to the *contribution foncière*, 45,234 were assessed at less than 5 fr., and 13,288 at from 5 to 10 fr.: 36 only were assessed at 1,000 fr. or upwards. The conger, oyster, and other fisheries are important; but especially that of pilchards, which employs in the season about 500 boats, manned by 2,500 fishermen. About 5-7ths of the fish taken are sold fresh, and the remainder being salted, make up about 15,000 barrels. The nett produce of the pilchard fishery is estimated by Hugo at 1,400,000 fr. a year. Manufactures are of considerable importance. The iron works are said to employ, directly and indirectly, from 1,500 to 2,000 workmen. The woollen cloth factories at Josselin and Malestroit employ together about 900 hands; and the tanneries are supposed to furnish products worth 800,000 fr. a year. Paper, glass wares, linen stuffs, cotton yarn, lace, hats, beer, chemical products, &c. are also produced; there are building docks at L'Orient, Vannes, Quiberon, Port Louis, &c.; and salt is made on the coast and islands of the estimated value of 1,000,000 fr. a year. Morbihan is divided into 4 arronds.; chief towns, Vannes, the cap., with 11,356 inhabs., L'Orient, Ploermel, and Pontivy. Total public revenue (1844) 9,685,127 fr.; expenditure in 1833, 11,933,084 fr.; the greater portion of which was, however, for the maintenance of the naval and military establishments of the department. (*Hugo, art. Morbihan; French Official Tables*.)

MOREA (an. *Peloponnesus*), a principal div. of Greece, and the most S. portion of continental Europe, consisting of a peninsula attached to N. Greece by the

well-fortified castle; and hills covered with gardens, formed into terraces, rise immediately above the town, the principal street of which runs parallel with the quays. The principal square (built on arches over the river) comprises many good modern houses, with a very large town-hall, partitioned out into government-offices, and a public library. There are 3 large churches, one an elegant Gothic structure, with a fine tower. A large tobacco manufactory of modern construction, employing between 300 and 400 workmen, a hospital, school of navigation, theatre, and 3 hotels, are the other chief buildings. Morlaix is the seat of a subprefect, of a tribunal of primary jurisdiction on civil and criminal cases, of an agriculture: its principal products are wheat, corn, and linen cloth; and it is in butter, corn, tallow, honey

Morlaix lays claim to consider already an important town. Near the close of the 14th century it suffered civil war.

Kingdom.	Pro- vince.	Area in sq. m.
Ten	?	25,457
Morocco	?	51,320
Tunisia	?	25,457
Total of empire		219,380

Of the above population (according to the census of 1856) that 3,850,000 are Moors, 3,750,000 Berbers, and 300,000 (chiefly devoted to agricultural and pastoral pursuits), 740,000 Bedouin Arabs, 220,000 Jews, 120,000 negroes, and 400 Christians and renegades.

and the annual fall of rain (chiefly confined to October and November), as calculated on a series of years, amounts to 26 inches. (G. von Hensel, p. 25.) These observations, however, apply chiefly to the N. and W. portions of the empire, or E. of the Atlas range, the heat is intense, and rain seldom falls. The soil is now, as in antiquity, proverbial for its fertility. Mela says of it, *Ceterum solo citius ditior et adeo fertilis est, ut frugum generis non cum servatur modo benignissimum procreet; sed quidem profundius citius non solum*. (Lib. iii. cap. 10.) In some favoured spots three crops of corn are reaped in the same year: the soil in many parts is purely alluvial, and in others of clay, sand, and loam, mingled in the most advantageous proportions. (G. von Hensel, 29, 30.)

Agriculture, however, owing, perhaps, to the extreme fertility of the land, which produces luxuriant crops, with little care or attention, is in the most backward state: fallows and rotations of crops are wholly unknown: indeed, the system of culture has remained almost unchanged since the invasion of the Arabs in the 11th century; and it consists of little more, generally speaking, than grubbing up and burning the weeds before the autumnal rains, and afterwards ploughing the land about 8 inches deep, with a machine of the most simple description, drawn by a bullock or ass, and in the S. provinces by a camel. Except in the gardens, the Moors never think of using manure or other means of assisting the soil, and consequently, the land near the towns is more impoverished than in less populous districts, where, from the abundance of unemployed land, it is allowed to remain in fallow 2 or 3 years, and in the mean time other parts are brought under the plough. The wheat is white, transparent, almost without husk, having a large and exceedingly hard grain, producing a flour superior in fineness and colour to that of the northern countries. A second crop is rarely obtained; but in the S. provs., when the harvest commences very early, a spontaneous crop springs up. According to Major Beauclerk, "The plains of Duquella alone are capable of producing in one year as much corn as the united kingdoms of Great Britain. Immense crops of corn yearly overstock the market of Mogador: a bushel of corn may be procured for a partridge, or a coin worth an English shilling; and such is the profusion of grain, that, in many instances, it does not repay the labour of harvesting." (Journey to Morocco, p. 253.) Yet, with all this productiveness, so little industry and providence are exercised, that the inhabs. are sometimes, in bad seasons, reduced to the greatest privations, and hundreds of Berbers often die of famine!

Barley is used chiefly for horses and cattle, oats not being raised in any part of the country. Maize and Turkish millet are raised near the towns and along the coast in the S. provs., and potatoes near Tangiers. On the whole, however, not more than a third part of the arable land is cultivated, and this in so superficial a manner, that the produce might be trebled, or even quadrupled, by a better system of tillage. Holme-oaks, cork and juniper trees are found on the mountains; and immense quantities of date-palms, vines, olive trees, sugar-canes, cotton, tobacco, and the fruits of S. Europe, are found in the level country. Throughout Morocco, however, there is a general scarcity of building timber: the white cedar grows to a tolerable size in the prov. of Raft; but when large timber is wanted, it is usually imported from Gibraltar. Land is usually rented by the number of oxen required for its cultivation, at the rate of about 7 dollars for the yoke of oxen; but in lands belonging to the sultan and allotted out to his soldiery, the same portion of land would be rented at about 4 dollars a year, and, if sold by auction, would fetch at Tetuan about 300 dollars. (Sir A. C. Brooke, Spain and Morocco, i. 400.) The pasture-grounds, also, are extremely rich, the grass often attaining a height unequalled except in the prairies of America. The horses in the country are estimated at 400,000; but the breed once so esteemed under the name of Barbs is greatly deteriorated. A few milk-white, small, and finely proportioned horses, with black manes and tails, are occasionally to be met with, belonging to the Arab chiefs; but the mass, though active, hardy, and with good action, are poor and mangy-looking: their exportation is entirely forbidden. Mules (of which there are upwards of 1,000,000) are equally well adapted for riding and draught: they are almost universally employed in long journeys, and a good mule, especially if of a bright chestnut colour with a black cross, is valued higher than a horse. Neither the asses nor mules, however, are at all comparable to those of Andalusia. It is said, though we suspect the statement is exaggerated, that about 40,000,000 sheep and 12,000,000 goats are reared; the wool of the former being of the finest quality, and the hides of the latter furnishing the celebrated Morocco leather. Oxen and camels also are bred in great quantities. A duty of about 16 dollars a head is imposed on the exportation of cattle, which being tantamount to a prohibition, the farmer is

discouraged from taking any pains further than to supply his own or his neighbour's wants. The wild animals comprise dogs, hyenas, lions, ounces, panthers, lynxes, gazelles, boars, and different varieties of game; the principal birds being ostriches, storks, quails, snipes, ducks, &c. Fish of many varieties are found in most of the rivers; bees, wasps, and mosquitoes swarm throughout the country, and locusts of large size commit fearful ravages, occasionally devouring every green leaf, and leaving the ground over which they have passed absolutely barren.

Manufactures and Trade are confined within very narrow limits. Except in the principal towns, where the houses are large and square, with a central court and flat roof similar to those of Algiers, the people live almost universally in huts or moveable tents; comparatively destitute of furniture and accommodation. Every woman understands the art of spinning wool or cotton, and the men weave it into cloth. Domestic labour, in short, which is almost wholly performed by women, supplies the principal wants of the inhabs. Tanning appears to be almost the only exception: leather is made in great quantities all over the empire, but especially in the large towns, that of Fez being red, while that of Taflelt and Morocco is respectively green and yellow. About 250,000 dozens of goat-skins are annually exported. The red caps, silk fabrics and girdles of Fez are highly esteemed; carpets, chip-baskets, and earthenware are manufactured in different provs., and in the principal towns may be found skilful sadlers, carpenters, locksmiths, and farriers.

The *Commerce* of Morocco is carried on, 1. with Europe; 2. with the Levant; and 3. with the interior of Africa. The exports of Europe comprise about 2,500 cwt. of wax (chiefly to Marseilles, Leghorn, Cadiz, and Lisbon), 1,500 cwt. cow-hides, 160,000 dozens goat-skins, 2,500 cwt. olive-oil, and 4,300 cwt. gums, with smaller quantities of wool, dates, honey, indigo, shawls, carpets, &c., to the amount of about 1,000,000 piastres a year; while the imports, chiefly of manufactured and colonial goods, amount only to 750,000 piastres a year. The tariff is regulated by the whim of the sultan, and prohibitions and duties vary at every port. European vessels pay 6 piastres for harbour dues, and a tax of 10 per cent. is levied on all imported articles. In 1831, the imports were valued at 158,400*l.*, the exports at 121,360*l.*; and in the same year 64 European ships, of 3,870 tons, arrived at, and 98 ships, of 5,820 tons, departed from, the different ports of the empire. (*Gräberg von Hemsö*, p. 157.)

The trade with the Levant is carried on partly by pedlars, accompanying the pilgrim caravan to Mecca, and partly, also, by feluccas coasting the shores of Africa as far as Alexandria. The communication with the interior of Africa is effected by caravans proceeding from Taflelt, and crossing the Sahara desert to Timbuctoo, in the manner described in the art. AFRICA (i. 31.), where the traders exchange salt, tobacco, cloth, caps, girdles, Turkish daggers, &c., for gold-dust, ivory, rhinoceros horns, assafoetida, ostrich feathers, and slaves. Their profits would seem to be immense; since, for 1,000,000 piastres, the value of goods exported, the returns amount at least to 10,000,000 piastres (*G. von H.* p. 146.); but a great part of this excess is swallowed up by the expense of the conveyance of the goods across the desert and back again. Interest on money is forbidden by law; but, notwithstanding, the Jews and others exact sums varying from 7 to 12 per cent. a month, on the security of merchandise. Paper money and bills of exchange are wholly unknown; nor is there any communication by post, for the purpose of facilitating commercial intercourse.

Government, Revenue, &c.—The government of Morocco is a pure despotism, the sultan being the head both of church and state, and the arbiter over the property and lives of his subjects; his chief title is *Emir-al-Mumenin*, "absolute ruler of the true believers." There are not here, as in Turkey, an uléma, the depositary of the national religion, or a mufti, the head of the law, who possess privileges independent of the sovereign, and may interfere to check his determinations. There is not even a council or divan which he is expected to consult. He has no regular ministers: all is done by his single command, and no subject is supposed to have either life or property but at his disposal. The sultans would appear to consider an adherence to their engagements as an unconstitutional check on their power. "Takest thou me for an infidel," said one of them to a foreigner, "that I must be the slave of my word? Is it not in my power to say and unsay whenever I shall please?" (*Chénier's Morocco*, i. 208. Eng. trans.) But, after all, there are here, as in all countries, certain rights which the monarchs dare not touch, and certain duties they must discharge. The sultan cannot safely invade the domestic privacy of his subjects, nor shock any of those customs to which long establishment has given the force of law. He is expected also to give

public audience four times a week, when he administers justice to all, even the poorest. Yet prudent persons usually think it more eligible to acquiesce in the sentence of the cadí, than to afford to the sultan any insight into their private affairs, of which he might afterwards make a not very agreeable use. On these occasions the sovereign appears on horseback, with an umbrella held over his head.

The crown is hereditary, descending to males only, but without the right of primogeniture; and hence it is not unusual for strife and civil war to arise among the children of a deceased sultan. The government has frequently, also, been overthrown by private or public treason. And hence, probably, has arisen the jealous and ferocious character by which the rulers of Morocco have been especially distinguished. Muley Ishmael, who ascended the throne in 1672, a bloodthirsty monster, though not without ability, introduced the system, since kept up, of employing a guard of negro mercenaries, on whose fidelity more reliance may be placed than on that of the Moors.

The most important state officers are the *Mula et-ici*, or tea-taster, usually the sultan's favourite, and the *Mula-et-tesserád*, or steward of the sultan's household. The sultan sits in public, as already stated, four times a week, to administer justice. The koran is here, as elsewhere in the Mohammedan world, the text-book of justice, and decrees are usually executed immediately after they have been pronounced. For the purposes of civil and military government, Morocco is divided into twenty-eight prefectures, some of which extend over large tracts of country, though others are confined to a single town. The chief provincial officers are the kaïds or prefects, who, although removable by the sultan, are despotic governors and commanders of the military forces within their districts. The agricultural tribes have also their respective sheiks; but these are commonly subject to the Moorish governors. The revenue of Morocco in 1822 amounted to 2,600,000 piastres; of which, nearly a half is derived from duties on land, houses, shops, mills, &c., and about a fifth from imported goods. The expenditure of the same year, chiefly for the maintenance of the army and the sultan's household, was only 990,000 piastres; and the yearly surplus goes to enrich the sultan's treasury at Mequinez, which is supposed to contain at least 50,000,000 piastres. (*G. von H.* p. 222.) The regular army does not exceed 16,000 men; of whom, as already stated, fully a half are negroes. The sultan's body-guard comprises about 3,000 infantry, and 2,000 cavalry. The Moors are good horse-men, and endure hunger, thirst, fatigue, and every inconvenience. They might therefore make excellent soldiers if they were properly manœuvred and exercised; but they are ignorant of every part of discipline except submission to their superiors. Their standard is the commentary upon the Koran, by Sidi Beccari, the favourite imperial saint, whose book is deposited under a tent in the centre of the army, and is the signal by which they rally. Morocco has 24 fortified and garrisoned towns, the principal of which are Suïra, Tangier, Azamer, Salee, and Mazegan. The navy of the empire is quite inconsiderable, comprising only 3 brigs, mounting 40 cannons, and 3 shallops.

Population.—The inhab. may be divided into the classes of Moors, Arabs, Berbers or Berebers, Shellocks, Jews, and Negroes. The Moors are a mixed race, the descendants of the ancient Mauritanians, intermixed with their Arab conquerors, and with the remains of the Vandals, who once ruled over the country; and, with the Moors, expelled from Spain, in the 15th century; but these varieties have been long since obliterated, and the Moors are now moulded into a distinct, peculiar people. They principally inhabit the villages and cities. Their language, called the Occidental Arabic, contains, as might be expected, many words borrowed from the language of the Berebers and Shellocks, and imported from Spain. The Arabs, as distinguished from the Moors, principally inhabit the plains, where, like their ancestors, they mostly lead a wandering life, and follow pastoral pursuits. They occupy *durwars*, or moveable villages, composed of tents; and whenever the pastures in the vicinity are exhausted, or the increase of fleas and vermin render the tents uninhabitable, they are struck; and placing them, their effects, and children, on panniers on the backs of camels, they set out in search of some other quarter in which to settle. Their women are not confined; but being subjected to hard labour, tanned by the sun, and sometimes even yoked in the plough with domestic animals, these habits of hardihood, with the loss of all traces of beauty, prove more effectual securities against intrigues than the bolts and bars used in the cities. The mountainous portion of the country is occupied by the Berebers and Shellocks, probably the aboriginal inhabitants of the country. The Berebers, who principally inhabit the country of the lesser Atlas, adjoining the Mediterranean, are nearly white, well formed, of middle size, and athletic; they live mostly in huts of stone and mud, but sometimes, like

the Arabs, in tents, and sometimes in caves; they are principally engaged in hunting and pastoral occupations. The Shellocks, who inhabit both sides of the greater Atlas, are less robust than the Berebers, but they are more advanced in civilisation, being principally agriculturists and artisans, and occupying comparatively good houses. A great discrepancy of opinion has been entertained as to whether the languages of those people be radically different, or merely different dialects of the same language; the latter opinion, though accompanied by several difficulties, seems to be, on the whole, the most probable.

The Berebers and Shellocks are sometimes called *amazighis*, or freemen, a designation to which they have a not ill-founded claim. They have never, in fact, been fully subjected to the Moorish government; they often break out into rebellion; and have carried their arms to the gates of Morocco. Their internal government has even somewhat of a republican form, and they are well trained to the use of arms. The Jews, who are numerous, particularly in the cities, carry on all the mercantile and money transactions; they also act as interpreters, and perform, in the cities, the functions of servants, porters, scavengers, &c. Every species of oppression and contempt, however, is heaped upon them. They are not allowed to mount on horseback, nor to sit before a Moor with their legs crossed. The meanest Moors may insult or maltreat them in the streets, or enter their synagogues for the purpose. They must not read or write Arabic, which being the language of the Koran, is too holy for them! A worse evil is, that when the emperor, or men in power, happen to be in want of money, they hesitate not to relieve themselves by stripping the Jews of large portions of their wealth, however carefully it may be concealed.

The negroes, who are not very numerous, are imported from Soudan. Sometimes, however, they obtain their liberty; and, as already stated, the emperor has thought fit to select them for his body guard. (The learned and excellent observations of Shaw, as to the different classes of people in Algiers, may be applied, with little modification, to Morocco. See his *Travels*, passim.)

Religion and Education. — The prevailing religion is Mohammedanism, and nowhere are its tenets and observances more rigidly enforced. The Jews are universally despised, nor are Christians allowed to reside any where except in Tangiers, Mogadore, El-Araitch, and Tetuan. There is a Franciscan convent in Tangiers, being the only Christian establishment throughout Morocco.

The education of the Moors is, at present, greatly inferior to that of their forefathers in the Middle Ages, and is almost exclusively confined to learning the Koran by rote, reading, and writing. At the high school of Fes, however, more aspiring students may receive a sort of instruction in grammar, geometry, and the mixed sciences, logic, rhetoric, medicine, and theology. The art of printing is unknown, so that great numbers of persons are employed, in all parts of the empire, copying the Koran, &c. Arts and sciences are in the most barbarous state; the literature, and history of foreign countries are wholly unknown; and their only musical instruments are a rude pipe, and more barbarous drum.

Manners and Customs. — The Moors are generally a fine-looking race of men, of middle stature, and somewhat inclining to corpulence, owing, probably, to their inactive life. The women are pretty when young, blacken their eye-lashes and eye-brows, and stain the tips of their fingers with *henna*. The dress of the country is picturesque and graceful, comprising a shirt with large sleeves, ample drawers of white linen, a *kafsan*, or waistcoat, of yellow or blue cloth, a silk sash, *knick*, or mantle, and slippers, or boots, of yellow leather. Women, however, wear red shoes. The Jews are not allowed to wear colours, and a black cap, with slippers of the same colour, marks their degradation. The usual food throughout the country is a dish, called *kuscusi*, composed of mutton or fowls, stewed with vegetables, and served up in large earthenware pans, accompanied with a savory kind of sauce. Coffee is not used; but tea is a general beverage, always presented to visitors, and highly esteemed by all classes. The Moors do not smoke tobacco, but take large quantities of snuff, and occasionally smoke the hemp-plant, which seems to partake of the intoxicating qualities of opium: a confection is also made from the hemp-seed, possessed of the same qualities, and to the use of this the natives are much addicted. The distinguishing features of the Moorish character are, a love of idleness, apathy, pride, ignorance, bigotry, and the grossest sensuality. The cities present the same gloomy aspect as in other Moorish states — that of strict seclusion, particularly of the female sex, while habits of gravity and silence prevail among the men, who meet only in the public coffee-houses. Unluckily, their high national pride, and contempt for all other people, is not combined with any sentiments of individual honour. They are not, however, wholly destitute

of good qualities, among which may be mentioned their hospitality, and fortitude under misfortune: *Allah-ird*, "God willed it," is their consolation in trouble. They are, also, healthy and long-lived, which could hardly have been expected, considering their habits. The climate is unquestionably good: but leprosy, ophthalmia, hydrocele, and syphilis, originating, most probably, in filthy habits, are not uncommon. Their medicines consist only of a few herbs, and their surgery is such as might be expected among a people without science or arts. The plague visits them about once in 20 years, and carries off thousands of the population. (*Geog. Journ.*, i. 146.)

History. — Morocco, anciently called Mauritania, was inhabited, under the Romans, by a hardy nomadic race, who were never thoroughly subdued by that nation. Early in the 7th century, the country yielded to the Saracens, whose different dynasties disputed for its possession nearly 300 years. At length, in the 11th century, a chief of Leptuma, having acquired so high a reputation for sanctity as to cause all the neighbouring tribes to flock to his standard, overturned the existing government, and extended his dominion all over N. Africa. His son, Joseph Ben-Tessisin, extended the empire by the addition of Fes and the S. provs. of Spain. In 1148, however, another revolution took place, and the Morabites were succeeded by the Almohades, who, in their turn, yielded the empire to more successful adventurers. In this state of anarchy the country remained till the middle of the 16th century, when Mohammed-Ben-Achmet, a scherriff and descendant of the Prophet, ascended the throne, which his posterity has ever since continued to occupy. (*Jackson's Travels in Africa; Beauclerk's Journey to Morocco; Sir A. C. Brooke's Spain and Morocco*, i.; *Count Gräberg von Hemso, Storia di Marocco*, i.; *Geog. Journ.* i.)

Morocco (Arab. *Marak'sh*), a large city of N.W. Africa, and the cap. of the above empire, 105 m. E. by N. Mogador, lat 31° 37' 20" N. long. 7° 36' W. Pop., acc. to Captain Washington, about 80,000, of whom 4,000 are Shellocks, and 5,000 Jews. We doubt however whether the population really exceeds 50,000, or at most 60,000.* It is beautifully situated about 4 m. S. from the river Tensift, on a plain elevated 1,450 feet above the sea, and is surrounded by a strong wall of lime and mud 30 ft. high and 6 m. in circuit, with square turrets at intervals of 50 paces; but the enclosed area, as in many African and Asiatic cities, comprises, besides houses and streets, many large gardens and open spaces from 20 to 30 acres in extent. The whole town, with slight exceptions, is in bad repair, many parts are in ruins, and it is everywhere filthy in the extreme. It is entered by 11 strong double gates; but the only one worth notice is the *Bab-el-Rom*, a Moorish horse-shoe arch, richly sculptured with Arabesque work. Extensive under-ground aqueducts, 10 or 12 feet deep, surround the walls, and reach across the plain to the foot of Atlas; at present, however, they are mostly in ruins. The houses in the habitable part of the town, a few of which are of stone, but the greater number of mud and lime, are, generally speaking, small, and only one story high, with central courts and flat roofs, the sides fronting the streets being plain and whitewashed, with here and there a narrow opening, unglazed, and scarcely deserving the name of a window. Their interior disposition greatly resembles that of Spanish houses, — the doors are of carved cypress-wood, the rooms long and narrow, with scarcely any furniture except a few mats, carpets, and cushions. Most of them, however, being old and in decay, swarm with vermin, especially bugs, scorpions, and snakes. The streets, which are unpaved, are frequently so narrow and crooked, that a horse can with difficulty pass through them; and they are in parts so heaved up with accumulations of filth, that the floors of the houses are some feet below the pathway. (*Beauclerk's Morocco*, p. 140.) These inconveniences are further increased by numerous low cross arches and gateways that connect the opposite houses. The city contains several public squares; but, like the streets, they are unpaved, and consequently very dirty when it rains, and covered with dust in dry weather. The sultan's palace stands on the S. side of the city, outside the main wall, but is itself enclosed within walls of equal strength. Its precincts consist of a large oblong space about 1,500 yds. in length and 600 in width, divided into squares and laid out in gardens, round which are several detached pavilions about 40 ft. square, forming the imperial residence. These have pyramidal roofs covered with glazed tiles, and lighted from 4 lofty and spacious doors, which are opened according to the position of the sun, the floors being tessellated with variously coloured tiles, and the interior painted in the Arabesque style, and ornamented with square compartments containing passages from the Koran, written in a sort of Arabic short-hand. The luxury and convenience of tables, chairs, and curtains are unknown, and even the rooms occupied by the sultan are furnished

* Ali Bey estimated the pop. at only 30,000, while Jackson, by an absurd exaggeration, carried it up to 270,000!

only with a few mats, carpets, cushions, some china and tea

else than a desert; the ruins of houses heaped one upon another serve to harbour thieves and desperadoes of all sorts. Nothing but the wretched government of Morocco could have made so great a city so miserable and so deserted. (*Geog. Journ.*, vol. i.; *Beauchamp's Journey to Morocco*; *Cleaveland's Hist. of Morocco*, l. 56-63; *Jackson's Morocco*, p. 121-124.)

MORON, a town of Spain, in Andalusia, prov. Seville, on a plain near the foot of a lofty hill, 38 m. S.E. Seville, and 80 m. W.S.W. Cordova. Pop., according to Mifano, 7,094. It has some well-built houses, a par. church, and 2 hospitals. Its inhab. are almost wholly agricultural, and nearly all the oil used in Seville is raised in the neighbourhood. The existence of Roman inscriptions and other antiquities has induced some authors to identify Moron with the ancient *Arenaci*.

MORPETH, a mun. and parl. bor., market-town and par. of England, co. Northumberland, ward of its own name, on the N. bank of the Wansbeck, crossed here by 2 bridges, 14½ m. N. by W. Newcastle. Pop. of parl. bor. (which includes the par. of Morpeth, except one detached township, together with the par. of Bedlington), in 1841, 7,160. The town, which is pretty well built, though badly paved, and not lighted, consists principally of 2 streets, at the junction of which is the market-place, with a high square clock-tower, containing a chime of bells. A town-house, a stone structure fronted by a colonnade, and decorated with turrets at the angles, was erected in 1714, at the expense of Lord Carlisle, for the manorial courts, quarter sessions, local business, &c. The co. gaol, and house of correction, is an extensive and commodious pile erected in 1829 on the S. side of the river. The par. church, a plain brick building, is on Kirkhill, ¼ m. S. the town; the living being a rectory in the gift of Earl Carlisle. There is also a chapel of ease. The Rom. Catholics, Presbyterians, and Wesleyan Methodists, have their respective places of worship, to which, and the church, are attached Sunday-schools. A slenderly endowed grammar-school was founded here by Edward VI. An English free-school, and infant schools, are supported by the corporation, and there are 2 subscription schools for boys and girls. The other establishments of the town comprise a Provident club, dispensary, mechanics' institute, subscription library, and some minor charities. Morpeth has undergone little change in its condition during the last 60 years; no buildings are in course of erection, and in 1846 there were 115 uninhabited houses. A small woollen manufactory, iron-foundry, and 2 or 3 steam corn-mills, are established here, but its chief dependence is on its cattle market, which is one of the largest in the N. of England. Freestone is quarried, and there are 4 collieries within the par.; but the railway connecting them with the town has been an unprofitable undertaking.

Morpeth is a bor. by prescription, and recognized as such by the charter of 15 Charles II.; its municipal officers, since the Mun. Reform Act, being a mayor, 2 other aldermen, and 12 councillors. Corp. rev., in 1848-49, 8742. 10s. It has sent 2 mems. to the H. of C. since the reign of Mary; the right of election, down to the Reform Act, having been nominally vested in the bailiff and free burgesses, but substantially in the Earl of Carlisle, lord of the manor. This act deprived it of one of its members, and the limits of the bor. were then also enlarged, as stated above. Reg. electors in 1849-50, 421. Petty sessions are held weekly, and quarter sessions alternately, with three other towns. A county court is established here, before which 254 plaints were entered in 1848. Large cattle fairs, the Wed., Thurs., and Frid. but one before Whit-Sunday. Races are held on Cottingham Common, early in Sept.

It appears from Camden that Morpeth was "burned down by its inhabitants in 1216, out of hatred to King John" that is, with the view of distressing him when on his march to punish the revolt of his barons; and it suffered again from fire in 1689. Its castle, built in 1338, and Cistercian monastery, both mere ruins, and several churches and baronial residences in the immediate vicinity, are well worth the notice of the antiquary.

MOSCOW (Russ. *Moskva*), a large city of European Russia, long the residence of the sovereigns, and still one of the capitals of the empire, on the navigable river Moskva, 400 m. S.E. Petersburg, lat. 55° 45' 13" N., long 37° 32' E. Pop., in 1850, 860,000?

This city, which was founded in 1147, is one of the most singular in the world. It is of a circular form, and covers a large extent of ground. The central part, on an eminence on the N. side of the river, is occupied by the kremlin, or citadel, containing the palace of the czars, with cathedrals, monasteries, squares, &c., built at different epochs, and in the most incongruous styles of architecture. The other quarters of the city lie round this central nucleus, increasing in magnitude according as they diverge from it. On the outside of all are the *slobodes*, or suburbs. The Moskva, which has a very tortuous course through the city, is crossed by various bridges, some of stone, but the greater number of wood.

Twentieth to the configuration of 1810, which displays no dash of the city, Moscow presented the most extraordinary contrasts - palaces alternating with huts, lanes with European buildings, and open fields with gardens and wooded avenues - "If I was struck with the irregularity of the streets," says Mr. Cobb, "I was at the same time struck with the immensity and variety of Moscow & its irregularity in comparison to any ordinary and so unvaried, never before claimed my attention. The streets are in general exceedingly long and broad some are paved others, particularly those in the suburbs, lined with benches of brass, or bordered with plants like the floor of a room, & ornamental houses are covered with tape palaces & cottages of one story stand next to the most meanly constructed. Many Turkish divans are covered with winding tape, some of the Russian houses are painted others have iron domes and roofs. Moscovs houses present themselves in every quarter both in the Oriental style of architecture, some with domes of copper others of tin, gilt or painted green, and many covered with wood. In a word, some parts of this vast city have the appearance of a secularized convent, other quarters of a populous town, some of a metropolitan city, others of a great capital." (Frobenius in der Nord. 1. 1810. aus dem Charakter, 1. 1810. 1811.)

There is no larger city question than the re-construction of 1919 on the part of the Russian government, to the view of rendering it impossible for the French to return in the city. With the exception of the Kremlin and the quarter (disregard immediately surrounding it, on the N. the rest of the city was mostly destroyed and in some quarters the destruction was so complete that the lines of streets could with difficulty be recognized. The Kremlin too, though it escaped the conflagration, suffered severely from the urban spring under its walls, by water of Russian, on its evacuation by the French. But this widespread devastation was repaired in a very few years. Like a phantom Moscow has risen from her ashes larger and more beautiful than ever. The streets are more widened, and the buildings are less dingy and insubstantial still, however the old and distinctive character of the city is preserved, being at once "humanized" of rich, grotesque and shrewd, magnificent and mean, according to H. Andrews there were in all 4,000 shops in the city in 1911 of which, 3,197 were of brick or stone, and the wooden timber. The creation of a modern house is no easy matter. A market, held in a go open space in one of the suburbs, exhibits a variety of materials for house building, consisting of boards of all cut shapes, and everything else one could wish. The vendor who wants a dwelling repairs to the spot, takes the number of rooms he requires, examines the board measure, which are regularly ascertained, and gives the total bill to him. The work is either paid on the spot, and taken away by the purchaser, or the vendor agrees to transport and erect it at the place where it is wanted. A dwelling may thus be planned, ordered, raised, and inhabited, within a week.

which 7 were the latter.

It had, in 1920, 120 professors and employed pupils. Among the other educational institutions, many be mentioned the gymnasium, the university, the theological academy, principal in the centre, the teacher-training

(Good secondary : The military school, or *corpo de cadetes*, with 600 pupils, the commercial school, founded in 1830; the establishment of St. Catherine and Alexander, for the education of young ladies, the veterinary school, the Institute of Letters, so called from its founder with 60 pupils, and a library particularly rich in Argentine literature, &c. There is, however, a great want of elementary schools for the lower classes, likewise lacking, in this respect, the entire Province, defective as is the latter.

There are a number of library institutions throughout the State. The best library belongs to Coast To Coast. The university library was partly destroyed in 1919, but it has since been enriched by book purchases and donations, and amounted, in 1934, about 25,000 volumes. Several unions have extensive collections of books, pictures, maps, etc.

The Foundling Hospital is a vast establishment, and is managed to the best possible manner. During the 10 years ending with 1881 the admissions were 68,345, and the deaths 34,712. In point of fact, however, a large proportion of the children brought to this, and to all similar establishments, are all but dead before they arrive, and the real question is not in such institutions existing not so much in their great mortality as in the encouragement they hold out to immorality, and the destruction of children. The great military hospital has above 1,000 beds, and an experienced judge, Baron Larrey has declared that its organization is excellent. There is also the hospital of St. Catherine the hospital of Clignancourt, &c. The pop. of the hospitals attached to the city in 1880 amounted to 58,387 individuals.

Minawa is the favorite residence of many of the English soldiers, who pass the winter in the greatest splendor, not being overshadowed, as at Petersburg, by the court. According to M. Lecomte de Lavergne, *Comte de Fougere & Minawa* there were reckoned in the city in 1866 5,266 shops, 470 bath and hotels, 324 restaurants, 161 houses or places for the sale of spirits, 66 hospitals for the sale of beer, 126 cellars for the sale of wine, 336 bakeries and 26 apothecaries shops.

Manufactures are prosecuted here on a much larger scale than in Petersburg, but a large proportion of the works on account of the manufacturers and capitalists of Moscow are out in the country but in the adjoining towns and villages, sometimes at a considerable distance from the capital. The principal manufactures are those for the manufacture of cotton, woolen and silk fabrics, many of which are upon a very large scale, and are fitted up with steam-engines and other improved machinery. There also are extensive productions and there are numerous industries, breweries, distilleries, etc.

However to the grand spectacle of the interval comparison of the empire. It has a water communication with Petersburg and Riga, on the Baltic Anzheren, on the Caspian, and Odessa, on the Black Sea. In spring, or after the breaking up of the ice, the Moskva is navigable for boats, but during the rest of the season it is navigable for rafts only. A great deal of the commercial intercourse between the city and the adjacent and distant provinces is carried on in winter by the stage-coaches.

The census census which contains a very great proportion of males over sixteen at Petersburg; which can, said to be more than a low estimate, and have a similar result. The total pop. of the city, in 1861, amounting to 50,000, was, according to St. Andrews, classified as follows:—

一	二	三	四	五	六	七	八	九	十	十一	十二	十三	十四	十五	十六	十七	十八	十九	二十	二十一	二十二	二十三	二十四	二十五	二十六	二十七	二十八	二十九	三十	三十一	三十二	三十三	三十四	三十五	三十六	三十七	三十八	三十九	四十	四十一	四十二	四十三	四十四	四十五	四十六	四十七	四十八	四十九	五十	五十一	五十二	五十三	五十四	五十五	五十六	五十七	五十八	五十九	六十	六十一	六十二	六十三	六十四	六十五	六十六	六十七	六十八	六十九	七十	七十一	七十二	七十三	七十四	七十五	七十六	七十七	七十八	七十九	八十	八十一	八十二	八十三	八十四	八十五	八十六	八十七	八十八	八十九	九十	九十一	九十二	九十三	九十四	九十五	九十六	九十七	九十八	九十九	一百

MODELLE. a Dextral dip. of Fromm, reg. N. E., for-
mally a part of Laramie, chiefly between lat. 37° and
38° N. and long. 94° 30' and 95° 30' W., having N and
S Laramie, Shoshone Fromm, and Shoshone Nevada;
S the dips are N. and E. and W. that of the
Shoshone. Area, 500,000 hectares. Pop., in 1900, 600,000.
The E. part of the dip is covered with ramifications of
the Yonago, and the W. with those of the Ardenne
mountains, but neither rise to any considerable height.
The general shape of the dip is towards the N., which is

the direction followed by its principal rivers, the Moselle in the W., the Sarre in the E., and their affluents, the Ornes and Nied. Some portions of the surface are very marshy. Near the Vosges, where primary formations prevail, the soil is stony; elsewhere it is chalky or clayey, and, in general, of indifferent quality, only about 10,000 hectares being said to be rich land. In 1834, the arable lands were estimated to comprise 303,913 hectares; pastures, 45,597; woods, 92,228; and orchards, gardens, &c. 11,920 hectares. According to Hugo and the *Dict. Géog.*, agriculture has of late made considerable progress in this dep.; and certainly it would seem, from the statements of Mr. Jacob, by whom it was visited in 1819, that, both in this respect and in the condition of the pop., there was ample room for improvement. "Through the whole distance," says he, "of 60 m. from the Prussian frontier to Metz, there is not a single good house to be seen, except the convent, and the house of the iron master at Forbach. There is nothing in any of the villages, large and populous as they are, nor within sight of the road, though it is an open country, that looks like a decent farmer's or clergyman's house. All seemed of the same standard; each filthy, dilapidated, and small, with barn and stables adjoining, of corresponding appearance. The horses and waggons looked miserable; the cows, few and poor; and I did not see more than fifty sheep, which were of a bad race, and nearly half of them black. The inhabs. were ill clothed, and at every stoppage we were assailed by numerous beggars. The cultivators (near Metz) are all proprietors. They or their parents generally bought the land, at the revolution, for paper money; before which they were bound to their lords in certain feudal services and payments, and were supplied by them with the capital requisite for cultivation. In the worst parts of Germany, where the soil is poorest, and where the feudal power is still in force, the peasantry are better clothed, have more furniture in their houses, and display more new and repaired houses, than are seen in the district from Metz to Verdun. Between those cities, the towns and villages are miserable receptacles of filth and poverty." (*Jacob's View of Agriculture in Germany*, &c. pp. 435. 439.)

Besides wheat, oats, and barley, the other principal articles of culture are turnips, flax, hemp, and oleaginous plants.

Moselle furnishes about 180,000 hectolitres a year of second-rate wine, the best of which is the red wine produced in the arrond. of Metz. The white wines are mostly light, and *de peu de durée*. (*Jullien*, 42.) Though the pastures are good, all kinds of live stock, except hogs, are said to be inferior. Quills and honey are important articles of rural produce; cantharides are collected in summer near Metz. In 1834, of 153,968 properties subject to the *contribution foncière*, 84,651 were assessed at less than 5 fr., and 22,218 at between 5 and 10 fr.; only 95 were assessed at 1,000 fr. or upwards. Iron, which is every where abundant, and usually of good quality, is extensively produced and wrought, especially in the arrond. of Thionville. There are many potteries and some glass factories in the dep. Lorraine is famous for its linens; but the value of those produced in this dep. does not exceed 1,800,000 fr. a year. Woollen cloths, lace, paper, glue, and leather are the other principal products. Manufacturing industry may, in fact, be said to have originated and grown up in this dep. since the revolution; but in the interval since that event, has made considerable progress. Moselle is divided into 4 arronds.: chief towns Metz, the cap., Briey, Thionville, and Sarreguemines. It sends 6 mems. to the Ch. of Dep. Number of electors, in 1838-39, 1721. Total public revenue (1831), 13,577,481 fr. (*Hugo*, art. *Moselle*; *French Official Tables*.)

MOSELLE (an. *Mosella*), a river of W. Europe, flowing through the E. part of France, and the S. part of Rhenish Prussia; its basin being situated between that of the Nahe to the E., and the Meuse to the W. It rises in the Vosges dep. and mountains, about lat. 48° N., long. 7° E., and runs generally in a N.N.E. direction, with a very tortuous course, to Coblenz, in lat. 50° 22', and long. 7° 33', where it joins the Rhine. Before entering the Prussian dom., it traverses the French depts. Vosges, Meurthe, and Moselle; and separates Dutch Luxemburg from Rhenish Prussia. Its entire course is estimated at nearly 300 m., for about half of which it is navigable. Its average breadth is about 170 yards; its mean depth 6 ft., and its ordinary rate of current about 1½ m. an hour. Its principal affluents are the Madon, Meurthe, Seille, Sarre, and Sure: Epinal, Toul, Metz, Thionville, Treves, Traubach, and Coblenz are on its banks. The surrounding country is subject to its inundations, which do much damage; but it is of immense utility as a channel of internal communication, large quantities of timber, slates, coal, charcoal, brandy, salt, potash, oak bark, glass and earthenware, and wine being sent by it to the Rhine. (*Dict. Géog.*; *Schreiber's Guide du Rhin*, &c.)

MOSTAR, a town of European Turkey, pach. Bosnia,

and sandjak Herzegovina, of which it is the cap., on the Narenta, crossed here by a Roman bridge, 48 m. S.W. Bosna Serai; lat. 43° 20' N., long. 17° 52' E. Pop., probably under 10,000. It is surrounded by crenellated walls, and its principal streets are on the right bank of the river, about ¼ of the town being on the other side. It has a celebrated manufacture of swords and fire-arms, besides an extensive traffic in cattle, corn, and wine, brought thither from a great distance. (*Stein, Dict. Géog.*)

MOSUL, a city of Asiatic Turkey, pach. of Bagdad, chiefly interesting as being near the site of Nineveh, the celebrated cap. of the first Assyrian empire. It stands on the W. bank of the Tigris (here very rapid, 300 ft. broad, and crossed by a bridge of boats, as well as an older one of stone), 193 m. N.N.W. Bagdad, lat. 36° 21' N., long. 43° 11' E. Pop., according to Kinneir, 25,000; of whom, about 9,000 are Christians, 1,500 Jews, and the rest Arabs, Turks, and Kurds. The city is so near the level of the river, that its streets are often flooded; and, like almost every other town in Turkey and Persia, it is in a declining state, its walls being broken down, and its best buildings crumbling into ruins. It has seven gates, and the castle, now in ruins, occupies a small artificial island in the Tigris. Streets narrow and irregular. Houses built partly of stone, partly of plastered brick, with vaulted roofs and ceilings, surrounded by flat terraces. The mosques, of which there are several that possess considerable beauty, the coffee-houses, khans, hummums, and bazaars, are handsomer than in most Turkish towns, and the market is well supplied with provisions from Kurdistan. The Greek Christians have nine churches, and there is a Dominican convent. The principal ornaments of the city are, a college, the tomb of Sheikh Addul Cassim, and the remains of a fine mosque, the minaret of which was built by Noureddin, sultan of Damascus. West of the Tigris, the environs are wholly uncultivated; and this circumstance, combined with the great extent of the cemetery close under the walls, gives it a gloomy and melancholy aspect.

Mosul is under the separate jurisdiction of a pacha of two tails: it formerly had a large caravan trade with all parts of Asia, but has lost much of its commercial importance; it still, however, carries on a trifling trade with Bagdad and Asia-Minor; to the former of which it sends, on rafts down the Tigris, gall-nuts and copper, from Kurdistan and Armenia, receiving in return Indian commodities, afterwards forwarded to Diarbekr, Orfab Tokat, Aleppo, &c. Its only manufacture is that of coarse blue cotton cloths, used by the lower orders of the pop.

The climate is proverbially healthy, the average temp. of summer not exceeding 66° Fahr.; but in spring, during the floods of the Tigris, epidemics are common, though not often fatal. Several sulphur springs are found within a short distance of the town, and are much resorted to for cutaneous diseases. The geological formation of its immediate vicinity consists, according to Ainsworth, of solid beds of massive, compact, and granular calcareous gypsum, arranged in horizontal strata, not fossiliferous, of a bluish white colour, and extensively quarried as marble. Superimposed on the gypsum is a thin formation of a friable limestone, abounding in shells, and forming the common building stone of Mosul, as it probably also formed that of the ancient Nineveh. (*Kinneir*; see also NINEVEH.)

MOULINS, a town of France, cap. dép. Allier, on the river of that name, which is here crossed by a handsome stone bridge of 13 arches, in a fertile plain, 159 m. S.S.E. Paris; lat. 46° 34' 4" N., long. 3° 20' 14" E. Pop., in 1846, 14,794. Streets narrow and irregular, but clean and well-paved; houses chiefly of brick, but a few also of stone, especially in the principal avenue, the *rue de Paris*. It has 3 public squares, that of the Allier being by far the largest and best built. It is well supplied with water from numerous fountains. The chief public edifices are the churches of Notre-Dame and the Visitation, the royal college, established in the suppressed convent of the latter, the town-hall, hotel of St. Cyr, and a recently erected hall of justice. It has also 2 large hospitals, barracks, a public library with 20,000 vols., a museum of natural history, and a small theatre. Several fine walks run in different directions out of the town; and in the neighbourhood are extensive vineyards, and mulberry-plantations for breeding silk-worms. Coal and limestone are wrought at a short distance from the town, and are articles of considerable trade. Moulins is the seat of a tribunal of primary jurisdiction and commerce, a chamber of manufactures, and a society of agriculture, sciences, and arts: it has a large manufacture of cutlery, especially scissars, which are highly esteemed, and smaller establishments for making coarse cotton and woollen fabrics, haberdashery, and hats, with steam corn-mills, glass-houses, and tanneries. It has a considerable trade in corn, wine, silk, timber, coal, and cattle, chiefly with Orleans, by the Loire navigation; but also with Bourges, Maçon, &c.

Moulins, which existed as a town so early as the 11th century, became the residence of the Dukes of Bourbon, in 1368. A famous assembly convoked here in 1565, by Catherine de Medici, was followed by the long and sanguinary war of the league. (*Hugo, art. Alhier, &c.*)

MOUNT-SORREL (properly, *Mount Soar-hill*), a market-town of England, in E. Goscote hund., co. Leicester, pars. of Rothley and Barrow-upon-Soar. Pop. of township, in 1841, 1,536. It derives its name from being situated close to a steep craggy hill of red granite, which rises immediately from the Soar. On its highest point there formerly stood a fortress, which, being taken by Henry III., was soon after entirely demolished. The town, built along the great road between London and Nottingham, consists chiefly of houses constructed of granite: the principal buildings are, the town-hall (in which the petty sessions for the hund. are held), a church, subordinate to that of Barrow, and three places of worship for dissenters.

Mount-Sorrel has some share in the hosiery trade of Leicester; and it has derived much benefit from its position on the Great-North-road; but this advantage it is likely to lose, from the recent opening of the Midland Counties Railway. Markets on Monday.

MOURZOUK. See **FREEZAN**, I. 836.

MOZAMBIQUE, a city and sea-port of E. Africa, cap. of a colony belonging to the Portuguese, lat. 14° 49' S., long. 40° 45' E. Pop. 3,000? It stands on a crescent-shaped island of coral, very low and narrow, and scarcely 1½ m. in length, near the entrance of a deep inlet of the sea, which forms its harbour. The fort, which has six bastions and eighty cannon, is in bad repair: the city comprises a large square, and several narrow, dirty streets lined with lofty houses fast falling to decay. The governor's palace is an extensive stone building, with a flat lead roof, and a square court in its centre. Three churches, an old town-hall, and hospital, are the only other public edifices. Black-town, at its S. extremity, is wholly inhabited by negroes, and consists of bamboo and osier huts.

The administration of the colony is vested in the governor, aided by a council comprising the bishop, the commander of the troops, and the chief civil minister; but it is extremely corrupt, and nearly all the functionaries, both civil and military, are criminals exiled from Portugal. Exclusive of about 600 Portuguese and Creoles, the pop. consists of free blacks and slaves, with about 800 Arabs and Banyans, chiefly engaged in petty trade and handicraft. The irregular life led by the Europeans, and the general insalubrity of the climate, prevent any increase in the white pop.; and, at an average, of 100 soldiers 7 only survive a residence of five years. The rural population is in the most degraded state; and, although the soil be naturally rich and productive, the culture of cotton, indigo, sugar, and other articles of commerce is wholly neglected. Rice, millet, and manioc, are raised almost without labour; furnishing, with cocoa nuts, almost the entire food of the slaves. The commerce of Mozambique has greatly decreased, in consequence of our exertions to suppress the traffic in slaves; but, though much diminished, the trade is still carried on to a considerable extent both with Brazil and Arabia. These slaves, who are chiefly of the tribe of Monjores, and brought from the centre of the continent, a distance of 40 or 45 days from the colony, are procured from the native merchants in exchange for salt, shells, tobacco, coarse cloths, &c.; goods costing about 2 dollars will bring in, as the case may be, either a slave, or an elephant's tusk, weighing from 60 to 80 lbs. of ivory: hippopotamus' tusks, gold-dust, columbo-root, gums, and amber, are the other chief exports; the imports comprise tea, sugar, coffee, cotton and woollen cloths, with other articles from Diu, Demau, and Goa. A duty of 16½ crusadoes is levied on every slave exported: all other imports and exports are free of duty.

Mozambique was first visited by Vasco de Gama in 1498; and in 1606 Albuquerque made it the centre of the Portuguese possessions in this part of the world, and the seat of the viceroy of the African colonies. When the Portuguese lost their Indian possessions at the commencement of the 17th century, Mozambique began to decline, and has ever since been in a languishing state. The territory, however, still extends from C. Delgado northward to Delagoa Bay southward, having a length of coast exceeding 1,400 m., and comprising, besides the cap., the several settlements of Ibo, Pomba, Condurcia, Mokamba, and Quillimane. The channel between the E. coast of Africa and Madagascar is called the Mozambique Channel. (*Ritter's Africa*, i. 202—204. &c.)

MULHAUSEN, a town of the Prussian dom., prov. Saxony, reg. Erfurt, cap. circ., on the Unstrut, 29 m. N.W. Erfurt. Pop., with its suburbs, in 1836, 12,050. (*Berghaus*.) It is surrounded by a high wall, flanked with towers, and environed by a ditch; has an antiquated appearance, several Lutheran churches, a gymnasium, 3 hospitals, and an orphan asylum; and is the seat of a judicial court for the town and circ. It has manufac-

tures of woollen and linen cloths, carpets, &c.; with dyeing-houses, fulling and oil mills, distilleries, breweries, and tanneries, and an active trade in corn and dyeing drugs. (*Von Zedlitz; Berghaus*.)

MULHAUSEN, or **MULHOUSE**, a town of France, dép. Haut-Rhin, cap. cant., on the Ill, 22 m. S. Colmar, and 16 m. N.W. Basle. Pop., in 1836, ex. com., 13,789; or with com., 16,922; exclusive of about 7,000 individuals, who come daily out of the neighbouring communes to work in the various factories. It is divided into the old and the new town. The former, entirely surrounded by the Ill (here crossed by several bridges), though irregularly laid out, has tolerably broad, well-paved, and clean streets, and some good houses. The Protestant and the R. Catholic par. churches, the synagogue, town-hall, college, arsenal, and hospital, are its principal public edifices. In one of its squares is a column erected to the astronomer Lambert, born here in 1728. The new town, which extends, on the S.E. as far as the canal uniting the Rhine and Rhone, is handsomely laid out, and has numerous handsome residences, with the hall of the Society of Industry, the exchange, the chamber of commerce, &c.; it has also a capacious basin on the canal.

Until about the middle of last century, Mulhausen had only a manufacture of woollen cloths; but in 1745 cotton printing was introduced, and it is now one of the principal seats of the cotton manufacture in France. The cotton prints and muslins of Mulhausen and its neighbourhood are second only, as respects the perfection and variety of their patterns, to the silk goods of Lyons. (*Bowring's Rep. on Switzerland*, p. 34.) The manufacturers have, in many instances, branch establishments in other parts of Haut-Rhin and in the neighbouring depts.; but Dr. Bowring states that many of their mills and factories are mortgaged to the inhabs. of Basle; and, in fact, Switzerland furnishes considerable capital to the manufacturers of Alsace. (*See art. RHIN-HAUT* in this work.) Hugo says that about one fifth part of its cotton goods are sent out of France. The workpeople are badly clothed, dirty, and lodge generally in cellars, or other comfortless dwellings; but of late efforts have been made, by some of the more wealthy manufacturers, to improve the lodgings of the workpeople in their employ. Wages are good: cotton printers of the first class get from 2½ fr. to 3 fr. 30 c. a day; inferior workman, from 1 fr. to 1½ fr.; women, an average of 1 fr. 20 c.; and children, from 25 to 33 c. a day. Weavers (men and women) and male cotton spinners get from 1½ fr. to 2 fr. a day; females engaged in cotton spinning, from 75 c. to 1 fr. 10 c.

Intemperance is not so prevalent here, as among the cotton weavers of the dep. du Nord; and, according to Villermé, the proportion of illegitimate children is but little above the general average of France.

The spinning mills at Mulhausen are not in a flourishing condition, owing, in part, to their being obliged to use cotton imported by way of Havre or Marseilles. In point of fact, however, they are totally unable to withstand the competition of the English; and since Manchester and Glasgow cotton twist has been admitted at a slight duty, as low as No. 170, they have ceased to spin any high numbers. Woollen cloths, hosiery, straw hats, morocco leather, and beer, are the other principal goods made at Mulhausen, which has also a brisk trade in iron, hardware, and agricultural produce. Before the Revolution, this town was the cap. of a small republic allied to Switzerland. It was annexed to France in 1798, and has rapidly increased since 1820. (*Hugo, art. Haut-Rhin; Villermé, Tableau des Ouvriers*, i. 14—60.; *Bowring's and Symons's Reports*, &c.)

MULL. See **HESBIDES**.

MULLINGAR, an inland town of Ireland, prov. Leinster, co. Westmeath, of which it is the cap., on the Brosna, 44 m. W. by N. Dublin. Pop., in 1821, 3,684; in 1841, 4,569. It consists of one principal street, running E. and W., with several diverging streets and lanes. It has a par. church, a very large R. Catholic chapel, a convent, a Presbyterian and a Methodist meeting-house, a large barrack, and the prison, court-house, and infirmary for the co. Though not an incorporated bor., it sent 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. It has two schools, partly supported by the Educational Board, one attended by about 250 boys, and the other by above 400 girls. Courts leet and baron, for small debts, are held every Thursday; and a court of record, with jurisdiction to the amount of 100l. The assizes for the co. are also held here; with general sessions in Jan., April, July, and Oct.; and petty sessions on Saturdays. It is a constabulary and revenue police station. The co. prison, built on the radiating plan, contains 100 cells and 15 other rooms for prisoners. It is a large market-town for corn, butter, cattle, and other agricultural produce, having an easy communication by the royal canal, which nearly encircles it, with Dublin on the one hand,

and the Shannon on the other. It has two tanneries, and a brewery. Markets on Thursdays; fairs, inferior only to those of Ballinasloe, for the sale of cattle, on April 6., July 4., Aug. 29., and Nov. 11., the last chiefly for horses. Post-office revenue, in 1830, 872*l.*; in 1836, 1,034*l.*

MUNICH (Germ. *München*), a city of S. Germany, the cap. of Bavaria, highly interesting on account of its collections of the fine arts, on the Isar, crossed here by 3 bridges, about 220 m. W. Vienna, and 118 m. E. S. E. Stuttgart; lat. 48° 8' 20" N., long. 11° 34' 30" E. Pop., in 1846, 118,384, incl. military. The city stands in the midst of a plain, which is neither fertile nor picturesque, but is one of the most elevated in Europe, being nearly 1,600 ft. above the sea. In the last century it was only a second-rate fortified town, with castellated gates, and quaint ancient-looking houses; but since the beginning of the present century, new quarters and suburbs have so far extended themselves beyond the walls, that the buildings now occupy nearly double the extent of the old town. "Munich," says the author of Germany and the Germans, "has kept pace even with Vienna in the march of modern improvement. This is every where visible; for we see new and splendid streets extending in all directions, fine palaces and public edifices, many of them magnificent, surrounded by extensive pleasure-grounds with fine walks and drives: in short, every object shows that it is flourishing beneath the sunshine of peace. Indeed, next to Berlin, Munich is the third city in the Germanic empire; for though Dresden, from its beautiful localities, is more captivating, yet this is the more striking: add to which, the one is dull and stationary, while the other is lively, attractive, and continually advancing in prosperity." (II. 319.) It has, however, an unfinished appearance, in consequence of the open spaces that intervene here and there between the numerous edifices, many of which are still incomplete. The old town comprises numerous streets, diverging from a common central square, called the *Haupt-platz*, and running towards the walls, which form round it a species of irregular circle. A large and broad street runs from N. W. to S. E., called in different parts, the *Neuhauser Strasse*, *Kaufinger Strasse*, and the *Thal*. The *Sendlinger Strasse* is another leading avenue, and two narrow lanes, one of which passes through *Max-Joseph's-platz*, one of the finest squares in Europe, lead to a fine suburban line of streets. The *Ludwig's Strasse*, *Karl's-platz* and *Maximilian's-platz* skirt the town on its W. and N. sides. The different public edifices that form the principal glory of Munich are chiefly on its N. side. Here, also, is the *Carolinen-platz*, in the centre of which is an obelisk, 100 ft. high, formed partly out of cannon taken by the Bavarians in the late war. An equestrian statue of the elector Max. I., by Thorwaldsen, decorates the *Wittelsbacher-platz*. The cathedral, a large brick pile, erected at the close of the 15th century, has 2 towers, 333 ft. high, and a fine monument of the emperor Louis of Bavaria. The church of the Theatines (so called from Caraffa, Bishop of Theate, the founder of the order) is a large structure in the Italian style, with a central dome flanked by 2 towers. The Jesuit's church, built at the end of the 16th century, is remarkable for its wide roof unsupported by pillars, as well as for 2 fine porticoes of marble, which form its grand entrance: it is 260 ft. in length, and 14 ft. wide; has 11 altars and a noble organ, with several monuments, one of which, by Thorwaldsen, to the memory of Prince Eugene Beauharnois, son-in-law of Napoleon, is one of the finest works of its kind. The church of St. Louis, in the *Ludwig's-strasse*, a brick building faced with marble, in the Byzantine Gothic style, has 2 towers, 220 ft. above the basement, and the nave is 260 ft. in length. The church of All Saints, recently finished, has some fine carvings and fresco-paintings; but is much smaller, and with fewer pretensions to architectural beauty than those before mentioned. There are several other churches, and 2 have very lately been opened in the suburbs, both on a large scale, and tastefully ornamented with pictures and painted glass windows. A Protestant church, recently built, has a lofty open tower, and is celebrated for a remarkably fine-toned organ. The public cemetery lies outside the S. gate, and is of vast extent; open alike to Protestants and Catholics. Not far from it is the General Hospital, a large building having accommodation for nearly 800 patients. The Royal Palace, or *Königs-residenz*, consists of an older part, built in the 16th century, and comprising 4 irregular court-yards, as well as a more modern part, called *Neubau*, planned on the model of the Pitti Palace at Florence, and fitted up in the most sumptuous style, though not yet completed. The apartments already finished are in the style of those seen in Pompeii, and comprise numerous fresco and encaustic paintings, bas-reliefs, richly carved cornices, &c. At the back of the palace is the *Hofgarten*, a large square planted space, surrounded by arcades, with cafés, shops, &c., not unlike those of the Palais Royal in Paris, the E. side being occupied by barracks. Connected with the

Hofgarten eastward, is a kind of park, called the English Garden. The new buildings of the palace face *Max-Joseph's Square*, on another side of which is the opera-house, opened about 14 years ago, one of the largest and most elegant theatres in Germany; it is fitted to hold about 2,500 spectators, and is equalled, as respects its performances, only by those of London, Naples, and Milan. Opposite the palace, in the same square, is the new post-office, copied from that of Rome, and in the centre is a statue of the late king, Max. Joseph I., by Rauch of Berlin.

The great glory of Munich, however, consists in its fine galleries of paintings and sculpture, called respectively the *Pinacotheca* (from *pinax*, a picture, and *θήκη*, a repository), and the *Glyptotheca* (from *γλυπτός*, a carving, and *θήκη*, a repository). The first of these, in the *Bayer Strasse*, is in the Palladian style, with 2 wings, and has a front 500 ft. in length: the public entrance is at the E. end, the corridor is adorned with allegorical frescoes in compartments; and the collection, which, for specimens of the Flemish and Dutch schools, is one of the finest in the world, occupies 7 splendid halls and 23 adjoining cabinets on the first floor, the basement story being devoted to the reception of drawings, enamels, mosaics, &c. The collection of drawings comprises about 9,000, including 5 by Raphael, 30 by Fra Bartolomeo, and several by Rembrandt, Albert Durer, and other Dutch and German artists. The paintings are limited to 1,500, and consist of the *chefs-d'œuvre* from the king's collections, including the galleries of Düsseldorf, Mannheim, Deux-Ponts, Schleisheim, and other galleries. Two of the apartments are devoted to the German school, and include the *élite* of the *Boisseree* gallery, purchased in 1827 for 375,000 florins, comprising specimens by Albert Durer, J. von Eyck, Schoreel, Hans Hemling, &c. Three of the rooms contain pictures of the Flemish and Dutch masters, the principal of which are the "Murder of the Innocents," "Fall of the Damned," and other splendid works of Rubens; the "Village Fête" of Teniers; the "Musical Party," by Netcher; the "Girl with the Pitcher" and "The Mountebank," by Gerard Dow; "The Wise and Foolish Virgins," by Schalken, besides numerous highly-coloured works of Vanderwerf and Rembrandt, with various portraits of Vandyck. The specimens of the Italian school, comprised in two apartments, bear no comparison with the invaluable pictures just mentioned; but there are a few fine works by Raphael, Guido, Titian, Domenichino, Annibal Carracci, and Carlo Maratti. Belonging to the Spanish school, also, may be noticed "The Beggars" of Murillo, several works of Espagnoletto, and some portraits by Velasquez. There are also a few paintings of the English school, and among them is the well known "Reading of the Will," by Sir D. Wilkie. The *Glyptotheca* in the *Königs-platz* is a chaste and elegant structure, in the Ionic style, erected like the last by the Baron von Klenze, and has a noble central portico, the sides being adorned with statues in niches. The collection is distributed in 12 rooms, each of which is devoted to a distinct epoch in the art, and decorated in accordance with its contents. The walls are of scagliola-work, the floors of marble, and the ceilings richly adorned in fresco and stucco work. The marbles from the temple of Jupiter Panhellenius, in Egina, purchased by the present king for 10,000 sequins, occupy an entire room, and are particularly valuable, from their being the only extant specimens of the Eginetan school of statuary. The *Illioneus*, however, is said to be "the gem of the collection," and one of the finest existing specimens of ancient art. The Roman hall far surpasses the rest in the splendour of its decorations; but the works that it contains are said to belong rather to the declining stage of the arts. The hall of modern sculpture has, among other works, the *Paris* and *Venus* of Canova, copied from that at Florence; the *Adonis* of Thorwaldsen, and a bust of the king by the same artist.

The *Leuchtenberg* gallery, formed by the late Prince Eugene Beauharnois, comprises a choice, though not very extensive collection, including, among other *chefs d'œuvre*, Murillo's famous *Virgin and Child*, with several cabinet pictures, by Raphael, Vandyck, Rembrandt, and Velasquez, with numerous works of modern French artists, and a few sculptures by Canova. The present king of Bavaria is certainly a liberal, and perhaps, also, a judicious patron of art; and nowhere is the modern German school of painting to be seen to greater advantage than in Munich. Several artists are kept in the king's employ, and an Academy of Arts has a triennial exhibition, supported by government, with salaried professors and pensioned students. This exhibition is encouraged and, in part, supported by a society which devotes annually about 8,000 fl. to the purchase of modern pictures. Munich was the birth-place of Sennefelder, the inventor of lithography; and it has many eminent professors of that art, who have transferred to stone some of the most celebrated works of the *Pinacotheca* and *Glyptotheca*.

The University of Munich, originally founded at In-

erected in 1475, and removed thither in 1519, is the principal school of learning in Bavaria. It comprises 20 professors of four different faculties, with 1,000 students, almost exclusively Bavarians, besides a library of about 10,000 vols. Philosophical and theological seminaries, as well as two gymnasia, are attached to the university, and the town has polytechnic, central, and subscription schools. But however high the celebrity of Munich as respects music and the fine arts, the celebrity of the town is fatal to the progress of literature, and to all the higher branches of philosophy. The royal library, lately removed to a noble building of great length, and 3 stories in height, is equalled only by that of Paris, the best authorities estimating its contents at 500,000 printed books and 16,000 MSS. The reading room is open for 800 hours during three days of the week, but the books may only be withdrawn from the building. The collection of engravings amounts to 50,000, and there are about 10,000 Greek and Roman coins. The museum of natural history is small and poor, containing but few specimens of foreign plants or animals and the Brazilian collection, made by Spix and Martius during their travels in S. America, though originally good and well preserved, has been so much neglected as to be unworthy of notice. Munich has no very important manufactures, but comprises establishments for bronze casting, iron-works, sugar-refining, silk throwing, mills, and tobacco manufactures. Its telegraphs are highly celebrated, and its porcelain is exported, like that of Dresden, to different parts of Europe. The last branch of industry is under royal patronage and is carried on in a large establishment at Nymphenburg, about 3 m. distant, where also is a handsome palace of the king, with parks, menageries, &c., completed at the end of the 17th century.

Munich owes its present distinguished position, as the Athens of S. Germany, principally to the patronage and encouragement of the late monarch. It is very doubtful, however, whether he deserves any considerable portion of the praise that has been lavished upon him on this account. On the contrary, those who are best acquainted with Bavaria affirm that the embellishment of the capital has been effected at the expense and injury of the rest of the kingdom; and that the vast sums lavished on buildings and pictures would have been far better expended on the improvement of roads, and such like public works.

The immediate environs of Munich abound in towers and gardens, which are the favorite resort of the middle classes. Few is the favorite beverage, and visitors are detained for 6 or 8 hours, without intoxication. The

same name, *cap. Canas*, is in a fertile valley, about 600 m. N. E. Calcutta; lat. 24° 30' N., long. 94° 30' E.

MUNSTER, a city of the Prussian states, *cap. prov. Westphalia*, and of a reg. and *chief* of the same name on the Aa, a tributary of the Rhine. Pop. 1828, 19,700. It is a pretty well built, to the east of a B. C. archbishop, of the government, and of the tribunal of appeal for the prov. It has a seminary or college for the instruction of Catholics in theology, a gymnasium, a veterinary school, a botanical garden, and a public library. Principal public buildings, the cathedral, the church of St. Lambert, and the episcopal palace, now occupied by the governor. Münster has manufactures of woollen stuffs and starch, with tanneries and breweries, and a considerable manufacture in the products of these and linen fabrics, hams, and other Westphalian produce. It is united by canals with the Rhine, and also with the Varre flowing into the Euphrate. The treaty of Westphalia was signed in the town-house, in 1648. The famous (Anabaptist) sect, named John of Leyden, the leader of the Anabaptists, made himself master of this place in 1534, but the town being subsequently taken by the bishop, John of Leyden and two of his accomplices were put to death, after being confined for a while in iron cages still preserved in the church of St. Lambert. (*Argens, &c.*)

Munster, one of the 4 great provinces into which Ireland is divided, comprising the S. W. portion of the island, and the *cos* of Clare, Kerry, Limerick, Cork, Tipperary and Waterford. (*See IRELAND*.)

MURCIA, a prov., and formerly a bishopric in the S. E. of Spain, between lat. 37° 30' and 39° 30' N., and long. 0° 00' and 0° 30' W., bounded N. and N. W. by Castile, E. by Valencia, S. by the Mediterranean, and W. by Andalusia. Greatest length, 140 m.; its breadth, 110 m. Area, about 5,000 sq. m. Pop., in 1828, 174,216. It is intersected by numerous ranges of mountains separated by extensive valleys formed by the Segura and its tributaries. The Sierra Segura and Sierra de las Utrillas rise to the eastward, and a chain of mountains runs northward from Carthagena, the highest point in the province being the Sierra de las Utrillas, which rises 5,000 ft. above the sea. The mountains are chiefly of limestone, interspersed here and there with other formations. Lead and copper abound, but no mines are wrought. The climate on the sea-coast, and among the mountains, is temperate and delightful, but oppressively hot in the plains. The heat in summer occasionally rises above 100° Fahr. in the shade, and the winters are so mild, that frost is almost unknown. Rain seldom falls, and the sky is usually as clear and blue as to have caused Murcia to be called *ciudad de eterna primavera*. The soil, except on the banks of the Segura, is sandy, dry, and unproductive, above two thirds of the surface is incapable of cultivation, and only about one half is fit even for pasture. Indeed Murcia is one of the most barren districts in Spain. The Segura, however, which flows into the Segura, is extremely fertile, producing rich crops of wheat, barley, rye, rice, maize, vegetables and fruit, particularly oranges, lemons, pomegranates, and melons. Mulberry and olive trees are found in great quantities, and evergreen oaks, as well as pines, clothe the sides of the mountains. Silk and oil are extensively produced, with smaller quantities of saffron and wine.

The *carpa* reed grows luxuriantly in the neighbourhood of Carthagena, and with barilla, forms a considerable article of trade. The cattle of Murcia are not numerous, consisting principally of sheep and goats, with only a few horned cattle. The pigs owing to the abundance of oaks, are almost equal to those of Valencia. Game is abundant, and the coast swarms with a variety of fishes. Wolves, foxes, and wild boar, inhabit the mountains. The manufactures are unimportant, being principally limited to the production of coarse woollen, silk stuffs, and earthenware and soap. Carthagena, its only port, has a considerable export trade in culinary, soap, ribbons, wine, soda, barilla, and saffron, but the roads of the interior are so bad as almost to prevent intercourse. Three large fairs are held in Sept. at Murcia, Lorca, and Alcaraz. The *tabaco* are protected even in Spain, for price, quality and quantity. Except at Carthagena, the principal industry of which are of French, English, or Italian descent, all classes lead a dull monotonous life, spending their time either in eating and smoking or else in total inactivity. Agriculture is pursued only from necessity, commerce languishes, and education and science are at the lowest ebb.

Murcia was the part of Spain first conquered by the Carthaginians, who founded Nova Carthago about 380 B.C. The country passed, with the rest of the peninsula, into the hands successively of the Romans, Goths, and Moors, the last of whom invaded it in the beginning of the 8th century. It formed a part of the caliphate of Cordova till 1144, when it was annexed to the kingdom of Granada, to which it belonged down to 1309, when it was taken by Alonso X. of Castile, and has since formed one of the provs. of Christian Spain. (*Milano; Hist. Trav.; Jutth, II. 110-111*)

Munich was founded by Henry, Duke of Saxony and Bavaria, in 919, on a site belonging to the monks of Schindling, from whom it takes its name. Otto IV. quailed it with walls in 1187, and in 1698 it surrendered to the Swedes and German Protestants, under Gustavus Adolphus. In the war of 1704, between the Austrians and Bavarians, it fell into the hands of the former after the battle of Blenheim, and it shared also the vicissitudes of the war of 1748, when the elector made his unsuccessful attempt to attain the imperial crown. In 1798 the French army, under Moreau, approached Munich, and obliged the elector to make a separate treaty. The French again occupied Bavaria in 1805, and from the battle of Dinkelsbühl till 1813 the country remained in alliance with France. (*Murray's Handbook for South Germany, pp. 37-40; Stray's Germany, II. 120-121; Germany and the Germans, II. 215-216; Argens, Schöner, Negersdorf, &c.*)

MUNNEEPOOR, an indep. state of India beyond the Brahmaputra. (*See CANAR.*) The small town of

MURCIA, a city of Spain, cap. of the above prov., on the N. bank of the Segura (crossed here by a "magnificent" stone bridge of 2 arches), 31 m. N.N.W. Carthage, and 250 m. S.E. Madrid, lat. 38° N. and long. 1° 14' W.; pop., acc. to Miffano, 35,390. It is situated in a vale which for beauty and fertility equals any part of Spain. It was formerly fortified, but is now open on every side, and has narrow though clean streets, lined with mean houses, sometimes ornamented with grotesque carved-work. Gardens often skirt the streets, as in Seville, and the walls in many parts are overtopped by the heavily laden orange trees and branching palms. There are 4 considerable squares, the largest of which is used for a bull-ring; the principal public buildings are the cathedral, 11 par. churches, the bishop's palace, 5 colleges, a town-hall, custom-house, and hospital. The cathedral is of mixed architecture, with a Corinthian portico and Gothic dome. It formerly possessed great riches in plate and jewellery; but these were abstracted during the late war, and it has now only a few pictures. The chief object of attraction at present is its tower, 260 ft. high, which, like that of Seville, may be ascended by a spiral walk or inclined plane, accessible even to horsemen. In the *Plaza real* is a fine marble column, formerly surmounted by a statue of Ferdinand V.; and there are four public walks, one of which is formed by a mole or quay skirting the river. The botanic garden is small and ill-arranged. The silk manufacture of Murcia, which once employed some thousand hands, now requires only 400. The silk is prepared by hand labour, and cannot therefore come into competition with that of Valencia, which is for the most part produced by machinery. Considerable quantities of coarse cloth are made for the supply of the poor; and there is a manufactory of saltpetre farmed by government to a company, which makes about 1,200 arrobas yearly—only one tenth of the quantity produced at the close of the last century. About 3 m. from the city is a gunpowder mill, bound to furnish government with 60,000 arrobas a year; but the quantity produced seldom exceeds 32,000 arrobas a year. Most of the inhabs. are supported by agriculture: the land in the vale of Murcia produces two crops a year—wheat and lentils, wheat and maize, or wheat and beans—and may be estimated to return about 5 per cent. to a purchaser. (*Inglis*, li. 214.) Provisions, owing to a heavy market-duty, are somewhat dearer than at Malaga and Seville. The price of labour is from 4 to 5 reals a day: female servants receive a dollar per month, and men from 1½ to 2 dollars.

Murcia is very ill provided with accommodation for travellers. Miffano mentions sixteen *posadas* or inns; but they are little better than wretched pot-houses, kept by *gitanos* or gypsies, a race very thickly scattered over all the S. provs. of Spain, and following the trade of a butcher, tinker, or low innkeeper. The inhab. of the cap. are equally sluggish, gloomy, and reserved, with those in the rest of the province. The African character is more strongly marked in them than in other Spaniards; and the cast of countenance is, in general, very different from that of the Andalusian Moors. (*Townsend*, iii. 152–159.; *Cook's Sketches in Spain*, i. 35.)

Murcia was little known before the invasion of the Moors, when it was besieged and taken, A. D. 714. It was subject to the caliphate of Cordova from 756 to 1144, when it was annexed to the new Moorish kingdom of Granada. In 1221 it again became subject to Cordova; and, on the dismemberment of that caliphate, was made the cap. of a separate kingdom by Húbiei, from whom it was taken in 1266 by Alonso X. of Castile; since which time it has remained in the hands of the Christians.

MURVIEDRO (*Muri veteres*, but more an. *Saguntum*), a town of Spain, highly interesting on account of its Roman antiquities, prov. Valencia, on the Canates, about 3½ m. from the Mediterranean, and 15 m. N.N.E. Valencia. Pop., acc. to Miffano, 6,273. It stands at the foot of a mountain of black marble, and at the N.E. extremity of a large and well irrigated plain; has long, tortuous, narrow streets, and is surrounded by walls flanked with small towers. The houses in the interior have a mean and gloomy appearance; but the suburbs are more airy and agreeable, and perfectly level. Two churches, three old convents, and a governor's palace are its only public buildings. Murviedro formerly exported considerable quantities of brandy; but its chief dependence, at present, is on the export of the oil, wine, wheat, barley, carobs, and fruit, grown in the adjacent district, sent coastwise to Valencia, and other ports of the Mediterranean.

"Murviedro," says Mr. Swinburne, "seems to occupy the same ground as the ancient Roman city; but, in all probability, the Saguntum of Hannibal was built on the summit of the hill. That the Romans, also, had a fortress on the top is clear, from the large stones and regular masonry on which the Saracens afterwards erected their castle. Half way up the rock are the ruins of the theatre, forming an exact semicircle, about 82 yards in diameter,

from outside to outside: the length of the orchestra, or inner diameter, is 24 ft. The seats for the audience, the staircases, and passages of communication, the vomitoria, and the arched porticos, are still easily traced. The back part rests against the hill, and some of the galleries are cut out of the rock. Two walls, going off at an angle, serve to turn off the rain water that washes down from the cliff behind. As the spectators faced the N. and E., and were sheltered from the W. and S., nothing could be more agreeable in this climate than such a place of entertainment, open to every pleasant and salubrious breeze, and defended from all winds that might bring them heat or noxious vapours. It is computed that 9,000 persons might be present, without inconvenience, at the exhibitions in this theatre." An attempt was made, at the close of the last century, to repair this noble structure; and, in 1796, a Spanish comedy was represented within its walls; but the plan was never carried into execution. The remains of a circus, also, are still discoverable in the orchards outside the town. It extended to a small river, the bed of which only remains, and which was the chord of the segment formed by the circus. When the Saguntines exhibited their mock sea-fights, called *naumachia*, this bed was undoubtedly filled from the neighbouring canals which still exist. A mosaic pavement, 24 ft. in length and 14 ft. wide, in a very perfect state of preservation, was discovered in 1755, at the entrance of the town; and Ferdinand VI. ordered it to be inclosed, but his orders were not carried into effect, and it was, consequently, soon despoiled. Its fragments may still be seen in several houses of Murviedro. "Indeed," says M. Bourgoing, "the city is full of the remains of its antiquity: the walls of the houses, the city gates, and the doors of the churches and inns, are covered with Roman inscriptions."

The ground occupied by the convent of the Trinitarians was formerly the site of a temple dedicated to Diana. A part of the materials served to build the church, and the rest were sold to build *San Miguel de los Reyes*, near Valencia. The castle on the top of the hill presents some interesting remains of Moorish architecture; the fortifications divide the hill into several courts, with double and triple walls, erected on huge masses of rock, laid in regular courses by the Romans. (*Swinburne; Fischer's Valencia*, p. 144.; *Mod. Trav.* i. 288.)

The prevalent opinion seems to be that Saguntum was originally founded by colonists from Zacynthus, who were afterwards joined by Rutuli from Ardea. (*Strabo*, lib. iii.; *Silius Italicus*, li. 603.) It appears to have early attained to great wealth and distinction; and being zealously attached to the Romans, it became an object of hostility to the Carthaginians. It was besieged by Hannibal previously to his invasion of Italy; but the strength of the city, and the determined bravery of the inhab., baffled for nearly 8 months all the efforts of this great general to effect its subjugation. At length, however, it fell into his hands, anno 219 B.C., the inhab. being in part put to the sword and in part sold as slaves. They had previously thrown a great part of their wealth into the flames; but the booty was still ample enough to enable Hannibal to reward the valour and devotion of his soldiers, and to facilitate his designs against Italy. (*Polyb.* lib. iii.; *Livy*, lib. xxxi. cap. 9.) Having been rebuilt by the Romans, it was afterwards famed for its porcelain, mentioned by Martial (xiv. epig. 108.).

"Sume Saguntino pocula ficta luteo."

MUSCAT, a city and sea-port on the E. side of Arabia, prov. Oman, of which it is the cap., about 96 m. N.W. Cape Ras-el-had, lat. 33° 38' N., long. 58° 37' 30" E. Pop., estimated by Fraser at from 10,000 to 12,000, of whom 1,000 are Hindoos, from Sind, &c.; and the rest a mixed race, the descendants of Arabs, Persians, Kurds, Afghans, Belooches, settled here for the purposes of commerce. The town is situated at the S. extremity of a small cove, shaped like a horse-shoe; and on either side hills, lined with foris, rise almost perpendicularly 300 ft. from the sea. It is built on a slope, rising gradually from the water, which nearly washes the bases of the houses. On this side it has no defence; but the other sides are protected by a wall 14 ft. high, with a dry ditch. Its mosques, minarets, and white terraced houses give it an imposing aspect when seen from a distance; but, on entering, narrow crowded streets, and filthy bazaars, wretched huts, paltry houses, and other tenements more than half fallen to decay, meet the eye in every direction. It has, however, some substantial and even handsome houses; the palace of the Imaum, those belonging to his mother, the governor's, and several others being of the latter description: their form differs considerably from what is usually seen in the towns of Yemen and the Hedjaz, partaking more of the Persian than Arabian style of architecture. Muscat is supplied with water by means of a deep and strongly guarded well, from which a newly constructed aqueduct conveys it to tanks in the different quarters. During July and August it is excessively hot; and the fevers

(The products are essentially raw) in Suriname. The country is in immediate vicinity to extremely fertile, but is improving at a moderate rate. Dates and wheat are the principal articles of produce, the former being sold at high estimation, and largely exported directly to India. A date tree is valued at from 7 to 10 dollars, and its annual produce from 1 to 1 1/2 dollars. The value of wheat is measured by the bushel of six from one, and grain within the property.

Moment to a place of considerable importance, being on the way to, and commanding the route of, the Porcine Group. The destruction of the timber are very extensive and the government is more than equal and intelligent than any other in Arabia or Persia. He has some large cities of war, and his subjects have some of the finest warlike music to be met with in the Indian

Shutes. The temperature of water in, steam, supplied on to a limited extent and there are brick works, a pottery, extensive breweries and distilleries, tanneries and saw-mills. Pikes run along with Newmarket in the parish of North Lath, virtually monopolizing the supply of Edinburgh with hardware and other wares and a branch of the Edinburgh and Dalkeith railroad has its depot at Pikes row. The country all round the hill surrounds the road, which, by means of the railroad, is conveyed to Edinburgh and by another branch of the entire railroad is taken to Lath for consumption and export. There are two tanks in the town. The highest being at two miles. The exports are coal, spirits, oil, and farm produce.

The schools are numerous and efficient. Chief among them is a library of English and other works, situated at Manchester, and New Union, the residence of Lord Hasting, the principal and authority is within 400 of the town. Poor rates have been reduced, average annual amount, £100. In addition to the parish church, it has a grand new church and chapel belonging to the Episcopalian, Associate Synod, Baptist, and Independent.

The chapel of Laverne, on the E. of the town, with, before the reformation, a place of great importance, pilgrimages were often made to it and in 1880 James V. performed a pilgrimage thither on foot. About 4 m. S. of Platts Haven was fought on the 10th Sept. 1647 the battle of Platts in which the English under the Duke of Somerset totally defeated the Scotch. The battle of Preston Pass, on 31st Sept. 1768 between the forces of Charles Edward and the royal army took place in this neighbourhood, when the latter were completely defeated.

[illegible]

VIKORE Madachauri, a pair of 2 Hindustani, forming a state auxiliary to the British, between lat. 11° 30' and 10° 30' and long 74° 00' and 70° 00' E., almost entirely surrounded by the territory of the British presidency. Its shape is nearly rhomboidal, greatest length N. to S. 80 m. by an extreme breadth of about the same. Area, estimated at 10° 00' sq. m., and pop. at about 1,500,000. The whole territory consists of a table land enclosed on the E. W. and S. by the Ghats, and varying from 1,000 to 1,500 ft. in elevation above the sea, with a gentle slope towards the N. The Rannaghatting, Pungar, Lohit, Caturan, &c. all rise within this part, which has, however, no river of much size. The climate is one of the most salubrious within the tropics; the air is temperate and breezy and the damaging rains, which prevail on either side between the Ghats, are here unknown. The soil, which is mostly of the red and black volcanic variety to the Deccan, is continually enriched by refreshing showers, and produces not only most of the grains and vegetables of other parts of India, but also many of the fruits of Europe. Extensive tracts are overgrown with jungle, especially of the dense palm, and from the remains of forests, &c. the tree appears in a remote period to have been in a much higher state of cultivation than at present, though it has recovered to a great extent, from the previous devastations, since the period of peace, commencing with the present century. Rice, sugarcane, sugar, coffee, betel, and cotton oil, and gum nuts, are the principal articles of produce. Though an inland country the rivers pass in almost everywhere abundant, great quantities of salt and soda efflorescing on the soil. Almost every species of fish is raised, both for smoking and for its food. Potatoes are grown, and exported to Madras and elsewhere. Tobacco is of inferior quality and is not much cultivated. From the great imperfection of agricultural implements, and the inferiority of the soil, the fields are very imperfectly ploughed, but the soil is in many parts extremely productive with the aid of manure. The villages of the presidency are, on the whole, poorer and more numerous than in most parts of India. They are almost universally constructed of the red soil of the country and roofed with that; nor are the best habitations of different materials, as elsewhere distinguished from the rest, thus by their size and from being whitewashed. The houses are nearly all Hindoos.

The Mysore dominions are subdivided into three great districts: central, western, Mysore, the city, Bangalore and Chittidurg. The government is nominally in the hands of a native prince but actually vested in the British resident at Mysore, appointed under the British presidency. The subsidiary armed force furnished by Mysore to the British government is estimated, but may be estimated at 4,000 men. The present dynasty of the Mysore sovereigns are supposed to have originally emigrated to this province from Orissa, but no authentic

11

CONCLUSIONS AND FUTURE RESEARCH

In the magazines of Mexico may be found every species of produce imported into or exported from the Pacific Gulf. Various articles are also imported for the use of the manufacturing industry and for the internal consumption of Mexico. Among them, the principal are rice, sugar, molasses from Mexico, cotton and cotton cloth, muslin, wool, wool for building, clover from Longworth, dates from Sanjuria and Sonora, &c. Payments for these are chiefly made in specie and goods, but they also export drugs of various descriptions, very good, hides, coffee, feathers, wax, a sort of cotton yarn, cotton manufactures, to Tampico, &c. &c. in animal products called *huastec* and a few other articles.

The markets of Saigon are abundantly supplied with all sorts of provisions. Beef, mutton, and vegetables of good quality may be had at all times, and reasonably cheap. The bay liberally returns with the greatest variety of marine productions (fish). Water is excellent, and is conveyed to the beach in such a manner that the cabin of a vessel may be filled in her berth while at anchor. Firewood is also abundant, and is cheaper than at Saigong.

Indians pay a duty of 2¢ per cord on imports and exports, and all other nations pay 5¢ per cord.

Students think that Huxton occupies the site of the Monks of Artois and other French others. Foreign on October 5, 71 and April 1780, a newspaper which came to be confirmed, not merely by the resemblance of the names, but also by the terms applied by Artois to Huxton being sufficiently descriptive of Huxton, and at the point is indicated on all sides by water. It was now generally almost the same appearance as in antiquity. In Vienna, however, though he speaks confidently on the subject, is inclined to place Huxton to the east of Cape Bonaparte (Comoros) and forgetful of the Artois is 114-117. For further particulars, besides the authorities above referred to, see Hamilton's *New Account of the East Indies*, 3. 66. *Primer's Journey to Siam*, pp. 6-10. *Mitford's Greek Com.*, p. 1. The last-mentioned place is that of Artoisville's Church of the French Coast.

THE GREAT BRIDGE, a part low and market and an
part low of London, on Mid Lothian on level ground
on the mouth of the Firth in the Firth of Forth. On it
Edinburgh. Pop. of part but in 1881 6,118. It is well
built the main street runs nearly N and S with a
slight curvature parallel to the bay and a few a good
many subsidiary streets. It has northern views, which
is accounted for by its vicinity to Edinburgh and a
suburb. Fisher row which contains many modern
buildings and new streets is separated from Market
Square property owned by the Edb. the common-sense
between them being kept up by means of a screen and
stone bridge one of the latter being old and iron used.
The other main bridge is a modern and handsome one
built after a design by Robert. The only one in build-
ings are a good, an ancient one surrounded by a spine
and the parish church of interest in which parish the
town is situated. The tower is an almost unique
one. From the town, is a landscape almost to every
direction. On the shore immediately adjoining the town
on the E are extensive docks or links and some 100
for the Edinburgh race, and for the game of golf, which
is much practiced here.

Minneapolis has two fax-fills, which employ about 150 people, and about 20 centers of call-center and other

surface is generally mountainous and woody, interspersed with occasional tracts of cultivated land. Principal rivers, the Wurdah, Wynegunga, and other tributaries of the Godavery, and the Muhanuddy. The land is assessed on the village system. Wheat, jowaree, and rice; teak and saul timber; cotton, sugar, hemp, tobacco, arrow-root, betel leaf, wild silk, iron, and limestone, are the principal products; some of which are sent in considerable quantities to Bombay, in exchange for European manufactures. Nagpoor had always a large trade with Poonah, though this has very much diminished since the breaking up of the Mahratta empire; and some trade with Benares and Mirzapore, in muslins, brocades, &c. The pop. of the country is nearly all Hindoo, or composed of wild Gond, and other tribes; and very ignorant, the children of only Brahmins and the mercantile classes being educated. The government is better administered than that of the Nizam dom. The revenue, which is estimated at between 46 and 47 lacs rupees a year, is collected under the superintendence of British officers. The rajah furnishes a contingent of at least 1,000 men to the Anglo-Indian army. (*Hamilton's E. I. Gaz.*; *Evid. of Mr. Jenkins in Parl. Rep.*, 1832; *Report*, 1840, &c.)

NAIRN, a small marit. co. of Scotland, on the S. side of the Moray Frith, having N. the sea, E. Moray, and S. and W. Inverness: it also includes the detached district of Ferintosh, in the centre of Inverness. Area, 124,800 acres, of which about a third is supposed to be arable. It is in all respects similar to Moray, with which it is united, under one sheriff. Along the shore it has a belt of low, flat, sandy soil, mostly suitable for the turnip culture, but in parts barren, owing to the sand being dry and movable. The valley watered by the Nairn is generally fertile and well cultivated; but the rest of the co. is mostly rugged and mountainous. The statements as to the size of estates and farms, houses, tillage, stock &c., in the article MORAY, apply equally to this co. Average rent of land, in 1843, 2s. 5d. an acre. Exclusive of the Nairn, it is watered by the Findhorn (*see* Vol. I. p. 837.), and some smaller streams. Except Nairn it has no town of any importance; and it has neither mines nor manufactures. The co., which unites with Moray in sending 1 mem. to the H. of C., had 111 reg. voters in 1849-50: the bor. of Nairn unites with Inverness, &c., in sending another mem. to the H. of C. Nairn is divided into 6 parishes, and had, in 1841, 2,235 inhab. houses, and 9,217 inhab., of whom 4,231 were males, and 4,986 females. Valued rent, 15,162*l.* Scotch: annual value of real property, in 1815, 14,902*l.*

NAIRN, a royal and parl. bor., sea-port, and market-town of Scotland, cap. of the above co., near the mouth of the river of the same name, on the public road between Aberdeen and Inverness, 15½ m. N. E. the latter, and 72 m. N. W. by W. the former. Pop., in 1841, inc. the par., 3,393. The river is here crossed by a substantial bridge, which, however, was greatly injured by the floods of Aug. 1829. "The principal street is tolerably spacious, but all the others are narrow and confined." (*Boundary Report*.) The only public buildings are the court-house, gaol, established church, Free church, two dissenting chapels, and a large inn, built by subscription. The harbour is accessible only for small vessels; and grain, cattle, timber, salmon, herring, and other white fish are exported to London and other markets. Indeed, the fisheries may be said to be the staple branch of industry of the town. The means of education are ample. Here are no fewer than three banks. It joins with Inverness, Forres, and Fortrose in sending a mem. to the H. of C. Registered electors in 1849-50, 94.

Nairn was created a royal bor., by William I., in the 12th century. In the vicinity is Cawdor Castle, once a fortress of great strength, but now a ruin. It gave the title of "Thane" to Macbeth, and Shakespeare has made it the scene of the murder of the "gracious Duncan." It now gives the title of earl to a branch of the Campbells of Argyle. Lord Lovat found refuge in a corner of this fortalice, after the battle of Culloden, in 1746.

NAMUR, (Flem. *Naemen*, Lat. *Namurcum*) a strongly fortified town of Belgium, cap. prov. of same name, on the Meuse and Sambre at their junction, 33½ m. S. W. Liege, and the same distance S. E. Brussels; lat. 50° 28' 30" N., long. 5° 0' 7" E. Pop., in 1846, 22,218. It is surrounded with good walls, and has been considerably strengthened since the last war: it has strong outworks on both sides the Meuse and Sambre, and is further defended by a citadel, erected in 1817, on the elevated site of a former citadel, demolished by Joseph II. It is well built; many of the streets are broad and clean, and the houses are mostly of bluish stone, roofed with tiles. The cathedral, a modern edifice, with a handsome Corinthian portico, and a dome, is principally remarkable for its containing the tomb of Don John of Austria, the conqueror of the Turks, at the famous battle of Lepanto. The church of St. Loup, a richly ornamented building, and that of Notre Dame, with some good sculptures; the new town-hall, several

hospitals, and a theatre are the other principal public edifices. A bridge crosses each river, that over the Meuse having nine arches; a dam has here also been thrown across the Sambre in the view of raising its waters so as to render it navigable; but this design appears to have only partially succeeded. Namur is a bishop's see; the seat of tribunals of primary jurisdiction and commerce, with appeal to the superior courts at Liege, and the residence of the civil governor of the prov., a military commandant, a provincial receiver of taxes, &c. It has an episcopal seminary; an atheneum with a library and cabinets of mineralogy, chemistry, &c.; various public and superior private schools, a society for the benefit of the poorer classes, a deaf and dumb and many other asylums, a *mont de pitié*, founded in 1619, &c. The situation of Namur is favourable for commerce. Its cutlery is much esteemed on the continent, and it has tanneries, potteries, and brass and iron works; but its manufactures are less flourishing than formerly. The coal and iron mines, and marble quarries of its neighbourhood, are, at present, the principal sources of employment and wealth to its inhabs. It has four annual fairs, one of which, beginning on July 2., lasts 15 days.

Namur is supposed to occupy the site of the *Oppidum Aduaticorum*, mentioned by Cæsar. Like other cities in the low countries, it has frequently suffered from the ravages of war. In modern times it has sustained two memorable sieges, one in 1692, when it was taken by Louis XIV.; and the second in 1695, when it was retaken by the Anglo-Dutch under William III. The first is the subject of Boileau's famous ode *Sur la Prise de Namur*. (*Vandermacelen, Dict. de Namur*; *Dict. Géog.*; *Murray's Hand-book*, &c.)

NANCY, a town of France, dép. Meurthe, of which it is the cap., in a fine plain, near the Meurthe, 30 m. S. Metz, and 175 m. E. by S. Paris; lat. 48° 41' 55" N., long. 6° 10' 31" E. Pop., in 1846, ex. comm., 38,569. This is one of the handsomest towns of France. It was formerly surrounded with walls, but these were demolished under Louis XIII. and Louis XIV.; and the citadel is its only existing fortification. It is, however, still entered by several gates, some of which have much beauty. Nancy is divided into the Old and New Town. The first is, in general, irregularly laid out, though it comprises several good streets and squares, many superior private residences, and most of the principal public edifices. Among the latter, are the remains of the palace of the dukes of Lorraine, now converted into a barrack for the gendarmerie; the church of the Cordeliers, a structure of the 15th century, in which are various interesting monuments; the church of St. Epore, and the ducal chapel. The royal court, the tribunal of commerce, and prefecture are in the *Place Carrière*, a square communicating with the *Place Royale*, in the new town, by a noble triumphal arch. The new town, which, however, is as old as 1608, is remarkable for the elegance and regularity of its streets, which mostly intersect each other at right angles. The *Place Royale*, or *Stanislas*, is a square surrounded by edifices, all built on the same plan, comprising the town-hall, the bishop's palace, theatre, &c. Its angles are ornamented with iron gateways and fountains; and in its centre is a bronze statue of Stanislaus, king of Poland and duke of Lorraine, erected by voluntary subscription throughout the duchy, in 1823. Stanislaus, to whom numerous establishments in the town, both scientific and charitable, owe their foundation, is buried, as well as his consort, in the church of *Bon Secours*, which has two marble monuments to their memory. The cathedral is a modern edifice of Corinthian and composite architecture. The remaining principal buildings are the university, with a library of 23,000 vols., the royal college, seminary, civil and military hospitals, a workhouse for the dép. Meurthe, and Vosges, and a house of correction. Nancy is a bishop's see, and the seat of a royal court for the dép. Meurthe, tribunals of original jurisdiction and commerce, a board of taxation, a chamber of manufactures, &c. It has an *académie universitaire*, a royal society of science and literature, a royal school of forest economy, a communal college, Protestant, Jewish, and other schools; manufactures of woollen cloth, hosiery, lace muslins, cotton yarn, liqueurs, chemical products, &c.; with tanneries, dyeing-houses, and refineries of saltpetre for the gunpowder factory at Mentz. Nancy is famous for its shot (*boules vulnérable d'acier*). No record exists of this town previously to the 11th century, but in the 13th it became the cap. of Lorraine. It was twice besieged by Charles the Bold, of Burgundy, who was killed under its walls in 1477. (*Hugo, art. Meurthe*; *Guide du Voyageur en France*, &c.)

NANGASAKI, a large town and sea-port of Japan, on the S. W. side the island of Kiu-siu, and the only place in that empire accessible to Europeans, 600 m. W.S.W. Yedo; lat. 32° 43' 4" N., long. 130° 11' 47" E. Pop. from 60,000 to 70,000. It is situated on the slope of a hill, and, like every other Japanese town, is regularly built, with wide and clean streets. The houses, however, are

low, none containing more than one good story, to which is added in some a sort of cockloft; in others, a low cellar; all are constructed of wood and a mixture of clay and chopped straw; but the walls are coated with a cement that gives them the appearance of stone. The height of the street-front, and even the number of the windows are determined by sumptuary laws. Oiled-paper supplies the place of glass, and the windows are further protected from the weather by external wooden shutters and Venetian blinds: a verandah, into which the different rooms open, runs round the outside of the houses, to which are invariably attached curiously laid out gardens. Large detached fire-proof store-rooms belong to each dwelling, and are so constructed as fully to answer their purpose of preserving the valuables of the inhabs. from the conflagrations so common here and elsewhere in Japan. The chief public buildings are the palaces of the governor and grandes of the empire, some of which cover a considerable extent of ground: there are also in the town and neighbourhood 61 temples, or *yasiro*s, usually on commanding eminences, and enclosed in large gardens, the habitual resort of pleasure parties. These buildings are as plain and little ornamented as the private dwellings, and comprise, also, apartments, which are let out to travellers, or used for banqueting rooms, and other purposes. The tea-houses or bagnios are another favourite resort of the natives; and of these, according to Siebold, there are 750 in Nangasaki. The artificial island of Dezima, to which the Dutch merchants are rigorously confined, is about 600 ft. in length by 240 ft. in breadth, a few yards from the shore, close to which stands the town, connected with it by a stone bridge, closed by a gate and guard-house, constantly occupied by soldiery. Neither Dutch nor Japanese may pass the gate without being searched; the number of European residents is limited to eleven; and the menial service is performed exclusively by Japanese; all of whom, except courtesans, are compelled to leave the island at sunset. From this imprisonment the Dutch are allowed to escape twice or thrice a year, rather to be exhibited to the great as a curiosity than out of indulgence. A corps of constables and interpreters (the latter of whom form a regular guild, receiving salaries from the *jogûn*.) are appointed to watch over their minutest actions; and the most degrading servilities are exacted even from the *opperhoofd*, or president of the mission, by the meanest officers of the Japanese government. As respects trade, the Dutch are placed under restrictions elsewhere unparalleled; but these and other particulars have already been detailed in the general article JAPAN, to which the reader is referred. The harbour of Nangasaki extends N.E. and S.W. about 7 m., being in most places less than a mile in width. Ships lie in 5 or 6 fathoms water within gunshot of the town, and protected from all winds. (Siebold, l. ch. 1, 2.; Crawford's *Hist. of the Indian Archipelago*, iii. 306—308.; *Manners and Customs of the Japanese*, 24—57.)

NANKIN, a city of China, in the district of Kiangning-foo, and prov. Keang-soo, near the S. bank of the Yang-tse-kiang, and about 110 m. from its mouth, lat. 32° 4' N., long. 118° 24' E. Pop. (acc. to Ellis) about 400,000. The walls, which are of limestone, cemented with sun-baked clay, enclose a very irregular triangular area of about 30 sq. m., and this circuit, as measured by the Jesuits, amounts to 57 *lis*, or nearly 20 m., a fact fully proving the absurdity of the Chinese statement that "if two horsemen should go out in the morning at the same gate and ride round in opposite directions, they would not meet before night!" This enclosure, moreover, comprises groves, fields, and even hills, of considerable extent; less than three fourths of it being covered by the town, which is sit. at the S. extremity, and about 6 m. from the river bank. The city has declined much both in size and splendour since the end of the 13th century, when Kublai-Khan removed the imperial residence to Pekin. It now consists of four rather wide and parallel avenues, intersected by 6 or 8 others of less width. The streets are not so broad as those of Pekin, but are, on the whole, handsome, clean, well-paved, and bordered with well-furnished shops. A palace of the emperor which once existed, and many other monuments of grandeur, have now almost disappeared. Nor are the palaces of the mandarins in any respect distinguished from those found in the caps. of other provs. of China; indeed, Nankin possesses no public edifices corresponding to its rank as the second city of the empire, except its famous porcelain tower, belonging to one of the pagodas, several temples, and its gates, some of which are of extreme beauty. The Porcelain tower (called *Paou-gan-see*) "pagoda of gratitude," which is unquestionably finer than any similar structure throughout China, is an octagonal building, each side 15 ft. wide. It consists of 9 equal stories, communicating by a spiral staircase running up the centre of the building, and each comprising one saloon finely painted, gilt, and adorned with idols. The outside wall is white, made of the white

bricks commonly used in China: a kind of carved gallery or verandah, ornamented with lightly-tinkling bells, runs round each story, and the whole is surmounted by a gilt conical roof, the height of which from the base somewhat exceeds 200 ft. It was completed in 1432, at a cost of 400,000 taels. An observatory stands about a league N. ward of the pagoda, but though formerly well provided with instruments, &c., it is now almost in ruins. Nankin has extensive manufactures of satin and crape, the quality of the former, both plain and figured, not being equalled by that of any other city in China. The cotton fabric called Nankin receives its name from this city; but in fact it is made in every part of the prov., and scarcely a cottage can be found where the thrifty housewife has not a loom for weaving Nankin. (*China opened*, i. 79.) The paper of Nankin is highly esteemed; and Indian-ink (as it is called in Europe) is manufactured in large quantities both in the town and neighbourhood, forming an important article of commerce. Nankin is celebrated also for its manufacture of artificial flowers from the pith of a shrub, and so extensive is this branch of industry as to give rise to a large trade. The commerce of the city is very considerable, owing to its position in the centre of the empire, and on the Yang-tse-kiang, which is navigable for small boats to the ports of Soo-cheo-foo and Shang-hae, its great entrepôts for corn, manufactured goods, and other articles. Its communication with Pekin is effected by the imperial canal, which leaves the river about 40 m. below Nankin: the principal traffic with the cap. is during April and May, when fast boats, which accomplish the distance in about 9 days, are constantly employed in exporting to the imperial court the produce of the Nankin fishery packed in ice. Nankin, according to Du Halde, is not less celebrated for literature than commerce: the arts and sciences are studied there with great diligence, and it furnishes more doctors and mandarins than many towns together; its libraries are also extensive and valuable. The booksellers' shops are well provided with the best native publications, and the editions published here are the most esteemed in the empire.

Nankin, which began to decrease in the time of Kublai-khan, was further diminished by the removal of the 6 great tribunals to Pekin, which caused its name Nankin ("Court of the South") to be changed to Kian-nin in all the public acts: in common usage, however, it retains its old appellation. It is still the residence of one of the great viceroys called *Tsong-tuk*, to whose jurisdiction are committed all the judicial affairs, not only of this prov. but of that also of Kiang-si and Gan-woy. The Manchoo-Tartars have here an extensive military dépôt under a general of their own nation, and their quarters are separated from the rest of the town by a lofty wall. (*Du Halde*, l. 149—151.; *Ellis's Journal of a Miss. to China*, 289—306.; *Ritter's Erdkunde von Asien*, iii. 681—686.; *Gutslaff's China opened*, l. 76—79.; *Private Information*.)

NANTES (an. *Nannetes*, or *Civitas Nannetum*), a large and celebrated commercial city and port of France, dep. Loire-Inférieure, of which it is the cap., on the Loire, where it is joined by the Erdre and Sevre-Nantaise, about 24 m. from its mouth, and 210 m. S.W. Paris; lat. 47° 13' 6" N., long. 1° 32' 44" W. Pop., in 1846 (in. comm.), 88,250. "Nantes is a noble city, and its situation can scarcely be excelled. It stands upon the slopes and summit of a gentle hill, half encircled by the Loire, which is broad, clear, and tolerably rapid; and its beauty is greatly increased by several islets which dot the river exactly opposite to the town, and which are covered with pretty country-houses and gardens." (*Ingis*, p. 338.) The banks of the Erdre too are very agreeable, abounding with chesnut woods, gardens, and country houses. The declivities of the neighbouring hills are in great part covered with vineyards, which add much to the beauty of the scene, though their produce be very inferior. Nantes is built mostly on the N. bank of the Loire, but partly, also, on the islands *Feydeau* and *Gloriette*, in which are some of the handsomest quarters. Both the N. bank and the islands are bordered by fine quays, one of which, *Quai de la Foce*, full half a league in length, is broad, and shaded by fine elms, and bordered with balconied terraces and warehouses. The Quays *des Braces* and *Port Maillard* are also planted with trees, being at once well frequented promenades, and the principal seats of commercial activity.

Nantes was formerly fortified, but its ramparts have been mostly demolished, and it is now an open town communicating with 4 considerable suburbs. Towards the E. end of the city are the *Cours de St. Pierre* and *St. André*, two public walks planted with trees and separated by the square of Louis XVI., in which is a statue of that monarch surmounting a Doric column about 80 ft. in height. These *Cours*, with the *Boulevard*, W. of the Erdre, another fine promenade of the same kind, are on a portion of the site formerly occupied by the fortifications. There are, however, some remains existing of various fortresses erected in the middle ages.

NANTES

In the E. part of the city, skirting the river, is the large and imposing castle of the ancient dukes of Brittany, a mass of irregular buildings, surrounded by thick walls flanked with solid round towers. It was founded in the 10th, but it was not till the 16th, century, that it became a place of any great strength. It is now chiefly dismantled, and is the residence of the military governor, and a powder-magazine. Between the Erdre and Loire are some remains of the Chateau de Bouffay, a structure also dating from the 10th century, consisting of some lofty walls surrounding a polygonal tower, and on the bank of the Loire are the ruins of the Tour de Pirmin, erected in 1369. The city is, in general, regularly laid out, and well built and paved. Most of its houses are of stone rooled with slate. There are between 30 and 40 squares, or rather open spaces, the principal of which, the *Place Royale*, is surrounded by handsome shops, and, together with the *quartiers Gracien and Feytaud*, may be compared with the best parts of the capital.

The different parts of the city communicate by numerous bridges, several of which are handsome, and one, the *Pont de Fermat*, 377 yards in length, has 16 arches. The cathedral, though not imposing either without or within, has a front ornamented with good though mutilated sculptures, and flanked by two towers. The interior is a magnificent *basilique*. In the last decade of that particular notice. The Prefecture. It was ere was formerly appropriate has two noble fronts of and several large halls partly used as the archives. The exchange, constructed chiefly with stone, is the *Place Grise* handsomest provincial theatre in France, after those of Bordeaux and Dijon. The town-hall was commenced in 1607, since which it has received several additions. It has three façades, ornamented with Corinthian pilasters, and over its principal front are sculptured figures, emblematical of the Loire and Sèvre. The remaining public buildings include the mint, corn exchange, and linen hall; the *Hôtel Dieu*, on the late *Gloriette*, erected in 1646, with 670 beds; the *Hospice du Sacriste*, or general infirmary and asylum, with 800 beds; the Hospital of Insane, the Protestant church, formerly that of the Carmelites, mansion-house, chapter-house, the large prison, public slaughter-house, barracks, college; the museum, with an excellent mineralogical collection; the *Salpêtrerie*, a general depot for merchandise, &c.

Mantes is a bishop's see, the cap. of the 12th military division of the kingdom, the seat of a Lutheran consistory, of tribunals of primary jurisdiction and commerce, a chamber of commerce, &c. and is the residence of the consuls of many foreign powers. It has a royal college, an anatomical society, 3 episcopal seminaries, a public library with 20,000 printed vols. and many valuable MSS., collections of engravings, paintings, and an observatory, and botanic garden, schools of navigation, medicine, drawing, riding, &c., maternity and Protestant Bible societies, a savings' bank, a *casa de pié*, and a maritime insurance office. The bank of Nantes has a capital of

ments, and ship-yards for the construction of merchant-ships, corvettes, and smaller vessels.

Nantes was formerly famous for her quick sailing vessels; but this is not the case at present, and more ships are now built at Bordeaux. At Indret, near Nantes, on an island towards the mouth of the Loire, the French government has lately founded an establishment for building steam-boats. In 1840, there were here 8 ships, on some of which, steam-boats of from 100 to 220 tons each were in course of being built; the establishment employed altogether 900 workmen, and 4 marine engineers; and a sum of 2,000,000 fr. was

NANTUCKET.

1999

voted by the legislature for its maintenance. (Pott, &c. of France, p. 182.) Large naval storehouses are established at Nantes, from which Brest, L'Orient, and Rochfort receive supplies both of provisions and ammunition. Previously to the revolution, the foreign trade of Nantes was much larger than at present, and during the time that the slave-trade was carried on, Nantes was more extensively engaged in it than any other French port. New Marseilles and Havre both rank above her as commercial cities, but she is still theemporium of all the rich and extensive country traversed by the Loire, and has a considerable import and export trade, particularly with the French W. India, S. America, and the different parts of Europe. The exports comprise all sorts of French produce, but principally brandy, wine, and vinegar, silk, woollens, and linen goods, refined sugar, wheat, rye, ship-biscuits, &c. The chief imports are sugar, coffee, and other colonial products, cotton, indigo, timber, hemp, &c. Nantes is likewise a considerable entrepot for the commerce of the salt made in the dep. chiefly at Mellemeunier and Craie. (See LOIRE INFÉRIEURE.) The customs' duties amount to about 15,000,000 fr. a year.

Subjoined is a statement of the French and foreign ships that entered and cleared from the port in 1938, specifying the departments in which the French ships were entered, and the number in each.

Branch of Trade.	Export.		Import.	
	Ships.	Tonn.	Ships.	Tonn.
French ships in foreign trade	241	21,200	129	10,577

Of the vessels engaged in the fisheries 10 come from the banks of Newfoundland, laden with 15,000 cwt. of cod-fish and 200 cwts. of oil. 2 whales brought in, during the same year, 12,000 cwt. of whale-oil, and 300 cwts. of whalebone. The pilchard fishery is also carried on with great activity; and employs, in the season, 700 boats, manned by about 3,000 seamen. Nantes has 2 weekly markets, and 12 yearly fairs, one of which, beginning May 25th, lasts 15 days. Living is cheap; and fish of many varieties, as well as the tree fruits of the E. of France, are abundant in the markets. According to Huys, there are annually killed in Nantes 2,700 turkeys, 20,000 calves, 24,300 sheep, and 9,000 hogs.

The site of the foundation of Nantes is unknown; but before the conquest of Gaul by the Romans, it was already a considerable city, and the cap. of the *Nervnates*, who distinguished themselves by their opposition to Julius Cæsar. In 448, it was unsuccessfully besieged by the Huns, and, in the middle of the 9th century, was seized by the Normans. In 991, it was added to the possessions of the dukes of Brittany, with whom it remained down to the union of that kingdom with France, by the marriage of Anne of Brittany to Louis XII. But Nantes is chiefly distinguished in history from the famous edict issued here in 1562 by Henry IV., and hence called the Edict of Nantes, which secured to the Protestants the free exercise of their religion, and an equal claim with the Catholics to all offices and dignities. The revocation of this edict by Louis XIV., in 1685, is the grand blot in his reign; and by occasioning the emigration of great numbers of his most industrious subjects, was even more injurious to the kingdom than the victories of Marlborough and Eugene.

During the revolutionary phrensy, Nantes was the scene of the atrocities of Carrier, the most sanguinary of the republican agents in the reign of terror. Nantes has produced numerous distinguished individuals, including Arnauld, Duke of Brittany; the Egyptian traveller, Cailloud; the physiologist, Lamarck; Fouché, minister of police, &c. Near it is the Château de Buron, celebrated as having been long occupied by Molière de Launay. (*Hugo, art. Letra-Inferiores; Guide du Voyageur en France; Paris. Reports; Commercial Dict., &c.*)

NANTUCKET. an island of the U. S. of America, state Massachusetts, in the Atlantic, 35 m. S.E. the peninsula of Cape Cod, the part of Nantucket, being in lat. 41° 18' N., long 70° 3' W. Pop. in 1901, 2,078. It is of triangular shape, about 15 m. in length, and from 4 to 10 m. broad, with an area of 29,340 acres. The land, which was originally conveyed, in 1659, by the Earl of Stirling to nine proprietors, and by them divided into 25 shares, is a joint-stock property to the present day, but the number of shares has increased to 2,000, held among the inhab., most of whom belong to the Society of

Friends. Little attention, however, is paid to agriculture, and both sheep and cows are fed on common pastures. The pop. is chiefly employed in the whale or other fisheries, and the seamen have acquired great celebrity for their enterprise, skill, and success. In 1838, 13 ships and 3 schooners arrived in port, from the whale-fishery, laden with 21,730 barrels of sperm oil, and 6,200 of whale oil. The town of Nantucket is situated on the arm of a small bay on the N.W. side of the island: it comprises about 750 houses, chiefly of wood, several places of worship, 2 banks, 2 insurance companies, a woollen-cloth manufactory, and 30 spermaceti establishments, employing a capital of 600,000 dollars. Its harbour is nearly landlocked, tolerably deep, and well protected from all winds; a lighthouse stands at its S. extremity. In 1849, the aggregate burden of the vessels, belonging to this port, amounted, according to the official returns, to 30,157 tons, that of the ships engaged in the fishery being estimated at about 25,000. (*Official Reports; Davenport's Gaz.; Encycl. Amer. &c.*)

NANTWICH, a market-town and par. of England, co. Chester, and hund. of its own name, on the Weaver, crossed here by a stone bridge, 17½ m. S.W. Chester, and 146 m. W.N.W. London. Area of par. (comprising 5 townships), 3,490 acres. Pop., in 1841, 5,921: do. of township, 5,489. It is situated in a luxuriant vale near the borders of Staffordshire and Shropshire, is irregularly laid out, and comprises 3 principal streets, badly paved and lined with mean-looking houses, uniting near the church, a very beautiful cruciform building of red sandstone, built in the early English style, and highly ornamental, with an octagonal tower rising from the intersection of the nave and transepts. There are likewise several places of worship for Dissenters, with attached Sunday schools, which, in 1835, furnished instruction to 840 children of both sexes. Two endowed day-schools are attended by about 130 children; and there are several alms-houses, besides minor charities. A market-house and town-hall were built in the last century. Nantwich formerly owed its prosperity to the abundance of its salt springs; but only one spring is now worked, and nearly the whole trade has been removed to other places. Large quantities of excellent cheese are made in the town and its fertile neighbourhood; besides which, the manufacture of shoes for the London market forms an important branch of industry. Cotton goods, also, are made here in considerable quantities; and in 1839 there was a cotton-mill, employing 111 hands. The glove trade is carried on to some extent. Great facilities of intercourse are furnished by the Birmingham and Liverpool, as well as by the Chester and Ellesmere, canals; and the Grand Junction Canal passes at only a few miles' distance. Petty sessions for the hundred are held here; and it is the seat of a county court, before which 698 plaints were entered in 1848. Markets on Saturday; and fairs, May 15., June 13., Sept. 4., and Dec. 4. 18, 19.

Nantwich, mentioned in Domesday simply as "Wich," was the scene, in 1069, of an unsuccessful attempt by the Cheshiremen to resist the advance of the Normans. In 1438 and 1583, the town suffered considerably from fire; and during the parliamentary wars, it was besieged by the royalists under Lord Byron, but soon afterwards relieved by Sir Thomas Fairfax. It also deserves notice, from having been the birthplace of General Harrison, one of the regicides, and of Milton's widow, who died here in 1726.

NAPLES (KINGDOM OF), otherwise called the KINGDOM OF THE TWO SICILIES, a European state of the second class, nearly identical with the *Magna Græcia* of antiquity, comprising the S. portion of Italy, with Sicily and the adjacent islands, included between the 36th and 43d degs. of N. lat., and the 12th and 19th of E. long. It has N. the Papal States, E. the Adriatic, and elsewhere the Mediterranean. Its total area may be estimated at about 42,000 sq. m., and its pop. at about 8,500,000.

The Neapolitan territory is divided into two principal portions, the continental and the insular, the first being called the *Dominij al di qua del Faro* (the country on this side the Faro, or straits of Messina) and the latter, the *Dominij al di là del Faro* (or the country beyond the Faro). The latter portion will be fully treated of under the head SICILY; we have now only to deal with the continental portion, the area, population, subdivisions, &c. of which are as follow:—[See top of next col.]

Physical Geography. The continental part of the kingdom of Naples, the limits of which have scarcely varied for the last 8 centuries, is about 400 m. in length, N.N.W. to S.S.E., and 130 m. in its greatest breadth, from Cape Campanella to the Garganian promontory. Its shape is very irregular; at its S.E. extremity are the two peninsulas of Calabria and Otranto, forming one the foot and the other the heel of the boot which Italy

is supposed to resemble, while to the N.W. of the latter is the conspicuous promontory of Gargano, extending into the Adriatic, representing the spur. On the W. coast also are many promontories and headlands, as those of Sorrento, Gaeta, Balæ, Cape Vaticano, and others, which respectively bound the Bay of Naples, the Gulphs of Gaeta, Salerno, Policastro, Sr. Eufemia, &c. The peninsulas of Calabria and Otranto inclose the extensive Gulph of Taranto, N. and S. of which are the less spacious Gulphs of Manfredonia and Squillace. The coasts are for the most part bold and abrupt, but the W. and S.W. are much more so than the E. and N.E. On either side, however, the kingdom has several good ports.

The surface of Naples, like that of the greater part of Italy, is mountainous, but it contains extensive and beautiful plains and valleys, which under the influence of an invariably mild climate present a luxuriance of vegetation, and a beauty of scenery, hardly to be met with in any other part of Europe. The Apennines traverse the kingdom nearly in its centre from end to end. In the Abruzzi, where they reach their greatest altitude, they consist of three lateral ranges, but these unite near Isernia, and the main chain thence proceeds undivided to Monte Caruso, about 14 m. N. Potenza, where it finally bifurcates, the principal range running through Calabria to its farthest extremity, and a less elevated range through the S. part of Apulia. Many important ramifications are given off by the Apennines, both before and after their bifurcation, as that forming the lofty promontory of Sorrento, that of Gargano, the mountain knot of La Sila in Calabria, &c. The Apennines rise to a much greater elevation in S. than in Central Italy. The *Gran Sasso d'Italia* (M. Corno) in the Abruzzi, reaches the height of 10,185 Eng. ft., and M. Majella, in the same prov., that of 9,325 ft. There are some separate or detached groups of mountains, of which Vesuvius, though not the largest, is by far the most celebrated. It owes this distinction to its situation close to the city of Naples, and still more to its having long been an active and sometimes a most destructive volcano, *Ætnæ ignis imitator*.

The largest of the Neapolitan plains is that of Capitanata, having Foggia in its centre. It is mostly appropriated to pasture, and is in part sandy and arid. (See *anté*, p. 57.) But the most celebrated plain is that of the Terra di Lavoro round Naples, anciently the *Campania Felix*, an epithet to which it is still well entitled. The choicest gifts of nature have been lavished upon this noble plain. It is above 40 m. in length by from 15 m. to 20 m. in breadth, and, excepting Vesuvius and a ridge between Naples and Misenum, it is everywhere a dead level. The soil, which is deep and loamy, is of the most extraordinary fertility, frequently producing two crops in a season. It is carefully, if not skillfully, cultivated; the vegetation is most luxuriant; and being free from malaria, the air mild and genial, and the sky usually clear, it goes far to realise the poetical descriptions of the Elysian fields—*Omnium non modo Italia, sed toto orbe terrarum, pulcherrima Campanie plaga est. Nihil mollius celo: denique bis floribus vernat. Nihil uberius solo: ideo Liberi Cereri certamen dicitur.* (*Florus*, lib. i. cap. 16.; see also *anté*, p. 57.)

The rivers are numerous, but mostly inconsiderable. The principal are the Garigliano (an. *Liris*), and the Volturno flowing through Campania to the Mediterranean, the Pescara, Biferno, Candelaro, Cervaro, Ofanto (an. *Aufidus*), &c. falling into the Adriatic; and the Bradano, Basiento, Crati, &c. which carry their waters to the Gulph of Taranto.

The only lake of any size is that of Celano or Fucino (an. *Fucinus*), in Abruzzo Ultra, 11 m. in length by 7 m. in its greatest breadth, in a basin surrounded by high mountains. This lake receives the waters of several considerable streams, and having no outlet is apt, occasionally, to overspread the surrounding country. To obviate this effect, the Emperor Claudius, in imitation of a similar undertaking at Alban Lake (see Vol. I. 48. of this work), carried an *emissario*, or aqueduct, 3 m. in length, partly by tunnelling and partly by

by proprietors, or by tenants holding under a lease of some years, duration at a fixed rate. The class of farms varies in different districts, and in those where pasture predominates they are sometimes very large. But notwithstanding the progress given to industry of late years, agriculture is still extremely backward. The industry, which are usually involved in debt, are little for agriculture, and their income are mostly without other adequate support or skill. Discharge is some quarters, and migration to others, though of essential importance, are generally neglected, and the sowing of artificial grasses and even the application of manure are comparatively unknown. Farming implements carts, ploughs, and tools of every kind are of the most defective description. *Manure*.—The manure consists of two kinds of grain are wheat, maize or Italian corn, and in the entire abundance, yet in Calabria, and the more distant provinces, grain is thought out by distilling over it, or by trampling it with the feet of horses and men. In many parts few or no ploughs are used in tillage. In the Campagna, the Campania, the soil is so very fertile, that it is easily turned up, even by children and such is its fertility that no fallows are required in its culture and but little manure the growing is of one crop being followed by immediate preparation for another. According to Caltabiano 3 crops are obtained round Naples in 3 years, exclusive of the produce of vines, fruits, and herbs, which grow in the same land without preparation to the next crop. Most parts, instead of the kingdom, except where there is a deficiency of water are extraordinarily fertile, the crops of wheat and barley are especially most abundant and there can be no doubt that with a better and more system of agriculture, the kingdom might afford ample maintenance for 4 or 5 times its present population. But here as elsewhere, the hostility of the soil and the indifference of the rulers contribute with bad government to maintain the situation, and by increasing their waste and draining them to supply them with their own produce that industry and energy that are so necessary to the most fertile provinces. In Calabria, the most fertile, and in a state that in Calabria would be reduced to approach nearly to absolute indigence. But under such a climate and corrupting such a soil, they do not often suffer the extremes of heat. They rarely however partake of any of the enjoyments and luxuries of life, other than those which they share in common with the lower animals. Without education, or the desire of rising in the world, and without any knowledge of the liberal, and but little of the mechanical arts, they pass their days in a state of brutish apathy and indifference.

The state of agriculture, according to Caltabiano, is almost the only part of the kingdom of Naples where agriculture may be said to be steadily and actively carried on. The rotation of crops is there, let peas, maize, &c. wheat, succeeded by beans, &c. cotton, &c. crops, followed by clover, &c. cotton, followed by peas or beans, making 3 crops in 3 years. Next to the above rice, barley, rye, maize, and other bluish vegetation of one crop, the various cultures and fruits of various kinds form the principal products, and much might be produced in quantities at least equal to twice the consumption of the kingdom. The olive is found in all the wet and temperate parts of the country and its culture is widely extended in Apulia, especially a great extent of land is covered with olive-trees, which frequently reach the ordinary size of oaks, and throughout the province of Bari and a part of that of Otranto, a good inch of olive trees the most for 100 to 150, a good deal more the produce of these groves was estimated at 200,000 and 2,500,000 gallons. In Calabria, also, from Squizzo to Ugento, olive groves are great abundance, and the W. shore of the kingdom, from the last named town to Ugento, produces large quantities of oil. The average annual produce of Calabria is estimated at 40,000 casks. The culture of the olive and the propagation of the oil have of late years attracted a great deal more attention than formerly and have been materially improved, and were it not for the anti-commercial policy of the government, might become of vast importance. At an average of the three years ending 1810, the average of olive oil amounted to 2,500,000 casks a year; whereas at an average of the three years ending 1813, the average was 3,000,000 casks a year, or above 500,000 imperial gallons. According to p. 41. Caltabiano is one of the greatest sources in Italy for oil, and that shipped from it is considered equal to that of Corsica or Leghorn, a superiority for which it is mainly indebted to the richness of the soil, whereas in which the oil is purified before being shipped. See Vol. I. p. 376.

The Neapolitan wine are chiefly red, white, and others are of a good flavor, but the principle of the division of labor is very imperfectly understood, and instead of being pursued as a separate branch, requiring the special attention of the husbandman, the culture of the

vine is generally carried on upon the same farm with that of corn, grain, &c. In the Terra del Lavoro and other parts of the country, olive and peaches are also planted in view for the support of the olive, the intermediate spaces being sown with corn, pulses, and other crops. In parts of the Abruzzi however the vines are cut low and used to enclose, as in France, and in the province of Otranto they are cut off to about 8 feet above the ground, which is laid around them with a degree of care by no means general in S. Italy. The stems of Tortosa, Corvara, and other parts of Apulia and Calabria, might become very superior by proper treatment. Large quantities of the produce are obtained, among others in the celebrated *Lucania* (Lucania) wine, which is a red, sparkling wine, to which Lucania owes its name at the royal table of Naples, the quantity grown being small, and principally purchased for the court. On the whole though the wine of Naples is probably superior to those of the rest of Italy, they are very inferior to those of France or Spain, and inferior than with out of Italy, and except the sweet ones are mostly converted into brandy.

Oranges and lemons are grown in large quantities in Capitanata and about Salerno and Reggio, from which latter towns a good many are sent to France and Leghorn, whereas in pretty largely cultivated in Bari and Otranto, and chiefly in Calabria Ultra, the Abruzzi, and Basilicata. But, excepting that and hemp, which are occasionally cultivated, few crops furnish manure for husbandry, though generally speaking being imported from abroad. Lemons are grown in Calabria and the Abruzzi, and about 5,000 casks a year of juice are exported. Manna is a product of some importance in Calabria. It comes from plants that in the bark of the mountain oak (*Quercus ilex*). The product is formed by the insects and the laborers who cut the bark and collect the manna are dispersed with an exception from attending to any other occupation, though they receive only a small pittance, amounting to 3 carlini or about 1/2 the every value of manna they collect. Manna is also produced upon laurel, where, however, about 5 carlini per cask are paid for its collection.

The forests might become an important source of national wealth, but in consequence of the suppression of the feudal system, the sale of manna and other commodities, and the division of the communal property (which the French conquerors were obliged and the ground they occupied was exported to tillage) but, after a few favorable years, the soil was exhausted, and it was further exposed to the ruinous ravages of inundations, which by washing away the soil and manna from the mountain declivities, caused great injury to the lands below. For some reasons, to look a special kind of superintendence over forests, he was appointed, and it was intended to appropriate the ground occupied by woods in villages, except where the site is level and fertile, or under certain other circumstances, either in any property allowed to fall under without proper cultivation. These regulations have checked the destruction of the woods, but their preservation has been even to maintain, for although in many parts of the kingdom there is abundance of timber suitable adapted for ship-building, the waste and want of improvement are so bad that its carriage to the coast would more than cover the cost of importing it into Naples from other countries. And, moreover, government discourages the efforts of individuals to improve the woods by prohibiting the export of timber at the same time that it obliges it to be cut down by laying a heavy duty on the importation of wood.

If we attend to the raising of the stock to cut are estimated to be 2,000,000 head, a great number of which are in the mountains in summer, and the valleys, and the quantity of oil raised is a vast of about 100,000 casks, and which, a few short years ago, was wholly devoted to the

— the kingdom, the villages having, indeed, been prohibited. Under the French government, a law was passed in 1806, which, for a time, completely changed the state of the country. Instead of the ground being farmed exclusively as pasture, a good deal was cultivated, and every one was allowed to apply the land, as he pleased, to pasturage or tillage. But in 1813, this law was repealed, and a new one passed, by the provisions of which, in order to keep up, as it was alleged, the due proportion between pasture and arable land, no one was to use more than 1/2 the part of his land in pasturage of paying a tax of 100, &c. Latterly, however, we believe that this almost unimportant law has been materially modified, in having hitherto been found impossible to enforce its provisions. The herbage cattle are estimated at about 100,000 head, exclusive of about 20,000 head, which wander in large herds over the marshy plains in the N. W. The class are of different breeds, and constant quality, being

used both for the plough and for carts. They are mostly stall-fed, on vine leaves, maize, stubble, &c., except in Apulia, or districts where the pasture lands are very extensive. The horses are but indifferent, but a fine small active breed, with dark frizzled hair, is peculiar to Calabria. Mules and asses are the most common beasts of burden. Hogs and goats are very numerous, the former, which are of a large, dark, hairless breed, wander wild in the forest; the milk of the latter is converted into cheese. The herdsmen throughout the kingdom are principally from the Abruzzi.

Except in the S., where the cottages are sometimes built of stone, it is rare that the agricultural labourers inhabit any thing but wooden huts, roofed with straw or tiles, in which three or four generations often live together. They live almost wholly on vegetable food, and into this, fruits and pulses enter more largely than corn. Their clothes are coarse, and the dress of the shepherds and poorer peasantry consists almost solely of sheep or goat skins, with the hair outside. The wages of an ordinary field labourer may average about 16 grani (or 8d.) a day.

The culture of silk is widely diffused, and it now forms a valuable article of export from the kingdom. The greatest quantity of silk is produced in the provs. of Laversa, Principati, and Calabria, but especially the last. At Reggio, in particular, many families furnish houses expressly for rearing silkworms. The total produce of Naples was estimated, in 1833, at 600,000 lbs., of which 300,000 lbs., worth 1,000,000 ducats, were exported raw and wrought. (*Serristori*, p. 61.) The remainder is consumed in the country. The silk of Calabria is stronger and more compact than that of other parts of the kingdom; a consequence, it is supposed, of the worms being fed with the leaf of the red mulberry peculiar to that prov. Much less attention is, however, paid to the culture of the mulberry, both there and throughout the Neapolitan dom., than in N. Italy. In the vicinity of Naples, where two crops of cocoons are annually collected, the breeders of silkworms are accustomed to buy mulberry leaves at a dear rate, at the same time that they use the poplar as a support for the vines in their farms.

The fisheries rank next to the foregoing branches of industry. The tunny (*Scomber sphyraena*) frequents the W coast in large shoals in the early part of the year,

and forgo at Stilo, comprises nearly all the remaining branches of manufacturing industry. (*Port. Report*, 1840; *Chittenden's Italy*, &c. pp. 107-202; *Van Rensselaer's Italy*, li. 348-354; *Kempster, Sicily, Greece, Switzerland, &c. postm.*)

Commerce. — The extraordinary fertility of her soil, the variety and superior quality of her raw products, and her admirable situation, give Naples the means of carrying on a very advantageous and extensive commerce. But her natural advantages have been, in this respect, all but nullified by the perverse policy of her government. Her oils, silks, sulphur, corn, wines, &c., would all meet with a ready and advantageous sale abroad, provided the manufactured goods and other products which foreigners have to give in exchange for them, were admitted on reasonable terms into the Neapolitan dominions. Such, however, has not been the case, the importation of a great many foreign articles having been prohibited, and those that were admitted having been loaded with oppressive duties. But this was not all; for some of the most important articles of native produce, *inc.* oil, argol, hemp, sulphur, skins, and wool, were subjected, on being exported, to heavy duties. But we are glad to have to say that of late years this *laissez-faire* policy has been considerably modified. The export duty on sulphur wholly ceased in 1840, and the discriminating duty of 80s. a ton on olive oil when exported on foreign bottoms has, also, ceased. Various reductions have been, also, made in the duties on imports; and but for the unfortunate disturbances by which Naples has latterly been agitated, the probability is that other and more considerable commercial reforms would have been effected. The *bonding* of goods is hardly permitted in any part of the kingdom; in other words, most foreign goods must pay duty on being imported, and no part of this duty is remitted, or drawn back, on their being again re-exported.

Under such multiplied difficulties the wonder is, not that the commerce of the country has been confined within comparatively narrow limits, but that it exists, and is so extensive as we find it to be. The great superiority enjoyed by Naples in the production of certain articles, and the wants of the people originating in the low state of manufactures, and the demand for colonial products, spices, dye-stuffs, and other indispensable articles, proved too strong for the anti-commercial policy of the government, and occasioned considerable intercourse with foreigners. No accurate accounts have, however, been published of the quantities and values of the principal articles imported into, and exported from, the Neapolitan dominions; but, according to the information obtained by Mr. Macgregor and others, the value of the exports from the continental portion of the country may be estimated at about 2,000,000*l.*, and that of the imports at about as much. The latter consist of cottons, woollens, linens, and other manufactured goods; sugar, coffee, and other colonial products; spices, dye-stuffs, salted fish, iron and hardware, &c. The exports consist principally of olive oil, silk, flax and hemp, wool, wine, corn, linseed, cream of tartar, rags, macaroni, lamb and kid skins, liquorice, coral, bones, &c. The trade of continental Naples principally centres in the capital; and the reader will find in the following article an account of the principal articles exported from it in 1847.

The principal weights in use are, the lb of 12 *uncie* = 11 oz. avoird., the *romolo* = about 31 oz.; and the *canaro* of 100 *rotoli* = 106½ lbs. avoird. The *tomolo* of corn = 146 Winchester bushels; the *barile* of wine, &c. = 9½ imp. galls; the *salma* of oil = 3½ imp. galls, nearly. The *canne* of 6 palms = 6 ft. 11 in. Eng.; the *salma*, di-

provincial towns, and there are numerous paper-mills.

Naples has manufactures of gloves and straw hats, in imitation of those of Tuscany; and the princes of Salerno and Gerace, with other partners, have established a considerable glass manufactory at Fusillipo. Reggio has manufactures of gloves, waistcoats, and hosiery; and Avellino, of woollen cloth, saungas, and macaroni. Commerce is fused throughout the kingdom for its industry. The establishments in which it is made are on a very small scale. "Great was my surprise," says Mr. Craven, "at finding that the various articles of this nature are all fabricated in detached small workshops, containing little more than a common blacksmith's apparatus, and possessing so contracted an assortment of articles that I could with difficulty obtain a selection of a dozen knives and cut-throats. They all work by commission for dealers in the metropolis and other large towns, with such limited means and capital, that they are entirely incapacitated from executing and maintaining in their laboratories a collection exhibiting anything like variety or choice." (*Excursions in the Abruzzi*, &c. li. 143.) A miserable cotton factory, a sort of government monopoly established at Salerno, some time ago, and the iron mine

vided into 12 *once* = 10.38 Eng. in. The Neapolitan mile of 7,000 palmi = about 1½ Eng. m.; the *maggia* = 73 Eng. acre. Accounts are kept in ducats (3s. 5½d. each) divided into 10 carlini and 100 grani. (*Balbi; Serristori, &c.*)

The Government is a monarchy, hereditary in both the male and female line; and at present in the hands of a branch of the house of Bourbon. The monarchy in respect to the continental portion of the kingdom, was formerly quite unlimited, while Sicily had a parliament of its own. But in 1821 a *consulta* was established for each separate division of the Neapolitan dom.; that for the continental portion consisting of 16 mems., and that for Sicily of 8 mems., appointed by the government from lists of candidates named by the inhabs. of the different provs. Each *consulta* was presided over by a vice-president nominated by the king; and both assemblies frequently meet in one, termed the *consulta generale*, in which a state minister, also appointed by the king, sat as president. In 1837, these *consulte particolari* were permanently amalgamated into one parliament, which sits at Naples. But the functions of this body are of the most restricted description; and, as is truly observed in the "Quadro del Governo," *non v'ha altra suprema autorità legislativa che quella del monarca; essa è assoluta, ed in qualunque modo faccia egli conoscere la sua volontà debbano i sudditi obbedirvi.* The king is, however, assisted by a cabinet of 9 ministers, and a privy council composed principally of noblemen.

Every province is governed by an *intendente* appointed by the king, to whom all the internal administration of the prov. is confided: at the head of every district (*circondario*) is a sub-intendant; and in every commune a syndic or mayor. Each commune has also a body of decurions elected from the heads of families paying taxes of from 12 to 24 ducats a year, according to circumstances, and who consult, under the presidency of the syndic, on the affairs of the commune, fixing the rates, and appointing municipal officers; but their resolutions do not acquire the force of law till they have received the sanction of the *intendente*. Every district has a council of 10 mems.; and in every prov. is a council of from 15 to 20 mems., nominated by the communes, and chosen by the minister of the interior; which council assembles once a year to examine the proposals of the district councils, to draw up, under the direction of the intendant, the projects proposed for the prov., and to examine the provincial accounts, &c. The provincial council must not, however, consult upon any matters but such as are submitted to it; and the entire authority in the prov. remains with the intendant and his council, which consist of from 3 to 5 mems., and is formed after the model of the French *conseil de préfecture*.

Justice is administered in a supreme court of cassation in the capital; high civil courts at Naples, Aquila, Trani, and Catanzaro; civil and criminal courts in the capital of each province, by a judge *d'istruzione* in each district, with authority from the provincial criminal court; and by a *conciliatore* in each commune, who decide in cases to the amount of 6 ducats. In 1834, tribunals of commerce were in operation at Naples, Foggia, and Monteleone. Judges, as well as most other functionaries, usually hold their appointments for 3 years. Trials are public, and the code of laws, as well as the judicial forms, established by the French, have been generally adopted, except that trials by jury are unknown. Some late statistics and details show that the average of persons accused is as 1 to 1,020, and of those convicted as 1 to 1,436 of the pop. Of 5,813 accusations, in a given period, 104 were for offences against religion, 996 for homicide, intentional or otherwise, and 1,703 for violations of property. In Capitanata, 1 in 607 of the pop. was convicted; in Abruzzo Ultra, 1 in 2,611. The proportion of the accused, was 1 in 559 of the rural pop., 1 in 199 of artisans and servants, 1 in 508 of persons occupied in liberal arts, and 1 in 2,819 of landed proprietors. (*Von Raumer's Italy, &c. II. 229-230.*) According to these reports, Capitanata is a province distinguished for crime; and both it and Sannio have been, in fact, noted for brigandage on a large scale. Mr. Craven states, that even the favourite amusements of the children, in some districts in these provinces, consist in mock representations of attacks by brigands on travellers, &c., in which the former invariably gain the advantage. The country bordering on the Papal territories is also infamous for robberies. Under the French, the police was well organised, but it is now extremely corrupt and bad. Popular feeling, in the capital at least, is also generally in favour of an offender.

The established religion is the Rom. Catholic; but the 8 provinces have about 75,000 Greeks, chiefly the descendants of Greek colonists, who settled in S. Italy after the destruction of the Greek empire by the Turks. Jews are few; and there are only about 800 Protestants in the kingdom. In the continental dominions of Naples, there are 20 archbishops and 66 bishops, each of whom receives an income of not less than 2,000 ducats. Ac-

cording to Serristori there were altogether, in 1637, 26,304 secular, and 20,906 regular clergy. Under the French, in 1807, about 250 convents were dissolved, their conventual property sold to pay the creditors of the state, and the monks, &c. allowed only a small stipend annually, which sum was afterwards considerably diminished. But, as already stated, since 1820, every thing has been moving in the contrary direction. Many convents and religious foundations have been restored; many new ecclesiastical fraternities founded; and the Jesuits have been re-established and endowed. According to the *concordat* concluded with the Papal court in 1818, the pope has the sole privilege of confirming the archbishops and bishops of the Neapolitan dominions in their sees, with other important privileges. Still, however, "the Neapolitan government does not allow the publication and application of any Papal rescripts without its own consent, and displays such firmness, nay, sometimes severity, in matters concerning the bishops and clergy, as the court of Rome would scarcely suffer a Protestant sovereign to exercise without reprimand." (*Raumer's Italy, &c. II. 212.*)

Public instruction is in the most miserable state. Popular or elementary instruction is confided to the clergy. The Jesuits have, since their re-establishment in 1822, opened day-schools for the gratis instruction of youth, though they have not yet been allowed to re-open their former colleges for lay-boarders. There are grammar schools, as in other parts of Italy; and some attempts have been made to establish Lancastrian schools in Naples, but they seem to have failed. (*Journal of Educ. v. 25.*) There is, or ought to be, a primary school for boys in every commune; but there are few, if any, primary schools for girls, and seminaries for teachers have only just begun to be established. In some of the provs., scarcely one in 150 or 160 persons learns to read and write.

Naples has a university, with faculties of theology, physics and mathematics, literature, jurisprudence, and medicine, which is attended by about 1,500 students; royal lyceums in Naples, Salerno, Bari, Catanzaro, and Aquila; royal colleges in all the other provincial caps.; and 42 secondary schools; in which, however, little is taught beyond reading and writing, and the mere elements of Latin and Greek. But, with the exception of mathematics, antiquities, and perhaps physic, all the higher branches of science and philosophy are in the most degraded state; and even the fine arts have not escaped the general paralysis.

In 1811, a royal society of science was established in Naples, which has been replaced by the Royal Borbonic Society, with 60 mems. in 3 divisions: many other institutions which were founded by the French have disappeared. In 1834, as many as 30 periodical publications appeared in the kingdom; of these, some that were scientific journals had a high character, but the others were mostly indifferent or worthless. The censorship of the press prevents native talent, if it exist, from distinguishing itself; and the oppressive duties on foreign books hinders the people from acquiring that information from abroad which they cannot obtain at home.

Monti frumentarii are established in the different towns for the relief of the poor, in which contributions of corn are received and distributed to the indigent. The hospitals and other charitable foundations were formerly very rich; but they suffered a good deal from the encroachments on their funds by the French government. Their revenue, however, amounts at present (1840) to about 1,500,000 ducats a year: they are generally managed by the clergy. Prisoners in public gaols are allowed, but not compelled, to work.

But the provision for the poor is certainly inadequate; and owing partly to this, and partly to the defective state of the police, mendicancy is excessively prevalent. Mr. Maclaren says, that in "all the towns and villages near Naples, strangers are besieged with crowds of mendicants, whose importunities know no bounds. To give any thing to the first hire merely excites others to follow you. It is nothing less than a persecution, and is really one of the greatest nuisances a traveller has to endure."

The military force in 1848 amounted to nearly 49,000 men, of whom 32,000 were infantry of the line, 5,000 cavalry, 4,000 artillery and engineers, and 8,000 *gendarmes*. In time of war, the effective force amounts to 64,237 men.

From the completion of the 18th to that of the 25th year every one (with certain exceptions) is liable to the conscription. A law of 1834 fixes the time of service at 5 years in the army and 5 years in the reserve: but gendarmes, artillerymen, and volunteers, serve 8 years without reserve. A provincial militia was instituted in 1818; but it was suppressed 3 years afterwards. The soldiers have, at different times, been employed in useful public works, such as paving the streets, &c.; but it must be added, that the troops are ill paid, and deficient in courage, morale, and most of the qualities that constitute good soldiers. In fact, 25,000 English, French,

by Austrian troops, would suffice to conquer and retain the kingdom. The principal fortresses are Civitella del Tronto, Pescara, Aquila, Gaeta and Capua, all in the N. provs. Manfredonia, Brindisi, and Taranto, are only partially fortified.

The naval force consists of 3 ships of the line, 3 frigates, 3 corvettes, and a number of smaller vessels, mounting altogether 400 guns. There are 3 battalions of marines, 1 of 1000 men each, and 1 of 500 men. The principal dockyard is at Castellammare, in the bay of Naples. (See *Annals*, October, &c.)

The revenues are derived partly from direct and partly from indirect taxes. Of the former the *contribuzione fondiaria*, or land-tax is by far the most important. Previously to the French régime the nobles of the church and the nobility were exempted from direct taxation, but the French made an end of this unjust distinction, and imposed the *contribuzione fondiaria* equally on all descriptions of land, without reference to its proprietors or occupants. The tax was originally fixed at 20 per cent of the rent, and has not since been changed. The other principal sources of revenue are the customs duties, the tolls on articles consumed in the different towns, the salt and tobacco monopolies, lottery &c. The indirect taxes paid by the different districts are levied by companies of the *tabacchi*, who collect them at a certain per centage. We are not sufficiently informed as to the working of this plan to be able to say whether it be an advantage or a disadvantage. We repeat in

History.—As a very early port, most part of the coast of Naples and Sicily were occupied by Greek colonies, the founders of some of the greatest and most flourishing cities of the ancient world. They received from this circumstance the name of *Naples Oversea*. Continental Naples was wholly subjected by the Romans soon after their war with Pyrrhus, and formed a most valuable portion of their empire. In modern times it has undergone many vicissitudes. It was united to Spain in the early part of the 16th century, and continued, as an appanage of that kingdom, to be governed by viceroys sent from Madrid, till the treaty of Utrecht, when it was ceded to Austria. In 1734 it was created into an independent monarchy, under the infant Don Carlos of Spain who took the name of Charles III. It continued under the Bourbon dynasty till 1799 when it was overrun by the French who held it from 1803 till 1815.

These circumstances account in part, at least, for the degraded character of the Neapolitans. Down to the invasion of the French they had groined under a succession of tyrannical or barbaric rulers, and with such a government, and with the feudal system in full vigour, a servile and ignorant nobility, a priesthood always ready to protect and cherish every monarch who had money and power it would have been a miracle had the people not become as worthless, as corrupt, and as degraded as their rulers. Had the government of the French been continued for half a century the regeneration of the country might have been effected. But Naples has again become the prey of foreign and barbarity. And till a new order of things shall be introduced, a vigorous government established, and the oppressive restrictions on foreign trade and on the circulation of banks and papers have been abolished, it would be idle to expect any material improvement in the condition or character of the people.

NAPLES (an. *Parthenope* and *Neapolis*), a famous city and seaport of Italy, cap. of the above kingdom, and the residence of the sovereign, on the W. coast, on the N. side of the bay or gulph of Naples, 118 m. S. E. Rome, in the immediate vicinity of Vesuvius, the lower elevations of which approach to within a mile distance of the city, on the S. E. (See *Port of Naples*). 40° 10' N. long. 14° 10' E. Pop., in 1801 104,710; but, owing to the ravages of cholera in the course of that year, the pop. was reduced, in 1805, to 80,000. It had, however, increased, in 1840, to 403,813, at 400,000 and

troops; and this may be about its present pop. The situation of Naples is one of the finest that can be imagined. Bounded partly on the south by a hill, and partly on the margin of a spacious bay it spreads its buildings along the shore, and covers the sloping eminences and adjacent mountains with its villas and gardens. Its suburbs stretch in a magnificent and lengthened sweep, from Portici on the E. to the promontory of Misenum on the W. The bay is extensive, and presents an almost unvaried succession of picturesque and beautiful scenery. On its N. W. side, the shore of Positano rises in a gentle swell from the surface of the water; while on the S. Vesuvius, with its verdant sides and black smoking summit, towers the prospect the centre contains the city, with its palaces, churches, and gardens, rising one above the other backed by the heights on which are the royal palace of Capo di Monte, the observatory and the Castle of St. Elmo. The view from the city, seawards commands the whole sweep of the bay, bounded on the E. by the promontory of Sorrentum, and having near its mouth the islands of Capri, Ischia, &c. The richness of the atmosphere and the mildness of the climate complete the gratification inspired by the scene and justify the epithet of *emerald* given to the city by the ancients. The city has an oblong form; but when viewed from an elevated position, such as the Carthusian monastery the walls of St. Elmo, or the church of Santa Maria del Porto, it appears triangular, the surrounding country being so studded with houses and villages, that it is impossible to mark the line of separation between the town and the suburbs.

But it is principally in respect of its situation that Naples is superior to most other cities. The streets, indeed, are generally straight and well paved, though without foot-paths, but they are universally narrow and being bordered by lofty houses, have a dark gloomy appearance, that contrasts singularly with the splendour of the surrounding country. The *Strada di Toledo*, the principal street, having at the one end the Piazza di Morosini, and on the other the royal palace, runs N. and S. for about a mile, but it is only from 40 to 60 ft. in width, while the houses on either side are from 5 to 7 stories in height. Few of the other streets are more than 30 ft. in width, and many not more than from 10 to 20 ft. and some still so much. The houses are two-storied, and covered with a kind of stucco made of Pozzuolana mud, which has either insulated or exposure to the atmosphere. Most of them have balconies in front, and these, and the lavatories and stairs, with which the streets are constantly occupied, make them look narrower than they really are. There are several open squares or *larghi*, but they cannot be called squares; but they are very irregular both in aspect and plan. The principal are the *Largo di Castello*, the *Largo di Palazzo*, and the *Piazza di Morosini*. Some of the *larghi* are decorated with fountains and obelisks; and the city is, on the whole, pretty well supplied with water.

The houses in Naples bear no analogy to those in London, but correspond pretty closely to those of Paris, except that they are generally on a larger scale. "You see," says Mr. Macdonald, "a vast town, with a front as long as that of Edinburgh College; but two stories higher—a grand tower, as large as the college gate, and decorated, too, with columns. This porch opens into a court as long as the building, but perhaps only 30 or 40 ft. wide. The town, in fact, forms a parallelogram, built all round the court, with wide apartment stairs in each of its interior fronts. The whole of the ground story externally consists of a series of arched cells, probably 10 ft. wide, 15 ft. high, and 10 or 20 ft. deep. These are occupied as sale shops, mills, and work-shops. The door is always in three high and narrow divisions; in cold or wet weather the middle only is opened; in mild weather all the three are raised high, and the business is carried on in the open air. In cell No. 1, for instance, you have an oil-shop; in No. 2, trips, stockings, &c.; in No. 3, cloth of some kind; in No. 4, sacks of flour; in No. 5, a copper-smith hammering away; in No. 6, you see half a dozen tailors stitching; in No. 7, you find a confecturer who is handling the dough on his counter; in No. 8 a musician, or dealer in women's dresses; in No. 9, a carpenter; in No. 11, a bookbinder; in No. 12, a watchmaker. The cells are all of the same shape and size, and the front only, but often all the four external fronts of the building are thus arranged and occupied. Such a building is called a *potenza* which does not mean a palace, but simply a house, or rather, a townhouse. In the ground story of which a crowd of shopkeepers and artisans carry on their business, and in the upper part a crowd of other persons live. Naples is almost entirely composed of palaces, great or small, such as I have described, and they are crowded together amazingly. The ground may be said to bear a crop of houses, as a field bears a crop of corn; the gardens, as open plots of ground for drying clothes, or securing the advantage of light and air, are never drained of hope, except as appendages to villas in the suburbs. In one

* The population in 1800 amounted to 4,310,000 souls.

thing Naples is magnificent — its street pavement, which invariably consists of squared blocks of lava, joined so closely and correctly as the flag of our best pavement. They are said to be laid in mortar, as the old Roman roads were, and hence may be considered as built roads. So firm is the work, that you cover one one block on the higher or lower than another. (Notes, p. 64.) There is not, however, a single shop in Naples, that would be reckoned handsome in London or Paris. Neither has it any good coffee-houses or restaurants.

Notwithstanding its disposition to eclecticism, Roman artists that Naples has but little architectural magnificence. The prevailing taste, if a series of absurd fashions deserve that name, has always been and is now, Spanish and Roman corrupted and intermingled together destroy all appearance of unity and symmetry, and form a monstrous jumble of discordance. Hence, the magnificence of the churches and palaces remains principally in their magnificence, and their paintings, marble, and other decorations.

The cathedral, built on or near the site of a temple of Apollo, a large Gothic edifice, is overcharged with ornaments in the most discordant style. It is supported by more than 100 granite columns, which originally belonged to the edifice it has replaced. In the subterranean chapel under the choir is the body of St. Gennaro, the tutelary saint of Naples, whose blood, miraculously preserved in a crystal vase and miraculously liquefied three times a year is regarded by the orthodox Neapolitans as the heart of the cathedral, and the great glory and honour of the city. The Basilica Apostoli, erected on the ruins of a temple of Mercury is perhaps the most ancient church in the city, having it is alleged, been originally erected by Constantine, but subsequently rebuilt with greater magnificence. The churches of St. Paul, St. Philippe Mart, Spirito Santo, and St. Martino, are all well deserving of attention, the latter indeed, is said to be the most splendid and beautiful church in the city. The church of St. Peter, though inferior to most others in size and decorations, derives interest from the fact of its having been erected and dedicated to the Virgin patroned by Sanseverino, mother of the famous Louis from De Porto Vergato. It contains the remains of its distinguished founder a native of the city where he expired in 1688, interred in a magnificent tomb, with the following epitaph by Benini: —

"In mare domo domo in the living
Spiritus domo domo in the living"

In all there are said to be about 100 churches in the city; and the priests compose a large, though, certainly not the most valuable, part of the pop.

The Neapolitans appear to manifest the most perfect indifference as to the manner in which their mortal remains are disposed of. The great burying place of the city lies alongside the splendid road leading to the Campo Marzio. It consists of five deep cells, dug into the Pomptina, of which the hill is composed. One of these cells is opened to rotation every morning, and receives all the dead bodies of the day brought in upon, and turned into it, like as much rubbish. This done, it is shut up again for a year and is then opened to receive a fresh supply of corpses! But, exclusive of this vast garbage, a considerable number of funerals take place in churches.

The palaces and mansions of the nobility, like the churches, have little pretensions to purity of architecture; and though in many the apartments are on a grand scale, they are in general too much loaded with ornaments. The kings of Naples have been distinguished by their rage for building. The royal palace, *Palazzo reale*, in the city near the quay at the S. extremity of the Strada di Toledo, though a part only of the original design, is a vast building, 17 stories in height, with a interior courts; the first story is of the Doric, the second the Ionic, and the third the Corinthian order of architecture. Its interior is splendidly fitted up, and it has some good paintings. Another royal residence, the *Capo di Monte*, finely situated on an extensive terrace the town on the N. commands a magnificent view. It has attached to it some fine gardens, and it possessed, a few years ago, some remains of the famous Farnese gallery, including portraits by Raphael, Andrea del Sarto, and Perugino, and some fine sculptures; these, however have been recently removed to the museum. This palace is now gifted to the city by a magnificent road constructed by the French and called, during their ascendancy the *Strada di Neapolitano*. The old palace of the Neapolitan monarchs is now occupied by the courts of justice, and by the archbishop of the diocese.

The *Palazzo degli Studi Pubblici*, erected in the early part of the 17th century from designs by Fontana, is, by far the most interesting building in Naples. It was intended for the university and was used as such from 1616, when it was completed down to 1793, when the university was removed to the university of Vienna.

* A hall now given to Sanseverino.

and the *Palazzo degli Studi* was converted into a great national museum, the *Museo Borbonico*. In addition to a noble library comprising about 100,000 vols., and many MSS. this museum contains a magnificent collection of bronzes, gems, paintings, household furniture, ivory, and Etruscan vases, from Hieronymus, Pompeii, Herculaneum, Vesuvius, and other ancient cities; and, in addition to these treasures, which are, in all respects, unique and unrivalled, it contains, exclusive of others, most of the statues and pictures formerly reserved to the Farnese palace at Rome, brought thither when the King of Naples succeeded to the rich inheritance of that family. The collection of statues is, in fact, inferior only to those of the capital and Vienna, and the gallery at Florence, which in paintings it yields only to Rome, Florence and Bologna. But, despite all the treasures of the world, Naples is not at present either a school or a cradle of art which is at a lower state than in any other considerable city of Italy.

The university of Naples, founded in 1224, has since 1760 increased. It is presided over by a rector, and divided into faculties, under deans, who, with the professors, receive very inadequate salaries from the crown. The professors are frequently chosen with little regard to merit, and the instruction they afford is all the higher branches of science and philosophy is most indifferent and worthless. Public law moral and political philosophy, and even theology can hardly be said to be taught at all, or, if taught, the instruction is not intended to expand or enlighten the mind, but to imbue it with the greatest prejudice. There are besides the university, many superior as well as inferior, schools; but, speaking generally they are all miserably bad, and Turkey excepted, amongst the schools at a lower state than in Naples. The university is extremely strict, and such foreign works as are admitted, are laden with an extremely high duty. Under such circumstances, one cannot be surprised at the gross ignorance prevalent among the mass of the pop.; the wonder, in fact, is, that there should be so much knowledge amongst them as is found easily to exist.

Naples has a *Societa Reale Borbonica*, or Royal Society, divided into the three sections of the fine arts, science and architecture; and other literary and scientific associations; a military and naval college, a royal medical college, a veterinary do., a royal college of music; a fine botanical garden, constructed by the French; an observatory in an elevated situation in the N. of the city, &c. One of the most curious institutions in Naples is a school where children of China are instructed in the principles of Christianity, and qualified to act as missionaries. The number of pupils is small, seldom exceeding 6.

and some very extensive one of and relief of the poor, to- cal and dumb, and an asylum principal hospitals are those, the *Asinara*, the *Asinara*, is open to the sick of all de- of about 300,000 due a year, and some hospitals and prisons as everywhere else, the open- of mortality and immortality. His respect is too obvious in they are really the most eff- a demand for maintaining the they are intended to preserve.

In 1837, 1,313 children were being known attached to the the 1,304 died in the course

of — — — — —, and a great number being in fact, in a kind of dying state when they were received! The truth is that instead of discouraging, stimulating tam- glaise really act as a powerful incentive to industry. The *Asinara* or *Asinara de Porto*, is an immense workhouse, or rather asylum for the destitute poor who are able to work and for orphans and poor children of both sexes, who are lodged and educated. The hospital of the *Asinara*, near the hill of *Capo di Monte*, is intended for the reception of infirm and aged poor, or poor unable to work. But, despite its hospital, such is the want of industry and the destitution of the pop., that there probably is no other city whose streets are infested by so large a proportion of poor, miserable, wretched mendicants.

Naples has 6 or 7 theatres. That of San Carlo, the largest and finest in Italy was nearly burnt down in 1613; but it was soon after repaired, and re-opened with more than its original splendour. Among the most theatres, 3 or 4 are wholly devoted to the exhibition of *Paolina*, or *Paolina*, who is here seen in his glory. "What," asks Forster "is a drama in Naples without *Paolina*? or what is *Paolina* out of Naples? Here, to his native tongue and among his own countrymen *Paolina* is a person of real power, he dresses up and retains all the drolleries of the day; he is the charlatan, and sometimes the source, of the passing opinions; he can tell

Thus living in idle retirement, their mind is exclusively bent on the means of procuring a lover; and the tales of Boccaccio and Lafontaine convey a likeness of their moral habits and manners." (*Simond's Italy*, 435.)

The numbers and wealth of the clergy were greatly diminished by the measures adopted by the French; and though both have been increased since the Restoration, their wealth has not been increased in proportion to their numbers. They are, speaking generally, poor, ignorant, and servile; and though the outward forms of religion be respected, it has nowhere so little real influence as at Naples. The lawyers, merchants, physicians, artists, and such-like persons, form the most intelligent and most valuable portion of society.

The *lazzaroni*, so prominent in the descriptions of Naples, formerly included most part of the lower classes, comprising street-porters, hawkers, water-carriers, boatmen, hackney-coachmen, mendicants, &c. Their numbers were loosely estimated at from 30,000 to 40,000, and they were said to constitute a distinct race, immersed in poverty, only half-clothed and not half-fed, without lodgings, and sleeping in the open air in the porches of churches and other public buildings. But it is now admitted that the *lazzaroni*, properly so called, or the houseless poor, are merely the dregs of the population, and that they owe their gipsy-like complexion and cast of features to their constant exposure to the sun and air. It is singular that wretches in so destitute a condition, and frequently involved in all but the extremity of want, should, speaking generally, be remarkable for their fine symmetrical and muscular forms, and be distinguished by their vivacity and humour. Great efforts have been made for many years past to lessen the numbers of the *lazzaroni*; and, under Murat, many of them were drafted into the army. But they are still extremely numerous; Mr. Maclaren says he saw numbers of half-clothed wretches (*lazzaroni*) asleep, in sunny days, on the pavement of the Chiaja. "They are the refuse of civilisation, sunk to the condition of savages. It is said there are individuals among them who do not know their own names, and who go to the priest and confess anonymously, owning sins of whose designation in the Decalogue they are ignorant." Unless when pressed by hunger, or under some peculiar and extraordinary excitement, the *lazzaroni* are neither turbulent nor licentious; but on such occasions they evince all the sanguinary ferocity of savages. They seem, however, to be wholly incapable of any vigorous or long-continued exertion for any public purpose, and may, speaking generally, be regarded as submissive, docile slaves. It used to be a common saying at Naples, that, to keep the populace quiet, three things only were necessary—*feste*, *farine*, and *forche*; that is, shows, food, and gibbets! And this compendious principle has not yet fallen into disrepute, though certainly they are supplied with but a very scanty portion of *farine*.

Lottery offices are extremely numerous in Naples, and have, as might be expected, a most injurious operation. Tickets are so subdivided, that shares may be purchased for about 2*d.*: the moral pestilence consequently descends to the very lowest ranks, and even the *lazzaroni* are speculators. There are, probably, a greater number of pick-pockets in Naples than in any other city; and deceit and falsehood are so common as hardly to excite attention. The *donne libere* are also extremely numerous.

Owing principally, no doubt, to its mild cli-

mate, a large proportion of the pop. of Naples may be said to inhabit the streets, and to carry on their business out of doors; and the competition arising among parties so situated, has probably given rise to that universal turmoil and effort to attract notice, that is at once so grotesque and so disgusting to a stranger.

"Naples," says Mr. Forsyth, "in its interior, has no parallel on earth. The crowd of London is uniform and unintelligible: it is a double line in quick motion; it is the crowd of business. The crowd of Naples consists in a general tide, rolling up and down; and in the middle of this tide, a hundred eddies of men. Here you are swept on by the current, there you are wheeled round by the vortex.

Quì vidi la gente, più che altrove troppa
E d'una parte e d'altra con gran urli,
Percuotevansi incontro —

DANTE.

A diversity of trades dispute with you the streets. You are stopped by a carpenter's bench, you are lost among shoemakers' stools, you dash among the pots of a *macaroni* stall, and you escape behind a *lazzaroni's* night-basket. In this region of caricature, every bargain sounds like a battle: the popular exhibitions are full of the grotesque: some of their church processions would frighten a war-horse.

"The mole seems, on holydays, an epitome of the town, and exhibits most of its humours. Here stands a methodistical friar preaching to one row of *lazzaroni*; there, Punch, the representative of the nation, holds forth to a crowd. Yonder, another orator recounts the miracles performed by a sacred wax-work, on which he rubs his *agnuses*, and sells them, thus impregnated with grace, for a grain a piece. Beyond him are quacks in hussar uniforms, exalting their drugs and brandishing their sabres, as if not content with one mode of killing. The next *professore* is a dog of knowledge, great in his own little circle of admirers. Opposite to him stand two jocund old men, in the centres of an oval group, singing alternately to their crazy guitars. Further on is a motley audience, seated on planks, and listening to a tragi-comic *filosofo*, who reads, sings, and gesticulates old Gothic tales of Orlando and his Paladins.

"If Naples be 'a paradise inhabited by devils,' I am sure it is by merry devils. Even the lowest class enjoy every blessing that can make the animal happy—a delicious climate, high spirits, a facility of satisfying every appetite, a conscience which gives no pain, a convenient ignorance of their duty, and a church which ensures heaven to every ruffian that has faith. Here tatters are not misery, for the climate requires little covering; filth is not misery to them who are born to it; and a few fingerings of *macaroni* can wind up the rattling machine for the day.

"They are, perhaps, the only people on earth that do not pretend to virtue. On their own stage they suffer the Neapolitan of the drama to be always a rogue. If detected in theft, a *lazzaroni* will ask you, with impudent surprise, how you could possibly expect a poor man to be an angel. Yet what are these wretches? Why, men whose persons might stand as models to a sculptor; whose gestures strike you with the commanding energy of a savage; whose language, gaping and broad as it is, when kindled by passion, bursts into oriental metaphor; whose ideas are cooped, indeed, within a narrow circle—but a circle in which they are invincible. If you attack them there, you are beaten. Their exertion of soul, their humour, their fancy, their quickness of argument, their address at flattery,

their rapidity of utterance, their pantomime and grimace, none can resist but a lazzaroni himself.

"These gifts of nature are left to luxuriate unrepressed by education, by any notions of honesty, or habits of labour. Hence their ingenuity is wasted in crooked little views. Intent on the piddling game of cheating only for their own day, they let the great chance lately go by, and left a few immortal patriots to stake their all for posterity, and lose it." (Pp. 264—267., and 412.)

"The people," says M. Simond, "seem, in general, peaceful and contented, unconscious of want at least; they consume little, and that little is cheap. For three grains a day (three half-pence sterling) a man has his fill of macaroni, and for three grains more he may have his frittata (very good fish or vegetables fried in oil) at any of the innumerable stands of itinerant cooks about the streets, which is not the only luxury of the gastronomic kind within his reach. A glass of ice-water costs one sixth of a grain (one twelfth part of a penny sterling), and, if properly seasoned with lime-juice and sugar, two grains. The price of these things is kept down by government, ice or hardened snow being abundantly supplied at the public expense from natural ice-houses, in certain cavernous rocks above Stabiae and Sorrento, and even on Vesuvius. The ice in baskets is made to slide down the mountain, along light ropes, into boats, which sail across the bay during the night, and land their precarious cargoes before day.

"The lower people have clubs, where they assemble twenty or thirty together, and contribute each one grain for wine of an evening. They elect a president and vice-president. The president calls upon one of the members to drink a glass of wine filled by the vice-president; but when the member challenged is about to take it, the vice-president has the right to say, I take it for myself, and actually drink it to his health; a standing joke, which he may repeat as long as he pleases, or as long as he can, but which the disappointed expectant, who has the laugh of the company against him, does not always relish; and in the end there is sometimes fighting and stabbing." (P. 432.)

The country round Naples is the most beautiful that can well be imagined, and is peculiarly interesting from its classical associations. Virgil was buried in the immediate vicinity of the city; and the ruins of an ancient mausoleum on the left hand side of the road, leading from the promenade of Chiaja to the grotto of Pausilippo, is said to have contained the remains of the prince of Latin poets. There is, however, no really good foundation for this statement.

The grotto of Pausilippo, now alluded to, is a tunnel cut through the hill of that name, being a part of the road from Naples to Pozzuoli. It is about two-thirds of a mile in length, 60 ft. in height, and broad enough to serve for a highway. This work is of great, but unknown, antiquity. Seneca, in his 57th epistle, complains bitterly of its length, darkness, and dust. (*Nihil illo carcere longius, nihil illis faucibus obscurius; etiam si locus haberet lucem, pulvis auferret.*) Its dimensions were, however, enlarged in 1557; and it is now well paved and lighted with lamps by day as well as by night. (For further information as to the environs of Naples, see the articles BAIE, HERCULANEUM, POMPEII, POZZUOLI, VESUVIUS, &c., in this work.)

Historical Notice.—Naples is very ancient. It was founded by the people of Cumæ, a colony from Greece, who gradually spread themselves round the Bay of Naples, and was called from this circumstance Neapolis, or the new city. It was also called Parthenope, from its being the burying-place of one of the sirens of that name. (*Velleius Paterculus*, lib. i. cap. 4.; *Strabo*, lib. x.) It was, therefore, to all intents and purposes, a Greek city; its inhab. spoke the Greek language, and were long distinguished by their attachment to the manners and customs of their ancestors. It was on this account, according to Tacitus, that it was selected by Nero to make his *début* on the stage; such a proceeding being less offensive there, and less repugnant to the prevailing senti-

ments, than in Rome. (*Taciti Hist.* lib. xv. cap. 33.) Naples, in truth, was then, as now, a chosen seat of pleasure. Its hot baths were reckoned equal to those of Baie; and the number and excellence of its theatres and other places of amusement, its matchless scenery, the mildness of the climate, and the luxury and effeminacy of the inhab., made it a favourite retreat of the wealthy and luxurious Romans, and justifies Ovid in calling it *in otia natam Parthenopem*. After the fall of the Roman empire, it underwent many vicissitudes. It, however, early became the cap. of the modern kingdom of Naples; and, notwithstanding the calamities it has suffered from war, earthquakes, &c., it has long been the most populous city of Italy, and one of the most interesting that is any where to be met with. (Besides the authorities already referred to, see *Serristori, Statistica d'Italia, parte settima*, passim; *Official Statement of the Population of Naples on the 1st of January, 1838*; *Stark's and Valéry's Guides*; *Com. Dict.*; *Macgregor's Report*, &c.)

NARBONNE (an. *Narbo Martius*), an ancient city of France, dép. Aude, about 4 m. S. from the Aude, and 7 or 8 m. from the Mediterranean, on a navigable canal that unites it with the sea, on the one hand, and with the river on the other, and which also unites it with the Canal du Midi, a little to the N. of the Aude, 52 m. S.W. Montpellier, and 34 m. N. by E. Perpignan; lat. 43° 11' 13" N., long. 3° 0' 24" E. Pop., in 1846, ex. com., 10,578. It stands in a fine plain, and is surrounded by a wall flanked with towers, and entered by four gates. Streets narrow and tortuous, and houses mean and ill-built; it is divided by the canal into two nearly equal parts, *la Bourg* and *la Ville*, connected by three bridges; and is plentifully supplied with water by numerous fountains connected with springs outside the walls. The esplanade, or *Place des Barques*, in the centre of the town, is a fine open space; but its beauty is much impaired by the almost total absence of vegetation. Other promenades are formed near the gates; on the banks of the canal is a fine public walk, planted with trees, and the environs generally are extremely beautiful. Narbonne has few buildings worthy of notice, except the cathedral and archbishop's palace. The former, built in the 13th and 14th centuries, is one of the finest specimens of Gothic architecture in Europe: the choir, however, is the only part complete, the nave, commenced in 1708, being unfinished. Two towers rise from its W. end; but they are deficient in that lightness and elegance observable in similar structures of the same era. The archbishop's palace (celebrated in history, as having been the place where Louis XIII. signed the order for the trial of De Thou and Cinq-Mars), is an ancient castellated building in the *Place des Barques*, having attached to it a massive square tower, built in the Middle Ages: in the front court are the remains of a marble altar, erected by the Narbonnese to Augustus Caesar, and, in the garden, a fine tomb of white marble. The two par. churches are ancient and massive structures, but built in very bad taste, and remarkable only for some curious sculptures. The other chief buildings are three hospitals, the exchange, arsenal, barracks, prison, a museum, theatre, and public baths. Narbonne is the seat of a tribunal of original jurisdiction and commerce; and has some silk filatures, fabrics of coarse linen cloth, worsted caps, and paper, with numerous distilleries, potteries, chemical works, tanneries, &c. It is the centre of the wine and spirit trade of the dep., and the principal support of its inhabitants is derived from its trade in wine, corn, brandy, silk, oil, salt (obtained from the neighbouring lagoons), wax, and honey, which it exports, partly to Bordeaux, by the Canal du Midi, and partly to Marseilles and other markets on the Mediterranean, by its port of La Nouvelle, at the mouth of the canal on which it is built. The honey of Narbonne is said to be the finest in the world. "Its peculiar excellence is owing to the variety of nourishment for the bees. The hives are moved from one place to another. From the gardens of Narbonne they are carried to the meadows in the neighbourhood; and they are afterwards conveyed 30 or 40 m., as far as the low Pyrenees, so that the treasures of the gardens, meadows, and mountains, are all rified to produce the honey of Narbonne. In England this system, though doubtless it would be advantageous, could not effect what it accomplishes at Narbonne, because numerous aromatic plants, abounding in the S. of France, are not indigenous to Great Britain. It is of a much higher flavour than any other honey, and so odoriferous that one might fancy himself eating a bouquet." (*Inglis; Switzerland, France, &c.*, p. 211.) Fruit is extremely abundant and cheap. The wages of labour do not exceed a franc a day, but the necessities of life are obtained at the same easy rate. Meat, however, is not reckoned among them by the lower orders; for "at Narbonne we have got so far south, as to discover something of those indolent habits which produce, in still more southern countries, a distaste

rally narrow and confined, though many are highly picturesque.

The Rhine forms a considerable portion of the S. and W. boundaries. The Mayn limits the duchy to the S.E., and the Lahn intersects it near its centre, having, for the most part, a S.W. course. The Lahn receives within this duchy the Elz, Ems, Aar, Muhl, &c.; and joins the Rhine at Lahnstein; being navigable as far as Weilburg, 14 leagues from its mouth. There are no lakes; but Nassau has a number of mineral springs, especially in the Taunus, where are Ems, Seifers, Schlangentbad, Wiesbaden, &c., among the most frequented spas in Germany. The climate is cold in the mountains, particularly in the Westerwald, but so mild in the sheltered valleys that the vine comes to very considerable perfection. The mean temperature of the year in the Rheingau, S. of Wiesbaden is 10° centigr., or 50° Fah. Every part of the duchy is tolerably healthy. The soil is no where remarkably fertile, but only a small portion of it is barren; it is least productive in the N., where, however, there are good natural pastures. A portion of the soil in Westerwald is volcanic, consisting of basalt and lava; and near Weilburg are traces of an extinct volcano. In 1831, of 1,812,541 *morgen* of land, 702,004 were arable, 196,190 in meadows, 15,543 in vineyards, 7,473 in gardens, no fewer than 736,377 in woods, 6,545 occupied with buildings, 106,981 in natural pastures, &c., and 40,247 altogether waste. Agriculture is the principal branch of industry. The land is mostly divided into small parcels, which are not, however, farmed by their actual proprietors. "The whole country, from the Heidelberg to the Rheingau and Homburg mountains, and from the Rhine to the mountains of the Spessart (which tract includes, besides the S. part of Nassau, part of Hesse Darmstadt, Frankfort, Hesse Cassel, and Bavaria), presents one uniform face. This plain is divided between large forests of the common *Pinus sylvestris*, occasionally interspersed with oak and beech woods, and large flat districts of corn and vegetables, unrelieved by a single tree or hedge. The open fields are divided into small patches, by the difference of culture, which frequently denotes the boundaries of each peasant's little farm. The farms rarely exceed 50 acres: gentlemen farmers, or speculative agriculturists, are unknown; and the opposite extreme, the class of agricultural day-labourers, is very small. The peasant generally holds his little possession at a fixed rent, due to the lord of the soil, which is never increased. He cannot be dispossessed; and his land descends from father to son subject to this burthen—a tenure much resembling English copyholds. *Leibeigenschaft* (personal vassalage) is now completely abolished in this, and, indeed, in most parts of Germany." (*Austrian near the Rhine*, 112, 113.) Wheat is grown in the valleys of the larger rivers; but on the uplands, rye, barley, and oats are almost the only grains cultivated, with potatoes; and in the Westerwald, buckwheat. The S. declivities of the Taunus are covered with chestnut woods and orchards. In the district called the *Rheingau*, further S., along the Rhine and Mayn, the culture of the vine occupies a large share of attention. The finest growths of the Rhine, as Hockheim, Steinberger, Rudesheim, and above all Johannisberg (which see), come from this duchy; in which nearly a third part as much land is appropriated to the culture of the vine, as in all Rhenish Prussia. (*Berghaus*.) The soil of the Rheingau is thin and sandy; but it is well manured, and very productive. The Hockheim, properly so called, or *Hock*, is grown at Hockheim, on a little hill behind the ancient deanery, on a space of about 8 acres, open to the southern sun, and sheltered from N. winds by the town. Each acre has about 4,000 vine plants, valued at a ducat each; and the little hill produces, in good seasons, about 12 large casks (*tonneaux*) of wine, each of which sells, frequently as soon as made, for 1,500 florins (125*l.*) or upwards. A constant supply of water is afforded to the plants by a small rivulet, and they are protected from too much wet by moveable wooden sheds. (*Schreiber*, 171.) But there is another vineyard little inferior to the above; and the surrounding lands yield an abundant produce which, as in the case of other wines, often passes for the first growths. The produce of the Steinberger vineyard, which belonged to the suppressed monastery of Eberbach, and is now the property of the Grand Duke, is the strongest of all the Rhenish wines; and, in favourable years, has much sweetness and delicacy of flavour. The quantity made is about 300 hhd., of which about 60 is first rate, and has occasionally been sold on the spot at 10*s.* a bottle. (*Henderson on Wine*, 223.) Flax, hemp, fruits, hops, tobacco, turnips, and chicory, are among the other principal kinds of produce. The pastures are well attended to, and a good many crops are grown for fodder, the rearing live stock being an important branch of husbandry. *Berghaus* estimates that there are 172,600 head of cattle, 126,000 sheep, and 54,000 hogs in the duchy. (*Allg. Länder*, &c., iii. 513.) The various breeds are said to be improving. Bees are numerous, and game

abounds in the woods. Iron, lead, copper and silver are the principal mineral products; bovey coal also is found in the Westerwald, and chalk, marble, roofing slate, and potters' clay elsewhere. Mining, forges &c. are estimated to employ 8,000 workmen. Working in metals is, however, the chief branch of manufacturing industry; the other manufactures are mostly domestic. Linen cloths are woven by the peasantry at their own houses; and some cotton cloths, carpets, woollen yarn and hosiery, morocco leather, sieves, soap, sealing wax, &c., are made: few, however, of the manufactured articles find their way out of the duchy, the exports consisting principally of mineral waters, wine, cattle, wool, mineral products, and hardware and earthenware. The roads are good; and the Rhine, Mayn, and Lahn, present great facilities for commerce; but the trade of the duchy is by no means so flourishing as it might be. Nassau has of late years joined the Prussian commercial league.

Accounts are kept in florins (*gulden*) of 60 *kreutzers*, containing 4 *pfennigs* each; the florin = 1*s.* 8*d.* Engl. The Hessian morgen (*stehernormalmorgen*) = about 8-11ths Engl. acre.

The government is a constitutional monarchy, hereditary in the male line; and is among the most liberal of W. Germany. The *landstände*, or parliament, of the duchy consists of 2 chambers; the first composed of the princes of the ducal house, the heads of 8 noble families, and 6 representatives for the rest of the nobility; the second consisting of 22 members, 15 of whom are representatives of the landed proprietors, and 3 of the clergy. The states are convoked yearly. The press is free, and personal liberty, the right of petitioning, and eligibility to all public offices are privileges belonging to every subject. Civil justice is administered in a primary court in the cap. of each of the 28 districts of the duchy; in secondary courts at Dillenburg and Usingen; and a high court of appeal at Wiesbaden. The principal criminal courts are at Wiesbaden and Dillenburg. There are elementary, royal, and grammar schools at Diarz, Usingen, Dillenburg, Hadamar, Wiesbaden, &c., and a gymnasium in Weilburg, besides female schools, many special academies, and deaf and dumb and other charitable schools. The government has taken considerable pains to promote popular education, but it does not seem to be yet much diffused, few children attending the public elementary schools. By an agreement with Hanover, the university of Göttingen has been constituted the high school for the duchy; except in Rom. Cath. theology, for which students resort to Marburg, in Hesse Cassel. In respect of religion, about 206,000 of the pop. are Protestants, 175,000 Rom. Caths., and 6,200 Jews: the Lutherans and Calvinists have united in one communion. The military force consists of about 4,000 men under arms, with a reserve of 1,550 more. Public revenue estimated at 1,800,000 florins a year: public debt about 2,000,000 florins, but this is in process of liquidation. Nassau holds, with Brunswick, the ninth place in the German Confederation; it has two votes in the full council, and, with Brunswick, one in the committee. It furnishes to the army of the Confederation a contingent of 3,028 men.

This country, like Hesse, was anciently inhabited by the *Catti*. The founder of the reigning house of Nassau was Otho of Laurenburg, brother of the emperor Conrad I. In 1255, two collateral lines were formed; and the descendants of the elder have remained in possession of this territory; while those of the younger (Orange-Nassau) have been seated on the throne of Holland. (*Berghaus, Allg. Länder*, &c., iv. 431—440.; *Horschemann's Stein*; *Schreiber, Guide du Rhin*, &c.)

NATCHEZ, a city of the U. S. of N. America, state Mississippi, on the E. bank of the river of the same name, 285 m. above New Orleans; lat. 31° 33' 48" N., long. 91° 30' W. Pop., in 1830, 2,780; in 1840, 4,800, and now probably 7,000 or 8,000. It is situated partly on a bluff or high ground, about $\frac{1}{2}$ m. from the shore, and 150 ft. above the level of the river, but partly, also, "under the hill," close by the latter. The upper town is laid out in broad streets, crossing each other at right angles, and shaded with fine spreading trees, the whole having an appearance of comfort and opulence. The principal buildings are the court-house, the 3 banks, the gaol, academy, and its 5 places of worship; besides which there are many handsome private houses, with attached gardens. "Natchez," says Mr. Stuart, "though occasionally very unhealthy, from the prevalence of yellow fever, is one of the most beautiful towns of the U. S. The 'pride of India' tree, shading the streets, was in blossom, having a greater resemblance to the lilac than to any other of the flowering shrubs. Its leaves are long and spiked; and the growth of these trees is so rapid, that in a few years they completely embower a village, and give a delightful freshness to the landscape." A fine esplanade, 100 yds. wide, occupies the edge of the bluff close in front of the upper town, and

commands an extensive and striking view of the river, the rich country eastward, and the wide dismal swamp on the W. side of the Mississippi. The town "under the hill, however, and that part in which the principal river trade is carried on, is a repulsive place, and is the general resort of the vilest characters from the upper and lower country. The houses are tenanted by boatmen, mulattoes, &c.; and on the landing-place are several hotels, in which vice and immorality of every kind are unblushingly displayed. Dancing assemblies for the refuse of both sexes are held in the public rooms of these houses almost every night, and there are other rooms devoted to gambling." The captain of the "Constitution" steamer informed Mr. Stuart, that he considered the neighbourhood of Natchez as the most profligate place in the Mississippi valley (*Stuart, U. S. 262*). The lower part of the town is also inhabited by some of the wealthiest merchants; and this being one of the principal places above New Orleans for the shipment of cotton, the streets at a certain period of the year are almost barricaded with bales of that article. In 1835, 35,000 bales were shipped from this port; and although nearly 300 m. above New Orleans, it is accessible to large ships, and carries on a very considerable foreign trade. Steamboats, also, constantly pass the town, and furnish the greatest facility for communication with the districts either above or below. The *Natchez*, and two other newspapers, are published here. Considerable attention is paid to literature; and at Washington, a village 3 m. from the city, is Jefferson College, founded in 1802, with 6 professors giving instruction in various branches of science and literature; the library is small, containing only 1,523 vols.

Natchez was formerly the residence of the chief of the Indian tribe, from which the town was afterwards named. In 1716, the French formed a settlement here, and established a port called St. Rosalie. Disputes, however, arose between the natives and the new-comers, which ended in a general massacre of the latter. The French, a few years afterwards, sent an army into the country, and so vigorous were their measures, that the whole nation was either exterminated, or sold as slaves. Indian mounds and other monuments are visible near the town; as are the ruins of the French port. (*Stuart's America, U. S. 262-264; Flint's Geog. of the U. S., p. 231; Murray's Egypt, Amer. ed., III. 548, &c.*)

NATOLIA, ANATOLIA, or ANADOLI (a corruption from *anadla*, the East, or *Icosus*), a peninsula of W. Asia, anciently called *Asia Minor*, and now constituting a pechallik of Asiatic Turkey; it extends between lat. 36° and 42° N., and between long. 28° and 42° E., being bounded the Euphrates W. by the A. to the Euphrates limited area, that of the 4,350,000. T. W. and S. Orpheus of A. Scanderoun. rally describ lakes, and on plateau of A. N. and S. on *Theraps* of th runs close a forming a bi there by nar vents run for Gulf of Ad be 7,800 R. hi tower, the m down their nearly equal (*monia*, p. 37. find, the soil about 20 m. Olympus we looking the which, called Turke, rises S. of Ida is mentioned by for its excel central table into the E. W. N. W. the r 150 m. in bre marshes, and seasons these cross the pla verge nearly these is the l by far the n parts of anti above the sea

so impregnated with brine, that any thing immersed in it was soon covered with a saline incrustation; the Turks call it *Tuzla*, and it still furnishes in abundance the article for which it was anciently famous; but it contains neither fish nor conchiferous animals. (*Geog. Journ., x. 299*.)

The largest rivers of Natolia flow into the Black Sea. The *Halya*, or *Kisil-Ermak* ("Red River"), rises by 3 branches on the S. side of Mount *Erdikh* (an. *Argosus*), and flows by a tortuous course of about 400 m., first N. W., and subsequently N. E., into the Black Sea, where it is about as wide as the *Saine* at Paris. It is the largest river of Asia Minor; and, in ancient times, was considered the boundary between the Lydian and Median kingdoms, as well as a natural dividing line of the peninsula. (See *Herod., i. 72*.) E. of the *Halya* is the *Iris* (now the *Jekil-Ermak*), a much smaller river, rising in the N. range of the table-land, and flowing W. by N. past *Tokat* into the Black Sea, about 20 m. E. *Samsoun* (an. *Amisus*). In the N. W. part of Natolia is the large and celebrated river *Sangarius* (now *Sakaria*), the most distant source of which is in the central plateau, about 60 m. S. S. W. *Angora*; lat. 39° 4' N., long. 32° 3' E. After receiving numerous tributaries, it turns northward, near the modern town of *Eski-sheh* (an. *Dorylaeum*), and flows into the Black Sea, about 60 m. W. by S. *Erekli*. The three principal rivers flowing into the Archipelago are the *Caicus*, the *aur* *Iardides Hermon* of *Virgil* (*Georg., II. 187*), now the *Sarabat*, the marshy *Cagayus*, at the mouth of which was the "*Aras* *Lupus* of *Hom*er (*Il., II. 470*), and the *Meander* (now *Menderes*), by far the largest of the three, and celebrated in antiquity, not only for the sinuosity of its course, but for the fertility of its valleys, and the number of flourishing cities on its banks. It rises by numerous sources in long 30° 4' E., and takes a general course W. by S., about 220 m. to its mouth, near the ruins of *Miletus*. The rivers on the S. side of the peninsula are, with one or two exceptions, little more than brooks or mountain-torrents; and the *Opus*, the scene of the splendid pageant of *Cleopatra*, is at present only 100 ft. wide, and inaccessible to any but the smallest boats. (*Beaufort's Karamania*, p. 375.)

The geological formation of Natolia partakes in many parts of a volcanic character. The high region of *Phrygia*, called *avresasavine*, abounds with lava, and other substances, indicating the existence of igneous action at some previous period; earthquakes have frequently visited the W. part of the peninsula, and all but demolished *Laodicea*, *Apamea*, *Cibotus*, *Herdes*, and other cities of antiquity; and it has still numerous thermal and sulphurous springs. The most general formation, however, is of white limestone, bold cliffs of which rise in *Karamania* from 600 ft. to 700 ft. perpendicularly from the sea, exhibiting the most curious contortions of strata. (*Beaufort*, p. 213, 215.) On the N. side of the peninsula the same description of strata prevails, covered with gypsum, and in the highest mountains serpentine is found alternating with the blue mountain limestone. The marble of Asia Minor was extensively used by the wealthy Romans, in building their houses and villas. These mountains abound in mineral riches; copper is wrought to a considerable extent near *Trebisond*, *Samsoun*, and *Siwas*; and the region of the *Chalybes*

Gem. Chalchum, doria patina est cula in aris
Et inest illud, amper doriae ignis mact.

Phil. Mus. Aug., IV. 314.

is still an important mining district of the peninsula. Lead has been found in several places, though not wrought, but rock-alum is procured near *Unieh* (an. *Ghar*), and exported in considerable quantities.

The climate of Natolia, owing to the varying elevation and different aspects of its surface, will admit of no general description. On the central plateau, the height of which (exclusive of mountains) varies from 2,800 to 3,900 ft. above the sea, it is cold, though salubrious, and snow lies, in many parts, for 3 or 4 months of winter; but, in July and August, the heat is often intense, and rendered more oppressive by the tendency of the sandy surface to absorb heat. On the W. shores the climate is genial, and the soil very productive, but in some parts, as at *Smyrna* and elsewhere, epidemics are prevalent, and the plague often makes great ravages among the pop. The heat in July is stated by Mr. Addison to range from 84° to 94° Fah. In the shade; rain seldom falls, though the want of it is, in some measure, compensated by heavy dews. (*Danvers and Palmyra*, I. 320, 322.) The climate on the N. side is far more temperate, and rain is frequent. The soil on the coasts is tolerably fertile, producing wines, olives, rice, millet, and other grains; but tillage is much neglected, irrigation and the manuring of land being little practised. The N. shores are covered with forests of oak, ash, larch, beech trees, &c., furnishing abundant supplies of timber for the Turkish navy. The mountains of *Karamania*

are covered principally with pines. Large flocks of sheep and goats graze on the lofty plains of the interior; their wool and hair forming an important article of commerce between Angora and Smyrna.

Natolia is under a pasha or military governor, to whom are subject the respective begierbegs of Anadoli, Karamania, Marash, Siwas, and Trebizond, the country being further subdivided into 17 sandjaks. The fixed pop. consists principally of Turks and Greeks, with smaller numbers of Armenians and Jews; besides whom there are nomadic tribes, both Kurds and Turcomans, employed partly in pastoral, but partly also in marauding occupations. (For further particulars see TURKEY.)

Natolia, which was first called simply Asia, afterwards *ἡ ἡνὸς Ἀσία*, to distinguish it from that more to the E. *ἡ ἡνὸς Ἀσία*, was called *Asia propria* or *proconsularis*, by the Romans, and did not receive its appellation of *Asia Minor* earlier than the time of Orosius, in the beginning of the 5th century. With respect to the original inhabs. of this celebrated peninsula, we have little information on which any reliance can be placed; but there is reason to believe that the Phœnicians had settlements, at a very early period, on its S. and W. coasts, and that there were frequent emigrations to it from Thrace, as well as Thessaly, soon after the Trojan war. The great Ionian migration (composed of colonists from Attica and Achæa) took place *anno* 1130 B.C.; and, about 80 years afterwards a colony of Dorians, from Megara, Trœzene, and Argos, settled on the S.W. coast, a little S. of those last mentioned. Subsequently to the establishment of these Greek colonies, and during the existence of the Lydian monarchy, (which lasted from a period of obscure antiquity down to the overthrow of Croesus by Cyrus, B.C. 556.) Asia Minor was overrun successively by large bodies of Cimærians and Scythians, who, however, though they penetrated as far as Lydia, and took Sardes, were unable to secure a permanent footing in the country. (Herod., i. 15.) The numerous revolutions, indeed, caused both by conquest and colonisation are sufficiently attested by the statement of Herodotus, that the peninsula, between four and five centuries prior to the Christian era, comprised 30 different nations (*ἔθνη*). At the fall of the Lydian kingdom Asia Minor was formed into 4 satrapies, belonging to the Medo-Persian empire, under which it remained upwards of two centuries, though the interior of the country, inhabited by nomadic tribes, was never fully subdued. Notwithstanding the oppressions of the provincial governors, and their occasional struggles with the "Great King," the Greek colonists continued to flourish, and they gradually spread themselves northward, along the Euxine Sea, as far as *Trapezus* (now Trebizond), and southward, on the shores of the Mediterranean to the Gulph of Issus, everywhere distinguishing themselves by their industry and commercial activity. In refinement, also, and the cultivation of the arts, they were at least equal, if not superior, to their European brethren; at all events, if Asia Minor have not given birth to great warriors and statesmen, she may justly boast of the all but unrivalled excellence of her poets, historians, philosophers, sculptors, architects, and musicians. In poetry she lays claim to Homer, Hesiod, Sappho, Alcæus, and Nicander; in philosophy to Thales, Pythagoras, Anaxagoras, Bias, and Pittacus; and in history to Hecætus, Hellanicus, Herodotus, Ctesias, and Dionysius of Halicarnassus. The Macedonian succeeded the Persian dominion *anno* 331 B.C.; from which time, during nearly two centuries, Asia Minor was subject to many vicissitudes consequent on the changing fortunes of Alexander's successors and their descendants, as well as the formation of several minor kingdoms (as Pontus, Bithynia, &c.) under native princes. During the century immediately preceding the Christian era the various parts of the peninsula fell, one by one, into the hands of the Romans, under whom it formed a proconsulship; and it attained, during their dominion, not only its most uniform and settled, but also its most prosperous state; a fact sufficiently proved by the number of large cities built or embellished, and the great works undertaken and completed, during the earlier period of the empire. The decline of the Roman power exposed the peninsula to fresh invasions from the E.; and at the commencement of the 8th century the Mohammedans began to settle themselves on its E. borders. At the period of the first crusade they had spread over almost the whole peninsula, and reduced it to a state in many respects similar to that in which we find it at the present day, except that it was more populous. It was ravaged by the crusaders in the 12th and 13th centuries, and was overrun by the Tartar hordes under Timour after the battle of Angora (1402 A.D.); but neither produced any permanent effect on the condition of the population. (Leake's *Asia Minor*, p. 1—144.; Cramer's *Asia Minor*, *passim*; *Geog. Journ.*, vi. x.)

NAUMBURG, a town of Prussian Saxony, distr. of its own name, on the Saale, 25 m. S. Halle, and 26 m. S.W. Leipzig; lat. 51° 8' N., long. 11° 54' E. Pop.

12,000. It is situated in a fertile vale, and is tolerably well built, having several good and wide streets, with 3 suburbs. Its principal public buildings are the citadel, town-hall, and arsenal, a noble Gothic cathedral, 5 Calvinistic churches, 2 orphan asylums, 6 hospitals, a poor-house, gymnasium, and trade-school. It is the seat of a superior and ordinary tribunal for the circle, a council for do., and board of taxation. It has manufactures of woollen cloths, hosiery, and shoes, and large chemical works. The 2 annual fairs of Naumburg were formerly much celebrated, but have recently declined in importance.

Naumburg is celebrated in history as having been besieged in 1482 by the Hussites, under Procopius. This general, irritated by the resistance of the inhab., made a vow to put them all to the sword, but was deterred from his purpose by the earnest supplications of the children of the town, who came out in procession and threw themselves at his feet. The anniversary of this event (called the *Kindersfest*, or "Children's Fête.") is still celebrated on the 28th July, and has furnished Kotzebue with the subject of one of his plays (*Von Zedlitz, Neukirch Pruss. Staat.*, iii. 725.; *Berghaus*; *Murray's Hand-book of N. Germ.* p. 352.)

NAUPLIA, or NAPOLI DI ROMANIA, a city and sea-port of independent Greece, on the E. side of the Morea, at the extremity of the bay of its own name, 5 m. S.E. Argos, 58 m. W. S.W. Athens; lat. 37° 33' 50" N., long. 22° 47' 30" E. Pop., acc. to Burgess, 16,000. The town, which stands on the N.E. side of a hill, with a tabular summit, and is built in the form of an amphitheatre, has been greatly enlarged and improved since the war of independence.

"Nauplia," says Mr. Burgess, the most recent traveller in Greece, "has no longer any similarity to its former internal appearance (which was that of a filthy and miserable Turkish town). The features of the Palamidi rock, the heights of Itchkali, the low coast sweeping round by Tyrius and the Lerndan marsh, with citadel of Argos rising out of the plain, the mountainous shores flanking the E. parts, and the headlands jutting beyond the reach of the naked eye, must endure as long as the landscape remains undissolved; but every thing that man and his institutions can change is now changed at Nauplia." (i. 186.) It now comprises several wide streets, regularly laid out, and lined with good houses, in the European style; some of which, for size and elegance, might pass, in Greece, for minor palaces. The principal public buildings, besides the churches (one of which belongs to the R. Catholics), are a royal palace, formerly the residence of Count Capo d'Istria, a new court of justice, called the *Βουλευτήσιον*, and a garrison, occupied by Bavarian troops. The shops are well stored with provisions, and other articles; and there are numerous cafés about the port, and in the chief thoroughfares. A quay faces the harbour, which is commanded by the ancient Fort Palamidi, one of the strongest castles in Greece; at its foot is a stone aqueduct, from which the town is well supplied with water. Nauplia possesses one of the largest government dockyards in Greece, and extensive storehouses. Its trade is very considerable, the principal exports being oil, wine, gall-nuts, wax, silk, wool, and cotton; while the imports comprise corn, manufactured and colonial goods, with timber, &c. The commerce is principally carried on in Greek bottoms. In 1836 there arrived 86 vessels of 6,026 tons, and 58 vessels of 3,728 tons left the port in the same year. The roadstead of Nauplia is W. of the town, in 8 and 9 fathoms; but within the harbour there are only 2½ fathoms, and in entering it is necessary to keep in mid-channel, to avoid a shoal of 6 ft. water.

Nauplia is, in comparison with the rest of Greece, well provided with literary establishments. They comprise a military academy, school for the middle classes, circulating library, several book societies, two lithographic establishments, and five printing-houses, one of which is the property of the government, and exclusively employed in printing their official paper. The *Σωτήρ*, or "Saviour," a political and literary newspaper, is published here in Greek and French, and has a wide circulation. The pop. of Nauplia comprises a considerable number of Germans, French, and Italians: house-rent is high, and the rate of living is not much cheaper than at Paris or Naples. The climate is unhealthy, owing to the miasma from the neighbouring marshes in summer, and the cold searching N.E. winds that prevail during winter: the town has likewise been frequently ravaged by the plague.

The ancient Nauplia was the port and arsenal of Argos during the flourishing period of Grecian history; but it was deserted and in ruins when visited by Pausanias, who noticed the vestiges of its walls and docks (*λίμνες*), the temple of Neptune, and a fountain called Canathus, still existing. The inhabs. had been expelled several centuries before by the Argives, on suspicion of having favoured the Spartans, who in consequence received them into their territory, and established them at Methone in Messenia. The town revived under the Byzantine em-

perors, and was occupied in the 13th century by the Venetians, who made it their chief settlement in the Morea. It was taken by Sultan Solymán in 1537, but was soon afterwards recovered; nor did the Venetians finally lose possession of it till the treaty of Passarowitz in 1718 secured it to the Porte, which retained it down to the close of the war of independence. Nauplia was the seat of the new government from 1829 to 1834, when it was transferred to Athens. (*Burgess's Greece and the Levant*, i. 185—186.; *Leake's Morea*, ii. 355—361.; *Off. Rep.; Journ. of Educ.*, vol. ix., &c.)

NAVAN, an inland town of Ireland, prov. Leinster, co. Meath, at the confluence of the Blackwater with the Boyne, 26 m. N. by W. Dublin. Pop., in 1831, 4,416, and, including its suburbs, about 6,000. It has a par. church, a Rom. Cath. chapel, a convent, an endowed grammar-school, a national school, a preparatory Rom. Cath. college, with a chapel, court-house, bridewell, fever hospital, the infirmary for the co., and cavalry barracks. At one end of the town is a large rath or mote. Owing to the opening of the Boyne navigation to Drogheda, Navan has become a place of considerable trade, especially for all sorts of agricultural produce, sent principally to Drogheda, but partly also to Dublin. It has also 5 corn or flour mills, 2 paper mills, 2 distilleries, and a tannery. The old corporation sent 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. Markets on Wednesdays; fairs on Easter and Trinity Monday, the 2d Monday in Sept., and the 1st Monday in Dec. Post-office revenue, in 1830, 602l., in 1836, 664l. (*Railway Rep.; Mun. Boundary Rep.*)

NAVARINO, a town and sea-port of indep. Greece, on the S.W. coast of the Morea, 136 m. S.W. Athens, and 92 m. S. by W. Patras; lat. 36° 52' 15" N., long. 21° 41' E. Pop., 2,000. It stands on the S. side of a fine semicircular bay of the same name, and is surrounded by walls, and defended by a strong citadel, placed on a lofty rock. Streets narrow, steep, and irregular, lined with small, mean-looking houses, chiefly of stone cemented with mud, and encumbered in many places with the fallen ruins of former habitations. At the opposite extremity of the bay are the remains of Navarino Vecchio, consisting of a fort covering the summit of the hilly peninsula of *Coryphasium*, on the S. slope of which once stood the ancient *Pylos*. The long rocky island of Sphagia (an. *Sphacteria*) stretches about 4 m. from N. to S. across the mouth of the bay, forming a kind of natural breakwater for its protection from the heavy seas that would otherwise be thrown in from the W. The entrance is at the S. side of the island, and the bay is one of the finest asylums for shipping in the Mediterranean. It has water to float the largest ships, and good holding ground. Ships usually moor about ½ m. from the modern town, or behind the island of Marathonisi, near the centre of the harbour. The circular lagoon, on the N. side of the harbour, directly E. Navarino Vecchio, abounds with fish; but, as it is not mentioned either by Thucydides or Pausanias, it is probably of modern formation.

The ancient *Pylos*, one of those towns that claimed to be the birthplace of Nestor (called by Homer Νῆστος Ἄργεος), was deserted by its inhab. after the Messenian war. When the town was restored, we have no information; but in the time of Pausanias, it was inhabited, and comprised among other monuments, a temple of Minerva Coryphasia, and a monument of Nestor. (See *Paus. Mess.* 36., quoted by *Leake*, i. 413.) The island of Sphacteria, which Thucydides (iv. 35—38.) has described as "desert, pathless, and covered with wood" (ἄλσος ἐν καὶ ἀγροῖς ἄρα οὐ ἰσχυίας), is celebrated in the history of the Peloponnesian war as having been occupied by the Lacedæmonians after the defeat of their fleet by the Athenians, under Demosthenes. They were detained here during 72 days, and were at length compelled to give themselves up as prisoners, and to surrender their fleet in pledge of their fidelity to their engagement. The battle which preceded this blockade took place in the bay of *Pylos*, or Navarino, which has also obtained celebrity in modern times, during the late war of independence, for the decisive victory gained (Oct. 20. 1827) by the combined fleets of England, France, and Russia, under Sir E. Codrington, over the Turco-Egyptian fleet, commanded by Ibrahim Pacha. Notwithstanding the great preponderance of force and science on the part of the allies, the Turco-Egyptian fleet made an obstinate resistance, but in the end it was almost totally destroyed. A convention was soon after entered into, by which the Turks agreed to evacuate the Morea; and this battle finally led to the acknowledgment by the Porte of the independence of Greece, in the treaty of Adrianople, in 1829. (*Leake's Morea*, i. 400—415.; *Gall's Morea*, pp. 19—23., &c.)

NAVARRE (Sp. *Navarra*), a portion of Spain forming a dependent kingdom under that monarchy, on the N.E. side of that peninsula, between lat. 41° 57' and 43° 12' N., and long. 0° 41' and 2° 25' W.; being bounded N. by France and the Pyrenees, E. by Aragon, S. by Old Castile, and W. by the Basque provs. Greatest length

from S.W. to N.E., 75 m.; breadth, about 50 m. Estimated area, 2,440 sq. m. Pop., 271,260. The surface consists in a great measure of subordinate mountain ranges, running southward from the main ridge of the Pyrenees; but the S. part of the prov., near the Ebro, has some extensive and fruitful valleys. The principal summits within the limits of the prov. are Altobiscar, 5,380 ft. high; Adi, 5,218 ft.; and 3 others rising above 3,000 ft. from the sea. The highest points of the Pyrenees, however, are considerably to the E. in the kingdom of Aragon. The principal passes over the Pyrenees from Navarre into France are, proceeding eastward, those of Verra, Maya, and Roncesvalles, the last of which is, according to Bory St. Vincent, 5,771 ft. above the sea. The mountains are chiefly of transition and secondary formation, consisting in a great measure of the rock called Pyrenean limestone. Jasper and marbles, also, occur in large beds; and there are several iron-mines, besides one of copper. Rock-salt is quarried at Valtierra, near the Ebro; and the yearly returns, according to Mifiano, amount to 12,000 arrobas; the prov., also, comprises numerous thermal springs. Principal rivers, the Aragon, Zidacos, and Arga, uniting their waters in one channel, which falls into the Ebro opposite Alfaro: the only river flowing into the bay of Biscay is the Bidasoa, which rises in the mountains, forming the Val de Bastau, and has a course E.N.E. of about 45 m., falling into the sea near Fuenterrabia. The climate of the mountainous districts is very severe in winter, and not genial even in summer; but in the valleys of the Ebro and Aragon the temperature is much higher, and the climate delightful, as well as healthy. The forest trees of the Pyrenees consist chiefly of the pine, large quantities of which are sent down the Ebro to Zaragoza and other places; but there are also considerable numbers of beeches, deciduous oaks, chestnut-trees, &c.; and no prov. furnishes so good a supply as Navarre of useful building timber. (*Cook's Sketches*, ii. 286.) The wild animals of the mountains are wolves, wild boars, foxes, and wild cats; game is abundant in every part of the prov. Pasturage is extensively followed, especially in the N. districts; and, according to Mifiano, the stock at the last general census included 43,636 oxen, 4,616 calves, 25,760 mules, 629,500 sheep, 69,500 goats, and 31,760 hogs; the produce of wool being estimated at 56,490 arrobas (12,609 cwt.). The higher part of the kingdom, on the frontiers of France, is bleak, cold, and unsuitable for tillage; but the plains near the Ebro have a rich productive soil, well watered by numerous streamlets connected with the larger rivers. The principal crops are wheat, maize, barley, and oats. Hemp and flax are also raised, with oil and wine. About the half of the latter, with the greater part of the wool, and about 30,000 bushels of corn are exported chiefly to France in return for silk and cotton fabrics, colonial produce, &c. Cyder is made in the Val de Baztan, and liquorice is raised in the S. districts for exportation. Agriculture, however, is much neglected, and was recently rendered almost futile, in consequence of this part of the peninsula being the scene of the civil war between the adherents of the present queen and Don Carlos. Manufactures are also inconsiderable, including only those that are most indispensable, and some distilleries. The intercourse with the adjoining provs. is maintained partly by the canal of Aragon, running from Tudela to Zaragoza, and partly, also, by roads intersecting the country in various directions: the great road from Pampluna to Madrid is said by Captain Cook, and other recent travellers, to be little inferior to the modern roads of England.

The kingdom of Navarre is still governed by its separate laws, and has, nominally at least, the same constitution which it enjoyed when it was a separate monarchy; but its cortes, or estates, have not met since 1713, and cannot be convoked without the authority of the crown. A council, however, representing the cortes, sits permanently at Pampluna, decides on the method of raising the revenue, fixes the tariff, and exercises other commercial privileges. The supreme power is vested in the viceroy, who presides at the royal council (*Consejo Real*), consisting of 6 judges, an attorney-general, and 4 *alcades*: this is the highest tribunal for civil and criminal causes. The inhabs. of Navarre are tall, and strongly built, resembling the Biscayans in independence of spirit, attachment to their religion, and jealousy of their ancient national privileges. Castilian is the general language of Navarre; but the Basque is spoken in the N. and W. districts.

Navarre is divided into 17 *partidos*, which are again subdivided into 74 *merindades*, or districts; and the kingdom comprises 9 cities, the principal of which are Pampluna, the cap. and seat of government (pop. 15,000), Tudela (8,150), the once royal city of Olite (5,000,) and Estella, the stronghold of the Carlists during the late war (4,600).

The inhabs. of Navarre, in the time of the Romans,

were called *Vascones*, in common with those in the neighbouring parts of the peninsula, and were faithful subjects of the empire till the close of the 5th century, when they were subdued by the Visigoths, under whose sway they remained between 200 and 300 years. The Arabs overran the country in the 8th century; but were unable to effect its conquest. Inigo, Count of Bigorres, having been elected king in the 9th century, the crown remained upwards of 5 centuries in his family, till in 1890 it became united, through intermarriage, with that of France, the title of whose monarchs, from the time of Henry IV. (with the exception of Napoleon), to that of Charles X., was "King of France and Navarre." In 1512, however, Ferdinand of Aragon united all the country S. of the Pyrenees to the crown of Spain; so that only the small portion N. of that chain remained annexed to the French monarchy: this formed the prov. of Béarn before the Revolution, and is at present included in the dép. of the Lower Pyrenees. (*Cook's Sketches in Spain*, i. 118—122.; ii. 286.; *Milano; Dict. Géog.*, &c.)

NAXIA (an. *Naxos*), an island of the Grecian Archipelago, the largest of the group called the Cyclades, about 5 m. E. Paros, its cap. of the same name being in lat. $37^{\circ} 7'$ N., long. $35^{\circ} 26'$ E. Shape, oval: circuit, about 48 m.: area, 106 sq. m. Pop., according to Burgess, 18,000. The coast is much indented and precipitous, especially on the N.E. side; and the surface is very uneven, comprising several high mountains of primitive formation, on which are superimposed strata of grauwacké and mountain limestone: the culminating point of the island, anciently called the hill of Zeus (3,310 ft. high), is still called *Zia*: it attained some celebrity from its containing a cavern or grotto, to which, according to tradition, the Bacchantes came to celebrate their mysteries and festivals. Emery is wrought in one part of the island; and, according to Dr. Clarke, almost all the emery of commerce comes from Naxia. Large flocks of sheep feed on the mountain sides; but both their wool and flesh are of inferior quality.

Naxia has few large trees, but is pretty thickly covered with lemon trees, myrtles, oleanders, thorny brooms, the arbutus and labdanum plant, *atractylis gummifera*, the produce of which is chewed by the natives, and various kinds of leguminous plants, besides the olive, fig, and vine, which are extensively cultivated. The wine, however, though characterised by Athenæus as the "nectar of the gods," is now of very indifferent quality, owing to the want of care in its preparation. The oil, also, is inferior to that produced in most of the other islands. The island was famous in antiquity for its fertility; but agriculture is now so much neglected that the corn raised is sufficient only for six months' consumption of the inhab. Vegetables, however, are so abundant, that considerable quantities are sent to Syra. (*Burgess*, ii. 21.) Lime juice also is exported, chiefly to Russia. In the S. of the island is a small salt-pan, from which the cap. is supplied with salt. The island abounds with game; and field-sports constitute a favourite occupation of the inhab.

Naxia, the cap. of the island, occupies an eminence close to the sea on the W. coast (which is the only part accessible to shipping), and has 4,000 inhab. Its narrow streets lined with dilapidated houses, exhibit a profusion of marble; and there is scarcely a dwelling in which there are not ancient inscriptions or other monuments. A castle, built by the Venetians, occupies the summit of a hill above the town. The principal remains of the ancient Naxos are a gate belonging to a temple of Bacchus, on a lofty crag, an aqueduct, and a jetty now under water, but still distinguishable in calm weather. It is the residence of a Greek and Latin archbishop, and there are several churches and convents belonging to both religions. The harbour of Naxia, called the Porto Saline on account of the salt collected there, is exposed to the N. and N.W. winds, and being almost surrounded by hidden rocks, is unfit for the anchorage of large ships. The island comprises 40 villages; and there are numerous country-houses, forming the residences of the nobles and gentry.

Naxos (which, according to Pliny, was called at different times Strongyle, Dia, Dionysias, and Callipolis), was probably first colonised by Carians. The Naxians were among the most steadfast opponents of Persian aggression, and the failure of the expedition undertaken by the Persians against this island at the suggestion of Aristagoras, led to the revolt of the Ionian states. Soon afterwards, Naxos was conquered by the Persian fleet under Datis and Artaphernes, who destroyed the city and enslaved its inhab. (*Herod.* v. 28. vi. 96.) The Naxians, however, had sufficiently recovered 7 years afterwards to enable them to furnish 4 well-equipped triremes for the fleet at Salamis. The Athenians, even in the time of Pisistratus, claimed them as colonial dependents; and, after the Persian war, they deprived them of their liberty. Naxos was celebrated in ancient mythology for the worship of Bacchus, who is alleged to have been born in the

island. It became tributary to the Romans after the fall of Corinth, 146 B.C., but was ceded by Mark Antony to the Rhodians after the battle of Philippi. The island was afterwards annexed to the possessions of the eastern empire, and subsequently became the possession of the Venetians, and the cap. of a dukedom which embraced most of the other Cyclades. At length, in the reign of Selim II. (A.D. 1570), it was united to the Ottoman empire. The Turks, however, allowed the inhab. to retain their ancient laws and government, contenting themselves with occasionally sending a *waivode* to collect the land-tax and customs. It now forms a part of the new kingdom of Greece. (*Turner's Greece*, i. 208—221.; *Burgess*, ii. 21.; *Cramer's Greece*, iii. 408.; *Clarke's Greece*, &c., vi. 90—113.)

NAZARETH, or NASSARA, a small town of European Turkey, in the pachalic of Acre, celebrated as having been the residence, during his youth, of the founder of Christianity, 17 m. E.S.E. Acre, and 70 m. N. by E. Jerusalem. Pop. 3,000, of whom 500 are Turks, and the rest Christians. It stands on the W. slope of a delightful valley, encompassed by rocky mountains of no great height, which rise round it like the edge of a shell, as if to guard it from intrusion. The houses are mostly wretched stone cottages, with mud floors and roofs; nor does it comprise any thing worthy of notice, except a Latin church and convent, with two other churches, belonging respectively to the Maronites and Greek Catholics. The Turks also have a mosque, erected at the beginning of the present century. The Latin convent, belonging to the missionaries of the Terra Santa, at the E. end of the village, is a spacious and commodious building of stone, surrounded by high walls, which enclose a church, cells for the friars, and extensive accommodation for pilgrims and travellers. The church, called that of the Annunciation, is an ill-proportioned and gaudily ornamented building, said to occupy the spot where, according to tradition, the house of Joseph and Mary stood before its miraculous removal to Loretto. The columns and interior walls are hung round with silk damask, and there are two tolerably good organs. Beneath the high altar is the descent to a subterranean cave, in which the Virgin is said to have lived, and which is divided into small grottoes, pointed out as her kitchen, parlour, and bed-room! Here also are two granite columns, each 2 ft. 1 in. in diameter, and about 3 ft. apart, which are supposed to occupy the very places where the Angel and the Virgin stood at the precise moment of the Annunciation. The innermost pillar is broken through, above the pedestal, and, although it touches the roof, it is represented to be self-supported in the air. "The fact, however," says Dr. Clarke, "that the capital, and a piece of the shaft of a grey granite pillar, have been fastened on to the roof of the cave: so clumsily, also, is the rest of the *foculus* contrived, that what is shown for the lower fragment of the same pillar is not of the same substance, but of Cipolino marble." (*Travels in Greece and the Holy Land*, iv. 170.) It was formerly the custom of the sick, during the prevalence of the plague, to resort thither for the purpose of rubbing themselves against the pillars, believing thus to obtain a certain cure; but, within the last few years, a railing has been formed to exclude the patients, who, however, still flock round in hopes of relief from being in its immediate vicinity. Different interesting localities are pointed out to the pilgrims, such as Joseph's workshop, enclosed in a small chapel, the synagogue in which Christ explained the celebrated passage of Isaiah (*Luke*, iv. 16—22.), the table on which Jesus ate his last meal previously to his final departure for Jerusalem; and even the precipice, or "brow of the hill," to which they led him, "that they might cast him down headlong." (*Luke*, iv. 29.) Here however, as at Jerusalem, fancy, and the desire of imposing on the credulity of the devotees, have had a far greater share in fixing these localities, than any regard for authenticity. The chamber containing the fictitious *mensa Christi* is the favourite resort of all pilgrims, Turks as well as Christians; and to Rom. Catholics, who say the *Pater-noster* and *Ave Maria* in it, the pope grants a plenary indulgence of seven years! The present inhabs. of Nazareth are, with the exception of a few weavers, employed in rural pursuits. Corn is raised abundantly in the neighbourhood, especially by the monks of Terra Santa, who are the chief farmers; and a small portion of it is sent to Acre, which is the chief source of supply for the town. The pasturage of cattle and goats, also, is extensively pursued, from the milk of which is made a large quantity of butter and cheese, both of indifferent quality. (*Turner's Levant*, ii. 130.)

Nazareth is not mentioned in the Old Testament: it was a city of the tribe of Zebulun, and afterwards of the N. portion of Palestine, called Galilee, and was held in so little esteem by the Jews of Jerusalem as to give rise to the exclamation, "Can any good thing come out of Nazareth?" (*John*, i. 46.): it owes its entire celebrity to the circumstance of having been the resi-

dence of Jesus Christ almost from his birth to the commencement of his ministrations. Here the angel Gabriel announced to the Virgin the approaching birth of the Saviour; thither the holy family returned 33 days after his birth at Bethlehem; and during his infancy spent in the house of Joseph the carpenter "the child grew and waxed strong in spirit, filled with wisdom, and increasing in favour with God and man." (*Luke*, ii. 40, 52.) Christ preached here "the acceptable year of the Lord," immediately after the temptation; and found from the unfavourable manner in which he was received, that "no prophet is accepted in his own country." His hearers were filled with wrath, rose up, thrust him out of the city, and led him to a precipice to destroy him; but he passing through the midst of them, went his way (*Luke*, iv. 28-30.); and thenceforward Capernaum seems to have been his general residence, though there can be little doubt that he occasionally visited Nazareth to see his mother, and the members of her family. (*Clarke's Travels in Greece and the Holy Land*, iv. 164-183.; *Turner's Levant*, ii. 129-132.; *Robinson's Palestine*, i. 205-209.; *Mod. Trav.*; *Calmet's Dict. ad vocem.*)

NEAGH (LOUGH) a lake of Ireland, the largest in the United Kingdom, in the centre of the prov. of Ulster, having N. and E. the co. of Antrim, S.E. Down, by which it is merely touched, S. Armagh, W. Tyrone, and N.W. Londonderry. It is about 17 m. in length, by about 9 m. in breadth; occupying, inclusive of Lough Beg (2,551½ acres), which is joined to it, an area of 61,626 Irish, or 99,823½ statute acres, at ordinary high-water-mark. (*Third Report of Commissioners on Irish Bogs.*) It is fed by several rivers of considerable magnitude, while the Lower Bann is the only channel through which its reflux waters find a passage to the sea. Though by far the largest, it is by no means the most beautiful of the Irish lakes. Its shores consist mostly either of a level strand, or marshy border, liable to frequent floods; and are of course deficient in those varied banks, and bold promontories, without which such extensive sheets of water want picturesque effect, except when their uniformity is broken by islands; and of these there are only two small and uninteresting ones in this lake. Frequent squalls and want of shelter render its navigation rather dangerous for sailing vessels; but these inconveniences will most probably be obliterated by the introduction of steam packets. According to Mr. Sampson (*Survey of Londonderry*, p. 118.), the mean level of Lough Neagh is about 38 ft. above that of the sea; and it is said that nearly 10,000 acres of land contiguous to its banks, now annually flooded, might be made available for agricultural purposes, by the outlay of a moderate sum on the removal of some obstructions in the channel of the Lower Bann. Its waters are celebrated for their petrifying quality. (*Statistical Account of British Empire*, ii. 337.)

NEATH, or NEDD (the an. *Nidum* of Antonine's Itin.), a parl. bor., market-town, and par. of S. Wales, co. Glamorgan, and hund. its own name, on the Neath (crossed here by a stone bridge), 7 m. E.N.E. Swansea, and 159 m. W. by N. London. Pop. of parl. bor., in 1831, 4,043. The town, situated in a picturesque valley on the E. side of the river, is "indifferent in appearance: the streets are narrow, and badly paved; there are few good houses, and the place is only partially lighted with gas. The cottages of the poor extend irregularly beyond the town, particularly on the Cardiff road." (*Mun. Bound. Report.*) The town-hall is a handsome modern building, the lower part of which is used for a corn-market: a church, with a lofty square tower, and six places of worship for dissenters, are the only other public edifices. There are two national schools, two Sunday-schools, and two infant schools.

Neath is situated in the immediate vicinity of an extensive copper, iron, and coal district, and it depends in a great measure on the great smelting-houses and foundries that have been established round it, chiefly on the W. bank of the river. "The commerce of Neath is very considerable, and has been steadily increasing for some years; but though vessels of 300 tons can get up to the town, the trade is generally carried on by barge-communication with Britten Ferry, which is about 2½ m. lower down the river, and is connected with Neath by a canal running northward, 12 m. higher up the valley. By Britton Ferry, in fact, Neath acts as the vent of all the mineral districts connected with the vale. Another canal joins the last mentioned at Aberdulais, and terminates in a sea-lock and basin on the E. side of Swansea harbour. The exports are coal, culm, copper, iron, iron castings, fire-bricks, oak bark and timber; the imports comprising copper and iron ore, corn and flour, foreign timber, black-jack, and general shop-goods." (*Parl. Bound. Rep.*)

Neath is a bor. by prescription, and has been governed since the Municipal Reform Act by a mayor and 8 other aldermen, with 12 councillors: it has also a commission of the peace under a recorder. Before the Reform Act, Neath was a contributory bor. to Cardiff; that Act an-

nexed it, with Aberavon, Kenfig, and Loughor, to Swansea, which sends 1 mem. to the H. of C. At the same time the electoral limits were so enlarged as to include, with the old bor., that portion of the suburbs on the W. side of the river. Registered electors of Neath in 1839—40, 174; ditto, of entire bor., 1247. Neath is also one of the polling-places at elections for the co.; and the petty sessions for the hund. are held here, as well as the quarter sessions alternately with 3 other towns. Markets on Wednesday and Saturday; fairs, July 3., Sept. 12., and the first Thursday after Trinity Sunday.

About 1 m. from the town, on the low ground bordering the river, are the ruins of Neath Abbey, founded by Richard de Granville in the 12th century: the church is a mere heap of ruins; but the chapter-house, a curious specimen of early English architecture, is still in tolerable preservation; and foundations of buildings may be traced to a considerable distance. (*Parl. Rep.*; *Nicholson's Cambrian Guide.*)

NEGAPATAM, a decayed town of Hindostan, presid. Madras, distr. Tanjore, and the residence of the British collector for the district, on the shore of the Bay of Bengal, 162 m. S. by E. Madras. The European town, which was formerly the cap. of the Dutch possessions in the Carnatic, now scarcely exists, Negapatam being seldom resorted to, except by ships, for water and provisions, both of which are plentiful. The native town is tolerably extensive and regular, and on its N. side is a remarkable tower 80 ft. high, the origin of which is unknown, but which is very useful as a landmark. The anchoring ground here is about 3 m. from shore. Negapatam was taken by the English in 1781. (*Hamilton's E. I. Gaz.*)

NEGOMBO (*Nagambhu* "the land of serpents.") A sea-port town of Ceylon, on the W. coast of that island, 20 m. N. Columbo, and beside the canal, from the latter city to Calpentin. Lat. 7° 11' N.; long. 79° 44'. It has a small fort, and several ranges of European buildings; and is principally inhabited by Dutch families in reduced circumstances, attracted thither by the cheapness of provisions, and the salubrity of the climate.

NEGROPONTE, or EGRIPPO (an. *Eubœa*), a long, straggling island of the Grecian Archipelago, lying close to the E. coast of indep. Greece, and forming, with the Sporades, a separate nomarchy of its own name. Length, 110 m.; breadth, from 5 to 26 m., the widest part being measured from Chalcis to C. Kili: area, 1,480 sq. m. Pop., in 1836, 60,000. Eubœa is very similar in its mountainous character and geological constitution to the neighbouring continent, from which it seems to have been separated by some sudden convulsion of nature. Grey limestone and clay-slate are the chief stratifications, and there are clear indications both of old and more recent volcanic action. The whole country is bold and rugged, with a bluff coast, especially on its E. side, which is dangerous to navigators; the highest points of the mountain-range, proceeding from N. to S., through the island, are Mount Lithada, 2,837 ft. high; Mount Kandili, 3,967 ft.; Mount Delphi (an. *Derphossus*), 5,725 ft., and St. Elias d'Oro (an. *Ocha*). The soil of the slopes near the shore is very fertile, but only imperfectly cultivated. The orange, citron, almond, and other trees peculiar to the climate of Greece, grow abundantly on the lowlands; while the chestnut, oak, and fir, skirt the regions nearer the mountains. The staple produce of the N. part of the island consists of grapes, from which the farmers make large quantities of a thin red wine, very commonly drunk in Greece, and fetching, according to Colonel Leake, about 5 piastres per barrel. Corn and olives are raised chiefly in the S. districts; but the island has lost the character which it anciently held of being the granary of Greece. (*Comp. Thuc.* i. 2 with *Herod.* v. 77.) Excellent herbage for grazing is found in the more elevated lands; but oxen are bred only for farming purposes. Sheep, however, are numerous, and of an excellent breed, furnishing large quantities both of wool and cheese.

The chief town and port of Eubœa is Chalcis, or Egripos (lat. 38° 30' N., long. 23° 54' E.), on the Euripus, or channel of Talanti, where it is only 40 yards wide, and crossed by a bridge, supposed to have been erected by Mahmoud Pacha in 1462. Pop. 6,000. The town (which, according to Strabo, was founded by the Athenians before the Trojan war) is walled and strongly fortified, comprising numerous ancient fragments; but few of them are sufficiently large to be intelligible. It has also 2 tolerably good harbours, one of which on the N. side, though small, is deep, secure, and capable of containing many merchant ships. The only other town of Eubœa is *Carystus*, or Castel Rosso, a fortified post near its S. extremity, with 2,000 inhabs. There are, also, numerous villages.

The most ancient name of Eubœa was Macris; but it was also known, at different times, by the various appellations of Ocha, Ellopia, Asopis and Abanti. Its inhabs., called Abantes by Homer, were among the earliest navigators of Greece, and, according to Herodotus,

behind the Indian advance on the coast of Asia Minor
 (1401). They also founded settlements at a very early
 period in Libya, Sicily and Corsica. Soon after the
 capture of the Philippines the Spaniards became a dis-
 seminary of Athens, but succeeded in Sicily after a
 hard struggle. In the first year of the Protestantism war
 it afterwards became attached to the Romanists in
 France, and was taken by the Romans from Philip. The
 date of Lutheranism is then gradually declined in pop-
 ular importance, and Protestantism is the fifth day
 under the emperor. At the disintegration of the
 Eastern empire by the Franks, the Venetians obtained
 possession of Rhodes, but were expelled from it in 1522.
 By the Turks, who took it all the nominalism of the
 first kingdom of Greece in 1830. Leake's H. Greece,
 vol. 3. London, U. 1824-1831, Cameron's Greece, U. 1831
 and 1832, &c.

It is surrounded by a compact mass of its kindred of all colors and is one of the handsomest, fern leafed trees of Little Canada. It has several upright branches, up to 10 ft. and a greater extent fringed by pointed branches. It produces rich, very white and profuse and therefore that are highly distinguished all over Canada. It is also the principal of a handsome and portion of the landscape started on the banks the present in the hills and there on the bank. Its wood is very soft and is used for the same as the wood of the spruce, but it is not so hard and is not so strong. It is also used for the same as the wood of the spruce, but it is not so hard and is not so strong. It is also used for the same as the wood of the spruce, but it is not so hard and is not so strong.

[illegible]

The district of British India, called Madras, comprises some parts of the Peninsula, lying between the Bay of Bengal and the Arabian Sea. It was, in the last century, a fortress of considerable strength, and to this a populous and busy town, about 400 in length, and of shape well adapted for commercial purposes, without a single wall or fortification, has been added. The districts without the walls are large. The richness of the British colonies is in an elevated ridge of the town. A curious discovery was made here in 1793 of a number of British gold coins and medals, supposed to be of great value, and the ruins of a Hindu temple, which, unfortunately, have not been discovered, but which were present, and found to be of the most ancient quality 7 years, 4 months, and 10 days, (1793).

NO 122 A, an ancient relic of Lapin. Owing to the
ruins situated in its neighboring grove, this relic
remains only by the modern village of Lapin. It is
10 m S W of Lapin and 4 m S by W of Lapin. The
ruins of the tower as well as the fragments of the
it is merely a square, irregular fragment of a temple
of Lapin a square and a few hundred and seven feet
pillars supposed to have formed parts of the tower of
Lapin. If the temple these remains only are
standing two of which belonging to the same tower
the same suggest their existence. These columns are
6 ft by 4 in diameter and carry 10 ft high, columns
of their capitals. The temple was destroyed and
the ruins being suggested by W. Walker to have had
columns on the sides. The lower part of the walls
surrounding the site, is complete and the pillars of which
there are numerous fragments have been in such regular
order that the temple appears to have been destroyed
by an earthquake rather than by the burning and
destruction of fire. Mr. Daband says "I have
not seen to know any other temple the remains of
which are as similar and the capitals as distinguished
only small as those of Lapin. The whole is of red
dolerite and the columns are covered with a fine
grain." Mr. W. Hall mentions, also, that there are
indications of the Temple being at the foot of a ridge

...taining 60%, and probably remains of the station and hydrocarbon origin be observed by a search similar to that mentioned at Garrettsville and Pungit. (Am. J. Science, 4, 1911)

Menon are ascribed to mythical history as having been the guests of the first emperor of Macedonia to destroy the Menon race, and the sons of this emperor are pointed out to legislators even to the time of Pausanias, near the end of the second century of the Christian era. The games are of doubtful origin, but the national mythology asserts that in the region inhabited by the country of Epidauria or Acarnanum, one of Locris, a king of Menon. They were celebrated by the guests of Alexander, and are thus alluded to by Strabo (Th. 10. 136) :-

With respect to the periods at which these syllable were substituted, different accounts are given by the old writers, but the more consistent opinion is, that they were substituted universally in the American month December, corresponding with the modern August. The A-gives were the signs at those years which commenced having and abetting contain, as well as chariot years, and the comparisons were viewed with effect to the State of the Florida war when, in consideration of the manner that the Spanish republic had declined in that struggle for independence, a change plan was introduced in the month of August from February and May 1808, that the years were to be denoting steps in the reign of Philip, son of Christopher, in the second century preceding the Christian era. It may be observed here, even from the slight mention that Ponce de Leon of the Roman games that they had in his time taken into great notice. (Dunbar's *Ornithology* II. 111-112. Cooper's *Ancient Games* II. 111; *August's Games* I. 171-172.)

1911, a village and lake of Central Italy. Pagan
Sights, to the Camera di Roma. The village on the
S. E. bank of the Lago di Bracciano is a fine example of
the S. E. Roman style, and is called from the name of
the lake by which it was formerly surrounded. The
village is the seat of the Bishop of the Roman
diocese, and is a fine example of the Roman style.
The village is the seat of the Bishop of the Roman
diocese, and is a fine example of the Roman style.
The village is the seat of the Bishop of the Roman

Wagon, a small town of 2000, dip between Martin, on bottom of the Loring, on N. by E. Union Gap, to the south. It is surrounded by the river and the main of Loring, and bounded by water. It is well built, and has a few old mills, which were given for several people interested. Installing a public library at it (the only general collection a hanging) a small thing, and a handsome bridge over the Loring. It has one large casino and timber (timber) and a brick trade in agricultural products. The majority of houses was given to the town of Orléans, by Louis XIV. (Baptist, 1800, at Martin, N. E.)

It is one of the largest of islands, some 100 miles in length and 10 miles in width. It is situated in the Pacific Ocean, about 100 miles from the coast of the Hawaiian Islands. It is situated in the Pacific Ocean, about 100 miles from the coast of the Hawaiian Islands. It is situated in the Pacific Ocean, about 100 miles from the coast of the Hawaiian Islands.

There are also 3 places of worship for Dissenters, and, in 1834, 4 Sunday-schools were attended by 520 children. It has also an endowed school for 25 boys, and a large paper-mill; but the principal dependence of the inhab. is on the retail trade with the surrounding district. Markets on Thursday, 3 large horse and cattle fairs; and a statute fair on Aug. 1.

NEPAUL (Hind. *Nepala*), an indep kingdom of N. Hindostan, extending through 8 degs. of long., and comprising a great portion of the S. declivity of the Himalaya chain. It lies between lat. $26^{\circ} 30'$ and $30^{\circ} 50'$ N., and long. 80° and 88° E., having N. and N.E. the table-land of Thibet, E. the territory of Sikkim, and elsewhere the British territories. Length, E. to W., about 500 m., average breadth, rather more than 100 m. Area may be estimated at 53,000 sq. m.; and pop. at 2,000,000. This country may be divided into four regions, according to its elevation. The lowest, or *terriani*, is a part of the great plain of Hindostan. In a few places, the British districts reach to the base of the mountains, but, in most parts, the Nepaul dominions stretch for about 20 m. into the plain. This region is not wholly level, but undulating, and comprises a good deal of poor land, overgrown with trees and bushes of little value: but there is also a large proportion of rich land, and, upon the whole, the soil is much better than in the adjacent parts of the British territory, the products being, however, nearly the same. The surface here is intersected by numerous small rivers, which not only serve for watering the crops, but, in the rainy season, are used for the transit of agricultural produce to the markets of British India, and to float down the valuable timber of the forests. The very name *terriani* (or *tariyani*), implies, indeed, the country's being navigable. Bounding this region on the N. is another of nearly the same width, consisting of small hills composed chiefly of clay intermixed, however, with many primary rocks.

The lower portion of this region, with a part of the last-named, is the grand site of the saul forests, among which are many sissoo and toon trees. Higher up the hills are covered with a great variety of trees; and in the N. are many pines and mimosas, from which catechu is obtained. In this region are many fine valleys, some of which are tolerably cultivated; while others, though possessing a very rich soil, are almost wholly neglected. A few straggling villages are scattered through the woods, the inhab. of which grow cotton, rice, and other articles with the hoe, having first cleared away the trees. The third region is that of the mountains, which rise so high as to be covered with snow for a great part of the year, and are divided by valleys, rising to from 3,000 to 6,000 ft. above the great plain of Hindostan. Of course, these valleys differ very much as to temperature; some abound with rattans and bamboos, and ripen the sugar-cane and pine-apple; while others produce only barley, millet, and other grains of cold countries; and oaks and pines are their only forest trees. The breadth of this belt or region generally may be from 30 to 40 m. N. to S., though further W. it is probably greater. The fourth, or Alpine region, is probably of nearly equal extent, and consists of immense rocks, rising into sharp peaks and tremendous precipices, which, where not perpendicular, are covered with perpetual snow, and almost constantly involved in clouds. The interior, or most lofty chain of the Himalaya, forms the farthest boundary of Nepaul to the N.; through which, however, are several passes into Thibet, while several tributaries of the Ganges, which intersect this country, are supposed to rise on the N. side of the main chain.

The land in the third or mountain region is considered the most valuable in the country, and is that in which all the officers and servants of the crown are paid, and from whence all endowments are made. From the abundance of rain in the warm season (for the periodical rains extend to Nepaul with nearly the same violence and duration as in Bahar), the land here, considering the inequality of surface, is uncommonly productive of grain. Wherever it can be levelled into terraces, however narrow, it is exceedingly well suited for transplanted rice, which ripens after the rains have ceased, so that the harvest is never injured; and as most of these terraces can be supplied at pleasure with water from springs, the crops are almost certain. In some parts the same land gives a winter crop of wheat and barley, but in most parts this is judiciously avoided. Where the land is too steep for terraces, it is generally cultivated after fallows with the hoe, and produces rice (sown broadcast), maize, cotton, several kinds of pulse, a kind of mustard, Indian madder, wheat, barley, sugar-cane, and a large species of cardamom; and in the country between Nepaul Proper (the valley of Catmandoo) and the Kali, ginger is a valuable product; but transplanted rice may generally be considered as half the entire produce. The sugar-cane is planted in considerable quantities in the valley of Nepaul Proper, and it seems to thrive. Most European kitchen vegetables have been introduced; but they are

only to be found in the gardens of men of distinction, and in very small quantities. From the abundance of rain the climate is not favourable for many kinds of fruit; the heats of spring not being sufficient to bring them to maturity before the rainy season sets in, as is the case in Bengal. Peaches grow wild by every rill, but the one side of the fruit is rotted by the rain, while the other is still green. The grapes are also bad from the same cause.

The pasture on the mountains, though not so hard and watery as that of the low country, is by no means good, and is said to be inferior to that even of the heath of Scotland. The pastures are in general common. Nothing is paid for pasturage; but as it is scarce, and the principal tribes do not employ cattle in agriculture, very few are bred in the country. Buffaloes and goa are imported from the low country; and horses, yaks (*Bos grunnicus*), shawl-goats, common goats, and sheep are brought from Thibet, and become tolerably common on the hills. The buffaloes furnish pretty good beef. The shepherds of some tribes are provided with numerous flocks. In winter they retire to the lower mountain and valleys; but in summer they ascend to the Alpine regions, and feed their herds in the vicinity of perpetual snow. The sheep which these people possess are very large, and have fine wool, which is woven into a cloth finer than that of Bootan: they give also an abundance of milk, from which is made a kind of cheese.

The lands in Nepaul Proper have long been divided into *khat*s, or fields, each of which, in ordinary seasons, produces about 234 bushels of paddy, or rice, in the husk, which, on the supposition that each *khat* is equivalent to $8\frac{1}{2}$ English acres, would be at the rate of 28 bushels an acre. The arable lands are partly retained as the property of the court, for defraying the rajah's household expenses; but the produce of the land so employed is not sold, but serves for the consumption of the court, and for distribution in charity at the temples and among religious mendicants. But by far the greater portion of these lands are let to tenants, or granted in fee for military service; and the rent of the lands let, as in the former case, forms a principal portion of the rajah's revenue. Landholders who do not cultivate their own estates, in general let them for half the produce. The persons who rent lands from the owners are of two kinds: the *kuriyas*, who occupy free land, and are exempted from any services to government, except the repair of roads, &c.; and the *prajas*, who occupy the crown land, whether that be held by the prince, or granted for military service. Most great proprietors, however, like the rajah, employ stewards, with their servants and slaves, to cultivate land for the supply of their families. Money-rent for land can seldom be procured, and is very low, only from 4 to 12 annas being paid as a fixed rent in money for land capable of producing a crop, the half of which is worth about 60 annas.

But when the lands are alienated for sale, they fetch from 1,600 to 2,000 *moahars* a *khat*, which high price is owing to the very small quantity of land that is brought to market. The agricultural implements are very inferior, and almost comprised in an awkward kind of hoe, a weeding-iron, and fans for winnowing the corn. In Nepaul, however, they have made a further progress than in India, by the introduction of water-mills for grinding corn.

The mountain region of Nepaul contains a good deal of iron, copper, lead, and some zinc, the first three being found quite on the surface. The copper ore is dug from trenches open above, so that the workmen cannot act in the rainy season, not having sagacity to make a drain. Each mine has attached to it certain families, who seem to be a kind of proprietors, as no one else is allowed to dig. The total quantity of ore dug by each miner may be estimated at 2,000 lbs. a year. This is delivered to another set of workmen, by whom it is smelted and wrought, the rajah, to whom the forests mostly belong, furnishing the materials for the charcoal. The ore yields, at an average, 62½ per cent. of metal, 1-3d of which becomes the share of the rajah, 1-3d that of the miner, and 1-5th the share of the smelter; the remainder is divided among the rajah, the miner, and the keeper of the accounts, who usually advances a subsistence to the whole working party, and often furnishes loans even to the rajah. Iron-ore is found near the surface, and is wrought nearly on the same principle as copper, the miner receiving 1-3d part of the produce. Some of the iron is so excellent that even without being converted into steel, it is made into knives and swords. Only 2 lead-mines are now wrought; but lead is found in many parts of the country close to the surface, and it contains much silver. There are numerous sulphur mines; but some have been deserted on account of their injurious effects on the workmen. Corundum, here called *Kurran*, is found in great quantities on the hills of Isma and Musikot; but the masses, which always lie close to the surface, are much smaller than those in the British territory, and seldom exceed 4 or 5 lbs. in weight.

The most extensive manufacture of Nepal is that of coarse cotton cloth, woven by the native women of all ranks, and by the men of the Parbatiya caste. These cloths constitute the dress of the middle and lower classes of people, though woollen would be better suited to the temperature of a Nepal winter. All those, however, who are not very poor, cover themselves with woollen blankets imported from Bootan. The entire dress of the higher ranks is of foreign manufacture, and comprises Chinese silks and shawls, with muslins and calicoes from the low countries. The military alone wear European broad cloth. There are also at Lalita-Patan and Bhatgong extensive manufactures of copper and brass goods, as well as of bells, made from a mixed metal, called *Pau*: these, with iron vessels and lamps, are exported in large quantities to Thibet. A strong paper is made at Bhatgong, from the bark of the *Daphne papyfera*; but the supply is insufficient for the home consumption, and paper is imported from Bontan.

The trade of Nepal was formerly pretty considerable, though the rajah's territories produce few articles for exportation, except metallic wares and drugs; but at present the badness of the police, and total want of credit, owing partly to the weakness of the law, and partly to the falsehood of the people, operate as a great hindrance to commercial intercourse. The merchants of Cashmere carry their goods, by way of Leh, to different parts of Thibet and W. China, exchanging them for goats' hair, tea, and silks: they also send to China other skins, to the value of about 50,000 rupees a year, procured chiefly from the neighbourhood of Dacca, in Bengal. The merchants of Bootan and Thibet bring to Catmandoo paper, coarse woollen cloths, horses, shawl-goats, sheep, horned cattle, *chawngri*, musk, salt, sal-ammoniac, yellow arsenic, borax, gold dust, silver, and preserved fruit; much of which is again exported to Patna, in exchange for buffaloes and goats, broad cloths, cutlery, glass-ware, and other European articles, Indian cotton cloths, mother of pearl, coral, pepper and other spices, camphor, tobacco, and *ptags*, a red powder thrown about by the Hindoos at their festivals. Most of these articles, with metallic utensils and bells, are sold to the merchants of Thibet. The money of Nepal consists of *damas*, 4 of which are equal to 1 *paisah*; 4 *paisahs* = 1 *ana*; and 8 *anas* = 1 *mopur*. Gold coins are called *ashraffies*; but the half *ashraffy*, = 12½ *mohurs*, is the highest piece now coined: it weighs 84½ grains, and is worth nearly 6s. 3d. at the mint price of Calcutta. The *mohur* is the common silver coin of the country, and is worth about 4-10ths the Calcutta rupee. The *paisah* and half-*paisah* are the principal copper coins. Grain is sold by measure; 1 *seer* being equivalent to 2½ Winchester bushels.

The Nepaulese government, which for many years has been monopolised by the tribe called Gorkahs, is essentially despotic, modified, however, by certain observances enjoined by immemorial custom. The *Dharma-shastra* forms the basis of jurisprudence both in civil and criminal cases, the principal punishments being by fines, confiscations of property, banishment, degradation of caste, maiming, and death by hanging as well as slaying. Women are never put to death, but are subject to mutilation and torture. The provs. are governed by *subahs*, who are the supreme officers of revenue, justice, and police: each farms the revenue of his own district, and either collects it on his own account, or underlets it to *izaradars*. The amount paid by the *subahs*, however, forms by no means the whole of the royal revenue; for, besides compulsory presents made by all visitors of the court, a general income-tax is levied on all classes according to the exigencies of the state. Nepal Proper is governed by a rajah, assisted by the *bazadar*, or council of the 12 great officers of the court; for the support of which Catmandoo pays 18,000 rupees; Lalita Patan, 18,000; Bhatgong, 14,000; and Kirthipoor, 7,000. Each farm is assessed at a certain quantity of grain, which may be paid either in kind or in money at the market price. A large proportion of the valley, however, has been alienated either in fee or as charity land. A town called Sanghoo, worth annually 4,000 rupees, is the jointure of the queen-regent, and Dewapatan, which is still larger, belongs wholly to certain temples. The religion of the Nepaulese is Buddhism; but in the distinctions of caste and the nature of the priesthood there are essential differences between the religion of the Buddhists of Ava and that professed by those of Nepal, both of whom are held in equal abhorrence by the Brahmins of Bengal.

The pop. of Nepal comprises numerous tribes partly of Mongol and partly of Hindoo descent. The Magars, who occupy the hills in the W. part of the kingdom, form the greater part of the rajah's army, and the Gurungs, who employ themselves either in mining or pasturage. The Newars live in the plain of Catmandoo, and devote themselves to agriculture and the useful arts. They are of middle size, with broad shoulders and chest, flat faces, small eyes, and spreading noses, with a sallow complexion. The grand basis of subsistence in Nepal is

rice, with which the poorer classes eat raw garlic, radishes, and lentils: those in more easy circumstances add oil or *ghee*; and the rich eat a great deal of animal food. Even the poorest are occasionally able to sacrifice a pigeon, fowl, or duck, which they afterwards eat. The rajpoots of Nepal, indeed, are so fond of animal food, that, to the astonishment of the Bengalese, they drink the blood of a sacrifice as it flows from the victim. All classes drink spirituous liquors, to which they are excessively addicted. Most of the Nepaulese domestic servants are slaves, the price of which varies between 30 and 40 *mohurs*. Even some of the Brahmins are slaves to the rajpoots; but they are not degraded, and are employed in great families either as cooks or in the service of the private chapels. All other ranks are sold as common slaves, and persons of the best families have often been deprived of their caste; but this is not usual, as the Nepaulese are particular in maintaining the distinction of castes. Most of the slaves have been born free: a few, perhaps, have been degraded on account of crimes; but by far the greater number have been sold by necessitous parents. The female slaves, even those of the queen, are *donne libere*, compelled to sell their favours for clothes, no allowance being made to them by their masters except a little rice. Hence they seldom have children, and beggary is the usual lot of the old and infirm. The queen's slaves form her body-guard, and follow her on horseback armed with swords and riding like men. The ordinary language of Nepal is the Prabhariya, or mountain-Hindoo dialect, which is continually becoming more prevalent, and in some districts has already superseded the language of the native tribes: it is exclusively spoken by the reigning family and the higher castes. The Newars have a language peculiar to themselves, quite different from that of their neighbours, and alleged to possess a copious literature.

Nepal, which was formerly divided among numerous independent princes, became united by conquest in the middle of the last century under the sovereignty of a chief of the Ghorhas, who in about 40 years subjected all the countries between the Sutledje westward and Bootan on the E. The aggressions of the Ghorhas on the Chinese territory were stopped in 1792 by an army of 70,000 men, who, after many victories, advanced within 25 m. of Catmandoo, and obliged the rajah to make an ignominious peace. The Ghorhas afterwards turned their arms against the British, who, after a war of two years, obliged them, in 1816, to cede all the countries between the Sutledje and Kali, as well as to evacuate the territories of the Sikim-rajah. Active symptoms of hostility to the English were displayed in 1839; but these were checked by the events of Afghanistan. (*Hamilton's Nepal*, passim.)

NEPI (an. *Nepete*), a town of Central Italy, Papal States, deleg. Viterbo, 25 m. N.N.W. Rome. Pop. about 1,500. It is beautifully situated, and surrounded by a high Gothic wall, partly founded on the original walls erected by the Etruscans. It has numerous churches and convents, and a fine modern aqueduct, but a gloomy and desolate appearance within. Some Roman antiquities exist here. Conjoined with Sutri, Nepi constitutes a bishop's see. (*Gell's Rome*, &c. ii. 118.)

NERAC, a town of France, dép. Lot-et-Garonne, cap. arrond., on the Baïse, a tributary of the Garonne, 16 m. S.W. Agen. Pop., in 1836, ex. com., 2,684. It is divided into the old and new town, one on either bank of the river, here crossed by two stone bridges. The old town, on a steep declivity, and partly surrounded with Gothic walls, is ill built and gloomy; but the new town, on a level site, and encircled by promenades, is well laid out, and handsome. Nerac has the remains of an extensive castle, said to have been constructed by the English, a fine par. church, a large hall, and several other good public buildings. One of the promenades has a good statue of Henry IV., who passed most part of his youth in the castle of Nerac. This town has manufactures of coarse woollens, ship biscuit, and corks; and a good deal of trade in linen fabrics, corn, flour, wine, and brandy. Numerous Roman antiquities, including baths and other edifices, medals, inscriptions, &c., have been discovered at Nerac, from which it would appear that it was anciently called *Aqua Neræ*, and was either founded or greatly embellished by Tetricus, in the reign of Gallienus. (*Hugo*, art. *Lot-et-Garonne*, &c.)

NERBUDDAH, (*Narmada*, "The bestower of pleasure," called by Ptolemy the *Namados*), a river of Hindostan, extending through 9 degs. of long. in the N. part of the Deccan. It rises in the table-land of Gundwanah, lat. 22° 40' N., long. 81° 45' E., near the sources of the Sone and Mahanuddy. It has a general W. direction, with fewer windings than most Indian rivers; and, after a course of about 700 m., falls into the Gulph of Cambay, lat. 21° 36', long. 72° 50', 28 m. W. Baroach. It varies considerably in breadth; being 600 yards across, near Jubbulpoor, in long. 80°, and 1,200 yards at Mundleysir, 210 m. from its mouth; while above and below Baroach, it sometimes expands to a breadth of 3 m. At

its source, the Nerbuddah may be 2,460 ft. above the level of the sea: its total rate of descent will be therefore nearly $3\frac{1}{2}$ ft. in a mile. During its passage it is greatly obstructed by rocks, islands, shallows, and rapids, which render its navigation in most parts difficult or impracticable through the provs. Gundwanah, Malwah, &c.; but, after entering Gujrat, it becomes navigable for small craft for about 100 m. from the sea. The Nerbuddah is joined by no affluent of any consequence. For so considerable a river its basin is remarkably narrow and restricted: it being inclosed on the N., for the most part, by the Vindhyan mountains, and on the S. by the Santpura and other parallel ranges, which are seldom more than from 50 to 60 m. from the former. The valley through which it flows, consists of fertile alluvial soil, in which many fossil remains have been found. (See *Journ. of the Asiatic Soc. of Bengal.*) Mundlah, Gurrah Warrah, Hussingabad, Hinda, Mheysur, and Baroach, are the principal towns on this river. By the war of 1817-18, the British obtained an extent of nearly 30,000 sq. m. of the country watered by this river from the rajah of Berar, which, under the term of "Ceded Districts on the Nerbuddah," has been annexed to the Bengal Presidency, and, in 1820, produced a total revenue of 1,876,398 rupees. (*Parl. Reports; Asiatic Journals; Hamilton's E. I. Gazetteer.*)

NETHERLANDS. See HOLLAND.

NETTUNO, a small sea-port of Southern Italy, in the Campagna and Comarca di Roma, $31\frac{1}{2}$ m. S.S.E. Rome. Pop. about 3,000. It seems to have derived its name from an ancient temple dedicated to Neptune, and is built round the bastions of a Papal fortress. It has now but little activity or commerce, owing to the unhealthiness and depopulation of its vicinity; but in antiquity, under the name of Corno, or Cerio, it was the port of Antium, the cap. of the Volsci, some remains of which city exist about 2 m. W. by S. (*Gell's Rome, &c.,* ii. 122.)

NEUBURG, a town of Bavaria, circle Swabia and Neuburg; on the Danube, here crossed by 2 bridges, $28\frac{1}{2}$ m. N.N.E. Augsburg, and 45 m. W.S.W. Ratisbon. Pop. 6,000. It is divided into the upper and lower town; and has some remains of its ancient walls, a royal castle, in which many curiosities are kept, an arsenal, a royal institute, an hospital, a gymnasium, and a teacher's seminary. It is neat and well built; and is the seat of the high court of appeal for the circle. (*Berghaus, &c.*)

NEUCHÂTEL, or NEUFCHÂTEL, a canton in the W. of Switzerland, forming a principality belonging to Prussia; between lat. $46^{\circ} 50'$ and $47^{\circ} 10'$, and long. $6^{\circ} 25'$ and $7^{\circ} 5' E.$; having N.E. and E. the canton Bern, S.E. the Lake of Neuchâtel, S.W. Vaud, and W. and N.W. the dep. of Doubs, in France. Length N.E. to S.W., 33 m.; average breadth about 9 m.; area, 280 sq. m. Pop., in 1850, 70,753, of whom 26,111 were either citizens of other cantons, or foreigners. The Jura chain runs through the canton in its entire length, dividing it into two parts, one belonging to the basin of the Rhine, and the other to that of the Rhone. This mountain range often rises to 5,000 ft. in elevation; and the Chassirai, its highest point within the canton, rises 5,285 ft. above the sea. The valleys extend generally in a longitudinal direction, parallel to the mountains. The principal lakes are those of Neuchâtel (which see), and a part of that of Bienné; principal rivers, the Doubs, constituting the N.W. boundary; the Reuse, Thielle, Tyon, &c. The climate varies greatly: the vine is cultivated on the banks of the lake of Neuchâtel; but in some of the more elevated valleys the winter is very severe, and on many of the mountains snow remains continuously for 7 or 8 months. The soil is principally calcareous. Of 256,000 *poes* or arpents of land, which the canton is estimated to comprise, 35,000 are arable, 4,600 vineyards, 58,000 in artificial, and 60,000 in natural pastures, and 45,000 in forests. There are very few large proprietors: the savings of the labouring pop., both agricultural and manufacturing, are generally laid out on the purchase of cottages, with a small portion of adjacent land. Excepting wine and vegetables, this canton does not yield enough of agricultural produce for its own consumption; and the principal part of its supply of corn is imported from the neighbouring cantons of Basle and Bern. Considerable quantities of wine grown around Neuchâtel are exported to the neighbouring Swiss cantons. The best wines are those of Cortaillod, Neuchâtel, and Boudry. The first in fine years is said to approach pretty closely to Burgundy. Within the last few years the preparation of sparkling wines, sold as champagne, has become a pretty extensive branch of business, from 120,000 to 140,000 bottles being annually exported. A good many cattle are reared, principally cows; and cheese is one of the principal articles of export. Hay is also extensively exported.

Neuchâtel is one of the principal manufacturing cantons of Switzerland, especially for watches, printed cottons, and lace. Watch-making, which was introduced early in the 17th century, is carried on to a great

extent in the mountainous districts, but particularly in and near Le Locle and Chaux de Fond. It is estimated that from 18,000 to 20,000 hands are employed in this branch of industry, or in manufacturing instruments for the construction of watches. From 100,000 to 120,000 watches are supposed to be annually produced, of which 35,000 are of gold; they are exported to France, Germany, Holland, Italy, Spain, America, Turkey, &c. Mostly all the watches sold in Paris are made in Neuchâtel, and the neighbouring Swiss cantons, whence they are either smuggled into France, or regularly imported, the gold watches paying a duty of 6 and those of silver of 10 per cent. The capital employed in the watch trade has been estimated at 7,000,000 of Swiss fr., or upwards of 386,000*l.* sterling. It is difficult to ascertain the ordinary rate of wages, workmen being generally paid by the job, and not by a stipulated salary. But it is believed that a man's wages may be estimated, at an average, at from 1,000 to 1,500 fr. (55*l.* 10*s.* to 83*l.*) a year. Lace-making was said by Ebel to occupy from 5,000 to 6,000 hands; but it has declined, and many persons formerly engaged in it have embraced some branch of watch-making. The printed cotton manufacture was established early in the last century, towards the latter end of which it was in its most flourishing state. At present most of the cotton cloths printed in Neuchâtel are furnished by Zürich and other Swiss cantons; and only about 1,000 men, women, and children, are employed in this manufacture, who produce annually about 80,000 pieces, each containing about 32 English yards. Of these prints about 30,000 pieces are sent to the Prussian territories, and the remaining 50,000 to Holland, Belgium, and Italy. Hosiery, cutlery, mathematical instruments, and metallic wares of various kinds, are among the other manufactures of the canton. Neuchâtel is not a member of the Prussian Commercial League, but its manufactures are admitted into the Prussian dominions at a diminished duty. Watches, &c., pay one half, wine two fifths, and printed cottons pay 20 rix-doll. per cwt. of the ordinary tariff duty. The livre or fr. of Neuchâtel (of 20 sols of 12 deniers each) = 10 batzen, or about 1*s.* 8*d.* English.

Neuchâtel recognizes the sovereignty of the king of Prussia, and pays him an annual tribute of 70,000 Neu. fr., or nearly 4,000*l.* All the administrative functionaries are nominated by the king, without a veto on the part of the legislature. The representative body (*audiences générales*) consists of the 10 oldest members of the governor's Council of State; of 14 members not councillors, chosen for life by the king from lists presented by the inhab. of the canton; of the head magistrates of the canton, whose number must not exceed 24; and of 30 deputies each at least 25 years of age, elected by all the male inhab. of more than 22 years, being neither condemned criminals, bankrupts, nor receiving pecuniary relief. This body is convoked and prorogued at the command of the governor, but it must assemble once in two years. No law can be passed, changed, or abrogated, without the consent of the *audiences générales*; but no resolution of the latter becomes law till it have received the sanction of the king. The budgets are voted by the *audiences générales*, on whose account the imposts are received, through agents nominated by the king. No custom-houses exist in any part of the canton; and the turnpike dues are much lower than in most of the other Swiss cantons. There is no impediment to the free exercise of any profession, no poll-tax or other direct contribution, duty on raw materials, impost on carriage or communication, or taxes on food or drink, direct or indirect. There are neither stamps nor patents; and the complete absence of all restrictions, and of almost all taxation, is a primary cause of the cheapness of most articles, and the general prosperity of the canton. There are few districts of Europe where so large a proportion of the inhab. are interested in savings' banks. In 1834, 1 in 18 of the pop. was a depositor. Paupers are provided for by the communes to which they belong; no general tax can be established for their support. The number of illegitimate children is about 24 per cent.

The administration of justice is both prompt and economical. There are 21 courts of primary jurisdiction; and 2 of appeal, at Neuchâtel and Vallangin. The laws are, in many respects, similar to those formerly prevalent in Burgundy. The inhab. speak a French dialect; they are Protestants, except about 3,000 individuals under the authority of the Bishop of Lausanne. Public instruction is pretty generally diffused, few individuals being ignorant of writing and arithmetic. There are colleges in Neuchâtel, the cap., and Chaux de Fond; and schools of watch making and other arts in those towns and Le Locle. Many societies for instruction, and benevolent purposes, exist. The militia comprises all males between the ages of 18 and 50. Neuchâtel furnishes a battalion of light infantry to the Prussian service, and a contingent to the Swiss confederacy. The public revenues, derived from rents, a small tithe or land tax, posts, turnpikes, salt and

motion picture, for example, in 1912, to \$2,511 00, and the expenditure in the same year to \$2,149 00, of which \$4,517 00 formed the contribution to the 6-cow herd.

Switzerland belonged to the 11th century to the German emperors and was added to Burgundy by the death of Rudolph. In 1476 the town of Montbéliard passed into a treaty with them and was once again added (and so the Swiss needed. In 1515 the last power in history of this century doing the same thing the day of France for their country. Napoleon created the Rhodan into a principality which he conferred on Marshal Davoust but in 1814 it passed to France being re-annexed however at the same time the two giving the Swiss cantons. The Helvetic is in France, Paul Schlegel's I am going to writing a map on Switzerland (Historical Document 1).

[illegible]

It is a small tree born of Hungary beyond the Danube says in its own name, on the Green, at the Palace of the Ministers, 66 N. 4th. Page 414. County half being Pennsylvania. - Brought has wide spread, and is a tolerably good timber country tree, rather

According to the appearance, because all the houses appear to be in the light state with the roofs strong, probably it is only a high percent covered up to hide the roof. Paper (the) is the new church, a Gothic structure, is a hall, weighing 100 columns. Weidmull has an old castle on beautiful ground, superior location, etc., and is the residence of a bishop. The seat of a spinning wheel and cottoned. There is one more of the-remained, probably, 100, one of copper, a river, the entire river, and in the town is the largest spinning-house in Hungary. Weidmull has also manufactures of coarse linen, and best raw sugar. (Osnabr. Age, Aug. 10, 1860. Paper, Hungary, etc.)

WET LANA and DRY LANA are produced from the flanks of sheep, in a fairly wooded country at an altitude of 10,000 feet. In this country we have a mountain and sheep culture, a system of animal husbandry, and wool as a distinctive trade in the wool grown in the country.

[illegible][illegible]

iron and steel, wine, salt, &c., being the great entrepôt for the upper Loire. Its trade is facilitated by a commodious haven at the mouth of the Nièvre. It has 9 annual fairs, one of which lasts 8 days.

This town existed at the conquest of Gaul by Cæsar; it became a bishopric in 506, and the cap. of Nivernais; in 865 it was burned by Hugh Capet; and in the middle ages suffered severely from plague, the inundations of the Loire, the invasions of the English, and religious wars. (*Hugo, art. Nièvre; Dict. Géog.*)

NEVIS, one of the British W. India Islands, belonging to the Leeward group; in about lat. $17^{\circ} 10'$, long. $62^{\circ} 33' W.$, separated by a strait 2 m. in breadth, from the S.E. extremity of St. Christopher's. Shape circular; greatest length, N.E. to S.W., $6\frac{1}{2}$ m.; extreme breadth, about the same. Pop. 9,571. It consists of a conical hill, rising from the sea to a height of 2,500 ft. Soil mostly a strong tenacious marl, not readily absorbent of moisture: the climate is similar to that of St. Kitt's and Tortola. It is well watered, and, in general, fertile. The inhabs. are nearly all occupied in the raising of the sugar-cane and provisions, and in the preparation of rum and sugar. In 1849, 24,627 cwts. sugar, 4,580 gallons rum, and 2,844 cwts. molasses, were imported from Nevis into Great Britain. The total value of the exports amounted, in 1848, to 23,593*l.*; that of the imports to 21,261*l.* It is divided into 5 parishes; Charlestown, the cap., is at its S.W. extremity. This colony is placed under a governor and council, and assembly. It has sundry public schools, in which about 650 children are educated. The portion of the compensation for slaves paid to the proprietors of Nevis amounted to 151,007*l.*; the number of slaves by the last registration having been 8,722, and the average value of a slave, from 1822 to 1830, 39*l.* 4*s.* Columbus discovered Nevis; which was settled by the English in 1628. (*Parl. Papers, &c.*)

NEWARK, a parl. and mun. bor., market-town, and par. of England, co. Nottingham, S. div. wap. of its own name, on a lateral stream of the Trent, crossed here by a handsome bridge of 7 arches, 16 m. N.E. Nottingham, and 110 m. N. by W. London. Area of parl. bor. 2,000 acres. Pop., in 1841, 10,218. The approach to Newark from the N. is by a long causeway carried over a flat island formed by the Trent and the Newark branch; and under it are numerous bridges, to give free passage to the waters during the floods. The town, consisting of a principal street on the Nottingham and Lincoln road, crossed by several others, and having a large market-place near its centre, is on the whole well built, paved, lighted with gas, and abundantly supplied with water. Among the public buildings, one of the most interesting, though now in ruins, is the castle near the bridge, called the *New Work*, from the circumstance of its having been re-edified by Stephen. It comprises a square of large dimensions, with 2 massive towers, and seems to have had 5 stories: the interior area is used as a bowling green, but several of the lower rooms are still entire. King John died in this castle, 18th Oct. 1216. The town-hall, in the market-place, a handsome building of stone, erected in 1776, comprises several large apartments for the corporate business, assemblies, balls, &c. It has also a court-house for the quarter sessions, with a small gaol, which, however, is "wholly inadequate and unfit for its purpose." (*Pris. Inspec. 5th Rep.*) The church, said by Mr. Rickman to be one of the largest and finest in England, was built in the reign of Henry VI.; it is a cruciform structure, with large aisles, transepts, and chapels, having at its W. end a highly ornamented tower, surmounted by an extremely light steeple, 249 ft. in height, round which are niches containing statues of the twelve apostles. Some of the windows have stained glass, representing the history of Jesus Christ; the choir is separated from the rest of the church by a screen of rich oak-carving, and in the interior are several curious monuments. The fabric is kept in repair by the produce of estates belonging to the bor., so that there is no necessity for a church-rate. The living is a vicarage in crown patronage. It has also 4 places of worship for dissenters, with various Sunday schools, attended by about 100 children. The grammar school was founded in 1529; its endowment, at the time of the Char. Comm. Inquiry, amounted to 2,380*l.* a year, and in consequence of a suit in Chancery, the corporation, its trustees, have founded two exhibitions of 80*l.* a year each, tenable for 4 years at Oxford or Cambridge. The master has a salary of 220*l.* a year with a good house, and 60*l.* a year are paid to an usher; the school is attended by about 40 boys. Two national schools furnish instruction to about 250 children of both sexes, and there are two or three smaller schools wholly or in part supported by subscription. The estates held in trust by the bor. for charitable purposes, independently of that above mentioned, are very extensive; and there are several almshouses, a workhouse, and dispensary. A library and small theatre are the only other public establishments.

Newark carries on a considerable trade in malt and corn, and in coal, cattle, and wool. It has also two large

brass and iron foundries: bricks and tiles are made here, and large quantities of gypsum and limestone, quarried and prepared in the neighbourhood, are sent by sea to London. Here are two pretty extensive linen manufactories and two private banks, besides a savings' bank and a branch of the Nottingham banking company. The arm of the Trent on which Newark stands is made navigable by means of a lock close to the town.

Newark was divided by the Mun. Reform Act into 3 wards; the corporation comprising a mayor and 5 other aldermen, with 18 councillors. It has, also, a commission of the peace under a recorder, with a court of requests for the recovery of debts under 5*l.* Corp. rev. in 1848-49, 1,080*l.* The quarter sessions for the S.E. div. of the co. are held here. Newark has sent 2 mems. to the H. of C. since the 29th Charles II., the right of election down to the Reform Act being in the mayor, aldermen, and inhabs. paying scot and lot. The electoral limits were not changed by the Boundary Act; reg. electors in 1849 50, 862. Newark is also the election-town for the S.E. div. of the co. Large markets, especially for corn, on Wednesday; fairs, Friday in Mid-lent, May 14., Aug. 2., Nov. 1., and Monday before Dec. 11.

Newark, which takes its name from the castle, became a place of considerable importance soon after the Norman conquest; but its principal celebrity is owing to the fact of its having been one of the chief garrisons of the royalists during the civil wars of Charles I. It was besieged by the parliamentary forces in 1643; but both the town and castle were held by the royal army till 11th May, 1646, when it was surrendered to the Scotch by command of the king, who was then a prisoner. The castle was at the same time demolished by order of parliament. (*Parl. Rep.; Char. Comm. Rep., &c.*)

NEWARK, a town or city of the U. States, the largest and most important in New Jersey, though not its cap.; co. Essex, on the Passaic, 3 m. from Newark Bay, and 9 m. W. New York. Pop., in 1830, 10,953; but, in 1840, 17,290. It is well built, and has many good houses. The court-house, gaol, 2 banks, an academy, and the chapels of the Presbyterians, Episcopallians, Baptists, and Methodists, are the principal public buildings. It has extensive manufactures of shoes and boots, saddlery, carriages, furniture, hats, jewellery, &c. The Passaic is navigable up to the town for sloops of 80 tons: 7,362 tons of shipping belonged to the port in 1849. (*Encyc. Americana; Mitchell, &c.*)

NEW-BEDFORD, a town and port of entry of the U. States, Massachusetts, co. Bristol, on an arm of Buzzard Bay, 50 m. S.S.E. Boston. Pop., in 1840, 12,067. It is regularly laid out upon sloping ground, and has a wealthy and prosperous appearance, chiefly owing to the whale fishery, in which its inhabs. are largely engaged. It has numerous churches, with banks, insurance offices, a court-house, a flourishing lyceum, a gaol, academy, theatre, and several printing offices, which issue both daily and weekly newspapers. In 1849, 123,912 tons of shipping belonged to the port, 2-4ths of the vessels being whalers. New-Bedford is connected with Taunton by a railway 20 m. in length, opened in 1840. (*Amer. Almanack; Official Reports, &c.*)

NEW BRUNSWICK, a tract of country in British N. America, on the W. side of the Gulph of St. Lawrence, between lat. $45^{\circ} 5'$ and $48^{\circ} 5' N.$, and long. $65^{\circ} 47'$ and $67^{\circ} 53' W.$, bounded S. by Nova Scotia and the Bay of Fundy, N. by Lower Canada, and W. by the state of Maine in the U. States. Extreme length, from N. to S., 180 m.: average breadth, 150 m.: estimated area, 25,931 sq. m. Pop., in 1840, 156,062. This colony, which is divided into 11 cos., has a much less indented coastline than Canada or Nova Scotia: the surface, however, is broken and undulating, though not mountainous, and considerable rivers intersect it in all directions, the largest being St. John's (which see), Miramichi, and Ristigouche. The principal gulphs are the Bay of Chaleur and Miramichi, on its E. coast, and that of Passamaquoddy on the S., into which runs the river St. Croix, which divides the province from Maine, in the U. States. Its geology is very little known; but limestone seems to be the prevailing feature, though clay-slate, grauwaacke, and even the primitive formations occasionally occur. Coal is abundant, and is wrought, near the Grand lake, by a joint-stock company. Iron and gypsum occur also in considerable quantities. Dense forests cover, by far, the greater part of the surface, and though the soil is generally rich and fertile, except in a few swampy tracts, only one-sixteenth of the whole province has been surveyed and laid open for settlers. The cutting down, and exportation of the fine timber, with which these forests abound, has, however, been extensively pursued for some years, and the quantity of cleared land is progressively increasing. The fauna and flora of the colony nearly resemble those of Nova Scotia, to which, indeed, it formerly belonged. The climate is very similar to that of Canada: winter lasts from Nov. to April, when a sudden change takes place, and vegetation becomes extremely rapid. The temperature in the

8. parts is milder and more equable; but the prevalence of sea-fogs, on the shores of the Bay of Fundy, render the cultivation of wheat near the coast very uncertain, though it does not seem to injure the health of the settlers. Indeed, the climate altogether is uncommonly healthy, and will bear to be compared with that of any part of England. Rheumatism, consumption, and low typhus are the prevalent diseases; but they are in a great measure brought on by exposure to the damp, and the sudden changes of temperature. Agriculture, notwithstanding the rich tracts of alluvial soil skirting the rivers, is considerably less advanced than in Nova Scotia and the Canadas, owing, in part, to its later settlement, but principally to the superior importance attached to its timber trade. Within the last few years, however, great improvements have taken place in these respects; agricultural societies have been formed, new settlers have introduced, in many parts, the more approved systems of husbandry, and emulation has been generally excited by ploughing-matches, cattle-shows, and the distribution of premiums. Wheat, Indian corn, barley, and oats are the principal grain crops; but by far the most important article of produce is the potatoe, the crop of which, in 1835, was estimated at 2,100,000 bush. Red and white clover are the grasses most cultivated, and beans, peas, turnips, mangal-wurzel, and beetroot thrive well, and are raised in pretty considerable quantities. Pasturage is followed to some extent, and it was estimated that the live-stock of the colony, in 1835, comprised 11,000 horses, 91,000 cattle, 143,000 sheep, and 29,000 hogs. The felling and conveyance of timber constitutes, however, as before observed, the great employment of the labouring classes; but most of the *Jamaicans* are dissolute and depraved, and the occupation prevents them from paying proper attention to agriculture. Many of the trees, especially the yellow pine, attain to a great size, and furnish timber of good quality, though inferior to that of Norway and the Baltic. It is principally conveyed to Great Britain in the log, the remainder being manufactured into deals, boards,

90 m. above St. John's. The judiciary courts are the

The Brunswick Land Company have done much to promote the immigration of industrious British settlers, and several joint stock companies and banks have been recently established. The premium for bills on England varies from 8 per cent. to 11½ per cent.; and the difference between the currency and sterling price of money in the prov. amounts to 1½ per cent. The paper currency, which is very general, consists of the notes of the different banks, and of those issued by the corporation of the city of St. John's. The sum in circulation amounted, in 1839, to about 250,000.

The constitution of New Brunswick is very similar to that of Nova Scotia, which it resembles in several other particulars, and to which the reader is referred for further information. The representative body, or parliament, comprises 26 mems., and sits at Fredericton, about

bor. It has notwithstanding a considerable trade, being the port for the greater part of Kinross-shire, Strathern, and other contiguous districts, both for the export of their agricultural produce, and for importing coals, lime, &c. Most vessels bound for Perth wait here for the flow of the tide; and some of them unload part of their cargo before they can, even at high water, proceed up the river. Newburgh, indeed, is, next to Kirkcaldy, the most important sea-port of Fifeshire. The weaving of coarse linens is largely carried on, employing from 550 to 600 looms.

Newburgh existed in the 12th century, and was subject to the neighbouring monastery of Lindores, whose remains are yet pretty entire. In 1631 it was created a royal bor. by Charles I.; but, like Falkland, being unable to defray the expenses of its parliamentary representative, it petitioned to be relieved from the burden, which was granted. It has otherwise, however, all the marks of a royal bor., and is governed by 3 bailies and 15 councillors. Municipal revenue, derived from land, about 170*l.* per annum. There are two curious crosses of remote antiquity in the neighbourhood; one called the Mugdrum Cross, the other Macduff's Cross. The former is supposed to commemorate a victory over the Danes in the 10th century; the latter was erected as a sanctuary to any of the kindred of Macduff, thane of Fife, who might commit murder. If they fled thither, and paid a certain fixed solatium to their chief, they obtained protection. (*New Stat. Account of Scotland, § Fifeshire.*)

NEWBURGH, a town and port of entry of the U. States, New York, Orange co., on the Hudson, 50 m. N. New York. Pop., in 1830, 6,424. It is well built, well paved, and well supplied with excellent water. It has places of worship for various sects, an incorporated academy, and several other schools; 2 banks, some good hotels, and paper, plaster, and gunpowder-mills; a whaling company, with a capital of 115,000 dolls., &c. It is, alternately with Goshen, the seat of the county court, and was the head-quarters of Washington during the publication of the celebrated Newburgh Letters.

NEWBURY, a mun. bor., market-town, and par. of England, co. Berks, on the Kennett, crossed here by a stone bridge of 3 arches, 24½ m. S. Oxford, and 53 m. W. by S. London. Pop. of the mun. bor., which includes, with the par. of Newbury, portions of the pars. of Speen and Greenham, in 1841, 6,379. The town, a considerable portion of which on the N. bank of the Kennett is in the hamlet of Speenhamland, consists of two principal, wide, and well-built streets, arranged in the form of the letter T, with smaller and very irregular streets at its S. extremity. The market-place, opposite the church, is a large open square, in which is the guildhall. The church, erected in the reign of Henry VII., is a large but plain building, with a square tower: the living is a rectory in the patronage of the crown. A district church, in the Gothic style, has recently been erected on the London road, and is remarkable for its extensive catacombs. There are, likewise, 5 places of worship for dissenters; and the town comprises several Sunday schools, and an endowed free-school, besides numerous and wealthy corporation-charities, which, however, had been greatly neglected previously to the passing of the Municipal Reform Act. (*Mun. Corp. Rep.*) The almshouses have accommodation for 90 aged people: there is a small bor. gaol, and about ¼ m. S. the town is a large Union workhouse.

Newbury, being situated on the main-road between London and Bath, had a large posting business, which employed a considerable number of hands, besides occasioning a large importation of horse provender; but this having been superseded by the railway, her importance and pop. have declined. The Kennett and Avon Canal, connecting the Severn with the Thames, passes through the town, and affords the advantage of water-carriage from London, Bristol, and S. Wales. In the immediate neighbourhood are 2 silk manufactories and a paper-mill; but they are not considerable. The rapid declivity and copious supply of water in the Kennett have occasioned the erection of numerous large corn-mills, two of which are within the town. There are also considerable malt-houses, and some extensive breweries. The quantity of grain annually exported from Newbury, either as flour, malt, or in its natural state, amounts to upwards of 7,000 tons, in return for which it imports large quantities of building materials, and various articles of general consumption from the ports of London and Bristol. The poor rates are much higher than in the adjoining parishes, and higher also than they should be with reference to the description of the pop., a circumstance chiefly attributable to the attractions offered to the lower classes by the numerous charitable foundations attached to the corporation." (*Mun. Corp. Rep.*)

Newbury, which is a bor. by prescription, and was afterwards chartered in 88 Elis., has been governed, since the Reform Act, by a mayor and 3 aldermen, with 12 councillors; it has a commission of the peace under a recorder. Corporation revenue in 1839, 1,027*l.* The

spring quarter-sessions for the co., and petty sessions for the hundred, are held here, and is one of the polling places for the co. elections. Large corn-markets on Thursday: horse and cattle fairs, Holy Thursday, July 5., Sept. 4., and Nov. 8.

Newbury returned 2 mems. to parl. in the reign of Edward I.; and it is not known at what period, or for what cause, it lost the franchise. It was formerly also celebrated for its manufacture of serges, shaloons, &c.; and in the reign of Henry VIII., John Winchcomb, known as Jack of Newbury, kept 100 looms, from the produce of which he became so wealthy as to be able to entertain the king and his retinue during their passage through the town. He was a great benefactor to Newbury; and his house, a large brick structure, is still shown in the High Street, his manufactory being now occupied by a large inn, "the Jack of Newbury." The vicinity is remarkable for two battles fought during the civil wars between the royalist and parliamentary forces, Charles I. commanding his army in person on both occasions. The first was fought on a common called the Wash, on 20th Sept. 1643; the second on 27th Oct. in the following year; but neither had any decided result. Donnington Castle, a short distance N. W. of Newbury, was the property of Chaucer, the earliest English classic poet; and in it he spent the two last years of his life, which terminated in 1400. (*Mun. Reports, &c.*)

NEWBURY-PORT, a town and river-port of the U. States, Massachusetts, being the fourth town of the state in pop. and commercial importance, co. Essex, on the Merrimack, about 3 m. from its mouth, and 32 m. N. by E. Boston: lat. 42° 49' N., long. 70° 52' W. Pop., in 1830, 6,275; in 1840, 7,161. It is built on a gentle acclivity, and has an imposing appearance from the river. It consists of two long streets, running N. and S., parallel with the river, and communicating by other streets, crossing them at right angles. State Street, the principal, is broad, and lined with good houses, which, though of wood, are well built and handsome. The streets are partially paved and flagged, but neither lighted nor watched. It is connected with Salisbury, on the opposite side of the river, by a bridge, about ¼ m. long, partly supported on wooden piers, and partly suspended by chains. The harbour is secure, and has usually about 2 fathoms water at low ebb; but it is difficult of entrance, from a bar at the mouth of the river, which is impassable during E. gales.

A breakwater was a few years since constructed within the river, about 2 m. from its mouth, at an expense of 200,000 dollars, for the double purpose of shutting the Merrimack out from a swampy bay S. of the town, and enabling it to clear away the bar; but in these objects it appears to have signally failed. Newbury-Port has several cotton, cloth, and yarn factories, numerous distilleries, and manufactures of shoes, hats, cordage, Morocco leather, gold and silver plate, &c. It has a considerable business in ship-building. This town had formerly a large share of the W. India trade; at present it imports a good deal of raw cotton, for its own manufactures and those of Lowell; and its inhabs. are actively engaged in the cod and mackerel fisheries and have a brisk coasting trade. In 1849 there belonged to the port 25,011 tons shipping.

NEWCASTLE-UPON-TYNE, a parl. and mun. bor., and river-port of England, locally situated in Castle-ward, co. Northumberland, of which it is the cap., but it is also a co. by itself, and is celebrated as the principal British port for the shipment of coal, on the N. bank of the Tyne, about 9½ m. from its mouth, 84 m. E. Carlisle, and 244 m. N. by W. London: lat. 54° 58' 30" N., long. 1° 37' 30" W. Area of parl. bor., which includes, with the town and co., the five townships of Byker, Heaton, Jesmond, Westgate, and Elswick, 9,130 acres. Pop., in 1841, 69,430, but at present (1850) probably 75,000. The town occupies the bottom and sides of an acclivity rising somewhat abruptly from the river; and though a few years back it was very irregularly laid out, and consisted, with but few exceptions, of narrow, circuitous, and ill-built lanes, it has been so improved within the last 40 years (principally through the exertions of Mr. Grainger, a native of the town,) that it is now one of the handsomest towns of England. These improvements cost above a million sterling; and include a great number of new streets and terraces, a handsome square, the largest market in England, a central exchange, theatre, dispensary, music-hall, lecture-room, two chapels, two auction marts, &c.

General description.—Grey Street, so called in honour of Earl Grey, the largest of the new streets, has now become the principal thoroughfare of the town; it ascends a gentle acclivity, and forms a continuation of Dean Street and the Side, which last reaches nearly to the river. Grey Street is nearly ¼ m. in length, by 80 ft. in breadth, and is lined with substantial stone houses, which, in point of architectural beauty, may vie with Regent Street, in London: the effect is heightened, also, by the curvilinear direction of the street. At the top of Grey Street, where it joins Blackett Street, one of Grainger's

the number of children receiving instruction of some kind or other, in 1838, amounted to 8,239, or to about 51½ per cent. of the pop. between the ages of 5 and 15. The principal benevolent institutions are, the infirmary, which has accommodation for 800 in-patients; a dispensary; two blind asylums; a small lying-in hospital; asylum for poor keelmen; Jesus's hospital, for decayed freemen; mendicity society; domestic-guardian institution; and several ranges of almshouses; besides which, there are several minor charities and religious associations. Newcastle has also a large union-workhouse. Expense of maintaining the poor of the bor. in 1847, 21,133*l*.

Coal Trade.—The importance, if not existence, of Newcastle is owing to its convenient situation as a place of shipment for the coal wrought in its neighbourhood. The pits lie on each side the Tyne, from within 2 m. of its mouth to 16 or 18 m. up the river; and it appears from the evidence before the committee of the H. of Lords on the coal-trade, that, in 1829, there were 23 working collieries on the N. side, and 18 on the S. side of the Tyne. Several more have since been opened, and at present upwards of 50 pits are at work in the neighbourhood of Newcastle, some within ½ mile of the river, but others more than 8 m. distant. The coals are conveyed from the pits to the staiths in wooden or cast-iron waggons, brought along railways generally by means of successive inclined planes or locomotive engines. From such staiths (or coal-shipping wharfs) as are above Newcastle Bridge, the coal is conveyed in keels (each capable of holding 8 chalders or 22 tons) to Wallsend, Jarrow, or Shields, where it is delivered on board the ships; and the strength, as well as activity of the Tyne keelmen, is proverbial in the N. of England. Within the last few years, however, the formation of the Brandling Junction, and other railways, to S. Shields, has caused a diminution of the keel navigation. The coal shipped at Newcastle furnishes a large portion of the supply for the E. and S. co. of England, inc. London, and a considerable quantity for exportation, chiefly to France, Holland, and Denmark, as will be seen from the following returns of coals, culm, &c., shipped at the port of Newcastle in 1848 and 1849:—

	To Ports of U. Kingd.	To Colonies and Foreign Parts.	Total.
	Tons.	Tons.	Tons.
1848 - -	2,275,674	994,299	3,269,973
1849 - -	2,143,380	834,005	2,977,385

Of the coal shipped from Newcastle coastwise in 1849, 1,422,670 tons were for London. Owing to the circumstance of most of the vessels engaged in the coal-trade from Newcastle to London and other British ports belonging to the former, her registered tonnage, though it has decreased during the last dozen years, is greater than that of any other British port, London and Liverpool excepted. It amounted, on the 1st of January, 1850, to 1,029 (sailing) vessels of the agg. burden of 223,477 tons.

The principal exports of Newcastle, besides coal, comprise pig and sheet lead (from 6,000 to 7,000 tons of the former, and above 2,000 tons of the latter) from the mines of Stanhope, glass, and other goods manufactured in the town, hams, grindstones from Gateshead-fell, &c. Gross customs' revenue of the port, in 1846, 483,761*l*.

The salmon-fishery of the Tyne (once much celebrated) has greatly declined. About 150 steam-boats belong to Newcastle; but of these 143, under 50 tons burden, are chiefly employed in towing ships up and down the river, or plying for passengers to and from Shields. The other and larger steam-packets ply between Newcastle and Stockton, Hull, Leith, and London. The Tyne is navigable, from its mouth up to Newcastle bridge, for vessels of 250 tons, though in some intermediate places the depth, even in the middle of the stream, does not exceed 4 ft. at ebb tide. Dredging machines, however, have been in use within the last few years, and the navigation is said to have been much improved, though the bar at the mouth must always prove a great impediment to the entrance of large ships. It is high water at Newcastle about an hour later than at Tynemouth-bar, the average rise of spring-tides being 11 ft. 7 in., and that of neaps 7 ft. 2 in.

The principal manufactures are those of bottles and window glass, mostly carried on in the township of Byker, of mill-work, steam-engines, &c., and of leather and soap, of which last article 3,154,720 lbs. were made in 1849. Ship and boat-building, rope and sail-making employ a considerable number of hands; besides which there are several malt-houses, breweries, iron foundries, lead mills, and chemical works. It has a branch of the Bank of England, with the North of England Joint-stock Banking Company, Newcastle-upon-Tyne Joint-stock Banking Company, Northumberland and Durham District Banking Company, Newcastle Commercial Banking Company, a private bank, and a savings' bank, which had, on the 20th November, 1848, 338,019*l*. of deposits.

The Tyne is crossed at Newcastle by two bridges.

The first of these, or the "old bridge," constructed in 1774-81, on the site of a previous bridge, swept away by a flood, is of stone, and has 9 elliptical arches. But, owing to the bed of the river being much sunk, the descent to and ascent from the old bridge make it very inconvenient. Hence a project was long on foot for constructing a "high level" bridge that should connect the high grounds on both sides the river by a road carried over it at their altitude. And this great improvement has been effected. The railway uniting York with Edinburgh is carried over the Tyne by a high level bridge. But instead of making this bridge single, or serving only to carry across the railway, it has been made double, that is, it has two lines of road, the upper one resting on the top of the arches being the railway, and the other, immediately below, and in part suspended from the latter, being an ordinary road, and serving, as such, for the transit of carriages, horses, passengers, &c. This singular fabric has 4 river and 2 land arches, each 124 ft. 10 in. in span. The carriage road is 35 ft. wide, and the height from the parapet of the railway to the bed of the river, 132 ft. The entire structure cost, inc. its approaches, 491,153*l*. It was opened by Her Majesty in person, 28th Sept. 1849.

Newcastle was constituted a bor. by William the Conqueror, and has received 36 charters from subsequent monarchs. It is divided by the Mun. Reform Act into 7 wards, and is governed by a mayor and 13 other aldermen and 42 councillors, and has a commission of the peace under a recorder. Corp. rev. in 1848-49, 83,904*l*. 2*s*. 8*d*., derived from ballast-dues, tolls, and rents. The assizes and Epiphany quarter-sessions for the co. of Northumberland are held in the Moot-hall, besides which there is a mayor's court and sheriff's court for the recovery of debts to an unlimited amount; a county court, before which 3,450 plaints were entered in 1848; and a court of conservancy for the river. The town is well paved, lighted, and cleaned by the corporation, and there is an efficient police, established in 1836. Newcastle has sent 2 mems. to the H. of C. since 27 Edward I., the election being vested, down to the Reform Act, in the free burgesses, both resident and non-resident. The electoral limits were enlarged by the Boundary Act, so as to include, with the old borough, the townships of Jesmond, Heaton, Byker, Elswick and Westgate. In 1849-50 it had 5,324 reg. electors. It is one of the polling-places at elections for the co. Markets extremely well supplied, especially with corn, on Tuesday and Saturday: fairs for woollen cloth, hardware, leather, horses, and cattle, Aug. 12. and Oct. 29., each lasting 9 days.

The wall of Adrian passes through the town, which is proved, by the numerous antiquities discovered in it, to have been the site of a Roman station; but there is no proof, though a strong presumption, that it was the *Pons Ælii*, mentioned in the "Notitia." Before the Conquest it was called Monkchester, from its numerous monastic institutions (of which there are still rather extensive remains), and also from being the resort of pilgrims to the holy well of Jesus' mount (now corrupted into Jesmond). A fortress was built here by Robert, eldest son of William the Conqueror; and it received the name of *Newcastle*, probably, to distinguish it from some more ancient building. In 1289 the walls on the E. side were rebuilt, and in the reign of Edward III. the town was unsuccessfully attacked by David Bruce. Newcastle, at this early period, had become one of the largest commercial ports of the kingdom. It is curious, however, that the first authoritative mention of coal occurs in a charter by Henry III., authorising the burgesses of Newcastle to dig for that mineral. In 1281, the town had a considerable trade in coal, which soon after began to be imported into London; and in 1325 coals were exported to foreign countries. The town furnished, in 1346, 17 ships and 314 mariners for the siege of Calais, a greater force than any port N. of the Thames, except Yarmouth. It continued steadily to increase in commercial importance and mining industry till 1636, when it was visited by the plague, which carried off 5,000 of its inhabs. In the parliamentary wars it warmly espoused the cause of Charles I. With respect to the progress of its coal-trade, it may be stated that in 1703 the masters of the Trinity House of Newcastle reported to the H. of C. that 600 ships, each carrying 80 Newcastle chalders, and navigated by 4,500 men and boys, were required for the supply of other ports; and in 1772, 450 keels were employed on the Tyne, the quantity shipped amounting to 351,800 Newcastle chalders. The trade has thence been steadily increasing, and with greater rapidity since the introduction of gas. Lately, however, there has been a diminution, owing to the opening of extensive pits in S. Durham, whence large supplies of coal are sent to the ports of Hartlepool and Middlesbrough. (*Brand's History of Newcastle*, passim, &c.)

NEWCASTLE-UNDER-LYNE, or LYME, a parl. and mun. bor., market-town, and par. of England, co. Stafford, N. div. hund. Pirehill, 15 m. N.N.W. Stafford, and 135 m. N.W. London. Pop. of parl. bor., in 1841,

0,038. The town, which is well-paved and lighted, consists of two nearly parallel streets, entered from the London road, and crossed by several others of an inferior description. It is, on the whole, well built, though chiefly consisting of old houses: in the High Street is a large open market-place. The guildhall, a respectable-looking building, has good accommodation for the municipal and magisterial business. There are two churches, one of which, with the exception of its square tower, was rebuilt at the beginning of last century: the other, a district church, has recently been erected, the expense being defrayed chiefly by a grant of 4,400*l.*, from the parl. commissioners, but partly, also, by private subscription. A handsome Rom. Cath. chapel was built in 1834; and there are places of worship for Wesleyan and other Methodists, Independents, Baptists, and the Society of Friends. Six Sunday-schools are attended by upwards of 1,500 children; besides which, a national, Lancastrian, infant, and four subscription schools furnish daily instruction to about 800 boys and girls. Newcastle-under-Lyne has, also, a free grammar-school, founded in 1602, and in trust of the corporation. The master's salary amounts to 63*l.* a year; but though the sons of freemen may receive gratuitous classical instruction, the school is not much resorted to by the inh. of the town, and is seldom attended by more than 12 boys. (*Mun. Corp. Rep.*) Almshouses for 20 aged women were established here in 1637, by the Earl of Albemarle; and the town has several benevolent institutions, with Bible, tract, and other associations, &c. A literary and scientific institution was founded in 1836, a public library has 2,000 vols., and there is a small theatre, little patronised.

"The manufacture of hats is the chief business carried on at Newcastle, though there are three or four silk-mills and one cotton-mill at work." These mills, however, are not mentioned in the Report of the Factory Inspectors for 1838. "The town, a few years ago, was in some measure regarded as the cap. of the pottery district, which includes several towns equal or even superior in pop. and importance to Newcastle itself. Latterly, however, this connexion has been broken, and the town has suffered much in consequence. Trade has been very languid till within the last year or two, when it somewhat revived; and at present the labouring classes are in full employment." (*Mun. Bound. Rep.*)

Newcastle sustained a serious diminution of its traffic, by the removal of the great line of communication between London, Manchester, &c., to the Grand Junction Railway, which passes upwards of 6 m. W. of the town. But this has been compensated by the opening of the line from Crew by Stoke, Stone, and Tamworth to Rugby, which passes close by the town. Iron-works and collieries are seated in the neighbourhood, and there are considerable tanneries and malt-houses, with a paper-mill employed in making tissue paper for the potteries. The town is connected by a branch canal with the Grand Trunk navigation, and has access by a similar line of communication to the coal-field of N. Stafford. A branch of the Manchester and Liverpool District Banking Company, and a private bank, are established here, and there is a savings' bank. Markets on Monday and Saturday.

Newcastle-under-Lyne, which received its first charter in the 19 Henry III., was divided by the Municipal Reform Act into 3 wards, and placed under a mayor and 5 other aldermen, with 18 councillors; it has also a commission of the peace, under a recorder. Corp. rev. 1848-49, 1,838*l.* The bor. has returned 2 mems. to the H. of C. from 27 Edward III., the right of voting down to the Reform Act being in the resident freemen (by gift, birth, and servitude). The Boundary Act added to the old bor. a small extra-parochial part of the Penkhill-township: reg. electors, in 1849-50, 1,028. It is also one of the polling-places for the N. div. of co. of Stafford. A county court is established in the town, before which 405 plaints were entered in 1848.

The distinguishing name of Newcastle (*under Lyne*, or *Lyne*) is of doubtful origin; but the best authorities refer it to the fact of its standing near the woodlands, which formed a *lime* (limit) or separating *line* between the co. palatine of Chester, and the rest of England. Ashton-under-Lyne, Whitmore-under-Lyne, and Audlem, or Old Lyne, admit of similar explanations.

NEW ENGLAND, the name commonly given to the N.E. portion of the United States, or to the territory including the states of Vermont, New Hampshire, Massachusetts, Maine, Rhode Island, and Connecticut.

NEW GALLOWAY. See GALLOWAY (NEW).

NEWFOUNDLAND, a large island of N. America, near the Gulph of St. Lawrence, and off the E. coast of Labrador, from which it is separated by the narrow strait of Belleisle, between lat. 46° 30' and 51° 40' N., and long. 52° 15' and 59° 10' W. Greatest length from N. to S., 350 m.; average breadth, 130 m. Area, 57,000 sq. m. Fixed pop., in 1845, 96,295, exclusive of those who visit the different stations during the fishing season. It may be generally described as of a triangular form, but is broken and indented with broad and deep bays,

harbours, coves, rivers, and lagoons, which, besides numerous capes and projecting points of land, form two peninsulas, on one of which, called Avalon, at the S.E. corner of the island, is the town and harbour of Avalon. Its surface is wild and rugged, and its aspect from the sea far from prepossessing. The interior, which, till within the last ten years, was almost unknown, is much broken with water; and lakes, marshes, and scrubby trees, form its general character. The only large and navigable streams are the Humber and that called the River of Exploits. Its prevalent geological constitution is of granite, on which are superimposed in some parts porphyry, quartz, gneiss, mica, and clay-slate, with secondary formations: coal and iron also occur in a few places. The E. half of the interior is generally a low, picturesque country, traversed by hills and lakes, the whole being diversified by trees of humble growth. The country westward is more rugged and mountainous, with little wood, except near the shore; but the mountains are not generally in ridges, each apparently having its own particular base. The highest part of the island is the N. peninsula, lying along the strait of Belleisle; near its centre are flats of considerable extent, swampy, unhealthy, and usually covered with peat or strong wiry grass. Spruce, birch and larch, are the principal forest trees. Pine seldom occurs, and never attains a large size; indeed, there is but little wood of any value, except for fuel and the building of small boats; so that it has scarcely timber enough for its own consumption, much less for exportation. Whortleberry bushes and *wisha-capuca* (Indian tea) are the principal plants on the high unwooded grounds. The best soil is along the rivers and at the heads of the bays fringing the island; but both the soil and climate generally are unfavourable to the raising of grain, though well adapted for pasturage and the cultivation of potatoes and other green crops. Vast herds of cariboo deer graze in the plains and woods of the interior, and their flesh constitutes nearly the whole food of the Mic-Mac Indians. Beavers are much scarcer than formerly; but foxes are still numerous along the rivers and sea-coast. Among the other wild animals are wolves, and bears, hunted by the Indians from Labrador. Insects are numerous in swampy places, especially in hot weather. The best known and most celebrated of the animals belonging to Newfoundland are its dogs, famed for docility, obedience, and attachment to their masters. They are remarkably voracious, and are usually fed on salted fish; but, like the aborigines of the country, they endure hunger for a very lengthened period. The true breed has become very scarce, and there are only a few specimens of it in England, the animal so called in this country, though equally sagacious, hardy, and fond of the water, being a breed crossed with the mastiff, or some other English dog. The E. and S. coasts, where the winds blow from the sea, are very humid; and during winter the cold is intense. The harbours on the Atlantic shore are not so long frozen over as those within the Gulph of St. Lawrence, where the atmosphere is generally clear, and the climate not unlike that of Lower Canada. During the summer months the days and nights are commonly serene and pleasant; the temperature is very hot during summer, and in winter frequently falls as low as 30° below the freezing point. The island, however, is, on the whole, extremely healthy; and the inhabs. often attain a great age, attended with more than ordinary bodily as well as mental vigour. Agriculture is progressively increasing; but very few give it their exclusive attention, the pop. being principally employed in the fisheries. Almost every family, however, has a small quantity of land in cultivation, though tillage be very imperfectly understood.

Newfoundland has long been celebrated for its fisheries, on which, indeed, the inhabs. principally depend. The Great Bank, on the E. side of the island, is in some places about 200 m. in breadth, and 600 m. in length, the soundings being from 25 to 95 fathoms. There is also an outer bank, lying between lat. 44° 10' and 47° 30' N., and long. 44° 15' and 45° 25' W.; and a continuation of banks extends southward to Nova Scotia. Fogs prevail almost without interruption on these banks, occasioned by the meeting of the waters brought thither by the gulph-stream from the tropics, with the waters carried by the influence of the winds from the Polar regions. A counter-current from the N. sweeps, also, along the shore of Labrador, bringing with it large icebergs, and rendering navigation dangerous, especially during foggy weather. The best fishing-grounds on the Great Bank are between the 42d and 46th parallels; and the principal English settlement, besides St. John's, the cap., are Conception Bay, Carbonier, Grace Harbour, Trinity Harbour, and Placentia, all on the E. side of the island. The islands of St. Pierre and Mequelon, near the mouth of Fortune Bay, on the S. coast, were ceded to France in 1814; the former has a harbour and town of its own name, and is the residence of a governor. The cod-fishery, which

continued a few years after the discovery of the island, attained so high an importance during the late war with France, that the exports of cod and cod-oil were valued, in 1811, at £2,000,000; but the English fishery has since declined, so that the average annual value of the fish exported during the years 1847-1849 amounted to only £65,710. The number of ships employed in the fishery cannot be ascertained; but, in 1844 there were 18,000 boats. The cod fishery commences early in June; and as the English have for some years abandoned the bank-fishery to the Americans and French, it is principally carried on about to the shore, in small boats, manned by 2 or 3 persons. Every fisherman is provided with 3 lines, each with 3 hooks, baited with herring, mackerel and fish-codlings. In some cases, flappers, or artificial fish, are used, provided with 3 strong hooks, which the cod swallow with the bait. Boats are also used, by which multitudes of cod are hauled ashore in coves on the coast of Labrador. So abundant are the fish occasionally that a couple of cod are hauled on each line before it reaches the bottom, and while one line is running out, the fisherman has only to turn round and pull in the other with a fish on each hook. As soon as the boat is loaded, which, under favourable circumstances, will be in 3 or 4 hours, they proceed to the shore on the shore, where the process of cutting up, salting, and drying takes place, and after having delivered their cargo, return immediately to sea. The cod fishery, however, is truly precarious. Sometimes the fish is not equally abundant on all parts of the coast, and the fishermen are compelled to go far from the mainland, and in some cases, to split and cut the cod to the west. The fisherman's labour also, which attends the drying leaves the fishermen scarcely time during the season to cut their weeds, and allows them but more than 4 hours' sleep. (*St. George's News America*, 1 200-201) The cod fishery is conducted in vessels varying from 50 to 150 tons, with crews of 20 or 30 men. The season commences early in April. It is principally conducted close to the shore of Labrador and has become important only within the last 20 years. The cod fishery on the W. coast has been given up to the French, but there is still a small whale fishery continued in boats on the S. side of the island. There is likewise a pretty extensive salmon fishery the value of which, in 1847, amounted to £3,000.

The trade of Newfoundland consists in the exportation of the products of its fisheries in exchange for manufactured goods, colonial produce, corn, ship-stores, and a variety of articles for the consumption of the island. The following table exhibits the

Quantities and Values of the Fish, Oil, Skins, &c., the Products of the Fishery of Newfoundland, exported in 1847 and 1849.

Quantity.					
Year.	Dried Fish.	Oil.	Skin Skins.	Salmon.	Herring.
1847.	127,272	7,000	200,000	2,311	2,275
1849.	100,000	10,000	211,000	2,311	12,275
Value.					
1847.	£65,710	£10,000	£1,000	£2,311	£2,275
1849.	£65,710	£10,000	£1,000	£2,311	£2,275

The government of Newfoundland was long administered by naval commanders appointed to cruise on the fishing station, who returned to Britain in winter. Within the last century, however, it has been deemed more eligible to have a resident governor. In 1699, in consequence of a petition from the island, a representative government was granted, the plan being by almost universal suffrage. This system has hitherto worked very injudiciously, the popular body having been in a state of violent collision, both with the executive and the commercial interests. Great complaints have also been made of the influence of the Roman Catholic clergy in the elections, and the principal merchants have made representations to the government at home, to the effect that trade is injured, and property rendered insecure, by the proceedings of the assembly. The assembly comprises 18 members, and attached to it is a legislative and executive council. The laws are in English, and administered by clerical judges, but the policy is rather mercantile than salutary. The militia of the island amounted, in 1800, to 4,400 men, including 200 commissioned officers. Elementary schools have been established in most districts of the colony, and some of a superior class are especially patronized by government. In 1848 there were in all 125 schools in the island, attended by 10,000 pupils. In 1800 Newfoundland was, with the Bermudas, created into a bishopric. There are about 10 clergymen and 64 churches connected with the establishment; but in 1847 (and we are not aware of any change to the present) the former were all missionaries, there being no-

parishes nor rectors, properly so-called, in the island. The adherents of the Church of England amounted in 1845 to 24,301; the Wesleyans to 14,000, and the R. Catholics to 65,700. The latter have a bishop at St. John's, and a vicar-general at Green Harbour.

The islands are barren and uninhabited, but often subjected to drunkenness, and reputation to a degree almost beyond belief. Capital offences are exceedingly rare, and petty thefts are scarcely known. The people, consisting chiefly of Irish, French, and the inhabitants of Jersey and Guernsey, or their descendants (the British aborigines having been long all but extinct), are employed either wholly or occasionally in the fisheries. The practice of cattle and sheep, and the cultivation of small spots of land, are likewise partial sources of occupation. The women, besides assisting the men in smoking and curing the fish, are engaged either in rural occupations, or spinning and knitting worsted stockings, mittens, and socks. In winter much time is occupied in bringing home fuel, building boats, and making or repairing the fishing implements. Marriages and christenings are seldom celebrated at the close of the fishing season, or in winter, and are always times of great festivity and merriment. St. Patrick's and St. George's days are celebrated with riotous mirth by the Irish, and Christmas is a universal holiday marked by the observance of many customs that are now exploded in England. Cannibals are rare, and families of 10 or 12 children are very common. The fishermen's houses are one story high, built of wood, and covered with boards and shingles, imported from Nova Scotia, New Brunswick, &c. Their usual diet consists of ship-stores, potatoes and fish, salt pork and butter, and, except beer being the common beverage for those living, as most of the people do, on fish and salt meat. Spirits are mixed with the beer, to make the substance called Calishing, and rum is so cheap, that the labouring classes are apt to acquire habits of intemperance, which, however, is somewhat checked by the practice of bagging, somewhat similar to taking the temperance pledge, either for one or more years, and occasionally for life.

Newfoundland was probably first discovered by the Norwegians, at the beginning of the 11th century, but, if so, it was subsequently forgotten, till John Cabot visited it in the summer of 1497, and gave it its present name. As early as the year 1583 an extensive fishery was carried on, by the Portuguese and French, on the neighbouring banks; but, though Sir Walter Raleigh, and others, attempted to form a colony here, no permanent settlement was made, till Sir G. Calvert, afterwards Lord Baltimore, in 1620, established himself on the S. E. part of the island, called Avalon, and appointed his son governor. Ten years afterwards a colony was sent over from Ireland, and in 1684 a few English settlers came over under the authority of a parliamentary grant. The French, who, very early in the 17th century had formed a station at Placentia, were for many years a constant source of annoyance to the English; and though, by the peace of Utrecht, the possession of the island was confirmed to the English, the subject of fishery rights is still a cause of dispute between the two nations. With respect to the fishery generally it was chiefly carried on during the first half of the last century by the English, Anglo-Americans, and French; but the capture of C. Breton, and other possessions in America, gave a severe blow to the fishery of the latter. The Americans now divided the British fishery; that portion of it that had previously been carried on from New England being transferred to that of the United States; but still the English continued to preserve the largest share. The French were excluded from the fishery during the French war, by

and 3 m. from E. to W. The streets and squares are quite regular, and all shaded with fine trees. In the centre of the city is the public square, in which are the state-house, several of the churches, and Yale College. The new state-house is built after the model of the Parliament. Yale College is one of the most distinguished literary institutions in America. It was incorporated in 1704, and removed thither in 1717. The college buildings, which are of stone, comprise 4 halls, each 100 ft. by 60 ft., in which are the dormitories of the stu-

of the river at high water is also from 2 to 4 ft. above the level of the town; and even in its lower stages it is above the level of the swamps in the rear of the city. To obviate inundations, a levee, or embankment, from 5 to 30 ft. in height, has been raised for about 100 m. along the river. A breach sometimes occurs in this dyke, but it is rarely permitted to do much damage before it is closed; and the most serious drawback the city suffers from its situation is its insalubrity. It is usually visited by the yellow fever, from July to Sept., every year or every two years, when great numbers of the poor are swept off, and the rich betake themselves to some more healthy situation. But the fury of this scourge has latterly been mitigated by draining some of the contiguous swamps, paving certain parts of the city, substituting stone for wooden sewers, &c. The effective plan, however, would be to raise the ground on which the city stands 8 or 10 ft. above its present level. This would at once elevate it above the level of the river, provide a descent for the drains in the town, and would most probably free it from fever. Considering the vast importance of the objects to be gained, the undertaking, though expensive and difficult, is one that should immediately be set about. In 1849 there died in New Orleans 9,852 persons, being in the appalling ratio of 1 death for every 10·69 inhabs., or 92·6 deaths out of every 1,000 living. A part, however, of this excessive mortality was occasioned by cholera. And allowing for its influence the present average rate of mortality may be estimated at 1 death to every 15·41 living, or 60·5 deaths to every 1,000 of the pop. (*Dr. Stark on the Vital Statistics of New Orleans*.) This extraordinary mortality, (fully three times as great as the mortality of Boston,) is the great drawback upon New Orleans, and is sufficient almost to neutralise her other advantages.

New Orleans, having few steeples or other conspicuous objects, makes no striking appearance from a distance. "The city is built in the form of a parallelogram, composed of six complete squares, with suburbs or faubourgs, which are rapidly increasing. The streets in the old city are hardly 40 ft. wide; but in the newer portions they are much wider, and intersect each other at right angles. The cathedral, at the head of a square, is an old building, with 4 towers and massive walls, ornamented with figures of saints in the niches. It is the only public building at all imposing. Public institutions, though numerous, are built in an unpretending style. There are very few churches in proportion to the pop. The French theatre is in the city, and the American in the suburbs. The houses (which in the old city are lofty, ornamented with tasteful cornices and iron balconies, and presenting many characteristics similar to those in the towns of France and Spain,) are chiefly of brick, and many of them stuccoed externally of a white or yellow colour. In the new portion of the city the houses are built in the modern American style. Many of the doors are left open during the day, and mosquito curtains substituted in their stead." (*Stuart's America*, ii. 196, 197.) Next to the R. Cath. cathedral, the state-house, custom-house, exchange, U. S. mint, barracks, college, the charity hospital, which provides for from 8,000 to 9,000 in-door and out-patients annually, 3 other hospitals, the orphan-asylum, and several theatres, are the principal public buildings. The charitable institutions are both numerous and well conducted. There are places of worship for Episcopallians, Unitarians, Baptists, Methodists, &c.; but most of the white pop., being of French or Spanish descent, are R. Catholics. Half the fixed residents are black or coloured; but in no city is there a greater mixture of races. Inhab. from every state in the Union, and from every country in Europe, with Creoles and all the shades of the coloured pop., unite to form a curious contrast of manners, languages, and complexions. The markets of New Orleans are well supplied, and provisions are cheap, while labour of all kinds is dear. The city is abundantly furnished by the Mississippi with water, which, though turbid at first, becomes clear and palatable on being filtered or allowed to settle. Morals are at a lower ebb in this than in any other great city of the Union, though, according to Mr. Stuart, they are not quite so bad as has been represented. Education and a taste for literature are little diffused; and there are few newspapers and reading-rooms. On the other hand, however, there are an immense number of lottery-offices, billiard-rooms, and gambling-houses. The police is good.

Commerce.—New Orleans is the grand emporium of all the vast tracts traversed by the Mississippi, the Missouri, and their tributary streams, and enjoys in consequence a greater command of internal navigation than any other city either of the Old or New World. Civilisation has hitherto struck its roots, and begun to flourish only in some comparatively small portions of the immense territories of which New Orleans is the sea-port; and yet her progress has been rapid beyond all precedent. It appears from the accounts printed by order of Congress, that during the year ending the 30th of June,

1848, the value of native American produce exported from this city amounted to 39,350,148 doll., while the value of that exported from New York was only 38,771,409 doll. But with respect to imports, the case is materially different; the value of those of New Orleans in the above year being only 9,320,439 doll., whereas those of New York amounted to 94,525,141 doll.

It is believed by many, seeing how rapidly settlements are forming in the "West," that New Orleans must, at no very distant period, exceed every other city of America, as well in the magnitude of its imports as of its exports; and, considering the boundless extent and extraordinary fertility of the uncultivated and unoccupied basins of the Mississippi and Missouri, the anticipations of those who contend that New Orleans is destined to become the greatest emporium, not of America only, but of the world, will not appear very unreasonable. Steam navigation has been of incalculable service to this port, and, indeed, to the whole of central N. America. The voyage up the Mississippi, that used to be so difficult and tedious, is now performed in commodious steam packets with ease, celerity, and comfort. "There have been counted," says Mr. Flint, "in the harbour, 1,500 flat boats at a time. Steam boats are arriving and departing every hour; and it is not uncommon to see 50 lying together in the harbour. A forest of masts is constantly seen along the levee, except in the sultry months. There are often 5,000 or 6,000 boatmen from the upper country here at a time; and we have known 30 vessels advertised together for Liverpool and Havre. The intercourse with the Havannah and Vera Cruz is great, and constantly increasing." (*Geog. and Hist. of the W. States*, i. 557.) New Orleans has, also, a large and rapidly increasing intercourse with the Isthmus of Panama and California.

In 1849, the shipping belonging to the port measured, in the agg., 240,206 tons; of which about a half was the tonnage of steamers only. Vessels of the largest burden may navigate the river several hundreds of miles above New Orleans. Notwithstanding a large proportion of her foreign trade is carried on in foreign bottoms, she now ranks as the third shipping port in the Union, being, in this respect, inferior only to New York and Boston. The depth of water in the river opposite to New Orleans is, at a medium, about 70 ft.; and it maintains soundings of 30 ft. till within a mile of its confluence with the sea. Besides 3 or 4 of inferior consequence, the Mississippi has 4 principal passes, or outlets. But in the S.E., or main pass, at Balize, the water on the bar at ordinary tides does not exceed 12 ft.; and as the rise of the tides in the Gulph of Mexico is not more than 2 or 2½ ft., vessels drawing much water cannot make their way from the ocean to New Orleans.

The commerce of the city is facilitated by means of canals, which connect it with Lake Pontchartrain, and by the Carrollton, Pontchartrain, and Orleans Street railroads; though none of these works is of any considerable length.

The great articles of export from New Orleans consist of cotton, principally to England and France; flour, corn, and meal; bacon, pork, and lard, principally to Cuba, the West Indies, and Brazil; tobacco, sugar, lead, &c. We subjoin

A Statement of the Quantities of the Principal Articles shipped from New Orleans in 1849-50.

Cotton	-	bales	838,591	Lard	-	bags	1,554,819
Flour	-	bbls.	211,750	Tobacco	-	hhd.	57,955
Corn	-	sacks	456,067	Sugar	-	-	92,720
Pork	-	bbls.	470,237	Do.	-	bbls.	13,942
Bacon	-	hhd.	64,929	Beef	-	-	55,842

There are in the city a great number of joint-stock banks, with numerous insurance offices, &c.

New Orleans was founded by the French in 1717; in 1769 it was occupied by the Spaniards, in whose hands it continued for about 24 years. In 1814-15 a British army, which had effected a landing in the neighbourhood, was compelled to re-embark, after having sustained great loss in an attack on the entrenchments of the Americans under General Jackson. (*Official Returns*.)

NEWPORT, a parl. bor., market-town, and par. of England, in the centre of the Isle of Wight, of which it is the cap., on the Medina (crossed here by an old stone bridge), 14 m. S.S.E. Southampton, and 75 m. S.W. London. Pop. of parl. bor., which comprises, with the old bor., a portion of the par. of Carisbrooke, in 1841, 6,320. The town has one principal street, with two or three others meeting it at right angles, and forming spacious market-places. The best streets are well built, paved, and lighted with gas; but there are several inferior houses on the N. side of the town and along the river. The market-house is an old building, open in the lower part, the upper story being formed into apartments for the corporation business, &c. The church is a large edifice, having three aisles, divided from each other by pointed arches, and an embattled tower at its W. end: the living is a vicarage, subordinate to Carisbrooke.

The Rom. Caths., Wesleyan Methodists, Baptists, Unitarians, and the Society of Friends, have their respective places of worship; and there are three Sunday schools. A grammar-school was founded, in 1619, by James I. In its school-room, a venerable looking structure of grey stone, Charles I. and the parliamentary commissioners carried on the negotiations which ended so fatally for the former. There is also a girl's charity school. The Literary Institution, assembly-rooms, and theatre are the other principal public establishments. Within the bor. is a gaol, built at the joint expense of the bor. and the island generally: it has rooms for the separate confinement of male and female tried and untried prisoners; but there is little further classification. The old castle of CARISBROOKE (which see) occupies an eminence, about 1½ m. S.W. the town. About 1 m. N. is a work-house for the poor of the entire island, and near it is Parkhurst military depot and hospital, erected in 1780, and furnishing accommodation for upwards of 2,000 troops. "The town formerly derived much benefit from the presence of a large military force; but the barracks have been all but deserted since 1825, and the withdrawal of the stimulus has been seriously felt. There is a lace manufactory close to the town, employing from 600 to 700 hands, and another of less consequence at the distance of about 2 m. The present importance of Newport depends principally on its being a market-town in the centre of the island, which is an active agricultural and grazing district. The markets are said to be somewhat injured by the existence of the tolls; but the general prosperity of the town seems to be neither increasing nor diminishing to any material extent." (*Mun. Corp. Rep.*)

The bor. of Newport is supposed to have been incorporated in the reign of Henry II., but its principal charter was granted by James I. Under the Mun. Reform Act it is divided into 2 wards, and is governed by a mayor, 5 other aldermen, and 18 councillors: it enjoys, also, a commission of the peace, under a recorder. Corporation revenue, in 1847-48, 1,036*l*. An ancient court, the *Curia militum*, consisting of freeholders, is held once in three weeks at the town-hall, and exercises jurisdiction over all the island, except the bor. Newport has sent 2 mems. to the H. of C. since the 23rd Edward I. A portion of the par. of Carisbrooke was added to the old bor. by the Boundary Act: registered electors in 1849-50, 681. Newport is also the election-town for the Isle of Wight, which, under the Reform Act, sends 1 mem. to the H. of C.

NEWPORT (Welsh, *Castell-newydd*), a parl. bor., market town, and river-port of England, hund. West-loog, co. Monmouth, on the W. bank of the Usk, crossed here by a stone bridge of 5 arches, and about 4 m. from its mouth, 20 m. S.S.W. Monmouth, and 124 m. W. by N. London. Pop. of parl. bor. in 1841, 10,271. The town comprises a narrow and crooked main street, bifurcating at its S. extremity, and crossed by others still meaner and more irregular. On an eminence S. from the town is the old par. church of St. Woollos, with a square tower, apparently of Norman architecture, though much altered at different periods: the living is a vicarage, in the gift of the Bishop of Gloucester. There are places of worship for Wesleyan Methodists, Calvinists, Baptists, and R. Catholics. National and Lancastrian schools are established here, and the Sunday schools are attended by about 900 children. Near the bridge are some interesting remains of a baronial castle, said to have been erected by Robert Fitzroy, son of Henry I.; and not far off are the ruins of an old monastery. "Newport is extensively engaged in the iron and tin trade, and in the export of coals. It is connected with Pontypool and Crumlin by the Monmouthshire Canal. Iron and coal are brought from the former, coals only from the latter. Tram-roads also connect Newport with the Romney, Tredegar, Sirhowey, Ebbwvale, and Beaufort iron-works. It may, indeed, be considered a very thriving place: new docks and wharfs are building, or in contemplation, and the town is rapidly increasing." (*Mun. Bound. Rep.*) In 1849, 402,078 tons of coal were shipped from this port, of which 108,745 tons were sent to foreign countries. The gross customs' revenue in 1845 amounted to 9,726*l*, but in 1846 it rose to 11,192*l*. The river is navigable for sea-going ships close up to the town, and ship-building is carried on to a considerable extent. On the 1st of January, 1850, there belonged to the port, 89 vessels of the agg. burden of 11,935 tons. The iron-foundries are on a large scale, and there are nail factories, roperies, breweries, and a pretty extensive pottery.

Newport, which received its earliest charter in the reign of Edward III., was divided by the Municipal Reform Act into 2 wards; its mun. officers being a mayor and 5 other aldermen, with 18 councillors. It has also a commission of the peace, under a recorder. Corporation revenue in 1847-8, 1,660*l*. In conjunction with Monmouth and Usk, Newport has sent 1 mem. to

the H. of C. about the 10th Henry VIII., the right of election down to the Statute Act being vested in the resident burgesses. The electoral limits were enlarged by the Boundary Act, so as to include with the old town additional portions of the par. of St. Woolton and Churchtown. Reg. electors for the united town, in 1868-69, 1,260. It is, also, one of the polling places at elections for the co. and the principal town of a poor law union, comprising 20 par. and townships. Markets on Saturday; cattle markets the 1st Monday in each month, 6th, 13th, 20th, 27th, Thursday, 10th Aug., and 6th Nov. (*Part Mon. Bound. Reg. &c.*)

Newport, a market-town and par. of England, S. Stafford, bound on Salop, near the E. limit, 14½ m. W. N. W. Shrewsbury, and 100 m. N. W. London. Area of par. 100 acres. Pop. in 1841, 2,437. It consists principally of a main street on the road between Shrewsbury and Stafford, in the centre of which stands the par. church, the living is a perpetual curacy in the gift of the lord-bishopric. A grammar-school founded in 1585, is endowed with lands producing about 1,000l. a year and founded property to the amount of 12,000l. It has 50 scholars at Oxford and Cambridge, and is conducted by 3 masters. An English school is supported out of the funds of the same charity and there are 3 sets of dissenters. The town comprises 1000 ac. but well-built market-hall. The chief business of Newport is its retail trade for the supply of the neighbourhood. Milling is carried on pretty extensively, and it derives some advantage from its situation on a branch canal connecting the Shrewsbury Canal with the Liverpool and Birmingham Junction Canal. A private bank and savings bank are established here. Markets on Saturday, cattle and sheep fairs, 1st Tuesday in February, Saturday before Palm Sunday, May 15, July 17, Sept. 10 and Dec. 14.

Newport, a decayed bar and market-town of England, on Cornwall. N. 4½ m. E. bound East separated from Looe, of which it is a suburb, by a small rivulet. Though it had for many years been quite insignificant this bar came, from the reign of Edward VI., 1500, to the H. of C. (successors of the Duke of Northumberland) down to the passing of the Reform Act, by which it was disfranchised.

Newport, a sea-port town of the U. States, Rhode Island, on the W. shore of the island, whence the state derives its name, 2½ m. S. by S. Providence. Pop. in 1860, 6,438. Previously to the American revolution, this town ranked third or fourth among those of the British N. American colonies, but it has since been far outstripped by others, though it has still a considerable commerce. Its advantages for sea-bathing make it a favourite place of summer resort. It is regularly laid out, and its houses have an antique appearance. The state-house, post, covered bank and law-office offices and a good library are the principal public establishments. The harbour defended by 3 forts, is spacious, deep, and of easy entrance. There belonged to the port, in 1860, 10,174 tons of shipping.

NEWPORT-PAGNELL, a market town and par. of England, at the N. extremity on. Buckingham, bound.

for Presbyterians, Independents, Quakers, Methodists, &c.; several endowed schools, an infirmary, a fever hospital, and dispensary, a lying-in hospital, the Trinity hospital and other almshouses, with several other charitable institutions, a market house, and corn-market; a barrack, the borough court house, schools-house, and workhouse. A wooden bridge, 540 ft. in length with 6 draw-bridges for the passage of vessels leads across the river to the suburb of Rensselaer, in the co. Albany. The corporation, which received its first charter in the reign of Edward I., consisted of a sovereign, burgesses, and commonalty. It returned 2 members to the 1st H. of C. (the Union, since which it has sent 1 member to the 1st H. of C. The electoral limits, as fixed by the Boundary Act, comprise an area of 644 acres. Registered electors, in 1868-69, 187. The workhouse for New Rensselaer, opened in 1845, has accommodation for 1,200 inmates. General elections are held at Rensselaer and Dutchess; petty sessions every fortnight. The town is a parliamentary station, and it has breweries and distilleries. Markets on Wednesdays and Saturdays, 6th, 13th, 20th, 27th, 17th March, 1st May, 1st Monday, 10th May, 10th June, 10th July, 10th Aug., 10th Sept., 10th Oct., 10th Nov. and 6th Dec.

New Rensselaer is well situated for trade, vessels of 800 tons reach it at all times of the tide, and those of 1000 tons at high springs; the river is also navigable for barges to Albany, where it unites with the Grand Canal, communicating with Dublin on the one hand, and the Rhine on the other. The port, which was formerly subordinate to Waterford, has been made independent, in 1860, it is reported to have had 17 vessels of the reg. burden of 3,577 tons, but we presume there is some mistake in this statement. Customs revenue in 1861, 51,591l. It imports fish from Newfoundland, and timber from N. America and the Baltic. Post-office revenue in 1860, 600l. Branches of the Bank of Ireland and National Bank have been opened.

Though called New Rensselaer is really an old town. A sanguinary conflict took place here on the 4th of June, 1791, between the insurgent Irishmen and the military. The former repeatedly forced their way into the town, but were in the end repulsed with great loss.

NEWRY, a port bar, river-port, and town of Ireland, prov. Ulster on the Newry Water about 6 m. above where it falls into Carrigrohane Bay and on the line of the Newry Canal, which gives it a navigable communication with the bay on the one hand and with Lough Neagh on the other, 24 m. S. W. Belfast, and 66 m. N. Dublin. Area of par. bar, 2,440 acres. Pop. in 1861, 12,337. It is divided by the river into two unequal portions, the largest of which on its W. side, is to the co. Down, and the other in Armagh; the communication between them being kept up by 4 bridges, 3 of which are handsome structures.

It is a well-built thriving town. (*Part Mon. Bound. Reg.*) Its more ancient part, on the declivity of a hill, has narrow and ill-arranged streets; but the modern portion, on the low ground along the river and canal has wide airy streets, with good houses, security of granite. The principal public buildings are 3 Protestant Episcopal churches, St. Patrick's, originally built in 1573, and rebuilt after the Revolution, and St. Mary's, a handsome structure, erected in 1812, with a spire 150 ft. in height. It has also 2 fine Cath. chapels, one of which of large dimensions, in the Gothic style of architecture, is regarded as the cathedral of the see of Down. A convent of the order of St. Clare has also a chapel attached to it. The Presbyterians have 4 places of worship, the Methodists 2, and the Independents and Unitarians 1 each. The institutions for education comprise a preparatory academy for Maynooth College, a school attached to the convent of St. Clare, and 3 schools connected with the board of national education, to which and in other minor schools, about 1,700 pupils are instructed. Some of the apartments of a suite of assembly-rooms, erected in 1794, are now used as public offices and for a savings' bank. It has also a society's association and some almshouses, an hospital, with accommodation for 40 patients, a good common-house, and barracks for 700 men.

The churches, which are very beautiful are situated with numerous cells, surrounded by well wooded grounds. The town is paved, cleaned, lighted with gas, and watched, under the management of a board of commissioners. The supply of water is wholly derived from numerous private springs. The workhouse for the Newry Union, opened in 1841, has accommodation for 1,200 inmates.

The Lordship of Newry, of which the town forms part, extends over 17,000 acres. It formerly was attached to a manor and enjoyed very extensive privileges, which, after the dissolution of religious houses to the reign of Henry VIII., were vested in the English family of which the Earl of Rensselaer is the present representative, his lordship being lay ruler and representative of the title. The bar was incorporated by James I. in 1613; but the corporation under this charter

is in trust of the river and church wardens. Newport Pagnell had formerly a very extensive manufacture of bone lace, which, though greatly injured by the competition of the fine-lace-lace of Nottingham, still forms the staple trade of the town. The petty sessions for the bar, are held here. Markets well supplied with corn on Saturdays, cattle and sheep fairs, April 15, June 15, and Oct. 15.

NEW ROSS, a port bar and river-port of Ireland, co. Wexford, prov. Leinster on the declivity of a steep hill, on the E. side the Barrow, 13 m. N. E. Waterford. Pop. in 1841, 7,268. It is in general pretty well built. It has a parish church, a chapel of ease, 3 fine Cath. chapels, a friary, and a monastery, with meeting houses

having, from some cause or other, been extinguished, the consistory, appointed by Lord Kilmorock, became the ruling officer in the town, holding a manor court every third Wednesday for suits not exceeding 10s., and a weekly court of record on Mondays for pleas to the amount of 10s. 6d. Irish. The general sessions for the county of Down are held here twice a year, as are those for the W. division of Armagh, in which the town is partly situated. Here is a bridewell, in which prisoners are confined until transmitted to the county prisons at Downpatrick or Armagh. The bar returned 3 men to the Irish H. of C., and since the Union it has returned 1 man to the Imperial H. of C. The charter restricted the right of voting to the freemen and 19 burgesses, but on its extinction the franchise came to be enjoyed by the inhabit. at large. It was, however, abolished by the act 36 Geo. 3. cap. 20. In the description of houses rated as the annual value of 10s. The Boundary Act did not change the limits of the bar. Registered electors, in 1868-69, 577.

Though not distinguished by its manufactures, it has 3 distilleries, a dist. glass factory, a distillery, 3 breweries, several flour-mills, with tan-works, &c.; and in the vicinity are 3 large saw-mills and a cotton-mill. The opening of the Newry Canal connecting Carrington Bay with Lough Neagh, has been of great advantage to the town, having made it the entrepot of a very considerable district, and the seat of an extensive commerce: it is the principal port in the kingdom for the shipment of butter; and its communications will be farther improved by the Belfast and other railways. Vessels of small burden come up to its quays, but those of larger burden land and unload at Warren's Point, about 4 m. lower down. Antiquities in

Extensive of its cross-channel trade with Great Britain, especially that with Liverpool and Glasgow, which is by far the most extensive it has some trade with North America, the ports on the Baltic, and other foreign countries. The great estimate duty received at the port amounted, in 1848, to £2,100, and in 1868 it had 150 vessels of the reg. burden of 12,716 tons, and a steamer. A general market, and a market for linen, which are extensively produced in the neighbourhood, are held every Thursday; and a market for grain on Tuesdays, and the most on Saturdays. Post-office revenue, in 1868, £1,370.

Newry was early of considerable importance, and had a castle. It suffered in the war of 1691, and was nearly destroyed by the Duke of Berwick in 1703. It is now one of the most thriving towns in the N. of Ireland. (Belfast Report; Thos. A. Stewart, &c.)

NEWSTEAD a village of England, co. Nottingham, being a liberty of the par. of Papplewick, in the N. div. wap. Broxtow 5 m. N. by W. Nottingham. Pop., in 1861, 188. This village would be wholly unworthy of notice were it not for its proximity to Newstead Abbey, a structure, the name of which will be as immortal as the English language. The abbey was formerly a priory of Black Canons, founded by Henry II., and granted to the Dissolution to Sir John Byron, the ancestor of the illustrious poet, to whom it is wholly indebted for its celebrity. The part now inhabited consists principally of the ruins and offices of the priory, the church, except the S. aisle, having fallen entirely into decay. The front has a noble and majestic appearance, being built in the form of the W. end of a cathedral, adorned with rich carving and lofty pinnacles. The cloisters nearly resemble those of Westminster Abbey, only on a smaller scale, but possessing, if possible, a more venerable appearance. The cloister-court has a basin in the centre; and many of the ancient fragments of this noble pile lie under its flagged pavement. The chapel is still entire. The abbey stands

— enclosed in a happy valley,
— covered by high cascades.

And the ivy-covered ruins of the Gothic church, with its

"mighty window" and tower, strikingly contrast with the equalized mansion and its offices.

— before the cottage has a level top,
— and in the garden, deep, and healthy soil
— by a stream.

with woods sloping down to its banks. The apartments are spacious and superbly furnished in the old style, and the venerable fabric, with its remains of Gothic and baronial magnificence, its sombre appearance and sequestered situation, seems to have harmonized well with the moody mind of the "Scottish Chieftain." An antique cross of red sandstone stands in the courtyard, and a Gothic greenhouse leads into a beautiful garden, formerly the cemetery of the priory where in a pedestal of white marble erected by the poet over a Northumberland dog that had saved his life. The remains of Lord Byron are interred in Hackhall churchyard, a few miles from the Abbey which has passed from the family.

NEWTON IN THE WILLOWS, otherwise called Newton in Hereford a bar., market-town, and township of England, W. Derby, baron. co. Lancashire, 15 m. W. by S. Manchester, and 10 m. N. W. London. Area of township, 3,070 acres. Pop. in 1861, 2,125; but probably much increased, owing to the recent erection of iron foundries, engine manufactories, and glass-works. It comprises one main and rather long street, conveniently situated near the point where the Manchester and Liverpool Railway crosses with the Grand Junction and Union Railways. It has also a large depot and station. Two episcopal chapels have been built here within the last seven years, and there are two or three Sunday-schools. A free-school, founded in 1690, is endowed with 100 s. per year. Horse-races take place annually on the common N. of the town. Its market, long disused, was re-established in 1830, and is held on Saturday Fairs, May 17 and 18, Aug. 11 and 12. Newton returned 3 men to the H. of C., members of the land of the name, from 1st Eliz. down to the Reform Act by which it was disfranchised. (Belfast Report; Thos. A. Stewart, &c.)

NEWTON LIMAVADY, an inland town of Ireland, co. Londonderry, near the sea, about 15 m. E. from Lough Foyle, and 15 m. N. E. Londonderry. Pop. in 1861, 2,101. It is agreeably situated on the E. bank of the river Foyle, in a fertile and well-cultivated district. The town is rapidly increasing and improving arising from the impulse which of late years has been given to husbandry in its vicinity. Wheat is now raised in considerable quantities, though not many years ago it was imported for home consumption. But the great increase in the culture of flax is the principal cause of its prosperity. Since the municipal corporations visited the town, two banks, or branches of banks, have been established, with a fair proportion of business. (Belfast Report.) The public buildings comprise the par. church 3 Presbyterian meeting-houses, and 1 Methodist do., a dispensary, workhouse, a market-house, and a bridewell.

The corporation, under a charter of James I., in 1613, consisted of a provost, 12 burgesses, and a commonalty, and returned 3 men to the Irish H. of C. till the Union, when it was disfranchised. General sessions are held in June and December, petty sessions on alternate Tuesdays. The town is a constabulary station.

Markets for corn are held on Tuesdays and Fridays, and for general sales on Mondays. Fairs on the second Monday in February, 25th March, 12th June, 15th July, and 25th October. Post-office revenue, in 1868, £702; in 1869, £681. The banks referred to above were the Belfast

do. in 1855.
do. a market-town of Scotland,
do. of the Cree, mostly on level
do. river, and on the high road
do. rich, 50 m. W. the former,
do. or, direct dist. Pop. of town,
do. 2,375. It chiefly consists of
do. a road. A suburb, called
do. side of the river, and in the
do. is connected with the town
do. by a bridge.

A large cotton-mill was erected here about 60 years ago; but the speculation not succeeding, the premises were sold, in 1835, for a 6th part of the original cost, and have since been pulled down. A few hand-loom weavers are employed by the Glasgow manufacturers, and it has a brewery and tan-work. But the inhab. are chiefly dependent for support on its retail trade with the surrounding country and its markets. Large quantities of pork are cured here, chiefly for the English market. Vessels of 70 or 80 tons come up the Cree (which flows into Wigtown Bay) to Carly, within 1 m. of the town.

The par. church, designed by Mr. Burns, architect, in the handsome Gothic style for religious purposes by the S. of Scotland. It occupies an elevated position on the outskirts of the town, has a fine light spire, and is altogether extremely elegant, and to the best taste. It cost nearly 1,000. There are also chapels

belonging respectively to the Free church, Associate Synod, the Relief, and the Roman Catholics. There are sundry schools in the par., of which the most important is the Douglas School, founded and endowed by a gentleman of that name, a native of the par., who died in Jamaica in 1799. The teacher has a salary of 80*l.* a year, and is allowed to charge school fees. Dr. Alexander Murray, the celebrated orientalist, was born (1775) in the neighbourhood, where a granite monument, 82 ft. in height, has recently been erected to his memory. Adjoining the town is Kierouchtree, the seat of the Heron family. (*New Stat. Account of Scotland, § Wigtownshire, 167—188.*)

NEWTONARDS, a town and sea-port of Ireland, co. Down, at the N. extremity of Lough Strangford, 10 m. E. Belfast. Pop., in 1841, 7,631. It has a large square and several good streets, in which are the parish church, a small Rom. Catholic chapel, 3 Presbyterian meeting-houses, 1 for Methodists, and 1 each for seceders and covenanters, a large school on the foundation of Erasmus Smith, a spacious town-hall, a court-house, and a house of industry. "It is increasing very much in extent; many houses have been built within the five years ending with 1836; and others are building, but they are generally of a small description." (*Mem. Board. Report.*) The corporation, which, under a charter of James I. in 1612, consisted of a provost, 13 burgesses, and a commonalty, returned 2 mems. to the Irish H. of C. till the union, when it was disfranchised. A manor court sits every 2d Saturday for the recovery of debts to the amount of 10*l.* General sessions are held in June and December, and petty sessions on the 1st and 2d Wednesday of every month.

bourhood lets at a high rate." (*Board. Rep.*) "The fannel markets (removed thither from Welspool in 1832) are held on alternate Thursdays, and the quantity in the mart averages 400 pieces, valued at 10*l.* each, every market-day. The supply comes from every part of the country, except Llanidloes; and from many districts the fannel is sent in the rough, and finished or dressed at Newtown, where there are greater facilities of machinery and water. There are about 700 hand-loomes in the town. The labour is performed principally by male weavers, but also by women and children, the average net wages amounting to 3*l.* 6*s.* per week. The best weavers are never out of employ; but a great number of the middling hands are thrown out of work by the slightest depression of the trade. Considerable distress prevailed a few years ago among the weavers, owing to the failure of numerous small manufacturers, but the trade has now returned to a wholesome channel." (*Hand-loom Weavers' Report.*)

In 1839, Newtown had 4 woollen mills, employing 91 hands. Machinery is made on a considerable scale, and there are foundries, potteries, tanyards, and mak-houses, besides 1 joint-stock bank. From the extent of its trade, it is designated "the Leeds of Wales." Its communications are facilitated by the Montgomery Canal, which comes close up to the town, and connects it with the internal navigation of the central and northern districts. The Reform Act made Newtown a parl. bor., contributory with Llanidloes, Welspool, Machynlleth, and Llanfyllin, to Montgomery. The Boundary Act included with the par. the townships of Henddilly and Gwestydd. Registered electors of the united bors. in

1842-50, 1,048. Provision markets on Tuesday and Saturday; fairs, 1st Tuesday in Feb., last Tuesdays in March and Aug., June 24., Oct. 24., and Dec. 16. (*Hand-loom Weavers' and Board. Reports; Nicholson's Camb. Guide, &c.*)

Newtown, a decayed bor. and town of England, in the Isle of Wight, on the river of the same name, 6 m. W. by N. Newport, and 100 m. W.S.W. London. Pop. in 1841, 95. It was anciently called Frankville, and is supposed to have been of some importance previously to its being burnt down by the French in the reign of Richard II. Notwithstanding its decayed condition, it sent 2 mems. to the H. of C. from the 27th Elizabeth down to the Reform Act, by which it was disfranchised.

The soil in the S. is rather barren, but it improves on proceeding northward. Along the banks of the St. Lawrence, and in the region round the Oneida, it is well adapted for growing corn; upon the whole, however, the rearing of live stock is the most profitable branch of rural industry, and a large portion of the state, especially about its centre, is appropriated to sheep farming. In 1836, of 27,224,322 acres, which the state was supposed to comprise, 9,683,426 were said to be improved and worth 241,385,650 dollars. The principal wheat district commences in the valley of the Mohawk, about long. 75°, and extends W. to the great lakes, including the fertile vale of Seneca, and the Genesee country. The average produce of wheat is estimated at from 25 to 30

And the struggle of his time to plough as he can, and so his judgment might demand. In large open tracts long cleared some attention is given to the rotation of crops, with a view to the preservation of fertility, but it is not common to find the same field grown with wheat for a series of years without the intervention of other crops. Stacks of straw make mounds upon the which weeds grow to be destroyed. Weeds are here regarded only as competitors; and the duty of the farmer who sowed his seed in a high land is to keep the height of the weeds occupied by the decomposition of the straw, to remove them is generally an exaggeration. The appearance of the farm buildings agrees with the obvious wealth of the country. The original log cabins still remain upon farms well covered with them, and under high cultivation, but they are gradually giving way to more substantial buildings and in some cases to large and beautiful mansions. In the grazing country the buildings are generally of a better character than in the grain growing districts. New York contains a lot of Long Island and the adjacent New England though certainly very considerable are there improved and better than those other parts of the state probably in consequence of their vicinity to the city of New York. Agriculture however is every where improving. Agricultural societies are to be found in almost every county and the state government has contributed large funds for the promotion of their objects. Agriculture is generally the leading industry in every part of the state where the soil is inferior growing husbandry has been cultivated for things especially from the N. to which has brought the produce of the more fertile counties on the W. of the state into competition with them at the N.

Mr. Isaac Flavel says in N. American 1. 15 given a detailed and interesting account of the agriculture of New York. Land, he says, is almost always in the possession of the proprietor except in the neighborhood of the city and some of the upper towns. When it is not it is generally on the mortgage principle the landlord providing half the seed and rearing half the produce and the use of pasture lands, but the stock belongs to the proprietor. The various crops raised are much the same as in Britain with the addition of more for which our climate is not well adapted. Wheat is the most valuable crop, and the quantity of the harvest grows chiefly dependent to the extent of manure of which the farmer consumes very little and of which the rate is a good deal of land a bushel and 1/2 is given, but the degree of heat is not the same as in Great Britain. Potatoes, turnips and other grain crops are not so generally raised as in Great Britain as they are well adapted to the soil and climate in this state. Wheat is sown during the latter half of May to the first of June, and is harvested in October or sometimes later. The husbanding and clearing of this crop is extensive the whole work is performed by man, female labor being not of course. From 15 to 20 bushels an acre is considered a good average crop of wheat, the same proportion of straw is however considered a very abundant crop, and the average produce is that part of the United States where wheat is grown is said to be equal to 10 bushels, while in England it is estimated at 12 bushels, or upwards. Rye is grown but not extensively. Hay is sown in the first of the hay making season being very powerful and the other crops in this state it is seldom damaged by bad weather. Clover and all sorts of green crops are used and much more liberally is grown than in any part of Britain. The same of the pasture except the artificial kind on the banks of rivers have the beautiful appearance of English pastures, but are highly dressed with dry manure to be found. These require no manure, but frequent ploughings, rolling, &c. is far less expensive to be managed. The high price of labor is in fact the great obstacle to good agriculture, to the rotation of grain crops is expensive, to the raising of land is equally raised by rolling or harrowing from the farm and for the first two years sometimes crops of corn are produced, but as much as the quantity of grain diminishes, the farmer either buys down his land in grain.

the prevailing system of management in this state, second about a half of their produce on similar soils in Britain. (Hazard's America, 1. 115.)

Improvements in husbandry are upon the whole well adapted to the country, and their prices are not higher than in England. The new horse plough differs by the plough that is nearly universal except in rough deep land, and ploughing is well executed. The roads are in a good general way a good horseman riding down on some of them a day. Turning-husbands are not so common as in the old country.

Orchards are very productive. Various sorts of apple trees are grown, but a good deal of cider is made from the apple. It is the most part very inferior to the English and sold at from 1 to 2 dollars the barrel of 30 wine gallons. Strawberries and plums are raised for domestic use and for sale.

In 1841 the produce of the crops in New York was estimated as follows, viz. wheat 10,000,000 bushels, oats 10,000,000 do, barley 4,000,000 do, Indian corn 17,000,000 do, rye 4,000,000 do, and buckwheat 8,000,000 do. Great attention are making to improve the breeds of cattle and horses, by importations of the Yorkshire cattle and of stud horses from England. Mr. Hager and his son spent in the last in a good English market or to the place of the French islands which sell but not from the land. Beef comes from 10 to 12 per lb. Dairy produce are highly important articles of trade. Milk cows sometimes give 10 or 12 lbs of butter a week and perhaps 10 quarts of milk a day. Cows are much used for ploughing on rough lands and the horses are not treated to such work. The price of ordinary horses is from 10 to 15. Sheep are less attended to than they deserve in a country where the dryness of the weather preserves them from diseases to which they are subject in England. The American and European with them are the breeds generally with a mixture of inferior quality. The great extent of the forests covers the breeding of hogs, which are good and before being killed are usually fattened with apples or corn. Turkeys, geese, ducks and other poultry are very numerous and cheap, the price of geese and turkeys even at New York, is often not above 4 cents, while ducks and broods are about 10 cents and eggs 10 to 12 cents.

In the N. and E. parts of the state much of the country is covered with dense forests and the principal business of the farmers is the growing of and sending lumber. There is little or no underwood and in cultivated parts wherever a sufficient quantity of land has been cleared the stock of a few years as high as 100 per cent are as the land gradually cleared. The trees are sometimes above 100 ft in height. Numerous varieties of oak, the burr oak, white oak, chestnut, plane, &c. are abundant. Maple, ash, birch, etc. are also common. The culture of silk has long been prosecuted in the other parts of the N. States, but as an extended scale, 40 sets of full grown mulberry trees is estimated to produce 100 dollars worth of silk.

A third crop common here upon an average, from 10 to 15 bushels a month, and is raised. Hay is raised from these sorts of green crops, which are often purchased by owners in Europe for about 1/2 dollar of a bushel a day, or in value of hay making or harvest. Frequently a full number of these hay, being engaged to work from daylight to sunset.

New York is distinguished almost every other state by the Union by her extensive internal communication. Of these the principal formed partly by the navigation upon the Hudson, and partly by the Erie canal. The latter extends from Albany on the Hudson to Buffalo on Lake Erie, and passes the city of New York with the great American lake, and passes her to the great port of 1,000,000 tons, and of all the water and freight carrying the surrounding the lake. Upper Canada may be said to be reached from Europe by way of New York, in less than half the time to which it can be reached by way of the St. Lawrence and Quebec, and with comparative ease.

The Erie canal was begun in 1817 and was opened throughout its whole extent in 1825. Originally it was only 4 ft deep, but provision was made in 1825 for increasing its depth to 14 ft. Its first cost amounted to 7,000,000 dollars, and the expense of the improvements was estimated at about 7 millions more. Buffalo on Lake Erie is the termination of the canal in 1825 it shows the level of 4 miles on the Hudson where a canal was first formed by a French agent with George on Lake Ontario and by another branch canal with the Niagara, and consequently with the Connecticut. This great work was undertaken at the expense of the state, but has been amply repaid, both in a national and a pecuniary point of view, the mills, which are very

commerce, amounting to about 2,000,000 dolls. a year. New York has also a direct communication with the lake of the St. Lawrence by the Champlain canal. The latter which may be regarded as the N. E. branch of the Erie canal, connects the Hudson with Lake Champlain, which is united, by means of the navigable river St. John, or Richelieu, with the St. Lawrence. Another important canal connects the Hudson with the Delaware.

Statement, showing the Aggregate Value of the Property which came to the Hudson River by all the Canals during the Years 1847, 1848, and 1849:—

	1847	1848	1849
Products of the State	\$2,700,000	\$2,800,000	\$2,900,000
Manufactures	5,000,000	5,200,000	5,300,000
Mineral products	500,000	550,000	600,000
Other articles	1,500,000	1,600,000	1,700,000
Total	\$9,700,000	\$10,150,000	\$10,500,000

But, though of the greatest utility the rapid increase of pop. and production in the states bordering on the lakes and the fact that the Erie canal is annually shut up for some months by frost make it most desirable that additional means of communication should be opened with the lake district. And this has happily been effected by the Direct Erie railway of which 84 m. were in operation in October last, and which is to reach Lake Erie in May or June next (1851). This railway which runs through the E. part of the state adjoining Pennsylvania, has already been most successful, and there can be no doubt that on reaching Lake Erie, it will become one of the most important commercial thoroughfares in America. Besides opening a new and easy outlet for the produce of Ohio, Indiana, Michigan, &c., the prospect is that a large portion of the produce of Upper Canada will find its way to the American, West Indian, and European markets by its means.

Exclusive of this great railway there are a host of others in most parts of the state, the avg. length of those completed in 1848 having amounted to 500 m. There are, indeed, but few countries so well supplied with railway accommodations. The ordinary roads are not so good as in some other parts of the Union. They are usually formed in a rough way so as to keep off the water, and after the melting of the snow, or heavy rains, they become almost impassable. In dry weather they answer their purpose tolerably well; and stage coaches travel over them at the rate of 6 or 7 m. an hour. The roads are much and kept in repair by the work of the labourers actually called out. The travelling expenses for carriages and bridges are quite trifling (*Am. Almanac*, 1850—1851, *Am. Almanac*, 1851, &c.)

Manufactures are various and important. In 1848, there were altogether 7,000 saw and grist mills, 900 flitting mills, 1,000 carding machines, about 110 cotton factories, 200 woolen do. 200 iron works, 240 distilleries, 700 breweries, 400 tanneries, &c. the aggregate value of the manufactured goods was estimated at 45,000,000 dolls. of which the raw material is supposed to have amounted to 43,000,000. Flour and saw timber are included in this estimate among manufactured goods, and amounted, together to about 20,000,000 dolls. The other articles were comparatively trifling, cotton goods being only valued at 1,000,000 dolls. woollens at 3,400,000 do., iron works at 4,000,000 do., liquors 1,000,000 do., and leather 3,000,000 do. but the value of these articles must have nearly doubled or more in the interval.

The commerce of this state is very extensive; as she not only supplies her own wants and exports her surplus produce but also imports vast quantities of goods for the consumption of the northern parts of Pennsylvania, Ohio, Michigan and other western states. Albany Hudson, Buffalo, Whitehall and other towns on these canals, are large emporiums. But the principal part of the trade, including nearly all the foreign commerce of the state, centres in New York city (which see).

The legislature consists of a senate of 30 members, elected for 4 years, and a house of representatives of 120 members chosen annually. The state is divided into 6 senate districts, each entitled to send 4 senators; and 1-4th part of the senate is elected annually. The governor and lieutenant governor are elected for 4 years, the latter provides to the senate, where he has a casting vote. The right of suffrage is enjoyed by every white male citizen above 21 years of age who has resided for 12 months in the state, and for 6 months in the co. for which he offers to vote, and possesses of entire possession of a clear freehold of the value of 20 dollars. The salary of the governor is 4,000 dolls. a year, and the lieutenant governor receives 3,000 dolls. a year, and the members of the legislature receive 5 dolls. each every day during the session. The legislature meets annually at Albany on the first Tuesday of January, unless otherwise ordered. For judicial purposes the state is divided into 6 districts corresponding with the senate

districts; in each of which is a strength court, with a judge having a salary of 2,000 dolls. a year. There is a civil and criminal court in each co., besides mayors' and justice courts in the towns. The superior courts are a court of chancery vice-chancellor court, supreme court, and superior court for the city of New York. The chancellor and superior judges are appointed by the governor and senate, and hold office during approved conduct, or until the age of 60. The inferior judges are appointed by the same authorities for the term of 6 years. The amount law of England though with various modifications, forms the basis of the jurisprudence. There are 2 principal state prisons at Auburn (which see), and at Sing-sing on the Hudson about 20 m above New York. They are both conducted on the same plan, the former at the end of 1848, had 616 inmates, and the latter 441.

The principal religious sects are the Presbyterians, Methodists and Baptists the Episcopalians and Dutch Reformed are also numerous. The Episcopalians have a theological seminary at New York, the Presbyterians at Auburn the Baptists at Hamilton, and the Lutherans at Hartwick. In no state is public instruction more fully carried out. There is a school fund, which amounted, in 1849 to 5,370,142 dolls. the produce of which is distributed among the townships on condition of their raising a sum equal to that which they have received from the state. The whole of these sums are expended in payment of teachers wages the erection of school-houses, the establishment of libraries, &c. being at the charge of the various districts. The number of children attending school, between 5 and 16 in the various school districts, amounted, in 1848, to 718,128, the total number of pupils being 775,743, on these is private schools. In each of the 6 senatorial districts, an academy for teachers has been established at the public expense. There are also between 60 and 70 high schools, besides Columbia, Union, Hamilton and Genesee colleges, and New York university. As an indication of the literary activity that prevails, it may be mentioned that so far back as 1838, nearly 300 newspapers were published in the state 16 of which were issued daily. Charitable institutions, as humane societies at Utica, Blackwell's Island, Broomfield, deaf and dumb, and blind asylums, &c. are numerous. Paupers are supported by a rate on the amount to which they respectively belong, and are under the care of superintendents of the poor. In each co. is a poor house, to which a farm of about 5,000 acres is attached. In 1848, there were 37,200 paupers, the amount expended for their relief being 104,100 dolls., the average expense of each pauper was 2 3/4 dolls. a year. The value of the paupers' labour 20,124 dolls. Slavery does not exist in this state, but the blacks are, notwithstanding, regarded as an inferior and degraded class. The militia consists of 8 di-

visions, and of 1848, 81,450 men, being, 400, white, 1/4 of age are subject of taxable property at 600,000 171 dolls., 2,000,000 dolls. per annum the same year and dolls. of the state owned in 18,917, 00—valued at 10,712,000 \$ per ann.

captured in 1848, by so in the service of called by the Dutch of New Netherlands, 1848, and destroyed.

On the occasion of the latter, it resorted to the crown. New York sustained an important part in the revolutionary war its independence from Great Britain was declared on Sept. 1777. It sends 40 representatives to congress. (*New York Almanac* 1851; *American Almanac* 1851, *Swart's Three Years in America*, *Europe Americana*, *Marshall's Europe of Ocean*, *Amer. Alman*, *Plant*, *Pitts*, *Darby*, &c.)

New York, the largest and most populous city, principal sea-port, and commercial metropolis of the U. States, cap. of the above state, on the E. extremity of Manhattan Island, near the mouth of the Hudson river, on the coast of the Atlantic, lat. of the City Hall, 40° 45' N., long. 74° 00' W. Pop. in 1845, 371,000. But so rapid has been its increase that in 1850 its pop. amounted to about 512,000, and inc. Brooklyn, Williamsburg, &c., which, in fact, are its suburbs, its agg. pop. was considerably above 700,000, being nearly double that of any other city of the New World.

The following Table shows the Progress of the Population and Wealth of New York City:— (*Am. Almanac*.)

Years.	Population.	Value of Real and Personal Estate.
1800	60,439	24,486,370 dolls.
1810	93,373	69,530,753 —
1820	123,706	69,530,373 —
1825	166,086	101,160,046 —
1830	202,589	125,283,518 —
1835	270,089	218,723,703 —
1840	312,852	252,843,163 —
1845	371,223	239,938,317 —
1850	517,849	256,217,093 —

Manhattan Island, which is long and narrow, has S. New York Bay, comprising the estuary of the Hudson, E. Long Island Sound, and W. the Hudson, all having deep water: on the N. it is bounded by a narrow channel, called Haerlem river, across which are several bridges. The approach to the city by sea is very fine, the shores of the bay being wooded down to the water's edge, and thickly studded with farms, villages, and country-seats. The view of the city itself from the bay is less prepossessing; for the ground on which it is built, though undulating, being nowhere considerably elevated, but little of it is visible from the water; and it has no very striking object to arrest the eye. It is of a triangular shape, bearing, in this respect, some resemblance to Constantinople. The oldest portion of the city, at the apex or S. extremity of the triangle, has, notwithstanding the important improvements effected of late years, many narrow, crooked, and inconvenient streets; but in all the more modern portions the streets are broad and straight, and generally cross each other at right angles. The present circuit of New York is about 10 m. Broadway, the principal street, is a long and spacious avenue, 80 ft. in width, extending in a straight line through its centre for nearly 3 m.; its upper or more northerly portion being lined with very handsome houses. This is the favourite promenade; and when the entire plan of the city is completed, it will extend to 8 m. in length. Many of the shops or stores in the Broadway and other principal streets are highly ornamented, and are fitted up with plate-glass windows similar to those of London. On one side the Broadway is an open space, of about 4 (according to Bradford 11) acres planted with trees, and intersected by walks, having the city hall in its centre; and at the S. end of the same great thoroughfare is a vacant space called the Battery, commanding a fine view of the bay, and much resorted to by all classes. Hudson and Washington Squares are the principal squares already finished; but others have been planned in parts of the town that are not yet completed; certainly, however, in constructing the city, too few open spaces have been left for the health and recreation of the inhabs. Mr. Stuart says, "The dwelling-houses in the central parts are, as I was told, as high-priced as in the best squares in Edinburgh. The pavement all over the city is generally good, and the side pavements are broader than in British cities. The outside of the brick buildings is almost always kept painted, which gives them a clean, fresh, and cheerful appearance. The buildings for public institutions, and the churches, seem quite as numerous as in British cities, when the difference of pop. is taken into account. There are about 100 (in 1837, 146) churches. Many of these are large; but there is nothing in their architecture particularly requiring notice. There is no building to bear any thing like a comparison with St. Martin's church in London, the front of the Register Office in Edinburgh, or that of the Chamber of Deputies in Paris; but there are churches and public buildings in all those cities of recent erection quite as deficient

in good taste as any in New York. In short, though there be no very fine buildings in this city, there is not much to hurt the eye of the fastidious." (*Three Years in America*, i. 21—24.) The new Exchange, built, to replace one burnt down in 1835, of granite in the Grecian style, is the most splendid public building in the city. It cost, inc. the ground, about 1,800,000 dolls. The Custom-house, of white marble, also a very magnificent building, cost, inc. the ground, 1,175,000 dolls. Previously to the erection of the two last mentioned edifices the city-hall was the most imposing structure in the city. It is 206 ft. in length, by 105 ft. in depth, and 65 ft. in height, being enclosed within a massive iron railing. It has a front of white marble, and an interesting collection of portraits, busts, &c. of the presidents and other distinguished citizens of the U. States. Near the hall is a neat building, formerly a gaol, but at present appropriated to city offices; and in the rear is a range of brick buildings, now called the New York Institution, and occupied by the Literary and Philosophical Society, the American Academy of the Fine Arts, &c. The building for the "University of the city of New York," in Washington Square, is one of the finest of the public edifices. It is of marble, in the English collegiate style, 180 ft. in length, by 100 ft. in width. The front is divided into five parts, the chapel being in the centre, with wings, and flanked by towers on either side. The chapel, somewhat similar to King's College, Cambridge, is 55 ft. in width, and 85 ft. in depth. It has octangular turrets, and a window 50 ft. high, and 24 wide. Columbia College, and Astor House, the largest hotel in the Union, built of granite, 200 ft. by 150, and having 390 apartments, are well worth notice. Trinity Church, founded in 1696, in the Gothic style, with a steeple 198 ft. in height; St. Paul's, with an Ionic portico, and a spire 294 ft. in height; St. John's, on the construction of which more than 200,000 dollars have been expended; and St. Patrick's R. Cathedral, the largest church in the city, are the best ecclesiastical edifices. The city hotel, 7 stories high, and comprising a large assembly room; 5 theatres; the custom-house, on the model of the Parthenon; the city lyceum, hospital, almshouse, bridewell, gaol, &c., are among the other principal buildings. There are numerous good hotels and large storehouses.

New York has suffered at different times from destructive fires, of which the greatest occurred in 1835 and 1845. The latter destroyed about 300 houses and warehouses, with sundry public buildings. These conflagrations have, however, led, as similar visitations have usually done elsewhere, to the improvement of the city. The old wooden houses have been replaced by houses of brick, and the streets have been widened and otherwise improved.

New York formerly laboured under a great deficiency of water. But latterly this deficiency has been fully supplied by means of the Croton aqueduct, a work worthy of being ranked with the noblest of the old Roman aqueducts. It commences about 40½ m. from New York at the Croton river, the waters of which are collected by an immense dam. The aqueduct proceeding thence is arched over and under, being 6 ft. 3 in. wide at bottom, 7 ft. 8 in. at top, and 8 ft. 5 in. in height. It has a descent of 13·3 in. per mile, and discharges 60,000,000 galls. in 24 hours. It crosses the Haerlem river (separating Manhattan Island, on which New York is built, from the continent) on a bridge of stone, 1,450 ft. in length, with 14 arches, each of 80 ft. span, 110 ft. above

tide water. The receiving reservoir has a water surface of 31 acres, and contains 150,000,000 galls.; the distributing reservoir covers 4 acres, is 36 ft. deep, and holds 21,000,000 galls. Thence the water is distributed over the city by means of iron pipes, from 6 to 36 in. diameter, extending, in 1849, to the length of 180 m., 2,800 ft. The entire cost has been 10,375,000 dolls. The water was partially introduced into the city 4th July, 1842; but the works were not finished till 1845.

This ample supply of the finest water has made a great improvement in the cleanliness and salubrity of the town, in both of which respects there was, and still is, great room for improvement. Formerly there was hardly a sink or common sewer in the whole city: the night-soil was collected in pits, of which there was one in every house, and being conveyed to the nearest quay, was thrown into the river; but as these quays are made of timber with many projections, a great deal of filth was retained about them, producing in hot weather an abominable stench, and probably, also, originating the yellow fever by which the city is sometimes visited. But in these respects various desirable changes have been and others are in the course of being made.

New York inner bay forms one of the finest harbours in the world: it is about 8 m. in length N. to S., and has a breadth varying up to 5½ m. It may be entered from the ocean by three passages, the Narrows, East River or Long Island Sound, and Staten Island Sound; but the first is at once the best, and by far the most frequented channel. The bar, at the mouth of the outer bay, between Sandy Hook Point and Long Island, has 21 ft. water at ebb tide; and as the water rises about 5 ft., the largest class of ships may enter the bay. Within the bar the water in the outer and inner bays, and in the Hudson, is so deep that ships of the largest burthen lie close to the quays, and may proceed to a great distance up the river. The navigation of the bay is but rarely impeded by ice. The great strength of the tide and the vicinity of the ocean keep it generally open, even when the Chesapeake and Delaware bays are frozen over. In the bay near the city are Governor's, Bedlow's, and Ellis's Islands, all strongly fortified; and other fortifications are erected on the adjacent shores guarding the approach to the city. The navigation in entering the harbour is extremely easy, and were it not for the risk of vitiating ship insurances, the services of pilots would seldom be required. A light-house is erected on Sandy Hook Point, and there are two others, about 300 ft. apart, 4 m. S. by E. the foregoing, and 350 ft. above the level of the sea. A fourth light-house stands on Staten Island, on the left side of the Narrows. Vessels load and unload at the wharfs on both sides of the city, which are continually crowded with shipping.

Means of Internal Communication and Commerce.—The rise of the tide is felt in the Hudson so far as Troy, 60 m. above New York, and large vessels ascend to Albany, a little below Troy, affording the greatest facilities for the transport of produce from and to the interior. These natural advantages are trifling, however, compared with those which have been conferred on New York by the system of canals and railways with which she is connected. These, as shown in the previous article, have made her the grand emporium of a vast extent of fertile territory, and have given her an extent of internal navigation inferior only to that enjoyed by New Orleans, and one or two other cities. She is now, in fact, not merely "the port" of the state of New York, but in a great measure also of Upper Canada, and of the states of Ohio, Michigan, Indiana, &c. Not only does the Erie canal and railway place her in direct communication with the countries bordering on the lakes, but the latter, being connected by the Ohio and Wabash canals, it is of every day occurrence that goods laden at New York and taken up the Hudson, find their way, without being unpacked, to the emporiums on the Mississippi and Missouri, and even to New Orleans, and conversely! In con-

sequence of these extraordinary facilities, the trade of New York is extremely extensive; and it will necessarily continue to increase with the rapidly increasing wealth and population of the vast countries of which she is the principal entrepôt.

The value of the merchandise annually loaded and unloaded in the port of New York is estimated at from 250 to 320 millions of dollars. The number of vessels in the port in the busy season varies from 700 to 1,200, exclusive of about 150 steamers. The number of arrivals from foreign ports amounted, in 1847, to 3,166, and the coasting arrivals exceed 5,000. The total value of the imports into the United States in the year ending the 30th June, 1848, amounted to 154,998,929 dolls., of which no less than 94,526,141 dolls. were imported into New York! The imports comprise an infinite variety of articles. The principal are cottons, woollens, linens, hardware and cutlery, earthenware, brass and copper manufactures, salt, &c., from Great Britain; silk, wine, brandy, &c., from France and Spain; sugar and coffee from the Havannah and Brazil; tea from China; with spices, indigo, cochineal, dye woods, &c., &c. The value of the exports from New York in the year ending the 30th of June, 1848, amounted to 53,351,157 dolls., being above 1-3d part of the total exports from the United States. The exports principally consist of wheat, flour, corn, rice, and cotton; beef, pork, butter, dried fish, and all sorts of provisions; furs, tobacco, coarse cottons, and other manufactured goods, lumber, &c. The great excess of imports into New York over the exports is accounted for by the fact, that while by far the larger portion of the articles of export from the Western states are sent down the Mississippi, to be shipped at New Orleans, the greater part of the more valuable articles brought from abroad, and destined for the consumption of the same states, is imported into New York.

The tonnage of New York is greater than that of any other port, London not excepted. The total tonnage belonging to the port on the 30th of Sept. 1838, amounted to 400,971 tons; and on the 30th of June, 1849, it amounted to 796,492 tons, being near 1-4th part of the entire tonnage of the United States, and the greatest amount of shipping that has ever belonged to any single port. Subjoined are some statements respecting the navigation, &c., of New York, in some recent years:—

Values of the Imports from, and of the Exports to Foreign States from New York in the under-mentioned Years —

	Imports.			
	Dutiable.	Free.	Specie.	Total.
1850	\$96,366,626	\$7,800,578	\$10,502,116	\$113,752,618
1849	78,883,323	8,024,579	2,813,380	89,425,282
1848	82,512,451	8,183,796	1,173,406	91,668,833
1847	65,908,332	9,062,713	2,307,380	82,368,425

	Exports.			
	Domestic.	Foreign.	Specie.	Total.
1850	\$33,227,676	\$5,483,841	\$6,585,103	\$44,346,620
1849	23,166,339	3,563,885	4,739,903	31,469,127
1848	33,437,844	2,693,597	12,028,794	48,160,235
1847	43,021,562	2,616,572	905,841	46,543,975

Account of the Vessels, with their Tonnage, Crews, &c., that cleared from New York in the Year ending the 30th June, 1849, distinguishing between Native and Foreign Vessels:—

	Ships.	Tonnage.	Crews.
American	6,379	1,368,448	66,520
Foreign	3,320	784,514	43,576
Total	9,699	2,148,157	100,096

But very large numbers of small coasting vessels, with steamers and others employed in the inland trade, are not included in this return.

The following Table (see top of next page) shows the Quantities of the undermentioned Articles imported into the Port of New York from 1st of January to 31st of December, 1849, Foreign and Coastwise.

New York is the greatest port in the U. States, or in the world, for the arrival of immigrants.

Total number of passengers who landed at the port of New York, in 1849			
Of these there were citizens	-	-	234,771
And aliens	-	-	13,668
Of the latter were natives of Ireland	-	-	220,603
" " England	-	-	112,591
" " Scotland	-	-	28,321
" " Germany	-	-	8,840
" " other countries	-	-	55,706

We annex a Statement of the Amount of Customs Duties received at the Port of New York in each of the last Four fiscal Years:—

1850.	1849.	1848.	1847.
\$24,487,609 73	\$19,811,334 56	\$20,339,680 60	\$17,342,461 86

Ship-building is prosecuted very extensively at New York. It is estimated that the aggregate burden of the different steam and sailing vessels constructed at New York in the course of the present year (1850) will exceed 80,000 tons.

The communication of New York with Liverpool, London, Havre, Rio de Janeiro, and other foreign ports with which she has the greatest intercourse, is principally kept up by lines of packet ships, partly sailing vessels and partly steamers. The former, the property of New York merchants sail at regular intervals, are fitted up with every regard to safety and convenience, and are, probably, the finest and fastest sailing vessels in the world. They vary in size from about 500 to about 1,200 tons. The speed and regularity with which they perform their voyage are quite astonishing.

There belonged, on the 1st of January, 1855, to the state of New York, 145 banks with an aggregate capital of \$1,341,708,000, of which 25 banks, with an aggregate capital of \$1,341,708,000, were established in the city. They are all joint stock associations, the partners in most of them being liable only to the amount of their shares. It is needless to dwell on the state of these concerns. Every body knows that the banking system of the United States is a disgrace to a civilized country. It seems, in fact, to have every quality that a banking system should not, and not one that it should, have, and has repeatedly overspread the country notwithstanding its innumerable advantages, with bankruptcy and ruin. The New York banks are probably about the best in the Union, but, in common with the others, they have ever and over again stopped payments. There is nothing, indeed, so indisputable in America as a thorough and radical reform of the banking institutions of the country, and all they are placed on a totally different footing, those foreigners who invest capital in them may be fairly said to have more wealth than discretion. There are, also, a great many joint stock insurance companies and other associations in New York.

The city is divided into 19 wards, each electing annually an alderman and assistant alderman. These together form the common council, but meet in two chambers, one called the Board of Aldermen, and the other the Board of Assistants. The mayor, formerly appointed by the governor and senate of the state, has, since 1844, been appointed by the electors of the city. The council possesses the legislative power in the city, subject to the approbation of the mayor; but in case of his refusal to sanction any ordinance, it may be passed by a majority of the whole number of the members of each board. The courts of the city are—the superior court, court of common pleas, courts of general and special sessions, the marine court, a police court, with 5 magistrates; and 7 justices' courts. The university, chartered in 1821, and opened for students in 1825, is subject to the inspection of 31 regents, including the governor and lieutenant-governor of the state, who have

power to inspect all colleges and schools therein; but internally it is governed by a council of 30 shareholders with the mayor and 4 members of the common council for the time being. It has a chancellor and 11 professors, and affords instruction in all the usual branches of general science. The university course includes a period of four years for the degree of B. A. The price of tuition for the whole course is \$12 a year or for single branches \$10 each. In 1848, it had 154 students. Columbia College, formerly King's College, established in 1784, has a president, and 8 other professors, about 120 students, a library of 17,000 vols., and an estate valued at upwards of \$100,000. The city has also an episcopal seminary, and various other sectarian high schools, a college of physicians, the American and New York lyceums, an historical and philosophical library and mercantile library, medical law agricultural horticultural typographical, musical and numerous other learned societies, with extensive libraries, and reading-rooms, a chamber of commerce, board of trade, American Institute for domestic industry, and mechanics' institute, academy of the fine arts and drawing, a repository of arts, &c. Sixty-eight newspapers of which 12 were issued daily, were published in New York in 1848. The New York hospital into which 1,275 patients were received in 1848, and Bellevue Hospital are the principal of the numerous institutions for medical relief. There are admirable institutions for the blind and the deaf and dumb, a society for the reformation of juvenile delinquents, a fund termed "Long Island Farm," for the provision of destitute children; 4 savings' banks, and a great variety of other useful public institutions. Few, if any, cities have increased in pop. and wealth so rapidly as this. In 1848, the value of the real property within the city was estimated, for the purpose of assessment, at \$100,000,000, and that of the personal property at \$1,184,651, exclusive of property belonging to the corporation, and of the estates and properties of the various churches, schools, and universities. The city debt, in 1848, amounted to \$2,245,250 (Am. Almanac, 1850.)

The city of Brooklyn, on Long Island, immediately opposite to New York, bears the same relation to the latter that Peru and Lima do to Constantinople. It stands on rising ground, and is laid out like New York, its streets running at right angles to each other. Its pop., which, in 1820, was 16,204 had risen, in 1848, to 55,205. It has a navy yard, a handsome city hall, numerous churches, a municipal court, 3 lyceums, an academy, a collegiate institution for young ladies, many good private schools, several banks, insurance companies, and improvements. It has a steam cotton factory, many working machines, some cloth finishing works, lead works, distilleries, rope-walks, carriage-leather factories, &c.; and is a place of considerable trade. Steam-boats ply continually between it and New York, and it is connected by a railroad 19 m. in length with Jamaica, in the interior of Long Island. On Aug. 25, 1776, the British gained a victory over the Americans on Brooklyn heights, which gave New York into their hands; of which city they retained possession till 1783.

New York, under the name of New Amsterdam, was founded by the Dutch in 1624, being given with the rest of the colony to the Duke of York in 1684. In 1673 it was re-taken by the Dutch, but in the succeeding year it fell again into the hands of the English. It was the scene of several of the events that preceded the outbreak of the revolution, and the first congress of the U. States under the new constitution was held in it in 1789. (New York Gaz., American Almanac, Stuart, Official Papers, published by Congress.)

NIAGARA (RIVER and FALLS OF).

The river of Niagara is that portion of the great river St. Lawrence in N. America, that extends between Lakes Erie and Ontario, the level of the former being 334 ft. above that of the latter. The Niagara river issues from the N. E. extremity of Lake Erie, at Black-rock, near Buffalo where it is $\frac{1}{2}$ m. wide, and runs northward about 25 m., embracing in its course numerous islands, and running over a high ledge of rocks, forms the Great Falls, the most stupendous cataract in the world. On flowing out of the upper lake, the river is almost on a level with its banks; so that any considerable rise of its level would make it lay under water the adjacent flat country of Upper Canada on the W., and of the state of New York on the E. (Hall's America, v. 179.) For 5 m. from Lake Erie it has a rapid current; but it then becomes smooth and placid, and continues so till within a mile of the Falls. About 5 m. from Buffalo the river widens, forming

NIAGARA.

several islands, one of which, called Grand Island, 12 m. in length, comprises above 17,000 acres. Navy Island, belonging to the British, has an extent of 304 acres: the rest are much smaller. About 2 m. below Navy Island, on the left or Canadian bank, the river receives the Chippawa, which is connected with the Welland canal, the artificial channel of communication between the upper and lower lake. (See ante, 143.) The shores on either side are but thinly settled. Between Buffalo and the Falls, a distance of 21 m., there are only 4 villages, two on either side. A few farm-houses are dispersed here and there; but, for the most part, the banks are covered with forests. "The river, before reaching the falls, is propelled with great rapidity; being a mile broad, about 25 ft. deep, and having a descent of 50 ft. in half a mile. An island at the very verge of the cataract divides it into 2 sheets of water: one of these, called the Horse-shoe Fall, on the Canadian side, is 600 yds wide, and 158 ft. in perpendicular depth; the other, called the American Falls, being about 200 yds. in width, and 164 ft. in height. The breadth of the island is about 500 yds. This great sheet of water is precipitated over a ledge of hard limestone in horizontal strata, below which is a somewhat greater thickness of soft shale, which decays and crumbles away more rapidly than the former stratum, so that the calcareous rock forms an overhanging mass, projecting 40 ft. or more above the hollow space below." (*Lyell's Geology*, i. 261.) The depth of the water is much greater on the Canadian than on the American side; and hence, while the scarcely hidden rocks below the American Fall cause the flood to be broken into foam, the deep green hue of the billows beneath the Horse-shoe Fall is but slightly changed by the crests rising above them. "The finest view of the falls, perhaps, is from the table rock on the Canadian shore, and from the banks above it. Another good view is from a boat crossing the river 200 or 300 yds. below the falls, both of which are thus seen to the greatest advantage. The rapids, however, are best seen from Goat Island, to which a very ingeniously constructed and strong rough bridge has been thrown, on the American side, over rapids and great blocks of rock. On the N. side of the island, the rocks, projecting into the river 200 ft. or 300 ft., immediately over the falls, are accessible by a second wooden bridge, below which the water runs with fearful velocity. From the rocks, the view over the precipice and great fall is terrific, absolutely appalling; although the prodigious volume of the tumbling waters is not so apparent at this spot as from the table rock and the boat." (*Stuart's America*, i. 140.)

The banks rise from the ravine perpendicularly above the river upwards of 180 ft., and hence artificial means are necessary for effecting a descent to the water's edge. Spiral staircases have been constructed both on the Canadian and American sides; besides which, a third was constructed, in 1829, at the lower end of Goat's Island, for the purpose of descending to a ledge actually underneath the fall. By these means the traveller is enabled to view the falling waters in almost every possible direction. "The overwhelming sensations, with which the spectator can hardly fail to be affected, are produced by the immense flood, precipitating at least 100,000,000 tons per minute, as well as by the stupendous mass and overpowering force of the roaring and falling waters. Every surrounding object, indeed, is viewed with indifference, while

NICARAGUA (LAKE OF). [403]

the mind is wholly absorbed in the contemplation of a spectacle so sublime, surpassing in majesty and grandeur and power all the works of nature that have ever arrested the attention or presented themselves to the imagination. 'To form a faint idea,' said the late Governor Morris, 'of the great cataract of Niagara, fancy to yourself the Frith of Forth rushing wrathfully down a deep descent, leaping in foam over a perpendicular rock 175 f. high, then flowing away in the semblance of milk, from a vast basin of emerald. You will thus have some notion of the unparalleled, the petrifying influence with which these falls impress the beholder: but, truly, as the poet says, the eye of man must see this miracle to comprehend it, or the feelings it reproduces.'" (*Stuart*, i. 143.) These stupendous falls have attracted and continue to attract a large number of visitors, in consequence of which numerous large hotels have been built on both sides the river. Many private villas have also been erected on the Canadian side. After the river has passed over the falls, its character is immediately and completely changed. The waters, which had expanded at the falls to an entire width of 1,900 yds., including Goat Island, are again contracted after their union into a stream not more than 160 yds. broad; and the river then runs furiously along a deep wall-sided valley, or huge trench, which has been cut by the continued action of the stream during the lapse of ages. The cliffs on both sides are in most places perpendicular, and the ravine is only perceived on approaching the edge of the precipice. (*Hall's North America*, i. 195, 196.)

By the continued destruction of the rocks, owing to the eddies and spray rushing against the soft shale strata, the falls have within the last 80 years receded upwards of 150 ft., or, in other words, the ravine has been prolonged to that extent. Through this deep chasm the Niagara flows with a constantly decreasing velocity for about 7 miles; and then the table-land, which is almost on a level with Lake Erie, suddenly sinks down at Queenstown, and the river emerges into a plain, continuing for 7 miles to Lake Ontario. There seems to be no reasonable ground for doubting that the falls were once at Queenstown, or 7 m. below their present position; and that, from the force of the water undermining and wearing away the rock, they have receded from Queenstown to where we now find them. This recession is still going on, at the rate of nearly 80 yards in 40 years; and consequently they seem destined, in process of time, to reach Lake Erie, which, being only about 70 ft. in depth, would thus be completely drained. It is not unlikely, however, that in the long interval that must thus intervene, some convulsion of nature may occur to change the comparative levels of the district. But supposing this not to occur, and that the falls recede to the lake, the probability is, from the accumulation of mud, and the gradual filling up of the lake that is now going on, that its principal portion will have been previously converted into dry land. (*Lyell's Geol.*, i. 262-264. ed. 1835.)

NICARAGUA (LAKE OF), the most considerable lake of Central America, comprised within the state of Nicaragua, and extending principally between the 11th and 12th degs. of N. lat., and the 84th and 86th of W. long., about 12 m. in a direct line from the Pacific, and 90 m. from the Caribbean Sea. It is of an oval shape: length, N. W. to S. E., about 130 m.; average breadth, perhaps, about 40 m. It has numerous creeks and harbours, and several islands. It receives a good many rivers, especially along its N., N. E., and W. sides; its surplus waters are carried to the Caribbean Sea by the Rio San Juan, which issues from its E. extremity, and falls into the Caribbean Sea at San Juan de Nicaragua.

The project for uniting the Atlantic and Pacific Oceans, by means of the river San Juan and of a canal from the Lake of Nicaragua to the

[404] NICARAGUA (LAKE OF).

Pacific, has been often mooted; and the country appears to present greater facilities for effecting this great work than any other part of Central America, except the Isthmus of Panama. The river San Juan, about 90 m. in length, is said to have been navigable throughout its entire course for sea-going vessels, till the Spaniards, to protect themselves from the attacks of the buccaneers, sunk vessels loaded with stone in its bed! In consequence of the interruption thus given to the stream, a considerable portion of the water was carried off by a new channel called the Rio Colorado; and the San Juan can no longer be navigated, unless in the rainy season, except by vessels drawing very little water. (*Chevalier, L'Isthme de Panama, &c.*, p. 84.)

The lake itself has deep water throughout, and is adapted for ships of the largest burden. The distance between its S. W. shore and the Gulph of Papagayo, on the Pacific, is only 29,880 yards, or 15½ m.; and though the intervening country be laid down in many maps as mountainous, the greatest actual height of any part of it above the level of the lake is only 19 ft.; at least such is the result given by a series of 347 levels, about 100 yds. apart, taken in 1781. (*Thompson's Guatemala, Append.* p. 512—520.) The surface of the lake is 128 ft. 3 in. (Engl.) above the level of the Pacific; an ascent which, one should think, might easily be overcome by a succession of locks. The difference in the level of the two oceans, formerly supposed to be so serious an obstacle to the undertaking, is said by Humboldt not to exceed 20, or, at most, 22 ft. (*Nouv. Espagne*, i. 223., ed. 1825.) At its western extremity, the Lake of Nicaragua is connected by a small river, the Tipitapa, with the Lake of Leon or Managua. The latter, 55 m. in length by nearly 30 in breadth, is, also, said to have deep water throughout. And the plan which appears to be at present preferred is, to make the channel uniting these two lakes navigable, and to excavate a canal from the latter to the port of Realejo on the Pacific. Mr. Squier, late *chargé d'affaires* for the U. States at Nicaragua, has published the following statements in regard to this route:—

Length of the route by Lake Nicaragua, &c., across the American Continent, from the Atlantic to the Pacific Ocean.

River San Juan	-	-	90 m.
Lake Nicaragua, necessary to be traversed	-	-	110 "
River Tipitapa	-	-	18 "
Lake Managua or Leon	-	-	55 "
From Lake Managua to Realejo	-	-	40 "
			303 m.

Height of the various Lakes to be passed and the Elevations of Land:—

	Above Atlantic.	Ab. Pacific.
Height of Lake Nicaragua	147 ft. 9 in.	128 ft. 3 in.
" " Managua	176 "	156 "
Highest point of land to be passed	231 "	212 "

But great doubts are entertained whether this or any other route by the Lake of Nicaragua can be made practicable for large vessels, that is, for vessels of from 400 to 500 tons and upwards. The river San Juan runs from end to end through a dense and most unhealthy jungle. No labourers are to be had in the country, and it affords nothing for the subsistence of those that may be imported from a distance; and though, one should think, it would be no very difficult matter to clear it of the obstructions made to oppose the buccaneers, others are said to be in the way, of a more formidable character. And after the Lake of Nicaragua has been reached, more than half the difficulties of the undertaking have to be surmounted. And that they may be surmounted, and a navigable channel formed between the two oceans, is not, perhaps, impracticable; but we are persuaded that it is visionary to imagine that ships of 1,000 or 1,200 tons should ever, as has been stated, get across the Continent by its means; and on whatever scale it may be made, the anticipations of advantage to

NICE.

result from it will, we apprehend, be found to be greatly exaggerated. The project for constructing a canal or railway across the Isthmus of Panama from Chagres to Panama, a distance of less than 36 m., appears to be of a far less doubtful and more practicable character, and we believe, also, would be infinitely more serviceable. (*See PANAMA, (ISTHMUS OF)*).

On the 19th of April, 1850, the British and American governments entered into a treaty binding themselves to promote the construction of a ship canal between the Caribbean Sea and the Pacific Ocean, by way of the Lake of Nicaragua; and renouncing at the same time any exclusive right to or control over such canal.

The port of REALEJO, on the Pacific, lat. 12° 34' N., long. 87° 4' W., to which it is proposed to bring the canal from Lake Leon, is said to be one of the best that is anywhere to be met with. It is protected by a long narrow island, which forms a natural breakwater. We borrow from a late number of the "Times" the following notice of this harbour, derived from a late resident there:—

"I may confidently say that the port of Realejo is, at least, as good a port as any in the known world. I have seen Portsmouth, Rio de Janeiro, Port Jackson, Talcahuana, Callao, and Guayaquil, and to all these I consider it decidedly superior. It is a salt-water creek, into which several small streams of water empty themselves. The entrance is protected by an island about two miles long, which leaves at each end a channel where ships can enter the harbour, but extending opposite the mainland, forming the port in such a manner as to protect it entirely from any wind that could possibly blow, and also entirely breaking the swell which enters the outer bay of Couchagua from the ocean. The north entrance is about a quarter of a mile wide, and that at the south of the island rather narrower, both being entirely free from rocks or hidden dangers, and having in no part less than five fathoms depth of water. At one of these openings vessels can at all times enter with a leading wind, from whatever quarter it may blow. The inside consists of a noble basin of water, nowhere less than four fathoms deep, with a bottom of mud, where two hundred ships of the line might lie at all times in the most perfect security. One of the branches of the creek extends inland to within three leagues of the Lake of Leon or Managua. The intermediate country is a gentle slope, where undoubtedly should enter one of the ends of the canal to connect the Pacific and Atlantic oceans. The difficulties to be encountered in crossing the chain of hills between the Lake of Nicaragua and San Juan del Sud would be entirely avoided by bringing the canal through the Lake of Leon (connected as it is with that of Nicaragua by a river that might be rendered navigable at a moderate cost *) into the above-named branch of the Realejo harbour, thus securing the great advantage of an excellent harbour at each end of the canal, besides many others which are certainly not to be met with either at Panama, Tehuantepec, or any other place.

"The town of Realejo is about two leagues distant from the part of the creek where vessels lie; but there is sufficient depth for small vessels to come within a mile of the town, and a very little labour would make it accessible to large ships; but an enlightened government would probably prefer moving the town to the opposite side of the reach, where vessels lie, where there is a site extremely suitable for the purpose, and where a quay might easily be erected capable of accommodating any number of ships. In the time of the Spanish Government several vessels, some of 300 to 400 tons, were built at Realejo; where the wood is very superior and durable.

"The port of San Juan del Sud, to which place it was proposed to bring the canal, seems inferior to Realejo in most respects. The Gulph of Papagayo, where the port is situated, is very difficult to enter for a sailing vessel for five months in the year."

NICASTRO, a town of the Neapolitan dom., prov. Calabria Ultra II., on the W. side of the Apennines, 19 m. S. by W. Cosenza. "It is a straggling town of 5,000 inhabs., and the seat of a bishop and a sub-intendant. Its houses are mean, and all roofed with red tiles. A ruined castle, on a conical hill, rising from amidst all these modern buildings, is that in which Henry, the eldest son of the emperor Frederick II., was confined for some time." (*Craven, Tour*, p. 33.)

NICE (Ital. *Nizza*, an. *Nicea*), a city and sea-port of the Sardinian dom. in Italy, cap., div., and prov. of its own name; on the Mediterranean, about 5 m. E. from the bar, the boundary of the French territory, 95 m. S. W. Genoa, and 98 m. S. by W. Turin; lat. 43° 41' 16" N., long. 7° 16' 37" E. Pop., in 1838, of the town and canton (ex. garrison), 33,811. It is beautifully situated in a small plain at the foot of the maritime Alps, by which it is protected from the N. and E. winds; while the cool sea-breeze, which prevails every day with a regularity almost equal to that of a tropical climate, moderates the

* This statement must be received with a great deal of modification. There is a difference of no less than 25 ft. 8 in. between the level of the lakes.

summer heat. The principal disadvantage of its situation is that, being open on the W., it is exposed, with but little protection, to the influence of the *maïstral*, *vent de Bise*, which is often keen and piercing. It is enclosed by bastioned walls; and has on the E. a steep rocky hill of Monte Albano, surmounted by the ruins of an old castle. The view from this hill is very fine, and at sun-rise and sun-set the island of Corsica sometimes clearly distinguished, though it be some 70-80 m. distant. The port, which is small and protected by a pier, admits vessels of 300 tons burden, and is visited by the steamers from Marseilles to Genoa. Nicotia is divided into two parts by the river Pagliaro, here crossed by a good stone bridge. The old town has narrow and crooked streets, which, however, are kept very clean. The new town to the W. of the river is well laid out and handsome. It has a square surrounded by open arcades, and some of the houses near the sea, as in the vicinity, are very superior. The cathedral, several convents, 3 hospitals, the governor's residence, college, public library, theatre, and a fine arch erected in honour of Victor Amadeus III., are the principal public buildings. It has several bath-establishments, and some good hotels, and Dr. Farr states that the rents of houses and apartments are lower here than in any other place of general resort on the Continent. It has manufactures of silk twist, stuff, soap, essences, perfumery, and paper; a fishery of anchovies, and a considerable trade in the export of oil, wine, oranges, hemp, &c., and in the importation of corn from the Black Sea, salt fish, manufactured goods, and colonial produce. It is a bishop's see and the seat of a royal council, and of the head court of justice for its division.

Nice, in common with Montpellier, enjoys the reputation of having a peculiarly genial climate, and is accordingly resorted to by numerous invalids, especially from England, during the months of November, December, and January. Mr. Forsyth says, that when he arrived at Nice on Christmas Day, "a soft and balmy air, orange growing in every garden, lodgings without a chimney, and beds with mosquito-curtains, presented the first signs of Italy." But at other seasons it is less suitable for invalids. In February, the *vent de Bise* begins to blow; and it is very trying to persons with delicate constitutions. This explains the singular discrepancies in the accounts of different travellers as to the climate of Nice. Dr. Farr and Sir James Clark, especially the former, give full and satisfactory information as to the climate of Nice, and its surrounding localities, and the classes of invalids most likely to be benefited by a residence in it. A noble road, constructed at a vast expense, leads over the Maritime Alps from Nice to Turin. Another road, begun by Napoleon, but not completed till 1827, leads along the sea coast from Nice to Genoa; and a third road is now about being opened from Lyons to Nice, which will be a shorter and better way of entering Italy than by Mont Cenis.

Nice is said to have been founded by colonists from Marseilles. Under the Romans, it was originally the seat of a naval arsenal, but, under Augustus, the latter was transferred to Frejus. Under the French, it was the capital of the *dép. Alpes-Maritimes*. Among the celebrated individuals to whom it has given birth, are the painter Vanco, the astronomer Cassini, and Marshal Massena, one of Napoleon's ablest generals. (See Dr. Farr's *admirable Guide to Nice*, passim; Clark on *Climate*, 2d ed. p. 309.)

NICOBAR ISLANDS, a group in the Indian Ocean, between the 8d and 10th degs. of N. lat., and the 93d and 10th of E. long., about midway between the N.W. point of Sumatra and the Andaman Islands, and from 100 to 200 m. from each. Sambelong and Carnicobar, the former the S. and the latter at the N. extremity of the group, are the principal; there are, however, about half a dozen other islands of some consequence, and a number of smaller ones. Most of these islands are hilly, and all are covered more or less with dense woods of cocoa-nut, areca palm, and various timber trees. The climate is extremely unhealthy to Europeans, and is supposed to owe this quality, in great part, to the extensive spontaneous decomposition of vegetable matter. These islands are inhabited by a race of natives of the Indo-Chinese stock, whose inoffensive character contrasts strongly with the wild ferocity of their neighbours of the Andaman Islands. Their chief occupations are fishing, rearing hogs and poultry, a little culture, and trafficking among themselves, and with foreigners who touch at the Nicobars. Cocoa and betel-nut are met with in immense quantities, and most of the Indian ships bound eastward, call here to take in cargo of the former, which they obtain at the rate of 100 for a leaf of tobacco, and 100 for a yard of blue cloth. The natives also exchange fowls, hogs, birds, and iron, tobacco, cloth, silver coin, and other European goods. They live under a number of petty chiefs, the title is known of their internal economy, customs, and the great insalubrity of the climate having successively broken up all the establishments formed on the

others forming a deep valley. The streets are in general not more than 10 and 15 ft. in breadth; and, being unpaved, are always filthy, and, in winter, almost impassable. Having been the residence of the principal Venetian families during the period that the island was subject to Venice, it has many fine houses, which are now, however, mostly in ruins; and at present it consists principally of brick and mud huts. The bazaar, though tolerably well supplied, is not even arched, but roofed with reeds and mats, which admit the rain in all directions. Most houses have gardens, which abound with olive, lemon, and pomegranate-trees; and hence the first view of the city is very pleasing, from the contrast between the foliage and the dark mountains to the N. There are 8 mosques, all of which were once churches, the principal having been the cathedral church of St. Sophia, built by the Venetians; it is in the Gothic style, of an oblong shape, with a pentagonal projection at the end opposite the entrance, for the reception of the altar. The interior is laid out in three aisles, divided by clumsy white-washed Corinthian columns. On the two belfries the Turks have erected two high and handsome minarets. There are still 6 Greek churches, and 1 Roman Catholic, and several Greek convents. The city has also 4 public baths, and a large, but ruined caravanserai. It has some manufactures of carpets, printed cottons, and red morocco leather, and exports wine and cotton.

Nicosia is supposed to occupy the site of the ancient *Trimithus*, or *Trimithus*, mentioned as a place of some note by the Byzantine historians. When Richard I. of England took Cyprus in 1191, and conferred it on Guy de Lusignan, it was made the cap. of the new kingdom, and greatly enlarged. It fell, in 1480, to the Venetians, who built the present walls, and several churches and handsome palaces; and who held it, with the island, till 1571, when it was taken from them by the Turks, under whose brutal and destructive sway it has since continued. (*Turner's Levant*, ii. 544—547.; *Kinnear's Asia Minor*, 172. 189.; *Drummond's Travels*, &c.)

Nicosia, a city of Sicily, intend. Catania, district of its own name, on two hills, 14 m. N.E. Castrogiovanni. Pop., in 1831, 13,151. Like other towns in the interior of the island, it is remarkable for nothing but the number of its churches and convents. It has few manufactures, and hardly any export trade, but a considerable traffic in the corn and cattle of the surrounding country, which is very fertile. Its situation is such as to afford a strong military position; and it is supposed to be the ancient *Herbita*, founded in the earliest period of Sicilian history.

NIEVRE, a dep. of France, reg. centre, nearly co-extensive with the old prov. of Nivernais, between lat. 46° 40' and 47° 35' N., and the 3d and 4th degs. of E. long.; having N. Yonne, E. Côte d'Or and Saône-et-Loire, S. the latter and Allier, and W. Cher. Area 691,093 hectares. Pop. (1846), 322,262. A mountain chain runs from S.E. to N.W. through its centre, dividing the basin of the Loire from that of the Seine; the culminating point of the chain in this dep. being 2,000 ft. above the sea. The Loire and Allier bound Nièvre on the W.: the other principal river is the Yonne. The Loire and Yonne are united by the Canal du Nivernais, which, commencing at Decize on the former river, is continued through the déps. Nièvre and Yonne, for a distance of above 100 m.; but the work is not yet completed. The Nièvre, whence the dep. has its name, flows through its W. part, and, after a course of about 25 m., generally southward, joins the Loire at Nevers. It turns many mills, but is navigable only for rafts or small boats. The soil is not, in general, very fertile. In 1834, 295,261 hectares were estimated to be in cultivation, 67,396 in meadows, 9,900 in vineyards, 3,607 in orchards and gardens, and 239,561 in woods. In 1835, of 83,861 properties subject to the *contribution foncière*, 43,659 were assessed at less than 5 fr., and 13,926 at from 5 to 10 fr. The fertile portions of the surface are comparatively well cultivated, and sufficient corn is produced for home consumption. The annual produce, in wine, is estimated at about 260,000 hectolitres; of which the white wines of Pouilly are the best. *Ils ont du corps du spiritueux, un léger parfum de pierre à fusil, et un goût fort agréable; ils ne sont pas sujets à jaunir, et conservent assez long-temps leur douceur.* (Jullien, p. 156.) In 1830 there were supposed to be about 132,000 oxen and cows, and 315,000 sheep in the dep.; but the breeds are not particularly good. The chief resources of Nièvre are in its forests and mines. Most of the small rivers, which are not navigable, have been adapted to floating down rafts of timber and fire-wood, a good deal of the latter being sent down the Yonne and Seine to Paris. The coal wrought near Decize is principally destined for the supply of Paris and Orleans. Lead, copper, and some other metals are found, but iron is by far the most important metallic product, and its yearly value in the shape of pig iron, iron plates, anchors, files, &c., is estimated at 8,728,000 fr. Hardware and cutlery, at Cosne and La Charité, glass, and earth-

eware, especially at Nevers, linen and woollen cloths, and musical strings, are among the principal goods manufactured. Nièvre is divided into 4 arronds.: chief towns, Nevers the cap., Château Chinon, Clamecy, and Cosne. It sends 4 mems. to the Chamber of Dep. Number of electors (1834-39), 1,379. Total public revenue (1831), 6,256,756 fr. (*Hugo, art. Nièvre; French Official Tables.*)

NIGER, JOLIBA, or QUORRA, a celebrated river of Central Africa, having its remote sources near the extreme W. coast of the continent, in the country of the Mandingoes, in about 8° N. lat., and 6° W. long. It thence pursues a course N.W. and N. to the 10th deg. of lat., and then follows a general N.E. course to Timbuctoo, below which it turns S.E., and afterwards S. and S.W., to its mouth, in the Gulf of Benin. Supposed length about 2,300 m. The upper part of the Niger, called by the natives the Joliba, was first discovered in modern times by Mungo Park, who was sent out in 1795 by the African Association: he describes it at Sego, the cap. of Bambarra, as "glittering in the morning sun, broad as the Thames at Westminster, and flowing slowly to the eastward." (*Travels*, p. 220.) He succeeded in ascending it as far as Bammakoo, 250 m. above Sego, the cap. of Bambarra. From Cabra he sailed down the stream to Boussa, where, unfortunately, he was killed by the natives. Major Laing concluded, from information obtained in the neighbourhood, that the sources of the river were on the N. side of the mountains of Kong, at a height of 1,600 ft. above the sea, in lat. 8° 20' N., and long. 9° 10' W.; but Mr. Macqueen conjectures that the Allmar, its principal source, rises farther to the E. than Laing supposed. Lander, the servant of Captain Clapperton (who was murdered near Saccatoo), sailed from Boussa, with the stream, to the mouth of the river, previously called the Nun, in the Bight of Benin; and thus finally identified the Niger and the Quorra, and put an end to all the doubts and theories that previously existed as to the course and termination of the former. It hence appears that the length of the Niger, measured along its banks, exceeds 2,300 m.; and it is probable that its basin is nearly, if not quite, as extensive as that of the Nile. According to Caillié, it is navigable for large canoes within 100 m. of its source: for 200 m. below that point it has not been navigated by Europeans; but from Bammakoo to Timbuctoo it has been pretty accurately laid down, both by Mungo Park and Caillié. The river valley is here of considerable width, fertile, and comprising numerous towns and villages on either bank. The current of the river is not strong; and both travellers saw flotillas of canoes of 60 tons and upwards frequently passing up and down the river, which in the rainy season is flooded on both banks to a considerable distance. (*Caillié*, ii. 34.) In about lat. 16° N., the stream expands, forming a lake, called Debo, which measures about 10 m. from N. to S., is from 12 to 15 ft. deep, calm, transparent, and surrounded by extensive marshes. (*Caillié*, ii. 20.) Hence to Timbuctoo the valley becomes still wider; the pasturage of cattle, the tillage of rice, millet, maize, &c., are extensively pursued, and along the banks are numerous villages, which export rural produce. In lat. 17° 30' N. and long. 3° 10' W., the river bifurcates, and on the N. and narrower branch is Cabra, the port of Timbuctoo: these branches, however, seem to unite a few miles lower down. It has been already observed that the course of the river below Timbuctoo was traversed by Mungo Park as far down as Boussa; but, as that traveller was killed there, and his papers were lost, we know nothing of this portion of the river, except that it is navigable for vessels of considerable size.

The highest point of what may be called the lower Niger hitherto visited by Europeans is the neighbourhood of Yaúri (lat. 11° 20' N. and 5° E.), which point Lander reached in 1830. Here the river leaves the great plain of Soudan, and enters the defiles of a mountain range crossing this part of Africa from E. to W., and probably connected, on one side, with the Djebel-el-Kumri, and on the other with the mountains of Kong. The direction of the stream from Yaúri, for about 150 m., is nearly due S.; but it is full of rocks, sand-banks, &c., and wholly unnavigable, except at the time of the rains, and immediately after. Below Boussa, the banks on both sides are generally high and rocky; cultivated plains intervene in many places between the river and the mountains, but in others the offsets come close down to the water's edge. From Boussa downwards, the Niger is navigable for moderate-sized vessels; and in lat. 6° N., a little below Atta, it leaves the hilly country, and enters an alluvial plain, the lower part of which is an unhealthy swamp covered with jungle: many branches here diverge from the main stream, and at the mouth is an extensive delta, which, however, is, as yet, very imperfectly known. At Atta, the river is about 2 m. wide; and near Rabba, in lat. 8° 45', it attains a width of 5 m.; but its breadth, close to the mouth, is somewhat less than a mile. The tide is said to extend within about 26

Atta, at about 180 m. long the sea. The only of the Niger tributaries captured is the Chadda, joins it on the left bank in lat 7° 40' N., 33 m. S.W. Captain Alver and Mr. Laird sailed almost up this creek, and inform us that it is quite equal to, though not in depth, to the parent river. It is by shoals and sand-banks. It has been conjectured that this river has its source in the great lake discovered by Monard (Laperron and Denham; more probable opinion seems to be, that it has its source in the N. declivity of the Gebel of Kammel, perhaps, from the sources of the Lake of W. arm of the Nile. The only other sources of the lower Niger are the Saramon, May and Comandants, all joining it on the left or E. the former of these was discovered by Clapp and from the course which it pursues, it may be the same river that joins the Niger near (the *devermouth* a new map of Negroland) here flow from a range of mountains, running through Haussa, and forming the natural barrier between Lake Tchad and the Niger. In *Artica Africa* (Vol. I. 40), we have given a statement of the numerous modern expeditions we have sent out for the purpose of exploring the of this river or being involved in doubt and is, and though much still remains to be accomplished its general course and leading features have been well ascertained. This, however, has not been without a great sacrifice of human life. The country in the lower part of its course is

to permit it, we are taking leave of our friends on the grounds on which to anticipate any consideration from this expedition, and that the heretofore of Africa seems to depend on natural and historical causes. (Cottrell's *Travels in Central Africa*, II., *Journal of Bonnier*, *Notes of Africa* II. 47-178., *A Report* 2 vols., *Geog. Journal* vols. II. and III. and *Osborn's Report into Africa*, &c.) The story of the Niger is involved in extreme obscurity as was informed by the Greeks of Egypt, the writers of the African continent a city had been by some Marston travellers, which was inhabited in, and stood on the banks of a river containing it, and flowing from the W. eastward (see also *Journal de Bonnier*, II. 32.), which he conjectured the Nile. Now, as the Nile at Khartoum, or W. the Nile, flows from W. to E., and is certainly not to have been reached by the Marston, or that of the conjecture of the venerable father of that the river which they encountered was, in Nile, seems to be more consistent with probability than that of D. Anville, Bonnier, and other learned, who suppose that the city visited by the Marston is Timbuktu, and the river the Joliba of Mongo. The latter theory has, however, as is proved, some Niger is that which is now usually given to the discoverer and explored by Park and Lander. Niger, or Nigra, is first used by Ptolemy (Nat. 1-9), from whose somewhat confused account appears that there were supposed to be two rivers, one in Mauritania, S. of the great chain of S., and the other in Ethiopia, thus briefly described:—"Niger fluvius eadem natura quæ Nile, originem et eandem generat amara, tandemque in digitos." He seems, also, to have conceived Niger and Nile were united, and that there was a superfluous, having many branches, in the S. Africa. The poet Claudian also entertained the similar conception:—

He writes thus:—
 "Lithops, small ovalish purple stones,
 furnish a somewhat more detailed account
 river, and assumes that there are two septa-
 gons in the interior of Africa, both having
 surface (large) and connected with lake.
 went eastward to form the Nile (Nag), that to
 being the Nile (M. nag), communicating with

 says nothing however respecting the course of
 , though he seems to have been of opinion that
 a more abundant in lake, or lost by evaporation.
 (Lithops, and other Arabian mountains, and

asserted that the Niger (by some called *Nil-el-Ahli*, - *Nig-
ris Nihw'*) flowed westward, discharging its waters
either into the Atlantic or some lake of the interior,
and they represented it as rising from the same source
as the Nile, and identified it in the upper part of its
course this, indeed, is the opinion still maintained by
the natives, and it is far from improbable that some of
the adherents of the N. N. may be converted. During
the period of the legislation with some of the adherents
of the Niger. Much in a few words, seem to be the leading
statements of the more celebrated of the old geographers
respecting the Niger. It is doubtful, perhaps, whether the
Greek and Roman writers really possessed any trustworthy
information as to the rivers and lakes S. of the Great
Desert, and, at all events, the statements now referred
to if they really apply to that part of the continent, are
at more extremely limited and extremely vague. That
the caravans, which appear from a very remote period to
have maintained an intercourse between the coastlands to
the N. and those to the S. of the Great Desert, should
have taken in with and had some knowledge of the Ni-
lites, is far from improbable, and, perhaps, had any remain-
ings of the literature of Carthage come down to our
times, they might have thrown considerable light on the
question as to its identity with the Niger. but, with our
existing means of information, it would appear unwill-
ingness the bearing and ingenuity that have been
brought to its investigation, to be all but inevitable. The
notions of the ancients are too obscure to admit of any
certain inferences being deduced from them; and oppos-
ing against the opinion of the learned Baron Voss,

NIZHNI-NOVGOROD, vulgarly *Nizhny* that is, Lower Novgorod, a government in the central part of European Russia, on both sides the Volga, between lat. 54° 30' and 57° 0' N., long 41° 00' and 46° 30' E. having N the government of Kostroma, E Kazan and Simbirsk, S Penza and Tambov, and W Vladimir, area, 12,760 sq m Pop (1845), 1,172,320. Surface flat or gently undulating, the soil, which consists principally of sand and black friable mould, is exceedingly fertile and being (for Russia) well cultivated, this is one of the most productive provinces of the empire. Relative to the Volga, several of its affluents including the Oka, Irtysh, Piana, &c., traverse different parts of the government, which is well watered, at the same time that it is not marshy. There are some very large forests, those of the crown amounting to about 1,500,000 desyatines. The produce of the cereals crops considerably exceeds the consumption. Hemp and flax are very extensively cultivated. Great numbers of cattle and horses are bred; and government is taking the most effectual measures to improve the latter. This is a considerable manufacturing, as well as a rich agricultural district. Cotton linen, canvas and cordage, are the principal manufactured products, there are, also, some iron-works, with numerous distilleries and tanneries, soap-works, glass-works, &c. Commerce extensive and growing. The exports consist of corn and flour, cattle, horses, leather and tallow, the manufactured articles specified above, with iron (which enters most cheaply &c.

MIAMI NEVADANOS KUMUKAOK. or **MIYAN**, the cap. of the above government, in the angle formed by the confluence of the Oka with the Waiga; lat 40° 15' 00" N., long 40° 30' 30" W. Stationary pop. 20,000. It stands partly on a steep hill, about 400 ft. in height, the summit of which is occupied by the Kremlin or citadel, and partly on the low ground along the sides of the rivers. The citadel, from the ramparts of which there is a unique view of the Waiga, Oka, and surrounding country contains the government offices, two cathedrals, built after the model of that of Moscow, an obelisk 75 ft. in height, covered in basins of the dolerites of their country, the patriotic citizens, Minin, and Prince Pozarski; and other public buildings. The upper part of the town has several good streets, and being ornamented by numerous churches, placed in conspicuous situations, has an imposing appearance. The lower town consists principally of a very long street, bordering the Waiga. With the exception of the principal public buildings, and a few private houses, the rest of the city is constructed of wood. Among the establishments are 3 arcades, a bazaar, a gymnasium, and 4 primary schools, an ecclesiastical seminary, and a large military school. The town

ancient, having been founded in 1222. The Kremlin was surrounded by strong walls and towers in 1508.

A bridge of pontoons leads across the Oka to the splendid new bazaars erected on the left bank of that river for the exhibition and sale of merchandise brought to the fair. These, which are divided into parallel rows or streets, are constructed of stone, roofed with iron, having covered galleries in front, supported by 8,000 iron pillars. They are built on piles, and to guard against the danger of inundation, the ground on which they stand was raised about 20 ft. Being enclosed on 3 sides by canals, and on the 4th by a navigable inlet of the Oka, there is every facility for the delivery and shipment of merchandise. The establishment is of very great extent, comprising above 2,500 booths; and is admitted on all hands to be at once the largest and most perfect of its kind that is any where to be met with. Including the church, dedicated to St. Macarius, the patron of the fair, it is said to have cost in all about 11,000,000 roubles.

Nijnii Novgorod has various manufactures, but it owes its great importance almost entirely to its commerce. It is the grand entrepôt for the trade of the interior of the empire, and has, in fact, a greater command of inter-navigation than any other city of the old world. Besides the corn, cattle, and other products of the surrounding country, the Kama, the principal affluent of the Wolga, conveys to Nijnii the salt of Perm; the gold, silver, copper, and other metallic treasures of the Oural mountains; the furs, &c., of Siberia; and even the teas of China. The silks, shawls, and other merchandise of central Asia, and the fish, caviar, &c., of Southern Russia, come up the river from Astrakhan; while the manufactured goods of England and Western Europe, the wines of France, the cotton of America, and the sugar of Brazil, are conveyed to her from Petersburg and Archangel, with both of which, as well as Moscow, she is connected by navigable rivers and canals. These advantages, joined to her situation in a fertile country in the centre of the monarchy, were so highly appreciated by Peter the Great, that it is said he at one time intended to have made Nijnii the capital of his empire; and it is, perhaps, to be regretted that he did not carry this project into effect.

Latterly the commercial importance of Nijnii has been vastly increased. Previously to 1817, the great fair, now held here, was held, in a less convenient situation, at Makarieff, lower down the Wolga. But the buildings for the accommodation of the merchants at Makarieff having been accidentally burnt down in 1816, government took advantage of the circumstance to remove the fair to Nijnii. It begins on the 1st of July, and continues for a month or six weeks, and is well known, not only over all Russia, but over most other countries of Europe and Asia. It is carried on within the bazaars already noticed, which were constructed by government for the accommodation of the traders, to whom they are let at moderate rents. The produce disposed of is classified as follows, viz. 1st, Russian produce, raw and manufactured; 2d, Merchandise from the rest of Europe, consisting principally of manufactured and colonial products; and, 3d, Products of China, Bokhara, the Kirghises, and other Asiatic nations. The estimated value of the produce belonging to each of these classes, exposed to sale in 1827, 1832, and 1839, has been as under:—

	First Class.	Second Class.	Third Class.	Totals.
	<i>Roubles.</i>	<i>Roubles.</i>	<i>Roubles.</i>	<i>Roubles.</i>
1827	67,000,000	16,000,000	22,000,000	105,000,000
1832	89,500,000	17,000,000	16,700,000	123,200,000

In 1830, Russia sent to the fair silk goods valued at 8,500,000 roubles; hides, tanned and raw, 3,000,000 r.; dry and salted fish, 1,600,000 r.; cotton stuffs and yarn, 19,000,000 r.; woollen stuffs, 500,000 r.; furs and peltries, 8,000,000 r.; and 2,000,000 pounds iron. During the same year there were sent to the fair by foreigners, woollens of the value of 2,200,000 r.; 32,368 boxes of tea; 306,570 lbs. of silk, &c. Every sort of article is to be found in one or other of the different bazaars. In 1839, the cottons exposed to sale were valued at 28,544,000 r.; and the metals and metallic goods at 22,390,000 r. The concourse of strangers during the fair is quite immense; so much so, that the population is then increased, according to the lowest estimates, by from 150,000 to 200,000 individuals. Here are seen dealers from India, China, Tartary, Bokhara, Persia, Circassia, Armenia, and Turkey; and from Italy, Poland, Germany, France, England, and even America. Amusement as well as business is attended to: theatrical representations, shows of wild beasts, and other Bartholomew-fair diversions, being got up for the entertainment of the multitude. (*Schnitzler, La Russie*, &c., 114—120.; *Lyall*, ii. 329—355.; *Possart*, &c., *Das Europäische Russland*, 582., &c.)

NIKOLSBURG, a town of Moravia, circ. Brünn, from which city it is 28 m. S. Pop. about 8,500, a third part of whom are Jews. It has a fine castle and grounds

belonging to Prince Dietrichstein, a philosophical academy, a gymnasium, and several other superior schools; and in the castle is an extensive library, comprising many valuable MSS. The town is dirty and wretched; it has however, manufactures of woollen cloth and other stuffs, and some trade in wine and marble, both produced in its vicinity. (*Oesterr. Nat. Encycl.*; *Berghaus*.)

NILE (Lat. *Nilus*, Gr. *Νῆλος*, from *νῆα* *ἰλν*. "new mud," because it brings down vast quantities of slime or mud*), a large and famous river of N.E. Africa, flowing N. through Abyssinia, Nubia, and Egypt, to the Mediterranean Sea, celebrated alike for its magnitude, the inexhaustible fertility which it confers on the "land of Egypt," the uncertainty of its origin, its connection with some of the most interesting events in the remotest periods of authentic history, the great cities that were early built on its banks, and the stupendous monuments that still attest the wealth and power of their founders. The discovery of its real source was an object of intense curiosity to the ancients, as it still remains to the travellers and geographers of modern days; the words of Tibullus,

*Nile pater, quamvis te possum dicere canā
Aut quibus in terris occubuisse caput,*

being nearly as applicable now as in his time.

The Nile is formed by the junction, at 15° 34' N. lat. and 32° 30' 58" E. long., of two great arms, the *Bahr-el-Azrek*, (the *Astapus* of the ancients), or Blue river, from the S.E., and the *Bahr-el-Ablad*, or White river, from the S.W. The sources of the former, which derives its name from the dark colour of its water, were discovered and described by Paez in 1618, and were subsequently visited by Bruce, who ridiculously pretended to have, for the first time, ascertained the true sources of the Nile, and thus solved a problem that had for ages occupied the attention of the learned world! This E. branch rises from two fountains near Geesh in Gojam, in Abyssinia, at an elevation of about 10,000 ft. above the level of the sea, in lat. 10° 59' 25" N., long. 36° 55' 30" E. It thence flows N. to the lake of Dembea, or Tzana, a large sheet of water which receives many other streams; but the Nile is said to preserve its waters with little intermixture with those of the lake, across which its current is always visible. Escaping from this lake it sweeps, in a southerly direction, round the E. frontier of the provinces of Gojam and Damot, till, between the 9th and 10th deg. N. lat., it takes a N.W. direction, which it preserves till, at Khartoom, it unites with the other great arm, the *Bahr-el-Ablad*, flowing from the S.W. The *Bahr-el-Azrek* receives in its course several important tributaries, and is in several parts interrupted by cataracts, one series of which has a fall of 280 ft. At the point of junction with the other great arm, it is about $\frac{1}{2}$ m. in breadth, and has a rapid current; but, during half the year, its waters are low.

The W. arm, *Bahr-el-Ablad*, or White River, derives its name from the fine whitish clay usually suspended in, and colouring its waters. It is broader and deeper than the E. arm, brings down a larger volume of water, and appears to have been regarded in antiquity as the true Nile. (*Herod.* ii. caps. 30, 31.; *Mémoire de D'Anville*; *Mémoires de l'Académie des Inscriptions*, &c. xxvi. 46.) If, however, the derivation of the name previously given be correct, the *Bahr-el-Azrek* would seem to have the best right to be considered the genuine Nile, inasmuch as it carries down the greater portion of that mud whence its name has been derived, and the deposits of which have, in the lapse of ages, formed the land of Egypt. But without insisting further on this point, though the sources of the *Bahr-el-Ablad* have not hitherto been explored,

Nec licuit populis parvum te, Nile, videre,

its course was traced, in 1827, by Linant, for about 160 m. from its confluence with the *Bahr-el-Azrek*. (*Geog. Journal*, ii. 171—187.) And a party sent by the pacha of Egypt on a slaving expedition have since traced it to a much greater distance, or to a point supposed by Col. Leake to be in about the 10th deg. of N. lat. and 29th deg. of E. long.; and at this point no mountains were in sight, the river being, also, of great breadth, full of islands, and shallow. Perhaps, however, we shall not be far wrong in fixing its sources on the N. slope of the Gebel-el-Kumri, or Mountains of the Moon, in about the 6th deg. of N. lat., and between the 22d and 30th deg. of E. long. But whether its confluent form themselves into lakes, as was conjectured by Ptolemy, or fall successively into the main stream, are questions as to which no information can be given. The course of the *Bahr-el-Ablad*, so far as it has been explored, to its junction with the *Bahr-el-Azrek*, is pretty uniformly N.N.E.; it receives many tributaries, and forms numerous islands. "At the point of confluence, the *Bahr-el-Ablad* is only about 1,800 ft. across; but

* This is the derivation given by Servius in his notes to Georg., lib. iv., v. 291.; but many other derivations have been proposed, and perhaps the Nile may, like the Hebrew *Nahhal*, merely mean the river, or river per excellence. (See *Dictionnaire de Trevoux*, art. *Nil*.)

over 11 mi long, to banks being frequently a apart, and in some places during the flood-
waters extend 21 or more miles to each by the
gate, and in wet seasons it has been from 8 to
a mile. (see Journal, p. 10)

the other columns on the sides and back of the building are sunk half way into the walls. The capitals of the columns, and the frieze, cornice, and other parts of the building, are profusely adorned, in the most exquisite taste. The measurements of this edifice are as follow:—length, 82½ ft.; breadth and height, 40½ ft. each; height of the platform on which it stands, 18½ ft.; height of the stylobate, 9½ ft.; height of the doorway, 23½ ft.; breadth of do., 10½ ft. The columns, which are about 30 ft. in height, have a height equal to 10½ diameters. (*Frossard, Tableau Pittor. de Nîmes*, il. 171.)

The *maison-carrée* was considerably injured in the middle ages; but it is protected from future spoliation by being inclosed within an iron palisade, and since 1823 it has been employed as a museum of paintings and antiques. But it would have been more consistent with good taste to have preserved it untouched and unoccupied, in its ancient simplicity.

The amphitheatre of Nîmes is admitted to be the most perfect structure of its kind extant, after that of Verona. It stands on one of the boulevards, surrounded by a large open space, on which no buildings are allowed to be erected. It is said to have been founded by Antoninus Pius. Its longest external diameter is 437 ft.; its shortest 332½ ft.: it has 32, or, according to some authorities, 35, ranges of seats, and is variously estimated as having sufficient accommodation for from 17,000 to 23,000 spectators; the height of the building outside is from 68 to 104 ft., and its total external circ. is 1,174½ ft. (*Frossard*, i. 135.) Though it was occupied by the Visigoths, and afterwards the Saracens, as a fortress for their defence against the Franks, the outer wall is still nearly entire. It consists of two stories, each having 60 arches, and an attic story, and is entered by four gates, one at each of the cardinal points, the principal being on the N. side. The arcades of the ground story are separated by pilasters, those of the upper by columns, in an irregular Tuscan or Doric style. The interior is in many parts dilapidated and overgrown with vegetation; but it still serves for bull-baits, jousts, and dramatic entertainments, to which the modern inhab. of Nîmes are as much addicted as their ancestors were to the more barbarous exhibitions of gladiators.

A few portions of the ancient walls still remain, principally in the *Portes d'Auguste* and *De France*: the first, which, in the time of the Romans, was the principal gate of the city, consists of 2 large and 2 smaller arches: the former, which are in the middle, have between them a small Ionic column, respecting which there has been much controversy, all the other decorations of this gate being of the Corinthian order. The *Porte d'Auguste* is elaborately ornamented with sculptures, which constitute one of the principal points in which it differs from the *Porte de France*. In the N.W. part of Nîmes is a ruined *nymphæum*, or Roman bath, of considerable size, improperly termed the Temple of Diana. Near this, on a height overlooking the city, is the *Tour magne* (*turris magna*), a tower supposed to have been built by the Greek colonists of the city before the Roman invasion; but the original purpose of which has not been correctly ascertained. It is in the Doric style; its lower part being heptagonal, its upper, octagonal. It is in great part ruined; but being still 100 ft. in height, and in a conspicuous position, it is used to support a telegraph. The above are the principal objects of architectural interest in the city. The Vandals, and other barbarians, are said to have destroyed the basilica of Plotinus, the temples of Apollo, Ceres, Augustus, &c.; but the still existing memorials of antiquity are more than sufficient to evince the almost unequalled magnificence of the ancient city.

Nîmes does not, however, owe its sole interest to its antiquities. It has several large, and some good modern, edifices. The cathedral, begun in the 11th, but principally constructed in the 16th and 17th centuries, has little to recommend it, except its occupying the site of the Temple of Augustus, but the *Palais de Justice* on the Esplanade, the *Hôtel-Dieu*, principally rebuilt in 1830, the general hospital, the new theatre, several of the churches, and the public library, are handsome, well-contrived buildings. A large fortress to the N. of the city was constructed by Vauban, on the site previously occupied by the basins that received the water brought thither by the aqueduct, of which the *Pont du Gard* forms a part. It is now the central prison for the S. depts. of France, and has usually about 1,200 inmates. The bishop's palace, episcopal seminary, college, and large barracks, are the other principal public buildings. The esplanade contiguous to the amphitheatre, and the *Cours Neuf*, are among the finest promenades. The last named extends quite through the W. part of Nîmes from N. to S.; and leads to the fine and extensive *Jardin de la Fontaine*. This garden derives its name from a large and handsome fountain, and has in it many statues and other Roman antiquities, besides the *nymphæum* mentioned above.

The *Pont du Gard*, above alluded to, formed part of a superb Roman aqueduct, 25½ m. in length, which con-

veyed a supply of water from the neighbourhood of Uzès to Nîmes. We have no certain details as to the founders of this great work, the æra of its construction, or the purpose for which the water brought by it was employed. Some antiquaries have ascribed its erection to Agrippa, son-in-law of Augustus, about *anno* 19 B. C., while others have ascribed it to Adrian, or his successor Antoninus, who derived his origin, by the father's side, from Nemausus. But, by whomsoever constructed, it was worthy the most brilliant æra of Roman power. The *Pont du Gard* consists of that part of the aqueduct which was thrown across the river Gardon, in a wild defile, 11 m. N.E. Nîmes. It consists of 3 rows of arches, or, as it were, 3 different bridges, raised the one above the other, the whole being constructed of large stones, without cement. The first, or lower tier or bridge, has a length of 529 English ft., and a height of 65½ ft.; and consists of 6 arches of unequal size, the breadth of the largest, through which the Gardon usually flows, being 82½ ft. The second, or middle tier, is 846 ft. in length, and 63½ ft. in height: it consists of 11 arches, generally smaller than those of the first tier, but like them of unequal size. The third or upper tier, 870 ft. in length, and 23½ ft. in height, has 35 arches, which of course are much smaller than those of the other tiers, being respectively only 13½ ft. in width. The entire height of the structure is 188 ft.; its width or thickness, which is 19½ ft. at its base, diminishes as it ascends; on its summit is the watercourse, 4½ ft. in depth and 4 ft. in breadth, and through it a person may now pass with ease from one end of the structure to the other. About the middle of last century, a carriage road was built up against the bridge as high as the base of the second tier of arches. The *Pont du Gard* is in the Tuscan style; it is very little ornamented, but is a highly picturesque object. With singular good fortune, it escaped dilapidation during the dark ages; and the greatest injury it experienced was in 1600, from the Duke de Rohan, who broke away a portion of the second tier of arches to facilitate the passage of his artillery; but the breach was afterwards repaired at the expense of the States of Languedoc.

Nîmes is a bishop's see, the seat of a royal court for the *déps.* Gard, Lozère, and Vaucluse, courts of primary jurisdiction and commerce, a chamber of commerce, *council de prud'hommes*, a university academy, the royal academy of Gard, a royal college, &c. It has schools of drawing and chemistry, as applied to the arts, societies of agriculture, medicine, &c., a Bible society, a commission of antiquities, an athenæum, an extensive public library, and a cabinet of natural history.

Nîmes is further distinguished by its manufacturing industry. It is one of the principal seats of the silk manufacture of France; ranking, in this respect, immediately after Lyons and (perhaps) St. Etienne. Its manufactures are principally silk hosiery and shawls; and silk stuffs mixed with cotton, linen, and woollen. There are, altogether, between 7,000 and 8,000 looms at work in Nîmes, many of which are Jacquard looms. All the weavers work with their families at their own homes, there being no large factories except for dyeing, or for printing silk stuffs; which latter branch of industry has greatly augmented since 1836, when it employed from 600 to 700 hands, exclusive of children. But, though the silk manufactures of Nîmes be extensive, the goods produced are not much esteemed by the upper and middle classes, being mostly mere imitations of those of Lyons, and of inferior quality. From this and other causes the export trade of Nîmes is small; its industry is not progressive, and its pop. often experience distressing *crises*. Besides silks, Nîmes has manufactures of cotton goods, gloves, leather, brandy and vinegar, and a good deal of trade in wine, essences, drugs, and colonial produce, &c. It is also the principal entrepôt for the raw silk produced in the S. of France, of which material almost all its own silk manufactures are made. Of the pop. of Nîmes and its suburbs, about 34,000 are R. Catholics, and 13,000 Protestants; and in few towns is there so much acrimonious party-spirit and violence displayed on account of religion. This violence broke out, soon after the downfall of Napoleon, into the most atrocious acts on the part of the Catholics, which might easily have been suppressed by a vigorous government, but which were, in fact, rather encouraged by the imbecile bigots than at the head of affairs in France.

Nemausus is supposed to have been founded by a colony of Phocians; it was subjugated by the Romans, *anno* 121 B. C. In the middle ages it belonged successively to its own viscounts, the counts of Thoulouse, and the kings of Aragon, by one of whom it was ceded to Louis IX., in 1268. Nîmes has given birth to many distinguished persons, among whom may be specified Court de Gebelin, author of the *Monde Primitif*, and M. Guizot, late minister of France, and author of the able and original works on the progress of civilisation in France and Europe, &c. (*Histoire de la Civilisation en France*, and *Histoire Générale de la Civilisation en Europe*, &c.) This illustrious individual first saw the light on the 4th

ber, 1787: he is a Protestant; and the simplicity of character, and perfect freedom from all sorts of prejudice, give additional lustre to his talents and eloquence.

NEVEH, a great and famous city of the world, the cap. of the Assyrian empire, supposed to have stood on the E. bank of the Tigris, opposite to the modern city of Mosul (see). It was till lately supposed that it was identical with that of the village of Nebbi Yunus, containing the tomb of Jonah, about 3 m. from the river, and surrounded by vast heaps of ruins, lat. $36^{\circ} 17' N.$, long. $43^{\circ} 10' 17' E.$ But vast mounds of ruins exist at Khorsabad, 10 m. N.N.E. from Nunia, and at Nimrud, about 18 m. S., in the angle formed by the confluence of the greater Zab with the Tigris. It is impossible to say which of these mounds may represent the site of the city. They appear in fact, to consist of the ruins of palaces, or great public buildings; and may either be seen within or beyond the city walls, or be seen in different, though contiguous, cities. It is against all probability to suppose that Khorsabad and Khorsabad were included in the city.

Diodorus (l. 185) and other profane writers ascribe the foundation to Ninus, son of Belus, and first monarch of the Assyrian empire. But, according to the Bible (Gen. x. 11.), "Asshur (the grandson of Cush) went forth to the land of Shinar, and builded Nineveh." Its site is lost in the obscurity of succeeding ages; but no doubt, a very large city 9 or 10 centuries before the Christian era, for at that period Jonah described it as "exceeding great city of three days' journey."

Strabo says (l. xvi.) that it was much larger even than Babylon; the circuit of which he estimated at 385 stadia, and, according to Diodorus Siculus (l. ii.), it was of oblong shape, 150 stadia in length, and 90 in breadth; that is, above 54 m. in circuit. Very little dependence can, however, be placed on these statements; for, at the same time, admitted that the walls included a large extent of gardens, and pasture grounds. The description of its walls, given by Diodorus, is too highly exaggerated to require any notice. The prophet Nahum says that Nineveh "had more than six score and persons that could not distinguish between right hand and their left." (Jonah, iv. 11.) This, however, the import of which is by no means clear, is generally understood to refer to children; meaning it in this sense, and including under the children the younger persons under nine years of age, might be taken at about one fourth part of the whole, consequently, would be 480,000. But if we follow, as some critics have done, that the children mentioned by the prophet could not well exceed five years of age, they might be taken at between one sixth and seventh part of the pop., which would, consequently, amount to from 720,000 to 840,000. It is plain, however, that these statements are far too vague to be of any considerable weight.

Nineveh was the residence of the Assyrian kings, and of such commercial importance, that Nahum apostrophized her: "Thou hast multiplied thy merchants above the stars of heaven." (lil. 16.) She was besieged and taken by the Medes in the 6th century B. C., but it appears to have been regarded as the cap. of the Assyrian empire as late as 612 B. C., nearly 3 centuries after Jonah's prediction of her destruction, when she fell, after a protracted siege, into the hands of Ahasuerus, or Cyaxares.

Media, who took "spoils of silver and gold, and the end of the store and glory out of all the pleasant things," making her "empty, and void, and waste." (Jer. li. 9, 10.) The spoils were taken to Ecbatana, where the Assyrians were dispersed in villages, and the Assyrian empire, which had for centuries been the glory of the eastern world, gave way to that of the Medes and Persians. It seems certain, however, either that the city had not been wholly destroyed, or, which is most probable, that a new and inferior city had, at a subsequent period, grown out of the ruins of the more ancient city. The latter, no doubt, is that referred to by Tacitus, (Hist. v. 13.), and Ammianus Marcellinus, (xxiii. 20.), supposed ruins, or mounds opposite to Mosul, have the appearance of low, abrupt, hills: and have been long

well-informed authors of the learned and valuable work, *Vérifier les Dates*, have made a singular blunder in noticing this fact. They say that the children of 6 years of age and under do not exceed the 1-20th part of the pop. of a city; and that, consequently, the pop. of Nineveh must have amounted to about 1,680,000. (Tom. ii. 343., 8vo. ed.)

known to contain bricks, entire as well as in fragments, and pieces of gypsum, with inscriptions in the wedge-shaped character, closely resembling those of Babylon.

But within the last ten years they have been partially explored, by M. Botta, French consul at Mosul, and by Mr. Layard, an English gentleman; and their investigations, especially those of the latter at Nimrud, have been in the highest degree interesting. What was supposed to be a shapeless mass of earth and rubbish has been found to include the ruins of a royal palace in nearly as good preservation as the remains of Pompeii. It appears to have been of a gigantic size, and had been enriched with a vast variety of sculptures, including winged human-headed lions and bulls; statues of monarchs, generals, and priests; and other pieces in *baso rilievo*, some representing warlike achievements, and others scenes of peaceful life, executed with infinite spirit and on a grand scale. This extraordinary disinterment of a royal residence buried 2500 years ago, while it illustrates some of the most important portions of sacred and profane history, shows that the reports that have come down to us of the wealth, greatness, and magnificence of the Assyrian monarchs have not been in any degree exaggerated. (See the striking description of Ezekiel, c. xxx. v. 8., &c.) The walls and portions of the statues are covered with cuneiform inscriptions; and should means be found of interpreting them, they will disclose a part at least of the true history of the empire. The palace at Nimrud appears to have been destroyed by fire; and the remains found in it have obviously belonged to different epochs, the most remote extending as far back, perhaps, as the 14th or 15th century B. C. Some of the most interesting of the Nineveh sculptures are now, by a curious destiny, lodged in the British Museum. (See *Nineveh and its Remains*, by Layard, 2 vols. 8vo. passim; *Kimber's Persia*, pp. 256—259; *Olivier, Voy. en Turquie*, iv. 265—278; *Calmet, Dict. de la Bible*, voc. *Nineveh*, &c.)

NING-PO, a city of China of the first rank, prov. Che-Keang, at the confluence of the rivers Kin and Yaou, near their mouth in the harbour of Chusan, 46 m. E. by S. Hang-tcheou, and about 180 m. S.E. Nankin; lat. $29^{\circ} 55' N.$, long. $121^{\circ} 17' E.$ Pop. estimated at from 200,000 to 400,000. It is surrounded by walls and bastions, now in ruins, and is entered by 5 gates: the streets are broad and long, and the shops surpass those of Canton in elegance and splendour. It is intersected by numerous canals; a floating bridge crosses the inlet; and there are several pagodas, government warehouses, and other public buildings. The suburbs are flat, presenting rich fields and rice-gardens; but at the back, skirting the sea-shore, are dark-looking barren hills. Ning-po may be considered the third or fourth emporium of the Chinese empire; and the trade to the N. and S. districts of China, as well as to Siam, is of much importance. In the neighbourhood are very extensive salt works, and salt is exported in considerable quantities. The town is accessible by vessels of 300 tons; but large ships unload at Chinhae, a fortified town at the entrance of the inlet.

The English formerly traded to Ning-po. They were compelled, however, in the 17th century, to confine themselves to Macao, at the same time that similar restrictions were imposed on the Portuguese. But the city has been again opened to the English under the treaty of 1842. Hitherto the trade with it has been unimportant.

NIORT, a town of France, dép. Deux-Sèvres, of which it is the cap., on the Sèvre-Niortaise, 34 m. E.N.E. La Rochelle, and 43 m. W.S.W. Poitiers; lat. $46^{\circ} 20' 8'' N.$, long. $0^{\circ} 19' 12'' W.$ Pop. in 1846, ex. com., 16,860. It is pleasantly situated on the declivities of two hills, and is surrounded by planted promenades. It was formerly ill-built, but has been greatly improved since the Revolution, many new and good streets having been constructed on the site of the ancient fortifications. The castle of Niort, which has been long converted into a prison, was the birth-place of Mad. de Maintenon. The town has two good parish churches, one of which was built by the English, two hospitals, some good barracks, public baths and public halls, a handsome arcade (*galerie vitrée*), a theatre, a public library with 20,000 vols., including some rare MSS.; and a botanic garden, having attached to it a large horticultural school. It is the seat of tribunals of primary jurisdiction and commerce, a Royal athénæum, a council *des prud'hommes*, a society of agriculture, and a communal college. It has manufactures of leather, gloves, shoes, woollen stuffs, wooden and horn articles, &c.; and is an entrepôt for the wines of the Gironde, and for timber, wool, hides, and cattle. It is also celebrated for its confectionery (*confitures d'angelique*). (Hugo, art. *Deux-Sèvres*.)

NIPHON. See JAPAN.

NISHAPOOR, a town of Persia, in Khorassan, cap. district of its own name, 46 m. W. by S. Meshed, lat. $36^{\circ} 55' N.$, long. $36^{\circ} 8' E.$ Pop., according to Captain Conolly, 8,000. The town has a poor appearance, being confined within a mud wall and ditch, without either minarets or domes; the only building that appears

thing the most, is generally very fertile. In 1838, 40,000 acres were estimated to comprise 200,000 bushels of wheat, 100,000 bushels of barley, 10,000 bushels of oats, &c. In 1847, however, the crop was the least cultivated in Prussia. The population, as is throughout that country, are, in general, small. 211,364, compared to the number of persons in 1838, were estimated at less than 50,000. But it has, notwithstanding, more large proprietors than most other departments. Farms are round Döbeln; the smallest generally 100. In the wooded tracts they run mostly from Döbeln, but in the marshy regions east of the river, they vary up to between 50 and 70 hectares. Some are within for more than 5 years, except around of Aemmer, where they are frequently to 30 years, or even longer. (Hops.) On the river banks are good for the plough, but quite dry to cultivation on all the smaller holdings, and covered on the lands appropriated to the hops, or potatoes. Potatoes are rare, and the soil are not here, so in many parts of Prussia, as I have written previously to report all new and old methods of culture. All kinds of corn are sown, but principally wheat and oats. In 1838, 6,000,000 bushels of grain were harvested, about 1,000,000 bushels of potatoes, but from quality of the soil but little more corn is usually than is required for the home demand. Wheat does are good and plentiful; and best root, one grain, hops, clover, flax, hemp, wood, and are also extensively raised. Hops extend to the 100 of miles to the east, which annually a 670,000 bushels of all, and that the production is 3,000,000 bushels a year. Tobacco is not cultivated at from 5 to 4 millions bushels a year. According to the official returns there were, in 1847, 14,000 black cattle, and 13,000 sheep in the The most are of the Dan Flomish breed, and estimated that they supply 7,000,000 bushels of butter, 10,000 sheep a year. The annual production is about 740,000 bushels, a good deal is of or quality the sheep being partly Merino, and of the long and fine woolled Flomish breed. Some of the most are actively employed in the a factory and at Döbeln and Gersdorf many are fitted out for the wool and other branches, back to the centre of the market trade, but every of a number have Gersdorf with a cargo for the 5 marks of from 100,000 to 150,000 eggs, produced and the neighbouring departments, from, marble, building, &c. are found here, but the principal industry is to send, of which about 5,000,000 quarts a year sent. Manufactures highly important. Hops

1838, 11,000. After Döbeln, it covers more ground than any other Swedish town, but it has no public buildings worthy of notice. It has straight and broad streets, and is well adapted for trade, having a considerable quay close to which vessels can lie. It has several churches, a synagogue, public school house of commerce, and savings bank, and manufactures of bread and hardware goods, linen, cotton, and coarse woollen fabric, gloves, starch, paper, leather, &c. and several sugar refineries. A profitable salmon fishery is also carried on here to the river (Pomer., State of Denmark).

NORDLINGEN a town of Bavaria, circ. Middle Franconia on the Rhine, 40 m. S.W. Bamberg. Pop. 4,500. It is surrounded with old bastioned ramparts. The cathedral, a handsome Gothic edifice, has some curious monuments and paintings, and a tower 145 ft. in height. The tower hall is ornamented with three paintings of the battle of Nordlingen in 1694, in which, after an obstinate and decided conflict, the Austrians and Bavarians, under the Archduke Ferdinand, defeated the Swedes and their allies, under the famous Bernard, Duke of Weimar. The town has flourishing carpet factories, and a considerable trade in Silesian grain, and hops. (Boyle.)

NORFOLK a county of England on the E coast, having N and E the German Ocean, S Suffolk and W Cambridge, a part of Lincoln, and the W of the sea called the Wash. It is of a riverine shape, and contains 1,200,000 acres, of which about 1,000,000 are supposed to be arable, meadow and pasture. Surface generally flat, and where most diversified nearly uninteresting. Soil very various in the W parts of the co., contiguous to Cambridge, and the bottom of the Wash, there is a considerable tract of marsh land (termed within the Great Level of the Fens), and there is also some marsh land in the S E corner of the co. contiguous to Yarmouth. Soil, with some exceptions, the rest of the co. consists principally of a light sandy loam, especially suitable for the turnip and barley husbandry. Climate dry and early, but in spring the E winds are often very severe. Few rivers in the county have been so much improved as this. Little more than a century ago, the greater portion of it consisted of wastes, commons, sheep-walks, and barrens of little or no value. But, through the judicious application of marl which is found in the greatest abundance in all parts of the co., and the extension of the turnip husbandry introduced by Lord Viscount Townshend in the reign of George II., followed up by the introduction of the drill husbandry, and an improved rotation of crops, it is now perhaps, the best formed co. in England, and is a striking example of what may be accomplished by intelligence, perseverance, and industry. The usual rotation in the turnip land is, 1st, turnip; 2d, barley; 3d, clover or clover and eye grass, and 4th, wheat. Turnips form the basis of the system, and are sold with marl to have made the co. On some estates no crops are allowed to be raised, and turnip is, in all respects, the leading crop. Turnips are strictly prohibited from taking two white crops in succession, and the land is kept constantly clean, and is not injured by overcropping. Ploughing is chiefly manual, as in Scotland, by ploughs drawn by 2 horses or 3 oxen. The grazing husbandry of Norfolk is very inferior to the arable though it has been latterly a good deal improved. Great numbers of galloways and other Scotch cattle are purchased at the great fairs in the co. to be turned out, and otherwise fattened for the market of the metropolis. The stock of sheep is very large, amounting to between 700,000 and 800,000 head. Very quantities of turkeys are raised in this co. and Suffolk, which furnish the greater part of those supplied to London, especially at Christmas. Estates of all sizes from 5000 to a year downwards. Farms mostly large, and to last, the great improvement of which Norfolk has been the theatre never could have been effected by small farmers. Farms vary from 7 to 14, and to a few instances to 21 years. Farms, buildings generally good; farms very large. Average rent of land to 1000 lbs. 4s. 6d. on 1000 acres. Minerals, with the exception of marl of no importance. The woollen manufacture, especially the worsted branch, has been long extensively carried on in this co. especially at Norwich, where various descriptions of shawls, crapes, &c. are also manufactured. See Norwich. But owing to the superior facilities for the economical prosecution of manufacturing industry enjoyed by Bradford, Paisley, and other towns in the N. engaged in the same department, the manufactures of Norfolk are rather on the decline. Principal rivers, Great and Little Ouse, Wensley, Yare, Wensum &c. A navigable communication admitting vessels drawing 10 ft. water has recently been effected between Norwich and Lowestoft. (See Lowestoft.) Norfolk has no more than 16 hamlets and 118 parishes. Principal towns, Norwich, Yarmouth, and King's Lynn. It sends 19 members to the H. of C., viz. 6 for the co., 3 for the city of Norwich, and

Count, Döbeln, Hildesheim, and Völschmann public revenue land, 10,000,000. This dep. was sold to the French crown by Louis XIV. (Hops. In 1847, French Official Returns, Dec. 1847)

NORDLUND a town of Prussia, Saxony, circ. 10 m. S.W. Halle. Pop. 1,000. It is surrounded with old walls, and is generally built in an antiquated style. Several churches, in one of which are two pictures of L. Cranach; 3 hospitals, a gymnasium, an orphanage, a theatre, &c. and is the seat of a free market, a dispensary, and judicial courts for the town and district. One of the most flourishing manufactures in the Prussian dominions, having numerous distilleries, shops of which support great numbers of boys and women cloth making and stitching, soap (tallow) &c. and various of other are made at Nordlunda; it is further noted for its purveyor manufacture of glassware and. It has also numerous oil-mills, distilleries, and a considerable trade in corn, and in its vicinity. It was the native place of the noted philosopher Wolf. (Fam. Scdm., Der Provinzial-Statist. v. 1847, S. 100.)

NORDSTADT (Nord, North; Stadt, town) a town and of Sweden, in Linköping, on the Motala, near its N. to the Baltic, 60 m. S.W. Stockholm. Pop. 10,000.

2 each for the bors. of King's Lynn, Thetford, and Yarmouth. Registered electors for the co., in 1849-50, 16,146, being 8,333 for the E. and 7,813 for the W. division. In 1841, Norfolk had 85,903 inhab. houses, and 412,664 inhabs., of whom 199,101 were males, and 213,563 females. Sum expended for the relief of the poor, in 1848-49, 201,192*l*. Annual value of real property in 1815, 1,516,651*l*; do., in 1843, 2,327,371*l*.

NORFOLK, a borough-town and port of entry of the U. States, Virginia, co. Norfolk, on Elizabeth River, 8 m. from Hampton Roads, in Chesapeake Bay, and 90 m. S. E. Richmond; lat. 36° 50' 50" N., long. 76° 18' 47" W. Pop. in 1840, 10,920. It stands on low and somewhat marshy ground; its principal streets are well paved and clean, but the others are generally irregular and inconvenient; and neither the public nor private buildings can boast of much elegance, though of late years it has been a good deal improved. It has places of worship for various sects, a marine hospital, an orphan asylum, a lyceum, Larcasian school, theatre, &c. The harbour is deep, capacious, secure, and easy of access; its entrance, rather more than 1 m. in width, is defended by three strong forts. At Gosport, in the township of Portsmouth, near Norfolk, is one of the most important navy-yards in the U. States, in which is a noble dry dock of hewn granite, constructed at a cost of 974,356 dolls. The total tonnage belonging to the port of Norfolk, in 1849, amounted to 23,016 tons.

NORMANDY, one of the provs. of France under the old regime, now distributed among the depts. of Seine Inférieure, Eure, Orne, Calvados, and La Manche.

NORTHALLERTON, a parl. bor., market-town, and par. of England, in the liberty of Allertonshire, N. riding co. York, on a small trib. of the Whisk, 13½ m. S.S.E. Darlington, and 81 m. N.W. York. Area of parl. bor., which comprises the townships of Northallerton, Romanby and Brompton, 9,240 acres. Pop., in 1841, 4,861. The town, which is on level ground, consists almost entirely of a main street along the great N. road from London to Edinburgh. It is wide, well paved, and lighted with gas: a market-house stands near the centre of the town, and at its N. extremity is a fine open space, in which are the church and churchyard. The former is a large cruciform structure, of considerable beauty, with a square tower at its W. end: the living is a vicarage, in the gift of the dean and chapter of Durham. A grammar-school has been founded here under the same patronage, and there is a large national school for children of both sexes. There is also a place of worship for Wesleyan Methodists, with an attached Sunday school. The register-office for the N. riding of the co. was built here in 1736; and there is a court-house, in which the general co. sessions of the peace are held. A gaol has also been built, within the present century, on the plan of Howard, the discipline and arrangements of which are said to be, on the whole, very efficient: the number of prisoners averages about 60, and the cost of each is 1*s*. 5*d*. per diem. (*Gaol Returns, and Prison Inspectors' 4th and 5th Reports*.) "Northallerton is not a corporate town, and is under the jurisdiction of the co. magistrates. No manufactures are carried on, nor are there any local advantages likely to attract them. Linen-weaving, however, employs a portion of the pop., both in Northallerton and the surrounding villages, its chief seat being at Brompton." (*Parl. Bound. Rep.*) A branch of the Darlington Joint-stock Banking Company, a private bank, and a savings' bank are established here. The railway uniting York and Newcastle passes close to the town on the W. It has very large weekly cattle and corn markets on Wednesdays, and large fairs for horses, cattle, sheep, and cheese, Feb. 14., May 5., Sept. 5., Oct. 3., and 2*d* Wednesday in Oct. Northallerton sent 2 mems. to the H. of C. from the 15th Charles I. down to the passing of the Reform Act, which deprived it of one of its mems. "The elective franchise was formerly attached to about 210 burghage-houses, mixed up and conjoined with the other buildings from one end of the town to the other." (*Bound. Rep.*) The electoral limits were enlarged, as above mentioned, by the Boundary Act, and in 1849-50, there were 282 registered electors. A county court is established here, before which 363 plaints were entered in 1848.

At a short distance from Northallerton is Standard Hill, celebrated as having been the scene, in 1138, of a sanguinary conflict between the Scotch, under David I., and the English, under the Earls of Albemarle and Ferrers. It was called the battle of the Standard, from the circumstance of the victory of the English being attributed to their possessing a standard whence were displayed the banners of St. Peter of York, St. John of Beverley, and St. Wilfred of Ripon, the whole being surmounted by a consecrated host; but the true cause of the defeat of the Scotch was their consternation at the supposed death of their king. (*Parl. Papers; Priv. Inform., &c.*)

NORTHAMPTON, a central co. of England, having at its N. extremity the co. of Lincoln; on its E. and S.E.

side, Cambridge, Huntingdon, Bedford, and Buckingham; S. Oxford; and W. and N.W. Warwick, Leicester, and Rutland. It stretches N.E. and S.W. from Banbury to near Crowland, a distance of 66 m. Area, 650,240 acres, of which about 580,000 are supposed to be arable, meadow, and pasture. Surface beautifully diversified with gently rising hills, fine valleys, and extensive woods: it is traversed nearly in its whole extent by the Nen, which rises near Daventry. Though of various qualities the soil is in general very fertile, and is, in many parts, strong and well adapted for the culture of wheat and beans, which are the principal crops. The climate is mild and salubrious, and there are more gentlemen's seats in this than in most other counties. Agriculture, though still capable of material improvement, is, on the whole, in a comparatively advanced state. About half the co. is in grass; and great numbers of heavy horses, and of cattle, mostly short-horn, and sheep, are bred. Estates are generally large; but there are few large farms; and the circumstance of their being let only from year to year tends to perpetuate the routine practices that keep their ground in this and other counties. Farm-houses and offices are mostly inferior, and inconveniently placed; and this is also true of cottages. This is one of the co. in which there is a great waste of horse labour, 5 horses being usually employed to do the same work that might be as well done by 2, or at most 3. Average rent of land, in 1843, 29*s*. 1*d*. an acre. The woodlands are very extensive; and a good deal of wood is used as fuel. Except limestone, which is very abundant, and slates, dug up at Collyweston, minerals are of little importance. Boots and shoes are extensively produced in the town of Nottingham, and in Wellingborough, and other places; but the want of coal is an all but insurmountable difficulty to the progress of manufacturing industry. Exclusive of the Nen, the Ouse and Welland have their sources in Northamptonshire. Principal towns, Northampton, Peterborough, and Wellingborough. This co. is divided into 20 bunds and 306 pars., and sends 8 mems. to the H. of C.; viz. 4 for the co., 2 for Northampton, and 2 for Peterborough. Registered electors for the co. in 1849-50, 8,479, being 3,929 for the N., and 4,550 for the S. division. In 1841, Northampton had 40,841 inhab. houses, and 199,228 inhab., of whom 98,977 were males, and 100,251 females. Sum assessed for the relief of the poor in 1848-49, 95,480*l*. Annual value of real property in 1815, 947,578*l*; do., in 1843, 1,252,100*l*.

NORTHAMPTON, a parl. and mun. bor., market and manufacturing town of England, cap. of the above co., hund. Spelhoe, on the great N. road, and on the N. bank of the Nen, crossed here by a stone bridge of 3 arches, and 2 others of inferior size, 29 m. S.S.E. Leicester, and 59 m. N.W. London. Area of parl. and mun. bor. (which comprises 4 pars.), 1,520 acres. Pop., in 1821, 10,844; ditto in 1841, 20,637. The town, which comprises 4 principal streets, meeting in a very large open market-place, is well-built, paved, and lighted with gas: the houses in the principal street along the line of the great N. road are of stone, large, and substantial; but in the smaller streets are many inferior houses, almost entirely occupied by journeymen-shoemakers, and other workmen employed in shoemaking. The pars. of All Saints' and St. Giles's comprise the principal portion of the respectable classes of society. St. Peter's is a small par., inhabited principally by the inferior tradespeople and working-classes. St. Sepulchre's is extensive, but chiefly occupied by artisans and labourers. (*Mun. Bound. Rep.*) There were formerly 7 par. churches, of which 4 still remain. That of All Saints', in the centre of the town, (rebuilt, in 1680, on the site of one destroyed by fire,) is a large and handsome, though somewhat incongruous, building, with a central cupola supported by 4 Ionic columns, and a tower at its W. end, rising above an Ionic portico: a fine organ, and a full-length statue of the late Spencer Perceval, are the principal ornaments of the interior. St. Giles's, at the E. end of the town, is a large cruciform structure, partly of Norman, and partly of later English architecture, with a square tower rising from the intersection of the nave and transepts. St. Peter's, at the W. end of the town near the castle, erected shortly after the Norman conquest, consists of a nave, with side aisles separated from it by piers and arches, with a square western tower, and is altogether "a remarkably fine and curious specimen of enriched Norman." (*Rickman, p. 214*.) St. Sepulchre's, an almost equally ancient edifice, built by the Knights-Templar, at the N. end of the town, comprises a circular part, forming the body of the church, a square chancel with side-aisles, and a square tower surmounted by a spire at its W. end. The remains of the old church of St. Gregory form a school-house; but the two others have entirely disappeared, and of the numerous religious houses existing in Northampton before the Reformation, two only, St. Thomas's and St. John's, both in the later English style, now remain, having been converted into almshouses for the aged poor. The Wesleyan Metho-

NORTHAMPTON.

ptists, Presbyterians (now Unitarians), Rom. i, and the Society of Friends, have their places of worship: the castle-hill meeting- as, for 22 years, the scene of Dr. Doddridge's ions, during which period he was also master resbyterian academy in this town. Attached to us churches and chapels, are numerous Sunday furnishing religious instruction to between 2,000) children of both sexes. A central national erving as a model-school for the co., is attended 400 boys and girls; a Lancastrian school, by of 500 children; 2 infant schools (one of which rted by the Wesleyan Methodists) have 250 ; besides which, the corporation charity-school, ; charity-school, and the girls' school in King's- eet, provide clothing and education for 120 of both sexes. The free grammar-school, in , was founded in 1542. Among the other build- ne town, by far the most handsome is the Shire i the S. side of the market-square: it is of architecture, and comprises 2 large courts, and artments well adapted for the business of the

The town-hall is an ancient structure of brick, g All Saints' church; and near it is the bor. w disused. On the E. side of the town is a gaol, built in 1794 on the plan of Howard; but, standing its size, the cells are not sufficiently is to allow of the entire seclusion of prisoners. nt system, however, accompanied by hard la- strictly enjoined; and the management has atly improved within the last few years. This sed also, by agreement, between the co. and bor. ites, as a place of confinement for prisoners be- to the bor. (*Prison Inspectors' 3d Report*, iii. e theatre in Marefare, built at the beginning of ent century, is a neat building, and, though small, ntly large for a town in which dramatic enter- is are little relished. A race- as formed N. of the town in 1778, and the races, ke place in autumn, are invariably well attended. m. S. on the London road is an ancient cross, hose erected at the halting-places of the funeral n Eleanor, on its passage from Hardeby, in Lin- e, to Westminster Abbey.

bor. is evidently in a flourishing condition. Its d markets are resorted to by the inhabs. of the ural districts; and the shops are numerous, re- e, and thriving. The principal manufacture of boots and shoes; and a large proportion of er orders, men, women, and children, are em- in this craft, which has thriven and increased the last 30 years, without being affected by the changes which have occurred within that period. upwards of 1,300 men (exclusive of women and) were employed in this trade; and we are as- bat the wages of the journeymen at present to the weekly sum of 2,000*l*. The fixed pros- f this trade has been assigned as the cause why . of the bor. was nearly doubled during the 20 eceding 1831, and is stated to be still rapidly in- g." (*Mun. Bound. Rep.*) These shoes are sent : quantities to London, and furnish the chief sup- he shops that deal in cheap, ready-made shoes : , also, extensively exported. Leather currying idlery are extensively carried on; but the stock- lace trades, once very considerable, have greatly d since the introduction of machinery at Leicester ttingham. There are also several foundries, and nufacture of light brass and iron work is prose- n rather an extensive scale. The Northampton Bank, Northampton Banking Company, a private und savings' bank, are established here; and the us two weekly newspapers, one of which is amongst est provincial papers in England. Northampton merly the seat of a large posting business, which ning of railways has gone far to annihilate. She nited by railway with Peterborough and the lines to Lincolnshire and York on the one hand, and ie Blisworth station of the Great N. W. Railway, other. The latter brings her within little more hours' distance of London; and the facility of in- se thence arising has more than indemnified her : of the posting business. The Nen, also, and the us canals uniting with that river, give to Nor- on the advantage of a water communication with rman Ocean, London, Liverpool, Manchester, and

ampton is a bor. by prescription, and has received royal charters, the last being granted in the eo. III. By the Mun. Reform Act it has been into 3 wards, and is governed by a mayor, 5 other en, and 18 councillors; having also a commission peace under a recorder, and a court of record for

NORTHUMBERLAND. 415

civil suits. Corp. rev. in 1848-49, 10,018*l*. The assizes for the co. are held here in spring and summer; and quarter sessions in Jan., April, July, and Oct. A county court is also established here, before which 1,013 plaints were entered in 1848. The bor. has sent 2 mems. to the H. of C. since the reign of Edward I.; the right of voting, previously to the Reform Act, being in inhabitant-house- holders occupying a distinct dwelling for 6 months pre- viously to the election, and not having received alms for 12 months. (*Bound. Rep*) The electoral limits were left untouched by the Boundary Act, and in 1849-50, it had 1,819 reg. electors. Northampton is likewise the principal polling-place and election town for the S. div. of the co. A large cattle market is held every Saturday, and there are smaller markets on 2 other days. Exten- sive horse and cattle fairs, attended by jobbers from all parts of England, Feb. 20., April 6., May 4., and Aug. 5.

After the Norman conquest *North-Hamtun*, which, according to the Domesday Survey, had then only 40 bur- gesses, was given by William I. to Simon St. Liz, who built a castle here (now marked only by an earth-mound, on the W. side of the present town). Numerous synods and parliaments met here during the succeeding reigns; and, at the beginning of the 13th century, Northampton was considered of sufficient importance to have a minr. In the reign of Henry III. an attempt was made to esta- blish a university here, consisting of emigrant students from Oxford and Cambridge; but, though the scheme was at first sanctioned by the king, a mandate was after- wards issued to compel the students to return to their old seminaries, and to forbid the continuance of the esta- blishment. In the wars of the Roses, its neighbourhood was the scene of a great battle (fought 10th July, 1460), between Henry VI. and the Earl of March (afterwards Edward IV.), in which the former was defeated, and taken prisoner. In 1642, the town was seized by Lord Brooke, who fortified it for the parliament. In 1663, Northampton suffered greatly from a flood, and in 1675 was nearly destroyed by fire, the loss of property being estimated at 150,000*l*. To this calamity, however, may be attributed the increased width and regular arrange- ment of the streets, for which it is remarkable above most other provincial towns.

Northampton has been long celebrated in the annals of life insurance from the circumstance of Dr. Price having founded his famous table of the rate of mortality on the register of the deaths in the parish of All Saints in this town. But this table was far from being accurate at the time when it was framed, and is now very wide of the mark. And though it had represented the mortality in the parish of All Saints quite correctly, that was much too narrow a basis to be taken for a representation of the average mortality of England. The mortality in All Saints from 1735 to 1780 was about 1 in 30.4; and it is now only 1 in 43.5.

Mr. Farr has given in the Appendix to the 8th Annual Report of the Registrar General, an extremely elaborate and learned account of Northampton, and of the errors in Price's mortality table. (Pp. 289-325.)

NORTHFLEET. See GRAVESEND.

NORTHUMBERLAND, a marit. co. of England, being the most northerly of the kingdom; having N. a small detached portion of Durham, by which it is sepa- rated from Scotland, E. the German Ocean, S. Durham, and W. Cumberland, and the cos. of Roxburgh and Berwick, in Scotland. Area, 1,197,440 acres, of which about 800,000 are supposed to be arable, meadow, and pasture. It exhibits every variety of surface and soil. It is divided from Scotland and Cumberland by the Cheviot Hills, and a portion of the Pennine, or great central range of mountains, which stretch out into extensive moors, and cover a large portion of the W. parts of the co. with their ramifications. There are, however, very extensive tracts of low land along the coast, and in the vales of the Coquet, Tyne, and other rivers, the soil of which consists, for the most part, of a strong clay loam, and is very fertile. The Cheviot Hills are mostly covered with fine verdure, affording excellent pasture for the peculiar and valuable breed of sheep, called by their name, and now so widely diffused; but the mountains and their offshoots belonging to the Pennine range are mostly covered with peat earth; and are bleak, dreary, covered with heath, and interspersed with swampy mo- rasses. The climate varies with the elevation and nature of the soil; but along the coast and in the vales it is dry and early. Northumberland is dist'nguished by its im- provements, and is now one of the best cultivated cos. of the empire. Wheat and oats are the principal corn crops; but barley, beans, and peas are, also, extensively raised. Turnips are an important crop in the coast dis- trict; they are universally drilled, and their culture is no where better understood. Cattle are of various breeds; but the improved short-horns are now, perhaps, the greatest favourites. Estates of all sizes, but mostly large. Farms, also, large, and their occupiers distin- guished by their superior intelligence and enterprise.

Farms mostly held on leases, varying from 7 to 14 and 21 years. Farm-houses and cottages good. Average rent of land in 1843, 13s. 11½d. an acre. With the exception of those carried on at Newcastle (which see), manufactures are of no importance. Pit-coal forms the staple produce of Northumberland, and is raised and shipped in vast quantities from the Tyne, for the supply of London and other ports on the E. coast, and for exportation. In proof of this, we may mention that of 8,552,706 tons of coal shipped coastwise from the different ports of the United Kingdom in 1849, 2,143,380 were shipped from Newcastle. (*Parl. Paper*, No. 812. Sess. 1850.) The pitmen, who are a numerous and important class, receive wages varying from 15s. to 25s. a week, and are honourably distinguished among the working classes by their superior comforts and enjoyments. Their houses are generally clean, roomy, and well furnished; they live well, are but little influenced by political agitation, and are more orderly and decidedly less addicted to ardent spirits, cock-fighting, and such like demoralising sports, than they were 30 years ago. (*Minutes of Committee of Council on Education*, p. 61.) Exclusive of its coal, Northumberland has mines of lead and iron, and abundant supplies of limestone and sandstone; the quarries of the latter at Gateshead Fell supplying the "Newcastle grindstones," so famous in most parts of the world. Principal rivers, Tyne, Coquet, Alne, Blyth, Wansbeck, and Till. Principal towns, Newcastle, Tynemouth, N. Shields, Morpeth, &c. It returns (inc. Berwick) 10 mems. to the H. of C., viz. 4 for the co., 2 each for the bors. of Berwick and Newcastle, and 1 each for Morpeth and Tynemouth. Registered electors for the co. in 1849-50, 8,272; being 3,063 for the N., and 5,029 for the S. division. The co. is divided into 6 wards and 88 pars.; and had, in 1841, 48,710 inhab. houses, and 250,278 inhab.; of whom 121,268 were males, and 129,010 females. Sum expended for the relief of the poor in 1848-49, 81,607½. Annual value of real property in 1815, 1,291,413½.; do. in 1843, 1,542,434½.

NORTHWICH, a market-town and township of England, par. of Great Budworth, hund. of its own name, co. Chester, on the Weaver, 16½ m. E.N.E. Chester, and 155 m. N.W. London. Area of township, 200 acres. Pop., in 1841, 1,368. It has an antiquated appearance, with badly paved streets. The church, which is subordinate to that of Great Budworth, is a large building, with a semicircular choir, remarkable for the curious decorations on the roof of the nave. There are places of worship, also, for Wesleyan-Methodists and Independents, with attached Sunday schools. A grammar-school was founded in 1558; it is handsomely endowed, and the government is vested in 12 trustees, who appoint both the masters and the free scholars. There is, also, a charity-school for 12 poor children. Northwich is one of the *wiches* or salt-towns of Cheshire, and vast quantities of salt are annually produced in the town and its vicinity. The salt-mines are very extensive; they have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt-mines in the world. In its solid state, when dug from the mines, the salt is not sufficiently pure for use, and is sent to Frodsham and other places on the S. side the Mersey, where it is refined, by being dissolved in sea-water, and afterwards separated by evaporation and crystallisation. By far the largest quantity, however, of the salt now produced in Cheshire is obtained from the brine springs. The brine is first pumped up, principally by means of steam-engines, from very deep wells, and is collected in reservoirs, where it is sometimes saturated or strengthened by an admixture of crushed rock-salt. The business has greatly increased within the last few years, and it is estimated that above 300,000 tons are annually produced in Northwich and its vicinity. A considerable number of the inhab. are also employed in the cotton manufacture. It has every facility for water-carriage by its position on the Grand-Trunk Navigation, and it is close to the Grand-Junction Railway. It is one of the polling-places at elections for the N. div. of Cheshire. Markets on Friday; a large cattle fair, April 10.; other fairs, Aug. 2. and Dec. 6.

NORWAY (Norw. *Norgé*, Germ. *Norwegen*), a country of N. Europe, forming the W. portion of the great Scandinavian peninsula, and at present united to the crown of Sweden. It extends, including Norwegian Lapland, between the 58th and 71st degs. of N. lat., and the 5th and 31st of E. long.; having E. Russian Lapland and Sweden, S. the Skagerrack, separating it from Denmark, and W. and N. the North Sea, and the Atlantic and Arctic Oceans. Its entire length from the Naze, its most S. promontory, to the North Cape, is upwards of 1,100 m. Its breadth varies greatly; in Norrland, near its N. extremity, it may average about 50 m.; but to-

wards the S. it is as much as 250 m. The area, pop., &c., of Norway, have been estimated as follows:—

Dioceses.	Provinces.	Area in sq. m.	Pop. 1845.	Capitals.
Aggerhuus, or Christiania	Aggerhuus	1,898	109,432	CHRISTIANIA.
	Smaalchen	1,666	73,622	
	Hedemarken	9,516	87,118	Drammen.
	Christian	9,418	102,780	
	Buskerud	4,787	85,918	Laurvig.
Christian-sand.	Jarlberg & Laurvig	856	65,070	Arvedal.
	Bradeberg	5,560	72,891	
	Nedenaes	4,256	53,932	Christiansand.
	Mandahl	2,042	61,918	
	Stavanger	3,805	78,210	Stavanger.
Bergen	S. Bergenhuus	6,285	116,989	Bergen.
	N. Bergenhuus	7,515	77,978	
Tromdhjem	Romsdal	5,983	81,514	Romsdal.
	S. Tromdhjem	7,094	89,529	Tromdhjem.
	N. Tromdhjem	8,668	66,570	
Norrland	Norrland	15,052	65,512	Bodoes.
	Pinmark, (Norw. Lapland)	27,470	43,938	Tromsø.
Totals	-	121,725	1,328,471	

In 1835, the pop. amounted to 1,194,827, viz. 585,281 males, and 609,446 females, the ratio of the two sexes being as 100 to 104.

Physical Geography.—The chief physical characteristics of Norway are its *fjelds* and *fjords*; the first being lofty mountain plateaux in the interior, and the second deep indentations or arms of the sea all round the coast. Nearly the whole of the country is covered with mountains. The main chain, called the *Kiblen* (or keel), forms the line of separation between Norway and Sweden, as far S. as lat. 63°; but thenceforward it tends to the S.W., under the names of *Dovre-fjeld*, *Lange-fjeld*, &c., forming the watershed between the rivers flowing into the Skagerrack on the S.E., and the North Sea and Atlantic on the W. Many of the Norwegian mountains rise to from 6,000 to 8,000 ft. above the level of the sea. The *Sneebetta*, (lat. 62° 35', long. 9° 40'), 8,120 ft. in height, has been long considered the most elevated point of land; but it is now supposed that the *Hurunger Fjeld*, in the prov. Bergen, overtops the former by at least 700 ft. (*Laing*, p. 53.) The *Fjords* have been sometimes compared to the Scottish *frits*; but they are generally smaller than the latter, and rather resemble the Scottish salt-water *lochs*. They are most numerous on the W. coast, where the *Sogne* and *Hardanger Fjords*, with their continuations, stretch inland for at least 100 m. in a direct line; and are of the greatest use as means of communication. Norway has numerous rivers, some of which, as the *Glommen*, *Lougen*, *Drammen Nid*, &c., all taking a S.S.E. direction, are of large size; but their courses are so beset with cataracts, that they are of little service for navigation. Lakes are numerous in the E. half of the country, but none of them can be compared in respect of extent to the lakes of Sweden. The W. coast is lined in its entire extent by a vast number of islands. The principal of these are the *Loffoden* group (which see *ante*, p. 191.) The shores of Norway (like the W. coasts of almost all countries in high latitudes) are iron-bound, and difficult of access; and at the S. extremity of the *Loffoden* Isles is the celebrated *Maelstrom*, which inspires the Norwegian fishermen with as much terror as *Charybdis* did the ancient navigators of the Mediterranean; and, perhaps, with more reason.

Geology.—The formations of Norway are for the most part primary. The mountains were long supposed to consist almost exclusively of granite, but in reality this rock is far from common. The most abundant rock is gneiss; next to which, though by no means so widely diffused, is mica slate, resting upon and alternating with the gneiss; and in beds subordinate to both, are limestone, quartz, and hornblende. Upon the high table lands, the ground is often covered with blocks of a conglomerate rock, in which pebbles of quartz, feldspar, and other crystallised substances are embedded, and which, being smooth and rounded, have evidently been, during a remote but lengthened period, subject to violent friction. Mr. Lyell (*Princip. of Geology*, l. 336.) denies the occurrence of volcanic action and earthquakes in the Scandinavian peninsula; but his opinion, though entitled to great weight, differs from the statements of some recent travellers, from which it would seem that earthquakes are not unfrequent, and that the physical appearance of the country, especially of its fjords, almost demonstrates that it has at a distant period been upheaved by volcanic action. (See *Laing's Norway*, pp. 75, 76—114, &c.)

The climate must, of course, vary greatly, according to the elevation of the surface, as well as the difference of latitude; but generally the summers are short, and the changes sudden and extreme. From lat. 58° to 59° the average temp. is about 45° Fahr.; and there is no

it snow-region. The same vegetables and fruits as in England, except apricots and peaches. woods cease at 59°. From 59° to 60° the average is about 44° Fahr.; all kinds of grain grow here best soils, and the same fruit trees as before, but the plum ceases to ripen. From 60° to 61° the temp. on the coast is 43°; in the interior, 41°.

division the pine and Norway fir become the present forest trees, with birch, hazel, and aspen. The aspen; and beyond 61° the oak is not seen in perfection. The principal crops are rye, oats, flax, and but wheat ripens in favourable situations. Between 61° and 62°, the average temp. is about 40°; all the fruits still ripen; as will wheat, in certain places; grain is very precarious and little cultivated. At 62° the ash is scarcely seen. The region between 63° and 64° comprises the highest land in the country, upper 5,000 ft. of the Doone Fjeld is covered with perpetual snow. The average temp. of the valleys in this region is about 39° Fahr. Beyond 63°, peas begin to be sown, cabbage ceases to come to perfection, flax ripens, and wheat is not seen, except near the coast in small quantities; but the pine and fir tribes, mountain-ash, and aspen flourish. From 63° to 64° harder fruits ripen in sheltered situations only, and begin to be a precarious crop. From 64° to 65°, rye, and barley ripen; but beyond 65°, neither oats nor fruit, except currants, succeed; and the pine begins to degenerate. Respecting the climate of the north, see LAPLAND, *ante*, p. 129.

Days begin to be lighted in Christiania in the middle of May, and cannot be dispensed with till the middle of June; the summer then advances rapidly, and the thermometer, in July, often rises at noon to above 60°; but the heats are of short duration; frosts frequently occurring in the latter end of August. The coast, though proverbially rainy and damp, is not so; in the interior, the atmosphere is usually bracing. In some places vegetation is so quick that corn is sown and cut within six weeks.

Agriculture, &c.—Norway is essentially an agricultural and pastoral country. In 1835, of a total population of 585,381, of whom 434,267 were above 10 years of age, 309,000 were connected with agriculture, as proprietors, farmers, or farm-servants, journeymen, country paupers, &c. 28,903 were estimated to be engaged in navigation and the fisheries; 23,145 in commerce and manufactures; 1,192 were government officials, 2,104 pensioners, and 4,720 pauper inhabitants.

Only about 100th part of the entire surface is adapted to be under culture, or otherwise productive. Norway is a country where the feudal system was established, the land is mostly the property of the nobles who cultivate it. Such land is termed *odals*, and its origin probably the same with the German *adel*, or noble, since it carries an equivalent meaning in all its applications. Udal land is noble land, held under no superior, not even the king; but by the right by which the crown itself is held. It is held, consequently, without charter, and is not subject to fines, escheats, forfeitures, nor personal suit; nor to any of the burdens affecting land held of the crown in tenure direct from the sovereign, or from his vassal. The succession to land is not vested in the eldest male heir. On the contrary, all the kindred of the landman in possession are what is called *odels* to his land, and have, in order of consanguinity, a vested interest in it, called *odelsbaarn ret*. Hence, if a landman in possession should sell or alienate his land, the next of kin is entitled to redeem it on giving the purchase money; and if he should do so, it is in the power of the one next him to buy his *odelsbaarn ret*. Formerly the power to redeem estates was unlimited in point of time; but as a law of this sort, by rendering the title of the occupier precarious, prevented him from making any improvement. The right of redemption has latterly been limited to five years of the sale; and it has also been provided that the purchaser shall be indemnified for his improvements. But though this be an improvement on former law, no doubt the better plan would be to altogether the privilege of redemption, by making it absolute and final.

In 1835 the number of taxed agriculturists was 108,192, of whom 72,624 were proprietors, enjoying the *odels ret*, and 30,568 individuals, with only the limited possession of a farm.

Farms generally consist of 3 divisions; the in-field, or enclosed for the crops and best hay; the mark, or lund, also enclosed for pasturing the cattle; and the out-field, a tract of unmeasured grass land, which is some 30 or 40 m. distant; and on which chalets are built, and the cattle are pastured for 3 or 4 months in summer. A farm of average size is stated by Laing to comprise 290 acres, exclusive of the *scater*. Of this extent, 148 acres, comprising the in-field, were only about one-third, however, yielded corn and

potatoes, the remainder being always in grass for hay. The out-field is usually half cleared, being fenced off and ploughed in patches; and it is in this division that the housemen or cottiers, paying from 3 to 4 dols. each of rent, and working at about 8 skillings (3d.) a day, with their food, have their houses and their fenced pieces of land. The farm referred to above, supported 20 cows, 7 horses, and a score or two of sheep and goats. The accommodations for the cattle were very good, the cow-house being floored with timber, and lighted by glass windows: the cows were tended by a woman. The rent was 200 dols. a year; the taxes, including tithe, poor-rate, and all other direct assessments, amounted in all to about 26 dols.; the indirect taxes, including excise and other duties, were inconsiderable. A property like this is reckoned worth about 4,000 dols.; and the prices of ordinary estates vary from 2,500 to 4,500 dollars. Almost all the houses are of wood: they are generally comfortable; and owing to the facility with which they may be constructed, there is but little difference between the residence of a public functionary, a clergyman, or a gentleman of large property, and that of a bonde or peasant proprietor. The division of property among children prevents the erection of any splendid mansions, or any thing more expensive than is proportioned to the property upon which it stands.

Except in a few favoured spots the arable land is, generally speaking, sandy and poor. Hence, if a few days of warm sunshine succeed each other without rain, as is frequently the case in the early part of summer, the roots of the corn and grass are apt to be burned up. In autumn, on the contrary, the decreased warmth prevents the corn from ripening, and not unusually, even in favourable seasons, it is injured by violent autumnal rains. Mr. Malthus says there are three nights about the end of August, distinguished by the name of *from nights*, on account of their sometimes blasting the promise of the fairest harvests. (i. p. 375.) The crops are, in consequence, extremely precarious. Even in the best years a considerable supply of corn has to be imported; and in bad years the inhabitants, especially in the interior, have to sustain the greatest privations.

In addition to the depressing influence of the soil and climate the peasantry are said to be deficient in industry, and wedded to routine practices; and a considerable influence is also ascribed, in the production of dearths, to the great consumption of corn in distilleries. We believe, however, that the latter complaint is wholly without foundation. The demand for corn for distillation makes, no doubt, a greater quantity be sown in ordinary years than if it were prohibited; so that in bad years, when distillation almost wholly ceases, there is a greater supply to meet the necessities of the people. Rye is the crop most extensively cultivated, and next to it oats, flax, and potatoes. The agricultural implements, which are usually made by the peasants themselves, are better than could, under such circumstances, be expected: even thrashing machines are pretty common.

All over Norway there are corn magazines, to which the farmers may send their surplus produce, and whence, also, they may be supplied with loans of corn; the depositors receiving at the rate of 12½ per cent. of increase on the corn deposited for a twelvemonth; and the borrowers replacing the quantities advanced at the expiration of the same period, with 25 per cent. increase. These depositories are found to be useful in consequence of the extreme precariousness of the crops. The difference between the increase allowed on the corn received, and that charged on the corn given out, pays the expenses. In the north, and even in other parts, in years of scarcity, the inner rind of the fir tree, kiln-dried, and ground, is used, together with corn meal, for bread. Some travellers have, strangely enough, and without sufficient information, denied this fact; but, according to Laing, the use of this material is more extensive than is generally supposed. The inner rind next the wood is taken off in flakes, like foal-scap paper, steeped in warm water, and hung to dry in the sun. When dry it is pounded in small pieces, mixed with corn, and ground on the hand-mill. The extended cultivation of the potatoe since the peace, has probably placed the inhabitants of the lower country beyond the necessity of generally using it; but those in the higher parts use it, more or less, every year. It is not unpalatable, but is costly. The value of the tree, left to perish, would buy a sack of flour, if the English market were open. "The Norwegians starve, and we shiver in our dwellings, though each country has the means of relieving the other with advantage to itself; and all for the sake of supporting colonies and other interests, which add little to the well-being of the people of Great Britain." (Laing, 340, 341.)

The most profitable branch of rural industry is cattle breeding. The cattle are small in the bone, thin skinned, usually red or white, and obviously of the same stock with the common unimproved breed in England, France,

and Germany. The cows give excellent milk, and dairy produce enters largely into the food of every family. Goats are a favourite stock, and on every farm they appear more numerous than sheep. Hogs are not numerous. The horses are, in general, inferior to those of Sweden. The real Norwegian pony, however, met with in the N. of the country, is an admirable little animal, fast going, hardy, and fit for a great deal of work. A few are occasionally imported into Scotland. The live stock suffers frequently from wolves and bears, the hunting of both of which is actively pursued; but that of the latter not so much as formerly, the price of bear skins having greatly fallen. The elk, and many kinds of game, are found; and in the N. large herds of rein-deer constitute the chief wealth of the Laplanders. Aquatic birds are so abundant, that the search after their eggs occupies a large share of the attention of the inhabs. of the coast.

From the want of markets, and of other facilities for commerce, the Norwegian farmer is seldom able to convert his surplus produce or savings into money. His object, indeed, is not to raise produce for sale, but to supply himself with the various materials required for the food, drink and clothing of his family. "The food of the labourers who work for gentlemen or large farmers, consists of black rye bread and salted butter or cheese, for breakfast; and boiled barley and a herring, or some other fish, with beer, for dinner. Once a week, and sometimes twice, they have fresh meat. The common people live nearly in the same way, only not quite so well; and some who have large families are often in great distress." (*Clarke's Travels*, x. 448.) Mr. Laing says that the labourers get frequently at their meals an allowance of home-made potatoe or corn spirit. The latter article is especially abundant, being distilled, without let or hindrance, on every farm. Great quantities are drunk, its price being only about 14d. a gallon. The farm labourers, called housemen, live, as has been stated, in cottages on the mark or outfield, at a fixed rent for 2 lives, under the obligation of furnishing a certain number of days' work on the main farm, at a certain rate of wages. A system, in some respects similar, prevails in some of the best cultivated districts of Scotland; but, according to Mr. Laing, the Norwegian houseman is better off than the Scottish married farm servant. Land, he says, being of less value in Norway, the houseman has more of it; in fact, it constitutes a complete little farm, keeping generally 2 cows and some sheep, and producing a full subsistence for a family.* The law of the country has especially favoured the class of housemen. In default of a written agreement registered in the par. court, the houseman is presumed to hold his possession for his own life and that of his wife, at the rent last paid by him. He may give up his land and remove, on giving 6 months' notice, before the ordinary term, and is entitled to the value of the buildings put up at his own expense, which he may have left; but the landlord cannot remove him or his widow, so long as the stipulated rent and work are paid.

Fisheries.—Above the parallel of lat. 65°, agriculture and cattle rearing cease to be the primary occupations of the pop. The inhabs. of Norrland and Finmark, amounting to 91,000 persons, subsist chiefly by fishing, when they are not supported on the produce of herds of rein-deer. The Loffoden Islands (see *ante*, p. 191.) are the principal seats of the cod-fishery; and the average value of the fish caught there during the winter has been estimated at 86,500*l.* The winter fishery lasts from Feb. to April; after which the fishermen are either employed by the Russian merchants, or retire to their homes to begin the herring fishery. Besides these general fisheries, in every fiord, even at 100 m. from the sea, an abundance of cod, whiting, haddocks, flounders, herrings, &c. is caught daily for use and for sale, by the seafaring peasantry.

The Forests and Mines of Norway might be rendered two of its principal sources of national wealth. Fir timber, deals, &c. are among the chief exports. But the want of navigable rivers, canals and roads occasions great difficulties in the conveyance of timber to the coast; for it is only during the spring thaws that the rivers or torrents are deep enough to float the timber down to the fjords. No doubt, however, were the timber trade of this country placed on a proper footing, by doing away with the impolitic preference given to American timber, a great stimulus would be given to its importation from Norway; and the advantages thence arising would, it may be fairly presumed, lead to the formation of improved means for supplying the shipping ports with timber and deals. The manufacture of the latter is the principal branch of industry carried on in the country. They are mostly shipped from Christiania, Drammen, &c. "Their forests are of the most essential service to the Norwegians, who apply their products to an infinite variety

* Dr. Clarke, however, says, that in the neighbourhood of Christiania, the housemen have seldom land to keep a cow (x. 450.); and we understand that this is frequently the case in other parts.

of purposes. Their *summa bonum* seems to consist in the produce of the fir. This affords materials for building their houses, churches, and bridges—for every article of their household furniture—for constructing sledges, carts, and boats—besides fuel for their hearths. With its leaves they strew their floors, and afterwards burn them, and collect the ashes for manure. The birch affords, in its leaves and tender twigs, a grateful fodder for their cattle, and bark for covering their houses. The bark of the elm, in powder, is boiled up with other food, to fatten hogs: sometimes also, though rarely, it is used in the composition of their bread." (*Clarke*, x. 344., 8vo. ed.)

No coal has yet been discovered in Norway; but Berendish, between the N. Cape and Spitzbergen, appears to consist principally of that mineral. Some is occasionally brought thence by Tromsøe and Hammerfest whalers; and, were the forests raised to their due importance by better means of conveyance, it is probable that coal might be supplied to the country in quantities which would render the cutting down of the trees for fuel in a great measure superfluous. The iron of Norway, though inferior to that of Sweden, is of excellent quality, and very generally found. Copper is found at Roraas; and near Kongsberg a silver mine, which has been wrought for upwards of 200 years, was, about the middle of last century, accounted the richest in Europe. In 1768, it produced ore to the value of 79,000*l.*: it has since, however, materially declined. Lead, cobalt, arsenic, and a little gold are met with in various places. At Walöe is a salt mine, producing about 20,000 tons a year. Alum, asbestos, marble, slate, building stone, &c., are among the other mineral products.

Manufactures are almost wholly domestic, the division of labour being carried to a less extent in Norway than in, perhaps, any other European country. The *bonder*, or agricultural peasantry, build their own houses, make their own chairs, tables, ploughs, carts, harness, iron-work, basket-work, and wood-work; in short, except the window glass, cast iron ware, and pottery, every thing about their houses is of their own make. The Norwegian peasant, indeed, unites most trades in his own person, his principal tool for executing all kinds of work in wood being the knife he carries in his girdle. The shoemaker and tailor go round and cobble and sew for a few weeks at each village, getting their maintenance, and being commonly paid over or above, in potatoes, meal, butter, or other produce. Spinning-wheels and looms are at work in every cottage and house in the country; the farmers and country people spinning their own flax and wool, and weaving their own linen and woollen clothes. An official report, in 1829, made the total number of manufacturing establishments 337, but of these 138 were distilleries and 80 tobacco factories, principally in Christiania, Drammen, and Bergen. There are, in fact, very few fabrics of clothing materials; and few Manchester or Glasgow fabrics are seen. No doubt, however, were greater facilities afforded to the Norway timber trade by Great Britain, our manufactures would, at no very distant period, supersede the ruder fabrics of the Norwegian peasantry.

Commerce.—Foreign trade is in a very depressed state from various causes, but principally from impolitic restraints. Bergen and Trondhjem were formerly members of the Hanseatic Association, on the decline of which these towns retained, and still hold separately, the same privileges they enjoyed in conjunction with the other members of that body, though Christiansand and some other minor towns have succeeded, after a long struggle, in obtaining a share of the commercial monopoly. The merchants and shopkeepers in Norway are all licensed burgesses of Bergen, Trondhjem, or other privileged towns, to which they pay a certain tax; and each has a certain tract or circle belonging to his factory, within which no other person is entitled to buy or sell. The imports consist principally of coffee, sugar, tobacco, corn, spices, brandy, wines, tea, &c., and the exports of fish, timber, and other native produce. The trade of Norrland and Finmark is, however, different from that of the rest of the kingdom. The privileged traders do not supply the inhabs. of these provs. with necessaries, except during the winter fishing season; and as no other Norwegian dare interfere, the trade of these provinces is now almost wholly in the hands of the Russians, whose ships have been, since 1828, allowed admission, free of duty, into every port N. of Tromsøe.

Owing to the thinness of the population, and the bad state of the roads and other means of communication, there is but little internal trade. "Even in the largest towns, such as Christiania and Trondhjem, there is nothing that can be called a market. It is extremely difficult to get a joint of fresh meat; and a pound of fresh butter is an article not to be purchased even in the midst of summer. Fairs are held at certain seasons of the year, and stores of all kinds of provisions that will keep are laid in at these times; and, if this care be neglected,

inconveniences are suffered, as scarcely any thing is bought retail. Persons who make a temporary sojourn in the country, as small merchants, not possessing farms, complain heavily of this inconvenience." (p. 1372.) Latterly, however, some improvements have been made in the facilities of interchange; and the inconveniences depicted by Mr. Malthus have been in some degree diminished.

Bank of Norway, established in 1816, has its head office in Trondhjem, and branches in Bergen, Christiania, and other parts of the country. Its principal business consists in issuing in its own notes, upon first securities over a sum not exceeding two thirds the value of the same, at 4 per cent. interest. The notes of this bank are at only a trifling discount when compared with the notes of the English bank, and its paper is in general use in Norway instead of gold and silver. The mark or ort of 24s. English; 5 marks = 1 specie-dollar. Money being so cheap, internal traffic is almost wholly conducted by barter. Provisions are generally cheap; and a dollar has in this respect, estimated as equivalent to a pound in England; but it should be added, that the innkeepers, especially the innkeepers, never omit an opportunity of overcharging travellers. The most usual mode of travelling in this country is with the *carriole*, a carriage formed somewhat like a shell, and slung over the shafts and two cross bars, horsed as in England, and driven by the farmers along the road, at the order of the passenger. The price of posting in this manner is 4d. a mile. Steamers ply along the coast between Christiania and Bergen, but there is no similar service further N.

Government.—Though Norway be under the same crown as Sweden, she is no more connected with that kingdom than Hanover was formerly with Great Britain. Her constitution differs from that of Sweden in many important respects. The Swedish government is in part hereditary; that of Norway is an hereditary monarchy, but democratic assembly only. This, which is called the *thing*, consists of a certain number of members, 75 and 100; about one third of whom are representatives of the towns, and the rest by the rural districts. The age of the Norwegian of 25 years of age, who is a freeholder of any town, or possesses property, or the life-estate of the value of 30*l.*, is entitled to elect and be elected; but for the latter privilege he must not be less than 30 years of age; nor an officer of the crown (which is the representative or organ in the Norwegian storting) must he must have resided in Norway for 10 years. The country is divided into election districts and sub-districts according to their population. The mode of election is, being performed through the intervention of election-men. In the towns one election-man is chosen from 50 voters; in the rural sub-districts by every 100 voters: the choosing of these takes place in the parish at the end of every third year. The election-men meet at the place appointed for the district or sub-district election, and there elect among themselves, or among the other qualified voters of the district, the election-men to the storting, in the proportion of one election-man for the towns, and one for the rural sub-districts. Substitutes for those who have the next number of votes take the place of both election-men and members of the storting in the event of their unavoidable absence from duty. The storting meets for 3 months once in 3 years, and is not bound by any writ from the king or the executive; it may be convened at other times, but in that case its acts are only temporary acts, which must be ratified at the next ordinary session, otherwise they do not have the force of law. Each storting settles the taxes for the next three years; enacts, repeals, or alters laws; decides on the credit of the state; fixes the administration of the revenue; impeaches and tries before a court of its own body all state ministers, judges, and other officers, &c. This body, when elected, divides into two houses. One, called the *lagthing*, has a correspondence generally to those of our House of Commons, and is composed of one fourth of the total of members of the storting; the other three fourths constitute the *odelthing*, or lower house; and all enactments must originate in this division. A bill which has passed both houses usually becomes law, without the sanction of the king. But the Norwegian storting enjoys a right which no other legislative assembly in Europe possesses. If a bill pass through the storting in three successive storthings, on the third it becomes the law of the land without the royal sanction, and this right was exerted when the Norwegians abolished their hereditary nobility in 1821. Each member of the storting has an allowance of 1½ dollar a day during the session.

The mode of assembling the people in the country for business is simple, but curious. A *budstick*, or budstick, about the size and shape of a constable's staff, with a spike at one end, is made hollow to hold a paper, on which are written the official notice to the people to meet, with the time, place, and object. This is delivered from the court-house of the district to the nearest householder, who is bound by law to carry it, within a certain time, to his nearest neighbour; he must transmit it to the next; and so on. If the owner be not at home, the bearer is to stick it "in the house-father's great chair by the fire-side;" and if the door be locked he must fasten it to the outside. He who, by neglect in passing the budstick, has prevented others from attending, pays a fine for every person so absent.

Justice, &c.—The Norwegian peasantry were never *adscripti glebe*, subject to local judicatories, as in feudal countries, but subordinate only to the general jurisdiction of the country. The small kings, expelled in the ninth century by Harold Haarfager, seem never to have attained the powers of the great feudal lords in other countries, but were always in some degree dependent upon the general *things*, or courts, of the people. Trial by jury is a very ancient institution in Norway; but many of the details in the administration of justice originated with the Danes. The latter instituted the courts of mutual agreement, one of which exists in each parish, the arbitrators being chosen by the householders every third year. Norway is divided, for legal purposes, into 4 *stifts* and 64 *sorenskriveries*. In each of the latter divisions is a legal court, which sits once a quarter, and in which the *sorenskriver*, who presides, has only a vote as a member of the jury, a majority of whom decides the case. The *stifts* *amts*, consisting each of three judges, with assessors, and established in the chief town of each *stift*, are the courts of appeal from the foregoing. The *høiesteret*, in Christiania, composed of a president and eight assessors, is the highest court, and one of final resort. The special courts are the *rigsret*, or lagthing, the ecclesiastical, and the military tribunals. Judges are responsible in damages for their decisions. Capital punishment has been abolished; slavery in chains, for a longer or shorter period, being the ordinary sentence for all kinds of crimes.

The *religion* is the Lutheran; but much ceremony still remains in the forms of worship. Norway is divided into 5 bishoprics and 336 parishes: the latter divisions are very extensive, but several are frequently under the cure of one priest. The incomes of the par. priests amount to from 800 to 1,600 *dollars*, those of the bishops to 4,000 *dollars* a year. (*Lain*, p. 180.) The former are paid by means of rents from glebe lands, a small tithe of corn from each farm, or of fish in some parts, and fees, and other unfixed sources of revenue. There are no dissenters; all sects of Christians are, however, tolerated, but Jews are excluded from settling in Norway, nor are even suffered to remain in the country for more than a few hours at a time.

In 1837, 176,783 persons, or about one seventh part of the pop., were receiving *public instruction*. Schoolmasters are settled in each parish, who live either in fixed residences, or move at stated intervals from one place to another, and who frequently attend different schools, devoting one day only in the week to each. They are paid by a small tax levied on householders, besides a personal payment from each scholar, amounting, in the case of agricultural servants, to about 8 *skilling*, or half a day's wages in the year. Instruction in the primary schools is limited to reading, writing, arithmetic, and singing, with sometimes the rudiments of grammar and geography. Almost every town supports a superior school; and in 13 of the principal towns is a *lærde skole*, or college, the instruction in which includes theology, Latin, Greek, Norwegian, German, French, English, mathematics, history, geography, &c. Christiania has a university, founded by the Danes, in 1811, which is modelled on the system of the German universities, but differs from them in the professors not receiving fees; and in which the number of students varies from 600 to 800. (*Brewster*.) There are, also, schools of drawing and architecture, commerce and navigation, and other special schools. Sunday-schools have been widely established; and the Society of Public Good maintains a public library in most parts of the kingdom.

The press in Norway is altogether free. Every man is at liberty to print and publish what he pleases, being responsible, however, for what he does print. No tax exists on newspapers; and somewhat more than 20 are published in the kingdom, besides several scientific journals. But, notwithstanding these aids to science and advancement, Norwegian literature is not in a very flourishing state, and can by no means bear to be compared with that of Denmark or Sweden.

The *army* of Norway consists of about 10,000 infantry, 1,000 cavalry, 1,000 artillerymen, and 150 engineers; in all, 12,150 men. A militia is raised throughout the interior, into which all males, between 27 and 30 years of age, must enter; and on the sea coast there is a kind of marine militia, in which all seafaring men, and inhabitants of sea ports of a certain age, must be enrolled. The *naval force* consists of 5 brigs and 117 gun boats. (*Alm. de Gotha*, 1841.)

The *public revenue*, for the three years 1839—1841, was

estimated in the budget of the former year at 2,130,000 dolls.; the expenditure for the same period is fixed at 2,415,286 dolls.; the deficiency will be made up from the reserve funds in the hands of the government.

People, &c.—The Norwegians are members of the widely spread Teutonic race. The men are, in general, rather small in stature, but well made, and appear to have great muscular power. The Gludbrandsdal peasants are said to be the most athletic, but they are decidedly, as a body, shorter and slighter of limb than the mountaineers of Delecarlia, in Sweden. Their complexions, hair, &c., are fair, and resemble more of the Danes, and other N. German tribes, than the Swedes. The dress of the men varies greatly in the different districts, being, for the most part, more gay and fanciful than that of the women: in the towns, however, the upper classes have fully adopted the costume common in the rest of Europe. "The peasants possess much spirit and fire in their manner, are frank and undaunted, yet not indolent; never fawning on their superiors, yet paying proper respect to those above them. The principal mode of salute is by offering the hand; and when we gave them a trifle, instead of returning thanks by a word or a bow, they shook our hands with great frankness and cordiality." (*Coxe's Travels in the North of Europe*, v. 7.) They are generally addicted to drinking, and the standard of morals is said to be, in other respects, higher in Sweden than in Norway. Women are very generally employed in field-labour; and beggars are numerous, especially in the towns. The average number of illegitimate births is about 1 in 5; and in one district it was, from 1826 to 1830, as much as 1 in 3½. (*Laing*, 151.) But illegitimate children are most commonly legitimised by a legal act, and are seldom or never abandoned by their parents. The Norwegians are extremely fond of dancing, music, and dramatic entertainments, which are the principal amusements introduced at their festivities.

History.—Norway is interesting as the original seat of the Northmen, who made such frequent descents on the coasts of England and France in the dark ages, and who were the ancestors of that remarkable people the Normans, who conquered and carried their institutions to England and other of the fairest portions of Europe.

Little is known of the history of Norway before the end of the 9th century, when Harold Haarfager united the whole country under his dominion. Christianity was introduced by Olaf I. in the succeeding century. In 1387 Norway was annexed to Denmark, to which it remained attached till 1814, when the Allied Powers gave it to the Swedes in indemnity for Finland. The Norwegians, indignant at the transfer, took arms, and elected Prince Christian Frederick of Denmark for their king; but the latter resigned the crown in the same year, and the country has since been united to Sweden: and this union will probably be maintained without difficulty so long as the Swedish cabinet attempts no rash or violent changes in the internal administration of the country. (*Official Reports; Laing's Norway* is an able work, but its statements are obviously much too favourable, and must be received with great modification; *Bremner's Excursions*, vol. i.; *Coxe, Inglis, Clarke, Barrow, &c.*, passim; *Dict. Géog.*)

NORWICH, a city of England, being a co. of itself, and an important manufacturing town, locally situated in hund. Humbleyard, co. Norfolk, of which it is the cap., on the navigable river Wensum (crossed here by 10 bridges), 56 m. N.E. Cambridge, and 96 m. N.N.E. London; lat. 52° 7' N., long. 1° 16' E. Area of the city and co. 5,920 acres: pop., in 1811, 37,256; ditto, in 1821, 50,288; ditto, in 1841, 60,982; and probably, in 1850, 63,000. The co. of the city is of an irregular circular form, with an average diameter of about 5½ m., the city itself standing a little E. of its centre on the slope and summit of a hill, gently rising from the river. The buildings are, in a great measure, circumscribed by the remains of the ancient fortifications which still exist, particularly on the W. and N. sides of the city. The streets, with the exception of Giles Street, and one or two more, are narrow, and so irregularly laid out, as to preclude the possibility of any general description. It has, however, many handsome houses, open spaces, &c., and is well paved, watched, and lighted with gas: and its appearance from a distance is remarkably striking. The castle and cathedral are the principal public buildings; but it has no fewer than 36 par. churches, besides chapels and other edifices. The castle (supposed to have been built at intervals between the 10th and 12th centuries, by Canute, Roger Bigod, and others,) occupies a commanding eminence near the cattle-market in the centre of the town, and is a very imposing object at a distance: the part now extant forms a large square, on the E. side of which is an entrance tower, recently restored on the original plan. The entire building formerly occupied an area of 23 acres, and had three nearly circular and concentric lines of defence formed by a wall and ditch: the inner ditch, now laid out in gardens, still remains, in-

closing the inner ballium, and is crossed by a semi-circular bridge of one arch, 40 ft. in diameter, forming one of the largest and most perfect Saxon arches in the kingdom. In 1793 a co. gaol was commenced on the Castle-hill; and at the same time the ditch was enclosed with iron palisades and gates. Within the precincts, also, a new co. hall has recently been erected in the Tudor style. These modern additions, however, are quite incongruous with the ancient and venerable appearance of the original Norman fabric. The cathedral, originally built in 1096, but subsequently so repaired and enlarged that it did not assume its present form till the 16th century, is one of the largest and finest ecclesiastical edifices in the kingdom. The plan is almost wholly Norman. It consists of a nave, with side aisles, 2 transepts, and a choir with a semicircular E. end: the whole length from W. to E. is 411 ft., that of the transepts from N. to S. being 191 ft., and the breadth of the nave and choir, 72 ft. The cloisters form a square of 174 ft. within the walls adjoining the S. side of the nave. From the intersection of the cross formed by the nave, choir, and transepts, springs a lofty Anglo-Norman tower of 4 stories, highly ornamented and surmounted by an elegant spire, rising 317 ft. from the basement of the church. The W. entrance is extremely beautiful, and is the best point of view from which the cathedral can be seen; but the friable nature of the stone used in its construction has caused a decay of the more salient ornaments, and thus greatly diminished the external effect. The appearance of the interior is, on the whole, grand and imposing; the architecture, however, is of various eras, from the Anglo-Norman to the English-perpendicular style; and modern alterations and additions have not always been in the best taste. The ecclesiastical establishment consists of a dean and 6 prebendaries, now 5, and having a nett revenue of 5,240*l.*, besides 8 minor canons with separate allowances; but it is to be subjected to various retrenchments. The bishop's diocese comprises the whole of Norfolk, with part of Suffolk, and the revenue amounted, in 1838, to 4,465*l.* The episcopal palace stands N. of the cathedral, on the site of that built by the founder: it was erected in 1318, and, after undergoing repairs, and receiving considerable enlargements from successive prelates since the Restoration, has become a tolerably commodious residence, attached to which is a large and well-laid out garden, comprising some ruins of the hall belonging to the ancient palace. Near the W. front of the church is an ancient chapel, dedicated to St. John the Evangelist, which had underneath a charnel-house: it is now used as a free grammar-school. Near it are the two ancient gates of St. Ethelbert and Erpingham; the former is in the decorated English, and the latter a fine specimen of the late perpendicular style. Among the churches, which are here more numerous than in any city except the metropolis, a few deserve notice as good specimens of ancient architecture. St. Peter's, Mancroft, at the corner of the market-place, is a large edifice in the perpendicular style, surmounted at its W. end by a lofty tower; the inside is remarkably light and elegant, and it has a fine altar-piece and E. painted window. The churches of St. Andrew, St. George Colegate, St. Lawrence, and St. Saviour, present similar architectural features, having high towers either of stone or flint. Those of St. Ethelred, St. Benedict and St. Julian, have round towers, and belong apparently to the early Norman era; but they have been much altered and mutilated. Norwich abounds, also, with the remains of other ecclesiastical edifices. The common-hall, in St. Andrew's parish, consists of the nave of a church attached to a monastery of Black Friars; the workhouse till very lately occupied an old Flemish convent, near which is the Dutch church, now used as a chapel to the workhouse, and St. Giles's hospital comprises portions of the former church of St. Helen's. There are 2 R. Catholic chapels, 7 places of worship for Baptists, 3 for Independents, 2 for Calvinist-Methodists, 5 for Wesleyan or Primitive Methodists, 1 for Swedenborgians, 1 Unitarians; besides which, the Society of Friends have 2 meeting-houses, and the Jews a synagogue. Attached to the various places of worship are numerous Sunday schools, of which about a half are supported by the Established Church, and the rest by dissenters; the whole furnishing religious instruction to upwards of 7,000 children; besides which, there are several endowed charity-schools, with national, Lancastrian, and infant schools, either wholly or in part supported by subscription, and attended by about 3,500 children of both sexes.

The free grammar-school, founded in 1318, and restored by Edward VI., is maintained out of the funds of a corporation charity, called the Great Hospital: it has an upper and under master, and possesses fellowships and exhibitions at Caius College, Cambridge. The boys' and girls' hospitals, founded in the 17th century, are supported by the produce of estates in trust of the corporation, and furnish clothing and instruction to upwards of 100 children. Doughty's hospital, established

and under the same patronage, provides for infirm and aged persons; but the principal charity is St. Giles's hospital, near the cathedral, otherwise known as the 'Great,' or 'Old Man's,' maintained by rents and other property, averaging £100 a year, and providing clothing, food, and a bed for 165 inmates, besides servants. It appears, however, that till very recently these trusts were extensively abused for political purposes. (Comp. *Mun. 27th and 29th Report*, with *Mun. Corp.* App. iv.)

Of the charitable institutions of Norwich supply subscriptions, the first place is due to the and Norwich hospitals, occupying a large brick building erected in 1771, and enlarged in 1802; it has accommodation for about 120 in-patients, and has about 100 number of out-patients. Bethlehem hospital, an ill-endowed lunatic establishment, founded in 1613 at Thorpe, about 2 m. distant, is the county asylum. The other principal institutions of this city are the dispensary, eye-infirmary, magdalen asylum, charity, and blind asylum, with numerous minor associations, bible and tract societies, provision, &c.

Buildings devoted to the purposes of municipal jurisdiction comprise the guildhall, a large old building of the 15th century, but subsequently much altered and though even now it be little worthy of so large a city. St. Andrew's, or the New Hall, a noble fabric, is mentioned as having formed part of an old church; 3. the County Hall, in the castle, a fine and commodious building of perpendicular architecture and recent construction; 4. the new gaol and bridewell, a modern and well constructed building outside the walls, near St. Giles's Gate; and, 5. the gaol and house of correction, on the castle, a large but plain building, well adapted for its use, the establishment being conducted on the system of silence, separate confinement, and hard labour; the male prisoners average about 80, the weekly cost being 2s. 11d. (*Pris. Inspec. 4th Rep.*) A corn exchange was erected in 1828; and the barracks in Pockthorpe are substantially built of brick, enclosing an area of 10 acres. Norwich has a large workhouse, belonging to the united parishes; expended for the relief of the poor amounted in 1847.

Of the literary establishments is the public library, formed in 1784, and now occupying a handsome structure in the Grecian style, erected on the site of the old city gaol; the Norfolk and Norwich Literature occupies a building of recent erection, a good library and a numerous body of subscribers. The building is a museum, but not connected with a society. A society, called the Norfolk and Norwich Art-Union, has occasional exhibitions. Conventions held in the common hall in St. Andrew's parish, musical festivals are held in St. Andrew's Hall. There is also a neat modern theatre, and assembly-rooms, news-rooms, and a mechanics' institute. Two newspapers, (the "Norfolk Chronicle," and "Norwich Mercury") are published every Saturday.

Norwich has been celebrated for its manufactures since the reign of Henry I., when the Flemings first settled here. It introduced the spinning and weaving of long woollen cloth, called *worsted*, from the name of the village in the county where the business was first established: the worsted trade was also greatly increased during the 17th century, by the immigration of Flemish weavers from the Low Countries. Norwich, however, appears to have attained its greatest prosperity at the close of the 18th century, when the value of its goods exported to the East Indies, Russia, and other places abroad (consisting of camlets and camletees, callamancoes, worsted shawls, and shawls, lastings, damasks, and shawls), was estimated to amount to £1,000,000 a year, or to one-third of the British manufactured goods exported in that period. (*Handloom Weavers' Report*, part ii.) We believe, however, that this estimate is a great overmark; and since then the manufactures which have materially declined, or rather, perhaps, have not kept pace with their progress in Lancashire and the West Riding of Yorkshire, &c.: the privileges enjoyed by the latter, in the command of the absence of corporation privileges, and the scope given to competition and improvement, enabled them to produce, at cheaper rates, several articles which were at one time peculiar to Norwich. In the greater part of the yarn now used in making woollen fabrics is spun at Bradford, in Yorkshire; and the worsted manufacture of the West Riding is decidedly extensive and valuable than that of Norfolk. Principal fabrics that are at present manufactured about Norwich comprise bandanas, bombazines, mattas, fillovers, or ornamental shawls and shawls, gauzes and crapes, princettas (a fabric of worsted, with a worsted shoot), silk, silk shawls,

woollen shawls, jacquard, coach-lace, lustres, shallis and mousselines-de-laine, fringes, &c., with sacking and horse-hair. In 1839, there were in the city and its vicinity 5,075 looms, of which 1,021 were unemployed; and of the 4,054 looms then at work, there were 3,398 in the weavers' houses, and 656 in shops and factories: indeed, by far the greater part of the looms belong to families having only one or two. The labourers at these looms comprised 2,211 men, and 1,648 women, with 196 children. In the same year, two silk mills employed 731 hands, three worsted mills 385 hands, two woollen mills 39 hands, and one cotton mill 130 hands, making a total of eight mills wrought by a power (chiefly steam) of 151½ horses, and employing 1,285 persons. The gross wages of the weavers, when fully employed, range between 8s. and 25s., those engaged on fillovers, shallis, and fine bombazines, earning from 15s. to 25s. a week; but when "play-time" and expenses have been deducted, the average nett wages of the hand-loom weavers are said to amount to only 7s. 2d. a week; but this, we believe, is, speaking generally, below the mark. A power-loom factory of mohair (or Angora wool), established at Lakenham (one of the out-townships), employed about 400 hands, chiefly children. As respects the health of the weavers, Dr. Mitchell reported to the hand-loom commissioners, that Norwich is most favourably situated, the ground being on a bed of gravel over a substratum of chalk; that the working people, weavers included, have a fresh and healthy complexion; and that the physical condition of the weavers is much better than that of the same class in Spitalfields. Epidemics, however, occasionally prevail, as in Bethnal Green; but not to the same extent, or so continually, owing to the better air and house-ventilation usual in Norwich. The prevalent diseases are dyspepsia, consumption, female diseases, and those belonging to children, which last are attended with a large mortality. (*Handloom Weavers' Rep.* ii. 320.) On Sunday, the work people, especially the women, are well dressed; in general they attend divine service, and drunkenness prevails less than in most large towns. Frugality, however, is said to be little practised; few save any thing when they have the means; and when work is scarce, they are in the greatest distress. The industry and morals of the people have suffered materially from their frequent strikes and riots; from the disunion among the master-manufacturers; the party spirit which pervades all classes, and the electioneering abuses, for which Norwich is pre-eminent. (*Handloom W. Rep.*, ii. 332-336.)

Besides its worsted and silk manufactures, Norwich has iron and brass foundries, snuff-mills, vinegar-works, malt-houses, breweries, oil, mustard, and corn-mills; but they are not on an extensive scale. Of late years the manufacture of ladies' boots and shoes has been very extensively introduced into Norwich, and now (1850) forms one of its staple businesses. Women and children are principally engaged in the trade, but it, also, employs a good number of men. The trade of the town consists in the exportation of its manufactures, chiefly to London and other English ports, but partly also abroad, in exchange for corn, coal, and various other articles of consumption. The town has, since 1833, had the important advantage of being accessible to vessels drawing 10 ft. water, by means of the canals connected with the Lowestoff navigation (*see* Lowestoff); and its trade is, also, materially promoted by the Eastern Counties' Railway. A branch bank of the Bank of England is established here, and there is a joint-stock bank, called the East of England Banking Company, besides 2 private banks and a savings' bank. The Norwich Union Insurance Company is an establishment of great importance; it was at one time much mismanaged, but such, we are informed, is no longer the case.

Norwich, which claims to be a bor. by prescription, and received its principal charter constituting it a separate co. in 1403, was governed before the Mun. Reform Act by a mayor, 24 aldermen, and 60 common councillors; but by the provisions of that act it is divided into 8 wards, and has a mayor, with 15 other aldermen, and 48 councillors. The bor. has also a commission of the peace under a recorder, and a sheriff's court for the recovery of debts to any amount, and a county court, before which 1,578 plaints were entered in 1848; the assizes and quarter sessions for the co. are also held here. Corp. revenue, 1848-9, £11,557. Norwich has returned 2 mems. to the H. of C. since the 25th Edward I., the right of election, down to the Reform Act, being vested in the freemen and freeholders not receiving alms. The electoral limits were left untouched by the Boundary Act, except that the castle precinct was included. Registered electors, in 1849-50, 5,539. Norwich is likewise a polling-place and principal election-town for the R. div. of Norfolk. Markets on Wednesday and Saturday, but chiefly on the latter, for corn and cattle. Large horse and sheep fairs, day before Good Friday, Easter-Monday, and Whit-Monday.

Norwich is supposed to have risen from the decay of

an old Roman town, now known as Castor St. Edmund's, probably the *Venta Icenorum* of antiquity. A royal fortress was erected here by the East-Angles in the 6th century, and a town was gradually formed round it, which, even before the Norman Conquest, was so important as to have a mint and 25 par. churches, with 1,320 burgesses. William the Conqueror bestowed the castle on Roger Bigod, one of his Norman followers, who probably erected the present keep. It continued in the possession of his descendants till the reign of King John, when it was seized by the king, and finally surrendered to the crown in 1224. In the reign of Henry I., a colony of Flemings came over, who were joined by a still greater number of immigrants in 1336, from which time Norwich became an important seat of manufactures. In 1403, Henry IV. separated the city from the co., and made it a co. of itself with peculiar privileges. Its prosperity, however, owing to plague, scarcity, and frequent fires, had begun to decline, when, in 1566, a fresh immigration took place of 4,000 Flemings, who had fled from the persecutions of the Duke of Alva. In the civil wars of Charles I., Norwich declared for the parliament, and was occupied by its forces till Cromwell became protector. It is remarkable in ecclesiastical history for its numerous convents and other religious establishments, the funds of which have in most cases been converted to charitable uses, and placed in the trust of the corporation. Among other distinguished persons, Norwich has given birth to Matthew Parker, archbishop of Canterbury in the reign of Elizabeth; John Cosin, bishop of Durham; Dr. Kaye, one of the founders of Gonville-and-Caius College, Cambridge; Dr. Samuel Clarke, the author of the famous work on the Attributes; and Beloe, the translator of Herodotus. (*Parl. Papers; Comm. Reports, &c.*)

NORWOOD, a populous village of England, hunds. Brixton and Wallington, co. Surrey, on the top and sides of a steep range of hills, $5\frac{1}{2}$ m. S. London. Pop., in 1841, 6,046. It is very irregularly laid out, chiefly on a wide and elevated common, commanding an extensive view of the metropolis northward, and of the plains of Surrey southward. The neighbourhood is studded with villas, belonging partly to merchants and others engaged in business in the city, and partly to persons retired from active pursuits. Of late years, Norwood has been a good deal frequented in consequence of the discovery of a mineral spring at a place called *Beau-lieu*, or Beulah; where large gardens, laid out with terraces, plantations, &c., have been opened to the public for fêtes, picnic parties, &c. On the N. acclivity of the hill is a handsome church, opened in 1825 (subordinate to Lambeth), with a Corinthian portico and steeple. There are, also, places of worship for Wesleyan Methodists and Independents, with attached Sunday schools. A school of industry, established here in 1812, furnishes instruction in reading, writing, and needle-work, to nearly 300 girls. Here also is a large national school for children of both sexes, and a Lancastrian school, attended by about 200 boys. But the principal distinction of Norwood is the South-Metropolitan Cemetery. It comprises about 40 acres, has 2 fine chapels, is well laid out, and cost in all from 70,000*l.* to 75,000*l.*

NOTO, a city of Sicily, intend. Syracuse, cap. distr., on a hill near the Noto, and 16 m. S.W. Syracuse. Pop., in 1831, 11,156. It stands near the site of the ancient *Nectum*, now called Vecchio Noto, the surviving inhab. of which removed thither after the destruction of their city by an earthquake in 1693. Noto has large squares and regular streets, and is one of the best built, most agreeable cities of the island. Besides many handsome private residences, it has various ecclesiastical buildings, a council house, lyceum, hospital, &c. Some, however, of its public buildings, being on too magnificent and expensive a scale for a provincial town, are unfinished. There is in this city an excellent private museum, especially of medals and coins, and also of antiquities, minerals, &c. The ruins of an amphitheatre and of a gymnasium are the principal remains of the ancient city, which stood about 4 m. N.W. the modern town. It is rather unhealthy, but is surrounded by a very fertile tract of country, in the produce of which it has an active trade. (*Smyth's Sicily*, p. 177.; *Ortolani, Dizionario della Sicilia, &c.*)

NOTTINGHAM, a central co. of England, in the basin of the Trent, having N. the cos. of York and Lincoln, E. the latter and Leicester, and W. Derby. It is oval-shaped. Length, N. to S., 50 m. Area, 535,680 acres; of which about 470,000 are arable, meadow, and pasture. The Trent partly traverses and partly bounds the co. on the E., and it is also traversed by its important tributary, the Idle. Excepting the vales of the Trent and Belvoir, the surface is mostly hilly and uneven; but the hills do not rise to any considerable height. The soil in the vales is either a sandy or a clayey loam, and is very fertile; elsewhere it is principally sandy and gravelly. The climate is reckoned peculiarly dry and good. The ancient forest of Sherwood, the scene of the exploits

of Robin Hood and his companions, anciently covered the greater part of the hilly portion of this co. along its W. side; but it has long since been disforested, and now contains some magnificent seats and parks. Agriculture, though still susceptible of material improvement, is, on the whole, good. The vale of the Trent is famous for its crops of oats; but wheat, barley, beans, peas, and cabbages are also extensively grown. There is a considerable extent of grass and meadow land; and irrigation has been extensively practised, particularly on the estate belonging to the Duke of Portland. The breeding of heavy black horses is pursued to some extent. Cattle, principally of the short-horned variety. Estates of all sizes; many small. Farms generally small, and mostly held at will. Average rent of land, in 1843, 26*s.* 5*d.* an acre. Coal is abundant in the W. parts of the co. Nottinghamshire is the grand seat of the manufacture of bobbinet, or Nottingham lace, and also of the manufacture of cotton and silk stockings. It is divided into 6 wards, 1 liberty, and 285 parishes. It returns 10 mems. to the H. of C., viz. 4 for the co., and 2 each for the bors. of Nottingham, Newark, and East Retford, which are its principal towns. Registered electors for the co. in 1849-50, 7,356; being 3,817 for the N., and 3,539 for the S. division. In 1841, the co. had 50,550 inhab. houses, and 249,910 inhab.; of whom 121,731 were males, and 128,179 females. Sum expended for the relief of the poor in 1848-49, 69,848*l.* Annual value of real property in 1815, 751,626*l.*; do. in 1843, 1,142,367*l.*

NOTTINGHAM, a parl. and mun. bor., and extensive manufacturing town of England, and co. of itself, locally situated in the above co., of which it is the cap., hund. Broxtow, on the Leen, about $\frac{1}{2}$ m. from its junction with the Trent, crossed here by an old bridge of 19 arches, 14 m. E. by S. Derby, and 108 m. N.N.W. London. Area of parl. bor., which is co-extensive with the co. of the town, and comprises three pars., 2,610 acres. Pop., in 1821, 40,415; do., in 1841, 51,441; and estimated in 1850 to exceed 57,000. The town stands partly at the bottom and partly on the sides of a steep red sandstone rock, the summit of which is crowned by a modern building, called the castle, occupying the site of a castle built by the son of William the Conqueror, and demolished by order of Charles II. The streets, many of which rise above each other in successive terraces, are very narrow, and irregularly laid out: two long thoroughfares run nearly parallel N. and S., crossed at right angles by other streets; and considerable improvements have taken place in the N. part of the town. All the streets are well paved, and lighted with gas; there is a good supply of water from two companies, and the police is tolerably effective. The market-place, which is spacious, and surrounded by handsome buildings, has, at its E. end, the new exchange, a quadrangular building of four stories, erected at the beginning of last century, and much improved within the last few years: the lower part comprises shops, butchers' stalls, &c., the upper stories being used for assemblies and public business. The county hall, on the high pavement, near St. Mary's church, is another very conspicuous edifice, comprising two law courts, a grand jury room and other apartments, for the business of the assizes. Behind it, and connected by a long covered passage, is the co. prison, built on the edge of a rock, below which, at a depth of 70 ft., is the densely crowded and low quarter, called the Marsh. "The building has been altered and enlarged at various times, but is even now very ill suited for carrying on any efficient system of prison discipline: the supervision and control of the prisoners is hence no easy task; and the entire management is susceptible of great improvement." The borough house of correction, or "St. John's" prison, so called from occupying the site of an old monastery, is conveniently situated for its purpose; and shortly after the passing of the Gaol Acts was re-constructed, on the principles of classification. It comprises two sides of a square, each three stories high, possesses considerable capabilities, and is in an efficient state, both as respects discipline and general management. At Lenton, about $1\frac{1}{2}$ m. from the town, is a small gaol, belonging to the Honour of Peveril; but, "it is small, insecure, and totally unfit for its purpose: indeed, its abolition would be a public benefit." (*Prison Inspectors' 3d Rep.*, ii. 36-39.) The town-hall is a large building, three stories high, of which the lower part is used as a bridewell, while the upper apartments are used for corporate business, and other purposes. The other public buildings consist of a small theatre, little frequented, the cavalry barracks in the Castle-park, the foot-barracks, the yeomanry riding-house, now used as a circus, and the grand stand, on the race-course N. of the town: with eight churches and chapels, besides numerous places of worship for dissenters.

St. Mary's church, standing on a bold eminence, 170 ft. above the level of the adjacent meadows, is a cruciform structure, in the perpendicular style, with an elegant square tower, rising from the intersection of the nave

septs. A few years ago it underwent a thorough on a plan consistent with its original architect- id is now the handsomest church of the town: ng is a vicarage, of the annual value of 700*l.*, with house, in the gift of Earl Manvers. St. Peter's, e market-place, is a building of mixed architec- artly Saxon and partly Gothic, with tasteless additions, being remarkable chiefly for its lofty St. Nicholas, erected in 1678, on the site of a more edifice pulled down during the parliamentary account of its proximity to the castle, is of brick, one corners: it comprises a nave with 2 side- and has a light appearance outside, as well as good accommodation. St. James's Church, on Stan- ill, in the district called the Park, is a modern n the perpendicular style, with a low embattled St. Paul's Church, of Grecian architecture, with : portico, is capable of accommodating upwards) persons. It was formerly subordinate to St. but has recently been made an independent parish church. Trinity Church, a handsome structure, with a tower and spire, fitted to ac- date 1,400 persons, is now nearly completed. are numerous places of worship for dissenters, ng a Rom. Catholic chapel, meeting-house for iety of Friends, and Jews' synagogue, connected hich, as well as the churches, are above 30 schools, attended by above 5,000 children of es. The Blue-coat School furnishes clothing and tion to 60 boys and 20 girls; a national school had, , 570; and 3 Lancastrian schools, 484 children: re also 4 other subscription-schools, and 3 infant-. The free grammar-school was founded in 1513, fore the close of the last century had fallen into but in 1807 the establishment was revived, and furnishes the means of a respectable classical on to between 50 and 60 boys.

other charities of Nottingham comprise, 1. Plum- spital (founded in the reign of Richard II., and ently enlarged,) for 13 aged widows, besides out- ers; 2. Collins' hospital, which provides ample odation for 24 poor men and women, with a stin- allowance of coals; and, 3. Lambly hospital, ayed burgeses or their widows; besides which, other charities confer essential benefits on the and aged of both sexes. On Standard Hill is the l hospital or infirmary, standing in a spacious re, and comprising a centre and two wings, with airy wards for patients, about 1,300 of whom are d, on an average, every year. The lunatic asy- pened in 1812, is in New Sneinton, and has good odation not only for pauper but other patients. gham has likewise 3 dispensaries, and several benevolent institutions, with bible, tract societies, nd there are few towns in which so much is ex- in the relief of the sick and necessitous of the g classes. The three parishes of Nottingham are into a poor-law union: the maintenance of the n 1847, cost 17,682*l.*

chief literary establishment of the town is the library and news-room in the Market-place, which collection of more than 8,000 vols., a museum of ology, lecture-rooms, &c., with an attached literary . A mechanics' institute, established in 1824, has derable library, with apparatus, &c. Nottingham, issues 3 weekly newspapers, the Journal, Review, ercury.

ingham is celebrated as being the great centre of obbin-net and lace manufacture, besides which it , in common with Derby and Leicester, a large of the hosiery-business. The first attempt at the acture of lace by machinery dates as early as 1768; ough this was followed by many subsequent ts to shorten the tedious process of making lace pillow, it was not till 1809 that Mr. Heathcoat, of on, discovered the correct principle of the bobbin- ame, and obtained a patent for his invention. -power, first introduced in 1816, and becoming l in 1822-23, gave a great stimulus to the trade, was further increased on the expiration of Heath- patent. Prices fell in proportion to the increased tion; and the Nottingham lace-frame soon be- the organ of general supply, rivalling and sup- g, in plain nets, the most finished productions of : and the Netherlands: so much so that large ties were smuggled into those very countries from lace was formerly smuggled into England. But the object of the manufacturer is not so much to produce e, and, consequently, high priced lace, for which the d must at all times be very limited, as to improve ric and lower the cost of the inferior qualities for the demand is comparatively extensive. At pre- (1850) there are supposed to be about 1,800 bobbin- d warp-lace frames employed in the town and its iate vicinity: the wages paid to the individuals d in the trade vary from 1*s.* 6*d.* to 5*s.* per week idren, 7*s.* to 15*s.* per do. for young people and

inferior men, 15*s.* to 30*s.* per do. for power and hand- frame men on plain work; and 20*s.* to 40*s.* per do. for men working hand-frames, weaving patterns.

The health of the power-machine workmen is said to be, on the whole, good; the factories are neither hot nor confined; and the workmen have only to superintend, not work the machines. Hand-machine labour is much heavier: but as it is the custom to work by shift, each man is seldom more than 6 hours a day at the frame. Hand-machines used to be let out at a weekly rent to the workmen by capitalists; but they are now much reduced in numbers; and nearly all those that now exist are the property of those who work them, either by their own hands, or by the aid of journeymen.

Subordinate to its other departments, the town had, in 1839, 3 cotton mills, 2 worsted mills, and 3 silk mills; employing, in all, nearly 900 hands. Nottingham has likewise very extensive establishments for making bob- bin-net and stocking-frame machinery, large bleaching- works, malhouses, and breweries: the Nottingham ale has obtained considerable celebrity. There are 2 banking companies, and 3 private banks. The Nottingham Canal connects the town northward with the Codnor iron and coal district, and southward with the Trent, and the great canal system of the N. midland counties. It is, also, connected by railway with Newark and Lincoln on the one hand, and with Derby, Rugby, &c. on the other.

Nottingham claims to be a bor. by prescription, but received charters from Henry II., and many subsequent monarchs, Henry VI. having granted to it the additional privilege of being a co. of itself. It is divided, under the Municipal Reform Act, into 7 wards; and is go- verned by a mayor, 18 other aldermen, and 42 council- lers: it has likewise a commission of the peace, under a recorder. Corp. rev., in 1848-9, 12,781*l.* The assizes, both for the bor. and co., are held in spring and sum- mer; and quarter sessions for the S. div. of the co., in Jan., April, June, and Oct. A county court is, also, esta- blished here, before which 2,380 plaints were entered in 1848. Nottingham has sent 2 mems. to the H. of C. since the 12th Edward I., the right of election down to the Reform Act being in the freemen, (by birth, apprentice- ship, and purchase,) and in freeholders to the amount of 40*s.* The electoral limits were not altered by the Boundary Act. Reg. electors, in 1849-50, 4,861. Not- tingham is also a polling-place for the N.W. div. of the co. Markets on Wednesday and Saturday, but princi- pally on the latter. Large fairs for cattle, cheese, &c., March 7th, 8th, and 9th; Oct. 2d, 3d, and 4th; 3 other smaller fairs.

The origin of Nottingham is involved in obscurity; but so early as in the time of Alfred, it was of sufficient importance to give its name to the co. The castle was built by William Peverill, the natural son of William the Conqueror. Edward III. held several parliaments here, in one of which were enacted the laws relating to the settlement of the Flemish manufacturers. Nottingham was the chief place of rendezvous for the troops of Ed- ward IV. and Richard III. during the wars of the Roses; and it was here, in 1642, that Charles I. formally raised his standard against the parliament. The inhabs., how- ever, being attached to the republican cause, the king was soon compelled to abandon the town and castle to the par- liamentary forces. Nottingham has been the scene in more recent times of disturbances among the working classes. In 1811, when considerable distress prevailed among the weavers in consequence of our exclusion from the con- tinental markets, combinations were formed among the workmen for the purposes of breaking the frames, which they erroneously supposed had thrown them out of em- ployment; and to such an extent did they proceed, as to call for the most vigorous interference of the legislature. Disturbances of a minor nature have occurred several times since that period; but the only serious riot of late years took place on the 8th Oct. 1831, during the agita- tion preceding the passing of the Reform Act, when the rioters burnt down the castle. (*Parl. Papers; Private Information.*)

NOVARA (an. *Novaria*), a city of the Sardinian con- tinental dom., cap. division, prov. and mand. of its own name, on an eminence between the Gogna and Terdop- pia, 52 m. N.E. Turin, and 27 m. W. by S. Milan. Pop., in 1838 (ex. garr.), 18,524. It is surrounded by ramparts and ditches, and defended by a castle. Though the streets are mostly narrow, it is, on the whole, tolerably well built, and has many handsome residences. The ca- thedral, the Dominican church, and that of St. Ganden- zio, and the large barracks, are the principal public edifices. Novara has numerous convents, several hospi- tals and colleges, a theatre, and a governm. loan bank. It is a bishop's see; and has manufactures of silk and linen fabrics, leather, &c., and 2 large annual fairs. Under the French it was the cap. dep. Ag-gna.

NOVA SCOTIA, one of the British co- lonies of N. America, consisting of an oblong- shaped peninsula, between lat. 43° and 46° N

and long. 61° and 67° W.; connected with New Brunswick by a low sandy isthmus, only 14 m. across, and separated from Cape Breton by the narrow strait called the Gulph of Cansaw. It is about 300 m. in length, and of very various breadth. Area, according to Haliburton, 15,620 sq. m., about 1-5th part of which consists of lakes, rivers, and salt-water inlets. Pop., in 1838, 199,906; but it is now (1850) estimated at 300,000. The coast-line is extremely irregular, forming numerous capes and bays. Capes George and Cansaw are the chief promontories on the N.E. side, and at the S. extremity is Cape Sable. The basin of Minas is a deep inlet on the N.W. side of the peninsula, forming a part of the Bay of Fundy, which separates Nova Scotia from New Brunswick. St. Mary's and Argyle Bays are on its S.W. side; Pictou, Antigonishe, and Chedebucto Bays form the chief irregularities on the N. coast; and the E. coast, from Cape Cansaw to Cape Sable, is indented with almost innumerable small bays, harbours, and rivers. Rocks and islands fringe its shores, and the aspect of the entire Atlantic coast is exceedingly picturesque. Deep water is found, almost without exception, close to the rocks and islands; and the peninsula presents towards the Bay of Fundy bold and almost precipitous cliffs. The interior is intersected in almost every direction by streams, rivers, and lakes; but, with the exception of Annapolis River and Lake Rossignol, connected with the sea by the river Mersey, most of them are of very inferior size. The peninsula has no elevations deserving the name of mountains; its highest point, Mount Ardoise, between Windsor and Halifax, not rising more than 700 ft. above the sea. A pretty high ridge of hills skirts the shore of the Bay of Fundy.

As respects geological constitution, "the greater part of Nova Scotia may be described as a low range running from S.W. to N.E., resting on solid rocks of granite, trap, and slate alternately. Towards the E. end of the peninsula are beds of sandstone, greywacke, gypsum, limestone, porphyry, and many other kinds of rock; and on these strata there is usually a rich deep soil. The barren tracts are chiefly of sand or clay; and in these parts, especially about Pictou, are the great coal-fields of the peninsula. Iron is abundantly interspersed among the coal strata; and different varieties of lead and copper ore are met with, though in smaller quantities. Near Pictou are several brine springs, one of which is saturated with salt in the proportion of 12 to 88 of water." (*Report on Brit. N. America, App. B., p. 140.*)

The climate of Nova Scotia, with respect to temperature, bears a general resemblance to that of Lower Canada, and is subject to the same great and sudden variations. The greatest degree of heat observed at Halifax by Captain Moorsom was 95° Fahr., and the extreme of cold 10°. The difference of temperature within 24 hours often exceeds 50°, and a difference of 62° has been known to occur within the same period. These changes, however, are seldom so frequent or extreme in the interior, or in those parts of the prov. less immediately on the Atlantic. Notwithstanding the occasional lowness of temperature, the maritime situation of Nova Scotia tends to abridge the duration of the frost. The severe weather usually sets in about the middle of December, and it is not uncommon for the frost to break up at the end of January. The quantity of snow not only varies greatly from year to year, but is also very unequally distributed throughout the prov. The snow-storms are very heavy, some having been known to continue for 60 or 70 hours without intermission. (*Moorsom, p. 169.*) The severity of winter ends late in March, when chill, damp, east and north-east winds succeed, caused by the breaking-up and passage along the coast of vast fields of ice from the Gulph of St. Lawrence. Hence the most disagreeable season in this country is from the vernal equinox to the end of April. Spring approaches tardily and irregularly, the close of May often arriving before the fields are fully clothed with verdure. A very warm summer occupies 3 months, dating from the early part of June. May and June are marked by the prevalence of fogs, especially on the eastern coast, while July and August are usually remarkable for a continuance of calm serene weather. Autumn, the most beautiful season of the year, may vie with that of any country. September and October are very similar to the same months in England; but in November, and even December, there are days which, for beauty, warmth, and mildness, are equal to the loveliest mornings of an English May. (*Moorsom, p. 167.*) Westerly and N.W. winds are most prevalent; the fine bear to the wet days a proportion of 8 to 5. The extreme variations of temperature common to this country have not that injurious influence on health which one might naturally expect. Rheumatic and inflammatory complaints are far more prevalent than any other; and a considerable annual mortality occurs from pulmonary consumption. Intermittent fevers, however, so common in Canada and the United States, are here wholly unknown; typhus occurs only in a mitigated form, and the

ravages of the yellow fever have never been felt. Nova Scotia, therefore, may, on the whole, be termed a healthy country. Its inhabitants often live to extreme age; many attain ninety and even a hundred years. (*Murray's Brit. America, li. 19.*)

As respects agriculture, Nova Scotia is estimated to comprise somewhat more than 5,000,000 acres of land available for tillage; the proportion of land under cultivation at present being to the wilderness as 1 to 20. The first large public grants of land appear to have been made in 1760; and in less than 13 years from that time, nearly 8,000,000 acres (including the whole of Prince Edward's Island, then a part of Nova Scotia) were granted in lots, ranging from 20,000 to 150,000 acres, to individuals or companies in England. These grants contained conditions of improvement; but the grantees, after having incurred some expense in trying to settle their extensive properties, abandoned the land to its few inhabs., or suffered it to remain absolutely waste. Efforts made to escheat these lands to the crown were repeatedly baffled by the influence of the absentee proprietors; and thus the province was effectually closed against immigration, either from England or the neighbouring colonies. Large grants of escheated land were, however, made on the breaking out of the American war to refugee royalists; but these were seldom occupied, and are now, for the most part, uncultivated, opposing serious obstacles to the cultivation of the lands around them. Licensed occupiers, however, and squatters, have improved some portions of these tracts; and to them the progress made by the colony in population and agriculture is in great measure ascribable. The system of selling in lots not exceeding 1,000 acres was introduced in 1827; and the average price of unimproved land, in 1839, amounted to 2s. 3d. an acre. The largest portion of it, however, has been acquired, not by actual or intending settlers, but by speculators, who, tempted by the low price, have purchased, on account of the timber, or with a view to profit from a future sale. Land is now sold in this colony at a fixed minimum price of 1s. 9d. per acre, payable at once.

The total quantity of land ungranted in Nova Scotia was estimated by Mr. Morris, in 1838, at about 2,500,000 acres; but of these not above 1-8th part was fit for tillage. The country, as respects the quality of land and the state of agriculture, may be divided into three distinct sections. The E. division, formed by a line from the mouth of the river Phillip to that of the St. Mary, presents a strong upland soil, well adapted for grain, and varied with strips of rich intervale land along the sides of its rivers. The upland consists principally of a strong loamy clay, intermixed more or less with sand and gravel, the soil of the intervale being a rich, sandy, alluvial loam. The lands about Pictou are very rich and productive, 7 successive crops of wheat being frequently raised without the use of manure. Agriculture, however, is only imperfectly understood, and no proper use is made of the resources of the soil. In the S. district the land is almost wholly upland, with very little intervale or marsh: the soil is extremely rocky, varying from a strong loam to a light sand. Good returns of wheat and the coarser grains are obtained in some places; but the state of the farms generally exhibits the very reverse of intelligence. The unskilful use of manure, the indiscriminate employment of sea-weed, and, in many instances, the total neglect of any manure whatever, have retained those lands in a poor and backward state which better management would have rendered comparatively productive. (*Moorsom, p. 183.*) The N.W. division comprises upland, intervale, and marsh land; the first two being poor, and scarcely susceptible of any improvement. The marsh land is of two kinds, — one, called salt-marsh, being little more than a flat surface of spongy soil, overflowed at spring-tides, and covered with a long rank grass, sometimes converted into hay; the other, called the dyke-marsh, owes its formation to the impetuosity of the tide in the Bay of Fundy, which brings along with it fine loamy particles, which it leaves behind as it recedes, and thus, in course of time, a succession of layers raises the surface to the level of spring-tides, when an embankment or dyke, called an *aboitraw*, is formed to prevent any farther overflow. A newly-enclosed marsh is usually left untouched for the first three or four years: in the third year it is fit to receive the plough, and is then sown with wheat, the first crop averaging about 60 bushels an acre; and on long cultivated marshes the returns average about 40 bushels of wheat and 2½ tons an acre of hay. The crops usually cultivated are wheat, oats, and barley, with smaller quantities of peas, buck-wheat, and rye. But though, in a fine district, the supplies of corn exceed the demand, this is not the case generally; and the prov. does not, even in the best years, raise enough of corn for its own consumption, there being uniformly a large importation of flour from the U. States. Potatoes are universally cultivated, and the failure of the crops in 1846 and 1847 was productive of a great deal of distress.

—427.; *Moorsom's Letters from Nova Scotia*, passim; *Murray's Brit. America*, vol. II.)

NOVELLARA, a town of N. Italy, duchy of Modena, in the plain of the Po, 16 m. N.W. Modena. Pop. 4,070. It is the cap. of a principality annexed to Modena in 1737, and has some silk and leather manufactures.

NOVGOROD, a gov. of Russia in Europe, between the 57th and 61st degs. of N. lat., and the 30th and 42d of E. long.; having E. the gov. of Vologda, S. those of Jaroslavl, Tver, and Pskof; W. the latter and Petersburg, and N. the last named and Olonets. Length, N.E. to S.W., about 400 m.; breadth, varying from 40 to 160 m. Area, estimated at 47,033 sq. m. Pop., in 1846, 907,900. The surface, which in the N. is low and level, rises gradually towards the S.W., where the Valdai plateau reaches an elevation of 1,000 ft. above the sea. The gov. is well watered: principal rivers, Volkhof, Msta, Chexna, Mologda, Lovat, &c., some of which run towards the Wolga, and others towards the Lake of Ladoga. Among the lakes are those of Bielo-Ozero, Voje, and Ilmen. The climate, especially in the N., is more severe than in the gov. of Petersburg, not being tempered by the sea breezes. Except in a few districts, the soil is not eminent for fertility, and night frosts often spoil the crops. Scarcely any orchard trees are met with; but hemp and flax are grown for exportation; and in 1832, 868,000 *chetverts* of corn, principally rye, oats, and barley, were raised. Timber is an important product; a large part of the gov. is covered with forests, those belonging to the crown covering 2,727,200 deiatines. Few cattle are reared. Next to agriculture, fishing is a principal occupation. The salt-springs of Staraisa-Rouss furnish an adequate supply of salt for this gov. and that of Tver. Manufacturing industry is very backward; there are a few copper, glass, tile, leather, woollen cloth, and other factories; but in 1832 there were not, in all, 50 manufacturing establishments in the gov.: the pop. have, however, a turn for commerce, and the different fairs and markets are well attended. Novgorod is divided into 10 districts; Novgorod, Tikhvine, and Valdai are among its chief towns. Except some Lutherans among the Finnish inhab., the pop. is principally of the Greek church. Education is very little diffused. The cap. has a gymnasium; and there are schools there and in other parts of the gov.; but the young persons of all descriptions at school in 1835 amounted to only 1,086! The gov. is not supposed to possess a printing-press. Civil public revenue estimated at 2,733,000 roubles. This territory was made a separate gov. in 1776.

NOVGOROD, (called *Felikt*, or "the Great,") a city of Russia, and formerly the most important in that empire, cap. of the above gov., on the Volkhof, near its exit from the Lake Ilmen, 100 m. S. S. E. Petersburg, and 305 m. N. W. Moscow. Lat. $58^{\circ} 31' 32''$ N.; long. $31^{\circ} 16' 24''$ E. Its pop., which, in 1845, amounted to only 15,000, was estimated to have amounted in the height of its prosperity, in the 15th century, to 400,000, though this, probably, is much beyond the mark. At this period, Novgorod, with London, Bergen, and Bruges, constituted the four principal foreign depôts of the Hanseatic League; but the fall of the League, and still more the massacres perpetrated by the bloodthirsty barbarian Ivan Vassilievitch II., in 1570, proved fatal to this great emporium; and it soon after fell into all but irremediable decay. La Motraye, who visited it early in the last century, gives the following description, which will apply nearly as well in the present day. "Nothing is more deceitful than the view of Novgorod from a distance: its extent, and the number and height of its towers and spires, seem to announce one of the finest cities in Europe; but on nearing it, the traveller perceives that its walls and houses are only of wood; and on entering, he finds it ill built and wretchedly paved. Only the churches and a very few private residences are of stone or brick. There may be from 80 to 85 churches, including those of the monasteries; besides which, the castle, a large fortress bristling with artillery, is the remaining principal edifice." (*La Motraye*, in *Schnitzler, la Russie*, p. 170). The town, in fact, though comprising a large space, consists principally of scattered groups of miserable habitations, separated by ruins or by fields, which, it is evident, had once been covered with houses. It is divided into two parts by the Volkhof, here crossed by a handsome bridge of 11 arches, which is almost the only modern structure in the city. The piles, &c., of this bridge are of granite, the rest is chiefly of timber; its entire length is 270 yards, and the breadth of its central arch 85 ft. In the *Torgovaisa*, or market-town, are the governor's residence, an anc. palace of the czars, and most of the shops and warehouses. The *Safuskaia*, on the opposite bank of the Volkhof, is about $\frac{1}{2}$ m. in circuit, and surrounded by an earth rampart and a ditch. In it are the *kremi*, or citadel, the cathedral of St. Sophia, the archbishop's palace, and the various tribunals. The citadel is in many respects similar to the kremlin of Moscow, having a stone wall, flanked with many round and square towers. The cathedral, built

between 1044 and 1061, and repaired in 1832, is of stone, somewhat on the model of St. Sophia at Constantinople. It has some remarkable bronze gates, with sculptures in *alto-relievo*, representing passages from scripture history; and many of the paintings on its walls are curious, being said to date from a period previously to the revival of the arts in Italy. Novgorod is the seat of a military governor, whose authority extends over the adjacent prov. of Tver. It has a few manufactures of sail-cloth, leather, and vinegar, and some trade in corn. Though not the original capital of Rurick, it became the seat of the Russian government in 864. In the beginning of the 11th century the inhabs. obtained considerable privileges that laid the foundation of their liberty and prosperity; and as the city and its contiguous territory increased in pop. and wealth, they gradually usurped an almost absolute independency; so that, in effect, Novgorod, in the middle ages, should rather be considered a republic, under the jurisdiction of an elective magistrate, than a state subject to a regular line of hereditary monarchs. During the 12th, 13th, and 14th centuries, Novgorod formed the grand *entrepôt* between the countries E. of Poland and the Hanseatic cities; and its wealth and power seemed so great and well established, and the city itself so impregnable, as to give rise to the proverb—

"*Quis contra Deos et magnam Novogordiam?*"

"Who can resist the Gods and Great Novgorod?"

But in 1477 it was obliged to submit to Ivan I., great duke of Russia. In 1554 it was visited by the famous Richard Chancellor, who describes it as the "great mart town of all Moscovie, and in greatness beyond Moscow." But not long after it was subjected, as already stated, to the scourge of the destroyer, and fell, never to rise again. The foundation of Petersburg took from it all hope of ever recovering any portion of its ancient prosperity. (*Schnitzler, La Russie*, 152—174.; *Coxe's Travels in the N. of Europe*, II. 77—90., 8vo. ed.)

NOVI, a town of N. Italy, Sardinia dom., div. Genoa, cap. prov. and mand.; in the fertile plain of Marengo, at the foot of the Apennines, 14 m. S.E. Alessandria. Pop., in 1838, 10,278. Few remains exist of its old castle; its streets are narrow and ill-paved, and its public edifices undeserving of notice. It has, however, a handsome square. It is the seat of civil and commercial tribunals; and has a college and hospital, and manufactures of the best silk twist in the divisions. It is also an *entrepôt* for goods passing between Italy and Germany. On the 16th of Aug., 1799, an obstinate conflict took place near this town, when a French army, under Joubert, who fell in the action, was defeated by the Austro-Russian army, under Suwarrow.

NOVI-BAZAR, a town of Turkey in Europe, prov. Bosnia, cap. Sanjak, on the Rachka, 130 m. S. E. Bosna-Serai. Pop. estimated at from 8,000 to 10,000. It is a town of considerable traffic, the residence of a pacha and a R. Cath. bishop, and has some warm baths. Our acquaintance with it is, however, very limited, as it is seldom or never visited by travellers from W. Europe.

NOYON, (an. *Noviomagus Veromanduorum*), a town of France, dép. Oise, cap. canton, on the Vorse, a tributary of the Oise, 42 m. E.N.E. Beauvais. Pop., in 1846, 5,069. It is well built, and surrounded with numerous gardens. The cathedral, erected under Pepin and Charlemagne, is 340 ft. in length, its main entrance being flanked by two towers upwards of 200 ft. in height. Noyon has manufactures of fine linens, tulle, hosiery, leather, copperas, &c., and a brisk general trade. It was erected into a bishopric in 531. Charlemagne held his court in this town for a considerable period, and in it Hugh Capet was proclaimed king. But it is chiefly remarkable for its having been the birth-place of the famous reformer John Calvin, born here on the 18th of July, 1509. (*Hugo; Guide du Voyageur*.)

NUBIA (an. *Ethiopia*), an extensive tract of E. Africa, between the S. boundary of Egypt and the N. limit of Abyssinia; bounded E. by the Red Sea, W. by the desert of Libya, between lat. 13° and 24° N., and long. 33° and 36° E. Estimated area, 360,000 sq. m. Pop. unknown. The country is divided into Lower Nubia, or Nubia Proper, extending from Egypt to the N. frontier of Dongola, and thence to the junction of the river Atbara or Tacassé with the Nile; and Upper Nubia, which includes Shendy, Halfay (an. *Meroë*), and Sennaar. (*Encyc. Britannica*, art. *Nubia*; *Ritter's Africa*, &c.)

Nubia is situated almost entirely in the basin of the Nile. Rocks and mountains are the characteristics of *Lower Nubia*; and the mountains here press so closely on the river that there would be but little ground left for tillage, if they were not interrupted by lateral plains, the productiveness of which, however, is diminished by the continual encroachments of the deserts. Numerous rocky islands dot the stream, and in some places congregate so as to form rapids, hardly deserving the name of "Cataracts," by which they are usually designated. Some of these islets are rendered productive (like the high banks of the Nile) by means of the artificial irri-

portions of the Nubian valley being, on account of the height of its banks, beyond the inundation of the Nile, the land can only be watered by artificial means. Even in the lateral valleys, the few canals cut through them are rarely full; and the water, both from them and the Nile, is raised by Persian wheels. Dhourra is reaped in December and January; next follows a crop of barley, and then dhourra again. Tobacco is universally raised. Although the S. districts present some excellent land, agriculture offers few charms for the inhab.; and Sennaar and Shendy are celebrated only for being the *entrepôts* of the chief commerce of E. Africa. The town of Shendy, having Soudan and Abyssinia to the S., Egypt and the Arabian Gulph to the N. and E., and Darfur to the W., is the centre of much of the trade with those countries. Markets are regularly held there twice a week; and at one of them Burckhardt saw from 4,000 to 5,000 cows, as many camels, nearly 100 asses, and several horses for sale. In Shendy are several forges for iron and silver. The merchants from the W. pay regular visits to Sennaar; they exchange Indian goods for gold, which they transport to Djidda and the E. The price of gold at Sennaar is estimated at 12 dollars an ounce, and at Shendy 16 dollars. Every two months merchant caravans arrive at both these places, frequently consisting of 500 or 600 camels, laden with dhourra; others, comprising about 100 camels, trade in various products, as well as slaves. The traffic in slaves is extensively carried on, upwards of 5,000 being annually imported from the interior of Africa; of these 2,500 are disposed of in Arabia, 1,500 in Egypt, and 1,000 in Dongola and other parts of Lower Nubia. The Arabs of the Desert supply the caravans with senna of the best quality, ostrich feathers, and charcoal.

History, Government, &c.—It has been supposed that the country of the Ethiopians was among the earliest in which advances were made towards civilisation, and that the arts descended from Meroë to Egypt. But we have little or no authentic information respecting the state of this country in antiquity; and it was not till the 6th century that the wandering ancestors of the Nubians appear to have settled under a regular government. At that period mention is made of Silco, king of the Nubates and the Ethiopians (Letronne, *Journal des Savans*, 1825); under whom they were converted to Christianity, the country divided into ecclesiastical districts, and the whole subjected to the Patriarch of Alexandria. After the loss of Abyssinia, the kings of the Nubas resided at Dongola; but in the 14th century their power ceased, and Nubia was divided into several petty states. In the succeeding century the Mohammedan conquerors reached and subdued the country, Christianity was suppressed, and Mohammedanism took its place.

Down to the year 1821 the people of Nubia were independent, living under their own Meleks, or chiefs; but at that period Ibrahim Pacha reduced them to a dependency on Egypt. This change is so far fortunate for travellers, that with the permission of Mehemet Ali, the whole country is open to their researches, and no danger is to be apprehended, except from the climate and the dishonesty of the natives. The same system of military despotism and oppressive taxation that exists in Egypt has been extended to Nubia: but it is a question whether the people be now more heavily taxed than formerly by their petty chiefs, while, in other respects, their condition is improved.

Monumental Remains of Nubia—Ipsamboûl.—Of all the relics of ancient art with which the valley of the Nile abounds over the whole distance from Meroë to Memphis, none have excited more admiration than the excavated temples at Ipsamboûl, lat. $22^{\circ} 19' 47''$ N.; long. $31^{\circ} 32' 54''$ E. According to Champollion, the great temple, "*est une merveille, qui serait une fort belle chose même à Thèbes!*" It is wholly cut out of the solid rock, and presents a façade, supported by four seated colossi, of exquisite workmanship, and not less than 61 ft. in height. They represent Rameses the Great, and are all portraits, for the faces bear a perfect resemblance to the figures of that king at Memphis, and elsewhere. The interior is not less grand than the entrance: 16 apartments have been enumerated; the first of these is sustained by eight pillars, against which rest the backs of as many figures of Rameses, each 30 ft. in height. The walls of this immense hall are covered with innumerable bas-reliefs on historical subjects, the most striking portraying the conquests of the same prince in Africa. The other apartments afford some curious particulars that supply many conjectures relative to Nubian and Egyptian religious history, which it remains for future students in hieroglyphics to verify. The whole is terminated by a sanctuary, at the back of which are seated five statues, representing Amon, Ra, Phrè, Phtah, with the never absent Rameses the Great. The smaller of these excavations is a temple dedicated to Hathor by Nofre-Ari, wife of Rameses the Great, whose façade has six colossi, each 35 ft. high, carved out of the rock. They represent Rameses and his wife, having at their feet

statues of their sons and daughters, all of whom have their names and titles. The front of this temple is free from sand, and access is much easier to its interior than to that of the greater. A passage leads to the pronaos, which is 35 by $3\frac{1}{2}$ ft., supported by six square pillars, three on each side: to this chamber succeeds a vestibule, which leads to the adytum, or sanctuary, containing the remains of a sitting statue cut in the rock, which, however, is not in such good preservation as the rest of the structure. The bas-reliefs adorning the sanctuary are painted, the figures yellow, and are enclosed by a border of three colours: the colour of the ceiling is blue.

We are indebted to Burckhardt and Belzoni for bringing these splendid temples to light. The entrance of the great temple is so blocked up with sand that it is only passable by a person divesting himself of nearly all his clothing, and creeping on his hands and knees; and then the heat within is more intense than that of a Turkish bath, the want of air being almost insufferable.

Besides the excavated temples of Nubia, of which Ipsamboûl does not present the only specimen, there are others, partly hewn out of the solid rock, and partly built. Those of Gîrshé (lat. $23^{\circ} 31' 45''$ N.; long. $32^{\circ} 56' 55''$ E.), Sebona, Dendera, and Gebel-el-Birkel (lat. $18^{\circ} 31' 41''$ N. Ruppell) are of this class. The interior of these temples is cut out of the solid rock, while the exterior chambers and appendages are formed of stone-work. From the primitive character of the masonry, the rudeness and decay of the sculptures, and the decomposition of the walls, it has been concluded that the temple of Gebel-el-Birkel is older than many of the temples of Egypt, or even of Nubia. This site is also remarkable for 13 pyramids, lying in the desert to the E. of the town, differing from those previously known, their sides presenting small temples with gateways and enclosures. Opposite to Birkel, on the other side of the Nile, at Nouri, is another assemblage of pyramids. The age of all these vast masses of stone, many of them exhibiting little else to the modern traveller than mounds of debris, no doubt belongs to the remotest antiquity. At Sammeah and Dendera, we find specimens of a more perfect class of temples than those before mentioned, and which belong to the last epochs of Nubian art. That at the latter place has the proportions of Grecian structures, and in the pillars have been recognised a mixture of the Greek and Egyptian styles.

Ruins of Meroë.—The tract of country enclosed by the Nile and the Tacazzé, or Atbara, and terminating at the confluence of these rivers, was the island of Meroë of ancient geographers; and near Assur on the Nile, in the prov. of Shendy, the ruins of the ancient capital of Ethiopia have been recognised. Nothing remains but the Necropolis; which consists of a vast assemblage of pyramids, similar in every respect to those of Birkel. (For a particular account of which we refer the reader to *Hoskins' Travels in Ethiopia*, p. 66, et seq.) We must not, however, omit to notice the inferences drawn from these and other Nubian monuments by those whose acquaintance with antiquities entitles their opinions to respect. They conclude that art and civilisation, instead of ascending the Nile from Egypt, descended to it from Ethiopia. The decay in which the mounds of Meroë are now found, produced entirely by the slow hand of Time, the sculptures of their interior, exhibiting religious rites of a purer and simpler stamp than those of Egypt, and other circumstances which nice observers have supposed they have detected, prove, according to the authorities referred to, that they have been the models of the more stupendous Egyptian structures. The excavated temples, too, furnish, it is alleged, proofs of the remotest attempts at architecture. But, how plausible soever, these conclusions amount to no more than probabilities; and it would not be difficult, were this the proper place, to show that they must be received with great limitations and modifications.

NUDDEA, a district of British India, presid. Bengal, chiefly between lat. 23° and 24° N., and long. 88° and 89° E.; having N. the districts Moorshedabad and Rajshage, E. Jessore, W. Beerbhoom, Burdwan, and Hooghly, and S. Calcutta and the 24 Pergunnahs. Length, N. to S., about 80 m.; average breadth, nearly 40 m. Area, 3,106 sq. m. Pop., in 1822, estimated at 1,187,160. Its natural features are the same with those of the rest of the delta of the Ganges, by many arms of which it is intersected. The culture of the soil has greatly increased since the establishment of the perpetual settlement: total land revenue, in 1829-30, 11,66,961 rupees. Gang-robbery formerly prevailed to a great extent in Nuddea; but under the British rule, it has decreased so as to be now of rare occurrence.

NUDDEA, a town of British India, presid. and prov. Bengal, cap. of the above distr., at the commencement of the Hooghly river, 80 m. N. by W. Calcutta. It is the residence of the collector and judge for the district, and was formerly the cap. of a rajahship, and a celebrated seat of Hindoo learning, but it has now fallen into decay. (*Parl. Reports, &c.*)

NDYDRORG, a celebrated hill-fortress of Hindostan, prov. Mysore, on a hill 1,700 ft. in height, 100 m. N. by E. Mysore; lat. $13^{\circ} 22' S.$, long. $77^{\circ} 44' E.$ The hill on which it stands is inaccessible, except on one side: the fort is within it several barracks, magazines, &c., besides a Hindoo temple, in which worship is paid to the goddess Nundy, whence the name of the fortress. Nundydrorg was taken by the British in 1791, after an obstinate siege of 3 weeks.

NEATON, a market-town and par. of England, stone div., hund. Hemlingford, co. Warwick, on the river N. by E. Coventry, and 90 m. N.W. of London. Area of par., 7,020 acres. Pop., in 1841 7,105. The town is large and well built; consisting principally of a main street, whence another diverges, in which is a market-place. The church is a Gothic structure, with a square tower; the living is a vicarage, in crown grant. There is also a modern-built chapel-of-ease; the Wesleyan Methodists, Independents, and Baptists have their respective places of worship. A free school was founded, by the inhab., in the reign of Edward VI.; and there is another endowed school, called "St. John's Charity School," besides which, there are two other day schools and Sunday-schools. The inhabitants are principally engaged in riband-weaving, and, in 1846, there were 3,200 looms, nearly all employed. The trade is confined to four firms; and there are not many any engine-looms in the place that are not the property, though some are worked on the premises of the weavers. Floret gauze ribands are the staple article of manufacture; but they are occasionally laid out for figured satins, sarsonets, and lustrings. (*Handbook of Weavers' Report.*) Malting is carried on to a considerable extent; and there is a silk factory, which, however, was unemployed in 1839. Coal is procured in the neighbourhood, where are also some extensive stone quarries. The government of the town is vested in a mayor, a town constable and three others, annually elected by the electors. It is one of the polling-places at elections for the N. division of the co. Markets on Saturdays, May 14., Feb. 18., and Oct. 31., for horses and cattle. (*Parl. and Comm. Reports, &c.*)

NUREMBERG (Germ. *Nürnberg*), a city of Bavaria, Middle Franconia, on the Pegnitz, a tributary of the Regnitz, 93 m. N.N.W. Munich. Lat. $49^{\circ} 27' 31'' N.$; long. $11^{\circ} 4' 40'' E.$ Pop., in 1846, with its suburbs, estimated at 45,500, of whom about 1-10th part are Roman Catholics. It stands in a sandy but fertile plain, at an elevation of about 1,000 ft. above the sea; and is divided by the Pegnitz into 2 nearly equal parts, the Sebald-side and the Lawrence-side, each deriving its name from its principal church. Nuremberg covers more ground than any other city of Bavaria, and is, next to the capital, the most populous. "It is surrounded by feudal walls and towers, and these are inclosed by a ditch 100 ft. wide, and 50 ft. deep, lined throughout with masonry. Its principal gates are flanked by 4 massive cylindrical watch-towers, no longer of use as fortifications, but picturesque to a high degree, and serving to complete the coronet of the city towers which encircle the city, as seen from a distance. The stranger arrived within its walls might fancy himself carried back to a distant century, as he finds its irregular streets, and examines its quaint half-timbered houses. Its churches and other public edifices are singularly perfect, having escaped unharmed the ravages of war, sieges, and even of the Reformation, which in the 16th century adopted at an early period, without any outbreak of fanaticism or iconoclasm. Its private buildings, including the palace-like mansions of its patrician citizens and merchant-nobles, having been built of stone, are equally well preserved, and many are still inhabited by the families whose forefathers originally constructed them. Though built with narrow but highly ornamented gables, they are often of large size, inclosing 2 or 3 courts, and extending back from one street to another." (*Murray's Handb. for S. Germany.*) The most elevated position within the town, near its N. extremity, is occupied by the *Reichsveste*, or Imperial Castle, a building of great antiquity, and a frequent residence of the German emperors in the middle ages. A portion of this castle is fitted up for the accommodation of the King of Bavaria, when he visits the town; and comprises a picture-gallery, the paintings in which, however, except one by A. Durer, are generally of the most ordinary merit. The 2 principal churches are highly deserving of notice. That of St. Sebald, a fine Gothic edifice, with an elegant choir, built in 1337, has numerous sculptures and carvings by Adam Kraft and V. Stoss, many old paintings and stained glass windows, and the remarkable shrine of St. Sebald. This, which still stands in the centre of the church, though the latter is devoted to the Lutheran service, is the masterpiece of the celebrated artist Peter Vischer, who, with his five sons, was employed on it for thirteen years. "It is a miniature Gothic chapel, entirely of bronze, consisting of a rich fretwork canopy, supported on pillars, beneath which the relics of the saint repose in an

oaken chest, encased with silver plates. The workmanship is most elaborate. The figures of the 12 apostles occupy the niches around the shrine, and are truly first-rate works of art. Above them are 12 smaller figures of fathers of the church; while about 70 fanciful representations of cupids, mermaids, animals, &c., distributed among flowers and foliage, are scattered over the other parts. The miracles of the saint are the subjects of the bas-reliefs under the canopy. In a niche below, at one end, is an admirable statue of the artist himself, in a mason's dress, and at the opposite end is a figure, equally excellent, of St. Sebald." (*Handb. for S. Germany.*) The church of St. Laurence, founded in 1274, is the largest in the town; and has some very handsome entrances, fine stained glass, curious carvings, &c.; and above all, a repository for the sacramental wafer, a tapering spire of Gothic open-work, 64 ft. in height, executed by A. Kraft, with a minuteness more commonly bestowed on ivory than on stone. The church of St. Giles, erected in 1718, in the Italian style, has a fine altar-piece by Vandyk, various bas-reliefs, escutcheons, &c.; the R. Catholic church, finished in 1361, and distinguished for its rich decorations; and the church of the Teutonic knights, begun in 1784, are the other principal ecclesiastical edifices: the Gothic chapel of St. Maurice, constructed in 1313, has been converted into a picture gallery, and filled with rejected paintings from the gallery of Munich, &c. The *Rathhaus*, or town-hall, in the Italian style, is one of the most remarkable edifices in the city; it was chiefly built in 1619, but includes the ancient town-hall, dating from 1340. In the latter are the great hall and the council-chamber; the walls of the former apartment being ornamented with several oil-paintings by Albert Durer, and those of the latter having many concealed doors "leading to subterranean passages, which extend from the Rathhaus under the streets to the town ditch, beyond the walls." (*Handb.*, p. 56.) Nuremberg has a gymnasium, founded by the famous reformer, Melancthon, whose statue is placed in its front; an arsenal, barracks, a theatre, many hospitals and asylums, a savings' bank, a charity for distributing food to the poor, a house of correction, &c. It has also several fountains, some of which are worthy notice, especially the "Beautiful Fountain" (*Schöner Brunnen*), in the great market-place; a Gothic obelisk, or spire of open-work, with statues of various historical characters. Among the other remarkable objects in and near the city are the house of Albert Durer, now occupied by a society of artists; St. John's churchyard, in which is Durer's tomb, together with those of many distinguished natives; a succession of stone pillars between the cemetery and the city, ornamented with curious bas-reliefs, &c. Nuremberg is the seat of a high police court, a civil court of justice, a commercial court of appeal, and a forest board. It has a royal, and other high schools, several Latin and numerous inferior schools, a teachers' seminary, an academy of arts, a polytechnic, and a high commercial academy (*Handlungs-Institut*); a number of public libraries, including the city library of 40,000 printed vols., and 800 MSS. (*Adrian in Statist. Journ.*, 1841); societies of national industry, and medical and natural science, an agricultural union, and collections of every description in the arts and sciences. There are but few pictures by the celebrated native artist A. Durer; but those by other artists are very numerous.

Nuremberg has given birth to many distinguished men, including, among others, the famous painter Albert Durer, born here in 1471. Several important inventions in the arts are said to have been made in this city. The famous machine for drawing wire is supposed to have been constructed by Rudolph, a native of this city. (*Beckmann's Hist. of Inventions*, ii. 236.) Gunlocks are supposed to have been first fabricated here in 1517; and Beckmann says that the circumstance is probable, though he doubts whether the locks were of the present construction. (iv. 608.) Owing partly to these inventions, but more to the freedom and industry of its inhabitants, Nuremberg early rose to great eminence as a manufacturing and commercial town. It was, in fact, the continental Birmingham of the middle ages, during a portion of which period it is said to have had 70,000 inhabitants. Cannon are said to have been cast here as early as 1356; and in the same century it furnished paper and playing-cards. It had, also, a very extensive commerce, being a principal entrepot for the produce of both the N. and S. of Europe. It still is, and has long been celebrated for an extensive manufacture of wooden clocks and toys, which it exports to all parts of the world. It also produces various species of metallic goods and jewellery, with telescopes, mirrors, mathematical and musical instruments, sealing-wax, and lacquered wares; lead pencils, alabaster, horn, and ivory articles; brushes, woollen yarn, lawn, paper, parchment, brandy and liqueurs, chicory, &c. Printing is also carried on to some extent.

Though considerably declined, it still ranks as one of

the principal commercial centre of Bavaria, and its commerce will probably receive some augmentation from the opening of the canal between the Danube and Rhine, now in progress. The first railroad for steam carriages in Germany was completed in 1835-36, between Wurzburg and Furt, a distance of 46 m., now traversed in 10 minutes.

Wurzburg, supposed to have been founded in the 6th century, became, in 984, the seat of the first laymanish dioc. (see 1817) it had a bishopric/ or resident government appointed by the emperor and the members of the present royal family of Prussia make their first appearance in history in this capacity. It was subsequently governed first in the same way as Venice by a merchant aristocracy consisting of about 30 families, who appointed the executive officers among themselves. It was at the height of its prosperity in the 16th and 17th centuries. The famous *Leone System*, afterwards Pope Pius II. who had travelled over the greater part of Europe, introduced the wealth of this city, and says in his work *De Morib. Germ.* published in the 16th century, that the kings of England would wish to be as well lodged as the greatest burghers of Wurzburg. Capovani and *Agrippa* (Burmann) says *Germania* Wurzburg *Germania* also *Germania* p. 100.

Wurzburg early entered the dominion of the Reformation, and is celebrated in the history of the Reformation. A diet assembled here in 1527, was of great service to the cause of the Reformation, and here on the 26th of July 1527, a treaty was signed by which full toleration was granted to those professing the new doctrine. The city preserved its privileges as a free town of the empire to the year of Frederick in 1805, when it was annexed to Bavaria by Napoleon. *Agrippa*, *Germania* and *Pohl*, p. 145-147; *Murray's Handbook for Germany*, 5th ed.; *Dist. Geog.*; *Dist. Geog.*; *Dist. Geog.*, (p.)

O.

OAKHAM, a market-town and par. of England, hund. of same name, co. Rutland, of which it is the cap., 17 m. N. by W. Leicester and 4 m. N. to W. London. Area of par. 3,135 acres. Pop. in 1841 3,795. It is walled town. The chief public buildings are the co. hall (forming the only remaining part of a castle built in the 12th century), a fine church with a large square tower, and the Rutland palace. The free school founded in 1527, is the centre of 14 official parishes. It has 36 exhibitions at Oxford and 100 bachelors, and the school is open to children of the poor inmates. An act was incorporated with it by Queen Elizabeth, and endowed with dissolved church property, now producing about 3,000 a year. Another hospital was raised here, but it has fallen into decay. A lay school is established, and there is a well at St. Andrew's church. Oakham is of very little importance with respect to trade, its chief dependence being on its markets and the retailing of goods for domestic consumption. It is connected by a canal with Melton Mowbray and has a considerable trade to coal. The cattle, quarter and poultry markets are held here and Oakham is the chief centre for the co. markets on Sat. Morn. for cattle and sheep March 16. 2d Sat. in April May 3. Sat. in May 10. 2d Sat. in June 10. and 17th 18.

OAKHAMPTON, a decayed but market-town, and par. of England hund. Linton, co. Devon, on the Oke a tributary of the Tavy, and near the W. border of Dartmoor 10 m. W. Exeter. Area of par. (including the villages of Chinnock, Melton, and Kington) 12,370 acres. Pop. in 1841 2,000. It is walled and irregularly built. The church stands on rising ground about 1 m. westward, and there is an ancient chantry chapel in the market place, with places of worship for Wesleyan Methodists and Independents. It has a small endowed free school and two subscription schools, with minor charities for the relief of the aged poor. The town is not flourishing, the linen, formerly chiefly its retail trade, is now however being superseded by woollen weaving. It also derives some advantage from its situation on the great road between Exeter and Plymouth. (*Span. Camp Report*). The town was incorporated in the 14th century, and having fallen to decay it was considered too insignificant to be included in the provisions of the Municipal Reform Act. It, however, sent two members to the H. of C. from the reign of Charles I. down to the Reform Act, when it was disfranchised. Markets on Sat. Morn. 2d Thurs. after March 11. May 17. 1st Wed. after July 3. Aug. 3. and 2d Sat. after Christmas day.

OAXACA, or **GUAXACA**, a city of Mexico, the cap. of the State of the same name, on the Rio Verde, 200 m. S. E. of Mexico, and 120 m. S. E. of Vera Cruz, Mex. 17° 45' N.; long. 97° 45' W. Estimated pop., 40,000. It is built in the form of a parallelogram about 5 m. in length and 1½ m. in breadth, including its suburbs which are laid out in gardens and planted with sugar cane. The streets, which are broad, straight, and well paved, are lined with great houses of a graceful kind of stone, and on the whole it is the neatest, neatest, and most regularly built city of Mexico. The public buildings are in general handsome and well constructed, and richly decorated. The town has cathedral and bishop's palace (see 1841) of the principal square. There are several churches and convents; and numerous hospitals are supplied with water conveyed by aqueducts across the valley from the neighbouring hills of St. Felipe. The climate is generally good, the thermometer seldom falling below 60° or rising higher than 70° but it is exposed to earthquakes, and suffered considerably during the last that happened in Mexico. Oaxaca was founded by Vasco del Barroca, one of the companions of Cortes, and received its name from the town called *Guaxaca* that stood in its neighbourhood.

The state of which Oaxaca is the cap. is remarkable for its extensive fertility and for the richness and variety of its products. The cereals and the sugar-cane are raised with great fertility, and destined to extensively cultivated. Considerable attention is likewise paid to the culture of silk. The mineral riches of the state have been very little explored (*Ward's Mexico*, 3. 389; *Dist. Geog.*).

Oaxaca is a port, but and one part of Santhol, on Arroyo, on a bay of the same name, in a sheltered bay, beautiful situation, 31 m. N. W. Oaxaca. Pop. 1,200. The only public buildings are a new parish church connected with the establishment, and a dancing chapel. It has no manufactures, and no trade, except in such articles as the limited consumption of the place and neighbouring districts require. It is situated by the stream between Oaxaca and Ixcotelco, and thus that it is between other of these places and Oaxaca, from the bay. The harbour is excellent, and the whole system extensively in fishing. The magnificent ruins of the royal palace of Tlaximallan, stand on a promontory 3 m. N. the town. The town had no port, representative all the trading of the Reform Act, in 1837, which united it with Compostela, Ixcotelco, Ixcotelco, and Ayo, in sending) men to the H. of C. Registered voters, in 1841, 1,200.

(31), a large river of Asiatic Russia, in the government of Tiumen and Tobolsk, rising by two principal sources on the N. W. side of the Little Altai chain, and the foot of the Obi mountains; lat. 50° N.; long. 80° E. flowing from N. W. and then N. into the Gulf of Obi, after a course of about 2,000 m., but if the Irtysh, which joins it in lat. 50° 30' N. and is the longest and widest stream that flows from the system, be considered the main river, its length will amount 3,000 m.; the area of its entire basin has been estimated at 1,200,000 sq. m. The Obi which is the main branch, has numerous affluents; the principal of which are the Yenisei, Tura, and Ket, joining it on the E. or right bank. After its junction with the Irtysh, it divides a branch in some places of nearly 10 m. with a depth varying from 3 to 7 fathoms, and has a very rapid current, flowing in the lower part of its course numerous islands, and flowing over rocky ledges that greatly impede navigation during the few months that the river is free from ice. The Irtysh flows within the Chinese empire, in lat. 47° N. long. 80° 10' E. on the W. side of the Great Altai chain, and forming a course nearly W. N. W. of 160 m. to Lake Turgai, through which it flows, and then turns N. ward for about 100 m. after which it has a general N. W. direction, passing Samarkand and Osh, to the N. of Tashkent. Below this point it makes a curve N. E. ward of about 200 m. and joins the Obi at Samarkand. Both the Obi and Irtysh abound with fish, which might be made a lucrative article of trade, as there is a free navigation during the greater part of the year along the Northern Ocean to Archangel. (*Smith's Geography*, 3d ed. 1844).

OAXACA, a town of Spain in New Castile, prov. Toledo, 20 m. E. Toledo and 30 m. S. by S. Madrid, on the great road leading from Madrid to Oaxaca. Pop. 10,000. It is an ancient town of considerable size, surrounded by ruined walls, on the summit and sides of a steep hill. Streets generally narrow and ill built, but there are two or three squares which give it a tolerably respectable appearance. It has few parish churches, three decayed monasteries, a hospital, cavalry barracks, and a school of primary instruction, but the only object worth notice is the *Parque* or a beautiful and apartment of stone, on 10 acres, supposed to have been constructed by the Romans, which supplies the town with excellent water. Oaxaca, in the days of its prosperity under the Lord Mayor of the Order of St. John, established here in the 13th and 14th centuries, enjoyed on a considerable trade in gloves, but its industry

OAXACA, a town of Spain in New Castile, prov. Toledo, 20 m. E. Toledo and 30 m. S. by S. Madrid, on the great road leading from Madrid to Oaxaca. Pop. 10,000. It is an ancient town of considerable size, surrounded by ruined walls, on the summit and sides of a steep hill. Streets generally narrow and ill built, but there are two or three squares which give it a tolerably respectable appearance. It has few parish churches, three decayed monasteries, a hospital, cavalry barracks, and a school of primary instruction, but the only object worth notice is the *Parque* or a beautiful and apartment of stone, on 10 acres, supposed to have been constructed by the Romans, which supplies the town with excellent water. Oaxaca, in the days of its prosperity under the Lord Mayor of the Order of St. John, established here in the 13th and 14th centuries, enjoyed on a considerable trade in gloves, but its industry

it present is confined to the manufacture of hard soap, the tanning of leather, and the weaving of coarse woollen and linen cloths. A festival and fair is held on the 8th Sept. and eight following days, which is much frequented, especially by Jewish traders. During the peninsular war Odeſſa was the scene of a disastrous and obstinately contested battle (Nov. 25, 1808), between the Spaniards under Arceaga and the French under Mortier and Victor, which terminated in the total defeat of the former. (*Mémoires: Sir A. Brooke's Spain and Morocco*, vol. 251; *Mod. Trav.*)

ODENSEE, a town of the Danish dom., lat. Funen, of which it is the cap., on a small river, about 2 m. from the bottom of Stegestrand bay, a deep gulph to which it has been united by a navigable canal, 88 m. W by S. Copenhagen; lat. 56° 34', long. 10° 34' 30" E. Pop. 700. It is well built; and has one of the finest cathedrals in Denmark, in which many of the Danish kings are buried, an old episcopal palace, with a library 6,000 vols., a gymnasium, a church seminary, and a convent with an extensive library of Danish books, the collection of which commenced with the introduction of printing into the kingdom. It is the residence of the governor and of the bishop, and has a patriotic society. Out of the gentry of the island reside here for a part of the year, and the inhabs. are said to be the best educated and informed of his Danish majesty's subjects. (*ibid.*) It is celebrated for its manufacture of gloves and leather accoutrements: it has also manufactures of cloth, with extensive breweries and distilleries, soap works, &c. It is the most ancient town of Denmark; and was a place of great note long before Copenhagen was in existence. (*Sicilia; Inglis, Coast, &c.*)

ODER, a large and important river of Germany, traversing the centre of the Prussian dom. It rises in Silesia, about 15 m. E. Osnaburg, lat. 49° 35' N., long. 9° 25' E., at an elevation of 1,800 ft. above the sea. It is, at first, a small stream, but it soon becomes a rapid, and carries the Auersberg, to near Osnaburg, from which it flows by Great Haß, numerous most rapid courses. It is a river of great utility, on its W. side the Warth is the most considerable, and through which it flows as Ratibor is to 50 tons a day. It is connected with the Vistula, and the Netz to Braunsberg, and is a great artery to the Elbe, see article *Elbe*, &c.)

ODESSA, a celebrated city, sea-port, and emporium of Russia, gov. of Kherson, on the N. W. coast of the Black Sea, about half way between the mouths of the Dnieper and Bug; lat. 46° 38' 54" N., long. 30° 43' 22" E. Pop., in 1845, 70,877. The rise of this emporium has been quite extraordinary; its foundations having been laid, by order of the Empress Catherine, so late as 1794, after the peace of Jassy. It was intended to serve as a entrepôt for the commerce of the Russian dominions on the Black Sea, and has, in a great measure, answered the intention of its founders. It has been said, indeed, that a better locality might have been chosen; and in fact of this, it is stated that there are no springs nor water within 3 m. of the town; that the vicinity is comparatively barren and without wood; and that not only on or near the mouth of any great navigable river, but communications with the interior are difficult and expensive. That these considerations have great weight is true; but, on the other hand, the situation has the advantage of being central and salubrious; the bay, or roadstead, which is generally open and easy of access, is extensive, the water deep, and the anchorage good; the harbour, which is artificial, being formed by two moles, is able to accommodate above 300 ships, and has a lagoon on the model of that of Marseilles; the inconvenience arising from the want of water has been obviated by the cutting of a canal, by which it is conveyed to the town; and, on the whole, we doubt whether any other locality could have been chosen so well suited to serve as an entrepôt. The vicinity is by no means so barren as is often represented. Lately, indeed, it has been significantly improved by the formation of many gardens, and the planting of extensive vineyards. The town is well built of soft calcareous stone; but the buildings, for the most part, detached from each other, are few handsome streets. But a more serious defect

crops in S. Russia in the course of these years. The exports of wheat from Odessa in 1847, exceeded, we believe, the exports from any other port in any single year, either in ancient or modern times. They reached, as seen by the above table, the prodigious amount of 2,775,837 chet., being 651,452 chet. more than their amount in 1846, the year of the greatest previous exportation. The average price of wheat free on board in 1846, considerably exceeded 40s. a quarter; but taking it only at that sum, the gross value of the exports of that grain from this single port must have exceeded 4,000,000*l.* sterling! This excess may be ascribed in part to the extremely abundant harvest of 1846, in Southern Russia and Poland, and in part to the high prices and great demand for wheat in this country and in France, which made every corner of the country accessible by the Black Sea be ransacked for supplies. Of the quantity exported the largest share went to Marseilles: our imports were, however, very heavy, having amounted to 462,000 quarters, including those from Taganrog. The price of the best wheat in Odessa is rarely under 25s. or 28s. a quarter; and, during the 3 years ending with 1840, it was 34s. 6*d.* free on board: the freight and other charges on importing a quarter of wheat from Odessa to England may be estimated at about 16s. a quarter. Constantinople, Genoa, Leghorn, Marseilles, and Malta are the principal markets for Odessa wheat; but, as already seen, when our crops are deficient, considerable quantities are shipped for England.

Account of the Quantities, in English Weights and Measures, of the principal Articles exported from Odessa in 1847.

Articles.	Quantities.	Articles.	Quantities.
Wheat imp. qrs.	2,016,692	Hides - cwt.	5,219
Rye - "	240,390	Tallow - tons	5,395
Indian Corn - "	27,409	Iron - "	239
Barley - "	16,100	Planks and Staves value <i>£</i>	3,686
Oats - "	15,416	Furs - "	4,774
Peas - "	2,340	Gold thread and Spangles -	2,446
Flour - "	17,000	Manufactures -	15,489
Butter - cwt.	684	Sundries -	68,212
Cavier - "	2,002	Total Value of Exports, according to Custom House Reports - <i>£</i>	5,699,174
Linseed imp. qrs.	174,561		
Rapeseed -	1,460		
Wax - cwt.	344		
Candles -	5,474		
Cables and Cordage -	16,010		
Wool -	44,550		

The great articles of import into Odessa consist of sugar, coffee, and other colonial products; cottons, silks, woollens, and other manufactured goods; oil, wines, and spirits; spices and dye-stuffs; cotton-twist and raw cotton; lemon-julce; tin and tin-plates; cutlery, timber for building and firewood, &c. About 1,000 ships from foreign parts enter and leave Odessa in ordinary years. Including Maltese and Ionians, above 300 ships under English colours have arrived in the port in a single season; but their number is very fluctuating, depending essentially on the state of the corn trade. The official value of the exports in 1847 amounted to 34,000,000 silver roubles, and that of the imports to 11,000,000 *do.* The exports of tallow have latterly fallen off, while those of wool have increased.

A tribunal of commerce was established at Odessa in 1824, whose jurisdiction extends over all disputes connected with trade. There is no appeal from its decisions except to the Senate. There are 12 sworn brokers, approved and licensed by the Tribunal of Commerce, who have deputies appointed by themselves. They register all transactions, and receive $\frac{1}{2}$ per cent. from each party as commission. There is a discount or loan bank, established in 1828, and marine and fire insurance societies. Most articles of provision are cheap; and fish, which costs next to nothing, is excellent. Fuel, however, is scarce and dear. (*Official Reports; Private Information; Schnitzler, La Russie*, p. 724., &c.)

ODEYPOOR, or OUDEPORE, a city and rajahship of Hindostan, prov. Rajpootana, the city standing in a basin surrounded with rugged hills, 135 m. S.S.W. Ajmere, and 165 m. N. W. Oojein; lat. 24° 35' N., long. 73° 44' E. It has, at a distance, an imposing appearance. On the W. it skirts a large lake, the palaces and garden residences on the brink of which are all of marble, with sculptures that are both highly finished and display considerable taste. (*Hamilton*.) It is protected from inundation by an extensive embankment stretching along the lake. Images, toys, and other articles in marble, crystal, &c., are sent from Odeypoor into the neighbouring provs. The rajahship, or principality, of which this city is the cap., called also Mewar or Chittore, holds a high rank among the Rajpoot states. It has N. Joudpoor; E. the territories of Kotah, Sindia, &c.; S. many small principalities of Malwah, Guzrah, &c. and W. Sarowry. Area estimated at 11,784 sq. m.; and pop. at 800,000.?

The surface is hilly and well watered, producing sugar, indigo, tobacco, rice, wheat, barley, &c. Fuel is abundant;

and there are mines of iron, copper, lead, and sulphur, the last mentioned product being, however, of inferior quality. The pop. consists principally of Rajpoots, Jauts, Brahmins, Bheels, and Meenas. The *raja*, or chief, claims to be of the purest dynasty in India, and is held in great reverence by the Mohammedans, because of his supposed descent from the Persian sovereign, Nushirvan. In prosperity and power, however, this state is much inferior to those of Jeypoor and Joudpoor; and for a lengthened period previously to its becoming subsidiary to the British, it had been wretchedly mismanaged. The treaty of 1818 secured to the British, as the price of their protection, 3-8ths of the public revenue.

Chittore, the ancient cap., is the only other town in this principality worth notice. It is on the summit of a scarped rock, 68 m. E.N.E. Odeypoor. Heber says "It is still what would be called in England a tolerably large market-town, with a good many pagodas, and a meanly built, but apparently busy bazaar." It was, however, formerly famous for its splendour and riches, and has many interesting Hindoo temples, palaces, and other buildings. It was several times taken by the Mohammedans, and by Akbar, after a siege, an account of which is given in the second volume of the *Miscell. Trans. from Oriental Languages*. See also *Dow's Hist. of Hindostan*, ii. 356-357.; *Heber's Journal*, 274-284.

ODIHAM, a market-town and par. of England, co. Southampton, hund. of its own name, 21 m. N.W. Winchester, and 40 m. W.S.W. London. Area of par., 7,550 acres. Pop., in 1841, 2,817. It is pleasantly sit. on the N. side of a chalk down, and comprises a principal and well built street, met by two others of inferior size. The church, a large brick structure, has a square tower at its W. end; the living is a vicarage, in the gift of the chancellor of Salisbury Cathedral. It has, also, 2 places of worship for dissenters, with attached Sunday schools, a free school for 20 boys, and a large national school, and almshouse for 12 poor persons. Odiham has a considerable retail trade, and some of the inhab. are supported by spinning worsted and winding silk. It also derives some advantages from its situation on the Basingstoke Canal. Petty sessions are held here, and it is one of the polling-places at elections for the N. division of Hampshire. Markets on Friday; cattle fairs, March 23. and July 31.

About a mile from the town are the remains of an old castle, in which David I., king of Scotland, was imprisoned; and close to the town is a ruined gate, the only existing portion of a royal palace. Lilly, the celebrated grammarian and first master of St. Paul's School, London, was a native of Odiham.

OEDENBURG (Hung. *Soprony*, an. *Sopronium*), a royal free town of Hungary, cap. co. of its own name; in a wide and fertile plain near the S.W. border of the Neusiedl-lake, 49 m. W. Raab, and 37 m. S.S.E. Vienna. Pop. in 1848, 12,500, principally of German extraction. It is generally well built: the town-proper, which is not extensive, is regularly laid out, and tolerably well paved; and the suburbs are in every respect much superior. The only relic of its ancient fortifications is a huge watch tower, which, according to the *Austrian Nat. Encycl.*, is the loftiest in Hungary. It has several Rom. Cath. churches, some of which are interesting specimens of Gothic architecture; a Calvinist church; Dominican and Ursuline convents; Rom. Cath. and Lutheran high schools, two hospitals, two large barracks with a good riding school, a military academy, theatre, &c. It is the residence of the superintendent of the Calvinist church for Hungary beyond the Danube. The inhab. refine sugar, weave cotton and woollen goods, manufacture potash, and saltpetre; and trade in wine (grown in the vicinity), corn, tobacco, wax, honey, and cattle, for which it is an extensive market. Numerous Roman antiquities have been discovered in its vicinity. (*Oesterr. Nat. Encyc.; Berghaus*, &c.)

OELAND, an island of the Baltic, belonging to Sweden, near its S.E. extremity, being separated from the prov. of Calmar, in which it is included, by the Straits of Calmar, a channel varying from 2 to about 20 m. in breadth. It is long and narrow, extending between lat. 56° 13' and 57° 22' N., and long. 16° 20' and 17° 10'. Area estimated at 300 sq. m.; and the pop. at 31,000. (*Horschmann's Stein*.) The W. shore of the island is low, the E. hilly; in the centre is a plateau, elevated about 150 ft. above the sea, principally of a calcareous or sandy formation. It is principally appropriated to pasturage, only a small portion of the land round the coast being under culture. Fishing and navigation form the principal occupations of the inhab., who send their fish, butter, cattle, &c., to the mainland, receiving corn, manufactured goods, &c., in return. The forests are rather extensive; and the deer, roebuck, and wild boar, are pretty abundant. About 300 hands are said to be employed in an alum mine, the produce of which is supposed to be worth 50,000 dollars a year. Borgholm, on the W. side of the island, is its chief town and seat of commerce. A royal edict of 1820 conferred the freedom to pursue any trade or calling, without authority from

y guild or company, on all handicraftsmen settling in is town. (*Horschmann's Stein*, 1. 589. ; *Dict. Géog.*) OELS, a town of Prussian Silesia, gov. Breslau, cap. re., and principality of Oels; on the river of the me name, a tributary of the Oder, 17 m. N.E. by E. reslau. Pop., in 1846, 6,010. It was formerly fortified, it is now merely enclosed by a lofty wall. It has a rge ducal castle, in which are some extensive collections in art and science, several churches and hospita's, theatre, and numerous public schools and charitable stitutions. It has manufactures of woollen and linen brics. (*Von Zedlitz, Der Preuss. Staat*, &c.)

OESEL, an island of the Baltic, belonging to Russia, d included in the gov. Livonia or Riga, extending ross the mouth of the Gulph of Riga, principally between lat. 58° and 58° 40' N., and long. 21° 40' and 23°

Area, estimated at 1,150 sq. m. Pop., including the hab. of the adjacent islands of Moen and Runoe, about 1,000, all Esthonians except some German landed proprietors, and a few Swedes. The coasts are bold; the and is well watered, and its climate is milder than at of the neighbouring continent. The soil is mostly ny, calcareous, or loamy; but with manuring it homes tolerably fertile, producing wheat, rye, barley, ts, peas, &c.; a considerable extent of the surface covered with forests. Rearing cattle and fishing are e principal occupations of the inhabs.; and the seal heries are of some importance. Manufactures quite significant. People all Lutherans. Arensburg, on the E. coast, with about 1,800 inhabs., is a bishop's see, d the centre of the commerce of Oesel. This island longed to the Teutonic knights, when their order possessed Livonia; it afterwards belonged to Denmark and eden; but it was ceded to Russia with the rest of vonia in 1721. (*Schmitzer, La Russie*; *Dict. Géog. universelle*.)

OFFEN. See BUDA.

OFFENBACH, a town of Central Germany, being the incipal manufacturing town of the Grand Duchy of esse Darmstadt, prov. Starkenberg, on the Mayn, n. E. by S. Frankfurt, and 17 m. N. by E. Darm- dt. Pop., in 1846, 9,684. It is well built, and has a tle, 4 churches, and a synagogue. Its manufactures sist of silk and cotton stockings; cotton fabrics; riages, and other vehicles; tobacco and snuff; lac- ered iron ware, sealing-wax, jewellery, toys, um- ellas and parasols, a few carpets, and other woollen fac- es, &c. Next to Mayence (*Meitz*) it has the largest neral trade of any town in the Grand Duchy. Some od wine is grown in its environs. (*Berghaus*, &c.)

OHIO, one of the U. States of N. America, being at sent by far the most important in the basin of the ssissippi. It is situated between lat. 38° 30' and 42° , and long. 80° 28' and 84° 42' W., and derives its me from the magnificent river Ohio, which forms the ole of its S.E. and S. boundary, separating it from rginia and Kentucky; on the E. it has Pennsylvania, Indiana, and N. Michigan and Lake Erie. Length d breadth, about 200 m. each. Area, estimated at 450 sq. m. Pop., in 1840, 1,519,457. Ohio comprises out one third part of the country, sloping from the eghanies in Pennsylvania down to the Mississippi. has no very elevated hill ranges, but consists almost olly of a table land from 600 to 1,000 ft. above the sea, e central portion of the state being the highest. This, n, which is its least fertile portion, is in parts inter- ersed with swamps and marshes. The declivity to- rds Lake Erie is much more abrupt than the S. slope the state, and the country is here also in parts marshy; t portion of the surface which declines towards the io, and is the most extensive, is diversified with hills l valleys; and, on the whole, nine tenths of the te are susceptible of cultivation, nearly three fourths ng pre-eminently fertile. The hills are generally tivable to their summits; and the river bottoms are iberantly productive. In the S. and S.E., along the io, the country is broken with abrupt hills. Next the Ohio, the chief rivers are, its tributaries, the oto, Miami, and Mushingum, and the Maunee, San- sky, and Cuyahoga, tributaries to Lake Erie. The oto, traversing the centre of the state, is a fine navi- le stream, which has been ascended by boats to near source, where it is separated by a portage of only a miles from the Sandusky. The Mushingum, rising r the headwaters of the Cuyahoga, is about 200 m. in gth, for 75 of which (from the Ohio to Zanesville) it navigable by small steam vessels, and for 110 m. by teaux. The Miami is navigable for 75 m., and the unee for 18 m.; but most of the rivers flowing N. are atly interrupted by cataracts. In the tract between Scioto and Miami, and in some districts along the io, are rich and extensive prairies; but originally the ntry was almost covered with nob'e forests of large l valuable trees, and these still remain uncleared in the and N.W. parts of the state. The geological form- ons are nearly all secondary, comprising limestone, lias, ferous, and ferriferous rocks, sandstone, greywacke,

&c., in horizontal strata. The soil is generally very pro- ductive. In the sheltered valleys of the S. the climate is very mild; but in the central and N. parts, the cold of winter is considerably more severe than in the states on the Atlantic in the same latitude; but, upon the whole, it is very healthy.

In 1848, the value of the taxable property was esti- mated at 421,067,921 doll. of which 330,995,273 were real, and 90,072,718 personal prop. Ohio is rapidly becoming a thickly settled country of moderate-sized freehold pro- perties: in respect of the magnitude of its farms, their general equality in point of size, and the dispersion of the pop. over the whole state, Ohio bears a close simi- larity to the states of New England. (*Flint's Geog.*, 1. 391, 392.) Indian corn, wheat, rye, oats, barley, tobacco, orchard fruits, and kitchen vegetables, are the staple products. On the rich alluvial soils, more than 100 bushels of Indian corn are sometimes produced on an acre, though from 40 to 50 bushels may be considered an average crop. The soil is, in general, highly suitable for wheat; and a larger quantity of that grain is raised in this than in any other state of the Union, the produce in 1840 being estimated at above 2 millions of quarters: in con- sequence, it furnishes large quantities of flour for ex- portation. Hemp is grown to some extent. Tobacco of the finest quality is raised E. of the Mushingum river; and the tobacco crop was, in 1837, estimated at 25,000 hhds., though it has been raised for exportation only within a few years. The vine and mulberry have been introduced; and wine and silk will, perhaps, at no very distant pe- riod, be added to the products of Ohio. Hogs form one of the staple exports; Cincinnati (*see* Vol. 1. p. 610.), being the principal pork-market of the union. The stock of pigs, in 1848, was estimated at 1,879,689. Large droves of fat cattle are sent every autumn to the markets of the E. and S. In 1844, the stock of sheep was estimated at 3,677,171, yielding about 6,000,000 lbs. of wool; being the largest stock of sheep in any state of the Union, New York and Pennsylvania excepted.

Iron ore is pretty extensively wrought in the E. part of the state, where, also, bituminous coal is found. Salt, lime, and marble are the other chief mineral products. Some of the salt springs on the Mushingum are said to be so rich, as to yield 1 lb. of salt per gallon of brine.

Ohio takes a decided lead among the W. states in ma- nufacturing industry. Cotton yarn, cotton and woollen stuffs, iron, glass, and cabinet wares, paper, hats, shoes, linseed and castor oils, whiskey, &c., are the principal products. It was estimated, in 1836, that about 2,000,000 lbs. of wool were annually wrought up in domestic manu- factures. Cincinnati, Zanesville, Steubenville, and Chil- licothe are the principal manufacturing towns. Ship and steam-boat building are important branches of industry. The sailing vessels are laden at spring flood, and sent down the rivers to the sea; both vessel and cargo being usually disposed of in the West Indies or some foreign port. A good deal of timber is sawn and cut in this state; and this, with flour, corn, hemp, flax, cattle, beef, pork, tobacco, smoked venison, hams, and spirits, are the principal exports. The N. and E. counties send a good deal of agricultural produce to Montreal; and since the construction of the Ohio and Pennsylvania Canals, several of the W. and S. cos. have an active trade with New York and Philadelphia; but by far the greater portion of the foreign trade of Ohio centres in New Orleans.

The great extent of her canals, and other internal communications, renders Ohio in this respect a rival to New York. The Ohio Canal, completed in 1832, is 307 m. in length, extending from Portsmouth on the Ohio to Cleveland on Lake Erie, directly connecting the basin of the Mississippi with that of the St. Lawrence, and having several navigable lateral feeders to Columbus, Lancaster, Zanesville, &c. The Miami Canal, 65 m. in length, from Cincinnati to Dayton, was completed in 1830; and a continuation of the same to meet the Erie and Wabash Canal (*see* INDIANA), is in progress. The Mahoning and Beaver, having a length of 77 m. within the state, and the Sandy and Beaver, are the other chief canals. The tolls paid on the Ohio and Miami Canals in 1848 amounted to 765,041 doll. The railway from Cincinnati to Sandusky on Lake Erie, about 220 m. in length, is the principal work of its kind; but there are other railways in the state, their entire length amounting to near 400 m.

Ohio is divided into 73 counties; Cincinnati is by far its most important town, but Columbus is its cap. and seat of gov., and the General Assembly meets there an- nually in Dec. The representatives, 72 in number, are elected once a year; and the 36 senators, being half as many as the representatives, every two years. The right of suffrage is vested in all white inhabs. of the U. States, above the age of 21, who have resided in the state one year next preceding the election, and who have paid a state or co. tax. The governor is chosen for two years, and has only 1,500 doll. a year of salary. There are courts of common pleas in each co.; and a supreme court, consisting of 4 judges, who, since 1844, have 1,000 dolls. a year each. The

judges are elected for 7 years by a joint ballot of both houses of the General Assembly.

In 1790, the pop. of this state was only about 3,000; whereas, in 1840, or half a century afterwards, it amounted to 1,519,467, and now (1850) it is probably 2,000,000—a rate of increase quite unexampled in any other part of the world, and unequalled except by some of the other states of this valley. This extraordinary increase has been principally brought about by the settlement of immigrants from the E. states, attracted thither by the superior fertility of the soil, but partly also by the influx of immigrants from Europe.

Slavery is altogether abolished. The prevailing religious sects are Presbyterians, Methodists, and Baptists. Education is extensively diffused. In the townships that reported in 1839, there were 7,205 schools, attended by 254,612 pupils of all sorts; and the non-reporting districts were nearly as extensive. Ohio University, at Athens, had, in 1848, 22 students; and Miami University, at Oxford, 66, besides which there are superior colleges at Cincinnati, Gambier, Hudson, New Athens, Granville, &c. In 1848, there were in the state 5,063 common schools, attended by 90,695 children; the sum apportioned by the state for school purposes in the same year being 291,796 dolls. The total public debt of Ohio in 1848, amounted to 19,173,223 dollars. (*Amer. Almanac*, &c.) This territory was first settled in 1788; in 1800, Indiana was separated from Ohio; and the latter was erected into a state in 1802. (*Darby's U. States*; *Flint*; *Encyc. of Geog.*, Amer. ed.; *Encyc. Americana*; *Amer. Almanac*; *Official Returns*.)

OHIO, a river of the United States. See MISSISSIPPI.

OHLAU, a town of Prussian Silesia, gov. Breslau, cap. circ., on the Oder, 17 m. S. E. Breslau. Pop., in 1846, 4,800. It was formerly one of the strongest fortresses of Silesia, but its works were, in great part, demolished after its cession to Frederick the Great, in 1741. It has a royal palace, with a gallery of paintings, several Lutheran and Rom. Cath. churches, an hospital, orphan asylum, workhouse, manufactures of woollen cloth, &c. A good deal of tobacco is grown in its neighbourhood. (*Von Zedlitz*; *Berghaus*.)

OISE, a dep. of France, reg. N., formerly comprised in the Ile-de-France; between lat. 49° 5' and 49° 45' N., and long. 1° 40' and 3° 10' E.; having N. the dep. Somme, E. Aisne, S. Seine-et-Marne and Seine-et-Oise, and W. Eure and Seine Inferieure. Length, E. to W., 63 m.; average breadth, about 35 m. Area, 582,569 hectares. Pop., in 1846, 406,028. Surface gently undulating. A range of hills traverses the dep., dividing the basin of the Somme from that of the Seine, but no summit rises to any considerable height. Principal rivers, the Oise, Terrein, and Epte, all of which have a S. direction. The Oise, whence the name of the dep., rises in the Belgian prov. of Hainault, near the frontier of Ardennes; and after a generally S.W. course of about 190 m., through the depts. Du Nord, Aisne, Oise, and Seine-et-Oise, joins the Seine at Conflans St. Honorien, about 12 m. N.W. Paris. It is navigable from Channy in Aisne to its mouth, a distance of 75 m. Some pools and marshes exist in the E. and S.E. of the dep. In 1836, the arable lands of this dep. were estimated to comprise 389,486 hectares; meadows, 29,927 h.; vineyards, 2,601 h.; orchards, gardens, &c., 15,388 h.; forests, 80,578 h.; and heaths, waste, &c., 15,709 h. In 1835, of 214,149 properties subject to the *contrib. foncière*, 109,027 were assessed at less than 5 fr.; and 34,666 at from 5 to 10 fr. The number of large properties is, however, greater than in most depts. Soil principally calcareous, everywhere requiring manure: agriculture is considerably advanced, and is improving. Fallows are decreasing, and agricultural implements are made more effective. More corn is grown than is required for home consumption; it is principally oats and wheat. Peas, beans, &c., are raised in large quantities for the Paris markets. Pear and apple orchards are numerous, and a great deal of cider of good quality is made. Some wine is grown, but of indifferent quality. The rearing of cattle is an important branch of rural economy; and the fat calves, known in Paris as *veau de Pontoise*, are from this dep. In 1830, the stock of horned cattle, calves, &c., was estimated at about 96,500 head, and that of sheep at 538,000. The latter have been improved by crossing with the Merino, Southdown, and Leicester breeds, and yield annually about 800,000 kilogr. wool. (*Hugo*.) Butter and cheese, including the cheese of Songeons, are valuable products. Hogs and poultry are numerous. Mineral products, excepting limestone, are few, and of little importance. Oise is distinguished for its manufacturing industry. Woollen fabrics, especially at Beauvais and Crevecœur; table-linen, cotton, and hempen cloths, woollen and cotton yarn, cotton stockings, lace, metallic and glass wares, and fans, horn, wooden and ivory articles at Meru, &c., are among the principal goods manufactured. This dep. is divided into 4 arronds.; chief towns, Beauvais, the cap., with 12,356 inhab., Clermont, Compiègne, and Senlis. Total public revenue

in 1844, 16,114,450 fr. (*Hugo*, art. *Oise*; *Dict. Géog.*; *French Official Tables*.)

OLBERA (an. *Ilipa*), a town of Spain, in Andalusia, prov. Seville, in a mountainous district, 48 m. S.E. Seville. Pop., acc. to Millano, 6,000. It is, acc. to Captain Scott, "a wretched place, containing some of the rudest-looking and least scrupulous inhabitants of the Serrania de Ronda." A par. church, hospital, three decayed convents, and a Moorish castle, are its principal buildings; and the view from the last is very commanding over a great extent of mountains, intersected by well wooded valleys. A few oil-mills are established here; but the pop. is almost wholly occupied in rearing hogs for the Seville market. (*Millano*; *Scott's Ronda and Grenada*, ii. 151.)

OLDENBURG (GRAND DUCHY OF), a state of N.W. Germany, consisting, exclusive of some portions of country inclosed by the Duchy of Holstein, of an oblong-shaped territory, between lat. 52° 30' and 53° 43' N., and long. 7° 35' and 8° 50' E.; having N. the North Sea, and surrounded on all other sides by the Hanoverian dom., except on a small portion of its E. frontier, where it adjoins the territory of Bremen. Length, N. to S., 80 m.; breadth varying from 10 to nearly 50 m. It is divided into 3 provinces, as follows:—

	Area in sq. m.	Pop., 1846.	Chief towns.
Oldenburg -	2,103	224,918	Oldenburg.
Lubeck -	166	21,517	Eutin.
Birkenfeld -	143	30,966	Birkenfeld.
Total -	2,412	277,401	

The natural features, climate, &c., of this duchy are similar to those of the adjacent kingdom of Hanover. (*See* I. p. 960.) It is almost a perfect level, except towards the S., where are some hills, though none rises above 300 or 400 ft. The principal rivers are the Weser, on the N.E. boundary, its tributaries, the Hunte, Hase, Leda, Jahde, &c. There are many small lakes, the principal being the Drummersee, in the S. The coast is so low that dykes are necessary, as in Holland and Friesland, to prevent inundations of the sea. Here, and on the banks of the rivers, the soil is alluvial and rich; but in most parts of the grand duchy it is either marshy or sandy; and the country does not produce sufficient corn for home consumption, the deficiency being mostly made up by potatoes and pulse. The industry of the inhab. is, however, principally rural; flax, hemp, hops, and rapeseed; together with cattle, horses, salt beef, butter, and bacon, are the chief exports. The horses and cattle are of superior breeds; large flocks of sheep are pastured on the heath lands, but their wool is of inferior quality. In this district, also, a good many bees are kept. Next to tillage and grazing, taking fish, with which the rivers abound, is a chief employment of the pop. Timber, fit for ship-building and carpenter's work, grows in the hilly district in the S. of the duchy, where the forests are estimated to cover an extent of nearly 170 sq. m.; but in other parts the fuel used consists almost wholly of turf, which is very abundant in the marshes. Iron is the only other mineral product of much utility. The spinning of linen yarn, and the domestic weaving of linen and woollen stuffs, are the chief branches of manufacturing industry; but these are pursued only as auxiliary occupations by the agricultural pop. Though the country produces oily seeds, animal fat, &c., in considerable quantities, neither candles, soap, nor oil are made to any extent, all being imported from foreign countries, to which the raw materials are sent. Neither is the trade of the grand duchy at all extensive; it has but a small seafaring pop., and its commerce is principally confined to a coasting traffic with the neighbouring countries of Denmark, Hanover, Holland, Lubeck, &c.

The government is an unlimited monarchy, except in respect to the distribution of the taxes, which is under the control of the states, composed of deputies of the nobles, citizens, and peasantry. For administrative purposes, the Grand Duchy (exclusive of Lubeck and Birkenfeld) is divided into 6 circles and 28 districts, each of which has its own judicial courts. The court of chancery, and other high courts of appeal, are in Oldenburg or Jever, except for the principality of Lubeck, which has its own superior courts in Eutin. Total public revenue estimated at 850,000 rix dollars a year. The pop. is principally Lutheran, but there are about 68,600 R. Catholics, and a few Calvinists and Jews.

Oldenburg holds the 10th place in the full diet of the Germ. Confed., in which it has 1 vote; and the 15th in the committee, in which it has a vote in conjunction with Anhalt and Schwartzburg. Its contingent to the army of the Confed. consists of 2,829 men. The House of Oldenburg is connected with the reigning families of Denmark and Russia. The duchy was erected into a sovereign state in 1773, but Birkenfeld was not united to it till 1812.

two, a town of N.W. Germany, cap. of the Duchy, and residence of its sovereign, circle one, on the Hunte, a tributary of the Weser, N.W. Bremen. Lat. 53° 5' 34" N; long. 9° 15' 10" W. Pop., in 1848, 7,200. It is fortified, and divided into the Old and the New Town, the latter being built. The ducal castle is an imposing building. The chancery-chamber, and other for the use of the government, St. Lambert's a which the sovereigns of Oldenburg are in some other places of worship, the observatory, barracks, are the principal public edifices. gymnasium, a military school, and a ducal 24,000 vols. Its manufacturing industry is in cotton, but it has some trade in wool, &c. (*Brigham, Alg. Linder and Fother, iv. i. Dict. Geog.*)

AM, a pari. bor., market-town, and township ad. par of Freetrich, head. Saltford, co. near the source of the Irk, and not far from a with the Medlock, 6½ m. N.E. Manchester, N.N.W. London. Area of pari bor. (which with Oldham the townships of Chadderton, and Royton), 11,180 acres. Pop. in 1841, 8, of Oldham township, 12,308. The town has been since 1780, when it comprised only about 10 tenements; it now consists of many well-ries, extending on the side of a hill on the road to Chester to Leeds, and is well paved, lighted and well supplied with water. The chief here runs from E. to W., and there is an opposite direct- the town-hall, built in 18 re, race buildings, comprising re. &c., and a large gas ol be which is subordinate to that i a Gothic structure, completed of there are also 2 chapels-of-ease within the living of which are in the gift of the recto rich. There is a Roman Catholic chapel; other places of worship belong to different ions of dissenters, among whom Methodists revaling body and attached to the churches els are numerous Sunday-schools, which, in elated religious instruction to 12,877 children es. The town has a small endowed grammar- d a large blue-coat school, founded, in 1807, by dr. Henshaw, hat-manufacturer. This school, owing to a long Chancery suit respecting the which amounted to 40,000, was not opened till in school-house is at Oldham-edge, and the sent supports, clothes, and educates 110 boys. i likewise 3 large national schools, and several an as well as infant-schools, whole or in part, by subscription. The other public institutions 3 benevolent societies, a bible and tract soo- scription library, lyceum (with schools, news- c.), and 3 mechanics' institutes.

owed its present consequence entirely to the in- of which it was early a considerable 1786 there were within the chapelry 8 cotton t each and so rapid has been the increase of the ure in the interval, that in 1839 it had 200 sta- t in motion by a steam-power equal to 2,342 ad employing 15,291 hands. It had then, also, -loom weavers, chiefly of silks similar to those areed in Manchester. (*Factory Comm. Rep.*) ing (once the staple manufacture of Oldham) is r extensively carried on, employing, in 1850, ds; and about 1,400 are engaged in collieries, s been opened during the last few years within rly. The beds vary from 3 to 5 ft. in thickness; is of excellent quality, and furnishes the chief for Manchester, Ashton, Rochdale, and other rring towns, with which it is connected by the and Rochdale canals, which latter also commu- th the Ayr and Calder Navigation. The Man- and Leeds Railway passes within 2 m. of Oldham, uch railway up to the town has been opened he Oldham Banking Company, it has branches r two other banks, and a savings' bank. The the township are regulated by commissioners, g in an act passed in 1836. Petty sessions are a week; and there is a county court, before 300 plaintiffs were entered in 1848. The Reform erral on Oldham, for the first time, the impor- teps of returning 2 members to the H. of C. The limits comprise with the township three out- n, as above mentioned. Registered electors, in 1,341. Markets on Saturday fairs, May 2, July 1st Wednesday after October 12. (*Butcher's Hist. Lanc. & Baiter's Hist. of Lancashire; Parl. Rep.*) ION (151 E OF), an island off the W. coast of dep. Charante-Inferieure, opposite the mouth of rents, lat. 46° N., long. 6° 30' W., 7 m. S. the is, and 2 m. from the nearest point of the conti- nes estimated at about 100 sq. m. Pop., in 1836, 11.

16,000. It is tolerably fertile, producing various kinds of corn, timber, red and white wines (a portion of which is converted into brandy), and considerable quantities of salt, from salt-pans along the coast. Chateau d'Oleron, the cap., on its S.E. side, is a fortified town, with a pop. of about 2,800.

OLIVA, a town of Spain, prov. Valencia, 30 m. S.E.E. Valencia and 218 m. S.E. Madrid, built amphitheatro- wies on the side of a hill, 1½ m. from the Mediterranean, in a well watered and productive district. Pop., acc. to Milana, 5,467. Its chief public buildings are 3 churches, one of which has a collegiate establishment, an hospital, ancient palace, and 2 prisons. Its manufactures are cot- tured to hemp and linen fabrics. In the neighbouring river Molinet are found fine eels and loaches, the latter of which are exported in considerable quantities to France. (*Milana*)

OLIVENZA, a town of Spain, prov. Extramadura, close to the frontiers of Portugal, and about 6 m. from the left bank of the Guadiana, 14 m. S. S. W. Badajoz, and 211 m. W S.W. Madrid. Pop., acc. to Milana, 10,447. It is surrounded with walls and strongly forti- fied, it has 7 par. churches, 7 convents (now applied to secular uses), 8 hospitals, and a poor-house. The sur- rounding country, though very imperfectly cultivated, produces abundant crops of wheat, barley, and other grain, with pulses, wine, &c., and the town is much re- sorted to by traders from Alentejo, who come to ex- change manufactured goods for farm produce. Olivenza was attached to Portugal till 1801, when it was ceded to Spain, to which it is still attached, notwithstanding the or- der for its restitution by the Congress of 1813. (*Milana*)

OLMÜTZ, a town of Moravia, of which it was for- merly the cap., being one of the strongest fortresses of the Austrian dom., cap. circ. Olmütz, on the March, 40 m. N.E. Brünn. Pop., in 1848 (ex. garrison), 12,800. It is well built, but the loftiness of its buildings darkens the streets. The cathedral is a fine Gothic edifice, in which its founder, Wenceslaus III. of Bohemia, is buried: some of the other churches also deserve no- tice.

OLMÜTZ, a town of Moravia, of which it was for- merly the cap., being one of the strongest fortresses of the Austrian dom., cap. circ. Olmütz, on the March, 40 m. N.E. Brünn. Pop., in 1848 (ex. garrison), 12,800. It is well built, but the loftiness of its buildings darkens the streets. The cathedral is a fine Gothic edifice, in which its founder, Wenceslaus III. of Bohemia, is buried: some of the other churches also deserve no- tice. Olmütz, a town of Moravia, of which it was for- merly the cap., being one of the strongest fortresses of the Austrian dom., cap. circ. Olmütz, on the March, 40 m. N.E. Brünn. Pop., in 1848 (ex. garrison), 12,800. It is well built, but the loftiness of its buildings darkens the streets. The cathedral is a fine Gothic edifice, in which its founder, Wenceslaus III. of Bohemia, is buried: some of the other churches also deserve no- tice.

OLNEY, a town of England, co. Bucks, 18 m. N.W. London. Area of pari. bor., 1,341. The town consists of houses. The church is a fine Gothic edifice, in which its founder, Wenceslaus III. of Bohemia, is buried: some of the other churches also deserve no- tice. Olney was founded by a monk, and was at first a priory, but it was dissolved in 1539. The town is famous for its lace-making, which was long the chief employment of the inhabitants; but it has been for many years declining. More recently silk-weaving and the manufacture of hosiery were attempted on a small scale, but they also have been abandoned. Olney derives its principal cele- brity from its having been for a lengthened period the residence of the poet Cowper: the "substantial brick- built house" in which he resided still stands near the centre of the town, and the arbour in which he studied is in excellent preservation, and is an object of great at- traction. The latter years of the poet's melancholy existence were not, however, passed here, but at East Dereham, in Norfolk. It is rather singular that though the vicarage of Olney be not worth 100l. a year, it has been held by some rather distinguished persons, includ- ing Moses Browne, Scott the Biblical Commentator, and Newton the friend of Cowper.

OLONETZ, a gov. of European Russia, between the 60th and 64th degs. of N lat., and the 50th and 4th of E. long.; having N and N.E. the gov. Archangel, S.E. and S. Vologda, Novgorod, and Petersburg, and W. Lake Ladoga and Finland. Area (including Lake Onega)

estimated at nearly 62,400 sq. m. Pop., in 1846, 263,100. The W. part of this gov. resembles Finland, in being alternately mountainous and marshy, or covered with lakes. Of the latter, Onega (which see) is by far the largest. Principal rivers, the Onega, by which the lake Latcha discharges itself into the White Sea, Vodla, Svir, Suna, &c. For 23 weeks in the year the mean temp. is below 32° Fah., and mercury sometimes freezes. Bleak winds are almost constant; but the country is tolerably healthy. Soil thin, stony, and not very fertile. Except in the district of Kargopol, into which some improvements have been introduced, agriculture is very backward. The produce of corn, in 1832, was estimated at 269,000 *chetverts*, a quantity insufficient for the wants of the pop. The peasantry are supported chiefly on turnips, carrots, and other vegetables, of which their bread partly consists, and on the produce of the chase, fisheries, &c. Hemp and flax are grown for exportation; but the principal source of wealth consists in the forests, which are of great extent, those belonging to the crown covering 8,966,795 *deciatines*. Pasturage is not abundant, and few cattle are reared. Marble, granite, serpentine, alabaster, &c., are found; and there are mines of iron, copper, and even silver, though they are but little wrought. The poverty of the country obliges many of the inhabs. to emigrate annually into the adjacent govts. to take charge of cattle, hew millstones, &c.; and in summer the number of absentees is estimated at about a third part of the entire pop. These circumstances are hostile to manufacturing industry; and, exclusive of the royal cannon foundry at Petrozavodsk, it has only a few tanneries and iron forges. It exports raw produce to Petersburg and Archangel; from which cities, corn, salt, spirits, and colonial and manufactured goods are imported. Olonez is under the same military jurisdiction as Archangel. Its inhabs. are principally of the Greek church, and subordinate to the archbp. of Novgorod. Total public revenue estimated at only 288,110 rubles. (*Schnitzler, La Russie; Possart; Russland, &c.*)

OLORON, or OLERON (an. *Iluro*), a town of France, dép. Basses-Pyrénées, cap. arrond., on the summit and declivity of a hill beside the Oleron, across which it communicates with the town of Ste. Marie by a lofty bridge, 13 m. S.W. Pau. Pop., in 1846, 5,456. It has a court of primary jurisdiction, a board of customs, and a chamber of manufactures; with manufactures of woollen cloths, yarn, hosiery, paper, and leather; and an active trade in French and Spanish wool, sheep-skins, *jambons de Bayonne*, and other salted meats, cattle, and timber. It is the general dépôt for the timber of the Pyrenees destined for the dockyard of Bayonne.

OLOT, a town of Spain, in Catalonia, near the small river Fluvià, 53 m. N.N.E. Barcelona; lat. 42° 12' N.; long. 2° 45' E. Pop. acc. to Milàno, 13,845. It is tolerably well built on level ground, at the foot of a range of volcanic hills, and has several squares and streets adorned with fountains; its public buildings consist of two par. churches, cavalry barracks, and an hospital. It has considerable manufactures of cotton-cloths and woollen caps, with extensive tanneries and soap-factories, and some paper-mills. Well attended markets are held twice a week; and Olot is one of the most thriving towns of Catalonia. Its neighbourhood is peculiarly interesting to geologists, on account of the extinct volcanoes with which it abounds, scattered over a tract measuring about 15 m. from N. to S., and about 6 m. from E. to W. Mr. Lyell, who visited it in 1830, says, "There are about 14 distinct cones with craters in the vicinity of Olot; and the largest, called Santa Margarita, is 455 ft. deep, and about a mile in circumference. These volcanic rocks, also, have often a cavernous structure; and at the base of the same hill, adjoining the town, are the mouths of about 12 subterranean caverns, here called *bufadors*. In 1421 the whole of Olot, except a single house, was thrown down by an earthquake; but this calamity may, perhaps, be ascribed more to the cavernous nature of the subjacent rocks than to the extraordinary violence of the movements on that spot; for Catalonia is beyond the line of those European earthquakes which have within the period of history destroyed towns throughout extensive areas." (*Milàno; Lyell's Geology*, iv. 38-49.)

OMER (ST.), a strongly fortified town of France, dép. Pas de Calais, cap. arrond., on the Aa, and at the union of several great roads, 40 m. N.W. Arras, and 29 m. E. by N. Boulogne. Lat. 50° 44' 46" N.; long. 2° 25' 18" E. Pop., in 1846, 18,834. It is partly built on a hill, but principally in the low and marshy plain at its foot. The circ. of its ramparts is about 2½ m.; beyond its moats and glacis are several strong and extensive outworks; and from the town being half surrounded by marshes, the greater part of its vicinity may be readily laid under water. Its streets are broad and regular, but being lined generally with mean-looking houses of yellow brick, it has a dull appearance. It is, however, well furnished with public fountains. The cathedral of Notre-Dame, an edifice completed towards the middle of the 15th century, is of Gothic architecture, and 373 ft. in length internally. In it

are several colossal statues, a fine painting by Rubens, the tomb of St. Omer, a superior organ, &c. The abbey of St. Bertin, in which the last of the Merovingian kings died, was destroyed during the phrenzy of the Revolution, and only some ruins of its church exist. The college, formerly the Jesuit's church; the military hospital, occupying the building formerly a seminary for the English and Irish Rom. Catholic clergy; the town-hall, arsenal, and powder magazines, several hospitals and prisons, the theatre, and some convents, are the other principal public buildings. The ramparts are planted with elms, and form fine promenades; as do the banks of the canal of Neuf Fossé, which connects St. Omer with Aire, and the Aa with the Lys. It is the seat of a sub-prefecture; and has courts of primary jurisdiction and commerce, a chamber of manufactures, a communal college, and a public library of 16,000 vols. Its manufactures consist of common woollen cloths, woollen yarn, lace, basket-work, fishing-nets, soap, starch, glue, tobacco-pipes, &c.; it has also many distilleries, breweries, paper-mills, and tanneries, and an active trade in corn, wine, oils, flax, coal, &c. Beyond the walls are 2 suburbs, the inhabs. of which are principally gardeners. Near the town is a lake, on which are some curious floating islands, held together principally by the trees which grow on them, and affording pasturage for sheep and cattle.

This town was originally called Sithiu; it took its present name from St. Omer, who founded its cathedral about 645. It was walled at the end of the 9th century; and was long an object of contention between the Burgundians and French, to whom it finally fell in 1677. (*Hugo, art. Pas de Calais; Dict. Géog.*)

ONATE, a town of Spain, in Biscay, prov. Gulpuscoa, 28 m. E.S.E. Bilbao, and 194 m. N.N.E. Madrid. Pop., acc. to Milàno, 12,000. It stands on the side of a hill in the valley of its own name, and is well built with regular streets, most of them terminating in a large square, which has a remarkably fine town-hall, a par. church, with a tower 190 ft. high, and a large building with a Doric portico, formerly used as a convent of Jesuits: in the centre of the square is an elaborately ornamented fountain. There are two other par. churches, and several deserted convents, a well supported hospital, and a college of handsome architecture, attended by between 180 and 200 students. Iron is extensively wrought in the neighbouring mountains, and within the town are iron-foundries, nail-factories, &c. The late civil war, however, which chiefly raged in the Basque provs., gave a great shock to its industry, from which it is only slowly recovering. The surrounding district is extremely productive, and has numerous mineral springs and quarries of Jasper and limestone. (See BISCAY.)

ONEGA (LAKE), a considerable lake of Russia, being next to that of Ladoga, the largest in Europe, in the centre of the gov. of Olonez, between lat. 60° 50' and 62° 50' N., and long. 34° 20' and 36° 20' E. Length, N.W. to S.E., 130 m.; breadth varying from 30 to 45 m. Area variously estimated at from 3,200 to 4,300 sq. m. It receives numerous rivers, and at its S.W. extremity discharges itself into the Lake Ladoga by the Svir. Its shores, which are generally rocky, present several deep bays and gulphs; and there are numerous islands near its N. extremity. Its navigation is impeded by sandbanks, but it is less subject to storms than Lake Ladoga. Principal towns on its banks, Petrozavodsk and Povienetz. (*Schnitzler, La Russie; Possart; &c.*)

ONTARIO (LAKE), the smallest and most easterly of the five great lakes of N. America, in the St. Laurence basin, partly belonging to Canada, and partly to the State of New York (U. States); between lat. 43° 10' and 44° N., and the 76th and 80th degs. of W. long. It is of an elongated oval shape; length, W. to E., 173 m.; greatest breadth, about its centre, nearly 60 m. Area, estimated by Darby at 5,400 m. Its surface-level is about 334 ft. below that of Lake Erie, and 231 ft. above the tide-level in the St. Laurence. Its depth is said by Darby to average 490 ft.; but in some places it is upwards of 600 ft. in depth (*Stevenson*); and it is navigable throughout its whole extent for vessels of the largest size. The St. Laurence, (under the name of the Niagara river), enters it near its S.W., and leaves it at its N.E. extremity, where it is much encumbered with small islands. Lake Ontario has many good harbours; and as it never freezes, except at the sides, where the water is shallow, its navigation is not interrupted like that of Lake Erie. It is, however, subject to violent storms and heavy swells. Its banks are in general level, and mostly covered with wood, though now variegated with partial and increasing cultivation. Toronto, Kingston, Newcastle, and Niagara, are the principal towns on the British side (*see Toronto, &c.*); and Oswego, Genesee, and Sackett's Harbour, on the American side. This lake receives numerous rivers, including the Trent and Humber on its N., and the Black River and Genesee on its E. and S. shores. It communicates by the last-named river, and by the Oswego Canal, with

ONTENIENTE.

le Canal, and consequently with the Hudson and the Niagara River and the Welland Canal, at E. extremity, unites it with Lake Erie, and the Canal connects it with the St. Lawrence below. Numerous sailing vessels and steamers of size navigate this lake, which is the centre of an active commerce; as to which see OSWEGO, TORONTO, *Darby's New York Gaz.*; *Stevenson's Civil Engineering of N. America*, 49, 50.)

ONTENIENTE (an. *Fonteniente*), a town of Spain, Valencia, on the Clariano (a trib. of the Jucar), here by a handsome stone bridge, 35 m. N. by W. te, and 47 m. S. S. W. Valencia. Pop., acc. to 12,000. It is tolerably well built, with a fine square, and several wide though steep streets; its principal public buildings being three par. churches, five convents, an hospital and college now partly in ruins. It is a place of considerable industry, chiefly in weaving linens and woollen fabrics; besides there are several fulling, corn, oil, and paper-mills. In the neighbourhood is an extensive *huerta*, or ed tract, which is very productive. A great fair is here in November.

OOCH, a town of N.W. Hindostan, prov. Mooltan, dist. of Bhawalpoor, in a fertile plain 4 m. E. the *h* (an. *Accesmes*), where it is joined by the Garra, and Sutlije and Beas; lat. $29^{\circ} 11' N.$, long. $70^{\circ} 50' E.$ Pop. 20,000. It is formed of three distinct towns, hundred yards apart from each other, and each has encompassed by a wall of brick, now in ruins. It is a place: the streets are narrow, and covered with a protection from the sun. It is highly celebrated in the surrounding countries for the tombs of two of Bokhara and Bagdad. These are handsome, about 500 years old; but an inundation of the river, some years back, swept away one half of the tomb, with a part of the town." (*Burne's Trav. Hindostan*, &c., i. 79—82, &c.) Ooch is built on an elevation of clay, apparently composed of the debris of former houses, it being a place of high antiquity.

OJOIN (Hindoo *Ujjaini* or *Avanti*, the *Oxene* of the ancients, and the Periplus), a city of Central India, prov. of Scindia's dom., on the bank of a tributary of the Chumbul, 34 m. N. by W. of Bhopal, and 1,698 ft. above the sea; lat. $23^{\circ} 11' N.$, long. $75^{\circ} 11' E.$ It is of an oblong form, about 6 m. in circuit, fortified with a stone wall and towers. Within this is some waste ground, but the greater part of the city is thickly covered with buildings and very populous. The streets are broad, airy, paved, and clean; the houses of brick or wood, and tiled or terraced. Four principal mausoleums, Scindia's palace, an extensive unadorned edifice, but without any claim to magnificence, an ancient Hindoo gate, and some Hindoo palaces are the principal public edifices. In a temple to the goddess is an extraordinary sculptured image of the deity. The pop. of Oojain includes a great many *Medans*, who are actively engaged in trade. The goods are principally fine white cloths, turbans, and shawls; European and Chinese produce from Surat; opium, &c. from Sind; cotton, coarse cloths, opium, &c. are exported, and diamonds in transit to and from Surat.

OJOIN, which stood about 1 m. northward, destroyed at an uncertain period by some physical catastrophe. On digging to a depth of 15 or 18 ft., brick pillars, and other antiquities have been discovered, frequently in good preservation. Adjoining these subterraneous ruins, is what has been called the *dhirtery*, a palace now in great part buried under an accumulation of the surrounding earth, but which many portions remain entire, including a long gallery, supported by pillars curiously embellished with sculptures in relief. Elsewhere around Oojain, there are temples, &c. worthy of notice; and about 4 m. N. an elegant summer palace, cooled by artificial cascades built in the 16th century, and but little injured by time. (*Forbes, Hunter, &c., in Mod. Trav.*, x. 220—221, *I. Gaz.*)

TERHOUT, a town of Holland, prov. N. Brabant, Breda, cap. canton, 5 m. N.E. Breda. Pop. 1,200. It has numerous potteries and brick-kilns, and is the seat of three large annual fairs, at each of the sale of woollen and linen fabrics, shoes, &c., valued to amount to 40,000 florins.

PORTO, or PORTO, an important commercial city and port of Portugal, on the N. bank of the Douro, 174 m. from its mouth, 174 m. N. by E. Lisbon, lat. $41^{\circ} 54' N.$, long. $8^{\circ} 37' 9'' W.$ Pop. in 1827, 100,000. Villanova and Gaya, on the opposite side the Douro. The town has 4 suburbs, which, with the city, cover an area of about 2 sq. m. It is built on a hill, partly on the sides and tops of 2 hills, but partly also on a plain near the river, from which it has a strikingly beautiful appearance. A wall, at intervals, with towers, encircles the town, which is protected by a fort; but these fortifications

OPORTO.

437

have not been kept in good repair, owing to the city being naturally secure against an attack by sea, and one on the land side not being apprehended. An elevated quay extends the whole length of the town: it has on one side a row of houses, and on the other a strong stone wall, with rings, booms, &c. for securing vessels during the heavy swells of the river. It is generally well built, the houses are all white-washed, and though it has many narrow and dirty streets, it is said to be (which, however, is no great recommendation) the cleanest and most agreeable town in Portugal. From the quay rises a broad well-paved street, flagged on both sides, and leading to two cross streets of equally fine proportions; but the streets on the slope of the hill are mostly irregular, contracted, steep, and dirty. At the E. end of the city the houses, which overhang the side of the river, are built on so steep an acclivity as to be accessible only by steps cut out of the rock. On the summit of the hills are several fine broad streets, lined with good houses, with gardens attached, occupied by some of the principal merchants. Oporto has several squares, the largest of which are the *Praça da Constituição* and the *Campo da Cordaria*, lined with three rows of trees, and much frequented as a public promenade. There are 9 parish churches, and a great many other churches and chapels. The cathedral, built in 1105, is a large and fine, though rather heavy edifice: the church, *dos Clerigos*, has the highest steeple in Portugal, except that of Mafra: the rest exhibit no features worth notice. There are also 17 convents, now luckily unoccupied, or applied to secular uses. The other public edifices comprise a modern-built episcopal palace, a town-hall (*senado da Comarca*), court-house, with attached prisons, royal hospital, *casapia*, or pawnbroking establishment, and a very pretty theatre, with extensive warehouses belonging both to the Oporto company and the British merchants. The English factory is a handsome building, in one of the principal streets, comprising reading-rooms, ball-rooms, &c., and a residence for the British consul. Oporto has several establishments for public instruction, the principal of which are the Academy of navigation and commerce, the school of medicine and surgery attached to the hospital *de la Misericordia*, the episcopal seminary, school for foundlings, and 4 colleges, with numerous schools for primary and higher instruction. It has a large tobacco factory, a soap-boiling establishment, with roperies, tanneries, and fabrics of cotton, silk, linen, and wool: besides which there are ship-building yards for the construction and repair of merchant-vessels; but in none of these establishments is there any great display of activity. The harbour within the bar, across the mouth of the Douro, can only be entered, at least by vessels of considerable burden, at high water; and it is rarely practicable at any period of the tide for any vessel drawing more than 16 ft. On the N. side the entrance is the castle of St. Joao de Foz, near which, on high ground, is a lighthouse, with a fixed light. The ordinary rise of spring tides is from 10 to 12 ft., and of neaps from 6 to 8 ft. The bar being liable, from the action of the tides, and from sudden swellings and *frescos* in the river, to perpetual alterations, should never be attempted by any vessel without a pilot.

The swellings or *frescos*, now alluded to, most commonly occur in spring, and are caused by heavy rains, and the melting of the snow on the mountains. The rise at such times often amounts to 40 ft.; and the rapidity and strength of the current are so great that no dependence can be placed on anchors in the stream. Fortunately, a fresh never occurs without timely warning, and it is then the practice to moor with a cable made fast to stone-pillars erected on the quay for that purpose. On the opposite side of the river, but connected by a bridge of boats, are the towns of Gaya and Villanova, which may be considered as suburbs of Oporto. The former of these is said to occupy the site of the ancient *Cala*: more eastward is Villanova, inhabited chiefly by coopers, porters, and other labourers, employed by the merchants; and between these towns are immense vaults or warehouses for storing wine previously to its shipment.

Commerce. — Owing to her situation on the Douro, which is navigable partly by barges and partly by boats about 100 m. inland, Oporto is the emporium of a large portion of Portugal, and enjoys a pretty extensive commerce. The famous and well-known red wine called Port is produced on the banks of the Douro, about 50 m. above Oporto, and has derived its name from its being exclusively shipped at this city. The exports of port, which is the great article of trade, have varied during the last 10 years from about 16,500 to above 40,000 pipes. England is by far the largest consumer of port. The high discriminating duties on French wine, imposed in the reign of William III., originally introduced port into the British markets, and gave it a preference, to which, though an excellent wine, it had no natural claim: this preference first generated and its long continuance has

since so confirmed, the taste for port among the great bulk of the population, that it bids fair to maintain its ascendancy as an after-dinner wine, notwithstanding the late equalisation of the duties. In 1849, for example, 2,648,242 galls. port were entered for consumption in the United Kingdom; whereas the entire entries of French wines during the same year, including champagne, claret, sauternes, &c., amounted to only 331,690 galls. At an average of the three years ending with 1849, the shipments of port wine from Oporto for England were 23,290 pipes a year. Next to England, Brazil, the U. States of America, and Hamburg, are the principal importers of port. The other articles of export from Oporto are oil, oranges, and other fruits; wool, refined sugar, cream of tartar, shumac, leather, cork, &c. The imports are sugar, coffee and other colonial products, principally from Brazil; corn, rice, beef, salt fish, and other articles of provision; cotton and woollen goods, hardware, tin plates, &c. from England; hemp, flax, and deals from the Baltic, &c. Subjoined is a

Statement of the Shipments of Port from Oporto during each of the Three Years ending with 1849, specifying the Quantity shipped for each Country.

The climate of Oporto is damp and foggy in winter, less from the vicinity of the Atlantic than from its position in the midst of woods and mountains. The cold is severe for the latitude, though it seldom freezes; and in summer, on the other hand, the heat would be intense, if not moderated by winds blowing regularly from the E. in the morning, S. at noon, and W. at night. The soil in the vicinity is not fertile, nor is Oporto supplied with provisions from its own immediate neighbourhood; but there are many beautiful and pleasant gardens, producing, according to their exposure or elevation, the fruits of N. or S. Europe. The neighbouring mountains exhibit many traces of metallic ores; and along the S. bank of the river are veins of copper and beds of coal. (*Dalrymple's Travels in Portugal*, 126—128.)

Oporto was occasionally the residence of the ancient earls of Portugal, till Alphonso I., in 1174, wrested Lisbon from the Almoraves, and made it the permanent cap. of his kingdom. The city received many important privileges from John II. at the close of the 15th century; but most of them were withdrawn, in consequence of an insurrection of its inhabitants in 1757. In 1805 it was taken and sacked by the French, who retained it till 1809, when the British crossed the Douro, and compelled them to retreat. It afterwards became, in 1831-32, the scene of an obstinate and long-protracted conflict between the late Don Pedro and his brother Miguel. The siege of Oporto lasted upwards of a year, during which a considerable portion of the town was battered down by Don Pedro's artillery, a great deal of property was wantonly destroyed by Miguel's troops, many of the wine-stores were blown up, and several of the wealthiest merchants were ruined by the annihilation of all trade. (*Dalrymple's Portugal*; *Balbi, Essai Stat. de Portugal*; *Dict. Géog.*; *Mod. Trav.*)

OPPELN (Slav. *Oppolice*), a town of Prussian Silesia, cap. reg. and circ. Oppeln, on the Oder, 51 m. S.E. Breslau. Pop., in 1846, 7,600. It is walled, and has, in general, lofty and massive houses, with an old Gothic cathedral, several other R. Catholic and Protestant churches, various schools, a royal salt magazine, and several good hotels. It is the seat of government for the regency, of a board of taxation, a municipal tribunal, &c.; and has a gymnasium and a society for the promotion of the public good. (*Von Zedlitz*; *Berghaus*.)

OPPIDO, a town of the Neapolitan dom. prov. Calabria Ultra, cap. cant., on a hill close to Mount Aspromonte, and 14 m. N.E. Reggio. Pop. about 8,000. The old town of Oppido, supposed by Cluverius to occupy the site of the ancient *Mamertium*, was utterly ruined by the great earthquake of 1783. The modern town, which is also a bishop's see, was built in the vicinity of the former.

Oppido is the name of another Neapolitan town, prov. Basilicata, 13 m. N.E. Potenza. Pop. 5,000. (*Craen's Tour*, &c. pp. 275-76.)

ORAN, a fortified sea-port town of Algiers, at the bottom of the gulph of the same name, on both sides a small river, 220 m. W. by S. Algiers, lat. 33° 44' 20" N.,

long. 0° 42' 13" W. Pop. inc. garrison, 7,000? It is built on the declivity and near the foot of a high hill which overlooks it from the N. and N.W. On this hill are castles which command the town on the one hand, and the *Mers-el-Kebeer*, or Great Port, on the other. The spring which supplies the rivulet rises a short distance from the city. The latter, which flows in a deep winding ravine crossed by two bridges, is sufficiently powerful to turn several mills, and no doubt occasioned the city being built here rather than at its port. Oran was long in the possession of the Spaniards, who held it from 1516 to 1708, and again from 1732 to 1791. During the period of their occupation they expended vast sums on the fortifications, and adorned it with several fine churches and other buildings. It was, however, a very costly appendage; for, as the dominion of the Spaniards did not extend beyond the walls of the town, everything required for the subsistence of the garrison, consisting generally of from 5,000 to 7,000 men, had to be brought from Spain. In 1790 it suffered very severely from an earthquake; and the Moors, taking advantage of this catastrophe, besieged the town, which was evacuated by the Spaniards in the course of the following year. At the period of its occupation by the French it was in a state of extreme decay; but it has since been greatly improved. The fortifications have been repaired and strengthened; several new streets have been opened; and the place has assumed a cheerful, European aspect. It is one of the healthiest situations in the regency.

The port of Oran, at Mers-el-Kebeer, about 5 m. N. from the town, is one of the best on this part of the coast. It is formed by a neck of land which advances about a furlong into the bay, and secures it from the N. and N.E. winds. It has deep water, the holding ground is good, and it is capable of accommodating a large fleet. The French have constructed, with great labour, a new military road from Oran to the port; and they have, also, improved and strengthened the castle built for its protection. (*Shaw's Travels*, 4to. ed. p. 12; *Tableau des Etablissements Français dans l'Algérie*, p. 66. &c.)

ORANGE (an. *Arausio*), a town of France, dep. Vaucluse, cap. arrond. on the Meyne, a tributary of the Rhone, in a fine plain about 5 m. E. the latter river, and 12 m. N. Avignon. Pop. in 1846, 5,786. It has several par. churches, a Protestant church, a communal college, hospital, &c., and many good private houses and public fountains; but the widest thoroughfare being only 12 or 13 ft. across, scarcely any vehicles enter its streets; and the road from Lyons to Avignon, instead of passing through, goes round the town. It has manufactures of handkerchiefs, coloured linens called *toiles d'Orange*, serge and silk twist.

Orange is indebted for its celebrity to its Roman antiquities. The principal of these is a splendid triumphal arch, situated a short way out of the town. It has been conjectured that this structure was erected by Marius; but from its profusion of ornament it would seem to date from a much later period: and, according to Woods, is probably not prior to the age of Hadrian. (*Letters of an Architect*, i. 146.) In many of its details it presents more of the Grecian than the Roman style of architecture; but from the absence of any inscription, its date is wholly conjectural. It is about 6 ft. in length and breadth, and rather more in height. It has 3 arched passages, the central and largest of which is 28½ ft. in height. The archways are flanked by fluted Corinthian columns, and the whole structure is completely covered with groups of figures and other sculptured ornaments. This monument was a good deal injured in the middle ages, from having been converted into a fortress; but it is, notwithstanding, in a state of tolerable preservation; and of late years it has been repaired, and surrounded by a palisade. Extensive remains of a theatre, and the traces of several other Roman buildings, also exist here.

Orange was long the cap. of a small principality of the same name that gave the title of Orange to the family which now occupies the thrones of Holland and Nassau. The king of Holland, however, retains merely the title of Prince of Orange; the town and principality having been ceded to Louis XIV. at the peace of Utrecht. The principality, 12 m. in length by 9 m. in breadth, is very productive of wine, oil, saffron, madder, fruits and aromatic plants; its inhabs are distinguished by their industrious habits. (*Hugo*; *Guide du Voyageur*; *Frossard, Tableau de Nîmes*, &c.; *Artaud, Arc d'Orange*; *Woods*, &c.)

OREBRO, or CEREBRO, a town of Sweden, in the centre of the country, cap. län Orebro, at the W. extremity of the lake Hielmar, 100 m. W. Stockholm, lat. 59° 17' 12", long. 15° 13' 20" E. Pop., in 1836, 4,135. "The houses are built chiefly of wood, not merely of logs clumsily put together, as is the case in Russia, but of logs covered with boards neatly finished, the workmanship of which would not disgrace the tools of any of our English carpenters. Their exterior planking is in-

variably painted a deep red colour, with white doors and window frames. The roofs are generally covered with turf; but there are several well-built brick houses succeeded by white." (*Barrow's Excurs. in the N. of Europe*, 52.) Streets wide and clean, and some of them are paved with granite. In the principal church is a monument in honour of Englehardt. From its central position, Orebro becomes sometimes the seat of the Swedish diet. The inhabs. manufacture woollen cloths, stockings, &c., and carry on an active trade with Stockholm, by the lake Hjelmar, the canal of Arboga, and the lake Mälar. The town also is an entrepôt for the iron of the interior. (*Ström's Hand-book; Barrow, &c.*)

OREGON TERRITORY, a very extensive tract of country stretching N. N. W. and S. S. E. along the W. coast of N. America, partly belonging to Great Britain, and partly and principally to the U. States. It includes the territory between the Rocky Mountains on the E. and the Pacific Ocean on the W., or between the 112th and the 132nd deg. of W. long., and between the border of California, in the 42nd deg. of N. lat. to the S., and Russian America, in about the 54th deg. N. lat. on the N., comprising an area of above 500,000 sq. m. Attached to it are several large islands, of which Vancouver's and Queen Charlotte's are the principal; the former, about 260 m. in length, embraces an area of about 14,000 sq. m. This immense territory has a great variety of soil and climate; but, except in some favoured districts along the coast, and on the banks of the Columbia and other rivers, it is better fitted for hunting and grazing than for husbandry. It is traversed nearly through its whole length by two mountain chains, some points in which attain to great altitude, the Cascade, and Blue Mountains, parallel to each other and to the Rocky Mountains. It is consequently divided into three regions, viz. 1st, the coast region, between the sea and the Cascade Mountains; 2nd, the middle region between the latter and the Blue Mountains; and 3d, the eastern region, extending from the Blue to the Rocky Mountains.

In these regions, the first, or that next the Pacific, including Vancouver's island, is the lowest, most fertile, and has the best climate. "The

soil of this region varies from a deep black vegetable loam to a light brown loamy earth. The rocks are generally basalt, stone, and slate. The surface is generally undulating, well watered, well wooded, and well adapted for agriculture and pasturage. The timber consists of pine, fir, spruce, oaks (white and red), ash, arbutus, cedar, br-vitæ, poplar, maple, willow, cherry, &c.

All kinds of grain, including wheat, rye, barley, oats, and pease, may be raised in abundance. Various fruits, such as pears, apples, &c., succeed admirably; and the different vegetables of England yield most abundant crops." (*Dunn's Zoon*, p. 213.) The climate of that portion of the region S. of the 50th deg. of lat. is mild and temperate, having a considerable similarity to that of England.

The winters are more characterised by rain than by cold. From the middle of October to the middle of March the rains are almost incessant, and are accompanied with tremendous thunder and lightning. The winds which prevail at this season are from the S. and S. E., and they usually bring rain, while those from the N. and N. W. bring fair weather and a clear sky.

From the middle of March to the middle of October the weather is serene and delightful—only a few showers of rain fall; but in the morning the dews and fogs are frequently very thick. (*Penny Cyclopædia*, art. *N. W. Territory*.) The middle and eastern regions, being more elevated, have a severer climate. Even in the winter, however, the fall of snow is not so great

as might have been expected. During summer these regions are frequently subject to severe droughts, which, no doubt, contribute, along with their greater elevation and inferior soil, to their comparative sterility. The principal rivers are the Columbia (noticed under that name), with its affluents, the Willamette and Snake rivers; Frazer's river having its embouchure in the channel between the mainland and Vancouver's island, and the Umqua and Klamet rivers to the S. of the Columbia. The latter, which has its embouchure in 46° 18' N. lat., is navigable for vessels drawing 10 ft. water from its mouth 180 m. inland, when its navigation is interrupted by rapids. The rivers are well stocked with salmon and other fish; the bays are said to swarm with seals; and the country affords every facility for carrying on extensive fisheries. Mr. Dunn mentions that the pine tree sometimes attains, on the banks of the Umqua, the gigantic size of 250 ft. in height and 50 ft. in girth. He adds, the seed vessels are more than a foot in length, and the seeds are as large as castor beans. Cedar trees are found 26 ft. in girth, and high in proportion (p. 198.)

The buffalo was formerly found in large herds along the W. side of the Rocky Mountains, as far W. as Fort Hall; and sometimes descending the valley of the Columbia as far as the Falls. But within the last 20 or 30 years there has been a great and in some respects wanton destruction of this noble animal; and it is now seldom met with W. of the Rocky Mountains. The breed is, in fact, rapidly diminishing in all parts of N. America. And it is a curious coincidence that the main dependence of the Indians should begin to fail at the very time that the progress of civilisation is so rapidly hastening their annihilation. Among the other wild animals are the beaver, the sea and river otter, the musk-rat, fox, wolf, bear, &c.

The country has considerable commercial capabilities, from the number of its ports and inlets, its facilities for ship-building, and its convenient situation for the prosecution of the fisheries in the Pacific Ocean, and for carrying on a trade with China, which has the best markets for furs; of these large quantities are at present exported.

The earliest settlers belonged to the Hudson's Bay Company, the country being well supplied with fur-bearing animals; but now there is, in addition to the hunters, a very considerable and increasing agricultural population. The settlements are mostly in the district traversed by the Columbia in the lower part of its course. But there are no very recent accounts, on which it would be safe to rely, of the population.

Down to 1847 this country was in the joint occupation of the British and Americans; and their conflicting claims threatened at one time to interrupt the amicable relations between the two nations. In 1788, a factory was established by the British in Nootka Sound; but the Spaniards, who claimed the whole coast of America, up to King William's Sound, regarded this proceeding as an invasion of their rights, and sent out an armament to dispossess the British settlers. This outrage having been strongly resented by the British government and nation, Spain agreed to indemnify the parties injured, and a convention was signed, in 1790, at the Escurial between her and Great Britain, by which it was stipulated that the subjects of either power should "not be disturbed or molested, either in navigating or carrying on their fisheries in the Pacific Ocean or in the South Seas, or in landing on the coasts of those seas, in places not already occupied, for the pur-

pose of carrying on their commerce with the natives of the country, or of making settlements there." And it was farther stipulated (Art. 5), that "wherever the subjects of either of the two powers shall have made settlements since the month of April, 1789, or shall hereafter make any, the subjects of the other shall have free access, and shall carry on their trade without any disturbance or molestation."

In 1818, the Americans concluded a treaty with Spain, in which the latter ceded all her claims and pretensions to the territory on the W. coast of America N. of the 42d deg. of lat. Hence, whatever rights the Convention of the Escorial might give to Spain, it gave the same and no more to the U. States.

In 1818 it was stipulated in a convention between Great Britain and the U. States, "That any such country as may be claimed by either party on the N. W. coast of America, W. of the Rocky Mountains, shall, together with its harbours, bays, and creeks, and the navigation of all rivers within the same, be free and open for the term of ten years, from the date of this treaty, to the vessels, citizens, and subjects of the two powers: it being well understood that this agreement is not to be construed to the prejudice of any claim which either of the two high contracting parties may have to any part of the last-mentioned country, nor shall it be taken to affect the claims of any other power or state to any part of the said country." In 1827 this convention was indefinitely extended, with the proviso that it might be terminated by either party giving twelve months' notice to the other.

In the negotiations that were subsequently entered into, both parties agreed that the parallel of the 49th deg. N. lat. should be the boundary of their respective possessions from the Lake of the Woods W. to the point where the Columbia river is joined by the Flat Head or Clarke's river: but here they differed; the British contending that the Columbia should be the boundary from the point now referred to till its embouchure in the Pacific, and the Americans that the 49th parallel of lat. should be followed throughout, or to the W. coast of Vancouver's Island, which it bisects. Happily the differences were compromised and settled by treaty in 1847; the 49th parallel being made the boundary till it reaches the sea at the Strait of Fuca, leaving the whole of Vancouver's Island to the English, the right to the free navigation of the Columbia and Fraser rivers being, also, secured to them. The Americans are now, therefore, the undisputed possessors of the S., most extensive, and far most valuable portion of the territory, or that lying between California on the S. and the 49th parallel of lat. on the N., inc., of course, the comparatively fertile tracts on both sides of the Lower Columbia.

The extent of the American portion of Oregon has been estimated at about 340,000 sq. m. It has been formed into a territory, Oregon city, on the Willamette, being the seat of government. The governor has a salary of 3,000 dolls. a year, and the judges 2,000 dolls. each. The greater attractions presented by California will most likely hinder Oregon, for some considerable time to come, from obtaining her fair share of the emigrants to the W. coast of the continent.

The rapid growth of California is, however, in some respects, very favourable to Oregon. The vast influx of immigrants into the former, and the all but universal application of their energies to mining operations, have occasioned an extraordinary demand for corn and all sorts of provisions. Oregon has largely participated in the benefits arising from this demand; which has supplied her with a ready and advantageous outlet for the various products of her soil, fisheries, and forests. Both being integral portions of the American Confederation, articles from Oregon are admitted into California free of duty, which is not the case with those from other

parts of the continent. We need not, therefore, be surprised to learn that a very extensive trade has already grown up between San Francisco and the Columbia; and this trade, it may be fairly presumed, will continue to increase with the increasing pop. and wealth of California.

The difficulty of reaching Oregon has hitherto been a great drawback to its advancement; but this difficulty will every day diminish. The construction of a canal, or railway, or both, across the Isthmus of Panama will greatly facilitate the intercourse between the States on the Atlantic and those on the Pacific. Neither can there be a doubt that a communication between the two shores of the Union may be effected by roads carried through the passes of the Rocky Mountains. These have already been repeatedly traversed by parties of emigrants; and now that the vast importance of the W. States is beginning fully to manifest itself, we may be pretty well assured that everything will be done that enterprise and perseverance can accomplish, to facilitate the intercourse between them; and that in no very lengthened period railways will stretch across the continent from the Atlantic to the Pacific—from N. York and Philadelphia to Columbia river and San Francisco.

The part of Oregon belonging to Great Britain is inc. in the vast territories belonging to the Hudson's Bay Company. But with the exception of Vancouver's Island (for which, see SUPPLEMENT), it is of little value, except as hunting ground. (For farther information with respect to the Oregon territory, and the disputes to which it gave rise, the reader may consult *The History, &c. of the Oregon Territory*, by John Dunn, 8vo. 2d ed. 1846; *The Narrative of an Exploring Expedition to Oregon and California*, by J. C. Fremont, 8vo. Lond. 1846; *The Oregon Question examined*, by Travers Twiss, D. C. L., 8vo. 1846, an elaborate, learned, and excellent treatise; *Falconer's Tract on ditto*, &c.)

OREL, a central prov. of European Russia, to the S. of Kalouga and Tula. Area, 16,780 sq. m. Pop., 1,502,900. Surface undulating; soil, extremely rich and fertile. Principal rivers, Desna, an affluent of the Dniepr; Sosna, an affluent of the Don; and Oka, an affluent of the Wolga. Forests very extensive; occupying nearly a third part of the surface. Agriculture is the principal dependence of the inhabs.; and owing to the excellence of the soil, the return, notwithstanding the bad husbandry, is frequently 7, and sometimes 10 times the seed. Horticulture is better understood than in most parts of the empire. Most landowners have their kitchen-gardens and their orchards, in which they raise almost all the culinary vegetables common in Russia, with apples, cherries, pears, plums, &c. The chase, though a secondary occupation, is very generally followed, especially that of the fox and hare. Birds, especially quails, are very abundant. The breed of domestic quadrupeds is better and more attended to than in the more northerly provinces; the horses, which are very superior, are suitable either for draught or the saddle. The oxen are of large size; and sheep and hogs are both numerous. The inhabs. keep large quantities of bees, honey being generally used as a substitute for sugar. Manufactures, if we except distilleries, which are numerous and extensive, have made little progress, the country people supplying themselves directly with almost everything of which they make any use. There are, however, some establishments where coarse linen and woollen goods, earthenware, cordage, soap, &c., are produced; and there are some iron works. Agricultural produce, with timber, mats, iron, &c., constitute the principal articles of export. Articles of foreign produce and manufacture are brought from Moscow. Instruction very defective; there being in the entire government, in 1832, only 39 schools, and 4,266 scholars. The public revenue amounts to about 10,500,000 roubles, of which the spirit and beer duties yield 6,336,663 roubles! The inhabs. consist of Great Russians, Little Russians, and Cossacks, the great majority being of the Greek church. They are said to be for the most part industrious, frugal, and in easy circumstances; but they are at the same time ignorant, prejudiced, attached to old habits, and averse to changes and innovations. (*Schneider, La Russie*, &c., 346, &c.)

OREL, a city of European Russia, cap. of the above gov., on the Oka, where it receives the Orlyk; lat. 52° 57' 58" N., long. 35° 57' 15" E. Pop., according to the official accounts, in 1846, 33,000; having been only 20,000 in 1820. This rapid increase is owing to its favourable situation for commerce, in the centre of a rich country, on a navigable river, communicating, partly by the aid of canals, with the Baltic on the one hand, and the Black Sea and the Caspian on the other. Orel may be reckoned the entrepôt of the commerce between Russia, Little Russia, and the Crimea: and at the same time the depôt for corn, both of its own and the adjacent fertile governments. The principal articles of commerce are corn, hemp, tallow, butter, bristles, leather, wax, honey, cloth, horned cattle, &c., which its merchants chiefly buy in the southern provinces. Immense quanti-

les of most of these articles are shipped upon the Oka, partly to be landed at Serpuchof for the consumption of Moscow, and partly to be forwarded to Petersburg. It is an ecclesiastical seminary, attended by a great number of pupils; a gymnasium, &c. It has also establishments for the spinning of cotton, manufactures of cloth and coarse linen, with tanneries, distilleries, tallow-melting houses, rope-works, &c.; and is the seat of some important fairs. It is built of wood, and palisaded; and the inhabs. are distinguished for their industry and wealth. (*Schmitzer, La Russie, &c.*, p. 351.; *Gall's Travels*, i. 59., &c.)

ORENBOURG, a very extensive government of the Russian empire, mostly in Europe, but partly in Asia, lying between the governments of Astrakhan on the W., and that of Tobolsk on the E., and having Persia on the S., and the country of the independent Kirghises on the N. Area estimated at about 128,000 sq. m. Pop. 1,771,000. (*Kappen*.) It is divided into two unequal portions by the Oural Mountains; and the river Oural has its source and termination in this government. It is also traversed by the Biela and other affluents of the Wolga, and is bounded on the E. by the Emsa. Soil very various; in part mountainous, in part arid saline steppes, but the larger portion is decidedly fertile. Forests very extensive. Climate in extremes; being exceedingly hot in summer, and proportionally cold in winter, particularly on the E. of the Oural Mountains. Notwithstanding the backwardness of agriculture, the produce of corn is estimated at about 4,000,000 chetverts. The principal wealth of the inhabs. consists in their horses, cattle, and sheep; of all which, but especially the first two, they have vast numbers. They have also camels, hogs, &c. The river Oural teems with fish, which are taken in great numbers, and are said to furnish the best caviar. Mines important and valuable, yielding some gold, with large quantities of iron and copper, in the working of which many individuals are employed. A manufactory of arms was established in the district of Troitsk, in this government, by workmen from Rhenish Prussia. The iron-mines of Iletsk furnish annually about 500,000 poods, and a large supply is obtained from the salt-lakes. A considerable commerce is carried on with the Kirghises and other people to the S. of Orenbourg, which principally centres in the town of that name. In 1833 there arrived at the latter 14 caravans, with 2,547 camels; and during the same year there were despatched 13 caravans, with 4,769 camels and 264 draught-horses. The value of imports was 2,551,198 roubles, and of the exports 77,921 do. (*Schmitzer, La Russie, &c.*, p. 701.)

ORENBOURG, the principal city of the above government, and the residence of the military governor, on the bank of the river Oural, lat. 51° 46' N., long. 55° 4' 45" W. Pop. 18,000 or 20,000.* It is well built, and regularly fortified. Principal edifices, cathedral and custom-house. In 1826 a school was established here for the special use of the Mohammedans, and the study of their language. The seat of the commerce alluded to in the preceding article is on the southern side of the river, in a bazaar erected exclusively for that purpose, and protected by a camp of Cossacks.

ORFORD (formerly *Ore-ford*), a decayed bor., market-town, and par. of England, hund. Plumersgate, co. Folk, at the confluence of the Alde with the Ore; 16 E. by N. Ipswich, and 80 m. N.E. London. Area of , 2,740 acres. Pop., in 1831, 1,302. It was formerly much greater importance than at present, having, 1559, sent 3 ships and 62 men to Edward III. at the siege of Calais. Its decay is attributed to the loss of its port, the sea having receded from this part of the coast. It now, having lost its privilege of sending mems. to the king, is sunk into insignificance; though its large ancient church, decayed town-hall, assembly-house, and old castle, attest its former consequence. Its present inhabs. are chiefly supported by the oyster-fisheries on the neighbouring rivers. Orford claims to be a bor. by prescription, but has received several royal charters. Its corporate officers are a mayor, 8 portmen, and 12 aldermen; but it was considered too unimportant to be included in the provisions of the Mun. Reform Act. It sent 2 mems. to the H. of C. from the reign of Richard III. down to the Reform Act, by which it was disfranchised. Sudborne Hall, a seat of the Duke of Hertford, is about 1 m. N.E. from the town. Fairs on Monday: fair, June 24.

ORIA, (an. *Hyria*), a town of the Neapolitan dom., in the Otranto, cap. canton, 21 m. E. by N. Taranto. Pop. 5,000, principally of Greek origin. It is "a city antically situated upon three hills, in the centre of plains. The castle and cathedral stand boldly on the highest points." (*Swindburne*.) Oria is a bishopric, and is very ancient. (*Cramer's Anc. Italy*, ii. 310., &c.)

*The official returns quoted by Schmitzer make the pop. only 18,000; but this is no doubt an error, and most probably refers either to males or families. According to the same returns, the births in 1831 were 600, and the deaths 639, showing that the pop. cannot materially differ from what is stated above.

ORIHUELA, an episcopal city of Spain, prov. Valencia, on both sides the Segura, crossed here by two bridges, 14 m. E.N.E. Murcia, and 98 m. S.S.W. Valencia. Pop., according to Mifano, 25,551. It is situated at the foot of a ridge of bare rocks, near the head of a very fruitful vega or vale, forming a continuation of the *huerta* of Murcia. The streets are broad, but not paved; and there is not a single fountain in the town. Its principal buildings are, a cathedral (with an attached chapter of 5 dignitaries and 17 canons), 5 par. churches, 2 of which are in the suburbs, and 5 dependant churches (*colegios*), 2 hospitals, a foundling asylum, public granary, and cavalry barracks. The inhabs. are remarkable for their superstition, demoralisation, idleness, and poverty. The greater part are engaged in agriculture; and the town is a considerable mart for corn and oil. It produces linens and hats, and has numerous tanneries, corn and oil mills, soap-houses, and starch manufactories. A large fair is held in October. The neighbouring *huerta*, about 17 m. in length by 5 m. in breadth, can scarcely be exceeded in beauty and fertility. "Even the vale of Murcia yields in this respect to that of Orihuela, because the latter is so abundantly supplied with water as to be independent of rain. The cypress, silver elm, and pomegranate are here seen mingled with the mulberry, orange, and fig; and here, also, the palm, rising in rich clusters, lends novelty as well as beauty to the enchanting scene." (*Inglis*, ii. 220.) The *huerta* yields also very plentiful crops of wheat, barley, and canary seed, hemp, flax, garden vegetables, &c., and is deservedly called the "garden of Spain."

Orihuela, the an. *Orgetis*, is supposed to have existed prior even to the Carthaginians, from whom it passed successively to the Romans, Goths, and Moors. In 1067 it was made the cap. of a small kingdom subordinate to the caliphate of Cordova. In 1228 it became annexed to the Moorish kingdom of Murcia, and finally, in 1265, fell by conquest into the hands of James I., the Christian king of Aragon. (*Inglis*, ii. 216—220.; *Mod. Trav.*; *Mémoires*.)

ORINOCO, a large river of S. America, in Columbia, for a knowledge of which we are chiefly indebted to Humboldt, who explored the greater part of its course in 1800—1802. Its sources have not been traced, but are supposed to lie in about lat. 3° 30' N., long. 64° W.: it has a circular course running first W., then N., and latterly E., to its embouchure in the Atlantic, opposite to and S. of Trinidad: its length, including windings, is estimated at 1,380 m., being nearly equal to that of the Danube. In lat. 3° 10' the river runs over a ledge of rocks, forming a cataract called the Raudal de Guahariboes, about 50 m. above the station of Esmeralda, the highest point attained by Humboldt. About 15 m. below this station it is joined on the S., or left bank, by the Casiquiare river ("two or three times broader than the Seine near the Jardin des Plantes"), which unites with the Rio Negro, an affluent of the Amazon, and thus connects the Orinoco and the latter by a navigable water communication. Its course from this point is W.N.W. to the junction of the Guaviare, after which it becomes a broad and deep river, flowing N. by E. over a rocky bed, in which are the two large cataracts called the *Raudalls*, or rapids, of Maypures and Atures, joining together an archipelago of islands, which fill the bed of the river for several m., and in some places do not leave a free passage of 20 or 30 ft. for its navigation, though its breadth at this point exceeds 8,000 ft. (*Humboldt's Pers. Narr.*, v. 128.) About 50 m. below these falls the Orinoco receives from the W. bank the waters of one of its principal affluents, the Meta; and about 70 and 120 m. lower still, the large rivers Arauca and Apure. At the junction of the Apure, where the rocky country terminates, the main stream deflects eastwards, and runs E. by N. past Angostura, to the delta at its mouth, the only considerable affluents in this part of its course being the Caura and Carony, joining it from the S. The delta has its apex about 130 m. from the sea: the S., or principal channel, called *Bocca de Navios*, runs eastward into the Atlantic, and is divided for a distance of about 46 m. into two channels, by the island of Imataca, the E. end of which is about 35 m. from Point Barima, at the mouth of the river, in lat. 8° 45' N., long. 60° W. The N., or smaller channel, divides itself into a number of branches, called *Boccas chicas*, or small mouths: most of them are sufficiently deep for vessels of considerable burden; but they cannot be navigated without the aid of the neighbouring Indians, who alone are acquainted with the deep and safe channels formed in the alluvial soil near the mouth of the river. The greatest distance between the mouths of the Orinoco is estimated by Humboldt at 47 nautical leagues, or 140 m.: two of the northern mouths fall into the Gulph of Paria.

The affluents of the Orinoco are very numerous, many of them contributing an immense volume of water to the principal river. Those on the W. and N. banks, however, are the only rivers available for navigation, except in the lower part of its course, where it receives

Course and Course. The Guntura, which is supposed to connect itself with the Rio Negro by a natural channel, in the same way as the latter river is connected with the Orinoco, appears to have a navigable course of more than 300 m. The Meta rises in the Andes, E. of Bogota, and is navigable for about 500 m. The Apure rises in the Andes, by several sources, between the 8th and 9th parallels of N. lat.; and after a course of nearly 600 m., enters a low and swampy district, through which it forms many different channels, in the neighbourhood of which are extensive *llanos*, furnishing very rich pasturage.

The tides of the Orinoco, at the lowest season, in March, are perceptible as far as Angostura, about 380 m. from Ft. Barima, but the rise is not material about the juncture of the Carony, about 100 m. from the mouth. The annual swell of the Orinoco commences in April and ends in September, during which it remains with the vast body of water which it has acquired the five preceding months, and presents an astonishingly grand spectacle. At the distance of 1,300 m. from the ocean, the rise is equal to 13 fathoms. In the beginning of October the water begins to fall, imperceptibly leaving the plains, and exposing in its bed a number of rocks and islands. At the beginning of February it is at its lowest ebb, and continues in this state till the beginning of April. It abounds in fish of various descriptions. Amphibious animals are also found in great numbers on its shores; caymans, or round-mouthed crocodiles, are met with in great abundance throughout the river, and are, not without justice, an object of dread to the natives. Scorpions and mosquitoes are stated, likewise, to be so abundant as to offer the greatest hindrances to European travellers. The Indian tribes above Angostura are described as a miserable, savage race, little improved by the efforts of the Jesuit missionaries, and the ferocity of the natives along the upper part of the river prevented Humboldt and Schomburgk from ascertaining its furthest sources. (*Humboldt's Pers. Narr.* v.; *Geog. Journal*, x. 345-367.)

most striking objects in the town. There are several other churches, and convents, an hospital, a Tridennane seminary, and a Parlet college. The Tivoli is crossed here by a bridge of 3 arches. The Bay of Orizaba, the mouth of which is 8 m. across, affords excellent anchorage during the prevalence of winds blowing off shore, but those from the W throw in a heavy sea. The E. shore of the bay is shoal, but near its N side vessels anchor in 6 or 7 fathoms water. Many of the inhab. are occupied in the manufacture of salt, and the tunny fishery; and some tolerable wine is grown near the town. Orizaba was founded about 1070. (*Steph's Sardinas*, 264, 265, &c.)

ORIZABA, a town of Mexico, in the state of Vera Cruz, in a valley remarkable for its fertility, 70 m. W.S.W. Vera Cruz, and 140 m. E.S.E. Mexico. Pop. between 8,000 and 10,000, including whites and Indians. It is laid out in wide, neat, and well paved streets, though so great is the power of vegetation, that grass grows in almost every part of the town. Coarse cloths are made here in small quantities, and there are several tanneries. The valley in which Orizaba is situated is well clothed with forest trees, above which rises the now extinct and snow-covered volcano of Orizaba, to the height of 17,300

ORKNEY AND SHETLAND ISLES.

It. above the Atlantic. The neighbourhood produces all the tobacco consumed in Mexico; and within the town is a large government manufactory of that article.

ORKNEY AND SHETLAND ISLANDS. These islands, which are most probably the *Fæar* of the ancients, lie in two groups to the N. of Scotland, and form between them a co. The Orkneys (*Orkney*), the most southerly group, are separated from the co. of Caithness by the Pentland Frith, about 6 m. in breadth. They are comprised between the parallels of 59° 44' and 60° 34' N. lat., and 2° 35' and 3° 35' W. long. There are about a dozen principal islands; Pomona, or Mainland, being decidedly the largest. But, including the smaller islands (previously *holm*) and islets, the total number is estimated at about 67, of which about 40 are uninhabited. They are supposed to comprise an area of about 381,300 acres, and had, in 1841, a pop. of 20,307.

The Shetland, or *Zetland*, Isles, the most northerly group (perhaps the *Ullima Thule* of the ancients), are separated from the Orkneys by a channel 66 m. across, and lie principally between the parallels of 59° 57' and 60° 50' N. lat., and 3° 30' and 1° 40' W. long. Including islets, they are supposed to exceed 100 in number; but the mainland or principal island is a good deal more extensive than all the others put together. Between 30 and 40 are inhabited. They are about twice as extensive as the Orkneys; their total area being estimated at 383,300 acres. In 1841 they had a pop. of 20,307.

The aspect of these islands is pretty similar; but the Shetland group is the more wet and barren of the two. They are generally fenced, particularly on the W. side, with high, black, precipitous cliffs, against which the sea, when vexed by storms, dashes with astonishing fury. They are destitute of high mountains; the altitude of Mount Roma, in Shetland, the highest, not exceeding 919 ft. Their general appearance is that of dreary, heathy wastes, interspersed with rocks, varied sometimes with swamps and lakes, and, in a few places, with beds of moveable sand. In some parts, however, particularly in Orkney, the land is abundantly fertile, producing good crops of corn and luxuriant herbage. Some of the islets, or holms, appear like gigantic pillars, rising perpendicularly from the sea: these are the resort of vast numbers of sea-fowl; and in the breeding season hunting for eggs and young birds forms one of the principal and most dangerous employments of the natives. Climate similar to that of the outer Hebrides, except that the days are a little longer in summer and shorter in winter. During the latter, the aurora borealis is uncommonly brilliant. The cultivated lands bear but a very small proportion to the others, being supposed not to exceed 25,000 acres in Orkney, and 22,000 in Shetland. Farms generally very small; few having more than 10 acres of arable land, and many not nearly so much. Agriculture is considered, particularly in Shetland, of subordinate importance, and, though a good deal improved, is still very backward. In Shetland, most part of the ground is turned over with the spade, but in Orkney, ploughs are in pretty general use. Oats, and bare or bigg (*Hordeum brevisetivum*), are the only white crops cultivated; and, except on a few improved farms, they follow each other alternately as long as the land will bear any thing, which it does for a very long time when well manured with sea-weed. The barley of Orkney is a great deal more abundant, and of a much better quality, than could have been anticipated; and, besides supplying the home demand, considerable quantities are exported. Potatoes are cultivated in all the islands, and form an important part of the food of the people. Turnips have also been planted, and have succeeded very well. At present no trees can be made to grow, and hardly a shrub is to be met with; which is the more singular, as the trunks of large trees are not unfrequently found imbedded in moss and sand, both in Orkney and Shetland. The hardy, spirited, little horses, known by the name of *Shetland*, are bred in Shetland, and are exported in considerable numbers. The stock kept in the islands is estimated at from 10,000 to 12,000; they are never housed, nor receive any food, except what they gather for themselves. Some of them are exceedingly well proportioned, active, and strong for their size. The horses of Orkney are in inferior estimation. Cattle very small, sometimes not weighing more than from 25 to 40 lbs. a quarter; they are shaggy, and not well shaped; but they are hardy, feed easily, and, when fattened, their beef is fine and tender. The stock in both groups of islands is supposed to amount to about 45,000 head. The native sheep are of the small dun-faced breed; they yield short wool, which, though generally soft and fine, is sometimes as hairy as that of a goat. Recently the black-faced and Cheviot breeds, and even pure Merinos, have been introduced into Orkney with considerable success. The stock in both groups of islands is believed to exceed 135,000. A small breed of swine is very abundant; they roam at large, and are not a little destructive. Rabbits are abundant in both sets of islands, but particularly in the Orkneys; as many as 25,000 skins having been ex-

KNKY AND SHETLAND ISLES

in a single season from the port of Stromness, are plentiful, and large quantities of eggs are exported from Orkney. The herring, however, in Orkney, as Shetland, are the grand object of pursuit. They are periodically visited by vast shoals of herrings; the surrounding bays and seas are uniformly well-stocked with cod and other species of white fish. *De senis a mari, ad omnia ports summa placendi* *Male aforia.* (Shetl., No. 1. § 20.) Bransay in Shetland, has always been one of the principal ports of the Dutch herring fishery; but the fish is now principally carried on by the islanders, the year ended the 4th of April, 1840, 19,896 herrings, and 9,388 cwt. cod, were cured in Orkney; 45 barrels herring, and 40,201 cwt. cod, in Shetland. 100,000 lobsters are supposed to be annually taken on the Orkneys for London. Vessels from ports bound for the N. whale fishery mostly to Orkney or Shetland, and, besides taking on supplies of provisions, usually complete their crews men belonging to the islands, whom they put on their way back. Rye straw grown in Orkney is found peculiarly well fitted to serve as a substitute for the straw used in Italian plait; and the turning of this straw into plait has been carried on several years to a considerable extent, and with good success. Kelp, though comparatively unproductive, continues to be extensively produced. Wool-kings and gloves, sometimes of extraordinary quality, are exported from Shetland. Messrs. Anderson's valuable work on the Highlands, gives the account of the

collected in Orkney, in 1888, for Farm Produce,
Manufactures, Fish, &c. exported.

is no similar account for Shetland; but the rivers by its inhabitants do not differ materially so received by their neighbours in Orkney. The spring of the islands is considerable. In 1686 belonged to the Orkneys 77 ships, carrying 4,218 235 men; and there belonged at the same time and 101 ships, carrying 2,367 tons and 744 men, of a great number of boats engaged in the

opie of these remote islands being of Scandinavian Celtic origin, neither the Gaelic dress nor has ever prevailed amongst them. All of them speak English; but, of old, Norse was the prevalent language. The cottages of the poorer ranks are in general hovels, affording accommodation in winter and fowls, as well as to the family. Owing to the scarcity of fuel, the want of fuel is in some very severely felt. On the whole, however, the inhabitants are decidedly better off than those of the Hebrides, being comparatively industrious, and well fed. Kirkwall in Orkney, and Lerwick in Shetland — the only towns of consequence in the islands, in 1841, the former a population of 2,946, the latter 2,787. The society is both good, and comfortable.

id and some parts of Orkney suffer much from
ion of tithes. They are not only charged upon
see of the land, but on that of the fisheries; and
merally farmed, they are rigidly collected, are
re of much irritation, and are a formidable ob-
turbance. Besides the good effects that

ORLEANA

441

have resulted everywhere else in Scotland from the abolition of tithes, it is singular that they have not been commuted here. The feu duties, payable to the crown, or rather to the donor, Lord Zetland, have also contributed materially to check improvement. Mari, though neglected, is common in Orkney. Lead ore also has been met with, and limestone is of frequent occurrence. These islands are divided into 40 parcs. The gross rental of Orkney amounted, in 1818, to £,684.; and that of Shetland to £,541.

direct line to the *Place du Martroy*. In this square is the monument erected to John of Arc; consisting of a bronze statue of that heroine, 5 ft. in height, on a marble pedestal, upon the sides of which are 4 bas-reliefs in bronze, representing the principal actions of her life. A few remains of the ancient fortifications of Orleans exist, but their place is now principally occupied with plantations and public walks, one of which is a fine promenade called the *Mess*. In the old parts of the city the houses are chiefly of timber, and the public thoroughfares narrow, dirty, and wretchedly paved; but several new and tolerable streets have been opened of late years, and various improvements are in progress. (*Hugs*.) The cathedral, one of the finest Gothic edifices in France, is in a great measure hidden by the surrounding houses. It was begun in the 13th century; partly destroyed by the Huguenots, but rebuilt by Henry IV. It has a fine western portal, flanked with two towers, built by Louis XV. in the most gorgeous style. At the intersection of the nave and transepts is an elegant spire; the side entrances, the lofty vaults, the high altar, and the carving of some parts of the interior also possess great beauty. Some of the other churches and chapels are handsome; but, though still numerous, several of them have been converted into warehouses. The old town-hall, an edifice of the 16th century, is now appropriated to the museum: in its court-yard is an old tower, serving to support a telegraph. The Palace of Justice, a handsome edifice erected in 1821, the theatre, *abattoir*, prison, large infantry barracks, corn-hall, intendency, and general hospital, are the other principal public edifices. There are several private buildings, curious for their Gothic architecture and decorations; the most remarkable of these are the houses of Agnes Borel and Francis I. The city is surrounded by extensive suburbs, and its vicinity is sprinkled with numerous villages.

Orléans is the seat of a bishopric, of a royal court for the *dépts.* Loir-et-Cher, Indre-et-Loire, and Loirat; of tribunals of primary jurisdiction and commerce, a court of appeal, the forest-direction for the basin of the Loire, a *conseil de prud'hommes*, and a chamber of commerce. It has a royal college; an *académie universitaire* (for the 3 *dépts.* specified above); a society for the promotion of science, *belles-lettres*, and art; a public library of 26,000 vols.; a museum, with an extensive collection of paintings of the French school, cabinets of natural history, &c.; a botanic garden; courses of medicine, &c. at the general hospital; of drawing, architecture, botany, &c.; maternity and Bible societies; schools of mutual instruction, &c.; and a departmental assurance company. Its former university, founded in 1312, had, amongst its illustrious students, De Thou, Erasmus, Calvin, and Theodore Bèze.

Orleans is well situated for commerce, but its trade is less flourishing than before the Revolution. It has declined, while Havre and Paris have risen as commercial towns. Its manufactures comprise fine woollen cloths, hannels, woollen yarn, hosiery, cotton yarn, refined sugar.

vinegar, and wax candles; and besides its trade in these, Orleans deals extensively in corn, wines, timber, wool, cheese, and colonial produce. It has a large general fair in June, which lasts 15 days, and one in Nov., lasting 8 days.

D'Anville has shown conclusively that Orleans occupies the site of the an. *Gemabum*, the emporium of the Cornutes, taken and burned by Cæsar. (*Notice de l'Ancienne Gaule*, p. 345.) It subsequently rose to great eminence, and was unsuccessfully besieged by Attila and Odoacer. It became the cap. of the first kingdom of Burgundy, under the first race of French kings. Since the time of Philip of Valois, in the 14th century, it has usually given the title of duke to a member of the royal family. It was besieged by the English in 1428-29, who were ultimately obliged, through the efforts of Joan of Arc, to raise the siege and retire. In 1563 it was besieged by the Catholics; and during the progress of this siege the Duke of Guise was assassinated. (*Hugo, art. Loiret; Dict. Géog., &c.*)

ORMSKIRK, a market-town and par. of England, hund. W. Derby, co. Lancaster, 11½ m. N.N.E. Liverpool, and 180 m. N.W. London. Area of par., which comprises 6 townships, 29,020 acres. Pop. of Ormskirk township, in 1841, 4,691. The town is well-built, paved, and lighted with gas, consisting of 4 principal streets, meeting each other at right angles in a large market-place, in which is the town-hall, built in 1779. The church is a large edifice (rebuilt in 1729), with a tower and steeple, detached from each other, and standing side by side: the living is a vicarage, in the gift of Earl Derby, lord of the manor. The out-townships have 8 district churches. The Wesleyan Methodists, Independents, and Unitarians have their respective places of worship; and at Scarisbrick is a Rom. Cath. chapel. Attached to the churches and chapels are 7 Sunday-schools, 3 of which are also national day-schools. A grammar-school, endowed in 1614, is supported by an income of about 140*l.*; and there are 3 infant-schools. The other charitable institutions consist of Lathom's almshouses and apprenticeship-fund, 3 benevolent societies, a savings' bank, and a dispensary, opened in 1797. The principal business of the inhab. is in weaving light cottons and silks, silk-winding, hat and rope-making: in 1839, one cotton-mill employed 58 hands. Within the parish, also, are considerable coal-mines, the produce of which is sent to Liverpool and other places by the Dryden Navigation, and by the Leeds and Liverpool Canal, which passes within 3 m. of the town. The local government of Ormskirk is in the county and manorial police; and courts-leet are held by the lord of the manor (Earl Derby) once a year. Petty sessions, also, are held here; and it is one of the polling-places at elections for the S. division of Lancashire. Markets on Thursday: large cattle-fairs, Whit-Monday and Tuesday, and 10th Sept.

About 3 m. E. Ormskirk is Lathom House, once the seat of the Stanleys, Earls of Derby, and celebrated for the siege which it sustained under the Countess of Derby in the civil wars of the 17th century: it is now the property of Lord Skelmersdale. A battle was fought near the town in 1644, between the royalists and parliamentarians, when the former were defeated with great loss. (*Parl. Papers; Butterworth's Stat. of Lancashire.*)

ORMUZ (an. *Oziris*), an island situated at the mouth of the Gulph of Persia, in lat. 27° 12' N., long. 56° 25' E., about 12 m. in circ. It resembles, when viewed from the sea, a mass of rocks and shells violently thrown up from the bottom to the surface of the ocean. The fort, which is in tolerable repair, is built on a narrow projecting neck of land; and this, with a wretched suburb, has a pop. of not more than 500 persons. The remains of aqueducts, walls, &c. on a plain near the suburb, mark the seat of the former capital. The harbour is sheltered on three sides by land, and has good anchorage ground. A range of hills intersects the island from E. to W.; and the rocks consist almost entirely of fine crystallised salt, which might be exported in unlimited quantities. The geological formation of the island indicates the former existence of volcanic action, and sulphur, iron, and copper, are found in large quantities, though few attempts have yet been made to apply these mineral riches to any useful purpose. (*Kinastir's Persia*, p. 12, 13.)

This island, at present so inconsiderable, would not have been worth notice but for its former celebrity and importance. It had, however, owing to its advantageous situation, become, previously to the appearance of the Portuguese in the East, a great emporium, being, in fact, the centre of the trade of the Persian Gulph, and of the contiguous countries, and possessed great wealth, population, and prosperity. It was taken by Albuquerque, the Portuguese viceroy, in 1515; and was held by the Portuguese till 1622, when it was wrested from them by Shah Abbas, assisted by an English fleet. The booty acquired by the captors on this occasion is said to have amounted to 2 millions sterling! Subsequently the trade of the island was diverted to Gombroon and other places; and this once rich and flourishing emporium gradually

fell into that state of irreparable decay in which we now find it. (*Modern Universal History*, ix. 301., &c., 8vo. ed.)

ORNE, a dep. of France, reg. N.W., formerly included in the provs. of Normandy and Perche; between lat. 48° 12' and 48° 48' N., and long. 1° E. and 1° W., having N. the deps. Calvados and Eure, E. the latter and Eure-et-Loir, S. Sarthe and Mayenne, and W. Manche. Length, E. to W., 80 m.; breadth very variable. Area, 610,561 hectares. Pop. in 1846, 442,107. A chain of hills runs E. to W. through this dep., separating the basins of the Orne and Seine from that of the Loire; but its summits do not reach a height of more than from 1,900 to 2,000 ft.: the hills are mostly covered with thick woods. The dep. is abundantly watered. Principal rivers, the Orne, Dive, Vie, &c., running N., and the Sarthe, Mayenne, and Huine, S. The Orne, whence the name of the dep., has its source near Stez, and flows generally N. through the deps. Orne and Calvados to the English Channel; which it enters, after an entire course of about 90 m., 15 m. below Caen, from which city it is navigable. Small lakes are supposed to occupy 1,300 hectares; and there are numerous marshes. The soil is very various; and in several places there are distinct traces of volcanic action. In 1834, 333,400 hectares were estimated to be arable, 131,045 in meadows, 11,121 in orchards, 72,000 in woods, and 18,253 in heaths, wastes, &c. In 1825, of 147,135 properties, subject to the *contrib. foncière*, 63,854 were assessed at 5 fr. and under, and 26,128 at from 5 to 10 fr. Agriculture is extremely backward. On the small farms, which are extremely numerous, spade husbandry is very general. Except oats, not enough of corn is produced for home consumption, and the deficiency is, in part, made up by potatoes and buckwheat. Hemp and flax are among the principal products; in some cantons beet-root for sugar is grown. Large quantities of cider and perry are made, from a portion of which brandy is distilled. The best horses of Normandy are reared in this dep. Cattle, hogs, and poultry are fattened for the Paris markets, and honey is an important product. The sheep, which are of an inferior breed, are supposed to yield 450,000 kilog. wool a year. Iron mines are wrought in some parts; manganese, building and other stone, and porcelain clay, being the other principal mineral products. Metallic and linen goods are those chiefly manufactured. L'Aigle is celebrated throughout France for its needles and pins, copper and brass wire. The coarse linen cloths made at Mortagne amount annually to about 12,000 pieces, of from 80 to 100 cils each; and Alençon is particularly famous for a fine and highly prized species of lace, termed *points d'Alençon*. Muslins, calicoes, hair cloths, paper, glass, and beet-root sugar are among the other manufactures. Orne is divided into 4 arronds.; chief towns, Alençon, the cap., with 12,756 inhab., Argentan, Domfront, and Mortagne. Total public revenue in 1844, 12,128,684 fr. (*Hugo, art. Orne; Dict. Géog.; Official Tables.*)

ORONTES, (Arab. *El-Aassy*, "the rebellious.") a river of Asiatic Turkey, in Syria, which rises in a natural rocky basin on the E. side of the mountain chain of Antilibanus, near the village of El-Ras, within the pach. of Damascus, about 50 m. N. of that city. It runs N.N.E. as far as the lake Kades, through which it flows, and then takes a N.N.W. direction through the beautiful vale of El-Ghab, as far as lat. 36° 15', where it receives the waters of lake Antakiah, near the city of that name (the ancient *Antioch*), and then suddenly deflects westward, falling into the Mediterranean, near Soveidia, or *Selucia*, after a course of about 240 m. At its mouth is a bar, over which there is from 3½ to 9 ft. water during winter. (*Geog. Journ.* viii. 280.) "The Orontes in the winter season inundates a part of the low grounds, through which it flows in the upper part of its course, thus insulating the villages and cutting off all communication between them, except by boats. In summer the inundation subsides; but the lakes remain half dried up, and give birth to swarms of gnats and flies, which, coupled with the exhalations from the marshes, oblige the inhabitants to retire into the mountains with their cattle, goods, and chattels." (*Robinson's Pers. and Syria*, ii. 247.) This river is not navigable; "and the rapidity of the stream in many parts of its course, its sudden and numerous windings, its frequent shallows, its various bridges, and the many changes to which it is subjected in the vicissitudes of the seasons, appear to be insuperable obstacles to any plan for making it navigable, or for using it to any considerable extent for trading purposes. In fact, the Orontes is scarcely available at all, even for small craft; and to reach Antioch in a steamer would be a work of consummate difficulty, and, when accomplished, by no means worth the trouble and expense incurred." (*Bowring's Stat. of Syria*, p. 49.) Its use, therefore, is chiefly confined to the irrigation of the surrounding country, which is effected by means of water-wheels similar to those described in the article HAMAM, I. 958.

cities of the interior. It is the seat of a tribunal and chamber of commerce, and the residence of a military commandant and of an English consul.

During the ever-memorable struggle made by the Dutch to emancipate themselves from the blind and brutal despotism of Old Spain, Ostend sustained one of the most celebrated sieges of which history has preserved any account. It continued from the 4th of July, 1601, to the 28th of September, 1604, when the garrison capitulated, on honourable terms, to the ablest of the Spanish leaders, the famous Marquis of Spinola. This siege is supposed to have cost the contending parties the lives of nearly 100,000 men! (See *Watson's Philip III.*, i. 92—188. 8vo. ed.; *Official Returns*, &c.)

OSTERODE, a town of central Germany, kingd. of Hanover, princip. Grubenhagen, on the Söse, a tributary of the Leine, at the foot of the Harz, 49 m. S.S.E. Hanover. Pop., in 1845, 5,197. It is walled, and has several churches, an hospital, a gymnasium, &c.; but its principal public edifices are the royal granaries, which supply about 56,000 scheffel of corn annually, at 16 groschen (2s.) the scheffel, to the miners and other labourers of the Harz. Osterode has manufactures of woollen and cotton goods, table linens and long cloths, hats, tobacco, soap, white lead, copper and wooden articles, with breweries, distilleries, tanneries, &c. (*Hor-schelmann's Stein & Berghaus*.)

OSTIA, a decayed town and sea-port of Italy, Papal States, on the left or S. arm of the Tiber, a little below where it divides into two branches to inclose the Isola Sacra, about 3 m. from its mouth, and 15 m. W. S.W. Rome, lat. 41° 45' 35" N., long. 12° 16' 35" E. This miserable little town, which has scarcely 100 inhab., and which, in fact, is all but uninhabitable from malaria, was in antiquity a flourishing emporium. It was for a lengthened period the sea-port of Rome; and was founded by Ancus Martius in that view, who is, also, said to have constructed the salt-works in its vicinity.—*In ore Tiberis Ostia urbs condita, salina circa facta.* (*Livius in Anco*, lib. i. cap. 33.) In the course of time Ostia rose, with the rise of Rome, to be a place of great wealth, population, and importance. It was taken by Marius, who appears to have treated it with great severity. (*Livii Epit.*, lib. lxxix.) But it soon recovered from this disaster, and continued for a lengthened period to engross the whole trade of Rome carried on by sea. But its port had never been good; and, owing to the gradual accumulation of the mud and other deposits brought down by the river, it ultimately became inaccessible to ships of considerable burden, who were obliged to anchor on the coast in an exposed and hazardous situation. Many efforts were made at different periods to obviate these inconveniences, but apparently without much success; and at length the emperor Claudius determined to construct a new port (*Portus*) at the mouth of the N. or right arm of the Tiber. This harbour was wholly artificial, and was formed at a vast expense by moles projecting into the sea. (*Sueton. in Claud.*, cap. 20.; *Dio Cassius*, lib. lx.) Mannert, in his article on Ostia, says that the port constructed by Claudius was repaired by Trajan, and continued to be the port of Rome as long as the Roman empire existed! This statement is, however, in all respects, wide of the mark. The truth is, that the same circumstances (the accumulation of sand and mud at the mouth of the river) that had destroyed the harbour of Ostia very soon began to choke up the new port; and instead of attempting to improve the latter, Trajan judged it more expedient to construct a totally new harbour at *Centum-cellæ*, now Civita Vecchia, though the latter was more than double the distance of the former from Rome! (*Plinii Epist.* lib. vi. ep. 31., and art. CIVITA VECCHIA in this work.) The harbour formed by Trajan is at this moment the best by far on the W. coast of central Italy; the great works, the construction of which is described by Pliny, still remain entire, and evince the superior discernment and power of its illustrious founder. The port of Claudius, as well as Ostia itself, is now at a considerable distance from the sea; and its harbour, which, according to Bergier (*Hist. des Grands Chemins*, ii. 356.), could not have been executed by any European monarch, is a shallow, noisome pool:—

"Tantum evi longinqua valet mutare vetustas."

OSTUNI, a town of the Neapolitan dom., prov. Otranto, cap. canton, on the brow of a steep hill, 21 m. W.N.W. Brindisi. Pop. about 6,000. It is a bishop's see, but remarkable for little more than the number of its churches and convents. Its climate is said to be highly salubrious. (*Craven's Tour*, &c., 123, 124.)

OSWEGO, a town and port of entry of the U. States of N. America, state of New York, cap. co. of its own name, on the S. shore of Lake Ontario, at the mouth of the Oswego River and Canal, which connect the lake with the Erie Canal, 230 m. N.W. New York. Pop., in 1830, 2,703; but, in 1840, it had increased to 8,716; and is now (1850) probably 15,000. It stands on both sides

the Oswego River, here crossed by a wooden bridge 700 ft. in length, and is laid out in streets 100 ft. wide, running at right angles. The court-house, the Oswego hotel, various churches, an incorporated academy, two banks, and a light-house, were the principal public buildings in 1836: it had at the same time several large grist and saw mills, tanneries, cotton factories, iron-works, &c.; many wholesale and retail stores, and 2 weekly newspapers. The harbour is formed by two piers, one 1,219, and one 250 ft. in length, projecting from each side, the opening between them being 250 ft. in width. Within the piers are from 10 to 20 ft. water. The harbour is protected by a large pentagonal fortress and some smaller forts.

Oswego has a wet basin and slips for the repair of large vessels; and is, next to Sackett's Harbour, the best port on the American side of Lake Ontario. Its situation necessarily renders it a considerable emporium; and, notwithstanding the imperfect state of the Welland canal, it already commands a large portion of the trade between the state of New York and Upper Canada. In 1838, only 6,582 tons shipping belonged to this port, whereas 22,152 tons belonged to it in 1849! (*New York Gazetteer*, &c.)

OSWESTRY (corrupted from *Oswaldstree*), a market-town and par. of England, hund. of its own name, co. Salop, on the borders of Wales, 16 m. N.W. Shrewsbury. Area of par., 13,680 acres: pop. of township in 1841, 4,566. The town, which was formerly surrounded with walls, is well-paved and lighted; its chief public buildings are a town-hall, prison, theatre, and a fine old church, remarkable for its lofty ivy-mantled tower. The living is a vicarage, in the gift of Lord Clive. The Independents, Baptists, Wesleyan Methodists, Welsh Calvinists, and Primitive Methodists, have their respective places of worship, to which are attached Sunday schools, furnishing religious instruction to upwards of 700 children. A grammar-school has been established here, and "is free for all boys born in the parish to be instructed in grammatical learning in the English, Latin, and Greek languages. The present annual value of the endowment is 330*l.*; but the number of free scholars seldom exceeds 20, besides whom there are about 24 pay-boys residing with the master. There is also an extremely well-regulated national school, attended by about 230 boys and 150 girls." (*Mess. Corp. Report*.) Oswestry, which from 1461 to 1621 was the great mart for woollens called Welsh webs, has still a few manufactures of flannel and coarse linen cloth; but its principal dependence is on its retail trade with an extensive agricultural district. The bor., which received its first charter in 22 Richard I., is divided, under the Mun. Reform Act, into 2 wards, and the corporation consists of a mayor, 5 other aldermen, and 18 councillors. Corporation revenue, in 1847-48, 780*l.* Quarter and petty sessions are held under a recorder, and there is a court for the recovery of small debts. Oswestry is one of the polling-places at elections for the N. division of Salop. Races are held near the town in September. Markets on Wednesday: large cattle fairs, 15th March, 12th May, Wednesday before 24th June, 18th Aug., and 10th Dec.

Oswaldstree (more anciently called *Maserfield*) is supposed to have derived its name from Oswald, king of Northumbria, killed here in battle in 642, and subsequently canonised. It was surrounded by walls by Edward II., in 1277, and became highly important as one of the keys to the principality of Wales. At the W. end of the town, on a lofty hill, are some remains of its castle, supposed to have been built about the time of the Norman conquest. (*Pennant's Tour in Wales*, i. 333., &c.; *Parl. Reports*.)

OTAKEITE. See POLYNESIA.

OTLEY, a manufacturing and market-town, par., and township of England, W. Riding co. York, upper div. wap. Skyrack, on the Wharfe, 9½ m. N.W. Leeds. Area of par., comprising 12 townships, 23,060 acres. Pop. of Otley township in 1841, 3,445. The town, though small, is well-built, and delightfully situated in a picturesque river valley. The church is large, but has few remains of its original architecture: the living is a vicarage in the gift of the lord chancellor. There are places of worship for Independents, Wesleyan and Primitive Methodists, with attached Sunday schools. A grammar-school was founded here in 1611, and there is a national school for children of both sexes. Otley formerly enjoyed a considerable share in the woollen trade; but it has long since been removed to situations nearer to the coal districts, and better placed for inland navigation. Within the par., however, there were, in 1839, 2 cotton-mills, 4 woollen-mills, and 10 worsted-mills, moved chiefly by water-power, and employing 1,182 hands, chiefly in the townships of Grisley, Yeadon, and Rawden. Tanning and malting are carried on in the town to a pretty considerable extent, and it has large markets and fairs for corn and cattle, besides an agricultural show held in April. The Archbishop of York is lord of the manor and holds courts-baron for the recovery of small debts

arter sessions are held here by the magistrates under the archbishop's commission. Markets on the fairs, Wednesday in Easter week, and night after till Whit-Sunday, and then every 1st Aug.

OTO (an. *Hydruntum*), a sea-port town of its S.E. extremity, kingdom of Naples, prov. name, cap. canton, on the Strait of Otranto, point of Italy nearest to the Greek peninsula, Lecce, and 44 m. W.S.W. Cape Linguetta, in this petty town, of 1,600 inhab., has little to English reader, except the celebrated "Castle" with the name of which every lover of romances is familiar. "The castle, however, is far from the expectations created by the perusal of the name of its appellation. It is now, what it ever was, a tadel of the town, a fort of no considerable power, but not entirely deficient in picturesque scenery on the land side. Two large circular towers, from the rich foliage of the trees which fill the garden, and among which a very high palm is seen." (*Craven's Tour*.) The castle, which commands the sea, has a mill, a chapel, &c., was built by the king of Aragon, who otherwise fortified the town, and against the Turks. Otranto has a very fine cathedral, in which are some columns taken from Minerva in the vicinity; an archbishop's palace, and a few Roman antiquities. In 1480 it was taken by the Turks. Under Napoleon, it gave the name to Fouché. (*Craven's Tour in the S. Provinces*, 142. 144.; *Burgess's Greece*, i. 28. 30.; &c.)

ANO, a town of the Neapolitan dom., prov. of, at the E. foot of Mount Vesuvius, 12 m. E. Pop. estimated at 6,000. It has 3 churches, a some other public buildings. Its inhab. are engaged in agriculture, having but little taste for commerce. Several antiquities found here are supposed to have formed part of a palace anciently belonging to the Octavian family, from whom the town is supposed to have derived its name.

RY ST. MARY, a market-town and par. of co. Devon, hund. its own name, on the Otter (it derives its name), 11½ m. E. by N. Exeter. Ar. 9,470 acres. Pop., in 1841, 4,194. It is large, and is a market town; containing many vestiges of antiquity, which is a house formerly inhabited by Sir Raleigh. The church is a large and curious building, built like Exeter Cathedral, with 2 towers into the body of the church, and serving as a lady-chapel occupies the E. end, and in front is a fine arched monument. The living is a vicarage, in the gift of the Lord Chancellor. The Independent and Wesleyan Methodists have likewise their places of worship, with attached Sunday-school. A grammar-school was founded here by Henry VIII. it has for many years been an almost useless addition to the town. Two day-schools are supported by subscription, and an infant-school is attended by children. Almshouses are established here, and are numerous minor charities for the relief of the poor within the par. Ottery St. Mary, which had a considerable share in the manufacture of coarse woollen cloths, is now chiefly supported by agriculture and retail trade. A silk-mill, however, has been established within the last few years, in 1839, employed 325 hands. Petty sessions for the hund. are held here. Markets on Tuesday; fairs, before Palm-Sunday; Whit-Tuesday, and August 1st and sheep.

3 (*Agodhya*), a prov. and kingdom of Hindostan, under the protection of the British, between the 26th and 27th of N. lat., and the 79th and 83d of E. long. N. Nepal, but is every where else surrounded by the territories of the Bengal and Agra presidencies, having provs. Delhi and Agra, S. Allahabad, and E. Bareilly. Area estimated at about 25,300 sq. m. Pop. probably 1,000,000. This country is an extended plain, bounded northward by the lower Himalaya ranges, and S. by the Ganges, being well watered by several rivers of the latter. When properly cultivated, the soil is extremely productive, yielding crops of wheat, rice, and other grains, sugar, indigo, opium, and the richest crops raised in India; and Heber states, from Lucknow to Sandee the country is as populous and cultivated as most of the Company's provs. It was for a lengthened period so wretchedly governed by its native authorities, that, from being one of the richest states of Hindostan, it had become, a few years ago, one of the poorest and most miserable, being distinguished for anarchy and disorder. The revenue is estimated at between 18 and 19 million rupees per year, and its collection is farmed out to the highest bidder. Large tracts of the country are also in jaghire, all conferred for military service; the amils, revenue collectors, and the zemindars, are so independent of the royal authority, that they yield only a

very imperfect obedience, and so late as 1830 Oude was distracted by civil war between the sovereign and his military chieftains. A full account of the condition of the country at that period may be found in the *Report on E. I. Affairs*, 1832. (*Political Appendix*, p. 396—420.) Under the new king, however, great ameliorations have been effected, and the standing army has been reduced from 80,000 men to less than half that number. The subsidiary troops furnished by Oude to the Anglo-Indian army amount to 10,000 men. The foreign relations and treaties of the state are wholly conducted through the British resident at Lucknow. It has been secured, ever since 1765, by the British government from foreign aggression; and it is to be regretted that we did not also so far interfere in its internal concerns as to introduce regularity and efficiency into the administration, and to repress disorders. (*See Crawford's Letter in Rep. Polit. Appendix*, pp. 92. 94.)

OUDE, a town of Hindostan, in the above prov. and kingdom, of which it was the former cap.; on the Gogra, across which an iron bridge, the materials having been brought from England, is said to have been recently thrown, 74 m. E. Lucknow; lat. 26° 48' N., long. 82° 4' E. It extends for a considerable distance along the banks of the river, stretching as far as Fyzabad. It is said by Hamilton to be tolerably populous; but, except along the river's brink, it consists wholly of ruins and jungle, among which are the remains of various celebrated Hindoo temples. Hindoo pilgrims still visit Oude; and did so in great numbers, until Aurungzebe demolished most of their places of resort. A mosque erected by that monarch, and 2 tombs, greatly venerated by Mohammedans, are now the principal and almost sole remaining public edifices. (*Mod. Trav.* ix. 312—315, &c.)

UDENARD, or AUDENARD, a town of Belgium, prov. E. Flanders, cap. arrond. on the Scheldt, 14 m. S.S.W. Ghent. Pop. in 1842, 6,202. It is generally well built, and has one of the handsomest town halls in the Netherlands, several churches, an hospital, 2 orphan asylums, a convent, a college, and other schools, including one for spinning yarn. It has some manufactures of cotton and woollen fabrics, with breweries and tanneries. On the 11th of July, 1708, a powerful French army, commanded by the Dukes of Burgundy and Vendôme, was defeated in the vicinity of this town, and obliged to make a disorderly retreat, by the allied army under the Duke of Marlborough and Prince Eugene.

OUNDLE, a market-town and par. of England, co. Northampton, and hund. Polebrook, on the Nen (crossed here by 2 bridges, one of which has 5 arches), 25 m. N.E. Northampton, and 67 N. by W. London. Area of par., 5,300 acres; pop., in 1841, 2,037. The town, though small, is neat and well built, having a good market-house. The church is large and handsome, with a square tower, having octagonal turrets at the angles, and surmounted by a lofty spire; the living is a vicarage, in the gift of the Lord Chancellor. A grammar-school, established in 1544, is attended by about 60 boys. Two charity schools furnish clothing and instruction to 42 boys; and a national school is attended by about 180 children of both sexes. There are also 2 almshouses. Petty sessions for the hund. are held here once a fortnight. Markets on Thursday; fairs, Feb. 25.; Whit-Monday; Aug. 21., and Oct. 12., for horses, sheep, &c.

OURAL, or YAIK, the *Rhymenus* of the ancients, a large river of the Russian empire. It rises in the Oural Mountains, whence its name, in the district of Troitsk; and, after a lengthened south-westerly course past Orsk, Orenbourg, and Ouralak, pours its waters by various mouths into the northern part of the Caspian Sea. It is shallow, and of little use for navigation; but teems with fish, which, at the proper season, afford a rich harvest to the Cossacks of the Oural. It is reckoned one of the bulwarks of the Russian empire against the incursions of the nomades of the Tartar steppes.

OURAL, or URAL MOUNTAINS, an extensive mountain-chain, extending, including its subsidiary portions, nearly under the same parallel from the N. border of the Sea of Aral to the shores of the Arctic Ocean, or from about the 48th to about the 69th degree of N. lat. It forms, during the greater part of its course, the boundary between Europe and Asia. Where highest, it attains to an elevation of about 6,400 ft. above the level of the sea; but the ascent to the summit, particularly on the European side, is so very gradual, that its height does not appear nearly so great as it really is. Its breadth varies from 1 to 5 geog. miles. It is very productive both of the precious and the useful metals; being estimated to afford, at an average, about 340 pounds of gold, 200,000 do. of copper, 5,500,000 do. of forged, and 8,500,000 do. of cast iron. (*See art. RUSSIA; Schnitzler, La Russie*, &c. p. 652.; *Humboldt's Fragmens de Géologie*, &c., ii. 315., &c.)

OURFA, (an. *Edessa* or *Calirrhoe*) a fortified city of Asia Minor, pach. Diarbeker, 81 m. S.W. the city of that name, and 112 m. N.E. Aleppo. Pop. 30,000, 3-4ths of whom are Turks and Arabs, and the rest Armenians and Jews.

It occupies the slopes of two hills, in the valley between which is a fountain and large basin containing a number of fish accounted sacred by the inhabs. The houses are substantially built of hewn stone, and surmounted by terraces; gutters two or three feet in width run through the middle of the streets, and on each side are tolerably clean pavements. The mosques, which are numerous, have all lofty, and many of them handsome minarets; there are churches also for the adherents of the Greek and Armenian creeds. The bazaars are of tolerable size, and covered in from the weather, some being occupied by cloth merchants, others by goldsmiths and other artisans.

Ourfa is a place of considerable industry: large quantities of cotton fabrics are made in it; its goldsmiths' work and morocco leather are highly esteemed, and the produce of the neighbourhood, especially wheat and barley, is sent to Aleppo and the N. of Syria, and, by way of Bir, across the Euphrates. "The general trade with Aleppo is carried on almost entirely by about twenty Turkish and Christian merchants. They employ a capital not exceeding 50,000 dollars; but they trade on credit, both at Ourfa and Aleppo, for a much greater amount. Three-fifths of this are for British manufactures, principally cotton twist, calicoes, a few prints, muslins, and nankeens; the remaining 2-5ths being for colonial produce, and different articles in the country. The inland duty paid at Ourfa by the rayas is invariably 5 per cent. on the invoice cost; and the price of carriage from Aleppo ranges between 80 and 100 piasters per Aleppo cantar on every kind of goods." (*Bowring's Report on Syria*, p. 44.)

The ancient *Edessa* was for a lengthened period the cap. of the prov. Osroene, in Mesopotamia. It is said to have been one of the numerous cities built by Seleucus Nicator, and continued under his successors as long as they remained possessors of Syria. It was taken by the Arabs during the caliphate of Abubekr, in the 7th century, and, after many vicissitudes, Selim I. united it, in 1517, to the Ottoman empire. (*Olivier, Voyage dans l'Empire Ottoman*, iv. 210—233.)

OUSE, a river of England, co. York, one of the principal affluents of the estuary of the Humber, and which, indeed, may be considered as representing the various rivers that join it before it falls into that great estuary. The Swale, the remotest branch of the Ouse, has its source in the mountain of Shunnor Fell, on the borders of Yorkshire and Westmoreland, one of the most elevated in the great central range. Pursuing a S.E. course, the Swale is joined a little below Boroughbridge by the Ure, from Askrig, Middleham, and Ripon. A little lower down, the united river takes the name of the Ouse, and flowing past York, receives at Cawood its important tributary, the Wharfe, which, flowing through Tadcaster, has its source near Arncliffe. From Cawood the Ouse flows S.E., with many windings, to Goole, where it unites with the Humber, receiving the Derwent from the N., and the Aire and Don from the S. The Ouse is itself navigable for considerable vessels as far as York, and for barges to Linton; and the Aire, Don, and Derwent, have been, partly by improvements in their channels, and partly by canals, rendered navigable to a great distance. The Ouse is, in fact, connected not only with the ports on the Humber, but, by an internal navigation, with Liverpool, London, and Bristol.

Exclusive of the above, another river, called the Great Ouse, rises in Northamptonshire, near Brackley; its course at first is E., a little inclining to the N., through Bucks; it then passes Olney and Harrold, and, after many windings, reaches Bedford, where it becomes navigable. It then traverses the cos. of Huntingdon and Cambridge, and the N.W. corner of Norfolk, falling into the estuary of the Wash at King's Lynn. From Huntingdon Sluice to Denver Sluice, a distance of about 20 m. in a direct line, the Ouse is now called the New Bedford river, from the greater part of its water flowing in the great channel or drain of that name, dug in the reign of Charles II. The principal affluents of the Great Ouse are the Nen, Cam, Little Ouse, Lake, Wissey or Stoke, and Nar.

OVERTON, a parl. bor. of N. Wales, co. Flint, hund. Maylor, on the Dee (crossed here by a handsome stone bridge), 14 m. S. Chester, and 158 m. N. W. London. Pop. of parl. bor. and par., 1841, 1,662. The town is sit. on rising ground above the river, and is on the whole well built. The church is a venerable structure, picturesquely situated; and in the church-yard are some yews which, for size and beauty, are ranked among the wonders of the Principality. The town has little trade; and would be unworthy notice, were it not that it enjoys the privilege, in connexion with Flint and 6 other towns, of returning 1 mem. to the H. of C. Registered electors for the united bors. in 1849-50, 765.

OVIEDO (*Ovetum*), an ancient city of Spain, cap. of the prov. of Asturias, in a plain at the confluence of the two small rivers Ovia and Nora, 60 m. N. by W. Leon,

lat. 48° 19' N., long. 5° 57' W. Pop., according to Miliano, 10,476. It is an old-fashioned city, with many narrow and irregular streets; but it has several good squares, that forming the market-place being large and handsome. The town is supplied with water by a magnificent aqueduct of 41 arches, communicating with the fountains in the public squares. The principal public buildings are the cathedral, the collegiate church, and 3 par. churches, besides a district church, 3 hospitals, and 4 colleges. The cathedral (supposed to have been founded in the 8th century) is a large structure of Gothic architecture, and one of the most elegant in Spain, very similar to that of Toledo, though much smaller: it is surmounted by a beautiful, though unfinished, tower; and at the W. end is a noble open porch. (*Cook's Sketches in Spain*, ii. 96.) It contained many valuable vases, &c., taken away during the peninsular war: it has also a large mausoleum, in which are deposited the remains of 14 kings and queens of Asturias. The university, founded in 1580, is well endowed, and has a large library: the university buildings are among the finest in the town. Oviedo has a weekly market, and 3 annual fairs; but its trade is chiefly confined to the neighbourhood. A few tanyards, manufactories of hats, horn combs, and metal buttons are established here, and domestic weaving is carried on to a considerable extent. A manufacture of arms was, till lately, supported by the government; but within the last few years it has been abandoned.

Oviedo is supposed to have been founded about A. D. 759. It afterwards became a place of refuge, during the persecutions of the Moors, for great numbers of Christian clergy, and hence acquired the name *Civitas Episcoporum*. The pope in 901 made Oviedo an archbishop's see; but afterwards this honour was transferred to St. Jago, since which time the bishops of this city have been merely suffragans. The foundation of the university improved the condition of the inhabs.; and for upwards of 150 years Oviedo was a popular resort for literary monks and others desiring to avail themselves of the advantages offered by the ecclesiastical seminaries. When Mr. Townsend visited the town, it swarmed with mendicants, encouraged by a wealthy clergy; but since the French war, and the suppression of the conventual establishments, the importance both of the town and university has very much diminished. (*Townsend*, ii. 1—14.; *Mod. Trav.*; *Milano*.)

OWHYHEE. See POLYNESIA.

OXFORD, an inland and central co. of England, of a very irregular shape, bounded S. and S.W. by the Thames, by which it is separated from Berks, and having W. Gloucester, N. Warwick, N.E. Northampton, and E. Buckingham. Area, 483,840 acres; of which above 400,000 are said to be arable, meadow, and pasture. Surface, a good deal diversified. The S. division of the co. is traversed by the range of the Chiltern hills; but elsewhere it is mostly flat, or merely undulating. Soil very various: in the N. it consists of a deep, red, fertile loam; in the middle district it is comparatively sandy, gravelly, and poor; and, in the S., thin and chalky soil predominates. The co. is extremely well watered; for, besides being bounded, as already stated, for a lengthened distance by the Thames, it is traversed by the Windrush, Evenlode, Cherwell, and Thame. Oxford is principally in tillage; but though numerous improvements have been effected of late years, its agriculture is far from being in a very advanced state. This is accounted for principally, perhaps, from the tenants not being bound to follow any particular mode of husbandry, and not being restricted in the sowing of wheat, so that the land is frequently foul and over-wrought. There is, also, in many parts, a great want of drainage. The soil is particularly suitable for barley, which is the principal crop; but large quantities of wheat are also raised. Turnips extensively cultivated. Dairy husbandry is, in some districts, carried on upon a large scale; and the sheep stock is supposed to exceed 300,000 head. There are but few large estates, and farms are generally small: it is common to grant leases for 7 and 14 years. Average rent of land in 1843, 24s. 1½d. an acre. Manufactures and minerals of no importance. Principal town, Oxford. The co. is divided into 14 hundreds, and 217 parishes. It sends 9 mems. to the H. of C., viz. 3 for the co., 2 for the city, and 2 for the university of Oxford; and 1 each for the bors. of Banbury and Woodstock. Registered electors for the co., in 1849-50, 5,096. In 1841, Oxford had 32,163 inhab. houses, and 161,643 persons, of whom 80,436 were males, and 81,207 females. Sum expended for the relief of the poor, in 1848-49, 84,854½. Annual value of real property in 1815, 790,866½.; do. in 1843, 1,025,421½.

OXFORD, a parl. bor. and city of England, cap. of the above co., and the seat of one of the two great English universities, on the left bank of the Isis, near its confluence with the Cherwell, which are both crossed by numerous bridges, (one of which, on the London road, is a handsome stone structure, of 5 arches.)

7. N. W. London, lat. (Observatory) $51^{\circ} 45' 38''$ g. $1^{\circ} 15' 29''$ W. Pop. of par. bor. (which includes the old bor., the par. of St. Clement's and n of that of Cowley) in 1841, 24,656. The city is a plain, in the midst of meadows thickly planted with trees, and is surrounded on 3 sides by the above-named rivers: it has an imposing external appearance whatever side it may be viewed; but more especially from the adjacent high ground on the London and Oxford roads. The High Street is one of the finest in the land; not only for its width and regular arrangement, but for the beauty and magnificence of the mansions and collegiate edifices lining it on both sides: the houses of Magdalen and All Souls' Colleges, the front of University and Queen's Colleges, and the city Church, are its chief and most admired features.

Three other streets meet it at its W. end; one of which, called the Corn-Market, leads northward to the suburb of St. Giles's; and the second passes on by the town-hall, and the noble building of Christ Church, towards Abingdon; while the third, Queen Street, runs westward in continuation of the High Street, into the low and densely peopled parishes of St. Thomas. Parallel to and N. of High Street is another fine, though not long line, called Broad Street, in which are Balliol, Trinity, and Exeter Colleges, Ashmolean Museum, Clarendon Rooms, Sheldonian Theatre, &c.; and between High Street and Broad Street is a long space, occupied by a quadrangular building, forming a hollow square, round which are the academical buildings, the upper stories being occupied by the Bodleian Library and Picture Gallery. Between the schools and Mary's Church is the Radcliffe Library, a circular building, surmounted by a dome, and contrasting strangely with the Gothic structures by which it is surrounded. St. Giles's and Beaumont Streets are filled with substantial private dwellings; besides which, the houses of John's and Worcester Colleges, and the Taylorian Institute, a large structure of Corinthian architecture, in course of construction, greatly contribute to the embellishment of this part of Oxford. The other streets are mostly narrow, irregular, and crooked.

New streets, however, with good substantial houses, an entire new suburb, and several hundred new tenements, have been erected within the last 20 years, and the city has thus been greatly improved. (*Principal Bound. Report.*) The principal thoroughfares are well paved, cleaned, lighted with gas, and abundantly supplied with water. The police, a very efficient body, is regulated and maintained by the university. The town-hall, a long stone building, with little pretension to architectural elegance, is open below for the accommodation of farmers and corn-factors, the upper stories being divided off into court-rooms, and apartments for municipal and judicial business. A large and commodious new sessions-house, however, is in course of erection near the old castle, which has been converted into a modern gaol. The arrangements of the county prison are very imperfect; its site does not admit of classification or solitary confinement to any great extent, and hard labour is only partially enforced. There is likewise a bridewell, comprising about 50 cells; but its management is said to be unsatisfactory. (*Prison Inspector's 4th Rep.*, part iii. p. 198—201.) The market-place is a modern range of buildings, entered from the High Street, and, with its aisles, arcades, and shops, is one of the greatest improvements made in the city.

The Radcliffe Infirmary erected towards the middle of the last century by the trustees of the fund left by Dr. Radcliffe, is in the N. suburb, not far from the Observatory, which owes its origin to the same founders. It is a plain stone building, within a spacious enclosure, capable of accommodating between 150 and 200 patients; besides medical officers, &c. The only other edifices, besides those devoted to public worship, are the houses of industry, a large structure near the infirmary, for the reception of the poor belonging to 11 united parishes (the expense of whose maintenance amounted, in 1849, to 8,006*l.*) a small music-hall, and 2 sets of almshouses.

The city is divided into 14 parishes, and is the seat of a bishopric. The cathedral church connected with Christ Church College, presents the styles of different ages, from the 12th to the 16th century: it is built in the form of a cross, and measures, from E. to W., 154 ft.; the length of the transepts being 102 ft., and the height from the floor to the roof, 42 ft. At the intersection of the nave and transepts rises a tower, surmounted by a spire 146 ft. high. The carvings of the choir are very elaborate, though somewhat heavy; and in some of the windows are fine specimens of painted glass. Unfortunately it is hemmed in by college buildings and gardens, that no view of the whole can well be obtained. The cathedral establishment is identical with that of Christ Church College; and the sum annually divided by the dean and chapter amounts to 12,550*l.*, besides which, each has a handsome residence. The income of the bishopric

amounted, at an average of the 3 years ending with 1831, to 2,648*l.* a year; but it is to be increased to about 4,000*l.* a year. St. Mary's Church (used by the university for the academical sermons, Bampton lectures, &c.) is a fine structure, in the perpendicular style, surmounted by an elaborately ornamented tower and spire, 180 ft. high. The side towards the High Street, however, is disfigured by an incongruous porch, with twisted columns. The interior was renovated in 1826, and is handsomely fitted up. It is likewise a par. church, the living being in the gift of Oriel College. Carfax, or St. Martin's, the corporation-church, facing the W. end of High Street, is an oblong stone building, with a low tower. All Saints, in the High Street, is in the Grecian style: the roof is entirely supported on the side walls, and the whole is surmounted by a tower and spire: the living is in the gift of Lincoln College. St. Peter's-in-the-East, near Queen's College, is the oldest church in Oxford. Mr. Rickman says that its original portions are Norman; but it has had many introductions and alterations, mostly in the perpendicular style, which have greatly altered its exterior appearance. The interior has recently been restored and beautified, so as to correspond with that of the original building: the living is in the gift of Merton College. St. Mary Magdalen, at the junction of the Corn-Market with Broad Street, is in the decorated style; it has recently undergone a thorough repair, and is about to be enlarged by the addition of a large aisle and lofty tower, to be erected by subscription, in commemoration of the martyrs, Cranmer, Hooper, and Ridley. The other churches of Oxford deserve no particular description. The Roman Catholics have a small chapel; and there are places of worship for Wesleyan and Calvinist Methodists, Independents, and Baptists. Most of the churches have their attached charity-schools, besides which there are various Sunday-schools, attended by great numbers of children of both sexes. The Diocesan national schools give instruction to about 600 boys and 300 girls; and a school of industry is attended by 200 girls. A few schools, also, are supported by Dissenters. Most of the parishes have considerable funds for the relief of the aged and sick poor; and there are dispensaries, lying-in charities, clothing-societies, provident clubs, &c., to aid the numerous indigent persons in the town and neighbourhood.

The great glory of Oxford, however, consists in its buildings devoted to collegiate education; which far surpass those of Cambridge in number, and in extent and beauty. Most of them are built in the style peculiar to the 15th and 16th centuries; but a few, as Queen's and Worcester Colleges, with parts of Christ Church and Magdalen Colleges, partake more of the Grecian style, introduced late in the 17th century. They are chiefly built in hollow squares, round which are the members' rooms; and the quadrangles of Christ Church, All Souls, Magdalen, New, and Brasenose Colleges are very large and imposing. The chapels, halls, libraries, and gardens of these establishments are likewise extremely beautiful; nor must we omit to mention the shady promenades, called the Christ Church Meadows and Magdalen Walks, which are of great extent and beauty.

Oxford in a very great degree depends, and has during many centuries depended, for its prosperity on the University. Till the opening of the Birmingham and Great Western railways, it enjoyed considerable advantages from being on the great roads leading northward to Birmingham, Shrewsbury, &c., and westward to Cheltenham, Gloucester, and South Wales. Between twenty and thirty coaches used daily to pass through the town, and its inns were among the largest in England; but this source of wealth is now almost extinct, and owing to the opposition of the University no railway has hitherto been brought near the city. It is believed, however, that this will speedily be the case; and there can be no doubt that Oxford will gain incomparably more by such a speedy means of communicating with the metropolis and other great towns than she has lost by the annihilation of her posting business. There are no manufactories; and the trade of the place is chiefly confined to the supply of the academic population. It has the advantage of a canal navigation by the Isis to London, and by the Oxford Canal northward, which channels supply it with coal, and all the more bulky articles of domestic consumption. (*Parl. and Mun. Bound. Rep.*) It is also the mart for an extensive agricultural district, and its weekly corn-market is one of the largest in the midland counties. Oxford has four private banks, with a savings' bank; and two weekly newspapers, the "Oxford Journal," and the "Oxford University Herald." Races are held during August in the Port-meadow, W. of the town.

The corporation of Oxford claims to exist by prescription; but it has also received many charters, the last of which was granted in 3 James I. It is divided, according to the Mun. Reform Act, into five wards, and is governed by a mayor, 9 other aldermen, and 30 councillors. Corp. revenue, in 1848-49, 3,674*l.*, no part

(Oxford Calendar for 1841; and Chalmers's History of the Colleges and Halls of Oxford.)

considerable architectural elegance. The dining-halls of these establishments are on a scale, and the rooms within the colleges are capable of accommodating several hundred students. Oxford, from the great number of its fine academic halls, has a very imposing appearance when seen near or at a distance; and it has been not inaptly called a city of palaces, vying in external grandeur with the finest cities.

Each college, as in Cambridge, is governed by its own officers, and its principal or head must, in most cases, be a living commoner. The direction of the college is in the principal and senior fellows (technically called the *seniority*); but in matters affecting discipline the principal is the supreme arbiter, and he appoints the deans and tutors, who are immediately responsible to him for the conduct of the members *in statu pupillari*. The fellowships and scholarships are, in most instances, reserved for the natives of certain towns and counties, or for those who have been educated at certain schools; so that birth or interest, more than any positive amount of scholarship, usually procure the candidate's election. At Balliol, Oriel, Lincoln, and Wadham Colleges, however, the fellowships and scholarships have been either wholly or in part thrown open to general competition, and the candidates for these usually comprise the most promising students of the University.

Most of the colleges have *exhibitioners*, or students, receiving annual allowances from charities held in trust by the fellows, by city companies, trustees of schools, &c.; and at Christchurch there are *servitors*, an inferior class of students, somewhat resembling the *sizar*s of Cambridge. All Souls' College has no undergraduate members, except its bible-clerks, and cannot be considered as an establishment for education, though it has 40 fellows, *bene nati, bene vestiti, et in arte cantandi mediocriter docti*. New College is connected with Winchester School, which owes its origin to the same founder, and, like King's College, Cambridge, has little connexion with the rest of the University; but it has not, like the last-named college, the privilege of examining its own members for academical degrees. Residence in college, which, at Cambridge, is to a certain degree optional, is compulsory at Oxford on all under-graduates who have not passed their examination for the B.A. deg.; and hence the out-college men at Oxford comprise the senior, not the junior portion of the academic population. Attendance at chapel and the tutors' lectures is enjoined on each student, and omissions in either case are visited by impositions, rustication (temporary banishment), and other penalties. At the end of each term, also, examinations are held within the colleges on the subjects of the tutor's lectures: these trials (called *collections*) have no necessary connexion with the public examinations, though they in some measure familiarize the student with the method pursued in the Academic schools. With respect to college lectures, however, it seems to be a generally received opinion, that, as at present conducted, they confer but little benefit on the student, who is indebted for his degree and distinction, should he acquire any, almost entirely to his own exertions, or to the assistance of a tutor, procured at an expense of from 50*l.* to 70*l.* a year. The degree of attainment requisite for passing the University examinations has, since 1801, been determined by statute; and every candidate must belong to some college or hall, and must have been under collegiate instruction. It is usual, also, for the students to consult their tutors before they put down their names in the list of those to be examined. On admission to the University, each member is required to subscribe his assent to the 39 articles of the Church of England, the act of supremacy, and certain sections of the University statutes; and hence Oxford is exclusively resorted to by parties professing the established religion; whereas, at Cambridge, the education furnished by the University, though not the degrees, may be participated in by all parties, dissenters as well as churchmen.

There are at Oxford four terms in each year, two of which (Michaelmas and Hilary terms) last nine, and two others (Easter and Trinity terms) last from three to four weeks each. By statute, however, the two first mentioned terms may be kept by six weeks' residence, and the two latter by three weeks each; though by those who have taken the first degree in arts, or have passed the examination for that degree (having previously resided 12 terms), any term may be kept by a residence of three weeks. Sixteen terms (occupying the same time as the twelve terms, at Cambridge) are required for the degree of B.A. from all, except the sons of British and Irish peers, baronets, knights, and their sons, if so entered in the *University books*; but of these the term of matriculation is reckoned as one, the day of admission to the degree as another, and two others are dispensed with by a regular order of the governing body; so that, in fact, a residence of 12 terms in Oxford, as of 9 terms in Cambridge, is all that is necessary for the B.A. degree. The examinations for this, the lowest degree, are conducted in a large square building, known as "the schools," and consist of two trials, the first, or preliminary examination, called the *little-go*, or *responsions*, and the second the examination for the B.A. degree, both under masters of arts appointed by the vice-chancellor and proctors. There are seven public examiners of candidates for the B.A. degree, and three examiners, or masters as they are called, of the *little-go* schools. The *little-go* examination, which commonly takes place at the completion of the eighth term from matriculation, comprises a mere grammatical and elementary examination, offering few impediments except to the duller or idler students. To have failed in this examination is, in Oxford phraseology, said to have been *plucked*; and three successive failures are considered as tantamount to a disqualification from further university pursuits. The next examination, or that for the degree of B.A., is the last to which the student is subject during his probationary residence: the lowest acquirements for the degree comprise a knowledge of the rudiments of religion, sacred history, the doctrines of the thirty-nine articles, the *literæ humaniores*, including, at least, two works of Latin and two of Greek authors, (usually Herodotus or Thucydides, with a few Greek plays, and portions of Livy or Tacitus, with

Virgil or Horace,) with a fair knowledge either of Aldrich's Logic or Euclid's Elements. For honours, however, (of which, since 1830, there have been four instead of three classes as previously,) a very extended course of reading is necessary; the number of classical works on the candidate's list (each being compelled to send in an account of them) often amounts to twelve or sixteen, of which Aristotle's Ethics and Rhetoric commonly form two; and the amount of historical and metaphysical knowledge requisite for the honourable distinction of a *first-class man* is so great as to require intense labour during the three years' probation. It has been alleged, however, that the education of first-class men at Oxford is more extensive than solid, owing to its not being bottomed on any sound philological basis; but it may be doubted whether there be any good foundation for this statement. Classics are the favourite studies of the under-graduates, and till recently the pursuit of physical science was, if not discouraged, at least not encouraged. Hence mathematics form an unimportant part of the general examination for the B.A. degree; but for the honours in *disciplinis mathematicis et physicis* an amount of knowledge is required, varying from that of pure mathematics, (including differential equations,) to a somewhat extended acquaintance with physics, astronomy, &c. The highest mathematical degrees, however, may be generally obtained by persons of less attainments than the *wranglers* of Cambridge. (See Prof. B. Powell on the State of Mathem. Studies in the Univ. of Oxford; Journ. of Education, vii. 46.; and Stat. Account of the Brit. Empire, vol. II.) Of those members who, during the last six years, have taken the degree of B.A., the *passmen* (those not ambitious of honours) have averaged at each examination about 100, those receiving honours in classics, 78, and in mathematics only 18. A few of the students aim at distinction both in classics and mathematics; and there are occasional instances of men having attained a *double first-class*, the highest honour that the University can bestow. The examinations for the degrees are held twice a year, during the Easter and Michaelmas terms, and last about three days. A large part of the examination is now carried on by written questions and answers, the oral examination being principally confined to theology. About 300 students pass at each of these examinations.

The annual prizes of the University, which are subjects of considerable competition among those *in statu pupillari*, comprise three of 20*l.* each, given by the chancellor for the best compositions in Latin verse, Latin prose, and English prose; the first being confined to under-graduates, and the others to those who have exceeded four, but not completed seven years. Sir Roger Newdigate, in 1808, left property for an annual prize for English verses on ancient sculpture, painting, or architecture, confined to under-graduates; a prize of 20 guineas was founded, in 1828, by Dr. Ellerton, for the best English essay, by bachelors of arts, on the doctrine or duties of religion; and two other theological prizes of 20*l.* each were founded by Mrs. Denyer, in 1836, for the best discourses written on selected subjects by clerical members of the University under the standing of 10 years. The University has likewise several public scholarships. The principal of these are the Vinerian scholarship and fellowship, five Craven scholarships for under-graduates, four scholarships of 30*l.* a year each, established by Dean Ireland, and tenable for four years, the Boden scholarships for the encouragement of Sanscrit literature, three mathematical scholarships founded in 1831, the Kennicott scholarships for proficient in the Hebrew language, and the Eldon scholarships of 200*l.* a year, tenable for three years by bachelors of arts studying the profession of the law. Several scholarships have, also, within the last few years, been established with the view of encouraging mathematical studies; and they are usually held by those who have attained honours in the mathematical schools of the University. These prizes and scholarships are contested for with great spirit, and the holders of them are usually among the ablest of those *in statu pupillari*. The prize compositions are in most cases recited in the Academical or Sheldon theatre, at the Commemoration or Act held in Trinity term for conferring honorary degrees. After the degree of B.A. has been taken, there are no further examinations except for degrees in medicine; but certain exercises, now merely nominal, are performed in the schools, and the candidate must have had his name on the books of some college or hall for a certain number of terms, during some of which also he must reside in Oxford. Subjoined is a summary of the different periods at which the several degrees, &c., may be acquired in the course of a student at Oxford:—

B. A.	16 terms	12 in residence.
M. A.	28 —	13 or one after B.A.
B. C. L.	28 —	17 —
B. M.	28 —	17 —
B. D.	56 —	14 —

1. 40 terms, or one after B.A.
 2. L. 25 — but usually honorary.
 3. 25 —
 4. } chiefly honorary, but dependent on the
 5. } performance of a musical exercise.
 6. } are in the different colleges rank as follows:—
 7. } a, or principal, most of whom are D.D. 2.
 8. } a, D.D., M.A., or B.A. 3. Noblemen who have
 9. } 4. Graduate members not on the foundation.
 10. } graduate noblemen. 5. Gentlemen-common-
 11. } holders. 6. Commoners. 7. Bible-clerks and

ences of academical residence vary greatly ac-
 cording to the taste and habits of the student; but about
 £10 may be assumed as the average outgoings of
 a commoner, and an additional ex-
 pense of £5 a year is incurred by those who engage the
 services of a private tutor. The payments to the college
 tuition, &c., are usually called *scholarships*, and in
 the case of commoners range from 70*l.* to 90*l.* a year,
 of noblemen and gentleman-commoners are
 on a considerably higher scale, and their annual expen-
 diture is much greater.

The University of Oxford is governed, as before
 the Reformation, by the *Corpus statutum*, drawn up by Arch-
 bishop Becket. The highest officer is the chancellor, ap-
 pointed for 3 years, but since 1434 for life. This
 office, as well as that of the high steward or
 is little more than an honorary dignity con-
 ferred on distinguished noblemen; and the chan-
 cellor is ordinarily performed by the vice-
 chancellor, who is, in fact, the supreme executive and
 authority resident in the university. He is ap-
 pointed by the convocation from the heads of
 the colleges, and holds office for 4 years, and 4 deputies are appointed,
 one for each college, to take the duties of the
 chancellor in the absence of the chancellor or illness.
 The 12 colleges (two masters of arts, of at least 4 and not
 10 years standing) are the conservators of the
 discipline of the university; they rank next to
 the chancellor, and have an extensive police juris-
 diction over the town. They are assisted in their duties
 by 12 proctors, and have at their command a large
 body of force. They are annually nominated by
 the colleges, each college taking its turn, according to a
 list by the statutes. The business of the uni-
 versity is transacted by the
 12 masters at large, in two distinct assemblies,
 the *convocation* and the *congregation*. The former con-
 sists either necessary or of *placitors*, including
 doctors, heads of houses, professors and tutors,
 its business being chiefly confined to the
 granting of degrees and dispensations; the vice-chan-
 cellor presides on its proceedings, and the proctors
 have the same privilege. Convocation is the
 assembly of the university, comprising all
 the masters resident or not, whose names are
 on the roll of a college or hall; and its business is
 extending to all subjects affecting the credit,
 and welfare of the corporate body. The sta-
 tutes, cannot be altered, nor any new laws be
 made, unless the matter has been referred to the
 meeting of the vice-chancellor, proctors, and
 houses, who, if they approve of the measure,
 in terms in which it must be promulgated in
 the hall. The biennial meeting was first held
 in the reign of Charles I.

The professorships of Oxford are of 2 classes,
 viz. those established by royal foundation, and those sup-
 ported by private endowment. The regius-professor-
 ships, viz. civil law, medicine, Greek, and He-
 brew, founded by Henry VIII., and canonries in
 the cathedral are attached to the chairs of
 civil law, Greek, and Hebrew. George I. also founded a regius-
 ship of modern history in 1704, which was con-
 ferred on George II. in 1726. There is also, as at Cam-
 bridge, a regius-professor of divinity. The other
 professorships are, 1. of natural philosophy, founded by
 Henry VIII. in 1534; 2. geometry and astronomy,
 founded by Sir H. Savile; 3. moral philosophy, by
 Sir H. Savile, in 1621; 4. ancient history, by W. Camden, in
 1621; 5. Arabic, by Archbishop Laud, in
 1633; 6. poetry, in 1708; 7. Anglo-
 Saxon, in 1708; 8. common law, by Charles Viner, in
 1773; 9. classical medicine, in 1773; 10. anatomy,
 of medicine, and chemistry, by Dr Aldrich, in
 1726; 11. political economy, in 1826; and, 12. Sanscrit, by
 John, in 1820. There are also lectureships or
 chairs of Arabic, anatomy, experimental philoso-
 phy, and geology; there being, in all, 24
 or readers.

Lectures are delivered either in the public schools,
 building near them, formerly the university
 office. An edifice, however, is in course of erec-
 tion for which are provided by the munificence
 of the late Michael Angelo Taylor; it will be,

when completed, one of the finest buildings belonging to
 the university, and will comprise several large lecturing
 theatres for the professors, besides a noble picture-gal-
 lery for the reception of the numerous portraits and
 other pictures belonging to the university.

The public orator, who delivers the *Crowleyan oration*
 alternately with the professor of poetry, is chosen by
 convocation; and his office is to write public letters and
 make addresses on grand occasions in the name of the
 university. The archives are kept by a registrar, elected
 also by convocation; this office was first established in
 1634. The *Clarendon press* is superintended by dele-
 gates, of whom the vice-chancellor and proctors form 3

valuable works, all the more common works might be
 lent out here as in Edinburgh, on lodging a deposit
 equal to their value, without any loss to the library, and
 with very great advantage to the students. The
 Radcliffe library, founded by Dr Radcliffe, in 1715, and
 erected at an expense of 40,000*l.* is under private trustees,
 and has little or no connection with the university. The
 books in this collection are principally on medicine and
 natural history. An observatory was erected in 1773, out
 of the funds left by the same munificent individual, and
 the observer (commonly the Savilian professor of astro-
 nomy) is appointed by the Radcliffe trustees. The Ash-
 mole museum was built in 1683, for the accommodation
 of a rich collection of natural objects and articles of vint-
 age, brought together by Elias Ashmole; large additions are
 annually made to it; and in the department of natural
 history, this museum is inferior only to the British Mu-
 seum, and that of the Zoological Society. It is under
 the care of official visitors, appointed by Ashmole's
 will.

The few remarks we ventured to make, under the
 article CAMBRIDGE, on the system of education followed
 in that university, apply with little variation to Oxford.
 This, like its sister institution, is essentially a scholastic
 establishment, and is well fitted to make good Greek
 and Latin scholars, and perhaps good divines. But it is
 obviously quite unsuitable, as a place of instruction, for
 the *élite* of the youth of such a country as this. It cannot
 be entirely changed before it either send forth legis-
 lators capable of appreciating the various interests of
 this vast empire, or individuals capable of promoting and
 extending those manufacturing and commercial pursuits,

town of Bokhara, and is deflected northward by a large
 offset of the Western Himalaya chain. After another turn
 southward, its course is pretty regularly W.N.W. through
 extensive plains, and at the point where Sir A. Burnes
 crossed it on his way to Bokhara, he found it to be up-
 wards of 800 yards in width, about 30 ft. in depth, with
 muddy waters, and a current of about 2½ m. an hour,

and from Kharjoo downwards, for 300 m., it is made available for commercial communication. (*Burnes' Travels*, ii. 214., and *Geog. Journal*, iv. 309.) The river passes about 20 m. N.E. Khiva, which is situated in a verdant plain, irrigated by numerous canals supplied from its waters. It forms at its mouth a pretty extensive delta, the apex of which is about 50 m. from its principal and only navigable embouchure in the Aral Sea, the breadth of coast from the W. to the E. mouth being about 45 m. The Oxus has numerous tributaries; few of which, however, have been satisfactorily explored. A large river, called the Kokcha, rises in the Hindoo-Koosh, near the celebrated lapis-lazuli mines of Budukshan, and, flowing N.W., joins it at Kilapack on the S. bank. About 75 m. lower its waters are further augmented by the Ghorl, an important stream rising in the Hindoo-Koosh, near the celebrated pass of Bamian, and having a general direction northward, passing in its course the large cities of Ghorl and Kundus. The only other affluent explored by Europeans is the Kulm, partly traced by Moorcroft, and joining the Oxus on its S. side, about 30 m. below the tributary last mentioned. Several tributaries flow in from the N. bank, bringing considerable volumes of water; but their extent is almost wholly unknown. The Oxus, according to Moorcroft, begins to rise in April, and remains full till July, when it again falls. When at its height it inundates the plain on either side, but especially on the right bank, the extent of the floods being marked by a belt of sedge, weeds, &c., and then by a thick jungle of dwarf trees and brushwood. (*Moorcroft and Trebeck's Travels*, ii. 498.)

The Oxus, regarded by some critics as the Araxes mentioned by Herodotus as flowing through the territories of the Massagetæ (i. 201—205.; iv. 11.), was supposed by Strabo and Ptolemy to fall into the Caspian; and the traces of a valley, nearly resembling the dry bed of a river, have induced some modern geographers to adopt the opinion, that in the course of ages the Oxus formed for itself a new channel, running into the Aral Sea. But, however confused our information respecting this river, it undoubtedly formed the boundary line between the more civilised and settled nations of W. Asia and the wandering hordes of Tartary. The Oxus was the northern limit of the territories subdued by Cyrus and Alexander, and it seems to have been used, at a very early period, as a channel for commercial intercourse between India and the countries bordering on the Caspian and Euxine. The Ochus is mentioned by Strabo as one of its principal affluents; but his account is inconsistent, and unworthy of credit. (*Strabo*, xi.)

P.

PACIFIC OCEAN (THE), a vast expanse of water, extending between Asia and America, (sometimes, though improperly, called the **SOUTH SEA**;) and covering a large portion of the surface of the globe. Its extreme S. limit is the Antarctic circle, from which it stretches northward through 132 degrees of lat. to Behring's Straits, which separate it from the Arctic Ocean. Its greatest breadth from E. to W., measured along the equator, is about 10,100 m. Its shape is very irregular; but it becomes gradually narrower, as it extends northward, till at length the sea of Kamtschatka has a breadth of only 170 m. The American coast is pretty uniform, though high and bold, presenting the long range of the Andes close down to the shore. Its chief indentations are the Gulph of California and Bay of Panama; besides which, at the N. and S. extremities, it is broken and rugged, forming numerous islands and fiords, similar to those of other high latitudes. The coast-line of Asia, on the contrary, is extremely irregular, formed into deep bays, and subdivided by groups of islands into separate gulphs or seas, as the sea of Okhotsk, separating Kamtschatka from Siberia, the channel of Tartary dividing Saghalien from the main land, and the Yellow Sea separating the peninsula of Corea from China; besides which numerous straits are formed between the islands of the Asiatic archipelago, as the Straits of Sunda, between Sumatra and Java; the Straits of Macassar, between Borneo and Celebes; Torres Straits, between New Guinea and Australia; Bass's Strait, between Australia and Van Diemen's Land, &c. The equator divides this vast expanse of water into the two grand portions of the N. and S. Pacific Oceans, both being remarkable for the numerous groups of small coralline and volcanic islands with which they are studded, and which constitute a separate portion of the world, entitled **POLYNESIA**, to which the reader is referred for further particulars. These numerous islands form several archipelagos, in which are reefs and sandbanks, that render the navigation extremely difficult and dangerous. The reefs are sometimes of great ex-

tent, stretching from island to island, upwards of 600 m. Earthquakes are felt in most of the islands; and all the archipelagos seem to be the seat of extensive volcanic action. (*Lyell's Geology*, iii. 236—239.)

The general motion of the Pacific Ocean is from W. to E., or from the coast of America to that of Asia; and this movement is very powerful in the vast and uninterrupted extent of its waters, though it gradually decreases as it approaches the shores of Asia, while its temperature increases: its average velocity is stated by Capt. Beechey to be about 28 m. a day. (*Geog. Journal*, i. 210.) Near Cape Corrientes, in Colombia, the sea, owing to this cause, appears to flow constantly from the land; and from Acapulco, in Mexico, ships are carried with great celerity to the Philippine Islands. In returning, however, it is found advisable to take a course N. of the tropics, in order to have the advantage of the variable winds and polar currents, as well as of a counter-current, which sets eastward in about lat. 10° N. In the S. Pacific, the Polar currents being less interrupted by land, proceed with less deviation from their general course than those in the N. hemisphere; and carry icebergs nearer to the tropical regions than is usual N. of the equator. The equatorial current, as it approaches the shores of Asia, is interrupted and broken by the vast chain of islands, shoals, and submarine banks, which stretch from China to New Zealand. The general direction is changed and modified by the form of these lands, and the vast mass of New Holland is one cause of those dangerous currents around its shores, noticed by Cook, La Perouse, and Flinders. A current, also, sets eastward in the lat. of the Japanese islands, but turns northward about 150 m. from the shore, and probably joins the stream that runs N.N.E. through Behring's Strait; besides which there is a variable current on the E. side of Australia, setting southward from August to April, and northward during the rest of the year. The N.E. trade wind prevails uninterruptedly between lat. 5° and 23° N.; and, with the currents, enable vessels to sail from America to Asia with great rapidity, and almost without changing the sails. The S.E. trade wind, which is not met with near the American coast, varies in its extent at different seasons; but it commonly prevails between the equator and 26° S., so that the region of calms in the Pacific extends over only 5 degrees of lat., or somewhat less than in the Atlantic. In this region, however, there are occasionally severe storms, attended with lightning and heavy rain. (See *Bennett's Whaling Voyage*, i. 190.) These winds are still stronger in the numerous straits of the Asiatic Archipelago, and in the neighbourhood of the Philippine Islands, and immediately N. of Australia, their violence becomes extreme, and even dangerous. The attraction of great masses of heated land also causes local variations in the wind, as is the case in New Holland, on the W. side of which there prevails a constant W. wind. Every island has, likewise, its land and sea breezes. In lat. 40°, on both sides the equator, tempests and variable winds prevail; but it may be remarked generally, that N. of lat. 40° N., winds from W. and N.W. are more prevalent than any others, whereas in the regions S. of the trade winds, the prevailing winds are from S.W., and often extremely violent. Winds from the S., however, are found along the coast of Peru, and may be attributed in some measure, at least, to the strength of the polar current in the S. hemisphere. They are generally light, though steady; and N. of Guayaquil they always blow from S. S.E., extending westward as far as the Galapagos. (*Trall's Phys. Geography*, 95. 198.; *Malte-Brun*, i. 337. 335.; and *Hall's America*, ii. App.)

Vessels in sailing northward from the coast of Chili are favoured both by wind and tide, so that they may safely run near the shore; but those going in the contrary direction sail south-westward, by means of the trade winds, till they arrive in the region of the variable winds, and are obliged to run as far as about lat. 28° S. before they can reach a port. Navigators traversing the ocean between Asia and America sail westward from Mexico, touching at the Sandwich Islands, and entering the Chinese sea between the islands of Luzon and Formosa; but from the ports of S. America the ordinary track is westward, between the Marquesas and Society Islands, beyond which it assumes a W.N.W. direction, and joins the former in lat. 20° N., and long. 125° E. The voyage from Asia to America is effected by seeking the region of the variable winds N. of lat. 30°, and making the coast of California; but from Sydney the course is pretty direct E. as far as the coast of America, where the winds and currents are favourable for reaching its principal ports. One track for vessels sailing from Sydney to India is through the islands N. of New Guinea; the other, however, by Bass's Straits, is more common, and is the only one used in making the passage from India to New South Wales. (See *Berghaus's Physical Map of the Pacific Ocean*, and vol. i. 572. of his *Geography*.)

This ocean, which received its name *Pacific* from Ma-

ian, in consequence of the prosperous weather with which he met while navigating its surface, was not known to the ancients, nor was the existence of so vast an ocean at all suspected by Europeans, till, in 1512, Vasco de Balboa beheld it from the summit of the mountains near the Isthmus of Panama. Magellan traversed from America to Asia in 1521, and at the close of the 16th century, Sir Francis Drake explored a great portion of the W. coast of America, in the view of ascertaining whether this ocean had any other communications with the Atlantic than by the Straits of Magellan and round Cape Horn. The Pacific was pretty extensively explored during the 18th century; and to the observations of Behring, Anson, Byron, Bougainville, Cooke, Vancouver, Broughton, and La Pérouse, we are principally indebted for the grand outlines of our best maps of this sea. These navigators have been succeeded in the 19th century by Entrecasteaux, Krusenstern, Beechey, Troy, Bennett, &c., and means are now provided for the formation of a pretty accurate chart of this sea, so thickly studded with rocks and islands. Meanwhile the intercourse of the islanders with Europeans, and the efforts of European missionaries, have introduced among them the arts of civilised life; trade has gradually extended itself along the American shore as well as in different islands; and in Australia, and very recently New Zealand, the British have established numerous very flourishing colonies. For particulars respecting the trade of its various ports, the reader is referred to articles MANILLA, CANTON, and NAGASAKI, on coast of Asia; to ACAPULCO, PANAMA, GUAYAQUIL, LAC, VALPARAISO on the W. side of America; and TOKYO, and ZEALAND (NEW), in Australia. (*Mathieu's Geog.* i. and iii.; *Dict. Géog.*; *Hall's N. America*, ii. Appendix; *Geog. Journal*, i. 158—222; *Bennett's Ming Voyage*, &c.)

ADANG. See SUMATRA.

ADERBORN, a town of Prussian Westphalia, reg. den., cap. circ. at the source of the Pader, a tributary of the Lippe, 32 m. E S E. Münster. Pop., in 1846, 11, principally R. Catholics. It is walled, is tolerably built, and has a good cathedral and several other cath. churches, a Lutheran church, synagogue, gymnasium, episcopal seminary, female teachers' seminary, numerous almshouses, and other charities. It has a manufacture of starch, leather, &c.; but its trade is trifling. It was erected into a bishopric by Charlene, who is said to have made it his head-quarters during his wars with the Saxons. It was the temporary residence of several succeeding emperors, and the palace occupied still exists. Paderborn was subsequently one of the Hanse towns. In 1622 it was taken and pillaged by the Duke of Brunswick, and in 1602 it was added to Prussia. (*Berghaus*; *Dict. Géog.*, &c.)

ADHAM, a town and chapelry of England, par. of Hey, co. Lancaster, and upper div. of hund. Blackburn, on the Calder, a tributary of the Ribble, 164 m. westward. Area of township, 1,700 acres: pop., in 1841, 1,100. The town, though small, is respectably built, and in appearance of considerable activity. The church, subordinate to that of Whalley, was rebuilt in 1766; but the tower, built at the close of the 15th century, is still standing. The Wesleyan Methodists and Unitarians have their respective places of worship; Sunday-schools established. The inhab. are principally employed in the manufacture of cotton goods. A market once held has been for some years discontinued. Fairs, 6th and 26th Sept.

ADSTOW (corrupted from *Patrickstown*), a seaport-market-town, and par. of England, co. Cornwall, hund. Pyder, on the W. side of the estuary of the Tamar, 11 m. N W. Bodmin, and 220 m. W. by R. London. Area of par., 2,270 acres, pop., in 1841, 2,165. The town, which is situated in a richly cultivated vale, bounded by bold rocks and hills, has been considerably improved by the erection of new houses; but the streets are inconveniently narrow, and many of the buildings antiquated. The church is in the perpendicular style; the living is a vicarage in the patronage of the Dean of Exeter. Dr. Pridmore, the learned author of the valuable historical work on the "Connection" of the Old and New Testaments, a native of the town, where he was born in 1648. The Wesleyan Methodists have also a place of worship, and there are 2 Sunday-schools, but no small endowed national school. Facing the town are good quays and a custom-house, the gross amount of customs' duty in 1840 being 2,016*l*. The entrance to the harbour is between Stepper Point, on the N. and Pentire Point, on the E., close to the former. The passage is narrow, and rather difficult, especially in N.W. winds: it has from 13 to 18 ft. water at low ebb. This is the only harbour between the Lizard and Hartland Point. (*Purdy's Sailing Directory for the English Channel*.) In the reign of Edward I., Padstow furnished 2 ships for the siege of Lundy; and in the time of Leland it carried on a considerable trade with Ireland and Wales. In Jan. 1850,

has faculties of Chemistry, Law, Medicine, and Philosophy, and 30 professors, with between 400 and 500 students. It is governed by a senate, composed of a rector and 12 other individuals chosen from its graduates, especially those connected with the doctors, deans, and professors of the faculties who have graduated at Paimboup, and reside in the city. The university library comprises about 10,000 vols. and it has a fine botanical garden, one of the oldest in Europe. Paimboup has a celebrated society of arts and sciences, an episcopal seminary, with an extensive library formerly belonging to the Benedictine Abbey, a city school, 3 gymnasia, a high-roads school, agricultural veterinary and various other schools, a museum, a natural history and cabinet of minerals, and several libraries and observatories of the arts &c. This city being the seat of one of the 3 quarters of the 12 clergy of the Archdiocese of Paimboup. Among the charitable institutions are a civil and military hospital, a workhouse, foundling and orphan asylums, a house for the aged &c. Paimboup is a bishop's see, and the seat of the archbishop and superior judicial courts for the diocese. It has been celebrated both in ancient and modern times, for its wealth and manufactures, but these have greatly declined since the time of the Venetian republic.

It has still however manufactures of various kinds, spun silk, silk ribbons and laces, and an extensive trade in other silk, cotton, garden vegetation. The fair of St. Anthony which lasts 16 days, from June 15th, renders the city for a time a scene of bustle and gaiety, and the whole derives some benefit from Paimboup being, for a part of the year the residence of the Venetian embassy. It is very ancient, being said to have been founded by Antenor after the siege of Troy.

(The name of the town Paimboup, changes to Paimboup, at some times.)

The historian Levy was a native of Paimboup, and the alleged poverty of his style has long been a topic for critical discussion. Paimboup was taken by Albert Dufour and the Lombards, but being retaken by Charlemagne he submitted to the latter, and became a fief under his vassals, flourishing and independent. In 1310, it came into the possession of the Carrara family, and in 1490 was ceded to the Venetian republic. Under the French it was the cap. dep. of the Alpes.

PAIMBOUP is a small town of 10,000 inhabitants, on the left bank of the Rhone, of which it is, in 1840, the cap. dep. of the Alpes. It is on the great road, between the Alps and the sea, and has a fine view of the Alps. It has a fine view of the Alps, and a fine view of the Alps.

In the neighbourhood are some elegant villas and improved estates. The main importance of the public edifice is that for the civil business of the town and county, and the great and important, erected in 1810 at an expense of £10,000, but the former being deficient, an addition is now being made to it which is to cost £10,000. The original parish of Paisley has been divided into four distinct parishes. The Abbey Church which is a cathedral church, consists of the nave of an ancient monastery, being with the exception of a small chapel, and a S. transept window the only portion that now remains of that once splendid building. The High Church, an old edifice in the Old Town, or "the burgh" as it is commonly called, is an elegant building with a spire 140 ft. in height. The Free Church has 4 places of worship, but none of these require any particular notice, if we except the Free High Church on Glasgow Green. The Episcopal Chapel is a handsome Gothic building, and one of the best specimens of architecture in Scotland. The Free Town is connected with the town by a bridge, and the river is also crossed by the line of the Glasgow, Paisley, and Ayr and Greenock railways, which pass through the town. Several years ago barracks were erected in one of the suburbs for the accommodation of a battalion of infantry. There, also, is a theatre, with 3 galleries, rooms, and other places of amusement. In 1811, a cemetery was laid out on rising ground to the W. of the town, and the same disposed in its arrangement, and the cemetery is extensive, have made it a beautiful promenade.

In addition to the churches of the establishment and the Free Church (one of which is for dissenters in Paisley) there are no fewer than 7 Presbyterian dissenting churches, namely 1 Baptist place of worship, 1 Methodist chapel, 1 Independent chapel, and various churches belonging to the R. Catholics, S. Independents, Unitarians, and New Jerusalemists; and there are two or three additional dissenting churches in Paisley, a large village within the par. In 1841, 18,000 persons belonged, to 1811 to the established church; £1,000 to other religious denominations; the remainder are being brought in, being in any Christian denomination. But in consequence of the establishment of the Free Church, the influence of the establishment must now be considerably diminished. Paisley has a seminary for theological education connected with the Reformed Presbyterian Synod, with an extensive collection of theological books.

The grammar school, a royal foundation, (though the endowments have nearly disappeared), founded by James VI. in 1582, and endowed by subsequent royal grants, is in a highly efficient state. There are, in Paisley, about 10 schools in the town and par. all of which, with some trifling exceptions, are well-endowed. A ragged school was instituted in 1840. About 10 years ago, Mr. William of Newburgh, Paisley, built a large and elegant school house, which will be one of the finest buildings in town, it now being erected by the trustees under his will. A Philosophical Institution was founded here in 1811, in which courses of lectures on different branches of science and literature are delivered. A small library and a museum are attached to it; but the Institution is not in a very flourishing condition. An Asylum, founded in 1847, has a roomy, elegant building for teaching languages and books, a dispensary or school for teaching class, a library, &c. For the 2 years, an Acton's Institution, similar to the last was also opened in 1841. For the 2 years, there was a Methodist Institution. The newspapers are printed in the town; but Paisley editions are published of 3 of the Glasgow newspapers. Among the eminent characters that Paisley has produced may be named Alexander Wilson, the celebrated Scottish poet, Dr. Waddell, author of various theological works, and afterwards president of the college of New Jersey, &c. For the 2 years, one of the ministers of the town. The "Public Subscription Library" consisting about 1,000 volumes, is now incorporated with the Asylum.

Four mills were introduced into the town as early as 1703, and into the Abbey par. in 1760. The earliest cotton mill in 1760 in the town was built, and in the latter 1,000 ft. the number of spindles in both, for weaving and putting on joint and children was at the same time 1,000. There is an hospital or workhouse in the town, erected in 1760. A large and handsome hospital for the Abbey par. with a female asylum, has just been erected to the south part of the town. It cost about 10,000, and is now in progress. About 10 acres of land are reserved to it. The infirmary which has been recently enlarged at an outlay of 10,000 to 1,000, accommodates from 10 to 20 poor and 10 or 12 patients. The children are boarded and educated in the country. The town was visited by cholera in 1817 and 1818, and slightly in 1819. The deaths in 1810 amounted to 1,410, viz. 1,000 males and 410 females, being a decrease of 470 from the previous year, and being the lowest mortality since 1811.

MS. copy of Fordun's "Scotichronicon." The "Char-; their diets on the pavement. Swarms of scintils. nob'ly

tiges of an amphitheatre. In the senatorial hall are preserved fragments of various marbles, &c.; and in the royal palace are two ancient bronze rams, brought thither from Syracuse, and said to have been made by Archimedes! (*Smyth's Sicily*, p. 72.)

In the neighbourhood are many fine specimens of Moorish architecture; the principal being the Saracenic fortress of Kuba, now used as cavalry barracks; and the Zisa, a palace erected in the 9th or 10th century, still in good repair, and occasionally used as a royal residence. Near the latter is a Capuchin convent, with a cadesery, or receptacle for the reception of dead bodies. A royal residence, in the Chinese style, stands outside the walls, near M. Pellegrino; and about 10 m. E. Palermo, near the bay, is La Bagaria, the favourite residence of many Sicilian nobles. Several of the villas of the nobility are richly adorned, both by nature and art: that of Prince Palagonia, however, is chiefly noted for its statues of all sorts of monsters.

Palermo is the see of an archbishop, who is primate of Sicily; the seat of an intendant and council of intendency; a departmental council; a supreme court of justice, with 14 judges; a civil and criminal court for the intendency, and a tribunal of commerce. It has a university, the second in the Neapolitan dom., attended by about 600 students, comprising several eminent names among its professors. It has a library of upwards of 30,000 vols., a printing press, several museums; but only a few lectures are given, and the education is worthless in the extreme. Palermo has also a high female seminary, second to that of Naples; a college of nobles, an episcopal seminary, and many inferior schools; numerous charities, including large hospitals, a lunatic and a foundling asylum, houses of industry for mendicants, &c.; public baths, and several public libraries and scientific associations. Silk manufactures were established here in the 11th century, and they still form the chief branch of manufacturing industry, though much less flourishing than formerly. Cotton fabrics are also produced, with oil-cloth, leather, &c.; and there is here a glass work, the only one in Sicily. The tunny fishery employs from 900 to 1000 boats, and 3,500 fishermen. But the principal resources of the shah. depend on Palermo, being the residence of theiceroy and the seat of government, and on her trade. The latter, indeed, is but trifling, compared to what it could be were Sicily under an enlightened government, capable of calling forth its vast resources. But even at present it is far from inconsiderable. The great articles of export are shumac, fruits of various sorts, including oranges and lemons, wine, manna, brimstone, &c. Subjoined is a

Statement of the Quantities and Values of the principal Articles exported from Palermo in 1847.

Of the above, goods to the amount of 108,468*l.* went to U. States of America; 108,576*l.* to Great Britain and colonies; 24,082*l.* to France; 1,576*l.* to the Baltic; 54*l.* to Belgium and Germany; 24,653*l.* to the Italian states; and 12,370*l.* to other countries.

The imports consist principally of sugar and other colonial products; cotton, linen, silk and woollen fabrics; china-ware, hardware, and other manufactured goods; stuffs, spices, &c.

The city funds, derived principally from landed property, the land-tax, and taxes on consumption, are said to amount to about 100,000*l.* a year; but for many years the expenditure has exceeded this sum, and the city is now deeply in debt.

Sicilian writers have made many absurd and ridiculous statements concerning the foundation of Palermo; but the most rational and generally received opinion, con-

firmed by the authority of Thucydides and Polybius, is, that it was founded by a colony of Phœnicians; the beauty of the situation, and the convenience of the port, whence, as already seen, it derived its name, being powerful inducements to a trading people, to make it a settlement. (*Thucyd.* lib. vi.; *Polybius*, lib. i. cap. 38.) It subsequently fell into the hands of the Carthaginians, who made it the capital of their Sicilian dominions. Soon after the beginning of the first Punic war, it passed into the hands of the Romans, who established a colony in it (*Strabo*, lib. vi.), conferred on it various privileges, and allowed it to be governed by its own laws. In a subsequent age, the Saracens made it the capital of their Sicilian territories; and since their time, with the exception of some short intervals, it has been the capital of Sicily. It was the residence of the court of Naples during their exclusion from that city from 1806 to 1815. (*Smyth's Sicily*, 70—89. and *Append.*; *Scribnerne*; *Dryden*; *Russell*; *Simond*; *Von Raumer's Italy*, ii.; *Parl. Reports*, &c.)

PALESTINE. See SYRIA and PALESTINE.

PALHANPOOR, a fortified town of Hindostan, prov. Gujrat, cap. of a Mohammedan principality, 88 m. N.N.W. Ahmedabad. Lat. 24° 11'; long. 72° 20' E. Pop. 30,000(?) It is about 1½ m. in circ., and is surrounded by a brick wall, flanked with towers, the gates being defended by outworks, mounted with small cannon. It is of considerable political importance, being a frontier town on the desert separating Gujrat from Sindh and Cutch, and on the main route from Rajpootana southward. The state, of which it is the cap., extends from 30 to 40 m. round, including two towns, and about 130 villages, and producing a yearly revenue of about 2½ lacs rup. (*Hamilton, E. J. Gaz.*)

PALMA. See MAJORCA.

PALMAS, the principal town of the Canary Islands, which see.

PALME, or PALMI, a town of the Neapolitan dom., prov. Calabria Ultra I., cap. distr., on the Gulf of Gioja, 2½ m. N.E. Reggio. Pop. about 7,000. It was partially destroyed by the earthquake of 1783, but has since been restored. It is well built; its streets being regular, and its houses mostly of stone, and in good taste. In its centre is an elegantly sculptured and well supplied fountain. It has some manufactures of silken and woollen fabrics, and trades in oil, liqueurs, &c. (*Crazer's Tour*, 292.)

PALMYRA, (the Tadmor of the Scriptures, by which name it has always been designated by the Arabs,) a celebrated city of antiquity, and the cap. of the region of Palmyrene in Syria, in an oasis in the midst of deserts in the modern pach. of Damascus, 147 m. S.E. Aleppo, and 187 m. S.S.W. Damascus, lat. 34° 29' N., long. 38° 48' E.

This once famous city is now all but deserted, not having more than 100 inhabs., and it derives its whole importance from its classical associations and the number and magnificence of its ruins. These, which stand near the E. declivity of a mountain range running from N. to S., may occupy a space of about 3 sq. m., though it is probable that the ancient city extended over a larger area, exclusive of the tombs on the tops and sides of the adjacent hills. The oasis, in which the city is situated, is traversed by two streams, which, though hot and sulphureous, are said to be wholesome, and not disagreeable. But the water used in the ancient city was of the best quality, being brought from a considerable distance by a large subterranean aqueduct, of which there are still some remains. The first view of the city is described by all travellers as extremely magnificent. "On opening upon the ruins," says Captain Mangier, "as seen from the Valley of the Tombs, we were much struck with the picturesque effect of the whole, presenting altogether a most imposing sight. It was rendered doubly interesting by our having travelled through a wilderness destitute of a single building, from which we suddenly opened on these innumerable columns and other ruins, the snow-white appearance of which, contrasted with the yellow sand, produced a very striking effect." (*Irby and Mangier's Travels*, p. 262.) The ruins are not, however, to be compared, as respects the size of the gates, columns, and temples, with those of Baalbec and Thebes; but they are more remarkable than either for their vast extent, and they are less encumbered with modern fabrics than most other ancient remains.

The ruins now extant comprise the fragments of two or three temples, several gateways, (one of which is more perfect than the rest), colonnades, sepulchres, &c. With respect to the antiquity of these ruins, it is difficult to form a conjecture: the tombs are evidently the oldest, but even these do not date as far back as the Christian era. The other buildings are considerably more recent, and most of the fine and expensive edifices appear to have been constructed during the three centuries ending with the reign of Diocletian.

On approaching the city a ruined mosque, built by the

Saracens, introduces the stranger to a fine gateway, having a lofty central arch, flanked by two others of smaller size, which lead directly to a grand avenue, which, from the remains, must have been nearly 1 m. in length, and bordered on either side by rows of Corinthian columns, of which, however, only 114 now remain. This avenue leads to a gateway, beyond which are ranges of pillars supporting a frieze and entablature, supposed by Mr. Addison to be the ruins of two noble gateways, that may have led from the central avenue to other colonnades now entirely destroyed. A circular colonnade, of which eighteen columns only are now standing, has in its centre a small but richly ornamented building, with niches for statues; and immediately beyond it are the prostrate remains of a magnificent building, constructed of a species of marble superior to that found in other parts of the ruins. It appears to have comprised two very large rooms; but whether it were a temple or palace, is difficult to determine. By far the most extensive ruin, however, is the Temple of the Sun, the grand entrance to which was supported by four fluted Ionic pillars, and adorned with rich carvings of vine-leaves and clusters of grapes in bold and spirited relief, beautifully chiselled. The outer precinct, which encloses a quadrangular space of 220 sq. yards, is formed by a lofty wall, adorned with pilasters both within and without. Inside this court are the remains of two rows of noble marble pillars, each 37 ft. in height, and another row of columns 50 ft. in height, appears to have encircled the temple, which, however, was only 100 ft. in length by 45 ft. in breadth: it has since been converted into a mosque, and its interior is disfigured by passages from the Koran written round the walls.

The sepulchres, which are, perhaps, the most interesting of all the ruins, occupy the tops and sides of the surrounding eminence, some presenting mere heaps of rubbish; others half fallen, exposing their shattered chambers; while one or two still exist almost entire. They are built in the shape of square towers, from 3 to 4 stories in height, each forming a sepulchral chamber, with recesses divided into compartments for the reception of the bodies. Some of the chambers are ornamented with Corinthian pilasters and sculptures, in almost perfect preservation, executed in high relief; the walls are of white stucco, and the ceilings are divided into diamond-shaped compartments, delicately ornamented with white stars on a blue ground: over the doorways are tablets with inscriptions both in Greek and Palmyrene. A few of the streets may be traced with some difficulty, and the foundations of houses are distinguishable in some places; but not a vestige remains of the old walls destroyed by Aurelian, though a wall still exists that has been made of materials from the sepulchres, and was probably erected soon after the demolition of the older fortifications. The inscriptions are both in Greek and in the unknown Palmyrene language; all of those on the columns are honorary, generally to the effect, that the senate and people inscribed them in honour of an individual whose pedigree is given through several generations. The inscriptions on the tombs are in Greek, and tolerably perfect. Fac-simile copies of them are given in the great work of Messrs. Wood and Dawkins, which also contains drawings of all the principal buildings of Palmyra.

History.—The earliest accounts of the existence of Palmyra, are derived from the sacred writings, which state that "Solomon built Tadmor in the wilderness and all the stone cities which he built in Hamath" (2 Chron. viii. 3, 4.); and his motive for thus founding it was, according to Josephus, "because in that place were fountains and wells of water. He gave it the name of Tadmor, which is still prevalent among the Syrians; but the Greeks name it Palmyra." (*Ant. Jud.* i. viii. ch. 6.)

Pliny has noticed the city, and the peculiarities in its situation to which it owed its rise and importance: *Palmyra urbe nobilis situ, distans soli et aquis amantibus; vasto undique ambitu arenis includit agros; ac velut terris exempta a rerum natura, privata sorte inter duo imperia summa, Romanorum Parthorumque, et prima in discordia semper utrinque cura.* (*Hist. Nat.*, lib. v. cap. 25.) The fertility of the oasis round Palmyra made it a suitable situation for a small town; but its position in other respects was still more advantageous, from its being the resting-place of the caravans between the Persian gulph and the great cities on the Euphrates and Tigris, and Aleppo, Damascus, and the ports on the Mediterranean. Palmyra thus became a principal emporium of the commerce between the Eastern and Western worlds; and to this, no doubt, is to be ascribed the wealth and importance to which she early attained. Being situated between the empires of Rome and Parthia, it was an object of great importance with the Palmyrenians to preserve a strict neutrality, and to keep on good terms with them both. But after the victories of Trajan had established the unquestionable

preponderance of the Roman arms, Palmyra became a dependency of Rome, and attained to the rank of a colony. "It was during that peaceful period, if we may judge from a few remaining inscriptions, that the Palmyrenians constructed those temples, palaces, and porticoes* of Grecian architecture, whose ruins, scattered over an extent of several miles, have deserved the curiosity of our travellers." (*Gibbon*, cap. 9.)

The most splendid period of the history of Palmyra was that which immediately preceded her fall. Valerian, emperor of Rome, having been made prisoner by Sapor, king of Persia, Odenathus, a citizen of Palmyra, who had attained to the principal direction of her affairs, joined the Roman forces, and had a large share in avenging the insult offered to the majesty of Rome. He attacked the Persians, drove them beyond the Euphrates, penetrated as far as their capital city Ctesiphon, and captured the treasures and women of the great king. For these services, the senate, with the approbation and applause of the Roman world, conferred on Odenathus the title of Augustus, and associated him in the empire with Gallienus. These honours, however, he enjoyed only for a brief period, being soon after (A. D. 268.) assassinated by his nephew. The vacant throne was seized by his young, warlike, and beautiful widow, the famous Zenobia, who broke the alliance with the imbecile Gallienus, and assumed the title of Augusta, Queen of the East. The accounts that have come down to us of this extraordinary woman are so very flattering that we may not unreasonably suspect them of being exaggerated, in the view, perhaps, of enhancing the merit of her conqueror Aurelian. But, that she was highly accomplished, there can be no doubt. "Her manly understanding was strengthened and adorned by study. She was not ignorant of the Latin tongue, but possessed, in equal perfection, the Greek, the Syrian, and the Egyptian languages. She had drawn up, for her own use, an epitome of Oriental history, and familiarly compared the beauties of Homer and Plato, under the tuition of the sublime Longinus. The success of Odenathus was, in a great measure, ascribed to her incomparable prudence and fortitude." (*Gibbon*.)

Zenobia, who boasted of being the descendant of Cleopatra and the Ptolemies, sent, after the death of her husband, on pretence of this relationship, an army into Egypt, which she annexed to her dominions. But her troops were unequal to a contest with the disciplined legions of Aurelian. After being defeated in 2 great battles, Zenobia shut herself up in Palmyra. But, seeing that it must fall into the hands of Aurelian, she attempted to make her escape; and being intercepted in her flight, the city soon after surrendered. The victor sullied the glory of his conquest by ordering the execution of Longinus, author of the famous treatise on the sublime, and other advisers of the unfortunate queen; but, in other respects, the city was treated with great lenity. Unhappily, however, as soon as it was understood in Palmyra that the emperor, with his captive princess, had crossed the Hellespont, the citizens rose in rebellion, and, having massacred the Roman governor and garrison, proclaimed their independence. The instant Aurelian heard of this revolt, he at once, without a moment's hesitation, began to retrace his steps, and hastened to the ill-fated city with an irresistible force, and an insatiable thirst for vengeance. The sequel may be learned from his own words:—*Mulieribus non pepercimus, infantes occidimus, senes jugulavimus, rusticos interecimus: cui terras, cui urbem decempe reliquimus? Pascendum est iis qui remanserunt.* (*Flavius Vopiscus in Hist. August.*, p. 218.) At the same time the walls of the city were rased to the ground, and, in the words of Gibbon, "the seat of commerce, of arts, and of Zenobia, gradually sunk into an obscure town, a trifling fortress, and, at length, a miserable village. Zenobia herself was taken to Rome to grace the triumph of Aurelian, who, however, behaved towards her with a generous clemency seldom exercised by the ancient conquerors, and presented her with an elegant villa at Tibur, where the Syrian queen insensibly sunk into a Roman matron, her daughters married into noble families, and her race was not yet extinct in the fifth century." (*Decline and Fall*, ii. 44—48.) Palmyra afterwards fell with the surrounding country under the power of the Mohammedans; but history is entirely silent respecting the causes and period of its total desolation. (*Wood and Dawkins on the Ruins of Palmyra; Addison's Damascus and Palmyra*, ii. 284—323.; *Irby and Mangie's Travels*, p. 262—267.; *Mod. Trav.*)

PAMBERS, a town of France, dép. Ariège, cap. arrond., on the Ariège, 11 m. Foix. Pop., in 1846, 5972. It is well situated, and is generally well built and laid out. The cathedral, several other churches, the bishop's palace, a Carmelite convent, the court-house, and a large

* According to Stephanus Byzantius, these were mostly erected by the emperor Adrian; but there is no evidence that such was really the fact, though he may have done so to some extent.

still beautiful, are the principal buildings. No remains exist of the castle, built during the crusades, and called *Alfonso*, from the Syrian town of that name, whence, by corruption, the present name of this town (*Alfonso*, &c.)

PAMPELUNA, or PAMPLONA, a fortified city of Spain, cap. bishop. of Navarra, on a hill near the left bank of the Arga, 46 m. S. Bayona, and 108 m. N. E. Madrid: lat. 42° 40' N., long. 10° 20' W. Pop. according to 1810, 16,000. It is surrounded by a strong wall, with bastions, but derives its principal defence from 3 castles, one within and the other outside the walls, the latter, the citadel, being situated on a rock (of which the only accessible part is covered by a moat), and enclosed by a deep ditch. The interior of the town comprises several wide and straight streets, broad on both sides with trottoirs, 3 public squares, the largest of which bull-fights are held, 6 public fountains, supplied with water from a fine aqueduct 8 m. in length, and the *Paseo*, a public walk. Outside the walls are 3 other planted walks, and 6 bridges across the river, connecting the town with the suburbs. The houses are irregularly built, and the public edifices, which comprise a cathedral, 4 parish churches, 3 palaces, a prison, post office, and small theatre, are more remarkable for antiquity than beauty.

Pamplona is supposed to have been built by Pompey, after the defeat of Horthensia, and called by him *Pamplonica*. After the foundation of the kingdom of Navarra, it was made its capital city and sustained several sieges. But the most memorable event connected with the town is the contest for its possession between the English and French at the close of the peninsular war. In June, 1813, on the sudden retreat of the French army from Vittoria, the road to Pamplona was once open, and this fortress was hastily garrisoned and provisioned. It was forthwith invested by the British, but the approach of Marshal Soult, with an army, towards the close of July, prevented its early delivery. It was in the vicinity of Pamplona that the obstinate conflicts of the 20th and 21st July took place; and the French being compelled to retrace the Pyrenees with great loss, Pamplona was cut off from all supplies, and surrendered on 31st October.

PANAMA, or DARIEN, (ISTHMUS OF) the narrow neck of land which connects the continents of N. and S. America, forming a prov. of the republic of New Granada, between the 8th and 10th degs. of N. lat. and the 77th and 81st of W. long., having E. the Colombian prov. Choco, W. that of Veragua, N. the Atlantic, and S. the Pacific Ocean. Its shape is that of an arc, the convex side facing the N.; length, W. to E. about 800 m.; general breadth about 40 m., but, where narrowest, not more than 20 m. from sea to sea. Pop. of prov. in 1808, 75,000. The Cordillera, or chain of the Andes, in here interrupts low and level land carry a canal or well watered; and this length, never less. The dry or the wet during the rain is prodigious causes throughout season, of which is offered. On the 1 or six days, and with the season of irregularity to the ordinary course.

The temperature and salubrity vary greatly. Porto Bello is one of the hottest and most unhealthy places in the world. On the opposite coast, at Panama, the thermometer never rises higher in the day than 87°, and though at other times it is very sultry, it can hardly be called unhealthy. Rice, maize, coffee, cocoa, and some sugar, are cultivated. Sticks, conchagua, various dyeing drugs, and the finest timber trees, abound in the forests.

Near Panama is a considerable extent of cultivated land, but round Porto Bello, and on the E. coast, most part of the surface is uncultivated. Elsewhere, the land-larks keep their estates chiefly in grass, few of the Indians are industrious, and many, indeed, depend almost wholly on the chase. Drives of wild boar, deer, and a variety of other wild animals, are met with; monkeys are frequently used as food, as are sharks, gannets, &c. Herons are small but hardy fowls, the feathers of some of which, fetch sometimes 120 dollars each.

Gold was formerly obtained in the isthmus, but the search after it has been abandoned for a lengthened period. The pearl fishery, also, which used to be prosecuted in the bay of Panama, has now, we believe, been all but wholly relinquished. The Indians, indeed, are strangers to all sorts of enterprise and industry; and are said to be

less advanced in civilization than their neighbours, less so in the point to which the latter have attained.

Passage across the Isthmus.—It seems probable that the isthmus is destined speedily to undergo a great change. Lately, indeed, on shore the discovery of the mineral riches of California, it has become a great thoroughfare, vast numbers of individuals having crossed from the port of Chagres on the Caribbean Sea to Panama on the Pacific Ocean, and conversely.

The port of Chagres is within the mouth of the river of that name, is lat. 9° 10' N., long. 79° 30' W. A bar at the mouth of the river has only from 10 ft. to 12 ft. water, though within the bar the river deepens to from 4 to 6 fathoms. It is probable that the bar might be deepened without much difficulty, and a canal might be cut from the bottom of the fine bay of Mimonsilla to the river, from which it is only 3 m. distant. A short while ago the town (if so it might be called) was a mere cluster of huts, wretchedly, and without any accommodation for passengers. But having lately become one of the starting points in the narrow and shortest route from the E. to California, it will now, no doubt, be greatly improved.

The country between the ports of Chagres and Panama would seem to be decidedly the best fitted for the formation of a canal, or a railway, uniting the Caribbean Sea and the Pacific Ocean. The direct distance across at this point does not exceed 34 m. or 36 m., if so much. The river Chagres either is, or might without much difficulty be made for vessels of considerable

size, or Gorgona, nearly half-way across there are no great, and certainly no insurmountable difficulties, in the way of constructing a canal, or both, from Barro Colorado to the river, from which the navigable waters might ascend the navigable hills into the bay of Panama. The distance that would have to be passed over is not more than 20 ft. to 25 ft. above the level of the sea, and there are no measurements of this kind to be made in place much remote from the city of the country, and the difficulty is to carry on the works, would be serious of the obstacles to the system.

But these would not be so great as, with the length of the transit, and the extent of the works, would be incomparably less. Even should a canal be carried across the isthmus by way of Mimonsilla there can be little doubt that a rival communication will be effected by the isthmus of Panama. There will be ample business for two or more lines. See *Nicaragua* (LANSBY).

A company has, in fact, been already formed in New York for the construction of a railway across the isthmus, to run from sea to sea; and we understand that they have either begun, or are about to commence carrying the project into effect.

PANAMA, a city and one-part of Colombia, on the Pacific, 20 m. S. E. Chagres. Lat. 9° 05' N., long. 79° 31' W. Pop. 7,000. It stands on a rocky peninsula, projecting into the bay of Panama, and has an imposing aspect from the sea. Its streets are well ventilated, and it is said to be cleaner than most Spanish American cities. It is enclosed by irregular and not very strong fortifications, constructed at different periods. The houses are partly of wood, straw, and other fragile materials, but many are substantially built of stone, the larger having courtyards, or patios, in the old Spanish style. It had a cathedral, four convents, a university, and a college. Most of these establishments were lately falling into ruin, as was a large and fine Jesuits' college. But, like Chagres, its state has most probably changed very materially within the last two or three years. Its roadstead is one of the finest in the world: there are a number of islands, a short distance from the main land, which afford secure anchorage for ships of any burden, and from which supplies of provisions, including excellent water, may usually be obtained. The tides daily rise and fall from 20 to 25 ft., so that it is peculiarly well fitted for the repair and building of ships.

Previously to 1760, when the trade with the Pacific Sea began to be carried on round Cape Horn, Panama was the principal entrepot of trade between Europe and W. America. From that period, however, it fell off, and its decay has been peculiarly rapid since the independence of S. America, and the opening of the other parts of the Pacific. But within the last two or three years it has again rapidly increased. And should a canal or railway be carried across the isthmus, of which there can be little doubt, it will in all probability attain to greater commercial distinction than ever. In the course of the present year (1850) as early as 18 steamers are said to have been employed, at the same moment, in the trade between Panama and San Francisco.

Old Panama, founded by the Spaniards in 1519, stood about 3 m. to the E. of the present town. It was de-

stroyed by the buccaneer Morgan in 1670. Shortly after which the existing city was commenced. (*Dampier's Voyages*, i. cap. 7., &c.; *Hall's Voyages*, ii. 144—162.; *Humboldt, Nouvelle Espagne*, 2de ed. i. pp. 217—231.; *Lloyd in Geog. Journal*, i. 85., &c., and in *Times* of December, 1850; *Chevalier, sur L'Isthme de Panama*, 105—137, &c.)

Colony of Darien.—The place marked New Edinburgh, in Arrowsmith's map on the W. coast of the Gulph of Darien, derived its name from its being the site where, in 1698, the Scotch attempted to form a settlement. This colony was projected by a Scotch gentleman of the name of Paterson, the founder of the Bank of England, and was zealously patronised by all classes of his countrymen, who formed a joint stock company, and subscribed large sums to carry the project into effect. It was, however, extremely ill-suited for a country in the then situation of Scotland; and provoked the well-founded hostility of the Spaniards, and the bitter, though unreasonable and unfounded jealousy of the English West India merchants and ship-owners, who either were, or pretended to be, seriously alarmed lest this new settlement, in an unoccupied and unhealthy country, should seriously injure their commerce and navigation. The selfish opposition of these interested parties to the project, having been abetted by the English parliament, the king disavowed the company, and even issued orders to the governors of the West Indian and American colonies, charging them not to permit any intercourse with the Scotch at Darien! In consequence of these vindictive measures, and of the threatened hostilities of the French and Spaniards, the settlement was abandoned. This event was most acutely felt by the Scotch, whose pride was mortified by the failure of a scheme, of the success of which they had formed the most exaggerated expectations; and many of whom were ruined by the loss of the sums they had embarked in the project. It farther inflamed the existing prejudices against the English, and against the projected union of the two kingdoms, which happily, however, was not long after effected. (*Laing's History of Scotland*, iv. 261—277.; *Burnet's History of his Own Times*, iii. 299, &c. ed. 1753.)

PANIANY, a commercial town and sea-port of British India, Presid. Madras, prov. Malabar, on the Paniany river, 38 m. S. Calicut. It has numerous mosques, being principally inhabited by Moplays, or fishermen of Arabian descent. It exports teak, cocoa-nuts, iron, and rice; and imports wheat, pulse, sugar, salt, catechu, and spices; but the mouth of its river is closed by a bar which only admits boats of small burden.

PAPA, a considerable market-town of Hungary, beyond the Danube, co. Wesprim, 82 m. S. E. Vienna. Pop., in 1837, 13,232. It was formerly fortified, and has a large castle belonging to the Esterhazy family. It has numerous churches; Rom. Cath., Lutheran, and Calvinistic colleges; manufactures of earthenware, glass, and paper, and an active trade in agricultural produce.

PAPAL STATES (THE), STATES OF THE CHURCH, or POPEDOM, an independent country of Europe, occupying the greater part of Central, with a portion of N. Italy, being principally comprised between lat. 41° and 45° N., and long. 11° and 14° E.; having N. Austrian Italy, from which it is separated by the Po; W. Modena, Tuscany, and the Mediterranean; S. and S. E. the Neapolitan dom. and N. E. the Adriatic. It is very irregularly shaped; the length of a line drawn from its N. to its S. extremity may be about 270 m. Its breadth is very various. Area, 17,218 sq. m. The pop., inc. about 10,000 Jews, amounted in 1843 to 2,908,115. The country is subdivided into legations and delegations.

The Apennines, which intersect the papal territories nearly in their centre, have here an average height of about 4,000 ft.; but Monte de la Sibilla rises to 7,210 ft. (*Bruguière*); and several other peaks are not greatly inferior in elevation. The provs. of Perugia, Spoleto, Camerino, and the others constituting what was formerly called the March of Ancona, are those principally covered with the ramifications of the Apennines, which, in this part of Italy, approach more nearly to the Adriatic than the Mediterranean, leaving, however, an extensive plain on either side: that on the N., between the Po and the Adriatic, comprises the legation of Ferrara, and the greater part of the legations of Bologna, Ravenna, &c. It includes the *Valli di Commachio*, a very extensive marsh, but, with this exception, is highly fertile and productive. The plain to the S. of the Apennines is of still more ample dimensions, embracing all the vast undulating tract known by the names of the Campagna and Marmme, extending between the declivity of the mountains and the sea from the frontiers of Tuscany on the one hand, to those of Naples on the other. The S. portion of this great plain, or that next Naples, consists of the district called the Pontine Marshes (an. *Pomptina Paludes*), which, notwithstanding the vast sums expended upon it, is still very imperfectly drained. We have elsewhere fully described the present state of this

vast and naturally fruitful plain, famous in antiquity for its fertility, but now, unhappily, the seat of pestilence and death. (See *anté*, p. 57.)

The Po, which forms their N. boundary, is the largest river of the Papal States; but by far the most celebrated is the Tiber. The latter rises at St. Albonigo in Tuscany, and runs generally S. or S. E., but with a very tortuous course, to within about 25 m. N. N. E. Rome, whence it flows mostly S. S. W. to its mouth in the Mediterranean, 15 m. below Rome, after an entire course of about 200 m. Before entering the sea the Tiber divides into two arms, enclosing the small island of *Isola sacra*. At Rome the greatest breadth of the Tiber is only about 400 ft., or scarcely one third part of the breadth of the Thames at Blackfriars Bridge, and nearly approaching that of the Seine at Paris. It is justly entitled to its ancient epithet *fluvius*, being almost constantly loaded with yellow mud, from the crumbling and disintegration of its banks. Its principal affluents are the Topino, Nar, and Teverone on the left or E., and the Chiana on the right bank. It is navigable for boats to near Perugia. Except the Tiber, no river of any consequence falls into the Mediterranean in this part of Italy. The country to the E. of the Apennines has, however, a great number of rivers, though none of them be of any very considerable magnitude, falling partly into the Po and partly into the Adriatic. Several of the most celebrated Italian lakes are in the Papal States, as those of Perugia, (an. *Lacus Thrasimenus*) Bolsena, and Bracciano, (which see). The lakes of Vico, Albano, Nemi, Gabil, &c., though insignificant in point of size, are interesting from the classical associations with which they are connected. They are situated in a mountain region, and evidently occupy the craters of extinct volcanoes.

Geology.—The primary rocks in the Apennine region consist mostly of serpentine, mica, claystone, and quartz. Gneiss is met with in various places along the coast. Mountain limestone is frequent, and indeed a large portion of the country consists of calcareous formations; but the region round the cap. is of volcanic origin, and abounds with volcanic products, as sulphur, alum, &c. Rome is principally built of volcanic tufa, which composes the general soil of the Campagna. Some sulphur springs also exist at Poretta, N. of the Apennines, and various kinds of mineral springs are common elsewhere.

Climate.—In the legations N. of the Apennines, the thermometer often sinks in winter to 10° Reaumur, and oranges, lemons, &c., do not flourish in the open air. But the greater portion of the Papal States is situated within the 2d Italian region. Vegetation is here scarcely interrupted at any period of the year. The air in the mountain districts is pure and salubrious; but the plains of Ferrara and Bologna, the Campagna di Roma, and the Pontine Marshes, are at that season very unhealthy: the latter especially are subject to malaria. The origin of malaria has been a subject of much dispute, and we have already noticed some of the circumstances that have conspired to reduce the Campagna to its present all but desert state. (See *anté*, p. 57.) In antiquity it was bordered along the shore by dense forests; and it is believed by many, that the destruction of the woods has been a principal cause of the increase of malaria. "The ancients," says M. Simond, "planted, or preserved these woods, under an idea, probably erroneous, that they screened them from certain winds carrying noxious vapours; but though mistaken as to their real mode of agency, they were quite right in supposing them useful. To the destruction of the woods the increase of solstitial fevers has been clearly traced; the one having uniformly followed the other. During the decline, also, and after the fall of the Roman empire, those stupendous aqueducts, which in earlier times brought whole rivers to Rome, having been broken and overturned, in some places poured their waters over the land, which became a marsh; and the population, diminished by wars, was further and still more reduced by pestilence. The country became more unhealthy as it was less inhabited; in the course of a few centuries the millions of ancient Rome dwindled down to 30,000; and it was not before the 16th century, under Leo X., that the scanty pop. grew more numerous. Another cause of the increase of malaria is, that sandy ridge gradually thrown up on both sides the mouth of the Tiber for many leagues; various outlets, natural and artificial, are thus clogged up; and hence the Pontine marshes, formerly confined to a narrow space near the promontory of M. Circello, now extend under other names all along the coast." (*Tour in Italy*, pp. 350—359.)

Agriculture.—It has been estimated that of 590,000 rubbi of productive land (about 2,655,000 acres, or less than $\frac{1}{4}$ part of the entire surface), 242,000 are arable, 162,000 in pasture, 14,600 in vineyards, 1,400 in gardens, &c., and 170,000 in woods. In the March of Ancona, and other mountainous districts, and round the towns and

villages, both the properties and farms are small; but it is otherwise in the Campagna and the plain of Bologna. The whole of the Campagna is divided into about 600 estates, varying from 500 to 1,000 hectares and upwards each. The largest of these vast estates, which are mostly held in mortmain, belongs to the chapter of St. Peter. The value of land is very various; the rent in the Campagna varies from $\frac{1}{2}$ to 4 scudi per hectare. Beyond the maremme, as the pop. increases in density, the rental rises to perhaps 20 scudi per hectare, for land on which there are olive, vine, or mulberry plantations; or where there are adjacent markets for corn. In the neighbourhood of Rome, where the land is rented at a fixed price, it readily sells for 40 years' purchase; while lands farmed on the metayer principle do not generally sell, owing to the greater difficulty of collecting the rent, for more than 25 or 35 years' purchase. Lands in the maremme are frequently rented by middlemen, who underlet them in smaller portions to the actual cultivators. But speaking generally, land is everywhere held under the metayer system, the occupier paying a certain proportion, generally a half of the produce, to the owner. The soil is mostly fertile; but owing to the badness of the government, which oppresses the occupiers with injudicious taxes; the want of capital, skill, industry, and markets; the ignorance of the cultivators, the number of holidays, and the prevalence of the metayer system, agriculture is in the most wretched state. The implements of husbandry made in the country are as rude as those described by Virgil; and heavy custom-house duties prevent the introduction of improved implements from abroad. The cultivated part of the maremme produces wheat, maize, beans, and vines; but the lands often lie fallow for from 3 to 7 years; and Mr. MacLaren states that, from what fell under his observation, not 1 acre in 8 is under the plough or hoe (*Notes on Italy*, 68.) In the more populous and best cultivated parts there is usually an annual change from spring grasses to corn produce; but by far the greater part of this region is in a state of nature. Formerly all the farms were let with a considerable stock of horses, cattle, &c.; but the proprietors, when in want of money, parted with them. In whatever direction the traveller may enter the Campagna from Rome, he would pass over at least from 20 to 30, and frequently from 50 to 60 m., without meeting with a single field cultivated by resident inhab. In fact, though it embrace an area of about 4,000 sq. m., or 2,560,000 acres, it is not supposed to have a resident pop. of more than 16,000 or 18,000 inhab., mostly wandering shepherds. There is on each estate a *casale*, or large building, where the implements of husbandry are kept; but neither bakehouses nor kitchen gardens exist throughout the whole tract, the labourers being wholly supplied at a few scattered depôts with provisions, sent thither from Rome. The shepherds are in about as depressed a condition as possible; they have a sickly, cadaverous appearance; their clothing consists principally of sheep-skins, worn with the wool outside; and they sleep either on the ground in the open air, or in some of the ruins with which the country is strewn. They are paid, not in money, but in cattle pastured with those of the farmer. The harvests in the Campagna are reaped by peasants from distant mountainous districts, who come to it in companies of from 20 to 100 individuals. Even in favourable seasons, $\frac{1}{2}$ or $\frac{2}{3}$ part of their number are attacked by fever; and in unhealthy seasons, the proportion is much larger. Many die in the hospitals of Rome, or in the Campagna; others perish on the road home; and others again return condemned to pass the remainder of their days a prey to intermittent fever, or other diseases brought on by the climate; and yet such is the poverty of the pop. in the mountainous districts, that the chance of realising a few scudi continually tempts new adventurers to undergo the same risks.

In 1800, on the estate of Prince Rospigliosi at Zagarolo, land was let out at a low fixed rate in lots of a rubbio each (about $4\frac{1}{2}$ acres) to the peasantry to cultivate as they pleased; and this plan, it is alleged, had the best results. Cultivation extended for a considerable distance round Zagarolo into the plain beneath; and the climate of the neighbourhood was improved. Were such a plan followed round the other centres of civilization, a considerable portion of the Campagna would, probably, soon lose a portion of its desolate and pestilential character, but neither the proprietors nor farmers show, in general, much disposition for change or improvement; and till the government and public economy of the state be completely changed, it were idle to expect that they should evince any such disposition. In order to arrest the depopulation of the Campagna, Pope Pius VII., in 1802, laid an impost of 5 pauli per rubbio on the uncultivated land immediately round the towns, and deducted 5 pauli per rubbio from the tax on cultivated lands. But this miserable attempt to extend industry by fiscal regulations (though it appears to be approved by M. Sismondi) necessarily failed. The regulation, which never was acted upon, speedily became obsolete; and the peasantry

of the Campagna generally remain in the same condition as before the French invasion. (*Sismondi, Etudes sur l'Economie Politique*, li. 12—128.)

In the mountainous parts of the Papal States, where the country is divided into small farms, and rather thickly inhabited, pease, beans, and kitchen vegetables, which form a large proportion of the food of the peasantry, occupy most part of the land; the remainder being appropriated to wheat, maize, &c. Little skill is evinced in agriculture; the crops being generally raised only for the supply of the cultivators, no one thinks of raising those products for which his land may be the best fitted, till after he has provided an adequate supply of grain or other produce for the use of his family. In the mountains near Rome, white crops are taken from the grounds for 2 or 3 years successively, without any manure being applied to the land; 3 crops of wheat may be succeeded by maize or kidney beans for 2 years, and once in 5 or 6 years, a crop of hemp or flax is, perhaps, raised. The grain is trodden out by horses, and winnowed by hand, immediately after harvest. The wages of a man in harvest time, amount, at Poli, to about 2 pauli a day, with bread and *piquette*, or weak wine; but they are generally higher the nearer the district to the capital. The herdsmen in the Apennines take charge of the cattle belonging to many different persons, and tend them on the mountains, night and day, receiving at the end of the season payment from each proprietor, at the rate of 2 scudi per month for every score of cattle. Besides bread and *piquette*, the food of the peasantry in the mountains principally consists of cheese from goats' or ewes' milk, onions, garlick, and other vegetables, and *polenta*, a kind of hasty-pudding, made with maize, pulse, &c. Goats' flesh and pork are sometimes eaten by the labourers, but very little other animal food. (*Graham's Three Months in the Mountains*, 7—56; &c.)

The provs. of Ferrara, Bologna, Romagna, and those forming the March of Ancona, produce rye, wheat, barley, and maize in abundance. Rice is grown in the legs. of Ferrara and Bologna, but there only. Hemp and flax are cultivated along the Adriatic; and saffron, coriander, aniseed, woad, and great quantities of kitchen vegetables in the same districts and the N. provs. The export of hemp is supposed to average 30,000,000 lbs. a year. Tobacco is grown in several places, especially at Chiaravalle, near Ancona; but being a government monopoly, its culture is confined within narrow limits; Serristori states that for 300,000 lbs. of tobacco exported, 1,000,000 lbs. are imported. The sugar-cane, indigo, and cotton, are cultivated near Terracina, though neither be grown to any great extent. Olive plantations were long among the most productive investments; but they are now less so than those of the white mulberry. The olive is abundant in the S. provs.; and though the Roman oil be badly made, and mostly consumed at home, a million lbs. have occasionally been exported in favourable years. Vineyards are said not to yield returns proportioned to the outlay. The vine is tolerably well cultivated in the vicinity of Velletri; the plants in regular lines being tied to trellises of large reeds; but the most esteemed growths are the light, white, muscadel wines of Orvieto and Montefiascone, near Viterbo; they do not, however, bear transport well, and are seldom met with out of the country. The timber of the dense forests in the deleg. of Viterbo is not turned to much account from the distance of markets, and is cut principally for smelting iron ore, making charcoal, &c. Cork trees abound in the country about Cisterna, Velletri, &c.

The rearing of live stock is, as has been said, the principal branch of rural industry. The number of sheep in the Papal States is estimated at 2,000,000. There are two varieties; the *negretti*, a small short-legged variety, in every respect resembling the breed of Dauphiny, except that their wool, though good, is chocolate-coloured; and the *pouille*, a variety with wool of a whiteness almost equalling that of the breed of Aragon. Still, however, it would seem from the statements of Serristori that the total quantity of all sorts of wool exported from the Papal States does not exceed 800,000 lbs. a year, sent to Tuscany, Piedmont, France, and England. The ewes are mostly kept for their milk, and the greater part of the lambs are killed, the mutton not being good. About 1,000,000 lbs. cheese and 400,000 lamb-skins are annually exported, principally to the other states of Italy. Cattle breeding is extensively carried on in the marshes of the Po, in the provs. Bologna, Perugia, &c.; and about 40,000 oxen are exported. Many buffaloes and hogs are kept in the marshes; and about 100,000 ox and buffalo skins are annually exported. The horses are mostly of good breeds, and are exported to Tuscany and Lombardy. Goats are extensively reared, their flesh and lamb being the principal animal food. In Perugia and other delegs. great numbers of poultry, and in Forlì, Macerata, &c., many bees are kept. (*Châteaueux, Italy and its Agric.*; *Bowring's Report on the Roman States*; *Graham*; *Sismondi*; *Sismondi, Etudes sur l'Economie Politique*; *Serristori, Statist. d'Italia*, Part vi.)

Mediterranean, and 14 sc. in the Adriatic ports, and other values in proportion. The importation of such books as would communicate any useful information, as to politics, political economy, or philosophy, is of course absolutely forbidden. Notwithstanding the low state of manufacturing industry, high duties are levied on manufactured goods when imported. Woolen cloth, woolen and cotton fabrics, and cambrics, pay 100 sc.; dyed or stamped cottons, 50 sc.; and porcelain, 20 sc. per 100 lbs. The principal seats of the foreign trade are Ancona and Civita Vecchia. In 1833, 1,392 ships, of the aggregate burden of 66,828 tons, with cargoes of the value of 1,09,300 sc. cleared from the former port; and in 1837, 520 ships, burden 133,403 tons, cleared out of the latter. *Parl. Reports, 1838; Bowring's Reports, &c.*

Accounts are kept in *scudi* (crowns), = 4s. 3½d. each, and divided into 10 *paoli* and 100 *bajocchi*. The Roman *libbra* or pound of 12 oncia and 288 *danari* = nearly 2 oz. avoird. The *barile* of wine, of 32 *boccali*, and 128 *agilette* = about 13 galls.; the *barile* of oil contains only 28 *boccali*. The Roman foot = 11·7 Eng. inches; the *palm* of architects = about 8½ inches; the Roman mile = 1639 Eng. yards. Generally the measures of towns have less capacity than those of the N. legations.

The Government is wholly ecclesiastical, no one being eligible to fill any civil office who has not attained the rank of abbot. The pope enacts all laws, and nominates to all clerical appointments. He is assisted, however, by the High College of Cardinals, comprising about 70 members; and the different branches of the government are conducted each by *Congregazioni*, with a cardinal at its head. Each leg. and deleg. is governed by

a cardinal, assisted by 2 assessors, and a council of 4 individuals nominated by the pope, half of whom are changed every 5 years. The jurisdiction of the temporal offices is provisionally retained in some provinces, but all the judicial officers of the nobility must be confirmed by the pope, and are subject to the general laws. In each leg. of a deleg. there is a tribunal of primary jurisdiction, which also decides in appeal on certain matters that first come before the district officers. The proceedings in these courts are public, but there is no jury. There are courts of appeal, 1 at Bologna, 1 at Macerata, and 2 in Rome; and a supreme tribunal of final resort, that of *Uditore Santissimo*, with a single judge; 9 tribunals of commerce also exist. Every town has its own jurisdiction and magistracy, and a municipal council of from 10 to 40 members, according to the pop. The laws in force are nominally those of the Justinian code; but the pope has power to alter or annul any previous law, and, which

incomparably worse, the provincial judges have extensive discretionary powers. Criminal proceedings in the Papal States are very dilatory; and in all cases the accused is thrown into prison, whence there is no liberation on bail. In 1832, 2,708 criminals were confined in various prisons, of whom 580 had been convicted of homicide, 334 of other offences against the person, 298 of burglary, and 1,072 of other offences against property, and 78 of state offences. Brigandage is less frequent than formerly; and the government has stationed five military posts along the road from Velletri to Terracina, for the protection of travellers. Still, however, the police and the law are equally defective; and assassinations and other crimes of violence are daily taking place without the perpetrators being ever brought to justice. The whole frame of government is, in fact, a tissue of abuses.

On the fall of Napoleon, the alienation of church domains was confirmed; but the compensation since made to their former owners, and the restoration of suppressed churches and convents, have cost the government prodigious sums, and are the principal causes of the wretched state of the finances. (*Von Hammer's Italy.*) Within the limits of the Papal States there are no fewer than archbishops' and 60 bishops' sees; and it is estimated that in Rome there is a clergyman for every ten families. It is needless to add that this super-abundance of priests, instead of promoting religion and morality, is, in fact, a principal cause of their low state in Italy. The outward deportment of the Papal court is, however, at present highly decorous. "Those times so disastrous, and disgraceful, when the Popes had so many nephews, and those nephews built so many splendid palaces and villas, called by the Romans, in derision, *miracles of St. Peter*," are now almost as much forgotten in Rome, as the times when horses were made mules, and eunuchs emperors." (*Ligonier's Polit. State Italy.*)

Public Instruction.—There are 3 chief universities—Rome and in Bologna,—each having at least 36 professorships; and 6 universities of secondary rank—at Ferrara, Perugia, Cambrino, Macerata, Fermo, and Urbino,—each at least with 17 professors. The university of Rome was, in 1830, attended by 343 students (*Servizi*); that of Bologna, which ranks, in Italy, second only to Pavia, is usually attended by from 300 to 600 students; that of Perugia by about 300; and those of

Camerino, Macerata, and Urbino by about 300 each. Altogether, upwards of 2,600 students annually attend the universities. (*Journal of Education*, viii. 209.) There are various other high colleges in Rome, &c., the principal of which is the Gregorian (*see* ROME). Secondary schools exist in most towns; but there is no general system of elementary instruction, and it has been estimated that only 1 in 60 of the pop. attend public schools. The truth is, that education in the Papal States is in the most degraded state imaginable. It is wholly in the hands of the clergy; and is conducted on the principle, if we may so call it, of imbuing the pupils with the grossest prejudices, and of proscribing every study or pursuit that might tend to expand or enlighten their minds, or make them acquainted with their rights and duties. The university education, excepting, perhaps, in so far as respects medicine, is altogether contemptible. Even theology is not efficiently taught; and philosophy, politics, and political economy are as little relished in Rome as in Morocco.

The censorship of the press is severe in the extreme; and the gazettes published in the different towns insert nothing not approved by the censors. The journals, of which there are several, devoted to *Belles Lettres*, antiquities, the fine arts, &c., being under a less severe surveillance, occasionally display originality and learning; but the literature of the Roman States is, like their government, emasculated and imbecile. "The Eternal City prohibits all the best works on mental philosophy. She has not one eminent man of science; and if she had a Cuvier or a Buckland, she would not permit him to lecture or to publish his discoveries to the world till they had been subjected to the pruning knife of some ignorant censor. The apathy and timidity, the dread of independent thinking and free inquiry manifested by the Papal government, seems, however, to admit of easy explanation. Its dogmas, its rites, its principles of action were framed in accordance with the opinions of the 13th century. It does make some changes silently, by dropping a few untenable pretensions; but it can make no great and marked change without abandoning its professed character of being the depository of immutable truth. The rulers of Rome, therefore, finding themselves unable to raise up their old institutions to the level of modern knowledge, endeavour to keep down this knowledge to the level of their institutions. They see the props and stays of their system dropping off, and one source of influence falling after another, and their prudence counsels them to shut out, as far as they can, the light which is sapping their authority, and to look upon innovations, even of the most harmless kind, with suspicion. They are religious *Conservatives* in the strictest sense of the term." (*MacLaren's Notes on Italy*, p. 97.)

Charitable Institutions.—The Papal States are literally overrun with all kinds of *charitable institutions*. In Rome, especially, the sums expended on charitable foundations are, in proportion to its extent, twice as large as in Paris; so that, as Serriatori exclaims, "*Dovrebbe credersi che negli Stati Pontifici, e molto più in Roma non esistesse mendicizia.*" (*Statist.* p. 29.) But nowhere are the pernicious consequences of indiscriminate charity better exemplified than in the Roman States, where mendicancy, wretchedness, and want revail to a frightful extent. The universality of beggary removes all sense of shame; and a large proportion of the pop. are degraded enough to prefer subsisting on alms to making any attempts to provide for themselves. Here is a *monfr-di-pieta*, or government pawn-broking establishment, with a capital of 230,000 scudi, in Rome; and others in most of the principal cities; where also *vingis'* banks have been established with considerable success. (*Bourring's Rep.* pp. 88—90.)

The *army*, if so it may be called, is under the direction of a cardinal-president, and a board of 3 general officers; and consisted, in 1850, of a permanent force of 14,000 men, (10,760 infantry, 3,239 cavalry, &c.); and a body reserve and national guard, together amounting to 200 men.

The principal fortresses garrisoned by the Pope are those of Rome, Civita Vecchia, Urbino, Castel Franco, Ancona, and Ancona; by the treaty of Vienna, the emperor of Austria has the right to garrison Ferrara and Ancona.

The taxes are very heavy, and are imposed in the most oppressive manner. The principal consists of a land tax; heavy duties are also laid on most articles consumed in towns and villages; and all sorts of grain, except rye, maize, barley, and oats, pay a heavy tax on ground at the mill. Salt, tobacco, alum, and oil, are monopolies in the hands of government. The *consumption* duties are probably, however, on the whole, the most oppressive and injurious. The lottery, also, notwithstanding its demoralising influence, is a fertile source of revenue; and contributes, in fact, about one tenth of the entire public revenue.

History.—The rise of the Papedom as a temporal power dates from 755, when Pepin, king of the Franks,

invested the pope with the exarchate of Ravenna; to which Charlemagne added the provs. of Perugia and Spoleto. Benevento was given to the pope by the emperor Henry III. in 1053; and in 1102 the marchioness Matilda of Tuscany, bequeathed to the holy see the provs. forming the "Patrimony of St. Peter." In 1297, Forlì and the rest of Romagna, and, in 1364, Bologna, became portions of the Papal Dominion; and at the end of the 14th century the pope acquired full jurisdiction over Rome and Sabina. Ferrara was acquired in 1598, Urbino in 1626, and Orvieto in 1649.

The French invaded the States of the Church in 1797, after which the N. legations were annexed to the Cisalpine republic. In 1798, Rome was taken by the French, and in 1810 the whole of the Papal States were included in the kingdom of Italy. Since 1815, most part of the pope's former dominions have been restored; but his authority, especially in the N. legations, is far from being well established, and his power as a temporal prince depends wholly on the support given him by Austria.

Since this paragraph was written, 11 years ago, the Papal States have been the theatre of some singular events. The present Pope, having been elected to the chair of St. Peter, on the 16th of June, 1846, took the title of Pius IX. It would appear, in so far as an opinion may be formed from his proceedings, that he is a liberal minded, though, perhaps, rather a weak man. The commencement of his pontificate was characterised by some considerable reforms. These, however, though probably as much as could be undertaken with any prospect of advantage by the Papal government, served only to unsettle the minds of the Italians, and to inflame the passions of the Carbonari, and other headlong revolutionists. In this state of things the revolution of Paris in 1848, and the subsequent outbreak in Vienna, had a powerful influence in the peninsula, and especially in Rome. The moderate reforms of Pius were despised, his minister (Count Rossi) was assassinated in open day, and he was himself obliged to seek his safety by flight from the country. By what appears to be a curious contradiction, he has been restored by the arms of the only government called into existence by the revolutions of 1848. A powerful French force having arrived at Rome, in 1849, laid siege to the city, which they took after a resistance prolonged by the unwillingness of the besiegers to take any measures against the town that might compromise its great remains of ancient and modern art. The Pope returned to the Vatican on the 12th of April, 1850; but it is difficult to say how long he would continue there were the French force withdrawn. But it is not difficult to see, but obvious, that the only safe and really efficient Italian reformer, must be an intelligent general like Napoleon, at the head of 100,000 foreign troops.
